Notes:

1. Rank assignments are based on 2022 consumption data.
2. Service location was constructed after 2015 WSP was published.
3. LMWD was the largest water user in 2015 and 2016 but discontinued purchase of water from the City in 2017. Included to contribute to the total consumption.
4. The annual total is the sum of the top 20 largest users from each year; Tall Cedars and Leisure Manor consumption data is not shown but is included in the total.

Figure 2-2 | Historical Annual Consumption of the Top 20 Largest Water Users in Million Gallons (MG)

2.3 Water Supply and Production

The historical average and maximum water demands are important parameters when performing system and supply analyses. The term "water demand" refers to all the water requirements of a system including metered customers, unmetered water use, and unaccounted for water loss such as leakage and theft. For this reason, the City's supply data, which accounts for all water demand, was used to calculate the Average Day Demand (ADD) and Maximum Day Demand (MDD) for each year.

2.3.1 Historical Water Supply

The City produces water through its springs, wells, and, when needed, wholesale water purchases. **Table 2-7** summarizes the amount of water produced and purchased by the City between 2015 and 2022 as MG. The City has not purchased water from the City of Tacoma since 2016.

Table 2-7 | Historical Annual Water Supply by Source in Million Gallons (MG)

	2015	2016	2017	2018	2019	2020	2021	2022
Lakeland Well 5	4.9	0.1	0.2	0.5	1.0	0.9	1.2	3.3

Valley Well 3A	-	-	-	-	-	-	-	-
Valley Well 3B	-	-	-	-	-	-	-	-
Valley Well 4	302	430	421	121	96	84	88	66
Valley Well 6	-	-	-	402	445	349	438	468
Valley Well 7	-	-	-	-	-	-	-	-
Coal Creek Springs	1,456	1,613	1,510	1,315	1,208	1,268	1,338	1,225
West Hill Springs	173	198	114	176	136	133	140	157
Algona Well 1	-	-	-	-	-	-	-	-
Total Production (MG)[1]	2,033	2,487	2,506	2,464	2,410	2,313	2,443	2,395
Total Purchased (MG)	732	321	-	-	-	-	-	-
Total Supply (MG)	**2,765**	**2,808**	**2,506**	**2,464**	**2,410**	**2,313**	**2,443**	**2,395**

Note:

1. Small differences exist between the total production value and the sum of individual production values by source. This is due to the use of raw unprocessed data for individual sources, which was subsequently processed to identify and remove outliers, correct data entry errors and account for anomalies that could distort the overall results. These adjustments ensure that the . Total Production values presented depict the most accurate information available.

Table 2-8 | 2022 Monthly Water Production by Source (MG)

2.3.2 Average Day Demands and Maximum Day Demands

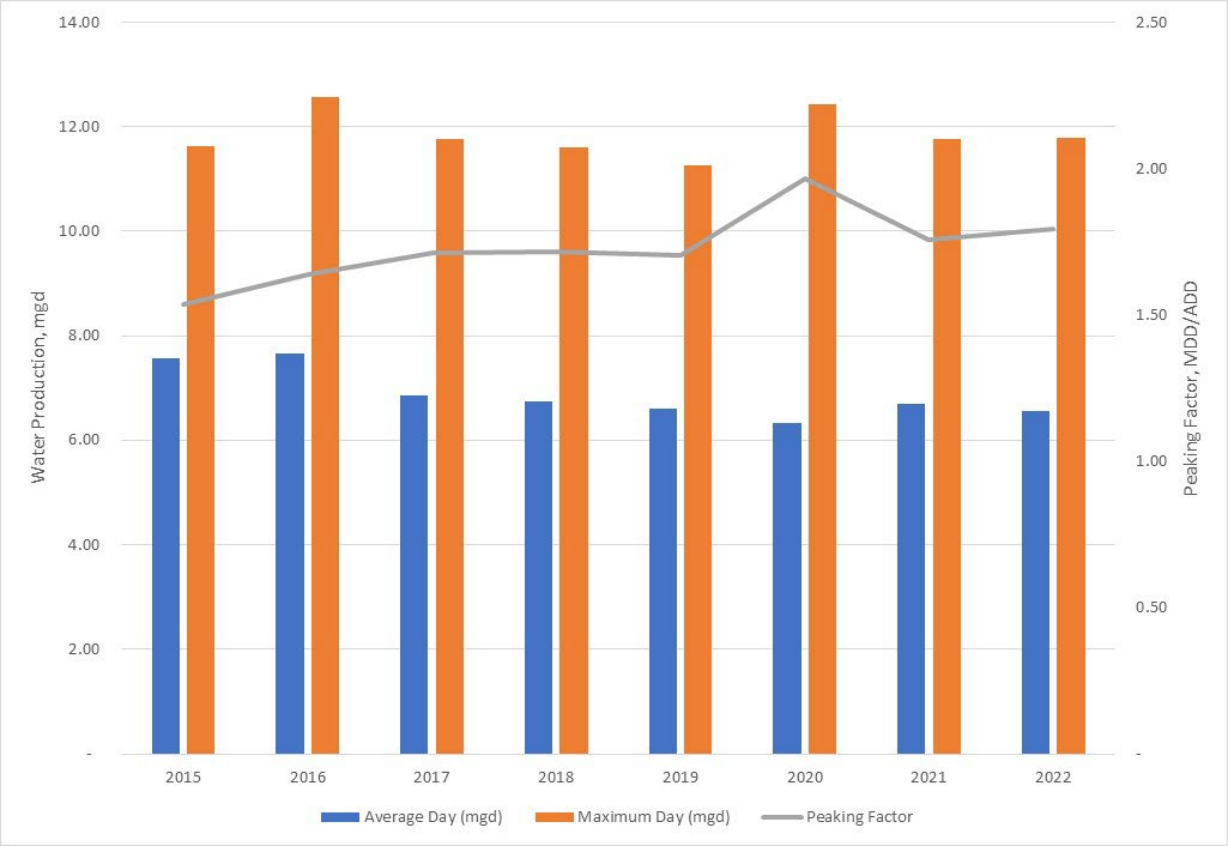
Table 2-9 summarizes the historical ADD and MDD based on production from 2015 through 2022.

To calculate the ADD, the total annual supply was divided by the number of days in the year.

Historical values of MDD are equivalent to the highest production and purchase in one day each year, usually during the summer when irrigation use is highest. The MDD is a key parameter used for supply capacity, pump station discharge rates, reservoir capacity, and pump sizes. The peaking factor is also a key parameter in developing the future MDD projections.

Table 2-9 | Historical Annual ADD, MDD, Peak Day, and Peaking Factor

	2015	2016	2017	2018	2019	2020	2021	2022
Annual Supply (MG)[1]	2,765	2,808	2,506	2,464	2,410	2,313	2,443	2,395
Average Day Demand (mgd)	7.57	7.67	6.87	6.75	6.60	6.32	6.69	6.56
Maximum Day Demand (mgd)	11.62	12.56	11.76	11.60	11.25	12.43	11.77	11.78
Max Day Date (month/day)	6/28	8/25	8/22	7/27	8/1	7/29	7/27	7/29
MDD/ADD Peaking Factor	1.53	1.64	1.71	1.72	1.70	1.97	1.76	1.80



Note:
1. Value is from **Table 2-7.**

The last row of **Table 2-9** presents the historical MDD to ADD peaking factor, which normalizes the historical data to compare between years. The minimum MDD factor was 1.53 in 2015, and the maximum MDD was 1.97 in 2020.

Due to variability of the peaking factor, the City has chosen to use the 75th percentile of the historical peaking factors in demand projections, which is 1.77. This factor provides a better representation of the peaking factors observed historically for water supply predictions.

Figure 2-3 shows that from 2015 to 2022 the ADD has decreased, which is correlated with improved water use efficiency, but the MDD and MDD/ADD peaking factor have increased. This is likely due to warmer and drier summer months and a reduction in the ADD after CWD opted out of their original agreement with the City, terminating their purchase of water, and LMWD stopped regular purchase of consumed water from the City, switching to interruptible supply.

Figure 2-3 | Historical Water Production with Peaking Factor

2.3.3 Peak Hour Demand

Peak Hour Demand (PHD) is the amount of water used, excluding fire flow, during the largest use hour of the year. Because the City does not track hourly production data, PHD was estimated based on Equation 3-1 from the DOH Water Design Manual, which is as follows:

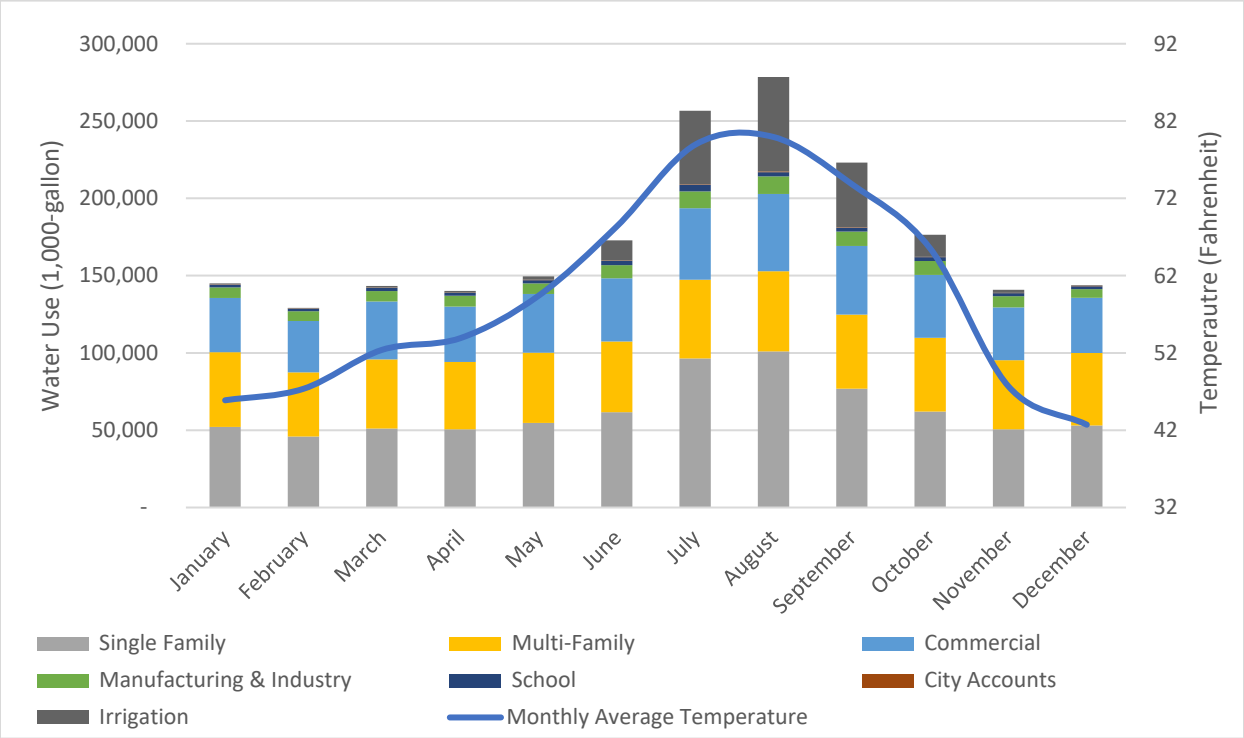
$PHD = (ERU_{MDD}/1440)\ [(C \times N) + F] + 18$

Where **PHD =** Peak Hourly Demand, total system (gpm)
C = Coefficient Associated with Ranges of ERUs (1.6 for systems with more than 500 ERUs)
N = Number of ERUs based on MDD
F = Factor Associated with Ranges of ERUs (225 for systems with more than 500 ERUs)
ERU_{MDD} = Maximum Day Demand per ERU (gpd)

The calculated annual PHD for the system is summarized in **Table 2-10**.

Table 2-10 | Historical Peak Hour Demand

	2015	2016	2017	2018	2019	2020	2021	2022
ERU_{MDD} (gpd)	279	298	312	313	310	358	320	327
Number of ERUs based on MDD	41,586	42,115	37,692	37,068	36,253	34,696	36,747	36,025
PHD (gpm)	12,973	14,019	13,135	12,950	12,567	13,881	13,140	13,159
PHD to MDD Factor	1.61	1.61	1.61	1.61	1.61	1.61	1.61	1.61



The last row of **Table 2-10** provides the calculated PHD to MDD factor, which normalizes the historical data to compare between years. The calculated PHD factor remained consistent at 1.61 between 2015-2022. Due to this consistency, the City has elected to use the PHD factor of 1.61 in future demand projections.

2.3.4 Seasonal Variations

The pattern of water consumption differs between the customer classifications. Water use increases significantly during the summer when daylight hours are longer, and lawn and landscape watering is prominent. Other outdoor uses, including car washing, pools, and recreation, are also at their highest during summer months.

Figure 2-4 presents the effect that temperature has on water usage by comparing 2022 monthly consumption data per customer classification to the average monthly temperature.

Figure 2-4 | Temperature Effects on Water Usage in 2022

As seen in **Figure 2-4**, SFR and irrigation customers show a significant peak in total consumption during the summer months. Other customer classifications show a smaller similar peak during these months. MFR customers do not show a significant peak during summer monthly because City's policy dictates the use of separate irrigation accounts for all non-SFR accounts. These monthly variations can be used to target water use efficiency efforts and/or to project future water-use patterns for planning purposes.

2.4 Distribution System Leakage

Distribution System Leakage (DSL) represents the difference between production and documented water use (retail, wholesale, and authorized unmetered). It may include inaccurate master and service connection meters, unaccounted-for non-revenue water use, pipeline leakage, and unauthorized use. DSL does not include authorized water usage such as water used for fire protection, flushing, construction, and other

maintenance and operations practices. However, to be credited, this must be accounted for by metering or estimating using credible means.

DSL is calculated as the difference between the total amount of water produced and the sum of water sold and authorized unbilled water usage. DOH requires the three-year average DSL to be under 10 percent to minimize water waste.

The City's estimated DSL for 2015 through 2022 is presented in **Table 2-11**. Revised DSL values have been provided to DOH for 2020, 2021 and 2022 that are lower than the values presented in **Table 2-11**. However, the revised values are not utilized for projections, as the revisions were made after the demand projections and system analysis were completed. Since the values used for demand projections and system analysis are slightly higher than the revised values, the projections are slightly more conservative than would have been necessary otherwise.

Table 2-11 | Historical Distribution System Leakage

	2015	2016	2017	2018	2019	2020	2021	2022
Total Water Supply[1] (MG)	2,765	2,808	2,506	2,464	2,410	2,313	2,443	2,395
Billed Consumption[2] (MG)	2,616	2,676	2,374	2,433	2,251	2,175	2,266	2,214
Authorized Non-Billed Consumption (MG)	7	4	6	13	7	4	5	5
Total Authorized Consumption (MG)	2,623	2,679	2,380	2,446	2,257	2,179	2,271	2,219
DSL (MG)	142	128	126	18	153	133	172	176
Annual Percent DSL	5.1%	4.6%	5.0%	0.7%	6.3%	5.8%	7.1%	7.4%
3-Year Rolling Average (Percent)	6.8%	5.1%	4.9%	3.4%	4.0%	4.3%	6.4%	6.7%
3-Year Rolling Average (MG)	183	139	132	91	99	101	153	161

Notes:
1. From **Table 2-7.**
2. From **Table 2-3.**

For the City's water system, the total three-year rolling average DSL ranged from 3.4 percent to 6.8 percent of the total production meeting DOH requirements and the City's goal. The City's annual average DSL over the period was 5.2 percent. During this period the City maintained a DSL below 10 percent on an annual basis, which is an improvement from the last planning period. Abnormally high authorized non-billed consumption was recorded in 2018 due to unidirectional flushing for the Valley Service Area. Starting in 2021, the billed consumption was updated to track hydrant water used during construction.

The City is committed to maintaining a 3-year rolling average DSL below 10 percent and actively works to identify and eliminate DSL throughout the system through its ongoing leak detection, meter calibration, and repair and replacement programs for water system infrastructure, as detailed in **Chapter 6 – Operations and Maintenance**. Additionally, the City has maintained efforts to reduce non-payment bills and water theft.

2.5 Water Supply Characteristics

The City has a diverse water supply consisting of two springs, ten wells and an emergency intertie with the City of Tacoma; refer to the Existing Facilities Figure provided in **Chapter 1** (**Figure 1-3**). The City's aquifer characteristics are described in several sources; this section draws mainly from the Conceptual Mitigation Plan (CMP) for Water Right Application G1-28404, provided in **Appendix S**.

Wells 1, 2, 3A, 3B, 4, 6, and 7 are in the lower alluvial aquifer in the Auburn Valley, referred to as the Valley Wellfield. This wellfield is mostly confined by the Osceola Mudflow, an important aquitard in the Auburn Valley depicted in Figure 4 of the CMP. Groundwater discharge from the upland aquifers is the primary source of recharge to the lower alluvial aquifer, which hosts all the City's wells. Groundwater generally moves upward in the valley aquifers and moves horizontally at approximately one to four feet per day. Alluvial groundwater from the White River also recharges the Green River alluvial aquifer. Groundwater in the vicinity of Wells 2, 6, and 7 discharges into the Puget Sound via the Green River and the Duwamish River valley. Wells 2, 6, and 7 are located northeast of downtown Auburn and collectively referred to as the Fulmer Wellfield. Wells 1, 3A, 3B, and 4 are in the White River Drainage Basin and Wells 2, 6, 7 and West Hill Springs are in the Green River Drainage Basin.

Wells 3A, 3B and 7 are not currently in use due to high manganese concentrations, however the City plans to install manganese treatment at each of these facilities to bring them back online. The City has a pending water right application for 13,443 acre-feet per year from the existing Wells 6 and 7 and a future Well 8. The City has sufficient water rights to meet current demands, 10-year, and 20-year demand projections, as shown in the Water Rights Self-Assessment Form provided in Appendix I. Mitigation obligations due to the proposed water right for Wells 6, 7, and 8 are listed below and are described in detail in the CMP:

- Mitigation of impacts to Green River,
- Mitigation of impacts to White River, and
- Mitigation of impacts to Mill Creek.

Wells 5, 5A, and 5B are in the Upland Wellfield and constructed within the Lakeland Service Area. The upland aquifers are recharged through precipitation and leakage from Lake Tapps and discharge into the White River system. Once Well 5B came online, the City discovered that the aquifer was not recovering. Well 5B has been offline since 2006. The safe yield of Wells 5 and 5A have been decreased from their design capacity due to a drop in the aquifer's capacity. Specific information on the individual wells and their associated water rights are provided in Section 3.4.1.

West Hill Springs draws from an unnamed confined aquifer. The spring source water flows by gravity into the Valley Service Area, although flows vary depending on aquifer conditions, and discharges into Mill Creek, which flows into the Green River.

Coal Creek Springs is the largest active water supply for the City and draws from a confined aquifer, however its flow varies depending on aquifer conditions. Coal Creek Springs collection system is located at the base of Lake Tapps Upland and is in the White River Drainage Basin. Further aquifer details are provided within the Wellhead Protection Program (WHPP) provided as Appendix T.

The City also owns two additional wells: the Algona Well 1 and the Braunwood Well. Algona Well 1 was acquired by the City in 1996 but has since been taken offline due to operational issues.

The City plans to use a groundwater flow model being developed by the USGS to predict potential impacts to surface water.

2.6 Water Supply Reliability Evaluation

The City's active water sources have maintained current production capacities and are deemed reliable, as they have back-up power sources available. The production of some water sources is limited by pump or intake capacity, as mentioned in Section 2.5, however all production is managed to be within available water rights and is managed by the physical capacity of each facility as summarized in Table 2-12.

Table 2-12 | Summary of Source Water Pumping or Production Capacity Compared to 2022 Maximum Daily Production

Source	Service Area	Pumping/Production Capacity (gpm)	Maximum Daily Production[1] (gpm)
Well 5	Lakeland	760	640
Well 5A	Lakeland	180	180
Well 5B	Lakeland	--[2]	--
Well 1	Valley	2,100	2,100
Well 2	Valley	1,600[4]	1,470
Well 3A	Valley	--[2]	--
Well 3B	Valley	--[2]	--
Well 4	Valley	2,600	1,796
Well 6	Valley	1,800	1,777
Well 7	Valley	--[2]	--
Coal Creek Springs	Valley	3,500[3]	4,383
West Hill Springs	Valley	600	563
Algona Well 1	--	--[2]	--
TOTAL		**13,140**	**12,909**

Notes:

1. Maximum daily production per source is the maximum production rate recorded in 2022.
2. The facility is currently offline. No production capacity is available without facility improvements.
3. Water rights for Coal Creek Springs allow for a Qi of 6,732 gpm. 3,500 gpm is the typical historical production capacity limitation experienced. The City is currently investigating the possible factors influencing the feasible withdrawal from this source.
4. The pump at Well 2 was replaced in 2023 and now has a capacity of 1,115 gpm.

Calculations presented in the Water Rights Self-Assessment Form (**Appendix I**) conclude that the City's existing water rights are anticipated to be adequate to meet the current, 10-year, and 20-year projections for maximum instantaneous flows (Qi) and total annual withdrawal (Qa).

However, the City does not have the infrastructure required to withdraw from all water sources, and some sources have underlying production restrictions that require further evaluation. Several facility improvement projects are required to maximize production and obtain the full water rights. Furthermore, potential demand from LMWD was not included in the assessment, as they have an interruptible wholesale agreement with the City which is a secondary priority to the City's demand. Currently, the City's interties with the City of Tacoma provide additional wholesale water for purchase if necessary to meet demands, however the City has not purchased water from Tacoma since 2016.

The City has established a policy of maintaining the capability to supply the MDD while the largest water source is out of service. The system analysis documented in **Chapter 3** confirms that with projected demands over the 20-year planning period, the City will maintain the capability to meet MDD if the largest pumping source is out of service. This evaluation includes the Tacoma interties as available sources to meet this need and excludes the capacity of facilities that are offline or not operational.

Of the twelve sources, only Wells 5 and 7 are currently without a standby power source. Standby power will be added to Wells 5 and 7 as part of CIP projects discussed in **Chapter 8.** The Fulmer Field Corrosion Control Treatment Facility has backup power.

The Game Farm Park Pump Station, Lea Hill BPS, and Intertie Pump Station are the only pump stations without a standby power source or connection. Backup power will be added to the Lea Hill BPS and the Intertie Pump Station as part of a capital projects discussed further in **Chapter 8**. The Game Farm Park Pump

Station is a small facility that serves a recreational area and does not serve residential or commercial properties, therefore back-up power is not a critical element.

2.6.1 Use Impacts on Instream Flows

New water right appropriations in the Green-Duwamish Basin are subject to instream flow (ISF) regulations as described in the CMP and WAC 173-509. These ISF are senior to the City's recent water rights application G1-28404. This requires mitigation for potential impacts to the Green River when instream flows are not met, such as predicting when streamflow will drop below ISFs as well as determining the lag time associated with impacts to instream flows from groundwater withdrawals. The CMP includes the following detailed description of the streamflow characteristics:

> "A review of historical streamflow data indicates that on average streamflow's are below the ISFs at the Auburn gauge approximately 20 percent of the time (Table 3). Streamflow's are generally more often below the minimum ISFs during the summer months, falling below the minimum ISFs 35 percent to 61 percent of the time between June and September. The flows are frequently above the minimum ISFs during the spring and winter months but can drop to below ISFs at any time of the year. For example, in April, streamflow falls below the minimum ISFs approximately 3 percent of the time (4.1.2)."

The City's current rights are senior to the instream rights and therefore not effected by the instream flow limitations, however as stewards of the watershed, the City has an aggressive water use efficiency program described in Chapter 4 meant to limit the volume of withdrawals, especially during the dry season. The City has a minor surplus of both annual volume withdrawn (Qa) and maximum instantaneous flow rate withdrawn (Qi) to meet MDD through the 20-year planning period. However, several facility improvements are required to make the withdrawals feasible.

2.6.2 Wholesale Interties

The City has three wholesale interties, described below and in further detail in Section 1.6.2.

City of Algona

The City has supplied water to Algona on a regular basis since 1996, when interlocal agreement IA3 was negotiated. A superseded agreement, IA3A, was negotiated in October 2002 which reflects the current status. The agreement will remain unless terminated by mutual agreement of the City and Algona. Currently, Algona is served through the metered Boeing Welded Duct Intertie and by two eight-inch, manually operated meter stations located at Boundary Boulevard and Industry Drive North, and at Boundary Boulevard and Milwaukee Avenue.

LMWD

An intertie between the City and LMWD was constructed in 1996 as part of IA2 to enable LMWD to purchase water from the City. The manually operated intertie also allows the City to provide an emergency supply to Kent's East Hill Service Area. The City agreed to provide up to 2.5 MGD average day and 5.0 MGD maximum day use. A provision of the agreement calls for LMWD to send an emergency supply of water to

the City when needed for the Lea Hill Service Area. The IA2 agreement also included several improvements to allow delivery of water:

- The Green River Pump Station and pipelines to deliver additional water into the Lea Hill Service Area
- The Intertie Pump Station and pipelines to deliver water from the Lea Hill Service Area to LMWD
- Construction of two additional wells (Wells 6 and 7).

LMWD discontinued regular purchase of water from the City in 2017 per the amendment to IA2, however LMWD still maintains the intertie with the City to use as a wholesale water supply on an as-needed basis. This interlocal agreement has a term of sixty years, commencing in 2017.

City of Tacoma

In 2012, Tacoma agreed to provide water to the City in the quantity of up to 1.0 MGD average day use, 1.8 MGD peak day use, and 1.62 MGD four-day peak use. Two interties were constructed to supply the City's Valley pressure zone: located at 3200 B Street NW and 29600 132nd Avenue SE in Auburn. In 2014, Tacoma amended and restated the 2012 agreement with the City to provide a total of 3.5 mgd (2,430 gpm) of average use and 5.12 mgd (3,555 gpm) of peak use from the interties. The B Street NW remotely operated intertie is limited to a maximum flowrate of 2,200 gpm and the 132nd Avenue SE Intertie is limited to a maximum flowrate of 4,500 gpm. However, the combined use of the interties cannot exceed 5.12 mgd (3,555 gpm) in a 24 hour period. This agreement will remain in force as long as the City of Tacoma remains in the business of providing water, however the City has not purchased water for consumption from the City of Tacoma since 2016.

2.6.3 Emergency Interties

Emergency interties are an important tool that helps water utilities increase reliability and respond to emergencies. The City has emergency interties with seven water systems, as described in Section 1.6.2 and summarized in Table 1-3.

2.6.4 Potential Interties

The City has an interest in acquiring additional interties that would enhance the reliability of water service in the City and among adjacent purveyors. Tacoma Public Utilities constructed the Second Supply Pipeline Project, which runs through the north end of the City's RWSA between 30th and 37th Streets NE. In addition to the B Street NW and 132nd Avenue SE interties, a third turnout was constructed as part of the pipeline project in the Valley Service Area. The City does not currently plan to develop this turnout but may do so in the future.

2.7 Future Population Projections and Land Use

2.7.1 Demographic Forecast

Demographic forecasts provide an estimate of future population and employment. The City is a member of the Puget Sound Regional Council (PSRC), which develops demographic analyses for the central Puget Sound region (King County, Kitsap County, Pierce County, and Snohomish County). The demographic projections are developed based on local planned development capacities and regional policies adopted by the PSRC Vision 2050. Vision 2050 established the region's strategy for accommodating population and employment growth to maintain the high quality of living, economic prosperity, and a healthy environment

through the year 2050. Through this planning process, the City is required to plan for a specific number of additional housing units and jobs.

Consistent with the Washington State Growth Management Act (GMA), the City uses the Vision 2050 growth values as the basis of the demographic projections.

Demographic projections are based on the PSRC's 2044 forecasts for housing, population, and employment for each Transportation Analysis Zone (TAZ) within the City's RWSA, as the City's policy is to serve all customers within its RWSA. Additional information on the City's existing land use, future zoning, demographic projections, and corresponding rates of growth are detailed in this Section.

2.7.2 Future Land Use and Zoning

Land use and zoning regulations provide important information in determining future water requirements. Land use and zoning determines the area available for various types of development including both SFR and MFR development, as well as commercial and other types of land use that provide the economic base necessary to support residential development. The housing, population and employment projections developed for the 2024 Periodic Comprehensive Plan are based on the employment and housing targets provided by King and Pierce counties that the City must accommodate over the 20-year planning horizon. This consistent approach is encouraged by the Washington State GMA and should result in predictable and stable land uses over longer planning periods.

Future land use and zoning designations for the City's RWSA are shown on the Comprehensive Zoning Map provided as Figure 2-5. Land uses in unincorporated King County which are part of the RWSA, but beyond City limits are anticipated to remain consistent with current designations, as the current land use designations reflect the intended long-range use of land for the 20-year planning horizon in the current Comprehensive Plan; additional data for future land use designation for unincorporated King County are not currently available. Zoning designations implement the land use identified in the City's Comprehensive Plan; therefore, the current land use reflects the City's historical zoning. House Bill 1337 and House Bill 1110, both effective as of July 2023, are geared at expanding housing options. As such, the City has adopted future zoning to allow for accessory dwelling units within areas previously dedicated to single-family detached housing. Table 2-13 summarizes the updating zoning designations and fire flow requirements. Note that the required fire flow in some zoning designations will be determined on a case-by-case basis pending development or re-development type. Fire flow requirements for portions of the RWSA located in unincorporated King County are also captured in Table 2-13.

Three of the updated residential zoning designations presented in Table 2-13 allow for Accessory Dwelling Units (ADUs). Policies related to ADU water service metering and connection fees are included in Appendix A. The demographic population projections are expected to be sufficient to account for growth that is realized by the additional ADUs within the service area. The demographic population projections are discussed in Section 2.7.3 and demand projections are discussed in Section 2.8.2. Required fire flow for ADUs will be determined on a case-by-case basis pending development or re-development type.

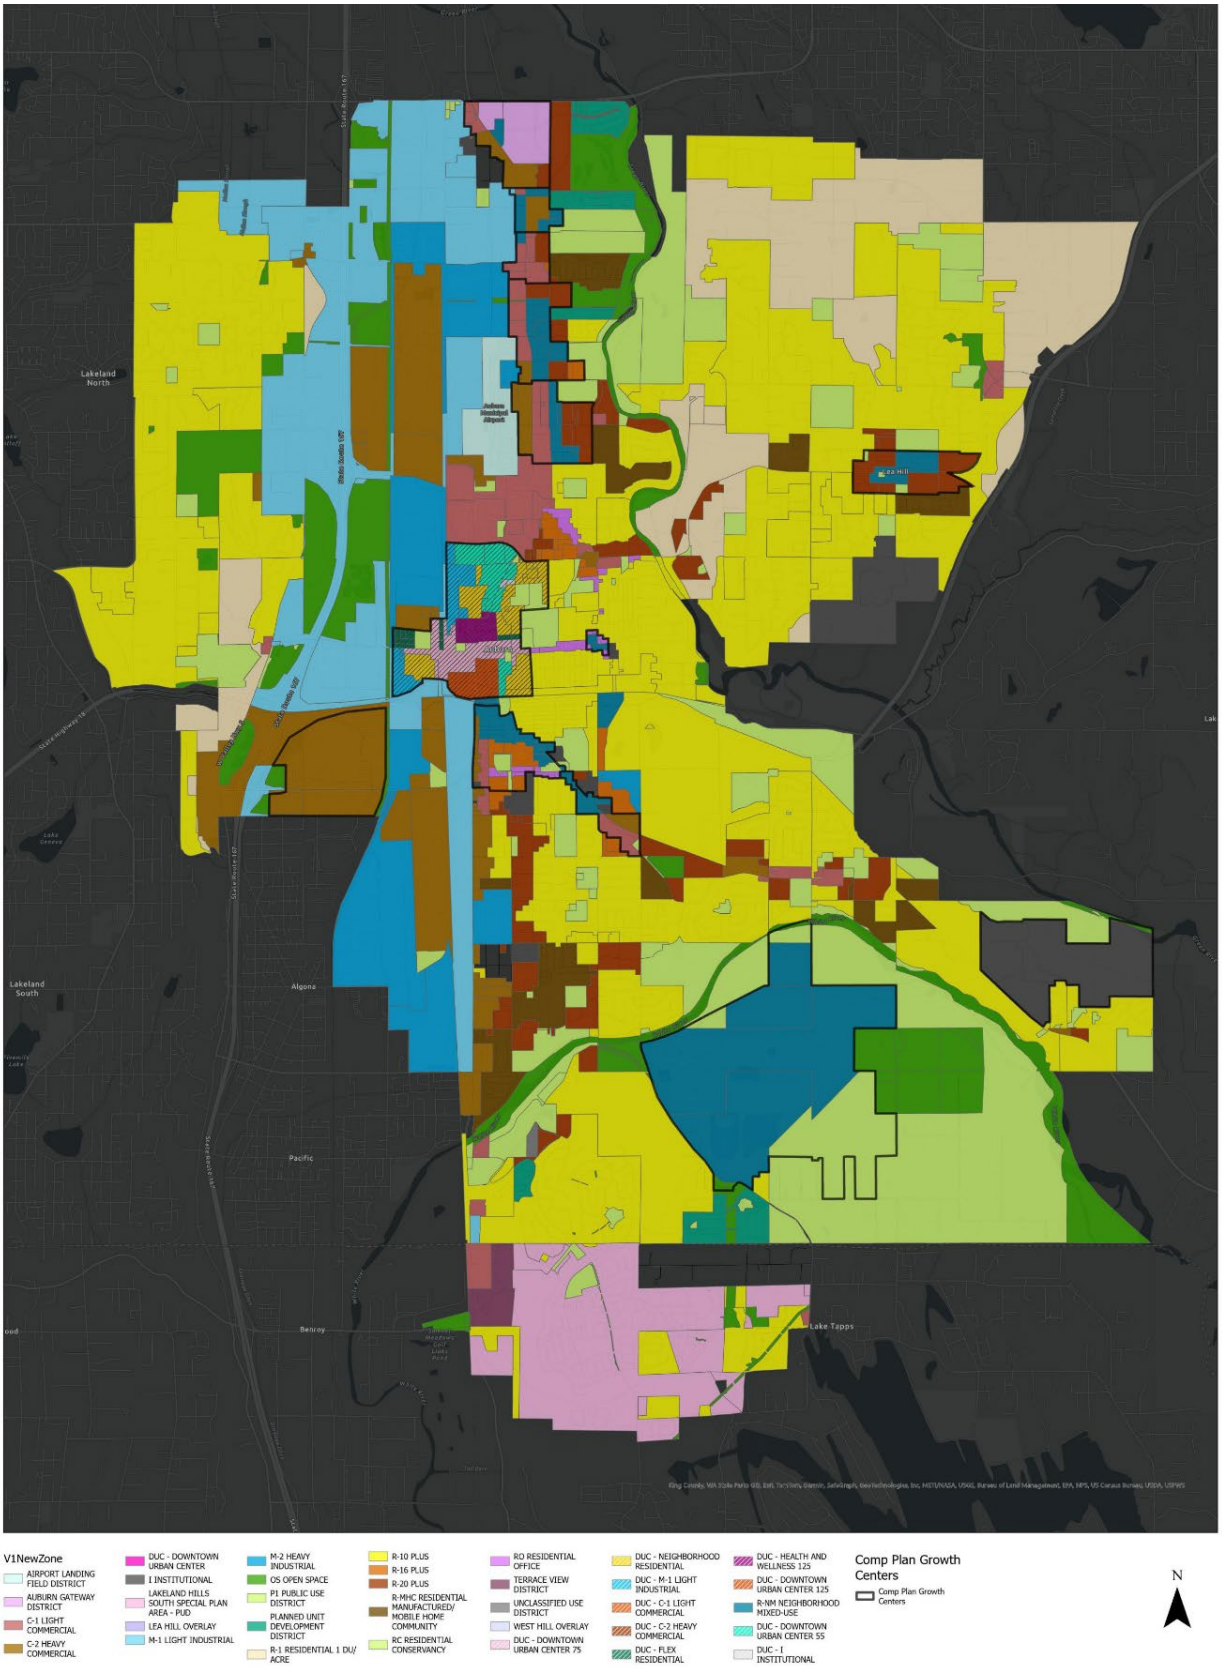
The City includes a wide range of residential, commercial, institutional, and industrial land uses. Public and quasi-public land uses include parks, open space, and public recreation as well as institutional uses such as schools. Commercial and industrial uses occur primarily in the Valley Service Area; however, large areas of residential land use and the Downtown Urban Center (DUC) also exist in the Valley Service Area.

The Academy and Lakeland Service Areas are primarily residential, although some commercial zoning is located along Auburn Way South (SR 164) in the Academy Service Area. The Lea Hill Service Area is also

primarily residential although other uses include small amounts of commercial and open space, and Green River College.

Areas within the RWSA, but outside the City limits, are governed by King County zoning. Land use was assumed to be consistent with zoning in these areas. The area in the northwest corner of the RWSA, west of SR167 and north of S 287th Street is zoned for Agriculture. A second area is located near Auburn Narrows State Park, which is north and west of SR18. This area includes Rural Residential, as well as Park and Greenbelt zoning. The City does not currently provide service in this area; however, it is willing to provide service to customers meeting the Service Area Policies. There are two additional unincorporated "pockets" of urban residential zoning within the RWSA that the City currently serves, where the southern area also contains a single parcel of Industrial zoning. The King County zoning was used in the demographic analyses.

Table 2-13 | Updated Zoning Districts and Fire Flow Requirements



Zoning District	Land Use	Definition	Fire Flow Requirement (gpm)
RC RESIDENTIAL CONSERVANCY	Residential Conservancy	No change	1,500
R-1 RESIDENTIAL 1 DU/ACRE	Neighborhood Residential One	No change	1,500
R-10 PLUS[1]	Neighborhood Residential Two	Single family, townhouse, duplex, triplex, fourplex, two-story stacked flats, cottage housing-4-6 units/lot ADUs	1,500 - 2,500
R-16 PLUS	Neighborhood Residential Two	R-10, plus five-plex, six-plex, 3 story stacked flats, courtyard apartments, apartment buildings and mixed use up to 20 units ADUs	2,500
R-20 PLUS	Neighborhood Residential Three	R-16 plus apartment buildings, and mixed use over 20 units ADUs	2,500
R-NM NEIGHBORHOOD MIXED-USE	Mixed Use	R-16 and C-1 Uses + Mixed-use (horizontal or vertical) encouraged	2,500
R-MHC RESIDENTIAL MANUFACTURED/MOBILE HOME COMMUNITY	Neighborhood Residential Three	No change	2,500
RO RESIDENTIAL OFFICE	Mixed Use	Smaller scale R-NM with emphasis on conversion of existing structure	2,500
C-1 LIGHT COMMERCIAL DISTRICT	Commercial	Generally the same as existing	2,500
C-2 HEAVY COMMERCIAL DISTRICT	Commercial	Generally the same as existing	2,500
AUBURN GATEWAY DISTRICT	Mixed Use	North Auburn Subarea Use	2,500
M-1 LIGHT INDUSTRIAL DISTRICT	Industrial	Generally the same as existing	2,500
M-2 HEAVY INDUSTRIAL DISTRICT	Industrial	Generally the same as existing	2,500
AIRPORT ZONE	Industrial	No change	2,500
P1 PUBLIC USE DISTRICT	Public/Quasi-Public	Public schools, recreational spaces, police stations, fire stations, cemeteries	2,500

Zoning District	Land Use	Definition	Fire Flow Requirement (gpm)
I INSTITUTIONAL USE DISTRICT	Public/Quasi-Public	Private schools, Green River College, large campus development	2,500
OS OPEN SPACE	Open Space	No change	-
DUC - DOWNTOWN URBAN CENTER 125	Downtown Urban Center	DUC with up to 125-ft tall buildings where permitted	2,500
DUC - DOWNTOWN URBAN CENTER 75	Downtown Urban Center	DUC with up to 75-ft tall buildings where permitted	2,500
DUC - DOWNTOWN URBAN CENTER 55	Downtown Urban Center	DUC with up to 55-ft tall buildings where permitted	2,500
DUC - NEIGHBORHOOD RESIDENTIAL	Downtown Urban Center	Mixed-use and R-15	2,500
DUC - HEALTH AND WELLNESS 125	Downtown Urban Center	R-OH-MultiCare Zone	2,500
DUC - FLEX RESIDENTIAL	Downtown Urban Center	RO with permitted specific industrial uses (craft workshops, breweries, coffee, etc.)	2,500
LAKELAND HILLS SOUTH SPECIAL PLAN AREA – PUD[1]	Neighborhood Residential Two		1,500-2,500
AIRPORT LANDING FIELD DISTRICT	Industrial		2,500
AUBURN GATEWAY DISTRICT	Mixed Use		2,500
DUC - I INSTITUTIONAL	Downtown Urban Center		2,500
DUC - M-1 LIGHT INDUSTRIAL	Downtown Urban Center		2,500
I INSTITUTIONAL	Public/Quasi-Public		2,500
PLANNED UNIT DEVELOPMENT DISTRICT[1]		Varies by location	1,500-2,500
TERRACE VIEW DISTRICT	Commercial		2,500
UNCLASSIFIED USE DISTRICT[1]		Varies by location	1,500-2,500
A-10	Agricultural	1 Dwelling Unit per 10 acres, located in unincorporated King County.	1,500
RA-5	Rural Area	1 Dwelling Unit per 5 acres, located in unincorporated King County.	1,500
R-1	Residential	1 Dwelling Unit per acre, located in unincorporated King County	1,500
R-4	Residential	4 Dwelling Units per acre, located in unincorporated King County	1,500

Note:

1. Required fire flow will be determined on a case-by-case basis pending development or re-development type.

Figure 2-5 | Comprehensive Future Land Use and Zoning Map

2.7.3 Projected Demographic Growth

Many factors influence population growth including the state of the economy, interest rates, annexation of adjacent areas, and up-zoning for new development. Growth management policies, along with coordination between local governments, should make development more predictable and growth projections more accurate than they have been historically. The City's Comprehensive Plan, as well as this Plan, are key documents to aid the City in preparing for the predicted growth. However, it is common for actual growth rates to vary from those predicted. In addition, growth rates will vary between various parts of the City based on the availability of services and the costs to develop for the zoned use.

Housing, population, and employment projections were used to calculate rates of growth. PSRC's Vision 2050 requires the City to plan for a given number of additional housing units and jobs. The demographic projections for population and employment were allocated based on water meter locations within the four Water Service Areas that comprise the RWSA. Population projections extending beyond the RWSA boundary were modified or eliminated and are not included in the projections.

2.7.3.1 Demographic Projections

Existing and future demographic projections consistent with the City's GMA goals were provided by the City for 2021 and 2044. City planning provided projections of housing, population, and employment growth based on TAZ data. The intermediate 10-year planning horizon (2034) was interpolated assuming consistent compounding growth across the planning period.

The projections were further delineated by Service Area, as growth is expected to vary due to zoning, availability of vacant or re-developable land, existing and proposed infrastructure, etc. Demographic growth rates, rather than total number of people or employed people, were used to develop demand projections. The resulting demographic growth rates as a compounding annual percentage are presented in **Table 2-14.** Total population is projected to annually increase by 1.5 percent from 2021 to 2044 and total employment is projected to increase by 1.9 percent annually over the same period. Overall, the City is planning for an additional 24,987 people and 20,525 employed people by 2044 within the RWSA.

Table 2-14 | Growth Rates by Customer Class and Service Area

	Total Growth from 2021 to 2044 (Housing Units/Population)	Total Growth from 2021 to 2044 (%)	Annual Average Compounding Growth (%)
Single-Family Unit Projections			
Lea Hill	201	5.9%	0.248%
Valley	275	5.3%	0.223%
Lakeland	534	27.0%	1.043%
Academy	436	36.3%	1.355%
Multi-Family Unit Projections			
Lea Hill	254	12.6%	0.518%
Valley	7,862	77.1%	2.515%
Lakeland	1,003	55.7%	1.943%
Academy	124	10.4%	0.433%
Population Projections			
Lea Hill	1,245	8.2%	0.343%
Valley	18,009	44.1%	1.602%

	Total Growth from 2021 to 2044 (Housing Units/Population)	Total Growth from 2021 to 2044 (%)	Annual Average Compounding Growth (%)
Lakeland	4,113	39.4%	1.456%
Academy	1,621	24.6%	0.962%
Employment Projections			
Lea Hill	484	30.6%	1.168%
Valley	18,692	43.8%	1.586%
Lakeland	171	31.1%	1.172%
Academy	1,178	77.8%	0.316%

Table 2-15 summarizes the calculated demographic projections for population or employment projections by Service Area for each category when applying the growth rates from **Table 2-14.**

Table 2-15 | Population and Employment Projections Calculated by Service Area

	2024	2034	2044
Single-Family Population			
Lea Hill	10,498	10,864	11,243
Valley	19,889	23,315	27,330
Lakeland	4,394	5,077	5,866
Academy	5,009	5,512	6,066
Subtotal	**39,789**	**44,767**	**50,505**
Multi-Family Population			
Lea Hill	5,341	5,527	5,719
Valley	25,203	29,544	34,633
Lakeland	3,454	3,991	4,612
Academy	1,535	1,689	1,859
Subtotal	**35,533**	**40,752**	**46,824**
Total Population			
Lea Hill	15,839	16,391	16,962
Valley	45,092	52,859	61,964
Lakeland	7,848	9,068	10,478
Academy	6,544	7,201	7,925
Subtotal	**75,323**	**85,519**	**97,328**
Employment			
Lea Hill	1,720	1,932	2,170
Valley	46,946	54,948	64,313
Lakeland	596	669	752
Academy	1,605	1,656	1,709
Subtotal	**50,867**	**59,205**	**68,944**

The demographic growth for each Service Area is shown in **Figure 2-6, Figure 2-7**, and **Figure 2-8**, where single family population, multi-family population, and employment population growth are each presented in a different graph. The figures show the anticipated variability in growth between the Service Areas. For example, employment growth rate (percentage) is projected to be greater in the Valley Service Area than the other Services Areas between 2024 and 2044. Since the Valley Service Area has a much greater magnitude of population and employment than the other Service Areas, minor differences in growth projection percentages results in larger increases in total population and employment numbers. The Valley

Service Area is projected to represent 64 percent of the system's population and 93 percent of the system's employment in 2044.

Figure 2-6 | Single Family Population Projections by Service Area

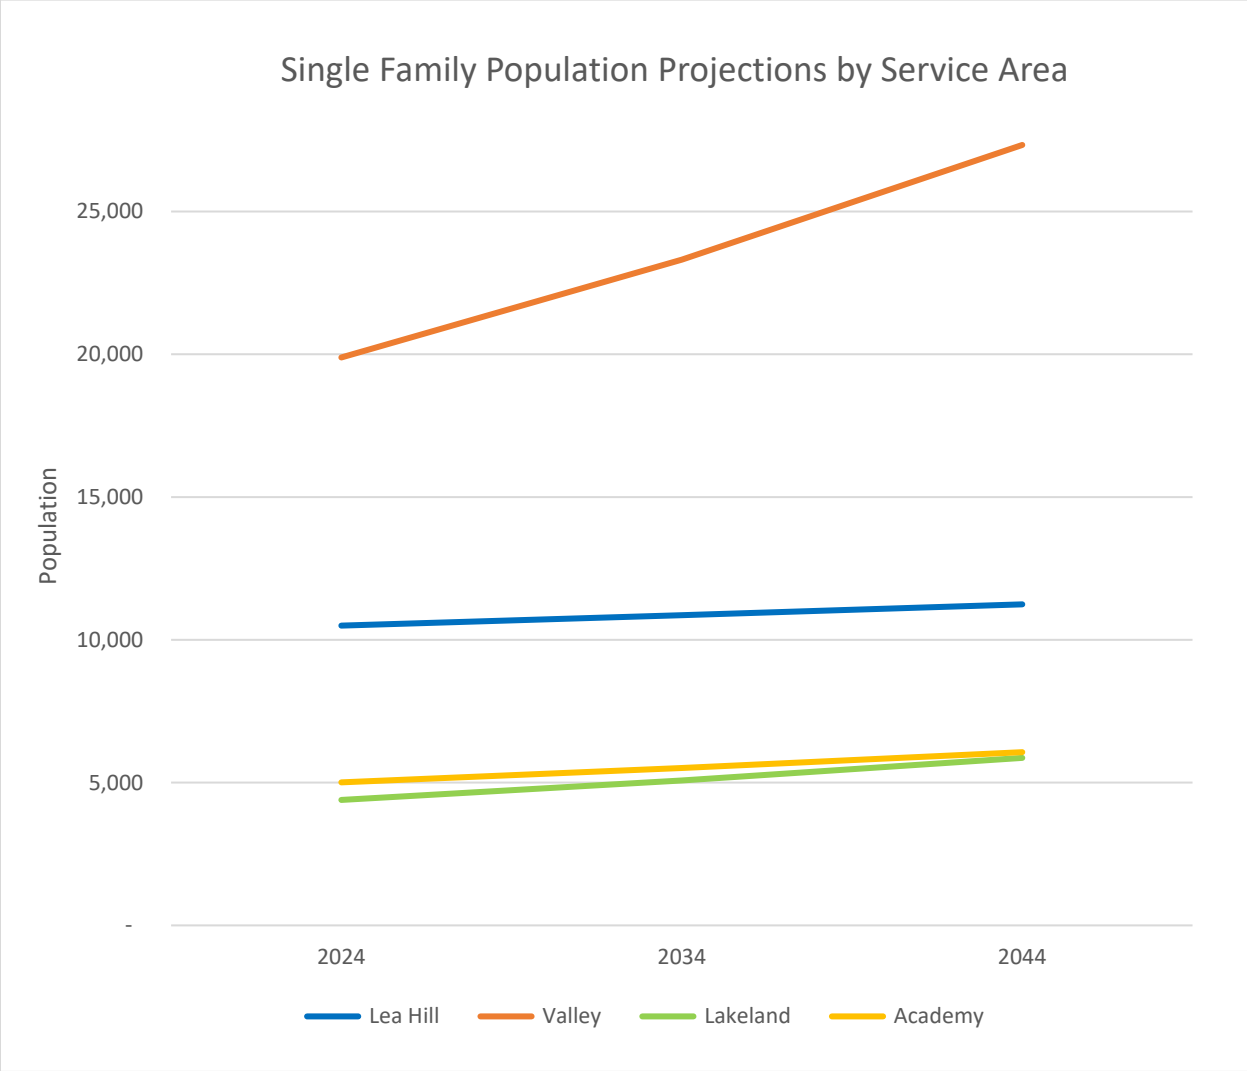


Figure 2-7 | Multi-Family Population Projections by Service Area

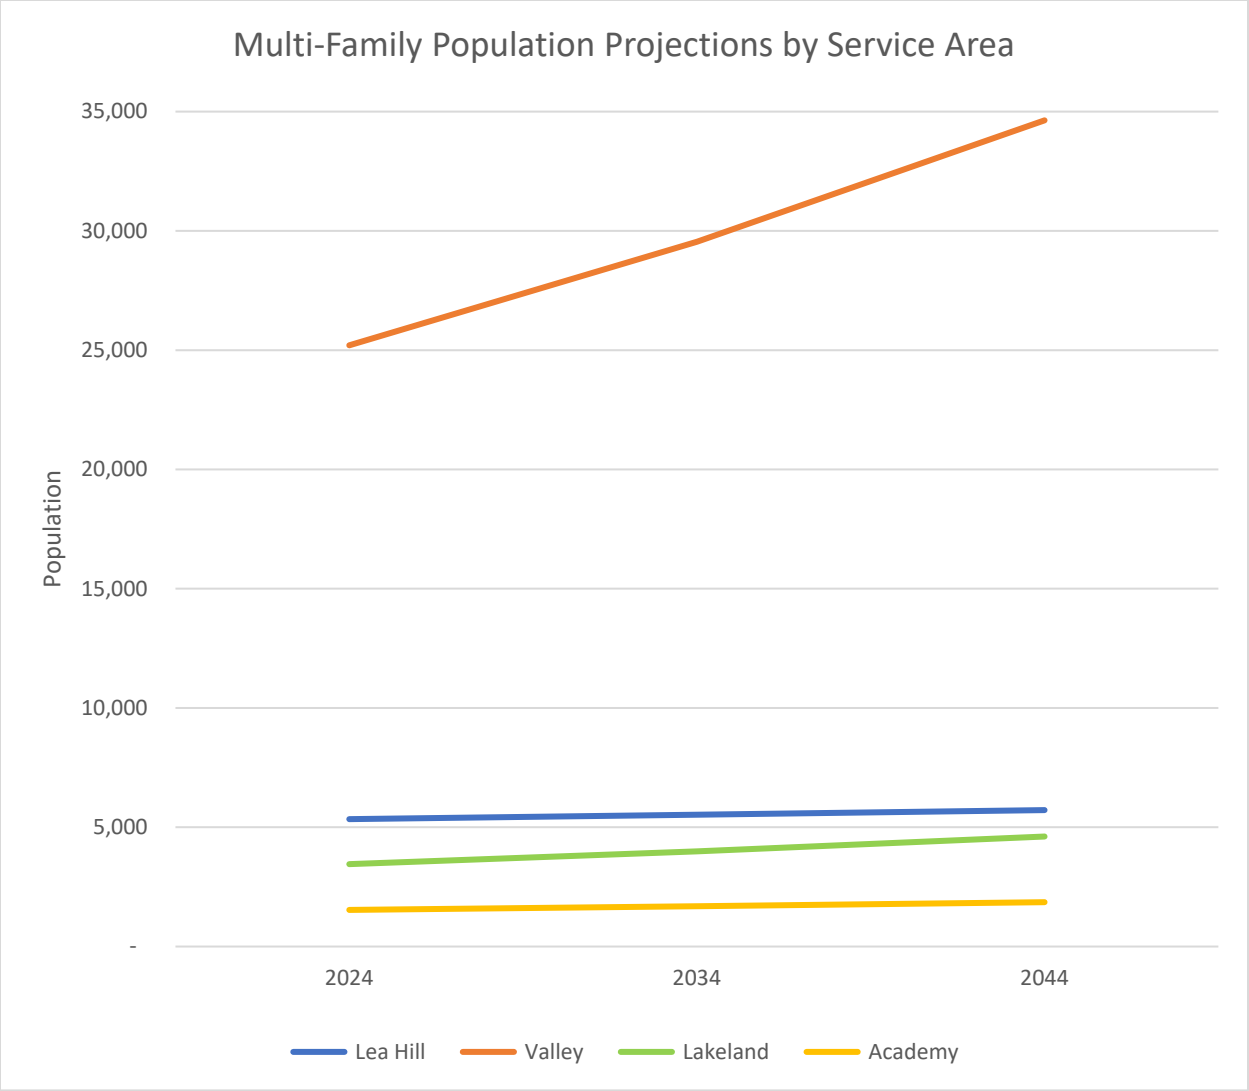

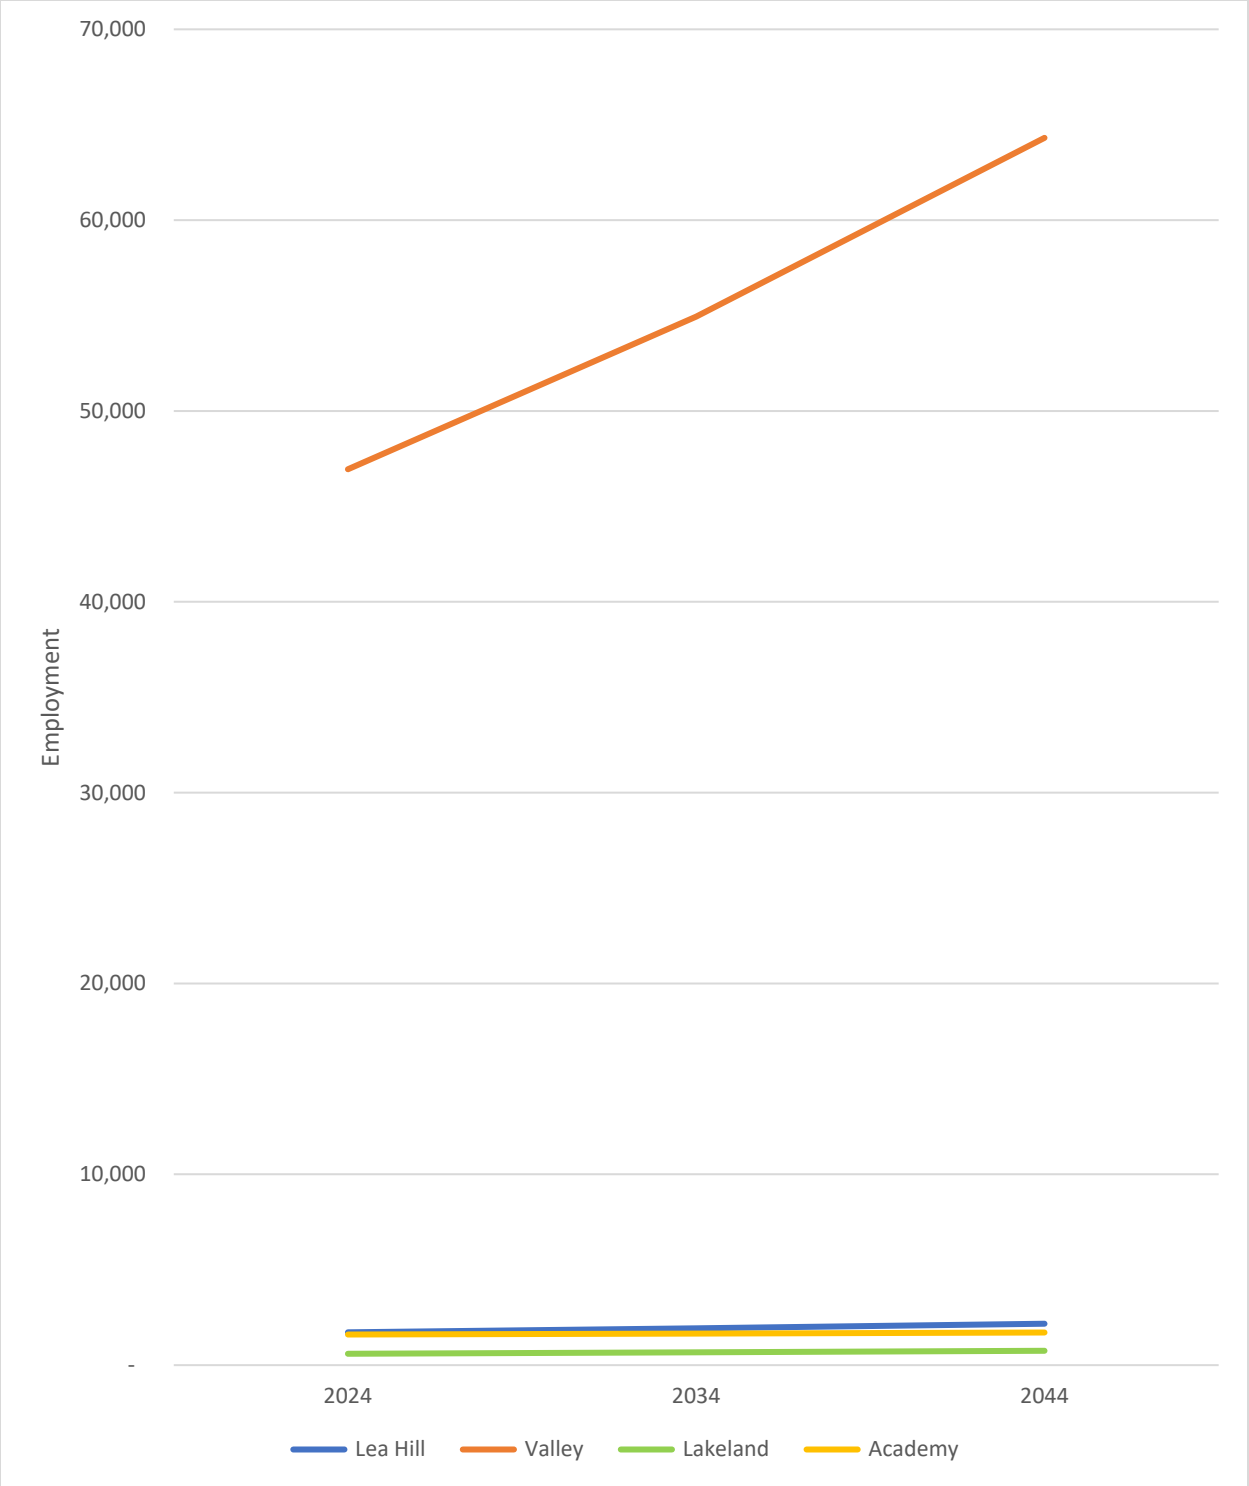

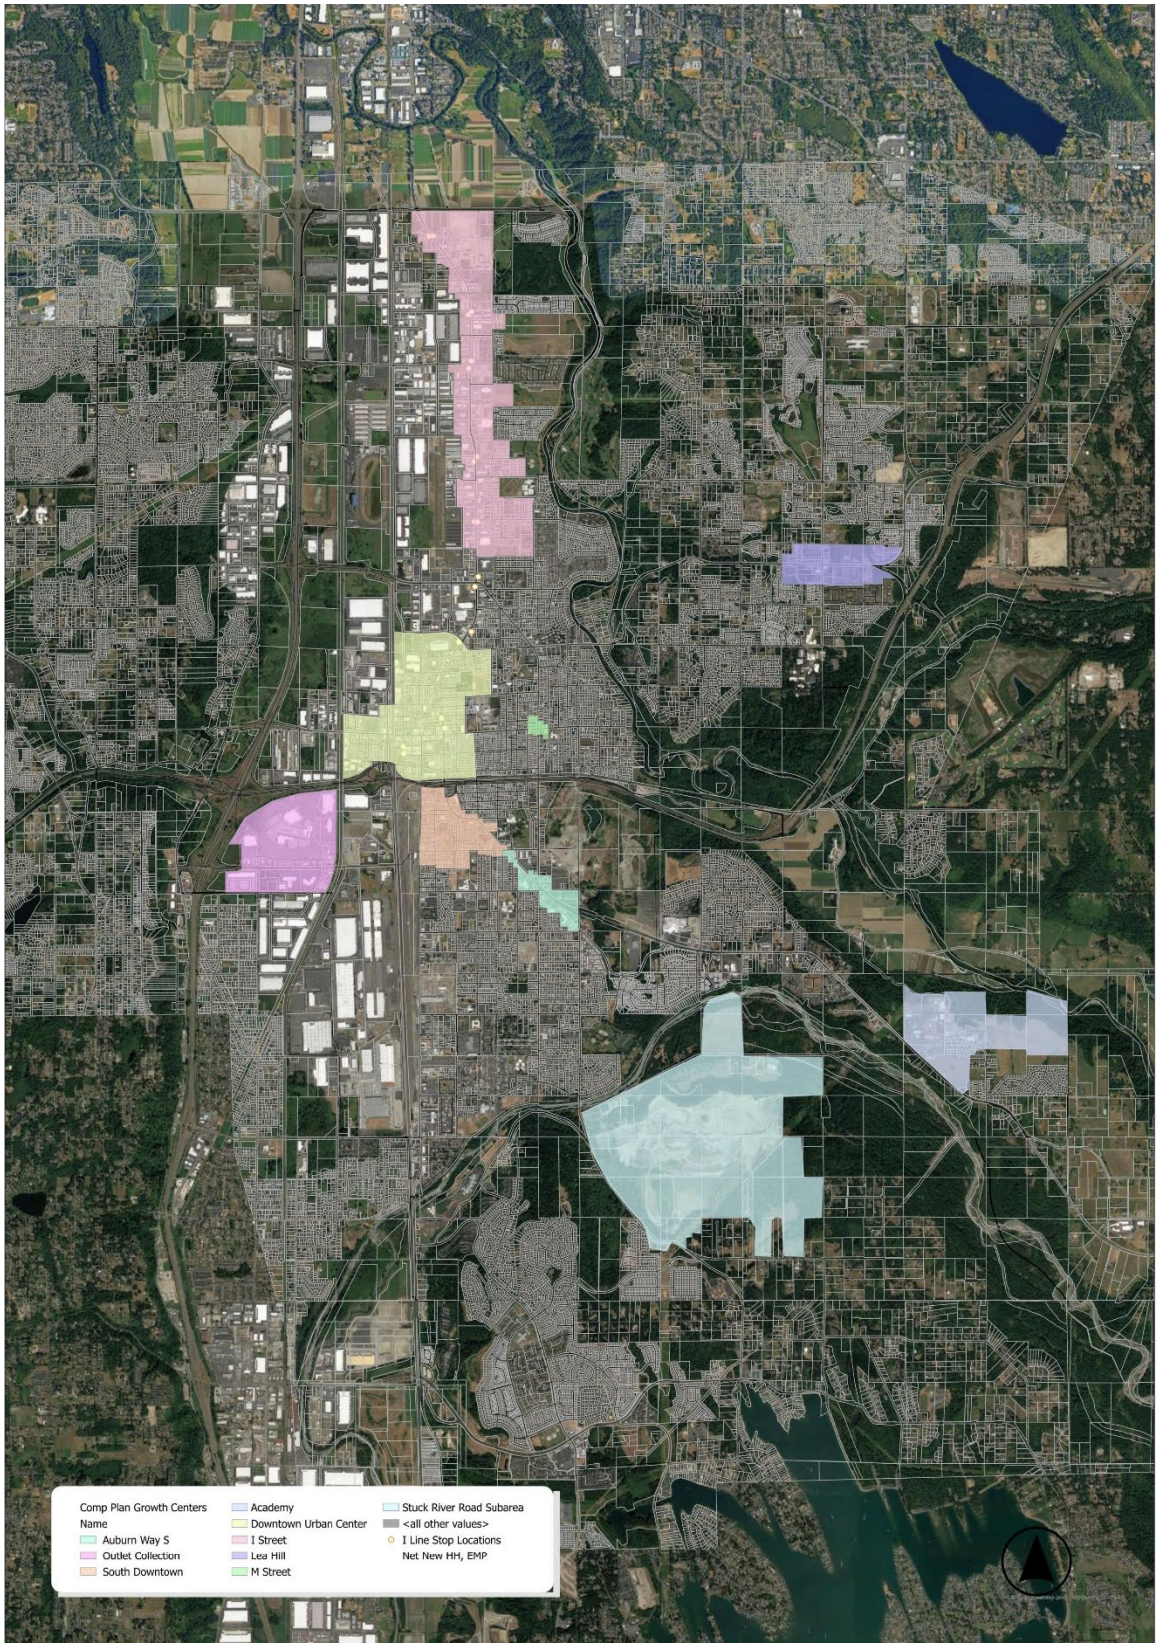

Figure 2-8 | Employment Projections by Service Area

Areas anticipated to have higher than average population and employment growth through 2044, termed "Growth Centers" identified in the City's Comprehensive Plan, are presented in **Figure 2-9.** Demand in each Service Area was modified during the system analysis to reflect focus growth in the areas identified in **Figure 2-9**, matching the population and employment growth projection data.

Figure 2-9 | Map of Projected Areas with Greatest Population Growth

2.8 Future Water Demand

2.8.1 Projected Number of Connections

The number of water connections was used in determining the ERU, ADD, and MDD projections. The number of water connections in the future was projected using the demographic growth rates presented in **Table 2-14** and the number of existing water accounts presented in **Table 2-2**. The projected future connections by both Service Area and customer classification are presented in **Table 2-16.**

- The respective housing unit growth rates for each Service Area were used to calculate projected SFR and MFR connections.
- The School connections were projected by multiplying the percentage of the City population aged 5-19 (22%) by population growth rates for each Service Area.
- The projected employment growth rates were used to calculate future Commercial, Municipal (City Accounts), and Irrigation connections.
- The City's largest user (Boeing) is not included in **Table 2-16**, their projections are based on individual demand and are presented separately. Boeing also accounts for the only Manufacturing and Industrial connections within the City.
- Wholesale customers are not included in **Table 2-16**, their projections are based on individual demand and are presented separately.

Table 2-16 | Connection Projections by Customer Classification and Service Area

	2024	2034	2044

2.8.1.1 Lea Hill Service Area

The Lea Hill Service Area is located east of the Auburn-Kent Valley and the Green River. The area is mostly residential with supportive neighborhood businesses. Green River College is in the Lea Hill Service Area and has a concentration of multi-family residential units in the vicinity of the college.

The Lea Hill service area is projected to have the lowest growth rate in population with a 0.3 percent per year average increase from 2021 to 2044. This Service Area is projected to have a moderate growth in employment with a 1.2 percent growth per year from 2021 to 2044.

2.8.1.2 Valley Service Area

The Valley Service Area contains a significant amount of developable land designated as multi-family and commercial, including the Downtown Urban Center. The Service Area is projected to have the highest growth rate in population at 1.6 percent per year from 2021 to 2044. The multi-family connections in this area are projected to grow 2.5 percent per year from 2021 to 2044 and employment is projected to grow 1.6 percent per year. These growth projections are based on the City's anticipation of growth trends and the redevelopment of Auburn's Downtown Urban Center, as well as commercial developments in locations with available space throughout the Service Area.

2.8.1.3 Lakeland Service Area

The Lakeland Service Area includes the entire City south of the White River. A sizable portion of this Service Area is designated residential conservancy land use, which is anticipated to be developed within the planning horizon related to the anticipated closure of the Segale Gravel Pit. The area includes proposed special planning areas for Stuck River Road and Mount Rainier Vista anticipated to be developed with a moderate population growth rate of 1.5 percent per year. This Service Area is projected to have a moderate growth in employment with a 1.2 percent growth per year from 2021 to 2044.

2.8.1.4 Academy Service Area

The Academy Service Area is a well-developed portion of the City. It is expected to have a population growth of 1.0 percent per year from 2021 to 2044. This Service Area is projected to have minimal growth in employment with a 0.3 percent per year increase from 2021 to 2044.

2.8.2 Projected Water Demand

Projecting future water demand is one of the key elements of the water system planning process. Identification of system improvements such as supply, pumping, storage, and piping requirements are all related to demand projections. This section summarizes the ERU, ADD, and MDD projections, as well as the potential range in future demands associated with various factors, such as water use per ERU, DSL, and demographic growth rate.

2.8.2.1 Potential Range in Future Water Demand

Several factors and assumptions affect the accuracy of projected future water demands. Recognizing that certain assumptions built into the demand projections will vary in the future, the projections were developed for medium and high demand scenarios to provide a range in demands that may be experienced in the future. The medium projection will be used for the system analysis in **Chapter 3**, while the high projection will be used for the water right evaluation in **Chapter 5**. The system analysis determines future pumping, storage, and distribution system deficiencies and identifies potential improvements to achieve the City's established capacity criteria. The water right evaluation looks at both water rights and overall supply capacity. Only the medium projections are presented within this Chapter. The variables considered in developing the range of demand projections are summarized in **Table 2-17** and are discussed below.

- Future Water Connections: The future water connections are presented in **Table 2-16** and were used for both demand scenarios.
- Water Use Per ERU_{ADD}: Water use per ERU for the average demand day projections are based on the 75th percentile of the historical data, which is the medium demand scenario, presented in **Table 2-4**. This value equals 182 gpd per ERU. The high demand scenario used the highest annual value from the data set presented in **Table 2-4**, which equals 193 gpd per ERU.
- ERUs per Account: The historical ERU per account by customer classification presented in **Table 2-4** was used to develop demand projections. The ERU per Account values are based on the 75th percentile of the historical data and a water use per ERU value of 182 gpd per ERU. These values are used in both projections.
- Distribution System Leakage: Historical annual DSL varied between 0.7 and 7.4 percent of the City's total City production between 2015 and 2022. The average three-year rolling average of historical DSL values of 5.2 percent is utilized in the medium demand scenario and the maximum three-year rolling average of 6.8 percent was used for the high demand scenario.
- Authorized Unbilled Consumption: Historical annual authorized unbilled consumption varied between 0.14 and 0.54 percent of the City's total billed consumption between 2015 and 2022. The 75^{th} percentile value of 0.27 percent is utilized in the medium demand scenario and the maximum values of 0.54 percent is used for the high demand scenario.
- Water Use Per ERU_{MDD}: Water use per ERU for the maximum demand day projections are based on 75th percentile of the historical data, which is the medium demand scenario, presented in **Table**

2-10. This value equals 322 gpd per ERU. The high demand scenario used the highest annual value from the data set presented in Table 2-10, which is 358 gpd per ERU.

- MDD/ADD Peaking Factor: The 75th percentile of historical annual peaking factors of 1.77 is utilized in the medium demand scenario. The highest value in the historical annual peaking factor data set was used for the high demand scenario, which is 1.97.

The City's largest user (Boeing) and wholesale customers are not included in Table 2-17, their projections are based on individual demand and are presented separately.

Table 2-17 | Proposed Planning Values for Demand Projections

Assumptions	Medium Demand Scenario	High Demand Scenario
Water Demand per ERU_{ADD} (gpd)	182	193
DSL	5.2%	6.8%
Authorized Unbilled	0.27%	0.54%
Water Demand per ERU_{MDD} (gpd)	322	358
MDD/ADD Peaking Factor	1.77	1.97

2.8.3 Large User Demand Forecast

The large user term is used to identify customers consuming the greatest volume of water on an annual basis as presented in Table 2-6. Projections for the City's single largest user (Boeing) is separated from the demand forecasts to aid in accurate forecasting and in the system analyses. The forecasts were based on historical water use data from 2015 through 2022 and is presented in Table 2-18. The projected demand will use the 75th percentile of water use from the historical period of record. Boeing's consumption has trended down over the historical period of record, therefore, the projected demand is conservative and actual consumption is anticipated to be less than the value presented in Table 2-18.

Wholesale connections are also projected separately in Table 2-22. The remaining largest users are not presented separately in demand forecasts; their projected consumption is built into the overall Service Area projections by customer classification.

Table 2-18 | Large User Demand Projections

Large User	Customer Class	Service Area	Representative Historical Water Use Statistic[1]	Representative Annual Water Use (MG)[2]	Projected ERUs in 2044
Boeing	Manufacturing Commercial	Valley	75th percentile	210.6	3,168

Notes:
1. Historical water use data from 2015 through 2022
2. Based on representative historical water use statistic.

2.8.4 Projected Retail ERUs

Future water system demands are based on projected ERUs, which in turn are based on the projected water consumption by customer classification and the projected number of accounts discussed earlier in this chapter. Table 2-19 shows the projected ERUs for the City's individual service areas over the planning period. The projected number of ERUs for each Service Area was calculated by multiplying the projected number of accounts, provided in Table 2-16, by the number of ERUs per account, as summarized in Table

2-3, for each customer class. Wholesale customer demand in terms of ERUs is not included in the demand projections below and must be added separately as summarized in Table 2-23.

Table 2-19 | ERU Projections by Customer Class and Service Area

	2024 ERU	2034 ERU	2044 ERU

2.8.5 Projected Retail Average Day and Maximum Day Demands

The ADD projections include the projected customer demands by customer classification, authorized unbilled consumption, and DSL by service area. The resulting ADD projections are summarized in **Table 2-20**.

- Customer demands by classification were calculated by multiplying the projected ERUs summarized in **Table 2-19** by the average ERU water use (182 gpd/ERU).
- Authorized unbilled consumption projections were calculated by multiplying the sum of all customer classification use by the medium demand scenario percentage presented in **Table 2-17**.
- DSL consumption projections were calculated by multiplying the sum of all customer classification use and authorized unbilled use by the medium demand scenario percentage presented in **Table 2-17** for DSL.

2.8.6 Wholesale Demands

The City currently has a wholesale water contract with the City of Algona. The City is also planning to supply wholesale water for the MIT's future fish hatchery. As stated in the Retail Water Service Policy, "the City will plan for and provide water service to all retail customers and wholesale customers with firm contracts. As supply permits, the City may provide water to wholesale customers without firm contracts unilaterally or as part of a capital improvement partnership agreement." The wholesale demands for the City are summarized in Table 2-22.

Algona's current agreement allows for the sale of up to 525,000 gallons per day on a firm basis for the ADD and up to 1,114,00 gallons per day on a firm basis for the MDD. In 2022, Algona purchased an average of 342,953 gallons per day of water from the City. Algona's 2022 Water System Plan (WSP) projects 2042 ADD to be 404,278 gallons per day and 2042 MDD to be 766,137 gallons per day. Algona's WSP demand projections were used for projecting the wholesale water purchases by Algona, rather than the contractual amount, as presented in Table 2-22.

MIT plans to develop a fish hatchery on the White River. An agreement dated from 1986 (included in Appendix G) requires that the City provide the tribe with an average annual demand of 3.9 cubic feet per second (cfs) (2.52 mgd) from Coal Creek Springs for MIT's future fishery enhancement purposes. The agreement does not specify an MDD but rather states:

"The Tribe and the City agree to work in harmony toward a mutually satisfactory allocation of the Coal Creek waters. In furtherance of this goal, the City understands that the water requirements for fishery enhancement purposes are greatest in the winter and spring months. Accordingly, the City agrees to increase the amount of water above 3.9 cfs as needed for fishery purposes. The Tribe understands that the City's requirement for water for domestic use is greatest in the summer and fall months. Accordingly, the Tribe agrees to decrease its use of water below 3.9 cfs, as needed for domestic water purposes…It is further understood that the tribe requires a minimum of 3 cfs at all times for fishery enhancement purposes".

The intent of this agreement indicates that the MIT demand will be at a minimum when the City's demands are at their maximum. Based on this understanding, the planned MDD for the MIT is 1.5 mgd and the ADD was 2.5 mgd. For planning purposes, the MIT demand was added to the Algona demand and included in the "Retail + firm wholesale" group of demands.

LMWD has an interruptible wholesale contract that can be terminated at any time and is therefore represented separately. As discussed in the Historical Wholesale Consumption section, LMWD discontinued regular purchase of water from the City in 2017 per the amendment to IA2 but maintains an intertie with the City to use wholesale water supply on an as-needed basis. LMWD may purchase up to 2.5 mgd of wholesale water per IA2. The contract does not have an expiration date and therefore 2.5 mgd of interruptible wholesale demand is projected through 2044.

Table 2-22 | Wholesale Demand Projections

Wholesale Customer	Service Area	Contractual Delivery[1]	2024 (mgd)	2034 (mgd)	2044 (mgd)[2]
ADD					
Algona	Valley	Firm	0.37	0.39	0.41
MIT Fish Hatchery	Valley	Firm	2.5	2.5	2.5
LMWD	Lea Hill	Interruptible	2.5	2.5	2.5
MDD					
Algona	Valley	Firm	0.69	0.73	0.78
MIT Fish Hatchery	Valley	Firm	1.5	1.5	1.5
LMWD	Lea Hill	Interruptible	2.5	2.5	2.5

Notes:

1. The City will plan for and provide water services to all retail customers and wholesale customers with firm contracts. As supply permits, the City may provide water to wholesale customers without firm contracts unilaterally or as part of a CIP agreement.
2. Algona's projections are provided through 2042; their projected rate increase was used to project consumption to 2044.

2.8.7 Total Demands

The total projected demands are tabulated for retail customers, firm wholesale, and interruptible wholesale in **Table 2-23.** The demands are presented separately to show the level of obligation to the City's customers. Projected retail ADD, MDD, and ERUs are presented by Service Area for the medium demand scenario. Additionally, the ADD and MDD are presented as the total of the projected retail demand and firm wholesale. The retail with firm wholesale represents the projected demand that is used as the basis for the system analysis and are shown in **Figure 2-10**. The difference between the historical and projected wholesale demands is due to the projected allocation of the supply to the proposed MIT Fish Hatchery, per the 1986 Stipulation Settlement Agreement. Additionally, both CWD and LMWD discontinued regular purchase of water from the City in 2017.

The 2044 retail ADD demand is projected to 9.02 mgd, which represents a 28 percent increase from 2024. Throughout the planning period, approximately 40 percent of the City's demand may be from wholesale purchases when both firm and interruptible supply are considered. The MDD is projected to increase by 24 percent from 2024 to 2044 for the sum of firm wholesale customers and retail customers.

Average Day Demand (mgd)	12.42	13.33	14.43
Maximum Day Demand (mgd)	17.16	18.77	20.71

Note:

1. The Algona ERU values were calculated using the City of Algona's projected demand and the City of Auburn's ERU_{ADD} and ERU_{MDD} factors.

Figure 2-10 | Projected Retail Plus Firm Wholesale ADD and MDD

CHAPTER 3

System Analysis and Asset Management

This chapter's objective is to identify existing facilities and determine their capacity to reliably satisfy current and projected water demands with safe drinking water. The cost of addressing identified infrastructure deficiencies and operational and maintenance improvements is addressed in priority order in Chapter 8.

This chapter addresses the following topics:

3.1 Asset Management – Asset Inventory and Analysis
3.2 Water Quality
3.3 Design Standards
3.4 Capacity Analysis
3.5 Summary of System Deficiencies

3.1 Asset Management – Asset Inventory and Analysis

This section establishes a date-based inventory of all system-owned water assets and satisfies the requirements of WAC 246-290-100(4)e(iii). The City actively assesses and plans for the maintenance, repair, and replacement of its major assets while preventive maintenance practices keep assets in good condition, thereby extending their useful life.

The City utilizes Cartegraph, an asset management software program, in conjunction with ESRI ArcGIS, a geographic information system (GIS) software program to manage its water assets. GIS is updated using record drawings as projects are completed and Cartegraph is linked to automatically update with new GIS information. Cartegraph is used to track and schedule maintenance activities, as well as materials, labor hours, costs and project timelines. Capital costs for the replacement of assets are assessed on a case-by-case basis.

The City's water system is comprised of groundwater wells, springs, interties with other water systems, treatment facilities, pump stations, storage facilities, pressure reducing stations, and water transmission and distribution pipelines. The City's water system includes 28 pressure zones in four different service areas: Lea Hill, Valley, Academy, and Lakeland. The location of major assets and pressure zones are shown in Figure 3-1. The hydraulic profile of the City's water system is presented in Figure 3-2, with enlargements provided as Figure 3-3 and Figure 3-4.

Water system vulnerabilities relating to risks from natural hazards, such as power outage, flooding, and earthquake are detailed in the Natural Hazard Vulnerability Summary, which is provided in Appendix U.

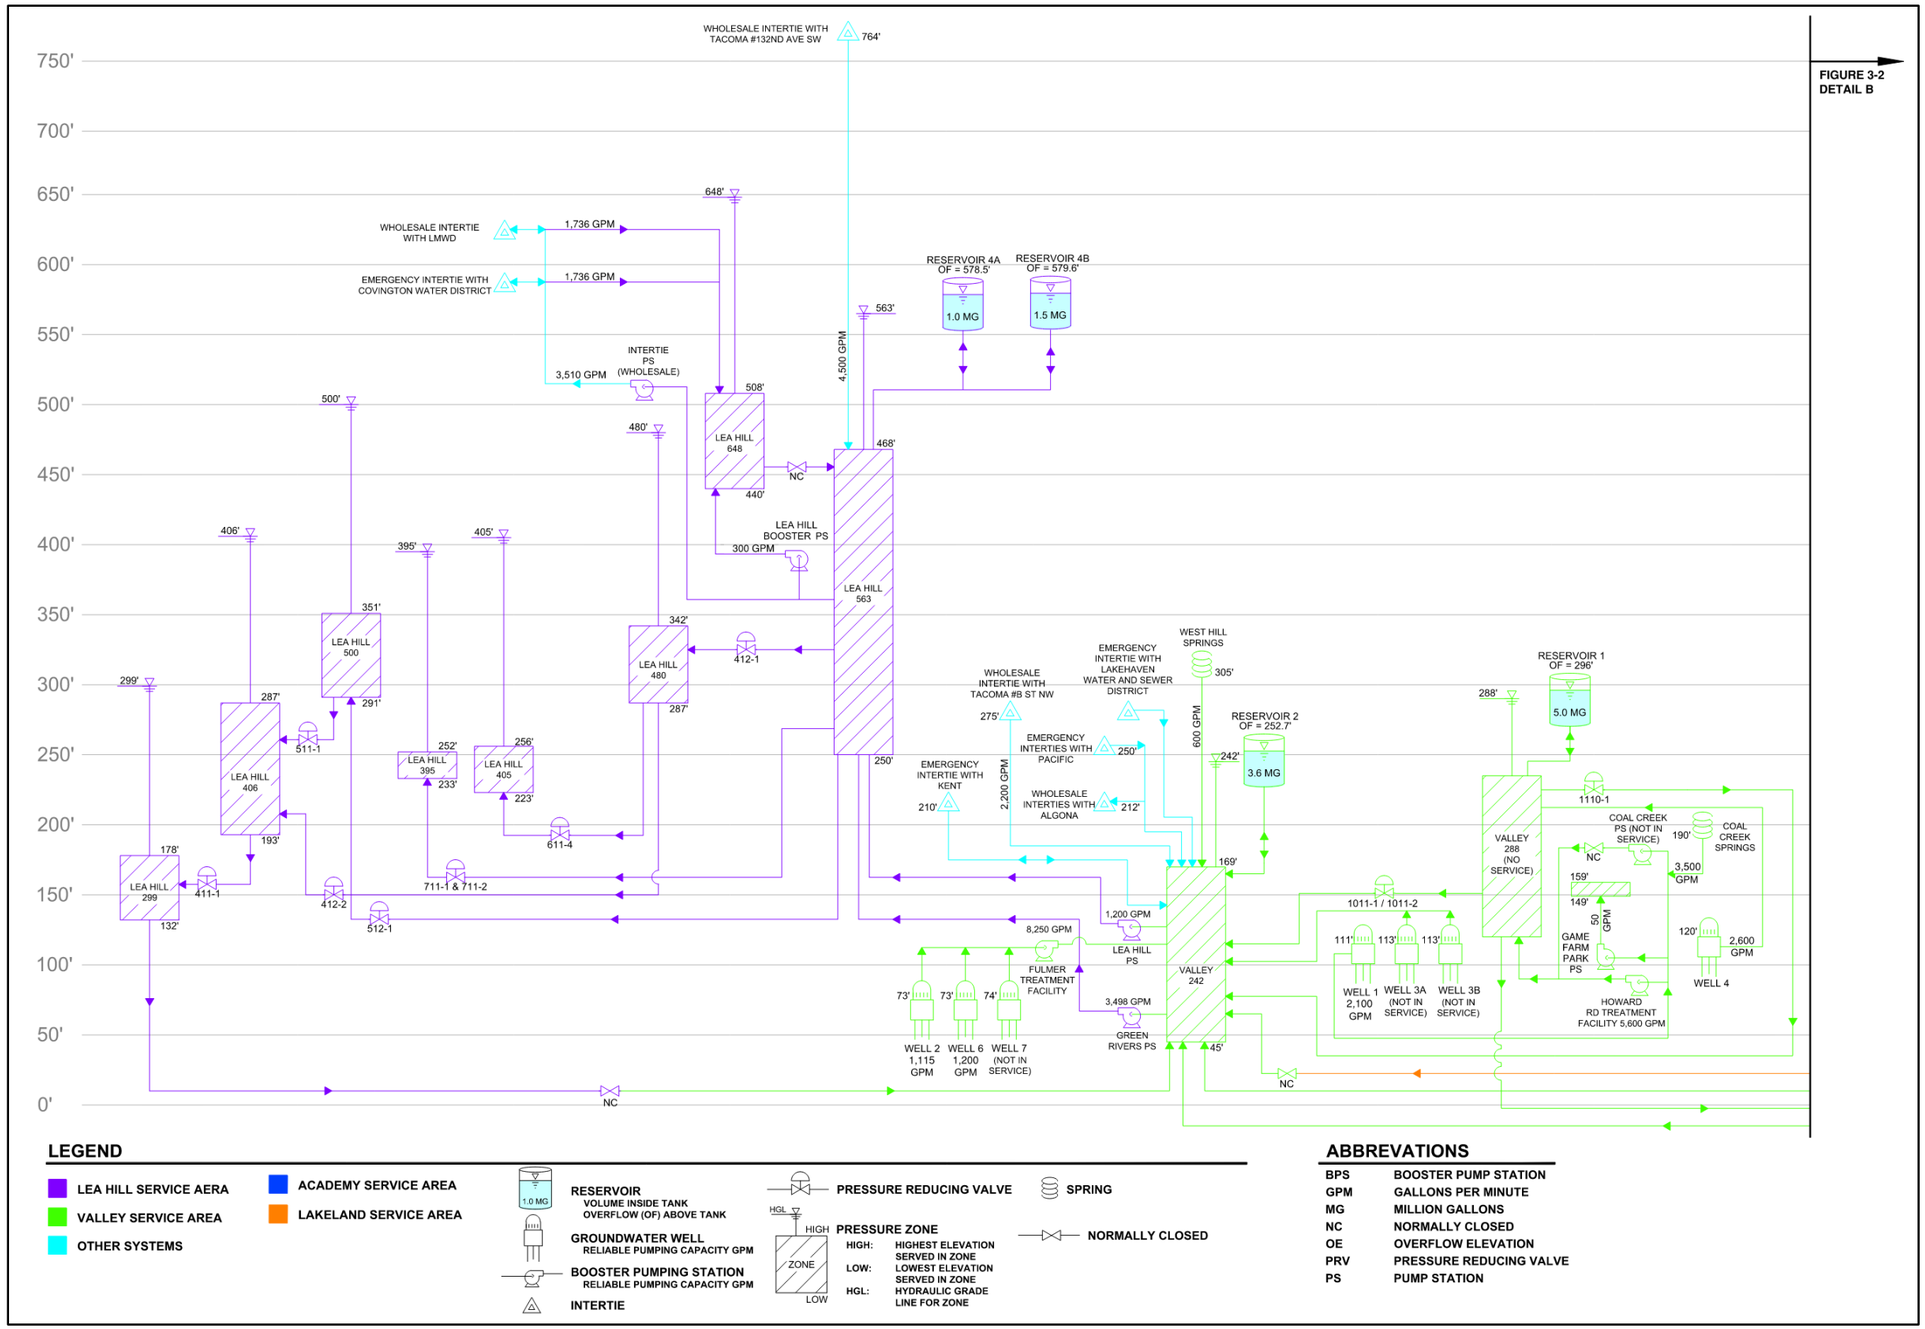

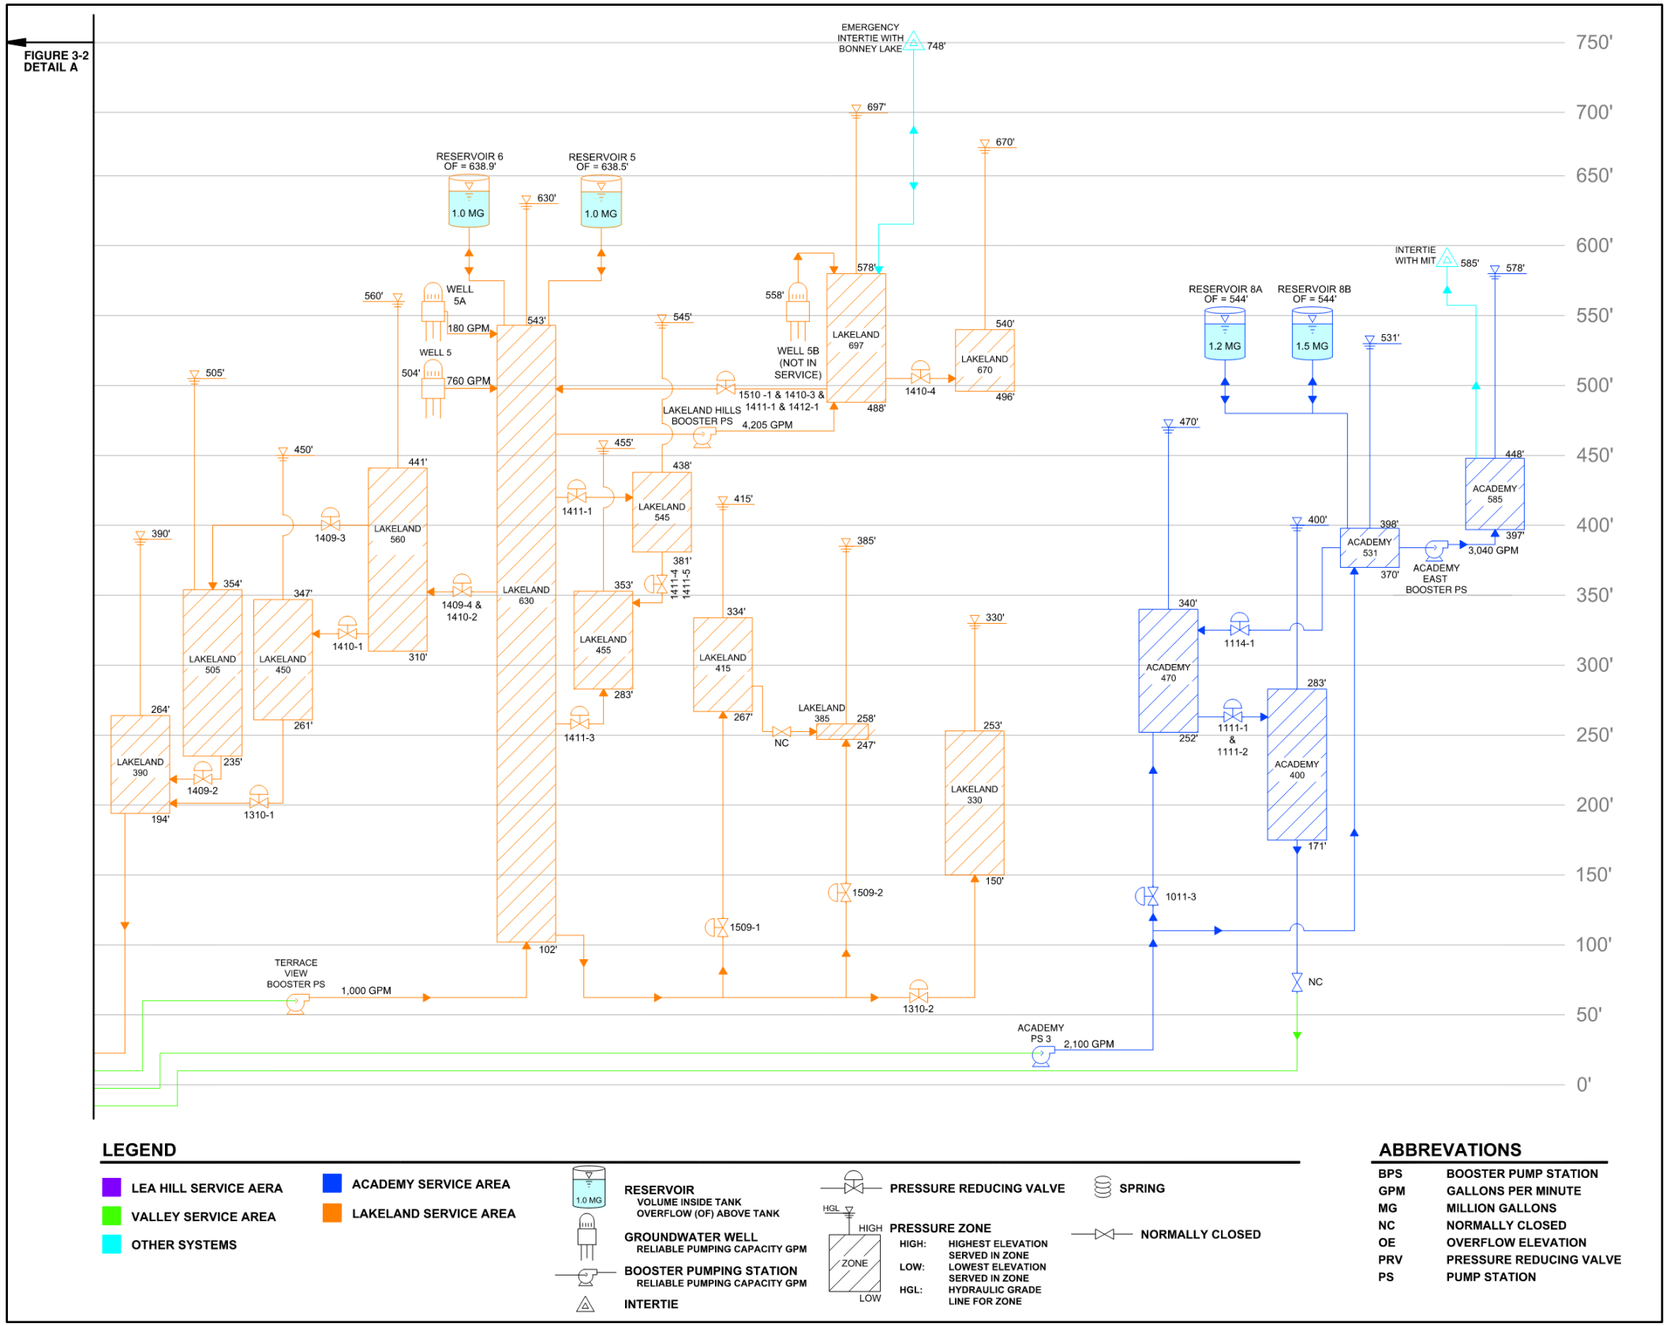

Figure 3-4 | Hydraulic Profile - Detail B

3.1.1 Distribution Facilities

The City' water distribution system includes approximately 300 miles of piping. **Table 3-1** summarizes the water piping inventory by size (diameter). The criticality ratings for the system's pipes are presented in **Table 3-1**, as criticality of the pipelines is assessed based on size. Water main and transmission pipelines vary in diameter from 4 to 36 inches, with a predominance of 8 and 12 inches, and range in age with the oldest piping dating back to 1925. Approximately 78 percent of the distribution system is ductile iron pipe.

Table 3-1 | Transmission and Distribution System Piping Inventory by Pipe Diameter

Distribution System Piping Diameter (inches)	Length (linear feet)	Design Life (years)	Criticality Rating (Bigger # = Less Critical)[1]
≤ 6	189,574	100	4
8-10	681,601		4
12-15	532,953		3
16-20	119,997		3
24-30	15,582		2
36-42	35		2
Unknown	1,380		--

Note:
1. Criticality was assessed based on pipe diameter. Larger diameter pipes were identified as being more critical than smaller diameter pipes.

Table 3-2 organizes water system piping by material and age and identifies the anticipated pipe condition. Pipe condition was assessed based on pipe age and remining useful life. Cast iron pipe that was installed after the 1930's, which constitutes over 48 miles of water mains or 16 percent of the total length of water mains in the City's system, was designated to have a significantly reduced design life of 50 years due to known pipe integrity issues. As such, the City is prioritizing replacement of cast iron pipe and regularly partners with other City projects to replace this piping efficiently and has capital programs to fund replacements as discussed further in **Chapter 8**. Piping that has an unknown material and unknown installation date will be updated in the City's GIS system and Cartegraph as more records research is completed.

In 2014, the City conducted leak detection testing and condition assessment of approximately 2.8 miles of 14 to 24-inch ductile iron and concrete composite pipe. The results indicated that the 20-inch and 16-inch ductile iron mains in the Lea Hill Service Area range from moderate to good condition. The Coal Creek Springs concrete composite main was identified as being in good condition. The 14-inch ductile iron main located in the Academy Service Area was suspected of being in poor condition, however this was later thought to be in decent condition as more information regarding the pipe material was obtained. A portion of the 14-inch piping was replaced as part of a roundabout project within Auburn Way S.

In 2020 the City conducted additional leak detection testing and condition assessment of approximately 13,500 feet of 10 to 16-inch cast iron main. With a focus on four specific sites: Auburn Way South, C Street Southwest, West Hill Springs, and Lea Hill Road. All the pipe on Auburn Way South and Lea Hill Road are in moderate condition. The pipe on C Street Southwest and at West Hill Springs are in poor to moderate condition. The C Street Southwest piping is currently being replaced by the City's "C St SW Preservation" capital project that will begin construction in in 2024.The West Hill Springs piping will be replaced in a forthcoming capital project titled "West Hill Springs Transmission Main Replacement" that is identified in **Chapter 8**.

		2010	4,112		86	2
Unknown	23,089	Unknown	23,089	50	--	--

Notes:

1. Condition was assessed based on remaining useful life of the pipe.
2. The City is investigating pipe materials in 2024 to verify pipe materials in the City's database that may be mislabeled.

The distribution system piping is delineated into pressure zones using Pressure Reducing Valves (PRVs). An inventory of the City's PRVs, as well as their size, remaining useful life, condition, and criticality are summarized in **Table 3-3**. As PRVs approach their anticipated design life, the City's Maintenance and Operations (M&O) staff remove and rebuild the valve to extend the useful life of the asset, when feasible.

Table 3-3 | Pressure Reducing Valve (PRV) Inventory

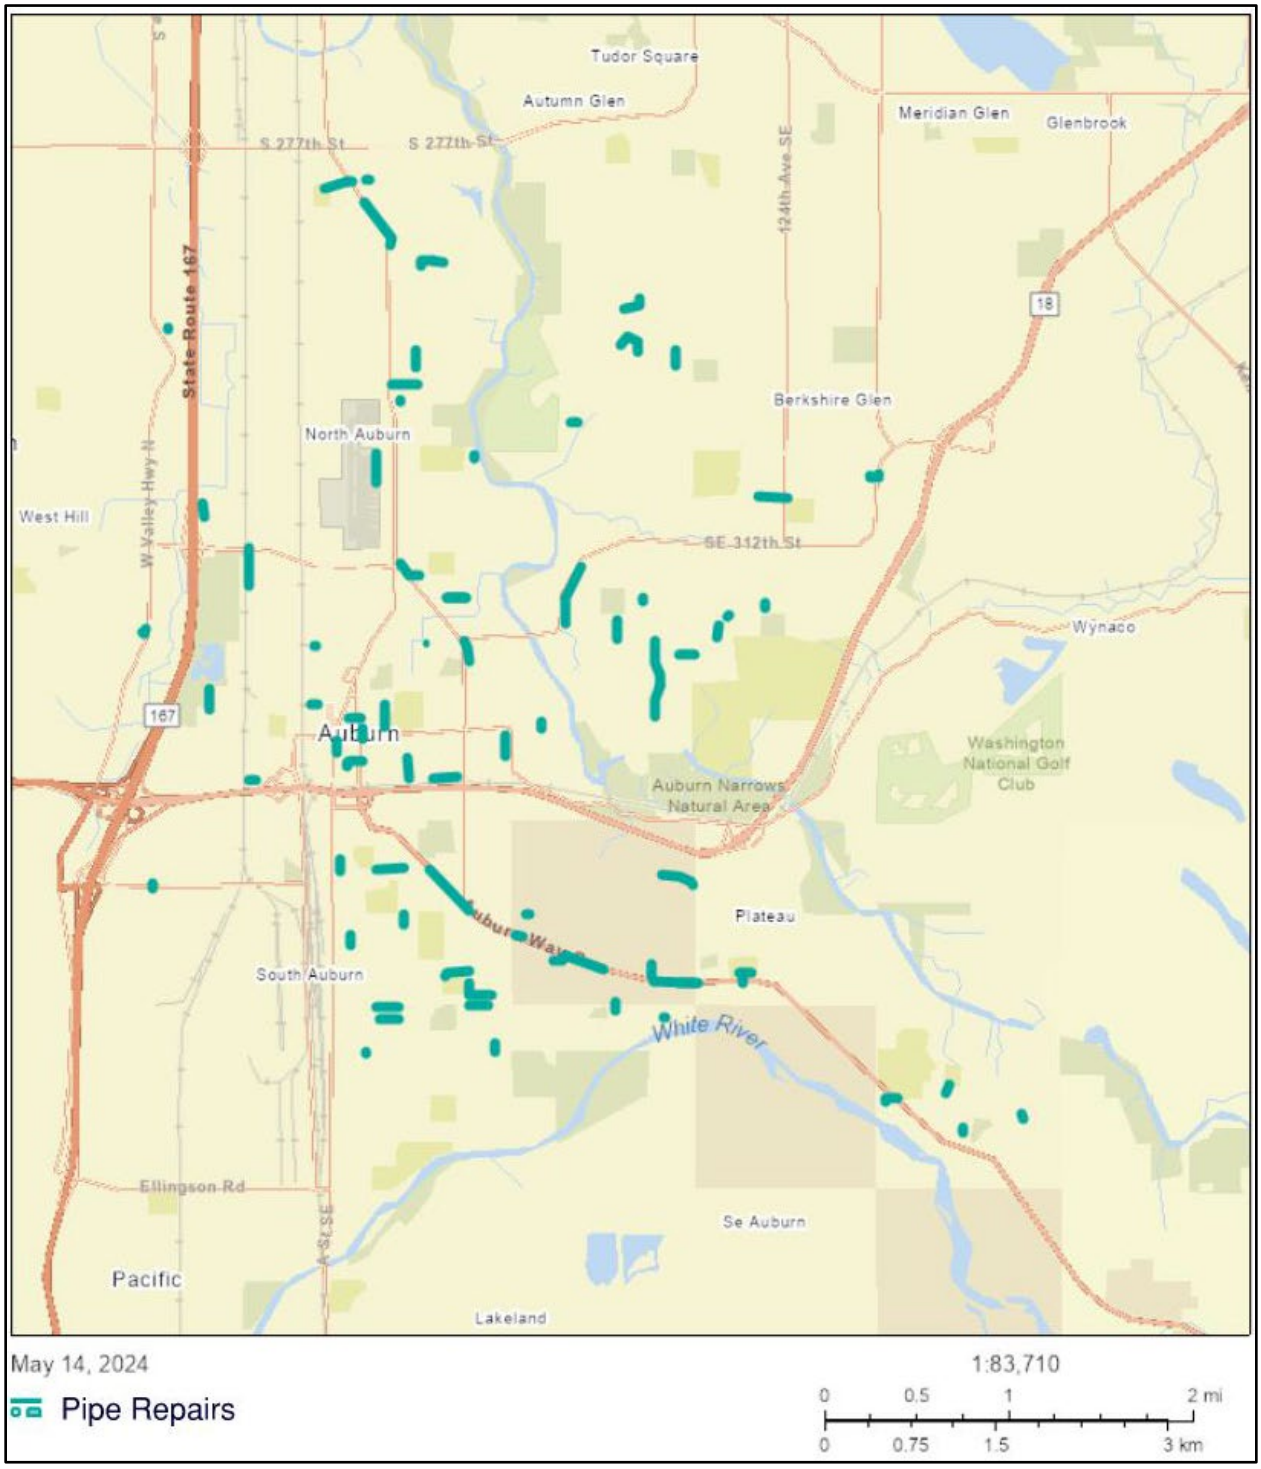
Figure 3-5 shows the locations of water main breaks and leaks that have required repair since 2014. A total of 93 repairs have been completed during this timeframe and include water main break and leak repairs, water main appurtenance repairs, service lines repairs, and repairs due to damage caused by construction contractors.

Figure 3-5 | Water Main Leak and Break Repair Locations from 2014-2024



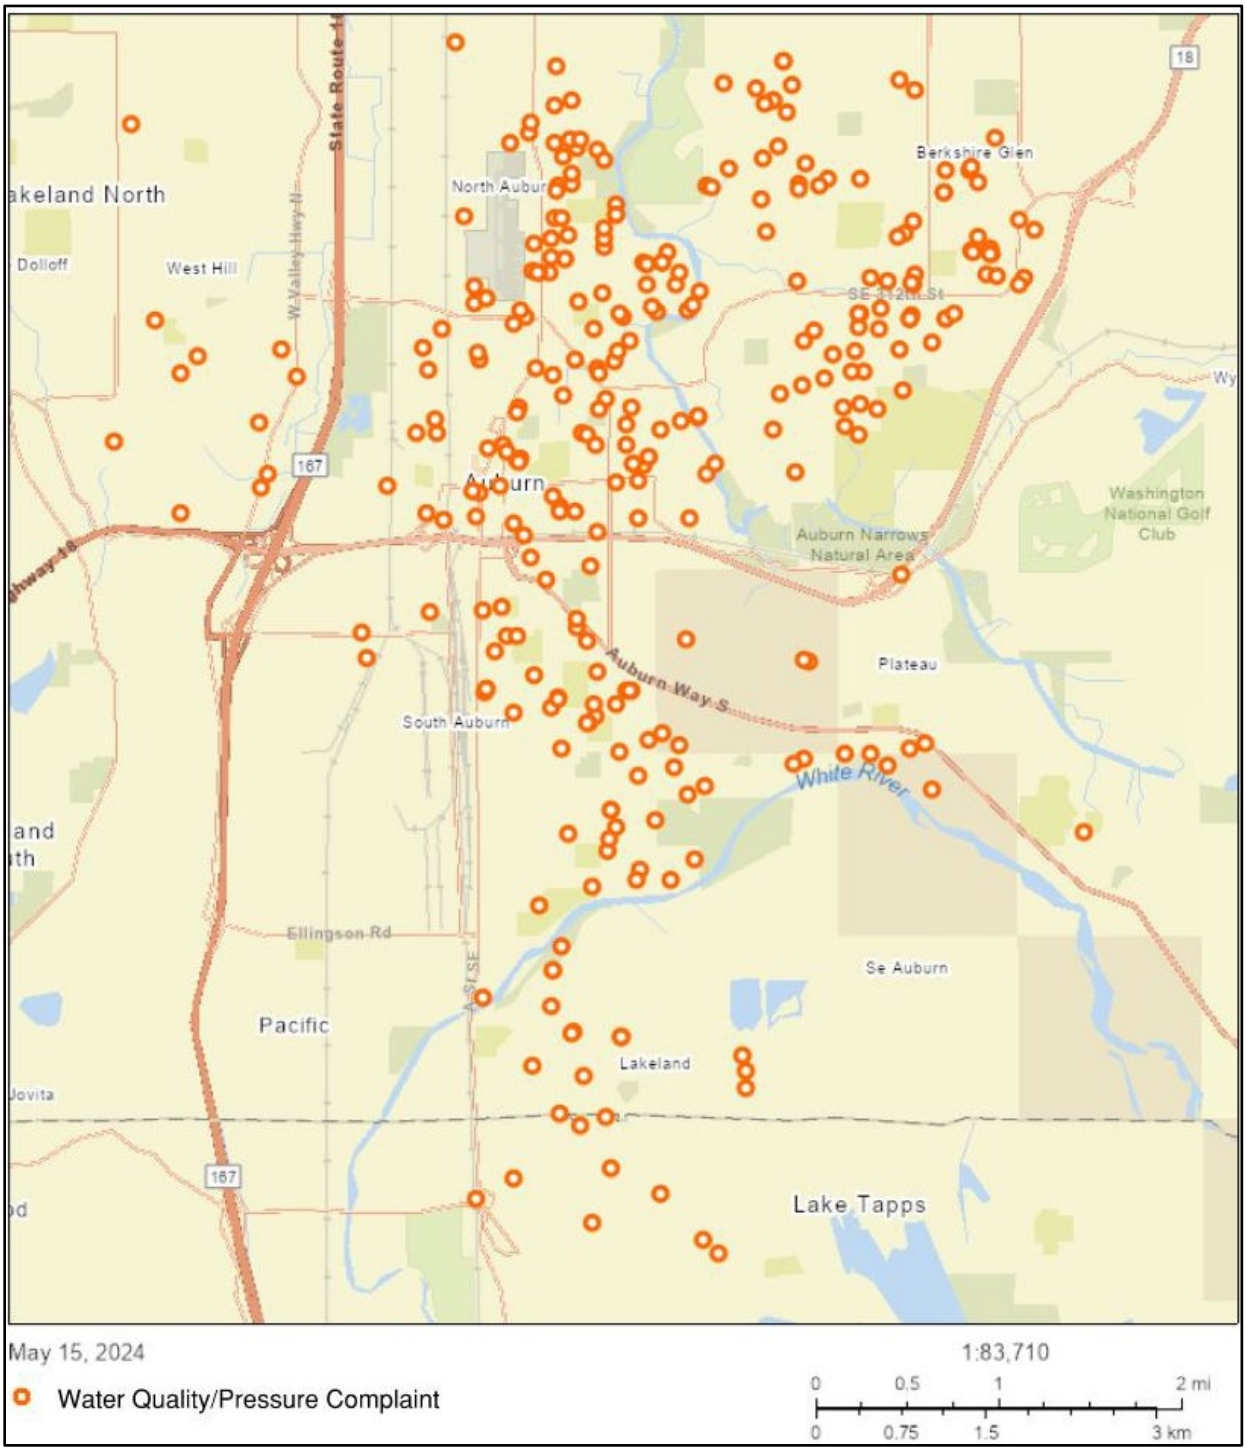


Figure 3-6 shows the locations of low pressure and water quality (odor and discolored water) complaints received since 2014.

Figure 3-6 | Low Pressure, Odor, and Discolored Water Complaints from 2014-2024

A summary of the customer complaints by category is presented in **Table 3-4**. Overall, there has been only one odor complaint within the last ten years. Pressure complaints and water quality complaints have remained fairly consistent, with the fewest number of complaints being made in 2023.

Table 3-4 | Summary Customer Complaints

Category	2014[1]	2015	2016	2017	2018	2019	2020	2021	2022	2023
Water Quality (Appearance)	0	40	47	23	14	55	48	47	27	9

Note:
1. Data in 2014 is incomplete due to the City transitioning to Cartegraph Asset Management.

3.1.2 Water Source Facilities

The City uses a combination of groundwater wells and springs as supply sources for the water system. The pumping capacity, remaining useful life, condition and criticality of the City's groundwater wells are summarized in **Table 3-5**. The City's two spring sources, Coal Creek Springs and West Hill Springs, are not included in **Table 3-5** since both these sources operate by gravity and have no on-site pumping equipment. Condition ratings are assigned based on the 2013 Water Facilities Evaluation Study.

A detailed description of each water source facility, including both springs and groundwater wells, and planned improvements is provided following **Table 3-5**. A summary of the pumping or production capacity of each source, including the springs, is included in **Section 2.6** of **Chapter 2**. Discussion of the City's current water rights for each water source is provided in **Section 3.4.1**.

Table 3-5 | Source of Supply Well Pump Inventory

Facility Name	Capacity (MGD)	No. of Pumps	Pump Type	Install Year	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)

Well 5A	0.26	1	Submersible	1990		6	7	2
Well 5B	Not in Service							

3.1.2.1 Coal Creek Springs

Coal Creek Springs is a primary water supply for the City due to its production capacity. This source is more economical to operate than other sources as it can provide a large volume of water and does not require pumping for extraction. Much of the spring's collector system, including the south and middle collectors, was constructed in 1964. A third collector (the north collector) was added in 1998 to enhance system performance and to provide increased reliability. Currently, the flow from this collector is by gravity, however a buried manhole structure was installed in the line to provide space for a future pump station that could increase production.

Each collector is connected to an overflow structure before connection to a 24-inch transmission line that conveys flow to the Howard Road Corrosion Control Treatment (CCT) Facility where the water is treated for corrosion and is then pumped to Reservoir 1. Between the Coal Creek Springs headworks and the Howard Road CCT Facility is a single connection that supplies potable water to Game Farm Wilderness Park. This transmission main is in good condition, however a suspected leak on the 24-inch steel transmission main crossing the White River was identified in a facility evaluation study completed in 2014. It was later identified that there was not a leak, but the evaluation results were caused by river turbulence due to portions of the pipe being exposed along the riverbed. The City is currently constructing a project that replaces the river crossing with new transmission piping suspended from a utility and pedestrian bridge; the project will be completed in 2024 and is identified in Chapter 8.

In recent years, the production capacity of Coal Creek Springs has been reduced. A maximum instantaneous production rate up to 4,500 gpm is currently feasible, however a more consistent functional production capacity of 3,500 gpm is currently achieved (approximately 52 percent of the water right capacity). The City is currently investigating the cause of reduced production and potential solutions. A capital project is planned to rehabilitate Coal Creek Springs once a solution is identified; the project is discussed further in Chapter 8.

3.1.2.2 West Hill Springs

Although the use of West Hill Springs as a potable water supply dates to before 1907, most of the current facilities and equipment were constructed after 1960. More recent improvements include replacement of the collection boxes, as recommended in the 1995 Comprehensive Water Plan, and partial fencing of the watershed, as recommended by the 2000 Water Comprehensive Plan. The spring's existing transmission main is constructed of 10-inch diameter cast iron piping and has experienced two breaks. The City plans to replace approximately 1,250 linear feet of the transmission main with 12-inch diameter ductile iron pipe in an upcoming capital project identified in Chapter 8.

3.1.2.3 Well 1

Well 1 was constructed in 1960 and underwent substantial renovation in 2016, significantly improving the overall facility condition. Renovations included transmission piping to Howard Road CCT Facility, site improvements, a new well house, new pumping system, disinfection with sodium hypochlorite, on-site emergency power, and upgraded electrical and supervisory control and data acquisition (SCADA) controls. The new well pumping system is a two-stage, vertical turbine pump with a capacity of 2,100 gpm, driven by a 100-HP motor and controlled by a variable frequency drive (VFD). Supply from Well 1 will be routed along the recently constructed 16-inch transmission main and conveyed to the Howard Road CCT Facility.

3.1.2.4 Wells 2 & 6

Well 2 was constructed in 1970 and the well and well house were replaced in 2000 with a new masonry building and pumping equipment as part of the City's corrosion control strategy. The facility built in 2000 also houses Well 6, which was built in 1999. Within the facility is a two-stage 1,115 gpm centrifugal pump powered by a 125-HP motor, installed in 2023 (Well 2), and a two-stage, vertical-turbine pump driven by a 200-HP motor (Well 6). The pumping capacity of Well 6 has been reduced in recent years to a typical production rate of 1,200 gpm due to fouling of the well screen that requires occasional cleaning. The wells discharge to a 14-inch transmission main to Fulmer Field CCT Facility for treatment prior to distribution.

Since the Fulmer Field CCT Facility is required to re-pump the water from Wells 2 and 6 into the Valley Service Area and to Reservoir 2, Wells 2 and 6 are functional only with operation of the Fulmer Field CCT Facility. Chlorination and emergency power for both Wells 2 and 6 are housed in the Fulmer Field CCT Facility.

In 2023 the City completed an interim replacement of the pump at Well 2. Full replacement of Well 2 is planned as a capital project discussed further in **Chapter 8.** Additionally, rehabilitation work completed in 2013 and 2014 indicated that it would be beneficial to clean and rehab both wells on a regular basis. As such, the City initiated a program for regular cleaning of the wells established on a 3-year cycle which is discussed further in **Chapter 8**.

3.1.2.5 Wells 3A & 3B

Wells 3A and 3B are located at the same site, off 37th Street SE on the extension of E Street SE. The wells are approximately 50 feet apart and were constructed in 1983 and 1984 respectively. Each well is equipped with a four-stage, centrifugal pump driven by a 125-HP motor, each with a maximum pumping capacity of 1,650 gpm when operated individually. A standby generator capable of running one pump at a time is available on site. The system is equipped with an automatic transfer switch.

Currently, Wells 3A and Well 3B are not operated because they produce water that contains high concentrations of manganese. Since the wells were taken offline, the chlorination facilities have been removed. If operated, the wells pump directly into the Valley Service area distribution system. The City plans to construct treatment for these wells as part of the "Wells 3A/3B Treatment" project discussed further in **Chapter 8**.

3.1.2.6 Well 4

Well 4 was originally constructed in 1985, was rebuilt in 2012, and is currently undergoing significant upgrades to mechanical and electrical equipment, including well pump piping, valve replacement, and control panel replacement. Once the upgrades are complete this source will be considered in excellent condition. The well is equipped with a 2,600-gpm, four-stage, centrifugal, turbine pump driven by a 300-HP motor. Well 4 pumps directly to a 16-inch transmission main that can either convey water to Reservoir 1 or to distribution through a PRV. Well 4 is an important supply for the southern end of the City's Retail Water Service Area (RWSA). Operation of the well is normally controlled by the water level in Reservoir 1.

3.1.2.7 Well 5

Well 5 is one of three City wells that were constructed to serve the Lakeland Hills Development within the City's Lakeland Service Area. Well 5 pumps directly into the Lakeland Service Area distribution system. The well was constructed in 1983 and is equipped with a seven-stage submersible turbine pump, driven by a

125-HP motor. The well facility was assessed to be in poor condition in the 2013 Water Facilities Evaluation Study. The City plans to upgrade the facility as part of the Well 5/5A Upgrades project discussed in Chapter 8.

3.1.2.8 Well 5A

Well 5A is the second well serving the Lakeland Service Area and was constructed in 1990 to supplement Well 5. The well pumps directly into the Lakeland Service Area distribution system. The well is equipped with a ten-stage submersible turbine pump, driven by a 60-HP motor and has on-site chlorination facilities. A manual transfer switch is provided to allow operation of Well 5A using a portable emergency generator. The well facility was assessed to be in poor condition in the 2013 Water Facilities Evaluation Study. The City plans to upgrade the facility as part of the Well 5/5A Upgrades project discussed in Chapter 8.

3.1.2.9 Well 5B

Well 5B was constructed in 2005 with a 600 gpm pump. Once this source came on-line, the City discovered the aquifer was not recovering, so the well was taken out of service in 2006 and has not been operated since. The City has no plans to operate this well within the planning horizon.

3.1.2.10 Well 7

Well 7 was constructed in 1997 and was originally equipped with a 3,500-gpm variable-stage, vertical-turbine pump driven by a 500-HP motor. Well 7 is configured to pump directly to the Fulmer Field CCT Facility through a 16-inch transmission main. The treated water is then re-pumped into the Valley Service Area. If necessary, Well 7 can pump untreated water directly to the Valley Service Area through a PRV. The well was taken out-of-service in 2012 due to high manganese concentrations. The City has planned capital projects to expand the treatment capacity and treat manganese at Fulmer Field CCT Facility to accommodate flows from Well 7 so operation of this facility can be reinstated. The projects to provide treatment and back-up power for Well 7 are discussed in Chapter 8.

3.1.2.11 Algona Well 1

In 1996, the City acquired the water rights for Algona Well 1 as a condition of the wholesale agreement with the City of Algona (Algona). Due to pump operational problems, Algona Well 1 was removed from service. The 500-gpm pump and associated piping have been removed from the well house and the building has been demolished, but the well casing is still intact, and the well is plugged. The City has a capital project identified in Chapter 8 to study the well and options for potential use or relocation.

3.1.3 Water Treatment Facilities

The City's water treatment facilities provide chlorination and corrosion control. An inventory of the water system's treatment facilities, including the treatment type, capacity, remaining useful life, condition, and criticality is provided in Table 3-6. Condition ratings are assigned based on the 2013 Water Facilities Evaluation Study. A detailed description of each water treatment facility and planned improvements is provided following Table 3-6.

Table 3-6 | Water Treatment Facility Inventory

Facility Name	Treatment Type	Treatment/ Dosing Capacity	Install Date	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)
Coal Creek Springs	Gas Chlorination	0.75-0.80 mg/L	1976	35	-13	3	2
West Hill Springs	Gas Chlorination	0.75-0.80 mg/L	1992		15	5	3
Fulmer Field CCT Facility	Hypochlorite	0.95 mg/L	2002	35	13	5	2
	Corrosion/Air-Stripping	11.88 MGD					1
Howard Road CCT Facility	Corrosion/Air-Stripping	8.06 MGD	2004		15	5	1
Terrace View Booster Pump Station	Re-chlorination	0.75 mg/L	2010		21	3	2
Well 1	Hypochlorite	0.75-0.80 mg/L	2016		27	2	2
Well 4	Hypochlorite	0.75-0.80 mg/L	2016		27	2	3
Well 5A	Hypochlorite	0.75-0.80 mg/L	1990		1	3	2

3.1.3.1 Chlorination Facilities

3.1.3.1.1 Coal Creek Springs Chlorination

The Coal Creek Springs chlorination station was built in 1976 and achieves 4-log treatment of the supply. The chlorination station is housed in a masonry building approximately 300 feet north of the collectors and is in fair condition. As a major source of water for the system, Coal Creek Springs is used to maintain chlorine residuals in the Academy Service Area and south end of the Valley Service Area.

This chlorination station is equipped with two chlorinators. Gaseous chlorine is stored on site in a separate room. Alarms from the chlorination equipment are transmitted back to the Water Control Center at the M&O Facility. A chlorine residual analyzer provides high and low alarms to the M&O Facility. Chlorine is dosed into the water at a range of 0.75-0.80 milligrams per liter (mg/L) and is adjusted based on the chlorine residual measured in the Academy and the south end of the Valley Service Area.

The City has a capital project planned to replace the chlorination building and upgrade the chlorination equipment from chlorine gas to hypochlorite disinfection. This project is discussed further in **Chapter 8**.

3.1.3.1.2 West Hill Springs Chlorination

The West Hill Springs Chlorination Facility was constructed in 1992. Water produced at West Hill Springs continuously flows from the collection boxes to the on-site chlorination station, housed in a wood building, where gas chlorine is metered continuously to treat the water. Chlorine dosage typically ranges from 0.75 – 0.80 mg/L and is adjusted based on the measured chlorine residual in the north end of the Valley Service Area. From the chlorination station, the water flows by gravity into the Valley Service Area.

3.1.3.1.3 Well 1

Liquid sodium hypochlorite treatment was installed at Well 1 in 2016. The chlorine dosage typically ranges from 0.75 - 0.80 mg/L. A residual monitoring system is tied into the City's existing SCADA system. The City plans to replace the liquid hypochlorite system with an on-site chlorine generation system (OSEC) to better accommodate seasonal changes to chemical demands and reduce chemical waste. This project is discussed further in Chapter 8.

3.1.3.1.4 Wells 2 and 6

Water produced at Wells 2 and 6 is treated and chlorinated at the Fulmer Field CCT Facility prior to distribution.

3.1.3.1.5 Well 4

Well 4 was equipped with a liquid sodium hypochlorite chlorination system in 2016. The chlorine dosage typically ranges from 0.75 – 0.80 mg/L. The City plans to replace the liquid hypochlorite system with an on-site chlorine generation system (OSEC) to better accommodate seasonal changes to chemical demands and reduce chemical waste. This project is discussed further in Chapter 8.

3.1.3.1.6 Well 5

There is currently no chlorination provided for water produced at Well 5. This City has a capital project discussed in Chapter 8 that will include the addition of a chlorination facility to Well 5.

3.1.3.1.7 Well 5A

Well 5A was equipped with a liquid sodium hypochlorite chlorination station in 1990. The chlorine dosage typically ranges from 0.75 – 0.80 mg/L and is adjusted based on the chlorine residual measured in the Lakeland Service Area.

3.1.3.1.8 Fulmer Field CCT Facility

The Fulmer Field CCT Facility was constructed in 2004. Chlorination at Fulmer Field CCT, along with B Street Intertie, is a major source of chlorine residual in the north end of the Valley Service Area and in the Lea Hill Service Area and is achieved using an on-site chlorine generation system. The existing on-site chlorine generation cell was replaced in 2012, but the system was identified as being in poor condition and sourcing replacement parts for repairs has become increasingly more difficult. A capital project to replace the entire on-site generation system is planned and discussed further in Chapter 8.

The Fulmer Field CCT Facility treats the water from Wells 2, 6, and 7 (when operational). Chlorine is introduced into the system prior to the air-stripping towers at a dose of approximately 0.95 mg/L. The chlorine is adjusted based on measured chlorine residual at the station analyzer. The treated water is then stored in the clearwell and boosted into the distribution system and Reservoir 2. If needed, the chlorine can be manually introduced into the clearwell rather than prior to the towers.

3.1.3.1.9 Terrace View Booster Pump Station (BPS)

The Terrace View BPS was equipped with a liquid sodium hypochlorite chlorination system in 2010, adding 6 percent solution to the discharge piping of the station at an approximate dose of 0.75 mg/L.

3.1.3.1.10 Intertie Pump Station

Through the First Amendment to Interlocal Agreement No. 2 for the Lea Hill Intertie project executed in 2017, Covington Water District (CWD) terminated its rights or obligations to Interlocal Agreement No. 2 or the First Amendment and Lake Meridian Water District (LMWD) continues to receive wholesale water from the City, as needed, on an interruptible basis. The chlorination equipment was removed from the Intertie Pump Station since the intertie is not used on regular basis.

3.1.3.2 CCT Facilities

To limit the corrosion of lead and copper in the system, the City treats major supplies. The treatment process increases the pH of the water, which reduces the solubility of lead and copper, allowing the water to comply with the Lead and Copper Rule. The goal of the CCT facilities is to adjust the water leaving the facility to a pH of approximately 7.5.

3.1.3.2.1 Fulmer Field CCT Facility

The Fulmer Field CCT Facility also adjusts the pH of the water from its sources to approximately 8.0 by air-stripping in three 33,000 gallon air-stripping towers to provide corrosion control treatment. Three 10,000 cubic feet per minute (CFM) blowers provide air. As the carbon dioxide is stripped from the water, the treated water is stored in the clearwell and boosted through four booster pumps back into the distribution system and Reservoir 2. The firm capacity of the facility is 11.88 MGD.

3.1.3.2.2 Howard Road CCT Facility

The Howard Road CCT Facility was constructed in 2004. It has a life expectancy of an additional 15 years and is generally in fair condition. This facility is housed in a masonry building and treats the water from Coal Creek Springs and Well 1. The pH of the water from Coal Creek Springs and Well 1 is then adjusted to approximately 7.8 by air-stripping in two 33,000 gallon air-stripping towers. Two 9,300 CFM blowers provide air. The treated water is then stored in the clearwell at the facility and re-boosted through three booster pumps to Reservoir 1 and the Valley Service Area. The firm capacity of the facility is 8.06 MGD.

3.1.4 Storage Facilities

The City currently maintains a total of 15.7 million gallons (MG) of water storage in eight water reservoirs located throughout the system. Storage reservoirs are present in each of the City's Service Areas. The location of each storage reservoir is shown in **Figure 3-1**. A summary of the City's storage reservoirs, as well as the type of storage tank, installation date, remaining useful life, condition and criticality is provided in **Table 3-7**. Condition ratings are assigned based on the 2013 Water Facilities Evaluation Study. The storage volumes provided in **Table 3-7** represent the maximum tank volume; however, the City commonly operates the reservoirs at below the maximum levels. A detailed description of reservoir and planned improvements is provided following **Table 3-7**.

Table 3-7 | Inventory of Storage Reservoirs

Reservoir Name	Storage Volume (MG)	Type	Install Date	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)
Valley Service Area							
Reservoir 1	5.0	Prestressed Concrete	1975	100	45	5	2
Reservoir 2	3.6	Prestressed Concrete	1975		45	3	2
Lea Hill Service Area							
Reservoir 4A	1.0	Steel Standpipe	1965	70	11	3	2
Reservoir 4B	1.5	Steel Standpipe	1983		29	4	2
Lakeland Service Area							
Reservoir 5	1.0	Steel Standpipe	1981	70	27	2	3
Reservoir 6	1.0	Steel Standpipe	2012		58	2	3
Academy Service Area							
Reservoir 8A	1.2	Steel Standpipe	1973	70	19	3	3
Reservoir 8B	1.5	Steel Standpipe	1980		26	3	3

3.1.4.1 Reservoir 1

Reservoir 1 is located at the southeast end of the Valley Service Area and is the primary storage location for water produced at Coal Creek Springs and pumped from the Howard Road CCT Facility. Reservoir 1 can also be filled by water produced at Well 4. The reservoir was constructed in 1975 and is a covered, pre-stressed concrete tank with a capacity of 5 MG. Reservoir 1 is 184.5 feet in diameter and has an overflow elevation of 269 feet. Academy Pump Station 3 draws water from Reservoir 1 to feed the Academy Service Area. Reservoir 1 also serves the Valley Service Area through Control Valve 1. Control Valve 1 is essential to limit flow and maintain adequate supply to the Valley Service Area.

Reservoir 1 was last inspected and cleaned on March 15, 2023. Recommended improvements identified in 2013 Water Facilities Evaluation Study are planned to be completed as part of the "Reservoir Capital Improvements" project discussed further in **Chapter 8**.

3.1.4.2 Reservoir 2

Reservoir 2 is located on the northeast side of the City's Water Service Area and serves the Valley Service Area. The reservoir was constructed in 1975 and is a buried, pre-stressed concrete tank with public tennis courts on the concrete roof. The reservoir has a maximum storage capacity of 3.6 MG, has a diameter of 143 feet and an overflow elevation of 252.7 feet. Reservoir 2 is filled by the water sources located in the Valley Service Area and is also filled from Reservoir 1 through Control Valve 1.

Reservoir 2 was last inspected and cleaned on March 13, 2023. A capital project is planned to replace the fill and drain valves associated with the reservoir; the project is discussed further in **Chapter 8**. This project will also resolve improvements identified in the 2022 sanitary survey.

3.1.4.3 Reservoirs 4A and 4B

Storage in the Lea Hill Service Area is provided in two steel standpipe reservoirs located in the northeast corner of the City's RWSA, Reservoir 4A and Reservoir 4B. The reservoirs have capacities of 1.0 MG and 1.5 MG respectively. Reservoir 4A was constructed in 1965 with a diameter of 46 feet and an overflow elevation of 578.5 feet. Reservoir 4B was constructed in 1983 with a diameter of 58 feet and an overflow elevation of 579.6 feet. Water is supplied to the Lea Hill reservoirs from the City's Valley Service Area through the Green River Pump Station and Lea Hill Pump Station.

The reservoirs were last inspected and cleaned in June and April of 2018. A capital project is currently installing seismic control valves on the outlet piping from both reservoirs to prevent catastrophic flow during a seismic pipe failure; the project is discussed further in **Chapter 8**. Additionally, required improvements identified in the 2022 Sanitary Survey will be completed as part of the Reservoir Repair and Replacements Program also discussed in **Chapter 8**.

3.1.4.4 Reservoir 5

Reservoir 5 is one of two reservoirs providing storage for the Lakeland Service Area. The reservoir was constructed in 1981 and has a total capacity of 1.0 MG. The reservoir is filled by Well 5, Well 5A, and the Terrace View BPS. Reservoir 5 is steel standpipe with a 53.25-foot diameter and an overflow elevation of 638.5 feet. The reservoir was last cleaned and inspected in 2019 and the interior and exterior were last painted in 2016 as part of routine maintenance.

3.1.4.5 Reservoir 6

Reservoir 6 is in the Lakeland Service Area within the boundary of the Lakeland 697 pressure zone but is connected to distribution piping for the Lakeland 630 pressure zone. Reservoir 6 is a steel standpipe constructed in 2012 and has a total capacity of 1.0 MG. This reservoir has a diameter of 63.4 feet and an overflow elevation of 638.9 feet. The reservoir is filled by Well 5, Well 5A, and the Terrace View BPS. The reservoir was last cleaned and inspected in 2019.

3.1.4.6 Reservoir 8A and 8B

Reservoirs 8A and 8B are steel standpipes that provide storage for the Academy Service Area. The reservoirs are normally operated in parallel, functioning as one large reservoir. Reservoir 8A has a diameter of 52.75 feet and a total storage volume of 1.2 MG and was constructed in 1973. Academy Reservoir 8B has a diameter of 60 feet and a total storage volume of 1.5 MG and was constructed in 1980. Both reservoirs have an overflow elevation of 544 feet. Academy Pump Station 3 fills the reservoirs.

The reservoirs were last cleaned and inspected in October 2019. A capital project is currently installing seismic control valves on the outlet piping from both reservoirs to prevent catastrophic flow during a seismic pipe failure; the project is discussed further in **Chapter 8**. Additionally, required improvements identified in the 2022 Sanitary Survey will be completed as part of the Reservoir Repair and Replacements Program also discussed in **Chapter 8**.

3.1.5 Pump Station Facilities

The City operates and maintains several pump stations to move water throughout the distribution system and to provide water at the required service pressures. An inventory of the City's pump stations is provided in **Table 3-8** and locations are shown in **Figure 3-1**. Condition ratings provided in **Table 3-8** are assigned based on findings from the 2013 Water Facilities Evaluation Study.

Table 3-8 | Pump Station and Booster Pump Station Inventory

Facility Name	Firm Capacity (gpm)	Firm Capacity (MGD)	Install Date	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)
Lea Hill Service Area							
Intertie Pump Station (Wholesale)	3,510	5.05	1999	40	15	3	4
Lea Hill BPS	300	0.432	1999		15	3	3
Lea Hill Pump Station	1,200	1.73	1965		-19	6	3
Green River Pump Station	3,498	5.04	1999		15	3	2
Valley Service Area							
Game Farm Park Pump Station	50	0.07	1988	40	4	7	4
Lakeland Service Area							
Lakeland Hills BPS	4,205	6.06	2012	40	28	2	2
Terrace View BPS	1,000	1.44	2010		26	2	2
Fulmer Field CCT Facility	8,250	11.88	2004		20	3	1
Howard Road CCT Facility	5,600	8.06	2004		20	4	1
Academy Service Area							
Academy Pump Station 3	2,100	3.02	2023	40	39	1	1
Academy East BPS	3,040	4.38	2014		30	2	2

3.1.6 Facility Back-Up Power

An inventory of the City's existing facilities with backup power accommodation is provided in **Table 3-9**. Of the City's twelve water sources, only Wells 5 and 7 are currently without a standby power source. Standby power will be added to both wells as part of capital projects discussed in **Chapter 8**. Back-up power for Wells 2 and 6 is housed at the Fulmer Field CCT Facility.

The Game Farm Park Pump Station, Lea Hill BPS, and Intertie Pump Station are the only pump stations without a standby power source or connection. Backup power will be added to the Lea Hill BPS as part of a capital project discussed further in **Chapter 8**. The Game Farm Park Pump Station is a small facility that serves a recreational area and does not serve residential or commercial properties, therefore back-up power is not a critical element.

Table 3-9 | Back Up Power Inventory

Generator Location	Generator Type and Size	Install or Purchase Date	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)
Fulmer Field CCT Facility	On-site, 1000 kW	2001	25	2	4	3
Howard Road CCT Facility	On-site, 600 kW	2004		5	3	3
Academy East BPS	On-site, 600 kW	2010		11	2	3

Generator Location	Generator Type and Size	Install or Purchase Date	Design Life (years)	Remaining Useful Life (years)	Condition Rating (Bigger # = Worse Condition)	Criticality Rating (Bigger # = Less Critical)
Academy Pump Station 3	On-site, 450 kW	2023		24	1	3
Green River Pump Station	On-site, 515 kW	2004		5	2	3
Lakeland Hills BPS	On-site, 300 kW	2012		13	2	3
Lea Hill Pump Station	On-site, 250 kW	1964		-35	6	3
Terrace View BPS	On-site, 250 kW	2010		11	2	3
Well 1	Portable, 230 kW	2014		15	2	3
Well 3A/3B	On-site, 210 kW	1983		-16	5	3
Well 4	On-site, 450 kW	2016		17	2	3
Well 5A	Portable, 230 kW	1992		-7	4	3
Well 5B	On-site, 400 kW	2005		6	3	4
Coal Creek Springs	On-site, 20 kW	1964		-35	6	3

3.1.7 Facility Monitoring and Control

Primary monitoring and operation of the City's water system and facilities is conducted via a SCADA computerized control system. A software program called "AVEVA" works in association with SCADA to provide real time graphical display of system data, set points, and alarms for staff monitoring and control. The City's SCADA system controls are centralized at the Public Works M&O Facility. Major upgrades of the City's SCADA system were complete in 2015 and again in 2024, and the system regularly undergoes updates as facility upgrades or improvements are completed.

3.1.8 2022 Sanitary Survey Findings

The City has already taken corrective actions and will continue to resolve all deficiencies identified in the 2022 Sanitary Survey, as summarized in **Table 3-10**.

Table 3-10 | Summary of 2022 Sanitary Survey Findings

Issues/Recommended Improvements		Required Action
Sources and Treatment		
Well 3A	Offline due to manganese issues	--
Well 3B	Offline due to manganese issues	--
Well 5	Water supply lines to chlorine solution tanks must be provided with either air gaps or reduced pressure backflow assemblies to eliminate potential cross connections.	This deficiency was mislabeled by DOH, This should have been for Well 4. A letter from the DOH acknowledging the error was received on October 17, 2022.
	Pump to waste line should terminate above grade.	Will be addressed in Well 5/5A Upgrades project included in CIP; refer to **Chapter 8**.
Well 5A	Water supply lines to chlorine solution tanks must be provided with either air gaps or reduced pressure backflow assemblies to eliminate potential cross connections.	Completed. On September 21, 2022, a reduced pressure backflow assembly was installed at Well 5A, on the water supply line to the chlorine tank.
	Raise casing to terminate above grade or provision of sump pump or alarms that activate when water accumulates in vault. In the meantime, the vault	City implemented an inspection program in October 2022.

	Issues/Recommended Improvements	Required Action
	should be inspected weekly and immediately following significant storm events.	Will be addressed further in Well 5/5A Upgrades project included in CIP; refer to **Chapter 8**.
Well 7	Offline due to manganese issues	--
Storage		
Reservoir 2	Reservoir overflow should not be connected directly to any drain, sanitary sewer, or storm sewer.	Will be addressed in Reservoir 2 improvements project included in CIP; refer to **Chapter 8**.
Reservoir 4A	Reservoir vents should open downward to prevent windblown debris from entering tank.	Will be completed as part of City's annual Reservoir Repair and Replacement program or Reservoirs 4 and 8 Seismic Rehabilitation project; refer to **Chapter 8**.
	Reservoir overflow should not be connected directly to any drain, sanitary sewer, or storm sewer.	Will be completed as part of City's annual Reservoir Repair and Replacement program or Reservoirs 4 and 8 Seismic Rehabilitation project; refer to **Chapter 8**.
Reservoir 4B	Reservoir overflow should not be connected directly to any drain, sanitary sewer, or storm sewer.	Will be completed as part of City's annual Reservoir Repair and Replacement program or Reservoirs 4 and 8 Seismic Rehabilitation project; refer to **Chapter 8**.
Reservoir 8A	Reservoir overflow screen must be repaired	Completed. On September 13, 2022, the overflow screen at Reservoir 8A was repaired.
	Reservoir vents should open downward to prevent windblown debris from entering tank.	Will be completed as part of City's annual Reservoir Repair and Replacement program or Reservoirs 4 and 8 Seismic Rehabilitation project; refer to **Chapter 8**.
Reservoir 8B	Reservoir overflow screen must be repaired	Completed. On September 13, 2022, the overflow screen at Reservoir 8B was repaired.
	Reservoir vents should open downward to prevent windblown debris from entering tank.	Will be completed as part of City's annual Reservoir Repair and Replacement program or Reservoirs 4 and 8 Seismic Rehabilitation project; refer to **Chapter 8**.

3.2 Water Quality

The quality of drinking water in the United States is regulated by the EPA. Under provisions of the Safe Drinking Water Act (SDWA) established in 1974, the EPA is allowed to delegate primary enforcement responsibility for water quality control to each state. In the State of Washington, DOH is the agency responsible for implementing and enforcing the drinking water regulations. For the State to maintain the authority to implement requirements under the SDWA, it must adopt drinking water regulations that are at least as stringent as federal regulations. In meeting these requirements, the State has published drinking water regulations that are contained in Chapter 246-290 of the WAC.

As a Group A system, the City is responsible for monitoring and complying with all applicable SDWA and WAC regulations pertaining to source water and distribution system water quality. The purpose of this section is to document the water system's water quality compared to the above drinking water standards, satisfying the requirements of WAC 246-290-100(4)(e)(ii).

The City also owns and operates the Braunwood satellite system located in southeast Auburn in the Braunwood development, also known as the Hidden Valley Acres development. This system is classified as a Group A - Community Water System by DOH. This system is not discussed further in this chapter since it is a small satellite system that is regularly monitored by the City as required and has not had water quality issues as documented in the City's annual water quality reports for the system.

This section includes the following:

- Water quality and treatment objectives
- Analysis of source water quality
- Analysis of distribution system water quality
- Recent regulatory changes

3.2.1 Water Quality Treatment and Objectives

The treatment objectives of the City are to treat source water to contaminant concentrations below the MCLs established by the EPA and WAC.

Historically, the City has relied on groundwater supplied from wells and springs, which have been determined to be not under the direct influence of surface waters (DOH 2004 for Coal Creek Springs). For these water sources, the City is required to meet the EPA's Groundwater Rule (GWR). The City treats water from all groundwater and spring sources, except for Well 5. The City's water treatment facilities provide chlorination and corrosion control. A summary of the required operator certifications for each type of facility is provided in **Table 3-11**.

Table 3-11 | Summary of Operator Certifications

Treatment Facility	Required Operator Certifications
Corrosion Control Treatment (CCT) Facilities	Water Distribution Manager 4 (WDM-4) and Water Treatment Plant Operator (WTPO)
Chlorination Facilities	WDM-4

The City began using surface water in 2012 through the B-St Wholesale Intertie with the City of Tacoma (Tacoma). This supply, referred to as the Regional Water Supply, originates from the Green River and the Howard Hansen Dam. Since the City receives treated water as a wholesale purchaser, it is not required to meet the Surface Water Treatment Rule. Tacoma maintains compliance with the Interim Enhanced Surface Water Rule, Long Term 1 and Long Term 2 Enhanced Surface Water Treatment Rules; and the Filter Backwash Recycling Rule. The City has not purchased water for consumption from Tacoma since 2016.

3.2.2 Analysis of Source Water Quality

3.2.2.1 Raw Water Quality

The City only samples post-treatment water except for Well 5, which does not currently have treatment or chlorination. Water quality data for Well 5 is provided in **Table 3-12**.

3.2.2.2 Finished Water Quality

Monitoring of inorganic chemical and physical parameters varies by source but is typically required once per 36-month compliance period, however, the City typically monitors these constituents every 12 months (annually) in July. Samples are collected from each source following treatment. A summary of the maximum detected concentrations for monitoring data from 2015 through 2022 is provided in **Table 3-12**. During this time, none of the MCLs published by the EPA were exceeded; all samples were below required limits.

Asbestos sampling is usually required once per 36-month compliance period. However, the City has a waiver that requires sampling once every nine years at three distribution system sample sites. No data was collected during the study period. The City is expected to sample again in 2028. Annual VOC sampling is required for Wells 2 and 6, which are both currently represented by the Fulmer Field CCT Facility. All active sources are disinfected with chlorine prior to entering the distribution system except for Well 5, which serves the Lakeland Service Area.

Monitoring data for 2015 through 2022 for inorganic constituents, physical parameters, SOCs, and VOCs were reviewed and is summarized in **Table 3-12**. All values are post-treatment, except for Well 5 since water from this source is not treated. Wells 3A, 3B, 5B, and 7 were not used during this period and were therefore not sampled.

Table 3-12 | EPA Primary Drinking Water Standards Results from 2015 through 2022

Constituent	MCL	Units	Maximum Detected Concentration From 2015 Through 2022[1] (mg/L)						
			Coal Creek Springs	West Hill Springs	Well 1	Well 4	Well 5	Well 5A	Fulmer Field CCT Facility[2]
EPA Primary Drinking Water Standards									
Arsenic	0.01	mg/L	0.001	0.001	0.001	0.001	0.001	0.002	0.002
Barium	2	mg/L	0.1	0.1	0.1	0.1	0.1	0.1	0.1
Cadmium	0.005	mg/L	0.001	0.001	0.001	0.001	0.001	0.001	0.001
Chromium	0.1	mg/L	0.007	0.007	0.007	0.007	0.007	0.007	0.007
Mercury	0.002	mg/L	0.0002	0.0002	0.0002	0.0002	0.0002	0.0002	0.0002
Selenium	0.05	mg/L	0.002	0.002	0.002	0.002	0.002	0.002	0.002
Beryllium	0.004	mg/L	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003	0.0003
Nickel[3]	-	mg/L	0.005	0.005	0.005	0.005	0.005	0.005	0.005
Antimony	0.006	mg/L	0.003	0.003	0.003	0.003	0.003	0.003	0.003
Thallium	0.002	mg/L	0.001	0.001	0.001	0.001	0.001	0.001	0.001
Cyanide	0.2	mg/L	0.05	0.05	0.05	0.05	0.05	0.05	0.05
Fluoride	4.0	mg/L	0.2	0.2	0.2	0.2	0.2	0.2	0.2
Nitrite-N	1	mg/L	0.1	0.1	0.1	0.1	0.1	0.1	0.1
Nitrate-N	10	mg/L	1.7	3.6	2.4	1.4	1.9	0.4	1.7
Total Nitrate/Nitrite[4]	10	mg/L	1.7	3.6	2.4	1.4	1.9	0.5	1.7
EPA Secondary Drinking Water Standards[5]									
Iron	0.3	mg/L	0.1	0.1	0.1	0.62[6]	0.16	0.1	0.1
Manganese	0.05	mg/L	0.01	0.01	0.01	0.01	0.01	0.01	0.032
Silver	0.1	mg/L	0.01	0.01	0.01	0.01	0.01	0.01	0.01
Chloride	250	mg/L	5	8	5	4	6	3	9
Sulfate	250	mg/L	9	15	12	12	11	6	14

State Regulated Characteristics									
Sodium	20	mg/L	6	8	7	7	10	6	12
Conductivity	700	µmhos/cm	150	254	184	152	275	133	224

Constituent	MCL	Units	Maximum Detected Concentration From 2015 Through 2022[1] (mg/L)						
			Coal Creek Springs	West Hill Springs	Well 1	Well 4	Well 5	Well 5A	Fulmer Field CCT Facility[2]
Turbidity	1	NTU	0.4	1.5	9.6	5.8	1.2	0.4	3.1
Color	15	Color Units	5	5	10	5	5	5	5
Total Dissolved Solids (TDS)[7]	600	mg/L	N/A	N/A	N/A	N/A	N/A	N/A	N/A
State Unregulated									
Lead[8]	0.015	mg/L	0.001	0.001	0.001	0.018	0.001	0.001	0.001
Copper	1.3	mg/L	0.02	0.3	0.02	0.2	0.02	0.02	0.02
Hardness[9]	-	mg/L	66	122	83	100	130	62	100

Notes:

1. Based on monitoring conducted between 2015 and 2022. Wells 3A, 3B, and 5B were not in use during this time period and no monitoring was conducted.
2. The Fulmer Field CCT Facility was monitored in 2015, 2018,2020, 2021, and 2022, it replaces monitoring of Wells 2, 6, and 7.
3. There is no state or federal MCL, but Washington state has a detection reporting limit of 0.005 mg/L.
4. EPA has set a treatment goal of Total Nitrate at 10 mg/L.
5. EPA does not enforce these "secondary maximum contaminant levels" (SMCLs). They are established as guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. These contaminants are not considered to present a risk to human health at the SMCL.
6. Iron levels in Well 4 exceeded the Secondary Drinking Water Standards in 2015 but have since all been below the MCL.
7. N/A - not applicable, no testing conducted; testing for total dissolved solids is only required if the specific conductivity is greater than 700 micomhos per centimeter (umhos/cm).
8. On November 30, 2023, the EPA announced the proposed Lead and Copper Rule Improvements, which would lower the Lead Action Level from 0.015 mg/L to 0.010 mg/L if finalized in October 2024.
9. No MCL, as hardness is not a regulated characteristic.

3.2.2.3 Water Quality and Treatment Technique Violations

There were no water quality treatment violations from 2015 through 2022.

3.2.3 Analysis of Distribution System Water Quality

3.2.3.1 Seasonal Water Quality Changes

Water quality within the distribution system is relatively consistent throughout the year. The Valley Service Area distribution water experiences low pH during the winter, however no changes are implemented to offset seasonal variations.

3.2.3.2 Distribution Water Quality Objectives

The City collects 100 samples at 70 dedicated sampling sites for total and fecal coliform monitoring. Sampling is conducted at one quarter of the routine sample locations each week during the first four weeks of a month. The City also monitors weekly for total and fecal coliform at Coal Creek Springs and West Hill Springs at their respective collector vaults, as well as after treatment, and at several additional sites to support operations on a weekly basis. The City uses two types of disinfectant for treatment, chlorine gas and liquid sodium hypochlorite, which both produce free chlorine residuals in the distribution system. Average chlorine residuals throughout the distribution system ranged from 0.57 to 0.71 mg/L from 2015 through 2022, as summarized in Table 3-13. Although the range of chlorine residual varies throughout the year, the range of chlorine residual is relatively consistent from year to year. Planned improvements to chlorination facilities at Well 1 and Well 4 are expected to help maintain a more consistent chlorine residual level within the water system.

Table 3-13 | Total Chlorine Residuals Results from 2015 through 2022

Year	Sample Results (mg/L)	
	Average	Range
2015	0.71	0.40 - 1.09
2016	0.64	0.37 – 0.89
2017	0.58	0.32 – 0.79
2018	0.57	0.30 – 0.78
2019	0.59	0.33 – 0.77
2020	0.57	0.33 – 0.80
2021	0.58	0.36 – 0.78
2022	0.59	0.40 – 0.77

The Stage 1 Disinfection By-Product Rule (DBPR) monitoring was superseded in 2012 with Stage 2 DBPR monitoring because the City's population exceeded 50,000 people. The City conducts monthly sampling within the distribution system to determine the concentration of fluoride. This sampling is in addition to the inorganic source monitoring required by DOH. The City does not add fluoride to their water. The City of Tacoma does fluoridate their water and is wholesale supplier to the City, but the City has not purchased water for consumption from Tacoma since 2016. Sampling is conducted for informational purposes only and to answer customer questions regarding natural fluoride in the City's water. Should the City purchase water from Tacoma, this information would also be used to monitor the blending of different water sources within the distribution system.

In the event the City purchases water from Tacoma via the Cascade Water Alliance, such as during a shortage or other such operational constraint, the City will monitor and report distribution system disinfection residuals daily. These samples will be taken at the same time and place as the City's routine coliform sampling.

The City conducted both Stage 1 and Stage 2 DBPR monitoring since the last water system plan (WSP). **Table 3-14** provides a summary of the sample results from 2015 through 2022. The City's Total Trihalomethanes (TTHMs) and Haloacetic Acid 5 (HAA5) monitoring has been conducted once per year during the month with the warmest water temperature (i.e., July or August). All samples were well below the concentrations that DOH uses to determine whether a water system qualifies for reduced monitoring (0.080 mg/L for TTHMs and 0.060 mg/L for HAA5).

Table 3-14 | Summary of Disinfection By-Product Rule Monitoring Results from 2015 through 2022

Year	TTHM Concentration (µg/L)[2]		HAA5 Concentration (µg/L)[2]	
	Range for LRAA[1]	Compliance	Range for LRAA[1]	Compliance
2015	2.6 – 19.0	< 80	Not Detected – 4.8	< 60
2016	2.2 – 23.1	< 80	Not Detected – 6.0	< 60
2017	1.7 – 15.0	< 80	1.1 – 6.9	< 60
2018	6.7 – 15.1	< 80	Not Detected – 6.9	< 60
2019	ND	< 80	0.2 – 0.3	< 60
2020	7.5 – 11.95	< 80	Not Detected – 3.66	< 60
2021	6.45 – 17.62	< 80	1.25 – 12.41	< 60
2022	9.03 – 10.41	< 80	Not Detected	< 60

Notes:
1. Local running annual average.

2. Microgram per liter (µg/L).

Corrosion control treatment (CCT) is required for the water produced at Coal Creek Springs, Well 1, Well 2, Well 6, and Well 7. Per the Lead and Copper Rule (LCR), the City is required to collect at least 30 water samples per 36-month compliance period in alignment with reduced lead and copper monitoring requirements of WAC 246-290. Sample results from 2015 through 2022 are presented in **Table 3-15**. Since the CCT facilities were constructed, the lead and copper levels have been well below the action level.

DOH granted the City a (b)(3) exemption on August 17, 2021. This exemption, under 40 CFR Part 141.81(b)(3), eliminates the requirement for the City to conduct optimal water quality parameter (OWQP) sampling throughout the distribution system. Instead, the City continues to focus on lead and copper sampling at designated monitoring sites to meet compliance requirements. A copy of the City's exemption letter from DOH is included as **Appendix F.**

Table 3-15 | Summary of Lead and Copper Sampling Results from 2015 through 2022

Constituent	Range of Results from 2015 through 2022
Copper Concentrations (mg/L)	
Copper Concentration Range	<0.02 – 0.3
Copper 90th Percentile	0.091
Lead Concentrations (mg/L)	
Lead Concentration Range	<0.001-0.018
Lead 90th Percentile	<0.001

3.2.3.3 Water Quality and Treatment Technique Violations

There were no water quality violations in the distribution system from 2015 through 2022.

3.2.4 Recent Regulatory Changes

The EPA established a health advisory for drinking water of 70 parts per trillion (ppt) for perfluorooctane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), two commonly found Perfluorinated compounds (PFAS). When both compounds are found in the water, the combined health advisory is also 70 ppt. The Washington State Board of Health (Board) adopted rule changes to chapter 246-290 WAC, Group A Public Water Supplies and WAC 246-390, Drinking Water Laboratory Certification and Data Reporting. The newly adopted rules became effective on January 1, 2022.

The rule establishes the administrative processes for setting drinking water quality standards as State Action Levels (SAL) and state MCLs. The rule establishes SALs for five PFAS contaminants: PFOA, PFOS, perfluorohexane sulfonic acid (PFHxS), perfluorononanoic acid (PFNA), and perfluorobutane sulfonic acid (PFBS). The rule requires Group A community and non-transient noncommunity public water systems to test for PFAS. For those Group A water systems that have detections of PFAS, but do not exceed the SAL, the rule requires additional ongoing monitoring, with the frequency of monitoring based upon the detected level in comparison to the SAL. It also establishes reporting, recordkeeping, and consumer confidence report requirements. For those Group A water systems that exceed the SAL, the rule requires follow-up actions such as monitoring, public notification, additional recordkeeping, and reporting requirements. SALs for regulated PFAS compounds are shown in **Table 3-16** with results from the City's latest samples. Most results indicated that the PFAS compounds were not detected (ND), being they were below detectable limits. PFBS was detected at Well 1, Coal Creek Springs, and West Hill Springs, however the levels are far

below regulated levels. In more recent results received in May 2024, all samples were below detection limits for all facilities and the City was approved for a 3-year testing schedule.

Furthermore, in April 2024, the EPA announced the first National Primary Drinking Water Regulation for six PFAS. This established individual MCLs for PFOA, PFOS, PFHxS, PFNA, and Hexafluoropropylene oxide dimer acid (HFPO-DA) and a Hazard Index MCL for PFAS mixtures containing at least two or more of PFHxS, PFNA, HFPO-DA, and PFBS. The EPA also finalized MCLGs for these PFAs, which can be seen alongside the MCLs in Table 3-16. The regulation requires that public water systems must monitor for these PFAS and must complete initial monitoring by 2027, followed by ongoing compliance monitoring. Water systems must provide the public with information on the PFAS levels in the drinking water beginning 2027. Public water systems must implement solutions by 2029 to reduce PFAS if monitoring shows that drinking water levels exceed the MCLs.

Table 3-16 | PFAS State Action Levels and Monitoring Data

PFAS Compound	SAL (ng/L)	MCL (ng/L)	MCLG (ng/L)	Maximum Detected Concentration (ng/L)[1]									
				Well 1	Fulmer Field CCT Facility	Well 3A	Well 3B	Well 4	Well 5	Well 5A	Well 5B	Coal Creek Springs	West Hill Springs
PFOA	10	4.0	0	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
PFOS	15	4.0	0	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
PFHxS	65	10	10	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
PFNA	9	10	10	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
PFBS	345	-	-	2.8	ND	ND	ND	ND	ND	ND	ND	3.1	3.0
HFPO-DA	-	10	10	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
Mixtures containing two or more of PFHxS, PFNA, HFPO-DA, and PFBS	-	1[3]	1[3]	0	0	0	0	0	0	0	0	0	0

Notes:
1. Nanograms per liter (ng/L).
2. Not detected (ND).
3. Hazard Index – unitless.

3.3 Design Standards

The City's most recent Engineering Design Standards are available on the City's website and are provided as **Appendix P**. **Table 3-17** highlights keys standards that are used to evaluate the capacity of the City's water system, summarizing both DOH criteria and City criteria. The City's water quality design standards follow the design standards set forth by the EPA and DOH, as discussed in **Section 3.2**.

Table 3-17 | System Capacity Analysis Criteria

Evaluation Type		Evaluation Criteria	Agency's Standard
Water Reliability Recommendations	Multiple Source	2 or more supply sources are available	DOH
	Backup Power	Source of supply pump stations have power connections to two independent primary public power sources, have in-place auxiliary power available, and/or maintain adequate gravity standby storage	DOH
	Surface Water Reliability	Firm watershed yield for surface water provides 98% reliability to meet normal, anticipated system demands.	DOH
	Groundwater Reliability	Factor of safety is applied to well pumping test safe yield determination.	DOH
Water Source	Source Capacity	MDD while replenishing Fire Suppression Storage (FSS) within 72-hrs (24-hr source pumping may be assumed).	DOH
		ADD with largest source out of service.	DOH
		MDD in a pumping period of 20 hours or less of pumping.	DOH
		MDD with the largest active water source out of service.	City
Pump Stations	Capacity - Open System (sufficient storage in zone)	ADD with largest pump out of service.	DOH
		MDD with all pumps in service.	
		MDD with largest pump out of service.	City
		Fire Flow is met from storage reservoir.	
	Capacity - Closed System (no/insufficient storage in zone)	PHD with largest pump out of service.	DOH
		MDD + Fire Flow at a pressure of at least 20 psi at all points throughout the distribution system.	
		PHD + Fire Flow with largest pump out of service.	City
		Standby power with capacity to run with any single pump out of service.	

	Evaluation Type	Evaluation Criteria	Agency's Standard
Storage Facilities	Total Storage Capacity	Sum of operational, equalization, standby, fire suppression, and dead storage.	DOH
	Operating Storage (OS)	The volume of water before sources turn on.	DOH
		(pump off elev. – pump on elev.) x gal/ft	
	Equalizing Storage (ES)	(PHD – maximum supply capacity) x 150 min	DOH
		Min. pressure of 30 psi.	
		Must be provided when source pumping capacity cannot meet the peak hourly demand.	
	Standby Storage (SB)	Min. standby storage of 200 gallons per ERU.	DOH
		Min. pressure of 20 psi.	
		Standby storage volume equal to one day of MDD for the pressure zone(s) served.	
	Fire Suppression Storage (FSS)	(required fire flow rate) x (duration in minutes)	DOH
		Min. pressure of 20 psi.	
		Nested storage (same storage for Standby and Fire Suppression Storge) requires written consent of fire protection authority.	
	Dead Storage (DS)	Volume that cannot provide minimum design pressure (20 psi) to all customers.	DOH
		Volume below the outlet pipe and cannot be used because of hydraulic limitations.	City
Distribution System	Minimum Pressures	PHD at no less than 30 psi.	DOH
		MDD + Fire Flow at no less than 20 psi.	
	Maximum Pressures	Add individual PRVs for ADD pressures more than 80 psi.	DOH
		Max. target pressure of 80 psi in water distribution system.	City
	Maximum Velocity	No more than 8 feet per second (fps) under PHD conditions.	DOH
		No more than 8 fps in distribution mains and 5 fps in transmission mains under PHD conditions. No more than 18 fps under MDD+FF conditions.	City
	Minimum Pipe Size	6-inch diameter in residential areas and 8-inch diameter in commercial areas, unless a hydraulic analysis justifies another size.	DOH
		Single-Family Residential minimum 8-inch diameter and Industrial/Commercial/Multi-Family minimum 12-inch diameter.	City
	Telemetry	Each parcel receiving water service shall have its own meter	City
		Meters shall be located as close to the water main from which the service is taken as possible, distance not to exceed 50 feet.	
		Meters shall be placed in landscape strips, behind the sidewalk, or at the right-of-way limits in that order of availability.	
		Meters in landscaped or unimproved areas shall be set 2 inches above the finished grade.	
	Maximum Valve Spacing	Maximum 400-foot spacing and at the intersection of lateral lines in all zones.	City
	Hydrant Spacing	Single-Family Residential maximum 600-foot spacing.	City
		Industrial/Commercial/Multi-Family maximum 300-foot spacing.	
Fire Flow & Duration	Residential	Minimum 1,500 gpm at 2 hours.	City
	Multi-Family Residential	Minimum 2,500 gpm at 3 hours.	
	Commercial		
	Industrial		

3.4 Capacity Analysis

This section provides an analysis of legal and physical capacity of the water system based on the system's available water rights, sources, treatment, storage, and distribution components.

3.4.1 Water Rights

A summary of the City's current water rights is presented in **Table 3-18**. The maximum instantaneous allowable flow for each source (Qi) is in units of gpm. The total annual withdrawal for each source (Qa) is in units of acre-feet per year. The City does not have any interruptible water rights.

Table 3-18 | Summary of Existing Water Rights

Water Right	Primary Qi (gpm)	Primary Qa (acre-feet/year)
Coal Creek Springs	6,732	9,410
Well 1, 6, & 7	2,200	1,120
Well 2, 6, & 7	2,400	1,360
Well 3A & 3B, 6, & 7	2,800	3,600
Well 4, 6, and 7	2,800	3,600
Wells 5, 5A, 5B, &5C	1,000	720
Well 5A	167	0
Algona Well	500	175
Braunwood Well[1]	20	6.5
West Hill Springs[2]	625	1,010
TOTAL	**19,244**	**21,002**

Notes:

1. Water from the Braunwood well is administered through water right certificate G1-25173C, originally issued for a small domestic water system to serve up to 13 connections. Braunwood is a standalone non-municipal satellite water system that currently serves 12 connections.
2. Water from West Hill Springs operates through water right claim S1-049354CL. A claim is an assertion that a water right was created pre-code (1917 for surface water and 1945 for groundwater).

In addition to the water rights presented above, the City also has a wholesale agreement with the City of Tacoma and can purchase water through two interties as discussed in **Chapter 1, Section 1.6.1**. These two interties are also considered to be supply facilities. The City also has several emergency interties with adjacent purveyors.

3.4.1.1 Analysis Criteria

Supply facilities must be reliable and provide sufficient water at pressures that meet the requirements of WAC 246-290-230. The capacity of supply facilities in a pressure zone with adequate storage must be sufficient to provide water at a rate that is equal to or greater than the MDD of the zone being served. This approach assumes that demands greater than the MDD will be supplied using equalizing storage.

According to Section 3.10.5 and Section 5.4 of the 2020 DOH Water System Design Manual, water system sources must be capable of supplying MDD and replenishing depleted within 72-hours (assuming continuous pumping), provide MDD in a pumping period of 20 hours or less, and provide ADD with the largest source out of order. The City's standards have a more stringent requirement to provide MDD with the largest active source out of service.

3.4.1.2 Analysis Results

The City's water supply (production) capacity compared with demand projections and DOH and City criteria are summarized in **Table 3-19**. It is worth noting that the water supply (production) capacity is not synonymous with the supply water rights. The MDD and ADD values are based on the demand projections included in **Chapter 2** and include wholesale supply projections for the City of Algona. Demand allocation for the Muckleshoot Indian Tribe (MIT) Fish Hatchery and LMWD are not included. LMWD is not included since they do not rely on the City as their main source of water and have an interruptible wholesale agreement. Demand from the MIT Fish Hatchery is also not included since it is unknown when this facility will be constructed, however the analysis presented in **Table 3-19** shows that the City has sufficient surplus supply to support this demand when it comes to fruition. The FSS flow rate is calculated as the sum of the FSS for each service area presented in **Section 3.4.2.3.2**, which totals 797 gpm, divided over a 72-hour period.

The results presented in **Table 3-19** demonstrate that the City has the supply facilities necessary to meet demand projections under current and future projections for all required criteria.

Table 3-19 | Supply Analysis with Largest Source Out of Service

Description	2024 Scenario	2034 Scenario	2044 Scenario
Required Supply (gpm)			
FSS Replenished in 72-hours	797	797	797
Maximum Day Demand[1], gpm	8,657	9,751	11,068
Average Day Demand[1], gpm	4,899	5,518	6,263
Available Supply (gpm)			
Largest Source (Q_L) – Tacoma Interties	3,555	3,555	3,555
Largest Active Source – Coal Creek Springs[2]	3,500	3,500	3,500
Total Sources (Q_t)[3,4]	15,610	15,610	15,610
DOH Criteria: MDD while replenishing FSS within 72-hrs (24-hr source pumping may be assumed)			
Surplus / (Deficit) of Supply, gpm	6,156	5,062	3,746
DOH Criteria: ADD with largest source out of service			
Surplus / (Deficit) of Supply, gpm	7,156	6,537	5,792
DOH Criteria: MDD in a pumping period of 20 hours or less of pumping			
Surplus / (Deficit) of Supply, gpm	4,352	3,257	1,941
City Criteria: MDD with largest active water supply source out of service			
Surplus / (Deficit) of Supply, gpm[2]	3,453	2,359	1,042

Notes:

1. Current analysis does NOT include a separate allocation for wholesale customers who have not purchased water from the City since 2019 or earlier (i.e., MIT or LMWD).
2. The City's largest active source is Coal Creek Springs since the City has not purchased water from Tacoma since 2016.
3. Total sources are: Well 1, 2, 4, 5, 5a, and 6 (7,955 gpm), Coal Creek Springs (3,500 gpm), West Hill Springs (600 gpm), and two Tacoma Interties (3,555 gpm).
4. Supplies do NOT include emergency interties with CWD (1,736gpm) or LMWD (1,736 gpm).

The City's Water Rights Self-Assessment Form is provided in **Appendix I** and was used to assess the City's water rights water rights and includes supply that is available to the City through firm wholesale interties with Tacoma. The form includes a comparison of the available water rights to the existing, 10-year and 20-year demand projections for the "High Demand Scenario" presented in **Chapter 2**. The calculations presented in the Water Rights Self-Assessment Form conclude that the City's existing water rights are anticipated to be adequate to meet the current, 10-year, and 20-year demand projections.

The City does not have all the infrastructure required to withdraw from all water rights (i.e., Wells 3A, 3B, 5B, and 7 are not currently operational). Additionally, some sources have underlying aquifer or infrastructure restrictions that limit the capacity of the source (i.e., Well 2, Well 6, and Coal Creek Springs). Several facility improvement projects are necessary for the City to maximize water production capacity to meet future demands, and planned supply related capital projects to meet this need are discussed further in Chapter 8.

3.4.2 Physical Capacity Analysis

This section includes an analysis of the physical capacity of the City's distribution system. The specific components analyzed include:

- Pump Station Capacity Analysis
  - Open Pressure Zones: Zones with storage reservoirs
  - Closed Pressure Zones: Zones without storage
- Storage Capacity Analysis
- Hydraulic Analysis of the Distribution System
- System Analysis based on ERUs

To complete the physical capacity analysis, the projected demands calculated in Chapter 2 were utilized for the 2024 scenario (existing conditions), 2034 scenario (10-year projections) and 2044 scenario (20-year projections). When evaluating facilities under fire flow conditions, the largest fire flow demand was utilized in each Service Area. The fire flow required for single family residential customers is 1,500 gpm for two hours and all other customer types have a requirement of 2,500 gpm for two hours. There are select buildings throughout the system that require fire flow capacity in the water system that exceeds 2,500 gpm for two hours as determined by the Fire Marshal; these individual locations and their fire flow requirements are summarized in Table 3-20.

Table 3-20 | Buildings in Auburn with High Fire Flow Requirements

ID #	Location Description	Address	Service Area	Flow Required (gpm)
1	RPS Distribution Center	3702 C St. NE	Valley	4,000
2	Emerald Downs	2300 Emerald Downs Drive	Valley	3,000
3	Panattoni Warehouse	816 44th ST NW	Valley	4,000
4	Span Alaska Transportation Inc.	3815 W Valley Highway N	Valley	3,125
5	AMB Valley Distribution Center	2202 Perimeter Road SW	Valley	4,000
6	Grace Community Church	1106 12th Street SE	Valley	3,750
7	Riverside High School	501 Oravetz Road SE	Valley	3,000
8	Wesley Homes Senior Housing	10805 SE 320th Street	Lea Hill	4,000
9	Auburn Elementary School at Lakeland	1020 Evergreen Way SE	Lakeland	3,125
10	Academy Campus	5000 Auburn Way South	Academy	4,000
11	MIT Casino Expansion	2402 Auburn Way South	Academy	2,625

3.4.2.1 Pump Station Analysis: Open Pressure Zones

This section evaluates the pumping capacity of the water system on a zone-by-zone basis with consideration for pump stations between zones and supply wells pumping directly into the pressure zones

that contain a storage reservoir. All reduced pressure zones are included in the open zone analysis, as they are ultimately fed by gravity from a reservoir. Pressure zones that do not include a storage facility are analyzed as a closed zone.

3.4.2.1.1 Valley Service Area

The Valley Service Area is the largest service area in the water system and consists of two pressure zones: Valley 288 and Valley 242. The Valley 288 pressure zone is a transmission zone that does not directly serve any customers. Valley 242 is the largest pressure zone in the RWSA and is draws supply from the following facilities:

- Wells 2 and 6 via the Fulmer Field CCT Facility
- Coal Creek Springs and Well 1 via the Howard Road CCT Facility with transmission through Valley 288
- Well 4 with transmission through Valley 288
- West Hill Springs

Table 3-21 provides an overview of the total pump station capacity into the Valley Service Area compared with demand projections and DOH and City criteria. The results presented in Table 3-21 demonstrate that the City has adequate pumping capacity within the open pressure zones of the Valley Service Area to meet current and future demand projections for all required criteria.

Table 3-21 | Pumps Station Capacity for Valley Service Area Open Pressure Zones

Description	Valley 2024 Scenario	Valley 2034 Scenario	Valley 2044 Scenario
Required Capacity (gpm)			
FSS Replenished in 72-hours	222	222	222
Maximum Day Demand, gpm	6,266	7,161	8,252
Average Day Demand, gpm	3,546	4,052	4,670
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	2,800	2,800	2,800
Total Pumping Capacity (Q_t), gpm	19,400	19,400	19,400
DOH Criteria: Reliable Capacity (ADD + largest pump out of service)			
Surplus / (Deficit), gpm	15,854	15,348	14,730
DOH Criteria: Total Capacity (MDD + replenish FSS in 72-hours)			
Surplus / (Deficit), gpm	13,134	12,239	11,148
City Criteria: MDD + largest pump out of service			
Surplus / (Deficit), gpm	10,334	9,439	8,348

3.4.2.1.2 Lea Hill Service Area

Water supply for the Lea Hill Service Area is provided by the Lea Hill Pump Station and the Green River Pump Station. In 2014, the City added wholesale water supply from Tacoma through the 132nd Ave SW intertie, however the City has not purchased water for consumption from Tacoma since 2016. The intertie and pump stations feed the Lea Hill 563 pressure zone, which includes Reservoirs 4A and 4B. Therefore,

the Lea Hill and Green River Pump Stations were evaluated based on the open zone criteria. **Table 3-22** provides a summary of the pump station capacity into the Lea Hill Service Area compared with demand projections and DOH and City criteria. The results presented in **Table 3-22** demonstrate that the City has adequate pumping capacity within the open pressure zones of the Lea Hill Service Area to meet current and future demand projections for all required criteria.

Table 3-22 | Pump Station Capacity for Lea Hill Service Area Open Pressure Zones

Description	Lea Hill 2024 Scenario	Lea Hill 2034 Scenario	Lea Hill 2044 Scenario
Required Capacity (gpm)			
FSS Replenished in 72-hours	222	222	222
Maximum Day Demand, gpm	1,231	1,281	1,333
Average Day Demand, gpm	696	725	755
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	1,166	1,166	1,166
Total Pumping Capacity (Q_t), gpm	6,664[1]	6,664[1]	6,664[1]
DOH Criteria: Reliable Capacity (ADD + largest pump out of service)			
Surplus / (Deficit), gpm	5,968	5,939	5,909
DOH Criteria: Total Capacity (MDD + replenish FSS in 72-hours)			
Surplus / (Deficit), gpm	5,433	5,383	5,331
City Criteria: MDD + largest pump out of service			
Surplus / (Deficit), gpm	4,267	4,217	4,165

Note:

1. The Green River Pump Station has a firm capacity of 3,498 gpm (largest pump out of service) and the Lea Hill Pump Station has a firm capacity of 1,200 gpm (largest pump out of service). The largest pump at Green River and Lea Hill PS have 1,166 gpm and 800 gpm capacity, respectively. Therefore, the firm and total pumping capacity of both pump stations is 4,698 gpm (two pumps out of service) and 6,664 gpm (all pumps in service), respectively.

3.4.2.1.3 Lakeland Service Area

The Lakeland Service Area is supplied from the Upland Well Field (Wells 5 and 5A) and by sources in the Valley Service Area using the Terrace View BPS. The Terrace View BPS supplies the Lakeland 630 pressure zone from the Valley Service Area, which is then distributed through the Service Area. Since the Lakeland 630 pressure zone contains two reservoirs (Reservoirs 5 and 6), the Terrace View BPS was evaluated based on the open zone criteria. **Table 3-23** provides a summary of the pump station capacity into the Lakeland Service Area compared with demand projections and DOH and City criteria. The results presented in **Table 3-23** demonstrate that the City has adequate pumping capacity within the open pressure zones of the Lakeland Service Area to meet current and future demand projections for all required criteria.

Table 3-23 | Pump Station Capacity for Lakeland Service Area Open Pressure Zones

Description	Lakeland 2024 Scenario	Lakeland 2034 Scenario	Lakeland 2044 Scenario
Required Capacity (gpm)			
FSS Replenished in 72-hours	130	130	130
Maximum Day Demand, gpm	629	719	823
Average Day Demand, gpm	356	407	466
Available Capacity (gpm)			

Description	Lakeland 2024 Scenario	Lakeland 2034 Scenario	Lakeland 2044 Scenario
Largest Pump (Q_L), gpm	500	500	500
Total Pumping Capacity (Q_t), gpm	1,500	1,500	1,500
DOH Criteria: Reliable Capacity (ADD + largest pump out of service)			
Surplus / (Deficit), gpm	1,144	1,093	1,034
DOH Criteria: Total Capacity (MDD + replenish FSS in 72-hours)			
Surplus / (Deficit), gpm	871	781	677
City Criteria: MDD + largest pump out of service			
Surplus / (Deficit), gpm	371	281	177

3.4.2.1.4 Academy Service Area

The Academy Service Area is supplied from the Valley Service Area using Academy Pump Station 3. The pump station operates based on levels in Reservoirs 8A and 8B located in the Academy 531 pressure zone. **Table 3-24** provides a summary of the pump station capacity into the Academy Service Area compared with demand projections and DOH and City criteria. The results presented in **Table 3-24** demonstrate that the City has adequate pumping capacity within the open pressure zones of the Academy Service Area to meet current and future demand projections for all required criteria.

Table 3-24 | Pump Station Capacity for Academy Service Area Open Pressure Zones

Description	Academy 2024 Scenario	Academy 2034 Scenario	Academy 2044 Scenario
Required Capacity (gpm)			
FSS Replenished in 72-hours	222	222	222
Maximum Day Demand, gpm	531	591	658
Average Day Demand, gpm	300	334	373
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	700	700	700
Total Pumping Capacity (Q_t), gpm	2,800	2,800	2,800
DOH Criteria: Reliable Capacity (ADD + largest pump out of service)			
Surplus / (Deficit), gpm	2,500	2,466	2,427
DOH Criteria: Total Capacity (MDD + replenish FSS in 72-hours)			
Surplus / (Deficit), gpm	2,269	2,209	2,142
City Criteria: MDD + largest pump out of service			
Surplus / (Deficit), gpm	1,569	1,509	1,442

3.4.2.2 Booster Pump Station Analysis: Closed Pressure Zones

The City operates a closed zone in each of its Service Areas. Closed zones do not have a storage reservoir directly serving the zone and are required to supply the peak hour demand (PHD) and fire flow via a BPS. The BPS serving each closed pressure zone was evaluated using the closed zone criteria as defined by DOH.

3.4.2.2.1 Lakeland Hills BPS

The Lakeland Service Area has two closed pressure zones served by the Lakeland Hills BPS: Lakeland 697 and Lakeland 670. **Table 3-25** provides a summary of the BPS capacity into the Lakeland closed pressure

zones compared with demand projections and DOH and City criteria. The results presented in **Table 3-25** demonstrate that the City has adequate pumping capacity within the closed pressure zones of the Lakeland Service Area to meet current and future demand projections for all required criteria.

Table 3-25 | BPS Capacity for Lakeland Service Area Closed Pressure Zones

Description	Lakeland 670 & 697 2024 Scenario	Lakeland 670 & 697 2034 Scenario	Lakeland 670 & 697 2044 Scenario
Required Capacity (gpm)			
Fire Flow Required, gpm	3,125	3,125	3,125
Maximum Day Demand, gpm	231	261	296
Peak Hour Demand, gpm	372	419	476
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	3,125	3,125	3,125
Total Pumping Capacity (Q_t), gpm	7,330	7,330	7,330
DOH Criteria: Firm Capacity (no storage; PHD + largest pump out of service)			
Surplus / (Deficit), gpm	3,833	3,786	3,729
DOH Criteria: Reliable Capacity (no storage; MDD + FSS + largest pump out of service)			
Surplus / (Deficit), gpm	3,974	3,944	3,909
City Criteria: PHD+ FSS + largest pump out of service			
Surplus / (Deficit), gpm	708	661	604

3.4.2.2.2 Academy East BPS

The Academy Service Area has one closed zone served by the Academy East BPS: Academy 585. **Table 3-26** provides a summary of the BPS capacity into the Academy closed pressure zone compared with demand projections and DOH and City criteria. The results presented in **Table 3-26** demonstrate that the City has adequate pumping capacity within the closed pressure zones of the Academy Service Area to meet current and future demand projections for all required criteria.

Table 3-26 | BPS Capacity for Academy Service Area Closed Pressure Zone

Description	Academy 585 2024 Scenario	2 Academy 585 2034 Scenario	Academy 585 2044 Scenario
Required Capacity (gpm)			
Fire Flow Required, gpm	2,500	2,500	2,500
Maximum Day Demand, gpm	87	98	111
Peak Hour Demand, gpm	140	158	179
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	1,250	1,250	1,250
Total Pumping Capacity (Q_t), gpm	4,290	4,290	4,290
DOH Criteria: Firm Capacity (no storage; PHD + largest pump out of service)			
Surplus / (Deficit) of Supply, gpm	2,900	2,882	2,861
DOH Criteria: Reliable Capacity (no storage; MDD + FSS + largest pump out of service)			
Surplus / (Deficit), gpm	1,703	1,692	1,679
City Criteria: PHD+ FSS + largest pump out of service			

Surplus / (Deficit), gpm	400	382	361

3.4.2.2.3 Lea Hill BPS

The Lea Hill Service Area has one closed zone served by the Lea Hill BPS: Lea Hill 648. **Table 3-27** provides a summary of the BPS capacity into the Lea Hill closed pressure zone compared with demand projections and DOH and City criteria. The results presented in **Table 3-27** indicate that the Lea Hill BPS is currently deficient and cannot meet the required criteria for existing or future demands.

Table 3-27 | BPS Capacity for Lea Hill Service Area Closed Pressure Zone

Description	Lea Hill 648 2024 Scenario	Lea Hill 648 2034 Scenario	Lea Hill 648 2044 Scenario
Required Capacity (gpm)			
Fire Flow Required, gpm	2,500	2,500	2,500
Maximum Day Demand, gpm	110	124	141
Peak Hour Demand, gpm	178	200	227
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	1,500	1,500	1,500
Total Pumping Capacity (Q_t), gpm	1,800	1,800	1,800
DOH Criteria: Firm Capacity (no storage; PHD + largest pump out of service)			
Surplus / (Deficit), gpm	122	100	73
DOH Criteria: Reliable Capacity (no storage; MDD + FSS + largest pump out of service)			
Surplus / (Deficit), gpm	(810)	(824)	(841)
City Criteria: PHD+ FSS + largest pump out of service			
Surplus / (Deficit), gpm	(2,378)	(2,400)	(2,427)

The Intertie Pump Station shares a building with the Lea Hill BPS and contains pumps which were originally purposed to serve the intertie for wholesale supply to CWD and LMWD. Since CWD and LMWD no longer rely on the City as their primary water source, the City plans to complete facility modifications so the pumps at the Intertie Pump Station can serve the Lea Hill 648 pressure zone. This project is discussed further in **Chapter 8** and will resolve the deficiencies identified in **Table 3-27**.

3.4.2.2.4 Game Farm Park Pump Station

The Valley Service Area has one closed zone served by the Game Farm Park Pump Station: Game Farm Park (no assigned pressure zone name). **Table 3-28** provides a summary of the BPS capacity into the Valley closed pressure zone compared with demand projections and DOH and City criteria. The results presented in **Table 3-28** indicate that the Game Farm Park Pump Station is currently deficient and cannot meet the required criteria for existing or future demands.

The Game Farm Park Pump Station provides service to a park restroom facility, two fire hydrants, and individual RV campsites. As this is a small BPS with the single purpose of providing service to a recreational area, and there are no residential or commercial property connections supplied by this facility, no actions are planned to resolve this deficiency. The DOH and City criteria are geared towards providing reliable service for residents and businesses and are not applicable for this minor facility. The City has reviewed this condition with the Fire Marshal, and no exceptions were taken. As further development progresses in and around the Game Farm Park Pump Station, modifications will be considered to address the deficiency.

Table 3-28 | BPS Capacity for Game Farm Park Closed Pressure Zone

Description	2024 Game Farm	2034 Game Farm	2044 Game Farm
Required Capacity (gpm)			
Fire Flow Required, gpm	1,500	1,500	1,500
Maximum Day Demand, gpm	0.4	0.4	0.4
Peak Hour Demand, gpm	0.6	0.6	0.7
Available Capacity (gpm)			
Largest Pump (Q_L), gpm	1,000	1,000	1,000
Total Pumping Capacity (Q_t), gpm	1,050	1,050	1,050

DOH Criteria: Reliable Capacity (no storage; MDD + FSS + largest pump out of service)			
Surplus / (Deficit), gpm	(450)	(450)	(451)
City Criteria: PHD+ FSS + largest pump out of service			
Surplus / (Deficit), gpm	(1,451)	(1,451)	(1,451)

3.4.2.3 Storage Analysis

This section evaluates the City's existing water storage facilities to determine if there is sufficient capacity to meet existing and future storage requirements of the system.

3.4.2.3.1 Components of Storage

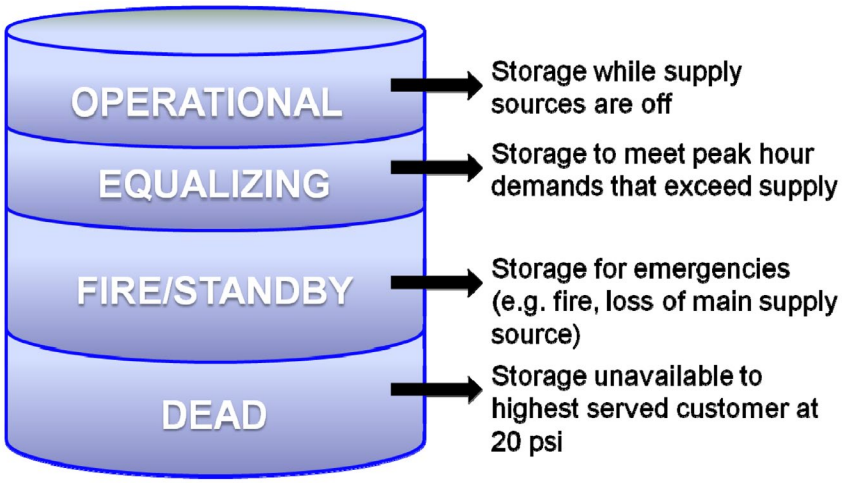
The City currently maintains a total of 15.7 MG of water storage in eight reservoirs located throughout the service area. Each Service Area has two reservoirs, providing redundancy for cleaning and maintenance. Historically, the City has evaluated each Service Area independently. However, new sources, pump stations, and PRV facilities now allow for reliable and redundant operation of the system as an interconnected whole, rather than as separate Service Areas. The storage analysis reflects the new operational ability by allowing sharing of emergency storage between the Service Areas. The existing infrastructure and customer expectations still require that other storage components, such as FSS, be stored in individual Service Areas.

Water storage requirements are typically defined by the following components: operational storage, equalizing storage, standby storage, fire suppression storage, and dead storage. A description of each storage component and the criteria used to evaluate the capacity of the City's reservoirs is as follows:

- Operational Storage: Operational storage is used to supply the water system under normal demand conditions and provides pump protection to avoid frequent starting and stopping of pumps for pump stations that are used to fill reservoirs. The operational storage is calculated per the DOH Design Manual as the pump supply firm capacity (in gpm) times 2.5-minutes.

- Equalizing Storage: When the source pumping capacity cannot meet the periodic daily (or longer) peak demands placed on the water system, equalizing storage must be provided as a part of the total storage for the system and must be available at 30 psi to all service connections. The criteria for determining the equalizing storage requirements for the City's system is based on the equalizing calculation in the DOH Design Manual (refer to equation 7-1).

- Standby Storage: Standby storage is the portion of the reservoir used to supply the water system when supply facilities are out of service. DOH allows water systems with multiple sources to require that standby volume be supplied with the largest supply source out of service but recommends a



minimum standby storage of 200 gallons per ERU in the system. The City calculates standby storage as the maximum volume required to supply all ERUs at least 240 gallons (based on the DOH minimum times a 20 percent factor of safety).

- Fire Suppression Storage (FSS): FSS is the portion of the reservoir with sufficient volume to supply water to the system at the maximum rate and duration required to extinguish a fire at the building with the highest fire flow requirement. The required volume of the FSS is the product of the fire flow rate and duration of the system's maximum fire flow requirement.

- Dead Storage: Dead storage is the bottom portion of the reservoir that cannot be used because water is stored at an elevation that is too low to provide sufficient system pressure (below 20 psi at the highest elevation served by the reservoir). This unusable storage occupies the lower portion of many ground-level standpipe-type reservoirs. When the highest service elevation is not the limiting factor, the City defines dead storage as being 1-foot above the reservoir inlet elevation for operational reasons.

The City's reservoir storage requirements depend on the water system's configuration, seasonal and daily variation in water-use patterns, and the reliability of various water system components. This section describes the five components of storage, summarizes the existing system's capacity to meet the storage needs of each Service Area, and makes recommendations to address identified storage deficits.

Figure 3-7 | Illustration of Reservoir Storage Components

3.4.2.3.2 Storage Analysis Results

The storage available in the four Service Areas was evaluated to confirm each is provided with the required usable Operational, Equalizing, Fire Suppression, and Emergency Storage volumes. Reflecting the interconnectedness of the system, excess storage in higher Service Areas (i.e., Lea Hill, Lakeland and Academy) can be used in the Valley Service Area and vice versa through use of the system pump stations. The storage analysis compares the required storage, based on the criteria in Table 3-17, and the available storage. The FSS for each region was calculated using 4,000 gpm for four hours except for Lakeland, which used 3,125 gpm for three hours based on buildings with the highest fire flow requirement in each Service Area (see Table 3-20).

Table 3-29 summarizes the existing 2024 storage analysis and results. The results indicate a deficit in the Lea Hill Service Area, however, this deficit is offset by surplus storage available in other Service Areas.

Table 3-29 | System-Wide Storage Analysis for the 2024 Scenario

Description	RWSA 2024	Academy 2024	Lakeland 2024	Lea Hill 2024	Valley 2024
Usable Storage (MG)					
Maximum Storage Capacity	15.86	2.72	2.06	2.48	8.60
Algona Reserve Storage Capacity[1]	0.28	--	0.28	--	--
Dead Storage	1.50	0.06	0.44	0.36	0.64
Total Usable Storage	14.08	2.66	1.34	2.12	7.96
Required Storage (MG)					
Operational Storage	0.05	0.01	0.00	0.01	0.03
Equalizing Storage	0.00	0.00	0.00	0.00	0.00
Standby Storage (Emergency)	9.30	0.57	0.68	1.32	6.73
FSS (Emergency)	3.44	0.96	0.56	0.96	0.96
Total Required Storage	12.79	1.54	1.24	2.29	7.72
Surplus/ (Deficit) Storage	**1.29**	**1.12**	**0.10**	**(0.17)**	**0.24**

Note:

1. The water supply interlocal agreement (IA3) between the City of Algona and the City of Auburn was updated in 2016. Through this updated agreement, Algona elected to financially participate in Lakeland Reservoir 6 to obtain a total share of 280,000-gallons of storage capacity. The agreement stipulates that if the City experiences any failure or decreased capacity, the supply of water to Algona may be decreased by the same percentage that is experienced by the City.

Table 3-30 summarizes the 2034 storage analysis and results (10-year projections). The results indicate a deficit in the Lea Hill, Lakeland, and Valley Service Areas, however, this deficit is offset by surplus storage available in other Service Areas. Additionally, the deficit in the Lakeland Service Area may not be realized based on the City's terms and conditions of the IA3 agreement with Algona.

Table 3-30 | System-Wide Storage Analysis for the 2034 Scenario

Description	RWSA 2034	Academy 2034	Lakeland 2034	Lea Hill 2034	Valley 2034
Usable Storage (MG)					
Maximum Storage Capacity	15.86	2.72	2.06	2.48	8.60
Algona Reserve Storage Capacity[1]	0.28	--	0.28	--	--
Dead Storage	1.50	0.06	0.44	0.36	0.64
Total Usable Storage	14.08	2.66	1.34	2.12	7.96
Required Storage (MG)					
Operational Storage	0.05	0.01	0.00	0.01	0.03
Equalizing Storage	0.02	0.00	0.02	0.00	0.00
Standby Storage (Emergency)	10.47	0.63	0.77	1.38	7.69
FSS (Emergency)	3.44	0.96	0.56	0.96	0.96
Total Required Storage	13.98	1.60	1.36	2.34	8.68
Surplus/ (Deficit) Storage	**0.10**	**1.06**	**(0.02)**	**(0.22)**	**(0.72)**

Note:

1. The water supply interlocal agreement (IA3) between the City of Algona and the City of Auburn was updated in 2016. Through this updated agreement, Algona elected to financially participate in Lakeland Reservoir 6 to obtain a total share of 280,000-gallons of storage capacity. The agreement stipulates that if the City experiences any failure or decreased capacity, the supply of water to Algona may be decreased by the same percentage that is experienced by the City.

The 2044 storage analysis was performed to determine the ability of the proposed storage facilities to meet the future storage requirements in 2044, based on projected demands. The analysis results indicate that the existing storage facilities do not have sufficient capacity to meet the future demands of the system

based on the demand projections presented in Chapter 2. The City is currently planning a new reservoir in the Valley Service area to address these future deficiencies in the 20-year time frame. Table 3-31 summarizes the buildout 2044 storage analysis.

Table 3-31 summarizes the 2044 storage analysis and results (20-year projections). The results indicate an overall deficit in the RWSA, spurred largely by the projected growth within the Valley Service Area in the 20-year horizon.

Table 3-31 | System-Wide Storage Analysis for the 2044 Scenario

Description	RWSA 2044	Academy 2044	Lakeland 2044	Lea Hill 2044	Valley 2044
Usable Storage (MG)					
Maximum Storage Capacity	15.86	2.72	2.06	2.48	8.60
Algona Reserve Storage Capacity[1]	0.28	--	0.28	--	--
Dead Storage	1.50	0.06	0.44	0.36	0.64
Total Usable Storage	14.08	2.66	1.34	2.12	7.96
Required Storage (MG)					
Operational Storage	0.05	0.01	0.00	0.01	0.03
Equalizing Storage	0.05	0.00	0.05	0.00	0.00
Standby Storage (Emergency)	11.88	0.71	0.88	1.43	8.86
FSS Storage (Emergency)	3.44	0.96	0.56	0.96	0.96
Total Required Storage	15.42	1.68	1.49	2.40	9.86
Surplus/ (Deficit) Storage	**(1.34)**	**0.98**	**(0.15)**	**(0.28)**	**(1.89)**

Note:

1. The water supply interlocal agreement (IA3) between the City of Algona and the City of Auburn was updated in 2016. Through this updated agreement, Algona elected to financially participate in Lakeland Reservoir 6 to obtain a total share of 280,000-gallons of storage capacity. The agreement stipulates that if the City experiences any failure or decreased capacity, the supply of water to Algona may be decreased by the same percentage that is experienced by the City.

Since most of the future storage deficiency is in the Valley Service Area, a new storage reservoir is planned in the northeastern portion of the Service Area (Valley 242 pressure zone). The reservoir is a planned capital project to be completed in the 20-year horizon and is discussed further in Chapter 8.

The Lea Hill PS has sufficient capacity to transfer standby storage from Valley to Lea Hill. In addition, there are multiple PRVs which can be used to transfer water from the Academy and Lakeland Service Areas back to Valley to utilize excess standby storage in those areas. No other projects are necessary to resolve this deficiency.

3.4.2.4 Distribution and Transmission Capacity Analysis

This section evaluates the City's existing distribution and transmission mains to determine if the water pipelines are sized and looped adequately to provide the required flow and pressures to meet existing and future system conditions. The evaluation used an updated version of the City's computerized hydraulic water system model and InfoWater Pro, a GIS-based modeling software developed by Autodesk (formerly Innovyze). The model was updated to accurately reflect the City's existing water system and verified against field hydrant test data. Results from the model were used to evaluate the existing system and identify deficiencies.

3.4.2.4.1 Model Update

The following updates were made to the City's hydraulic model prior to conducting the capacity analyses:

- Facility updates
- Pipeline network updates
- Elevation updates
- Demand updates

Each update is described in further detail below.

Facility Updates

Existing facilities within the hydraulic model were reviewed and updated based on information provided by the City. The facilities reviewed included groundwater wells, springs, interties with adjacent water systems, potable water reservoirs, pump stations, treatment facilities, flow control valves, and PRVs. The following documents were used to confirm the accuracy of the facility information within the hydraulic model:

- Interlocal agreements
- Record drawings
- PRV calibration records
- Pump curves
- SCADA data
- Operations and maintenance data

Pipeline Network Updates

The existing pipeline network within the hydraulic model was compared to the City's existing GIS data to locate areas where pipelines may have been missing in the model. In addition, the pipeline material type was added to the model to match data available from GIS to more accurately reflect the existing distribution system.

Elevation Updates

Node elevations within the model were updated using United States Geological Survey (USGS) Digital Elevation Model (DEM). The DEM is a tile of the 3-Dimenional Elevation Program (3DEP) with data that is updated regularly and distributed in geographic coordinates in units conforming with the North American Datum of 1983 (NAD 83). All elevation values are in meters and, over the contiguous United States, are referenced to the North American Vertical Datum of 1988 (NAVD 88). The assigned elevations were converted to feet when applied to the model.

In addition to the general elevation update of the model nodes, the record drawings of the water reservoirs were used to verify the bottom and overflow elevations of the reservoirs within the model. Where necessary based on date, the as-built elevations were corrected to NAVD88 values, as some of the reservoirs were constructed using National Geodetic Vertical Datum of 1929 (NGVD 29). A conversion of 3.51 feet was used to update elevations from NGVD 29 to NAVD 88.

Demand Updates

Demands in the model were updated using the City's customer billing database. The meters were geolocated based on the customer's address and assigned to the closest model junction. No demands were allocated to transmission pipelines or facility nodes (i.e., pump station, reservoirs, etc.). Approximately 10 percent of the demand was unable to be allocated using this method. The remaining demand and non-

billed usage, like DSL and construction meters, was distributed uniformly throughout the model by applying a scaling factor to match the 2022 production data. The demand sets in the model sought to distribute the demand projections provided in Chapter 2. A scaling factor was then applied to all demand nodes to equal the demand projection in years 2024.

As discussed in Chapter 2, TAZ data was used to determine growth projections and the future water demand. Based on the TAZ data, each Service Area was split between focused growth areas and non-growth areas. Future demands were allocated equally across all current demand nodes within the focused growth and non-growth areas of each Service Area. Demand peaking factors from Chapter 2 were used to adjust demands to MDD for the fire flow analyses and PHD for the pressure analysis.

3.4.2.4.2 Model Calibration

To verify and calibrate the hydraulic model, the City collected field hydrant testing data. A map of the hydrant testing locations and testing plan is included in Appendix K. The City also collected static pressure at the test locations to verify the hydraulic grade line (HGL) of specific areas of the water system.

In addition to the hydrant tests results, the boundary conditions of the water system facilities at the time of each test were provided. The boundary conditions were used to calculate the demand observed during each test. The boundary conditions were also entered into the model for each hydrant test to accurately simulate the system conditions during the hydrant test. At most locations, hydrants were operated to stress the system to identify required changes to the boundary conditions and pipe roughness factors (C-factors) within the hydraulic model.

A fire flow calibration scenario was set up within the hydraulic model and each of the hydrant test locations was simulated. Appendix K provides the field flow data compared to the flow data input into the model and a comparison of the static pressures and pressure drops observed at each hydrant test. Table 3-32 summarizes the final Hazen Williams C-factors used during the calibration based on piping material.

Table 3-32 | Final C-Factors for Piping Materials

Material	C-Factor
Cast Iron	90-120
Concrete	120
Ductile Iron	120
HDPE	130
PVC	130
RCP	120
Steel	120
Unknown	115

Valley Service Area

A total of 16 hydrant tests were conducted in the Valley Service Area, however the results from one test were excluded as the static pressure was not recorded. The static pressure and pressure drop in the calibrated model is now within 5 psi, or less, of the observed data for each of the hydrant tests.

Lea Hill Service Area

A total of nine hydrant tests were conducted in the Lea Hill Service Area. The static pressure and pressure drop in the calibrated model is now within 5 psi, or less, of the observed data for each of the hydrant tests.

The HGL from the hydrant testing was higher than the reported HGL in the hydraulic model for the Lea Hill 462 pressure zone. The PRV setpoints were referenced to confirm the higher HGL observed during the hydrant testing. As such, the naming for the pressure zone was updated to Lea Hill 480. The update and supporting calculations are included in Appendix K.

Academy Service Area

A total of five hydrant tests were conducted in the Academy Service Area. The static pressure and pressure drop in the calibrated model is now within 5 psi, or less, of the observed data for each of the hydrant tests.

The HGL from the hydrant testing was higher than the reported HGL in the hydraulic model for the Academy 350 and Academy 445 pressure zones. The PRV setpoints were referenced to confirm the higher HGL observed during the hydrant testing. As such, the naming for each pressure zone was updated to Academy 400 and Academy 470 respectively. The updates and supporting calculations are included in Appendix K.

Lakeland Service Area

A total of ten hydrant tests were conducted in the Lakeland Service Area, however the results from one test were excluded as the recorded static pressure was determined to be incorrect. The static pressure and pressure drop in the calibrated model is now within 5 psi, or less, of the observed data for each of the hydrant tests.

The HGL from the hydrant testing varied from the reported HGL in the hydraulic model for the Lakeland 440, Lakeland 441, Lakeland 446, and Lakeland 485 pressure zones. The PRV setpoints were referenced to confirm the HGLs observed during the hydrant tests. As such, the naming for each pressure zone was updated as follows:

- Lakeland 440 pressure zone was split into two pressure zones: Lakeland 450 and Lakeland 405.
- Lakeland 441 pressure zone was updated to Lakeland 385
- Lakeland 446 pressure zone was updated to Lakeland 415
- Lakeland 485 pressure zone was updated to Lakeland 455.

The hydrant test for Lakeland 575 was not simulated in the model as observed in the field since a static pressure of 101 psi was recorded during the hydrant test. According to the PRV setpoints, the HGL on the test date was anticipated to be an error. The City re-checked the hydrant on February 8, 2024, and a static pressure of 69 psi was recorded. It was concluded that the original hydrant test data was inaccurate, and the test was voided. The Lakeland 575 pressure zone was updated to Lakeland 560 instead based on the PRV setpoints and static pressure reading completed in February 2024. The updates and supporting calculations are included in Appendix K.

3.4.2.4.3 Hydraulic Analysis

PHD Analysis

During PHD conditions, the water system must maintain a minimum pressure of 30 psi at all service nodes, a maximum velocity of 8 fps in wall water mains, and a maximum velocity of 5 fps in all transmission mains in accordance with DOH and City standards. The hydraulic model was set up to evaluate pressures and velocities throughout the system under PHD conditions for the 2024 (existing conditions), 2034 (10-year), and 2044 (20-year) scenarios. The results of this analysis are shown in Figure 3-8, Figure 3-9, and Figure 3-10 respectively. The results of this analysis indicate that all areas of the water system meet these requirements under existing and future conditions.

Figure 3-8 | 2024 PHD Scenario – Pressure and Velocity

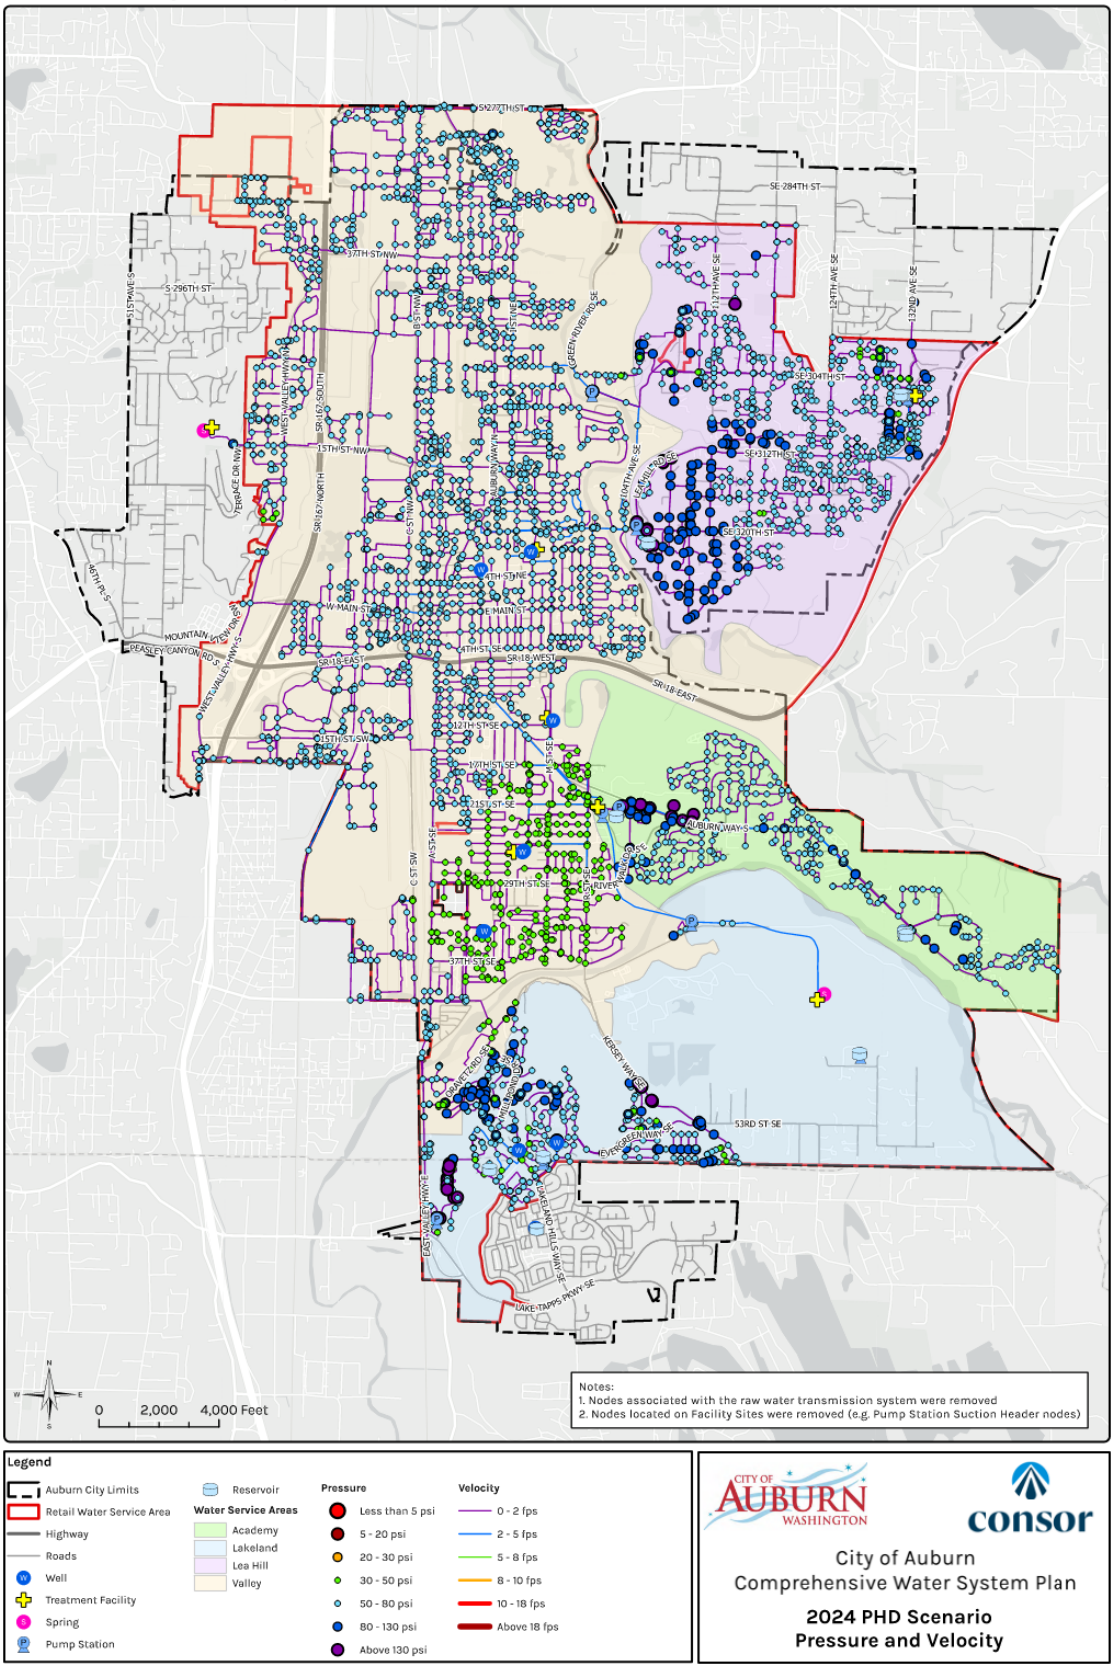


Figure 3-9 | 2034 PHD Scenario – Pressure and Velocity

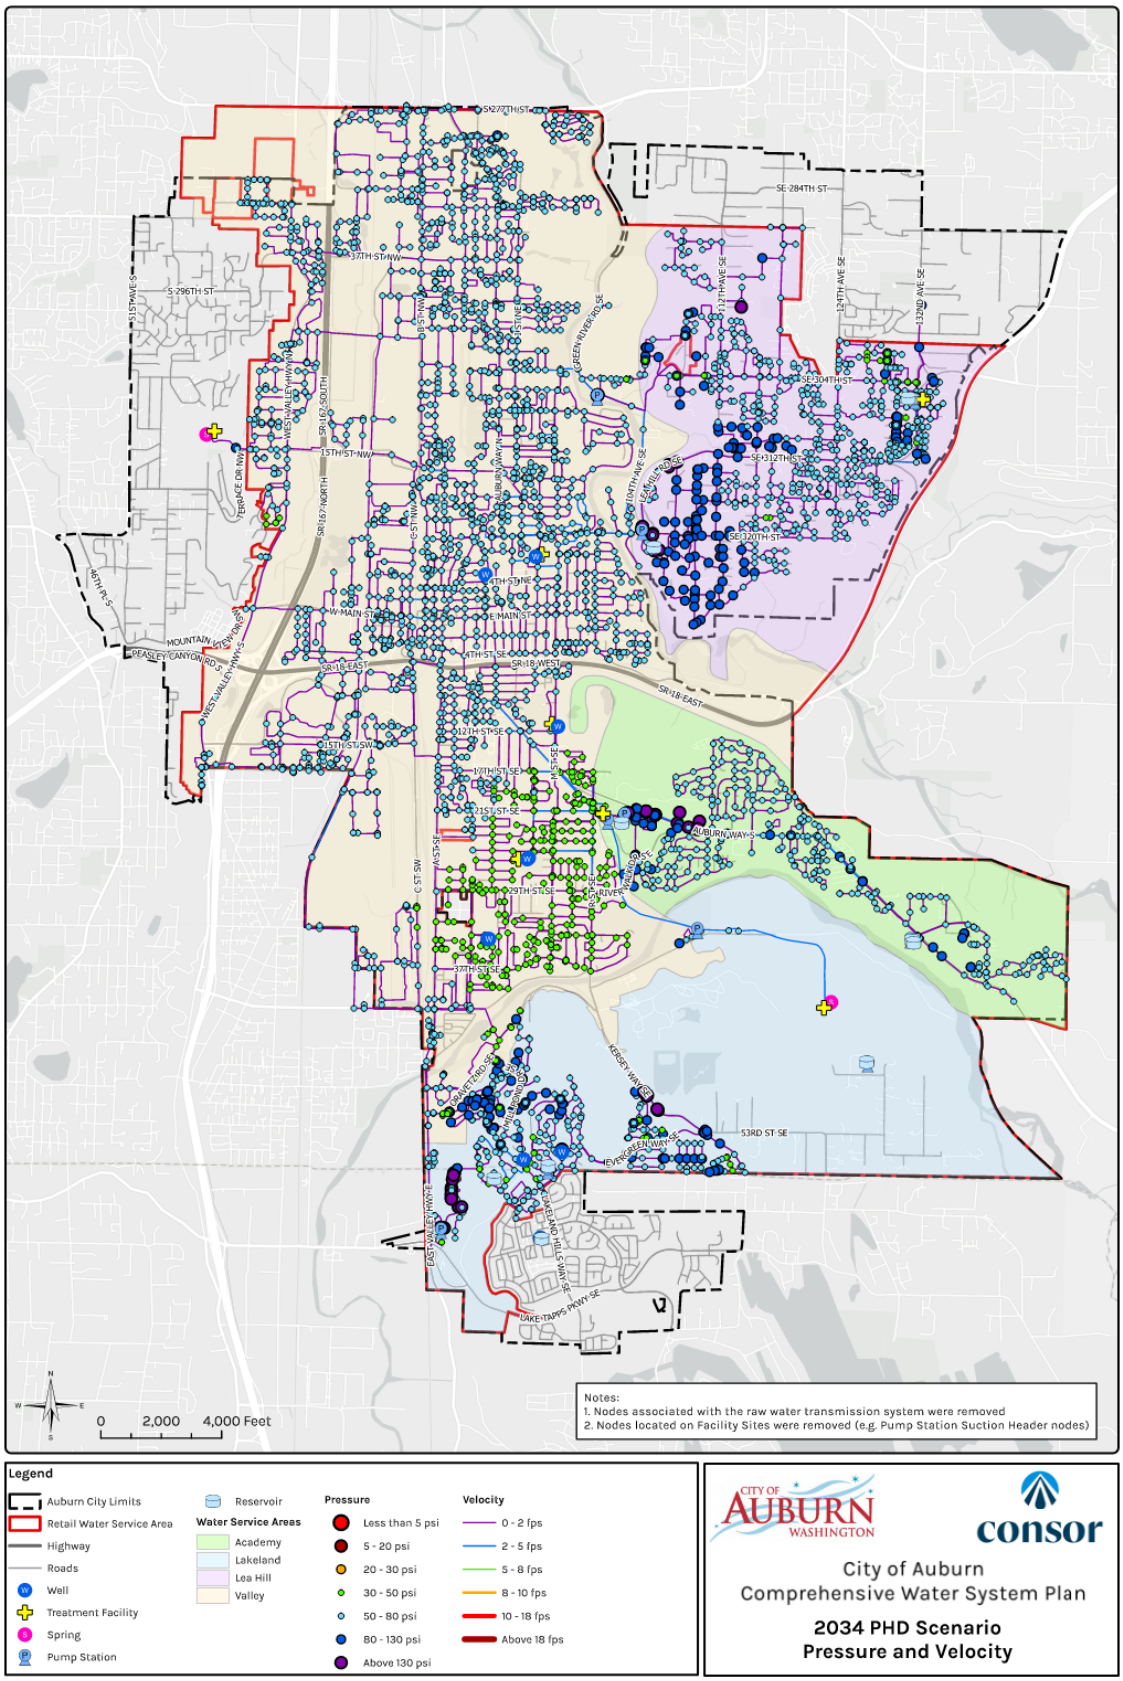

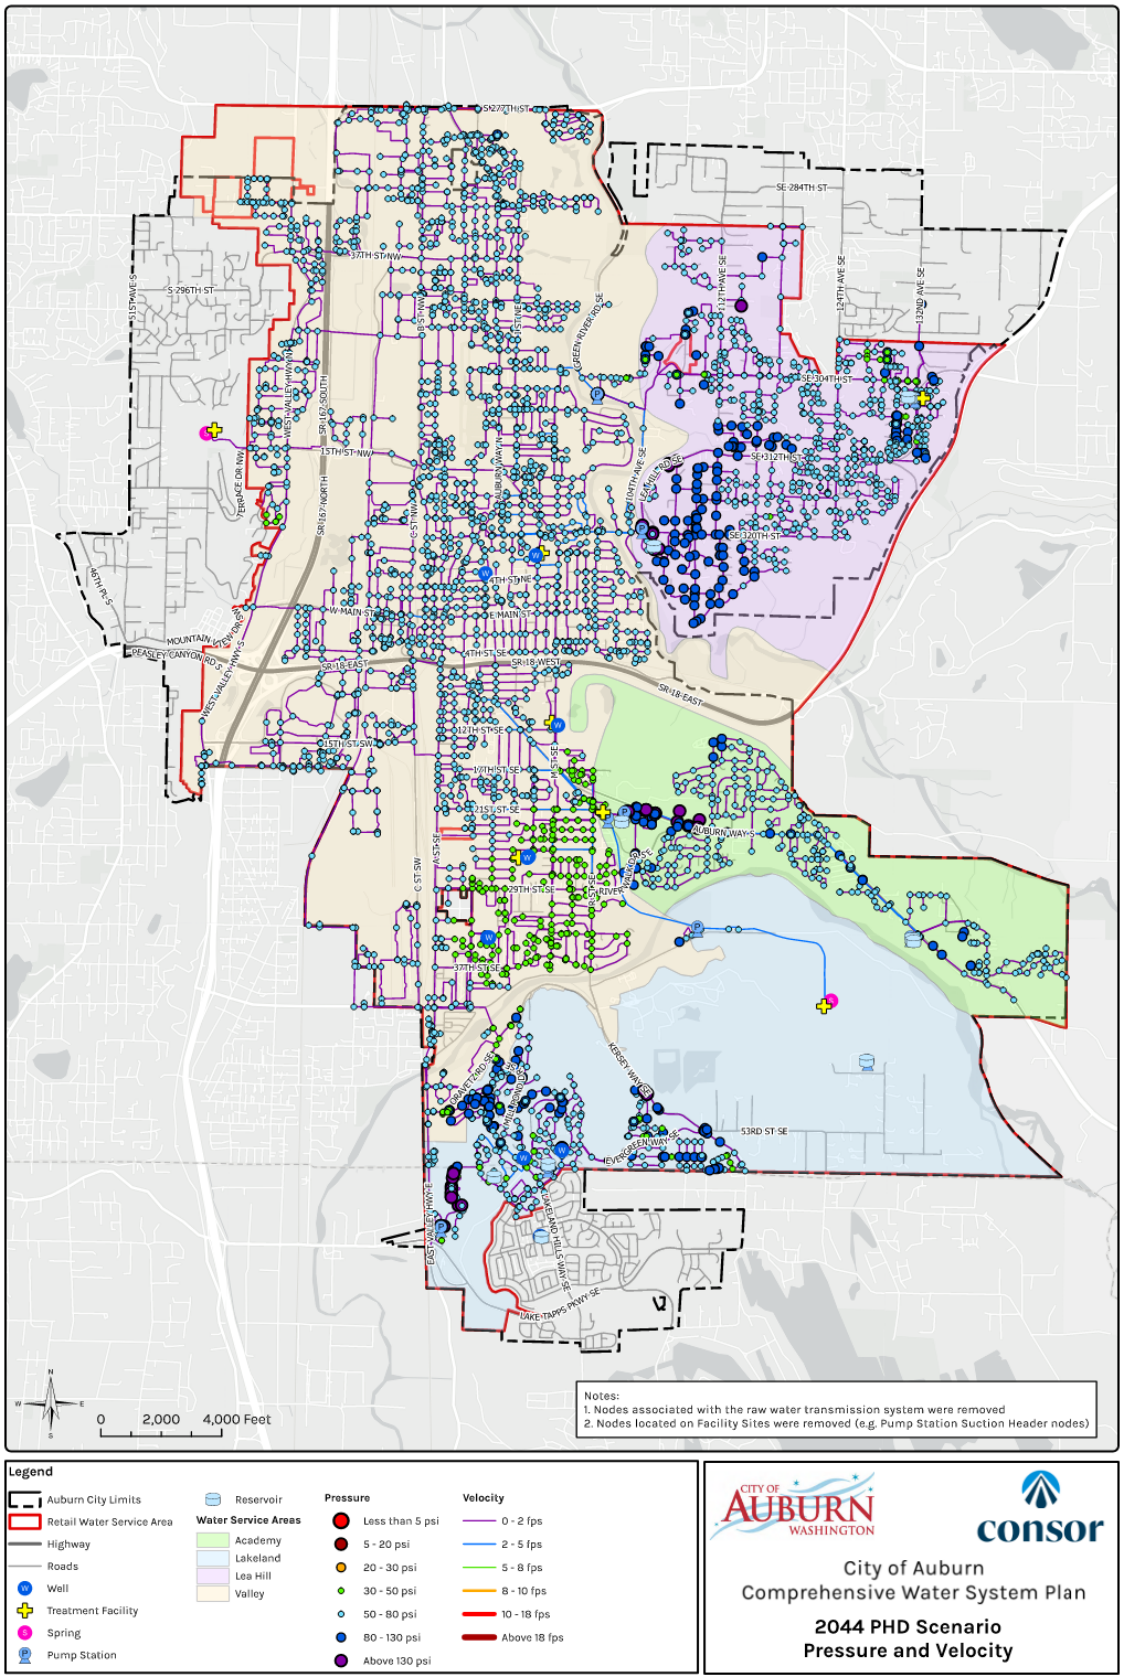

Figure 3-10 | 2044 PHD Scenario – Pressure and Velocity

Fire Flow Analysis

The fire flow analysis assesses each hydrant node in the hydraulic model to determine the available fire flow while maintaining a minimum residual pressure of 20 psi throughout the respective pressure zone. To complete the analysis, the water elevation in each reservoir was set to top of dead storage (below operational, equalizing and standby storage) per DOH recommendations. In addition, the system demands were set to MDD for each scenario (2024, 2034 and 2044). For each node, the modeled available fire flow was compared to its target fire flow requirement as follows:

- Single Family Residential Meters: 1,500 gpm of fire flow required.
- All Other Meters (i.e., multi-family, commercial, etc.): 2,500 gpm of fire flow required.
- Specific Buildings with Higher Fire Flow Requirements: Assessed individually per **Table 3-20**.

Fire flow requirements were assigned to the model nodes based on account classifications of the assigned water meters. Where multiple meters with different account classifications were assigned to the same node, the highest fire flow requirement was assigned to the node. The hydrant locations provided in the City's GIS system do not correspond to the exact location of the hydrant node in the model. Therefore, the nodes that were predicted to have fire flow below what is required were checked based on their proximity to the nearest hydrant to verify whether the appropriate hydrant could provide the required fire. As shown in **Figure 3-11** the results of this analysis indicated that multiple areas of the system under current and future demand conditions have fire flow deficiencies. A summary of the proposed pipeline improvements to resolve the deficiencies is shown in **Figure 3-12** and summarized in **Table 3-33**. **Figure 3-12** also includes on-going projects currently being completed by the City or developers.

Valley Service Area

Multiple deficiencies are identified in the Valley Service Area. The highest priority project assists with raising the HGL of the highest critical node on the west side of the RWSA. This project will increase the available fire flow at most of the western failure locations. The remaining improvements assist with specific failure locations by upsizing water mains experiencing significant headloss.

Additionally, a new PRV facility is proposed to rezone a portion of the Valley 242 pressure zone to the Academy 350 pressure zone to resolve deficiencies in the area. This PRV facility will also allow storage transfer from the Academy Service Area where this is surplus storage to the Valley Service Area to resolve the 2034 storage deficit projections. This project is discussed further in **Chapter 8**.

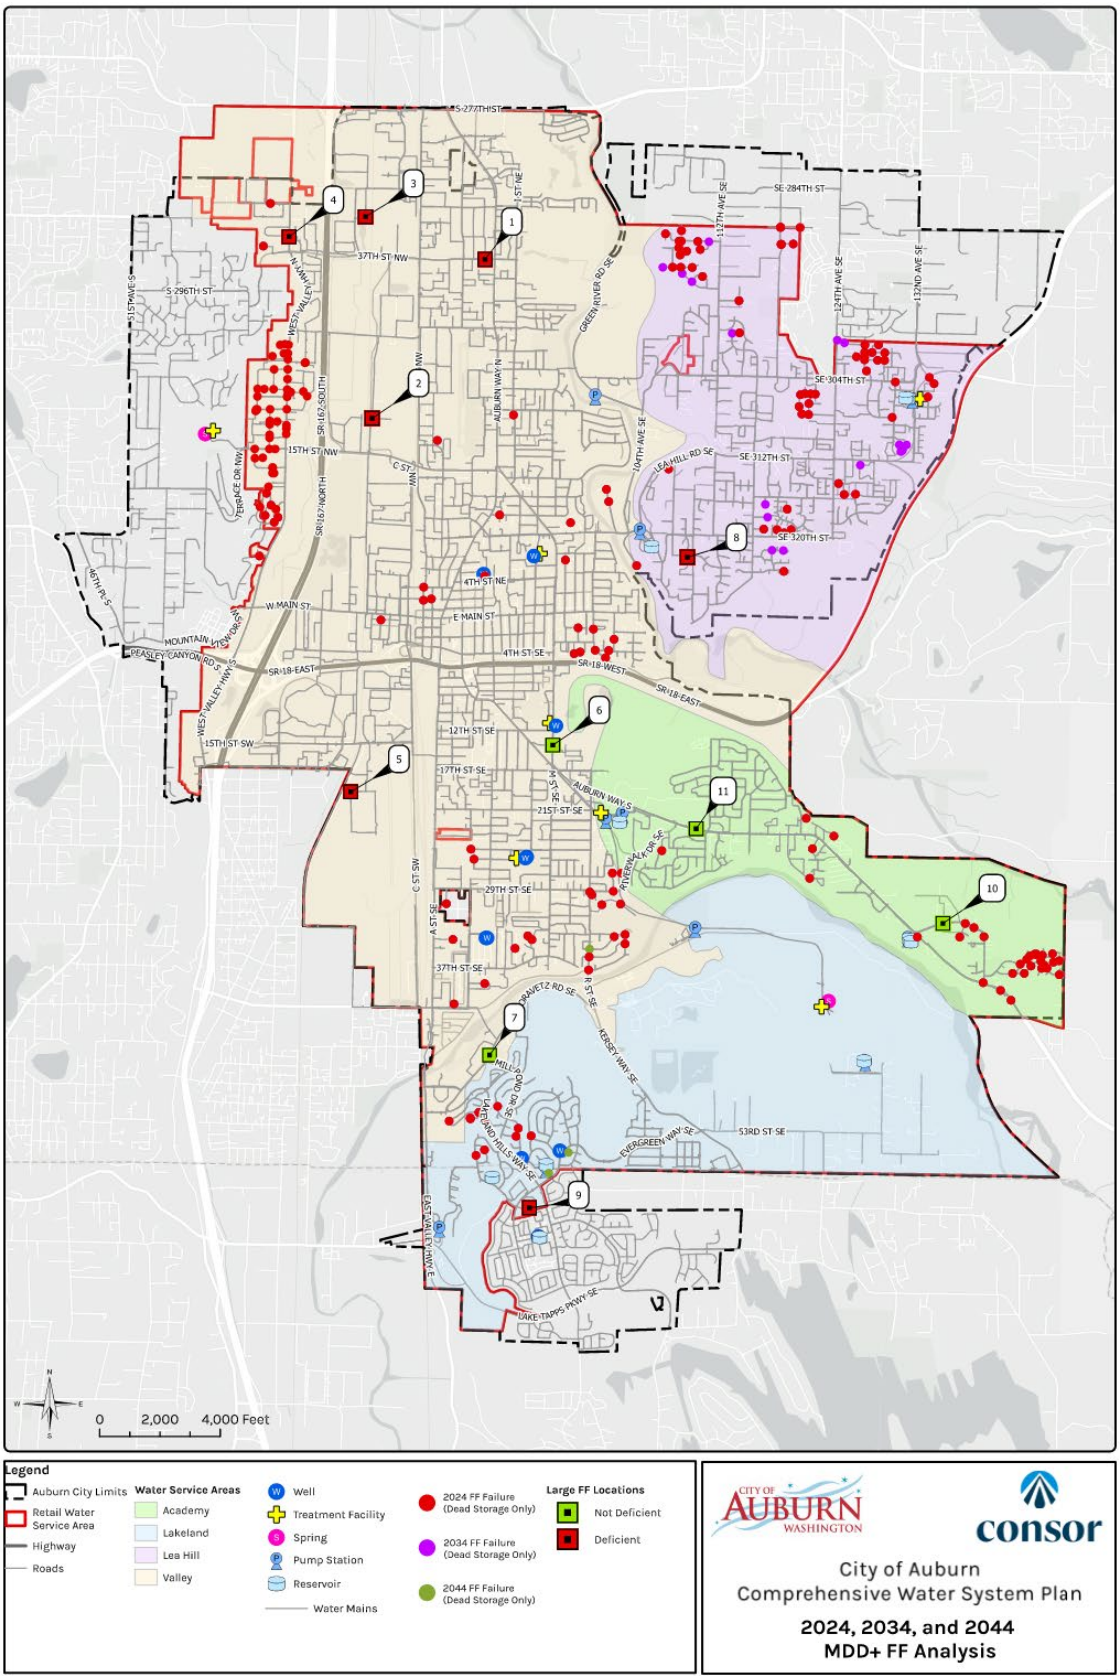
Lakeland Service Area

There were no failure locations identified within the Lakeland Service Area for the existing and future demand conditions.

Lea Hill Service Area

Multiple deficiencies are identified in the Lea Hill Service Area. The highest priority project in this area is to rezone a portion of Lea Hill 563 pressure zone to the Lea Hill 648 pressure zone. In addition, deficiencies were noted in the northern part of Lea Hill 563, in the vicinity of 112th Avenue, 290th Street, 295th Street, and 293rd Street. These pipelines were replaced recently and provide an available fire flow of approximately 1,350 gpm after the rezoning of the Lea Hill 563 pressure zone is completed. Therefore, a project was not proposed in this area and was confirmed with the Fire Marshal. The remaining improvements assist with specific failure locations by upsizing water mains experiencing significant headloss.

Figure 3-11 | MDD+FF Deficiency Locations for 2024, 2034 and 2044 Scenarios



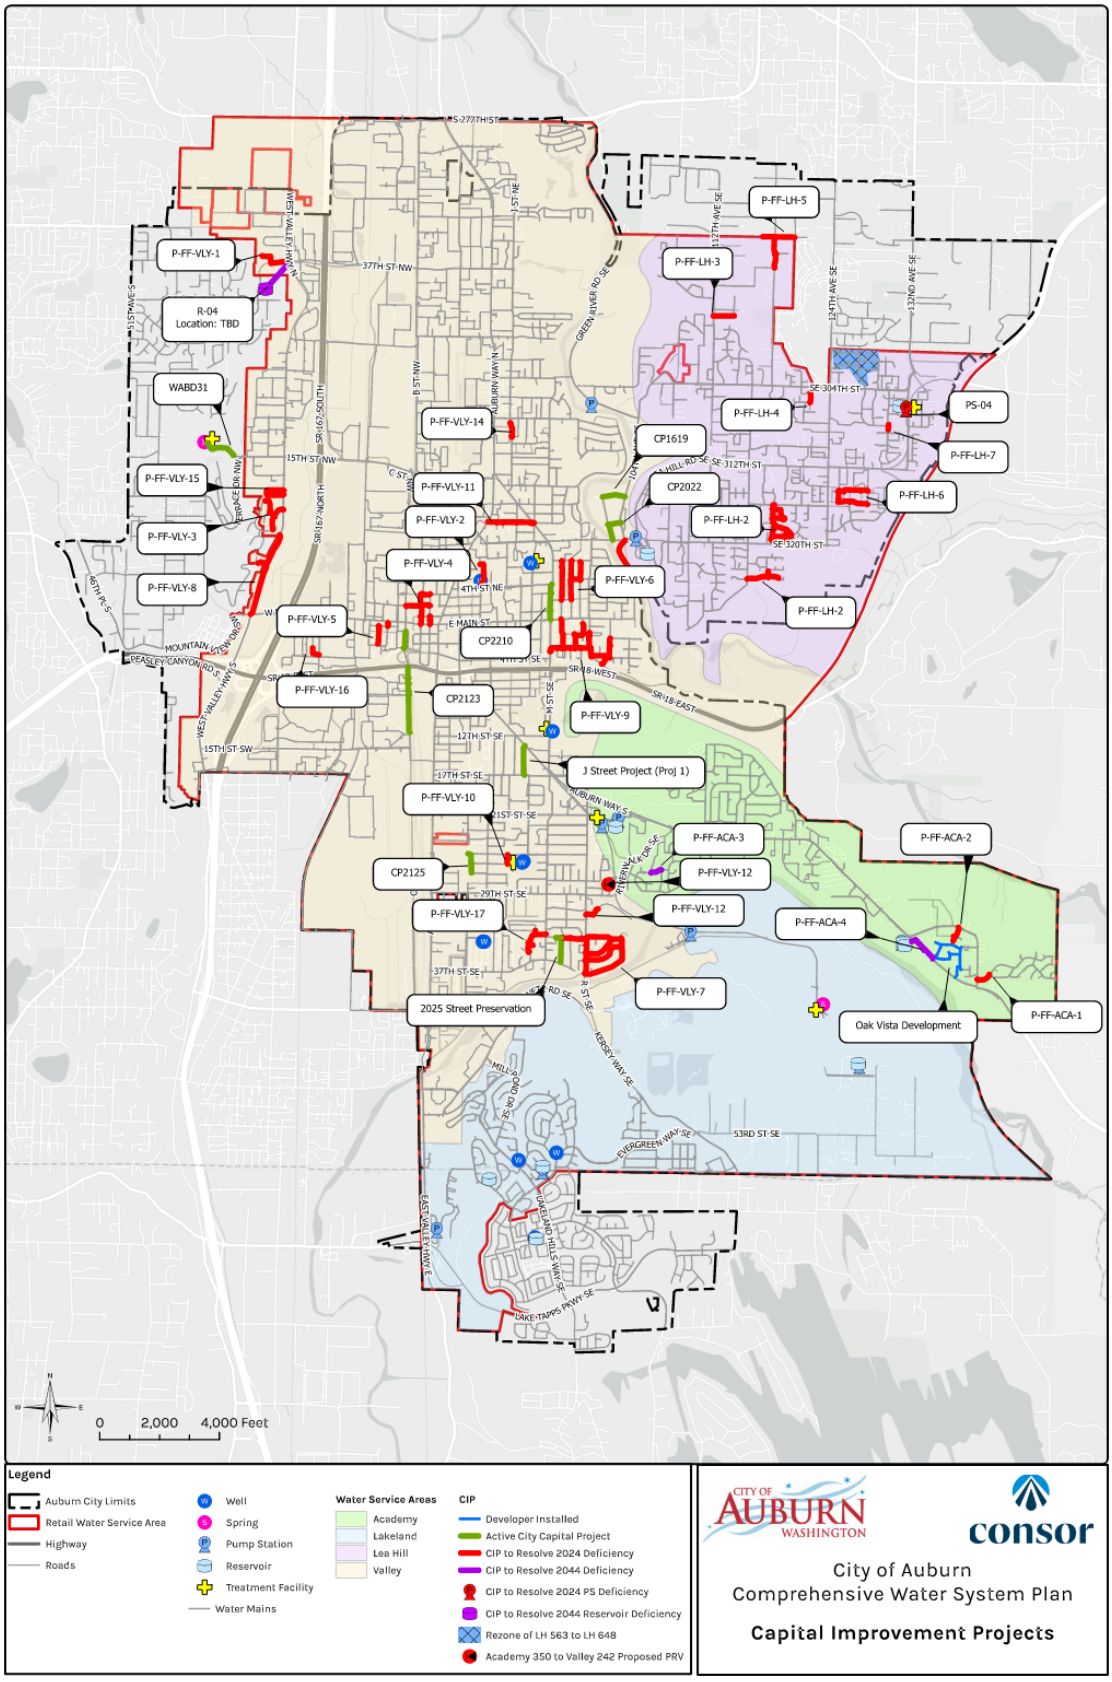


Figure 3-12 | Capital Improvement Projects Addressing Fire Flow Deficiencies

Academy Service Area

Multiple deficiencies are identified in the Academy Service Area. The planned Oak Vista Development provides a significant increase in available fire flow in Academy 585 pressure zone. The remaining improvements assist with specific failure locations by upsizing pipelines with high predicted headloss.

Table 3-33 | Prioritized Pipeline Improvements to Address Fire Flow Deficiencies

Project Priority	Service Area	Project ID	Summary of Deficiency	Summary of Improvements
1	Valley	P-FF-VLY-8	2024 Scenario: Hydrants less than 500 gpm	Replace existing with 3,200 LF of 16-inch diameter piping.
2	Lea Hill	P-FF-LH-3	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 690 LF of 12-inch diameter piping.
3	Lea Hill	P-FF-LH-7	2024 Scenario: Hydrants less than 1,000 gpm.	Replace existing with 180 LF of 8-inch diameter piping. Move hydrant connection to higher zone.
4	Lea Hill	P-FF-LH-5	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 1,080 LF of 12-inch diameter piping and 1,170 LF of 16-inch diameter piping.
5	Valley	P-FF-VLY-15	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 1,320 LF of 12-inch diameter piping.
6	Valley	P-FF-VLY-6	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 3,590 LF of 8-inch diameter piping.
7	Valley	P-FF-VLY-7	2024 Scenario: Hydrants less than 1,500 gpm	Replace existing with 7,9840 LF of 8-inch diameter piping and 4,380 LF of 12-inch piping.
8	Valley	P-FF-VLY-13	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 1,290 LF of 12-inch diameter piping.
9	Valley	P-FF-VLY-12	2024 Scenario: Hydrants less than 1,000 gpm	Replace existing with 1,440 LF of 8-inch diameter piping and 550 LF of 12-inch piping.
10	Lea Hill	P-FF-LH-1	2024 Scenario: Hydrants less than 1,500 gpm	Replace existing with 4,540 LF of 8-inch diameter piping.
11	Lea Hill	P-FF-LH-2	2024 Scenario: Hydrants less than 1,500 gpm	Replace existing with 1,300 LF of 8-inch diameter piping.
12	Lea Hill	P-FF-LH-6	2024 Scenario: Hydrants less than 1,500 gpm	Replace existing with 2,470 LF of 12-inch diameter piping.
13	Academy	P-FF-ACA-2	2024 Scenario: Hydrants less than 1,500 gpm.	Replace existing with 590 LF of 8-inch diameter piping.
14	Academy	P-FF-ACA-1	2024 Scenario: Hydrants less than 1,500 gpm.	Replace existing with 500 LF of 12-inch diameter piping.
15	Lea Hill	P-FF-LH-4	2024 Scenario: Hydrants less than 1,500 gpm	Replace existing with 340 LF of 8-inch diameter piping.
16	Valley	P-FF-VLY-9	2024 Scenario: Multiple hydrants less than 1,500 gpm	Replace existing with 190 LF of 8-inch diameter piping and 5,765 LF of 12-inch piping.
17	Valley	P-FF-VLY-14	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 510 LF of 12-inch diameter piping.
18	Valley	P-FF-VLY-2	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 910 LF of 12-inch diameter piping.

Project Priority	Service Area	Project ID	Summary of Deficiency	Summary of Improvements
19	Valley	P-FF-VLY-17	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 170 LF of 8-inch diameter piping and 1,270 LF of 12-inch piping.
20	Valley	P-FF-VLY-4	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 2,610 LF of 12-inch diameter piping.
21	Valley	P-FF-VLY-10	2024 Scenario: 4-inch Cast Iron near 1,500 gpm dead end	Replace existing with 320 LF of 12-inch diameter piping.
22	Valley	P-FF-VLY-3	2024 Scenario: Hydrant less than 1,500 gpm available.	Replace existing with 1,010 LF of 8-inch diameter piping and 660 LF of 12-inch piping. Complete P-FF-VLY-8 has higher priority for initial improvement in this area.
23	Valley	P-FF-VLY-1	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 960 LF of 12-inch diameter piping.
24	Valley	P-FF-VLY-11	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 1,630 LF of 12-inch diameter piping.
25	Valley	P-FF-VLY-16	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 390 LF of 12-inch diameter piping.
26	Valley	P-FF-VLY-5	2024 Scenario: Hydrants less than 2,500 gpm	Replace existing with 750 LF of 12-inch diameter piping.
27	Academy	P-FF-ACA-3	2044 Scenario: Hydrants less than 2,500 gpm	Replace existing with 380 LF of 12-inch diameter piping.
28	Academy	P-FF-ACA-4	2044 Scenario: Hydrants less than 2,500 gpm	Replace existing with 1,040 LF of 16-inch diameter piping.

3.4.2.5 System Capacity Analysis Results

Chapter 2 of this WSP calculated the ADD ERU planning value to be at 182 gallons per day per Equivalent Residential Units (gpd/ERU) and an MDD ERU planning value of 322 gpd/ERU. An analysis of the water system's overall physical capacity in terms of ERU using DOH Worksheet 4-1 is provided in Appendix V. Demand projection values include retail customer demands, distribution system losses, authorized unbilled consumption, and wholesale demand from Algona. Projections for the MIT Fish Hatchery and LMWD are not included. LMWD is not included since they do not rely on the City as their main source of water and have an interruptible wholesale agreement. Demand from the MIT Fish Hatchery is also not included since it is unknown when this facility will be constructed or what the actual demands will be.

The results of the ERU analysis included in Appendix V are summarized in Table 3-34. The analysis indicates that the existing system has sufficient capacity to serve the current and projected water demands through 2034 (10-year planning horizon). Under 2024 and 2034 demand conditions, storage is the limiting system component for growth and development. In 2044 (20-year planning horizon) storage is deficient, which is consistent with the analysis findings summarized in Section 3.4.2.3 and is planned to be resolved with a new reservoir project included in Chapter 8.

Table 3-34 | System Capacity Analysis in ERU Basis

Description of Capacity Parameter	2024	2034	2044
Demands per ERU Basis			
Average Day Demand, gpd/ERU	182	182	182

System Capacity Analysis Summary			
Limiting Component of System Capacity Surplus/ (Deficit), ERUs	**5,340**	**445**	**(5,445)**

3.4.3 New Source of Supply Analysis

The City has a pending water right application for 13,443 acre-feet from the existing Wells 6 and 7 and a future Well 8. The location of the future Well 8 has not been determined but is expected to be located near Wells 6 and 7. Flows from future Well 8 would be treated at the Fulmer Field CCT Facility. It is anticipated that water quality from Well 8 would be similar to Wells 6 and 7 and may require manganese treatment.

Calculations presented in the Water Rights Self-Assessment Form (**Appendix I**) conclude that the City's existing water rights are anticipated to be adequate to meet the current, 10-year, and 20-year demand projections for maximum instantaneous flows (Qi) and total annual withdrawal (Qa).

The City has established a policy of maintaining the capability to supply the MDD while the largest water source is out of service. The system analysis documented in this chapter confirms that, with projected demands over the 20-year planning period, the City will maintain the capability to meet MDD with the largest pumping source is out of service with the use of the Tacoma interties as an available source.

Mitigation obligations due to the proposed water right for Wells 6, 7, and 8 are listed below and are described in detail in the Conceptual Mitigation Plan (**Appendix S**):

- Mitigation of impacts to Green River,
- Mitigation of impacts to White River, and
- Mitigation of impacts to Mill Creek.

Water Use Efficiency measures described in **Chapter 4** will be applied to the expanded supplies from Wells 6 and 7 and the new supply from Well 8 if the pending water right is approved.

Aside from the pending water right application, the City has several projects planned over the 20-year horizon to improve supply production or fully utilize their existing water rights, as discussed in **Section 3.1.2**.

3.5 Summary of System Deficiencies

Table 3-35 provides a summary of the system deficiencies described in this chapter. Proposed improvements include pump station improvements, storage improvements, and distribution system improvements. Total project costs and the anticipated source of funding for each project are provided in **Chapter 8**.

Table 3-35 | Summary of System Deficiencies

CIP Improvement	Classification of Deficiency	Description of Project Solution	Location in WSP Where Deficiency is Identified	Location in WSP Where Analysis Demonstrates Deficiency will be Addressed by Project
Supply Improvements	Reliability, Resiliency	• Coal Creek Springs Rehabilitation • Well 2 Replacement • Well 2 and Well 6 Cleaning Program • Wells 5/5A Upgrades • Well 7 Back-up Power • Algona Well 1 Study	Section 3.1.2	Section 3.1.2 and Chapter 8

CIP Improvement	Classification of Deficiency	Description of Project Solution	Location in WSP Where Deficiency is Identified	Location in WSP Where Analysis Demonstrates Deficiency will be Addressed by Project
Treatment Improvements	Reliability	• Wells 3A/3B Treatment • Well 5 Chlorination • Well 7 Treatment • Coal Creek Springs Chlorination Building Replacement • Wells 1 and 4 On-site Chlorination Improvements • Fulmer Field CCT Facility Chlorination Improvements	Section 3.1.3	Section 3.1.3and Chapter 8
Storage Improvements	Growth, Fire Flow, Reliability, Resiliency	• Reservoir 2 Valve Improvements • Reservoirs 4 and 8 Seismic Rehabilitation • Additional storage in the Valley Service Area	Section 3.1.4 and Section 3.4.6	Section 3.1.4, Section 3.4.6, and Chapter 8
Pump Station Improvements	Reliability, Fire Flow	• Modifications to Lea Hill BPS/Intertie PS	Section 3.4.5	Section 3.4.5 and Chapter 8
Distribution Improvements	Growth, Fire Flow	• Coal Creek Springs Transmission Improvements • West Hill Springs Transmission Improvements • Replacing and upsizing pipelines where needed	Section 3.1.2 and Section 3.4.7	Section 3.1.2, Section 3.4.7, and Chapter 8

CHAPTER 4

Water Use Efficiency Program

The purpose of this chapter is to describe the water system's program to improve water use efficiency (WUE). WUE contributes to the long-term water supply reliability and promotes good stewardship of the state's water resources.

This chapter addresses the following topics.

4.1 Source and Service Metering
4.2 Distribution System Leakage
4.3 Water Use Efficiency Program
4.4 Water Use Efficiency Savings
4.5 Climate Change Resiliency

Table 4-1 lists the requirements of the WUE Rules from the DOH 2020 Water Use Efficiency Guidebook and reflects the City's level of compliance with these requirements.

Table 4-1 | WUE Rule Requirements

Category	Requirement	City of Auburn Compliance Status
Meters		
	Meter all sources.	Yes, all sources are metered.
	Meter all service connections.	Yes, all services are metered.
Data Collection		
	Provide annual consumption by customer class.	Yes, provided in Section 2.2.2.
	Provide "seasonal variations" consumption by customer class.	Yes, provided in Section 2.5.
	Evaluate reclaimed water opportunities.	Yes, provided in Section 4.3.5.
	Consider water use efficiency rate structure.	Yes, the City has an inverted block rate structure to promote conservation.
	Provide monthly and annual production for each source.	Yes, provided in Section 2.3.1.
Distribution System Leakage		
	Calculate annual volume and percent using formula defined in WUE Rules.	Yes, distribution leakage is calculated and reported in Section 4.2.
	Report annually: annual leakage volume, annual leakage percent, and for systems not fully metered, meter installation progress and leak minimization activities.	Yes, distribution leakage is reported to DOH on an annual basis.
	Develop water loss control action plan (if leakage is over 10% for 3-year average).	N/A, system has a 3-year average water loss of less than 10%.
Goals		
	Establish measurable (in terms of water production or usage) conservation goals and re-establish every 6 years. Provide schedule for achieving goals.	Yes, measurable goals were established via a public process. See Section 4.3.3.
	Use a public process to establish goals.	

Category	Requirement	City of Auburn Compliance Status
	Report annually on progress.	Yes, report submitted annually to DOH.
WUE Program		
	Describe existing conservation plan.	Yes, see Section 4.3.
	Estimate water saved over last 6 years due to conservation program.	Yes, see Section 4.3.1.
	Describe conservation goals.	Yes, see Section 4.3.3.
	Implement or evaluate 1-12 measures, depending on size. Nine measures for City of Auburn.	Yes, see Section 4.3.4.
	Describe conservation programs for next 6 years including schedule, budget, and funding mechanism.	Yes, see Section 4.3.6.
	Describe how customers will be educated on efficiency practices.	Yes, see Section 4.3.4.
	Estimate projected water savings from selected measures.	Yes, see Section 4.4.
	Describe how efficiency program will be evaluated for effectiveness.	Yes, see Section 4.3.1.
	Estimate leakage from transmission lines (if not included in distribution system leakage).	N/A, transmission line leakage included in distribution system leakage as system does not have true transmission lines.
Demand Forecast		
	Provide demand forecast reflecting no additional conservation.	Yes, provided in Section 4.4.
	Provide demand forecast reflecting all "cost effective" evaluated measures.	
Performance Reports		
	Develop annual report including goals and progress towards meeting them, total annual production, annual leakage volume and percent and, for systems not fully metered, status of meter installation and actions taken to minimize leakage.	Yes, reports will be submitted annually to DOH.
	Submit annually by July 1 to DOH and customers and make available to the public.	

4.1 Source and Service Metering

4.1.1 Source Meters

Source meters, also known as production meters, measure the amount of water emitted from the City's springs and wells. Each of the City's sources are metered to measure the amount of water produced. The meters are calibrated annually by an outside contractor under the direction of the Water Operations Supervisor to ensure an accurate accounting of water produced. If a meter cannot be calibrated properly, it is replaced with a new one. Propeller source meters are being replaced with electromagnetic (MAG) meters in conjunction with planned capital improvements projects, or as the budget allows.

Table 4-2 | Source Meter Details

Source Meter ID	Manufacturer	Meter Type	Meter Size	Years in Service	Date of Last Calibration
Coal Creek Springs	Siemens	Magnetic	24-inch	26	August 2023
West Hill Springs	Siemens	Magnetic	10-inch	10	Unknown
Algona Well 1	N/A	N/A	Not in use	Not in use	Not in use
Valley Well 1	Siemens	Magnetic	12-inch	14	August 2023
Valley Well 2	Siemens	Magnetic	10-inch	24	August 2022
Valley Well 3A	Sparling	Turbine	Not in use	Not in use	Not in use
Valley Well 3B	Sparling	Turbine	Not in use	Not in use	Not in use
Valley Well 4	Siemens	Magnetic	12-inch	39[1]	August 2023
Lakeland Well 5	Sparling	Turbine	8-inch	41[1]	August 2023
Lakeland Well 5A	Siemens	Magnetic	4-inch	34	August 2023
Lakeland Well 5B	Siemens	Magnetic	Not in use	Not in use	Not in use
Valley Well 6	Siemens	Magnetic	12-inch	24[1]	August 2023
Valley Well 7	Sparling	Turbine	Not in use	Not in use	Not in use

Note:
1. Years in service assumed to be from source's original construction date.

4.1.2 Service Meters

Water meters are installed on every service line to measure the quantity of water used by a customer per WAC 246-290-496 and City Code Chapter 13.06.320. All new direct service connections must be metered at the time-of-service activation per WAC 246-290-496(2)(d). All meters shall remain the property of the City and shall not be removed except by the City. In all cases where meters are lost, damaged or broken by carelessness, negligence, or willful actions of owners/operators of premises, they shall be replaced or repaired by or under the direction of the City. The actual cost of repairs or replacement of meters will be charged against the owners/operators. In case of nonpayment of fees, fines, charges, or penalties, the water shall be shut off and will not be turned on until all charges are paid.

In 2015, the City began installing an Automated Metering Infrastructure (AMI) system, as a part of the Water Meter and Billing System Improvements project, which was completed in 2018. With the new AMI system, the City automatically receives meter reads via radio transmission and can integrate the data into the billing software. The benefits of an AMI system include increased accuracy and efficiency, early leak detection, and improved customer service. The AMI system is anticipated to have a 20-year life, including the system components and batteries in the radios.

In conjunction with the AMI system installation, the City also completed a meter changeout in 2018. Since 2015, the City has installed 15,156 meters, ranging in size from ¾ inch to ten inches. Meter replacement will be on a 20-year program to coincide with the AMI system. Large source meters and three-inch and larger commercial meters will be tested and calibrated annually. Small meters (less than three inches) are not calibrated.

All new service connections under three inches, in addition to repairs, retrofits or replacements of existing services, are typically conducted by Water Distribution Staff unless unusual circumstances arise. Meter

services consist of meters, meter vaults, meter boxes, service lines, valves, setters, re-setters, and other associated equipment.

- Small Meters (3/4 to two inch)
    - Replacement Cost: $700 - $1,620
    - New Installation Cost: $550 - $1,500
- Large Meters (three to eight inch)
    - Replacement Cost: $3,300 - $12,000
    - New Installation Cost: $2,800 - $11,500

The City uses master meters when beneficial to the City and its customers. Master meters are used at certain locations such as mobile home parks, the Auburn Business Park (formerly the Federal General Services Administration Property), and Muckleshoot Indian Tribe (MIT) commercial properties.

4.1.2.1 Large Meters

Large meters are used to measure water consumption by customers with significant demand requirements. They are usually employed by the following customer classes.

- Commercial
- Farms or Parks – Irrigation
- Schools
- Multifamily Complexes
- Industrial / Manufacturing Businesses
- Wholesale Customers
- Municipal Buildings

Large meters are defined as water meters three inches or larger and new meters are installed by contractors rather than City maintenance staff. There are a total of 127 large meters in the City's system. All large meters are calibrated for accuracy each year, usually between the months of April and June, as part of the City's System Loss Program. Calibration of large meters is conducted by an outside contractor, but two maintenance staff members under the direction of the Water Distribution Supervisor assist in the process. If a meter cannot be calibrated, it is replaced with a new one by City maintenance staff.

4.2 Distribution System Leakage

Distribution System Leakage (DSL) represents the difference between production and documented water use (retail, wholesale, and authorized unmetered). It may include inaccurate master and service connection meters, unaccounted-for non-revenue water use, pipeline leakage, and unauthorized use. DSL does not include authorized water usage such as water used for fire protection, flushing, construction, and other maintenance and operations practices. However, to be credited, this must be accounted for by metering or estimating using credible means.

The DSL is calculated as the difference between the total amount of water produced and the sum of water sold plus any authorized unmetered water usage. The City's estimated DSL for 2015 through 2022 is presented in Chapter 2, Table 2-11. For the City's water system, the 2022 three-year rolling average DSL was 6.7 percent of total production (corrected value submitted by the City to DOH in 2024). This falls below the DOH requirement that the three-year average DSL be under ten percent to minimize water waste.

The City is committed to maintaining DSL below the required ten percent and is actively working to identify and minimize DSL. To minimize DSL, the City has ongoing leak detection, meter calibration, and an active repair and replacement program for water system infrastructure, as detailed in Chapter 6 – Operations and Maintenance. The City completes a leak detection study of 25 percent of the water distribution system every year to detect and fix leaks. Additionally, the City has recently increased its efforts to reduce non-payment of bills and water theft. The City recently completed a major SCADA system upgrade in 2024. These investments should significantly increase the City's ability to measure DSL both temporally and geographically. The resulting information may allow the City to better target its WUE activities to reduce DSL.

4.2.1 Water Audits

The City has implemented AMI throughout the system, completing installations between 2015 and 2018. AMI is a tool that improves the effectiveness of the WUE Program measures, providing detailed water use data for each customer that allows the City to better understand water use patterns and target WUE Program measures to specific customers. Data can be sent in real-time or stored for several weeks or months. Potential AMI capabilities vary depending on the chosen hardware and software however, most systems can aid in the WUE Program. Below is a summary of how the City can use the AMI data.

- Advanced algorithms and metering data will allow the City to identify customer leaks.
- Advanced metering will provide cost savings in the Leak Detection and Repair and Service Meter Replacements programs.
- Advanced metering will aid in the City's efforts to reduce non-payment of bills and water theft.
- By comparing production and customer water use, DSL can be evaluated in greater temporal and geographic detail. For example, DSL may be calculated by month or for a given service area.
- Advanced metering data will help the City identify groups of customers to target for WUE measures and can be used to track the effectiveness of the measures for the same customers.
- Advanced metering data will allow additional reporting options to educate customers, such as their peak water use.

The City reports DSL annually; refer to Appendix M for the previous three annual WUE reports. The newly installed AMI system will provide substantial benefits for the WUE Program and improve savings, further outlined in Section 4.4 of this chapter.

4.3 Water Use Efficiency Program

In 2003, the Washington State Legislature passed the 2003 Municipal Water Law (MWL) which added a requirement that water purveyors use water efficiently. This law was expanded in January 2007 with the WUE Rule and has since been updated. WUE requirements are listed under WAC 246-290 and include:

- Publicly establishing a water savings goal.
- Evaluating water use efficiency opportunities specific to each community.
- Developing a WUE planning program.
- Meter installation on all customer connections by January 22, 2017.
- Achieve a standard of no more than ten percent water loss, on a three-year rolling annual average.
- Annual reporting on WUE progress.

The City's WUE Program provides for efficient water use and supports continued growth. This program fulfills all the necessary requirements of DOH. The selected program measures will allow the City to meet its WUE goals, resulting in decreased water demand. Measures are interrelated and will help the City achieve its goals to both reduce average water use and peak water use per customer. Public education measures (showing water use in bills, workshops, school outreach, fairs/trade shows, etc.) will continue to be a focus of the WUE Program to increase customer awareness and knowledge of WUE opportunities. Public education is needed to support the City's other WUE measures and to support reductions in both average and peak water use. Continued appliance rebates and shower head giveaways help customers implement what is learned in the public education campaign. With the implementation of AMI, it is expected that the City and customers will be able to identify more water loss reduction opportunities than previously possible. Therefore, customer and City leak detection, water audits, and meter repair and replacement may have a prominent role in the 2024-2034 WUE Program. The program will also continue to provide financial disincentives for excessive water use through metering and WUE pricing. This aspect of the program is likely to help reduce peak water usage further. These measures will result in the City being able to achieve its WUE goals, which includes reduced demand.

The 2024-2034 WUE Program will be a continuation of the City's successful existing WUE Program. The program has also been updated to leverage the City's investments in improved SCADA, leak detection, and AMI. The 2024 Plan complies with regulations as set forth in WAC 246-290-830 and DOH's 2020 Water Use Efficiency Guidebook. This section summarizes the program's goals, demand and supply side measures, reclaimed water, and DSL. The projected demand with the conservation goals, program budget, and cost savings are also presented.

4.3.1 Program Requirements

The WUE requirements emphasize the importance of measuring water usage and evaluating the effectiveness of the City's program. There are three fundamental requirements of a WUE Program that the City follows.

- **Planning Requirements** – Municipal water suppliers are required to:
  - Collect data.
  - Forecast demand.
  - Evaluate WUE measures.
  - Calculate DSL.
  - Implement a WUE Program to meet their goals.
- **Distribution Leakage Standard** – Municipal water suppliers are required to meet a distribution system leakage standard to minimize water loss from their distribution system.
- **Goal setting and performance reporting** – Municipal water suppliers are required to set WUE goals through a public process and report annually to their customers and DOH.

The DOH requires that the City estimate the amount of water saved through implementation of the system's WUE program over the last six years. **Table 4-3** shows the average day demand per-capita from 2017 to 2022. Water use per-capita dropped from 112 gpd per capita in 2017 to 103 gpd per capita in 2022. The net water savings over this period equates to approximately 195.2 million gallons or 39.0 million gallons per year. This was calculated by multiplying the population for each individual year (over the six-year period) by the difference in calculated savings in gpd per capita year after year. The result was then multiplied by the total days in each year. Annual totals were summed for the entire six-year period.

Table 4-3 | Annual Average Day Demand (gpd) per Capita[1]

2017	2018	2019	2020	2021	2022
112	109	106	100	105	103

Note:

1. Average day demand per capita was calculated by dividing the Average Day Demand from Table 2-9 by the population served from Table 2-1 and converting to gpd.

4.3.2 Mandatory Measures

The WUE Program includes supply side measures that the City implements to understand and control leakage including new meters, leak detection surveys, and water audits. Per the WUE requirements, the following measures shall be continued for the 2024-2034 WUE program.

- Install production (source) meters.
- Install consumption (service) meters.
- Perform meter calibration.
- Implement a water loss control action plan to control leakage if the three-year rolling average exceeds ten percent.
- Educate customers about water use efficiency practices.

Additionally, the following measures that must be evaluated are:

- Rates that encourage water demand efficiency (discussed in **Chapter 9**)
- Reclamation opportunities (discussed below)

The City has complied with these requirements in the past and will continue to comply with these regulations.

4.3.3 Program Goals

Per the WAC 246-290-830(4)(a), all water purveyors with 1,000 or more connections were required to set efficiency goals through a public process. The City's 2024-2034 Conservation Program builds upon the goals and framework established through the public process conducted in July 2009, during which the City's water conservation goals were developed and posted to the City's website for public review, in alignment with WAC 246-290-830(4)(a). This process ensured transparency and community engagement in shaping measurable conservation objectives.

The goals established in 2009, including a 1 percent reduction per year in Equivalent Residential Unit (ERU) values, continue to guide the City's Conservation Program today. These goals emphasize efficient water usage and public education. The 2024-2034 Program incorporates updates to comply with WUE regulations and address evolving community needs, as detailed in **Section 4.3.4**. The City has chosen to focus on implementing voluntary measures to decrease both the average and peak water usage. The 2024 program has established the following goals.

- Water Use per ERU Goal: Decrease the planning ERU value (gpd/ERU) one percent annually from the current planning ERU value of 182 gpd/ERU, which is the 75th percentile of eight years of

historical data (2015 – 2022). Revaluate goal when the planning ERU value reaches less than 172 gpd/ERU.

  - To be conservative, an ERU planning value higher than the average was used by the City for demand forecasting. The 75th percentile of the eight-years of data was used to select the planning ERU value of 182 gpd. This methodology is consistent with the City's 2015 Plan. The ERU value of 182 gpd is seven percent lower than the 2015 Plan's ERU planning value of 195 gpd per ERU.

- MDD/ADD Peaking Factor: Decrease the planning peaking factor from the current 1.77, which is equal to the 75th percentile of eight years of historical data (2015-2022), to a planning peaking factor of less than 1.68, the average peaking factor from 2015-2022.

- Distribution System Leakage: Maintain three-year average DSL under ten percent to minimize water waste.

- Customer Support: Provide the service and support necessary to those water customers expressing a desire to conserve water as a part of their environmental ethic and as a means of minimizing water bills.

The WUE Program measures, as summarized below, are designed to help meet these established goals.

4.3.4 2024-2034 Demand-Side Program Measures

To encourage WUE and support customers, the City has incorporated program measures that target demand reductions. Under the WUE requirements, a program measure may include water efficient devices, actions, business practices, or policies that promote efficient water use. With 14 measures as part of the 2024 Program, the City exceeds the minimum DOH requirement of nine measures. WUE measures can target specific customer classes or a combination of customer classes. The City's demand-side program measures are summarized below.

1. School Outreach: The City will continue to participate in programs arranged to educate students on efficient water usage as requested by schools.

2. Speakers' Bureau: The City will seek speaking opportunities to discuss efficient water use with a wide audience spectrum. Topics could include water efficient fixtures and appliances, curbing seasonal peak demands, lawn watering practices, etc.

3. Program Promotion: The City will seek opportunities for social media, television, and/or radio public service announcements for WUE and submit news articles to local papers and Auburn Magazine on efficient water usage especially during the spring and summer months.

4. Theme Shows/Fairs: The City hosts an annual Kids Day fair. The fair includes a wide range of activities for all ages of kids. As part of the fair, the City has fun, water-related activities and provides water efficiency brochures and other materials. The City will conduct outreach at other Theme Shows/Fairs if requested. Water saving device kits are distributed to interested single-family and multiple-family residential customers.

5. Water Audits: The City will conduct a water audit upon the request of a customer, including industrial, commercial, and institutional customers. The audits will review items such as:

recirculation of cooling water, reuse of cooling and process water, reuse of treated wastewater, efficient landscape irrigation, low water using fixtures, fixing leaks, and process modifications.

6. Customer Leak Detection: The City identifies potential leaks through investigation of the water meter upon request of customers. The City runs multiple reports in the AMI system to analyze data and investigate water meters to identify leaks.

7. Bills Showing Consumption History: The City will continue to provide customer bills showing the previous year's water usage. The City provides water usage information from AMI on the customers e-portal.

8. Water Saving Device Kits: The City will participate in distribution of water use efficiency kits through education events such as speakers' bureaus, theme shows, fairs, and through bill insert request forms.

9. WUE Pricing: The City has an inverted block rate structure for single-family residential customers to encourage WUE. The City will consider WUE in future cost of service/rate studies. Studies should determine the most appropriate water structures and rate levels to achieve the City's WUE goals, while generating sufficient revenues for utility operations. It is recommended that the studies consider uniform rates by class, inverted block rates, seasonal rates, and excess use rates.

10. Water Efficient Toilet Rebate Program: The City will continue to provide rebates to customers that replace old toilets with new high-efficiency toilets through their Environmental Protection Agency (EPA) WaterSense Toilet Rebate program.

11. Low-Flow Shower Heads Giveaways: The City gives away free low-flow shower heads at the Utility Billing Counter.

12. School Outdoor Water Use Reduction: The City will target schools to reduce their outdoor water consumption. Water audits and education on the benefits of replacing inefficient irrigation systems or landscaping (including turf) will be conducted.

13. City Water Use Reduction: The City will audit the water use of City accounts to identify both indoor and outdoor water saving opportunities. The Water Utility staff will help educate City account holders on WUE; however, no water budget has been allocated to implement water saving devices at City facilities.

14. Rainwater Harvesting: The City will evaluate implementation of a rainwater harvesting (rainwater reclamation) promotion program as a means to reduce irrigation water usage by commercial, public, and residential customers. The City's Stormwater Utility's requirements to use Low Impact Development (LID) measures, where feasible, strives to keep rainwater on the property, further reducing irrigation demands.

It is important to note that in addition to the water cost savings for the WUE measures, other benefits result, both to the utility and to its customers, from WUE activities. Such additional benefits could include:

- Significant customer energy savings because water heaters are the second largest energy users in the home. Hot water use can be reduced by almost one-third by cost-effective WUE measures, such as water efficient fixtures and appliances. Significant energy savings can also occur for industrial processes requiring water heating and other power uses.

- Efficient landscaping and irrigation techniques save on maintenance costs.
- Reductions in water production decrease energy required by utilities to treat and distribute water and to collect and treat wastewater. Chemical costs are also reduced in water and wastewater operations.
- System measures could provide substantial benefits in addition to water production cost savings including:
    - Identification of non-revenue water could result in recovery of unbilled revenue (inaccurate meters) and reduced unauthorized water usage (theft).
    - Leak detection helps prevent major main breaks, which could result in significant repair costs.
    - Leak detection reduces a utility's liability due to prevention of potential property damage.
    - Repair and/or replacement of service and source meters allows a utility to recover unbilled water revenues.

4.3.5 Reclaimed Water

According to WAC 246-290-100 and the WUE requirements, water systems with over 1,000 connections must collect and evaluate information on reclaimed water opportunities. The City is committed to wastewater reuse and rainwater reclamation, as stated in its official water system policies summarized in Appendix A. The City participates in the King County reclaimed water program, which completed a Reclaimed Water Comprehensive Plan in 2012. Additionally, the City has completed the King County Water Reclamation Evaluation Checklist, included as Appendix L. Currently, there are no reclaimed water users in the City. The City considers the most likely candidates for use of reclaimed water to be the irrigation customer class. Since the City conveys all sewage to King County's regional sewerage system, there is not an opportunity for the City to sell reclaimed water without significant capital investments to develop a reclaimed water distribution system, and there is not currently an alternative reclaimed water source in the area.

The City will implement reclaimed water as a conservation measure and include these savings in the demand projections when specific opportunities arise. The City, in conjunction with King County, may develop projects or consider participation in water reuse projects and programs developed by adjacent purveyors and others as appropriate. The efforts may include demonstration or pilot projects developed in accordance with applicable federal, state, and local laws and regulations.

4.3.6 WUE Budget

The City has established a budget for each program measure from 2023 to 2029, as required per WAC 246-290-810 4.e, shown in Table 4-4. WUE measures are funded through rates.

Table 4-4 | Annual WUE Budget

Measure	2023	2024	2025	2026	2027	2028	2029
School Education (NPDES & Water)	$20,000	$20,000	$20,000	$20,000	$20,000	$20,000	$20,000
Conservation Public Education/ WQ Report	$6,350	$6,350	$6,350	$6,350	$6,350	$6,350	$6,350

Toilet Rebates & Low-flow Shower Heads	$11,000	$11,000	$11,000	$11,000	$11,000	$11,000	$11,000
Large Meter Test/Repair/Replace	$30,000	$30,000	$30,000	$30,000	$30,000	$30,000	$30,000
WSP Update (WUE)	$22,000	-	-	-	-	-	-
Total	**$89,350**	**$67,350**	**$67,350**	**$67,350**	**$67,350**	**$67,350**	**$67,350**

4.4 Water Use Efficiency Savings

The WUE Program primarily provides cost savings in two ways, reducing demand and reducing DSL. Reducing demand may reduce or delay capital projects for additional supply and expanded distribution infrastructure. Reducing DSL can provide additional revenue, as well as increase the efficiency of supplying existing water uses. Additionally, advanced metering will provide cost savings in the Leak Detection and Repair and Service Meter Replacements programs.

The City has completed a cost analysis of their proposed WUE Program using historical data and projected annual water savings. Table 4-5 shows projected demands with and without annual water savings. This analysis maintains the target water use efficiency goal of one percent reduction per year in the planning ERU value. This goal will be reached through implementation of the proposed program measures. These reductions in demand can be translated into tangible benefits once realized, such as more time before new sources must be developed, increased ERUs that can be served by the existing water infrastructure, and cost savings in power and water treatment.

Table 4-5 | Demand Forecast With and Without Projected WUE Savings

Year	ADD (mgd)				MDD (mgd)			
	Without WUE	With WUE	Savings	% Savings	Without WUE	With WUE	Savings	% Savings
2024	7.05	6.98	0.07	1%	12.47	12.34	0.12	1%
2025	7.14	6.99	0.14	2%	12.61	12.36	0.25	2%
2026	7.22	7.00	0.22	3%	12.76	12.38	0.38	3%
2027	7.31	7.01	0.29	4%	12.91	12.39	0.52	4%
2028	7.39	7.02	0.37	5%	13.06	12.41	0.65	5%
2029	7.48	7.03	0.45	6%	13.22	12.43	0.79	6%
2030	7.57	7.04	0.53	7%	13.38	12.44	0.94	7%
2031	7.66	7.05	0.61	8%	13.54	12.46	1.08	8%
2032	7.75	7.06	0.70	9%	13.70	12.47	1.23	9%
2033	7.85	7.06	0.78	10%	13.87	12.48	1.39	10%
2034	7.95	7.07	0.87	11%	14.04	12.50	1.54	11%

4.5 Climate Change Resiliency

In 2023, the Washington State Legislature passed House Bill 1181, which requires all group A community public water systems serving 1,000 or more connections to include a climate resilience element in water system plans initiated after June 30, 2025. Though this requirement is not yet in effect, the following section is included to initiate discussion and planning for climate resilience and to supplement the Climate Element being incorporated into the City's 2024 Comprehensive Plan update.

4.5.1 Expected Climate Changes for the City of Auburn

Climate is a key factor driving water use as temperature, precipitation, and other climate-driven weather patterns affect irrigation, and commercial and industrial cooling. Auburn's maritime climate is characterized by wet cool winters and dry warm summers. The City's temperate climate is largely protected from continental weather by the Cascade Mountains to the east.

According to the publication Climate Change Impacts and Adaptation in Washington State, Washington State is projected to experience decreases in snowpack, increases in stream temperatures, and widespread changes in streamflow timing, flooding, and summer minimum flows. Climate change is expected to cause more frequent summer water shortages, especially in fully allocated watersheds with little management flexibility. The average spring snowpack in Washington is projected to decline by 38 percent to 46 percent by the 2040s[1].

To estimate the impact of this change in climate on the City's water demands, results from the Water Supply Forum's 2009 Regional Water Supply Outlook (WSF 2009 Outlook) were used. The impacts of climate change on sources that rely on groundwater are mostly unknown due to the variability between aquifers and site-specific effects, such as recharge rates.

Continued increases in average annual and seasonal air temperatures in the Puget Sound are projected due to climate change, as well as increases in extreme heat. Projected changes in annual precipitation are generally minor, although summer precipitation is projected to decrease and heavy rainfall events are projected to become more severe[2].

No changes to demand projections were made for the 20-year planning period to account for potential climate change due to the uncertain magnitude and timing of local effects. However, it is recognized that demands have the potential to increase in the future given these changes. In the event the City experiences an increase in demand, to understand the scale of the impact, the City will run a model of the City water system that would compute firm yield from inputted streamflow data, replacing historic inflows with projected inflows from three climate change scenarios as described by the WSF 2009 Outlook. Those climate change scenarios for King County are provided in Table 4-6.

Table 4-6 | Predicted Increase in Demand from Baseline Due to Climate Change[1]

Climate Change Scenario	2005	2020	2030	2040
Baseline	0.0%	0.0%	0.0%	0.0%
Warm	3.5%	4.4%	4.9%	5.4%
Warmer	4.6%	4.9%	5.8%	7.4%
Warmest	4.8%	6.2%	7.6%	9.5%

4.5.2 Extreme Weather Events and Significant Challenges

To meet the requirements for risk and resilience assessments in America's Water Infrastructure Act (AWIA) of 2018, the City completed a Risk and Resilience Analysis (RRA) in December 2020 using the EPA's Vulnerability Self-Assessment Tool (VSAT). VSAT was developed to serve as an all-hazards assessment tool for water and wastewater utilities of all sizes and addresses malevolent acts, dependency/proximity

[1] Climate Change Impacts and Adaptation in Washington State: Technical Summaries for Decision Makers (uw.edu)
[2] *2009RegionalWaterSupplyOutlook.pdf (amazonaws.com)

threats, and natural hazards. Through this effort, the City has identified the following assets as the most vulnerable to flood hazards.

- Coal Creek Springs aquifer
- Coal Creek Springs and West Hill Springs piping
- Valley Aquifer (Wells 1, 2, 3A, 3B, 4, 6, 7)
- Green River and Lea Hill pump stations
- Distribution System

Climate change exacerbates existing challenges with flooding, landslides, droughts, wildfire, and other natural hazards by potentially changing the frequency, intensity, and duration of these events. Heavier rainfall increases the threat of flooding. In addition to immediate flood threats, flood waters can damage and contaminate wells and water treatment plants resulting in short-term outages and increased risk of waterborne diseases in drinking water. Higher levels of pathogens in runoff from areas around drinking water wells and surface water intakes from flooding of the wells themselves.

In October 2018, the Intergovernmental Panel on Climate Change (IPCC) released the Special Report on Global Warming of 1.5 degrees Celsius (^{O}C). Warming of 1.5^{O}C is projected to decrease summer streamflow in the Puget Sound by 23 percent. Average temperatures in 2015 were 2.7^{O}C warmer than pre-industrial era temperatures which resulted in low summer streamflow and warmer waters[3]. According to the King County Climate Change GIS map "Summer Runoff: Change, 2040s", summer (July-September) runoff in the City of Auburn is expected to decrease by 2.4 percent by the 2040s from historical conditions (1970-1999)[4]. The WSF 2009 Outlook believes the region is reasonably well prepared for drought, however further actions could improve drought preparation. During droughts, water supplies may fall short of meeting demands, especially in summer months. In the past, water utilities in the Puget Sound have adapted to fluctuations in water supplies from droughts through reservoir management and system adaptations such as long-term conservation programs and short-term demand curtailments[1].

Warming of 1.5^{O}C is also expected to bring larger and more frequent wildfires, which could disrupt regional water supplies. Significant water quality impairments from a wildfire include increased turbidity and introduction of radionuclides, metals, and fire-retardant chemicals[5], although impacts to the City's water quality is not likely as there are not surface water sources. The City can maintain existing emergency interties to mitigate wildfires that affect adjacent systems more severely than the City's. While the City contains land that is considered Wildland-Urban Interface, the United States Forest Service has classified the City as either Very Low or Non-burnable in its Potential Wildfire Hazard GIS map (2020)[6].

4.5.3 Assessment of Actions to Protect System

In the face of continued warming, there are actions the City can take to improve the resiliency of the water system from the impacts of climate change. Below are possible short-term and long-term actions for the City to consider. The short-term measures can improve resiliency within three to five years while the long-term measures may require decades to be fully implemented[5].

4.5.3.1 Short-Term Actions

Source Inventory: Identify sources that will remain online in the event of a 100-year or 500-year flood. Utilize GIS or other mapping tools to create a map to visualize which sources are at risk of inundation in such events. Develop protocols for isolating these sources. Determine how sources could be used for critical health and safety following an extreme weather event and how these sources relate to emergency shelters and critical facilities, such as hospitals.

Groundwater Supplies: Develop new groundwater supplies or augment existing groundwater supplies to improve drought resiliency and offset challenges posed by the wetter winters and drier summers expected with warming temperatures. Establish models to understand the effects of drier summers and increased risk of drought on groundwater supplies. Evaluate impacts of lower snowpack levels in the Cascade Mountains on aquifer recharge.

Wildfire Mitigation: Evaluate fire-fighting capacity for open space areas such as Game Farm Park and Wilderness Area.

Interaction with Research Community: Build and sustain routine interactions with the research community on the subject of climate change and water supply. Consider opportunities to fund water-industry research with direct application to water supplies in western Washington. Explore opportunities to have imbedded persons, such as employing a scientist with climate change expertise.

Rate Factors: Implement less frequently used rate factors, such as a rate for drought periods, to encourage lower demands.

Floodproofing: Build flood barriers such as levees and dikes to protect critical infrastructure. Elevate critical equipment or place it within waterproof containers or foundation systems.

Power Supplies: Extreme weather events can cause power outages. Consider alternative or on-site power supplies to provide resiliency during such events.

4.5.3.2 Long-Term Actions

Monitor Aquifer Conditions: Establish a program of long-range monitoring of aquifer recharge and water levels as affected by climate change. Assess risk of saltwater intrusion. Establish models to assess source redundancy in extreme drought events.

Green Infrastructure: Apply green infrastructure strategies to collect and manage stormwater. Regional or water-shed scale plans for stormwater management can be more cost effective than individual plans.

Water Use Efficiency: Continue to invest in and evaluate WUE programs to reduce water consumption and improve efficiency. Consider partnering with King County to assess reclamation and reuse programs to augment non-potable water demands.

Water Rights: Invest in permanent or mobile infrastructure to ensure access to all available water rights to maximize available sources.

CHAPTER 5

Source Water Protection

The City relies on groundwater sources to meet current water supply demands. This chapter's objective is to update the City of Auburn's (City's) program to protect and improve source water used by the City. As the City's sources only include groundwater wells and springs which are not under the influence of surface water, a Watershed Control Program is not required.

This chapter addresses the following topics:

5.1 Sanitary Control Area
5.2 Wellhead Protection Program

5.1 Sanitary Control Area

Sanitary Control Areas (SCAs) have been established for each of the City's water sources per WAC 246-290-135(2). An SCA is the front-line protection against contamination of the water source. The standard SCA for wells has a minimum radius of 100 feet from the wellhead. The standard SCA for spring sources has a minimum radius of 200 feet from the spring head. All City water sources have SCAs that were established and approved by DOH, and are documented in the susceptibility forms provided in Appendix T. All properties within the SCA for each water source are under the City's ownership and control.

5.2 Wellhead Protection Program

DOH has developed regulations that require Group A water systems using groundwater sources to develop and implement a Wellhead Protection Program (WHPP) in accordance with WAC 246-290-135. The basic elements required of a WHPP are:

- Assessment of initial groundwater susceptibility (physical susceptibility to contamination) for each water supply source,
- Delineation of the wellhead protection area (WHPA) that directly contributes groundwater to each water supply well,
- Identification of potential sources of contamination within each WHPA,
- Documentation of notification to owner/operators of known or potential hazards, and
- Development of spill prevention plans and water contingency plans that minimize or eliminate the possibility of contamination to the groundwater supply and development of options for maintaining water supply in the event the aquifer contributing to a source is contaminated.

The City maintains its WHPP for 12 groundwater sources. A WHPP was prepared in 2014 for the City's 2015 WSP; this remains the current WHPP for the City. The purpose of the WHPP is to help prevent the City's water supply from becoming contaminated and to develop contingency and emergency response procedures in case one or more sources are lost due to contamination. This is accomplished by providing

WHPAs around public groundwater sources, identifying existing groundwater contamination sources, and managing potential groundwater contamination sources prior to their entry into the drinking water system.

The WHPP provides tasks for the City to implement wellhead protection and the City prioritizes those tasks by criteria such as available staff, time to complete, cost, and urgency due to limited available resources. The City maintains an annual operating budget for implementing tasks related to the wellhead protection program, as well as identifying and monitoring potential new hazards. The City allocates budget annually for the Water Resources Protection Program, as discussed in **Chapter 8.**

5.2.1 Susceptibility Assessment

Susceptibility Assessment Forms have been completed by the City and submitted to the DOH. The forms are provided in **Appendix T**. The DOH's susceptibility assessment rating for each source is summarized in **Table 5-1.**

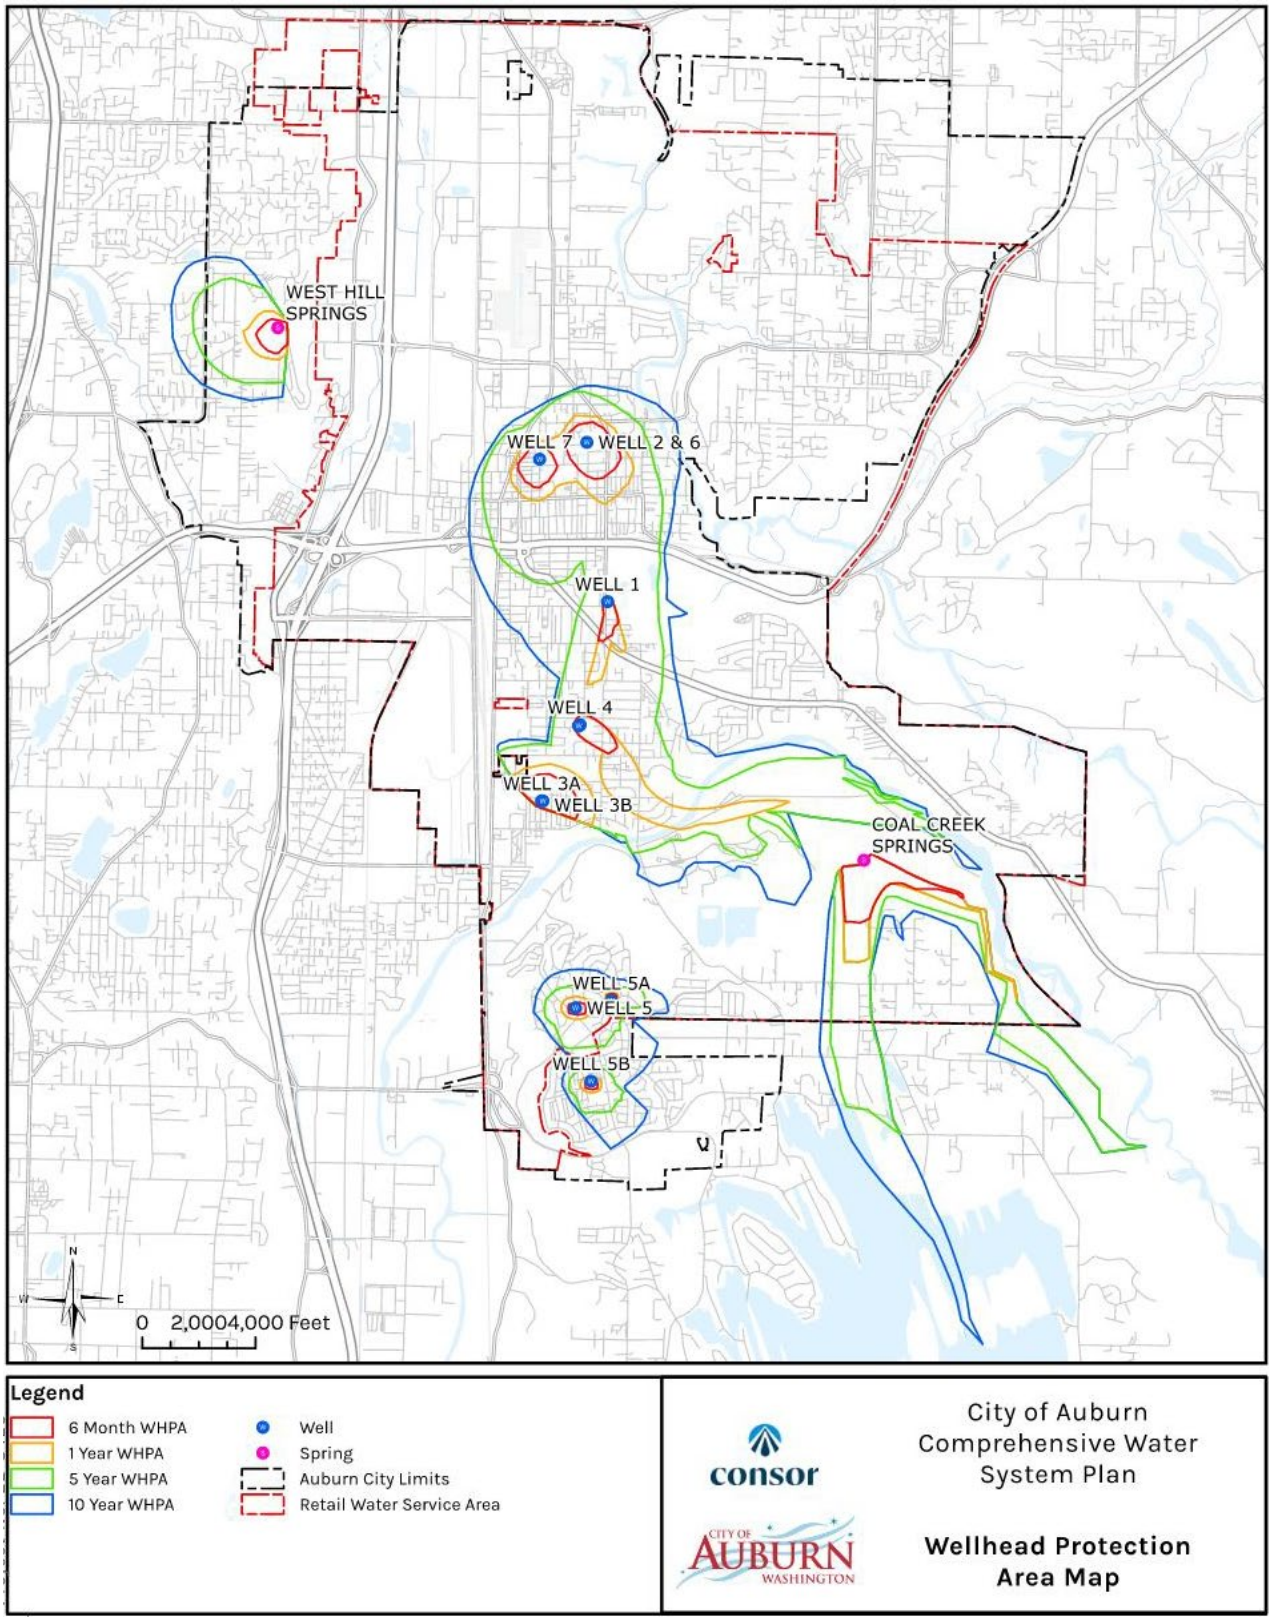

Table 5-1 | Source Susceptibility Assessment Ratings Issued by DOH

Source	Susceptibility Rating
Coal Creek Springs	High
West Hill Springs	High
Well 1	Moderate
Well 2	High
Well 3A	Low (Off-line)
Well 3B	Low (Off-line)
Well 4	Low
Well 5	Low
Well 5A	Low
Well 5B	Low (Off-line)
Well 6	High
Well 7	High (Off-line)

5.2.2 Wellhead Protection Area Delineation

The WHPA defines the area around a groundwater source that has the potential to contaminate the source. This area is based on the source's capture zones, which are the zones of the source aquifer and ground surface that can contribute water to the source in six months, one year, five years, or ten years. The City's 2014 WHPP largely replaced the initial plan created in 2000. The study area, physiographic settings, and WHPAs were defined in the 2000 WHPP and remain valid. Capture zones were delineated using a three-dimensional particle-tracking program with a steady-state head distribution created by a numerical model. The established WHPAs are shown in **Figure 5-1.**

Figure 5-1 | Wellhead Protection Area Map

5.2.3 Contaminant Source Inventory and Notification of Findings

A summary of potential contaminant sources for the City's water sources was updated in April 2024. The Contaminant Source Inventory (CSI) was updated utilizing Ecology's Facility/Site ID database. The contaminant sources are organized by water source and time travel zones, and are included in **Appendix T**.

DOH requires notifications be sent to landowners with potential contaminant sources, as well as state and local agencies, of the CSI findings. Letters and WHPA maps were mailed to landowners in June 2024; copies of the notification letter template and maps that were sent to landowners are included in **Appendix T.**

State and local agencies use the CSI findings and WHPAs to help prioritize local and state pollution control outreach, to provide incentives to landowners for risk reduction, and to support local land-use planning decisions. DOH requires that state and local emergency responders be notified of the WHPAs, results of the susceptibility assessment, CSI findings, and the contingency plan. Copies of the notifications sent to emergency responders and regulatory agencies, as well as the WHPA maps, are included in **Appendix T**. A list of state and local agencies that were sent notifications letters, along with the date of the notification is summarized in **Table 5-2**.

Table 5-2 | State and Local Agencies Notified of CSI Findings

Agency	Notification Date
Washington Department of Ecology	June 2024
Washington State Department of Health Southwest Regional Office	June 2024
King County Public Health	June 2024
Auburn Police Department	June 2024
East Pierce Fire and Rescue	June 2024
King County Fire Protection District 31	June 2024
Mountain View Fire and Rescue	June 2024
South King Fire and Rescue	June 2024
Valley Regional Fire Authority	June 2024

5.2.4 Contingency Plan

The City developed a Water Source Loss Mitigation Plan (City of Auburn Standard Operating Procedure 5.2.1) to address how the water system will provide consumers with adequate supply of potable water in the event one or more sources become temporarily or permanently unavailable; this plan is included in **Appendix T**. Should one water source be unavailable, the City has sufficient capacity across the remaining sources and interties to supply potable drinking water to its customers; water supply availability is evaluated in greater detail in **Chapter 3**.

CHAPTER 6

Operations and Maintenance Program

This chapter provides an overview of the City of Auburn's (City) Water Utility organization, operations and maintenance (O&M). The purpose of the chapter is to document existing procedures and to identify areas where improvements or changes could enhance system operation.

The following topics are addressed in this chapter:

6.1 Water System Management and Personnel
6.2 Operations and Preventive Maintenance
6.3 Comprehensive Water Quality Monitoring
6.4 Emergency Preparedness and Response
6.5 Safety Procedures
6.6 Cross Connection Control Program
6.7 Sanitary Survey Findings
6.8 Customer Complaint Response Program
6.9 Recordkeeping and Reporting
6.10 Summary of O&M Deficiencies and Recommended Improvements

6.1 Water System Management and Personnel

6.1.1 Mission Statement

The mission statement of the City's Water Utility is to provide for the efficient, environmentally sound, and safe management of the existing and future water system within the City's service area.

6.1.2 Department Overview

The Water Utility is responsible for providing potable water to the City's customers that meets or exceeds the recognized standards of today and the future by efficiently administering, operating, and maintaining the water supply. The Water Utility will also continue to enhance its customer service through public education and information. A primary responsibility of the Water Utility is implementing the Comprehensive Water Plan (Plan).

6.1.3 Internal and External Factors

The objective of the Water Utility is based on compliance with internal and external factors. An internal Work Plan Overview is generated at the beginning of each work year with a review process at the end of the year. The Work Plan Overview describes budget goals, performance measures, engineering tasks,

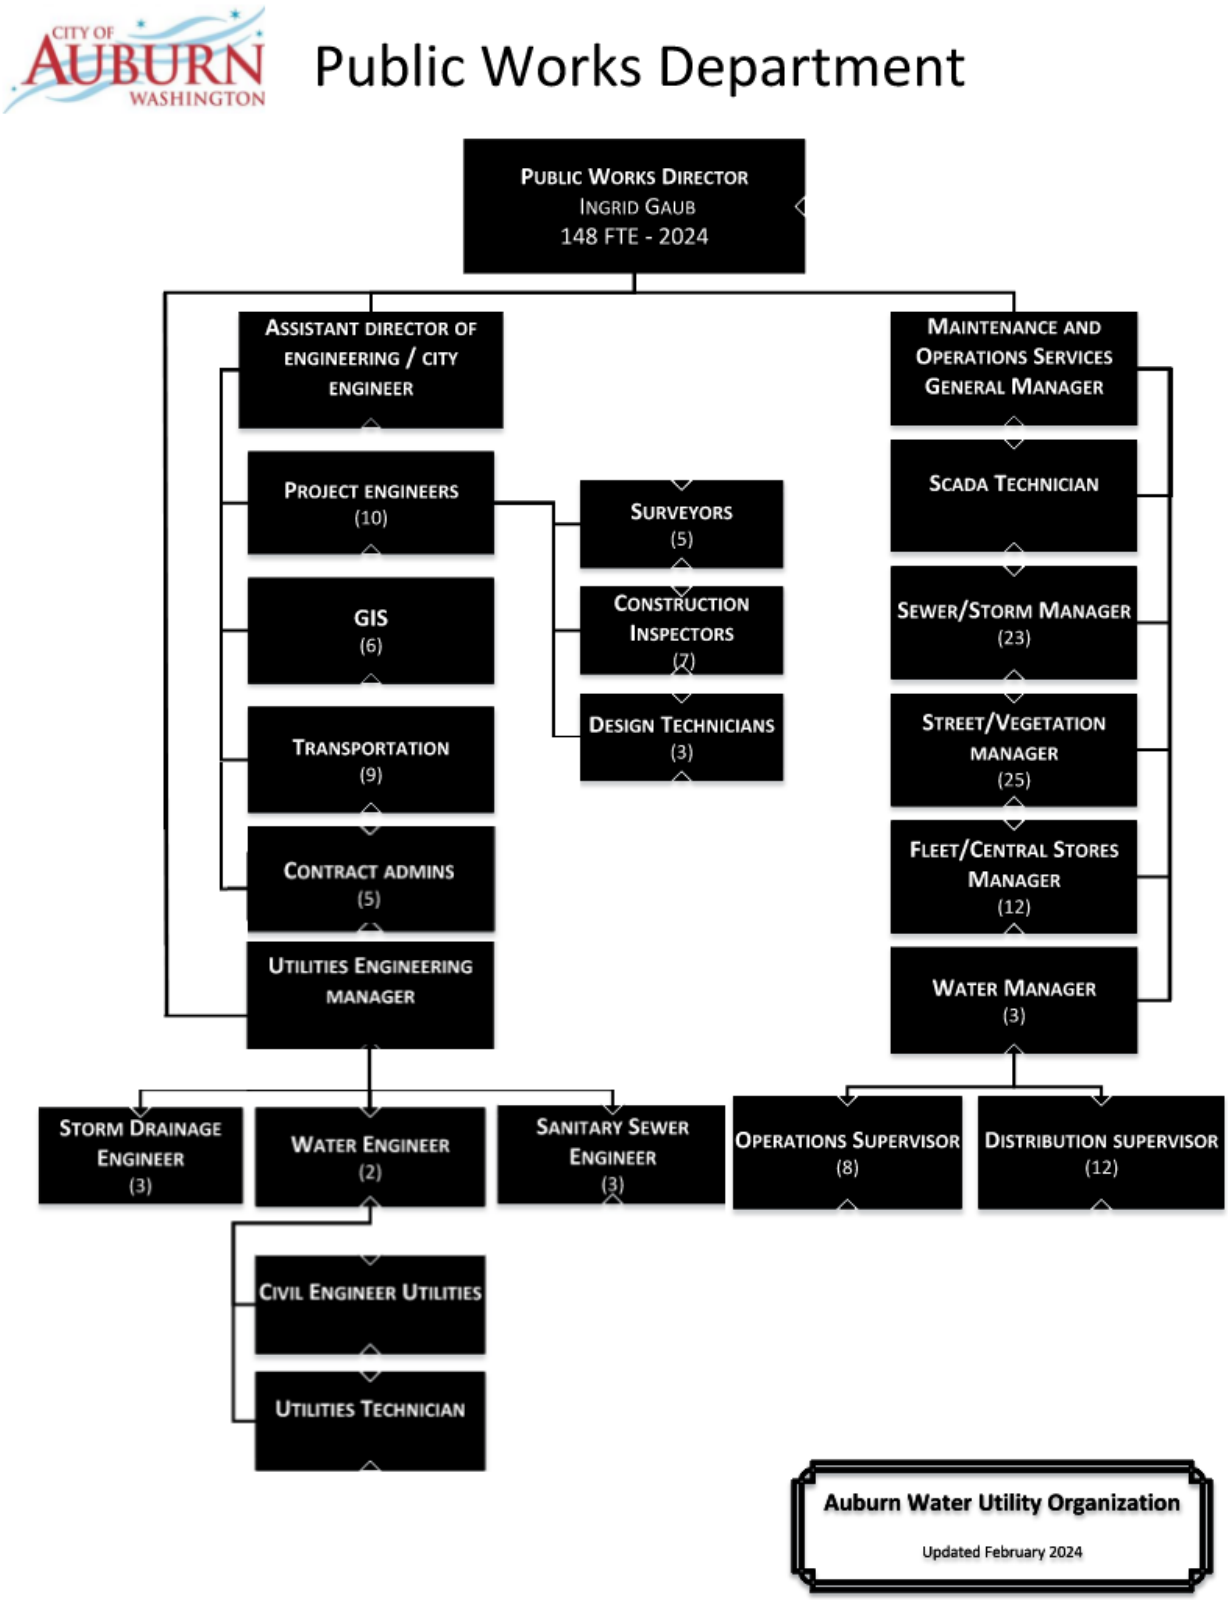
capital projects, and maintenance and operations tasks. External factors include adoption of goals, recommendations, and standards established by the following regulatory or professional practice agencies:

- Washington State Department of Health (DOH)
- Washington State Department of Ecology (Ecology)
- American Public Works Association (APWA)
- Association of Washington Cities (AWC)
- Department of Homeland Security (DHS)
- American Water Works Association (AWWA)
- Washington Cities Insurance Authority (WCIA)
- Municipal Research and Services Center of Washington (MRSC)
- United States Environmental Protection Agency (USEPA)

6.1.4 Water Utility Division Organization

The Auburn Water Utility is operated as a utility enterprise under the direction of the Public Works (PW) Director. Specific Water Utility Management Responsibilities within the PW Department fall under either the Utilities-Water Section of Engineering Services or the Water Division of Maintenance and Operations Services.

The Utilities-Water Section of Engineering Services is responsible for comprehensive water system planning, development of a Capital Improvement Program (CIP), as well as programming the design, construction, and inspection of projects related to the water system.



The Water Division of Maintenance and Operations Services is responsible for operating and maintaining the water system, performing daily operation and inspection, water quality monitoring as required by DOH, and line management of the Water Utility.

The organization of the Water Utility is shown within the Public Works Organizational chart in Figure 6-1. The responsibilities of each staff within the Utilities-Water Section of Engineering Services, including professional and technical support staff from within Engineering Services that are not specifically within the Water Utility are summarized below.

- Utilities Engineering Manager and Water Utility Engineer: Primarily responsible for development of the comprehensive water plans, water capital facility plan, annual project budgeting, technical design, and construction standards, "as-built" drawings, and designs, utilized in the construction of the water systems facilities. They also provide technical computations, water modeling and other analysis required to support system operation. Additional responsibilities include engineering, consultant contracts, capital projects planning, and customer assistance with City code, drawings, and permits.

- Water Quality Programs Coordinator: Assist with the Water Quality and Water Conservation Programs and is responsible for compiling DOH sampling data and verifying DOH sampling was conducted per the sampling schedule.

Figure 6-1 | Auburn Water Utility Organizational Chart

- City Engineer: Responsible for issuance of the City's Design and Construction Standards. Responsible for the management and the design and construction of capital projects managed by Project Engineers, including consultant-designed projects and construction contractors. Under the direction of the City Engineer, GIS Specialists are responsible for the transfer of data from "as-built" drawings to the GIS database. GIS is a mapping software that records and locates infrastructure related to the water system. GIS Specialists are also responsible for provision of maps and statistics to staff within the PW Department.

- Utilities Technician: Assist with certain permit-related activities involving the water system. The Technician is also responsible for customer inquiries, assistance with applications, tracking water system usage for reporting, and updating and updating water system records.

- Utilities Civil Engineer: Review City capital improvements and development projects pertaining to water system improvements and provides customer assistance regarding projects and permit activities.

Personnel lists for Engineering and Maintenance and Operation (M&O) staff that are responsible for daily operations are summarized in Table 6-1 and Table 6-2. Operations staff provide daily O&M of wells, corrosion control treatment facilities, pump stations, and reservoirs. They also implement the cross connection control program and provide locating services for all City utilities. Distribution staff maintains the complete distribution system including water mains, valves, hydrants, pressure reducing stations, and meters.

The City has a mayor-council form of government; therefore, the PW Director reports to the Mayor. The City Council provides oversight of the Water Utility regarding policy, planning, and management of the water system.

6.1.5 Communication System

The City maintains a robust communication system to contact Water Utility personnel during normal work hours and after hours. This system is necessary to respond to customer requests, routine maintenance, or emergency situations. Maintenance staff vehicles and other rolling stock are all equipped with radios and personnel carry cellular phones. The Water Utility also has access to an inventory of portable emergency use radio units, should they be required.

A Standby Call-Out Program was initiated in 2006 to ensure that coverage for after-hours response was guaranteed. One staff member in Operations and one staff member in Distribution always carry a dedicated cell phone during their off hours. Standby duration runs for one week before responsibility is rotated to the next staff member on the roster.

Water problems involving service leaks, quality issues, main breaks, broken hydrants, etc., that occur outside normal working hours, are reported through the City's 911 emergency response system. An "Emergency Call-Out List" is provided to the emergency operators who will attempt to contact the designated standby Water Distribution or Water Operations employee, based on the type of service required. If contact cannot be made, the operator will contact the designated Standby Public Works Maintenance and Operation Manager.

Table 6-1 | Water Operations and Distribution Staff and Certifications

Position	Primary Function(s)	Certification(s)[1]
Water Manager	Management	Water Distribution Manager 4
Water Operations Field Supervisor	Management (Operations)	Water Distribution Manager 4, Water Treatment Plant Operator 1, Cross Connection Specialist
Water Distribution Field Supervisor	Management (Distribution)	Water Distribution Manager 3
Maintenance Lead (Distribution)	Management (Distribution)	Water Distribution Manager 2
Cross Connection Control Specialist	Cross Connection Control & Backflow Assembly Tester	Water Distribution Manager 1, Cross Connection Specialist, Backflow Assembly Tester
Distribution Specialist	Distribution Operations Maintenance	Water Distribution Manager 1
Maintenance Worker II / Locator	Operations & Distribution Maintenance	N/A
Maintenance Worker I	Operations & Distribution Maintenance	N/A

There are 12 staff members on the On-Call Manager Standby List and one of them has call-out responsibility for an entire week until it rotates to the next staff member. The 12 staff positions on the Standby List are:

- Water Manager
- Water Distribution Supervisor
- Water Operation Supervisors
- Sanitary Sewer and Storm Drainage Manager
- Sanitary Sewer Supervisor
- Storm Drainage Supervisor
- Streets and Vegetation Manager
- Street Supervisor
- Vegetation Supervisor
- Fleet/General Service Manager
- Maintenance & Operations (M&O) Support Supervisor
- M&O Services General Manager

There are also three other maintenance staff members on standby that can be called out as needed. The staff members are employed by Sanitary Sewer Division, Storm Drainage Division, and Street Division. The 911 operator also has phone access to the other Public Works staff, if the situation warrants it.

Telemetry alarms that occur after hours are handled by an automated Supervisory Control and Data Acquisition (SCADA) alarm and an automated dialer for notification called WIN911. The SCADA alarm calls standby staff from the WIN911 list. If no one responds within 15 minutes, then WIN911 calls the Water Operations standby staff on the call out list. The system will continue to cycle through the roster of seven employees until contact is made.

6.1.6 Operator Certification Program

The Washington Administrative Code (WAC) 246-292, requires minimum standards for the certification status of water operators. Also, the City has recognized the value of having a knowledgeable and well-trained staff operating the Water Utility and encourages employees to obtain the highest level of certification available. The City currently serves a population of greater than 50,000, which classifies their

distribution system into a group 4 according to WAC 246-292-040. Certifications required per staff role are summarized in Table 6-1.

The City pays for annual certification fees, provides time and tuition for certification training courses, and allows time for certification examinations. In addition, the City provides opportunities for staff to obtain continuing education units (CEUs) to maintain certification. Professional growth requirements for certification CEUs are monitored and maintained by the Washington Certification Services.

6.1.7 Education and Training Program

Continuing educational opportunities are fundamental for staff in the Water Utility. The Water Utility training budget is funded to support staff in maintaining their technical awareness and skill sets. Seminars, conferences, and college coursework: 1) broaden their knowledge and 2) allow them to network with other professionals involved in Water Utility work. Subjects include cross connection control, pumps, motors, pressure reducing valves, hydrants, chlorination, generators, forklift training, confined space, first aid, CPR, electrics, and other essential topics.

Most staff are tasked with specific job functions during their normal work shift and the consistent nature of the work allows them to complete their jobs in a very professional and efficient manner. However, all staff are rotated through an active cross training program to cope with employee absences such as vacation, sickness, retirement, and termination.

6.2 Operations and Preventive Maintenance

The City's water system is comprised of pump stations, chlorination stations, corrosion control facilities, reservoirs, springs, and wells. Figure 1-3 presented in Chapter 1 provides an overview map of the major existing system facilities. These components all work together to ensure that water is available to meet customer demands. Primary operation of the water system is maintained via the SCADA computerized control system. AVEVA software works in association with SCADA to provide real time graphical display of system data for staff interpretation and control. The SCADA system is often referred to as the Telemetry system based on one of the definitions of Telemetry (the science and technology of the transmission and measurement of data from a distant source). The City's SCADA system is monitored in the Public Works M&O Building, 1305 C Street SW, and responsibility for the system related to the Water Utility falls under the Water Manager and associated staff.

Some of the functions that SCADA monitors, records, and controls include:

- Reservoir levels
- Source meter production
- Pumps
- Motors
- Valves
- Chlorination
- Pressures: Low, High, Discharge, Suction
- Alarms: Intrusion, Fire, Generator Run, Low Fuel, Overflows, Failures, Turbidity

Status reports are continuously received via radio and information regarding system demand is used to determine system activation. The SCADA system includes logic programming which automates the process; however, Operations staff can manually override most computer decisions, if necessary. The alarm infrastructure is linked to WIN911 for after-hour call-out and response.

All data monitored by the SCADA system is electronically recorded by a computer server maintained by the Innovation & Technology (IT) Department. A back-up copy is made each evening to ensure that records are retrievable should hardware or software failures occur. SCADA records are available to all PW staff via the City's computer server. Access and control of the system is relegated to two dedicated computer terminals at the M&O Building. The computer terminal that houses SCADA is password protected and entry into the building is keycard access controlled.

The SCADA software and historical data is maintained on the City's Wide Area Network (WAN). Staff have access to the system via workstations connected to the WAN or remote network applications. A telephone connection provides the auto-dialer for the WIN911 notification to phones or pagers. An Ethernet radio connected to the computer system at the M&O Building sends and receives radio signals to/from the Programmable Logic Controllers (PLCs) at the water facilities. PLCs at the facilities are also able to communicate directly with each other via radio signal.

The City recently completed a SCADA Upgrade Project, completed in 2024, which updated the system platform to the most current version, modernizing the City's SCADA system from its last major upgrade in 2015. Major components were also replaced throughout the system to provide more reliable communication. The new hardware, in conjunction with software upgrades, provides additional control of the city's facilities.

6.2.1 Inspections, Preventive Maintenance, Repairs, and Replacement

Systematic inspection of Water Utility facilities is conducted on a daily or weekly basis by Distribution Specialists under direction of the Water Operations Supervisor as summarized in Table 6-2. The inspection process serves the following purposes:

- System Confirmation - proper operation of automated control and monitoring equipment
- Sound Check - listen for unusual noises
- Well Levels - static and dynamic
- Equipment Check - pumps, motors, valves, chlorination, heaters, vents, generators, etc.
- Security Verification - intrusion, vents, hatches, locks, gates, graffiti, etc.

A portion of the maintenance tasks handled by the Operations staff are associated with a Preventive Maintenance Program and some of those activities are arranged to coincide with the Facility Inspection Schedule shown in Table 6-2. The maintenance activities are based on equipment manufacturer recommendations and maintenance staff observations for infrastructure located within and outside the facility. Preventive maintenance tasks are essential for reliable operations and preservation of investment so adherence to the program is stressed. Additional maintenance activities handled by Water Operations staff include repairs, replacement, small improvement projects, and response to customer requests.

The Distribution staff is involved in the same activities as Water Operations staff regarding inspection, preventive maintenance, repairs, replacement, and response to customer requests. Water Distribution staff activities are usually in response to damage or leaks involving mainlines, service laterals, meters, meter boxes, and hydrants. Other Distribution tasks include fire flow testing, system flushing, meter installation, and miscellaneous small improvement projects.

Most customer requests are associated with water quality concerns and water pressure issues. Those requests are handled by the Distribution staff and/or Cross Connection Specialists, on a case-by-case basis.

Table 6-2 | Water Operations - Facility Inspection Schedule

Type of Facility	Facility Name	Daily Inspection 5 Day Workweek	Weekly Inspection
Booster Pump Station	Academy Pump Station 3	X	
	Academy East Booster Pump Station	X	
	Green River Pump Station	X	
	Lea Hill Pump Station	X	
	Lea Hill Booster Pump Station		X
	Lea Hill Intertie Booster Pump Station	X	
	Terrace View Booster Pump Station	X	
	Lakeland Hills Booster Pump Station	X	
	Game Farm Park Pump Station		X
	Braunwood Booster Pump Station	X	
Chlorination Facility	Lea Hill Intertie Pump Station (Re-chlorination)	X	
	Terrace View Booster Pump Station (Re-chlorination)	X	
	Coal Creek Springs – Chlorine Gas	X	
	West Hill Springs - Chlorine Gas	X	
	Well 1 – Hypochlorite	X	
	Well 3A – Chlorine Gas (when well is in operation)		Off-line
	Well 3B – Chlorine Gas (when well is in operation)		Off-line
	Well 4 - Hypochlorite	X	
	Fulmer Field Corrosion Control Facility – Onsite Generated Hypochlorite (Treats Well 2, 6, and 7 sources)	X	
	Well 5A - Hypochlorite	X	
	Braunwood Well - Hypochlorite	X	
Corrosion Control Facility	Howard Road Corrosion Control Treatment Facility (Treats Coal Creek Springs source)	X	
	Fulmer Field Corrosion Control Treatment Facility (Treats Well 2, 6 and 7 sources)	X	
Metals Removal Facility	Well 5B (Treats iron and manganese)		Off-line
Reservoir	Reservoir 1 – Valley Service Area	X	
	Reservoir 2 – Valley Service Area	X	
	Reservoir 4A – Lea Hill Service Area	X	
	Reservoir 4B – Lea Hill Service Area	X	
	Reservoir 5 – Lakeland Service Area	X	
	Reservoir 6 – Lakeland Service Area	X	
	Reservoir 8A - Academy Service Area	X	
	Reservoir 8B - Academy Service Area	X	
	Braunwood Reservoir	X	
Spring Source	Coal Creek Springs	X	
	West Hill Springs	X	

Type of Facility	Facility Name	Daily Inspection 5 Day Workweek	Weekly Inspection
Well Source	Well 1	X	
	Well 2	X	
	Well 3A (Off-line)		Off-line
	Well 3B (Off-line)		Off-line
	Well 4	X	
	Well 5	X	
	Well 5A	X	
	Well 5B (Off-line)		Off-line
	Well 6	X (when on)	X (when off)
	Well 7 (Off-line)		Off-line
	Braunwood Satellite Well	X	
Intertie Supply	Tacoma B Street Intertie		X
	Tacoma 132nd Avenue Intertie		X

6.2.2 Reservoir Maintenance

Reservoirs are a fundamental part of the water distribution system. They act as storage and regulating devices for water flow and maintaining them in prime physical condition is an essential activity. The Water Utility began a rigorous reservoir maintenance program in 1997 and it has evolved into an annual routine function. Each year, two of the reservoirs have their interiors thoroughly inspected by a contractor experienced in reservoir maintenance. The annual inspection process is based on a rotational schedule to ensure inspection of each reservoir on a 5-year timetable.

Since the reservoirs are usually filled with water, a diver must conduct the inspection. The diver is equipped with lights and an audio/video device to record the process. Issues of concern include corrosion, cracks, and condition of coating on the walls, valve, fasteners, etc. The diver is also equipped with a vacuum unit to remove sedimentation. The contractor also performs a visual inspection of the exterior of the reservoir for the same elements noted for the interior. The recording is reviewed by the contractor, a report is generated based on the interior and exterior inspection and a copy of the report and recording are given to the Water Manager and Water Utility Engineer for review.

If the report and recording indicate that a reservoir needs major repair, relining, or repainting, another contractor is acquired for a recommended course of action. If interior work is required, the reservoir must be drained of water. In those situations, a carefully orchestrated timetable and shifting of water resources is necessary to balance maintenance with the needs of the City's customers.

6.2.3 Pump Station Maintenance

Pump Stations are inspected daily or weekly depending on the station by Water Operations staff. The inspection checklist includes confirming that proper operation of the automated controls and monitoring equipment align with the standard operating procedures for the equipment, sound checks for unusual noises, static and dynamic well level checks, equipment checks (pumps, motors, valves, chlorination, heaters, vents, generators, etc.), security checks through visual inspection of the facility grounds for

intrusion, graffiti, or issues with vents, hatches, locks, gates, and anything else that may seem unusual or misaligned.

6.2.4 Treatment Facility Maintenance

Treatment Facilities are inspected daily by Water Operations staff. The inspection checklist includes confirming that proper operation of the automated controls and monitoring equipment align with the standard operating procedures for the equipment, sound checks for unusual noises, equipment checks (pumps, motors, valves, chlorination, heaters, vents, generators, aeration towers, etc.), security checks through visual inspection of the facility grounds for intrusion, graffiti, or issues with vents, hatches, locks, gates, and anything else that may seem unusual or misaligned.

6.2.5 Pressure Reducing Valve Stations

Pressure Reducing Valve (PRV) Stations are inspected every month by Water Operations staff. The inspection checklist includes condition of the vault, valves, inlet pressure, outlet pressure, and pilot controls. Staff inspections are supplemented by a more thorough inspection and calibration process conducted annually by a contractor that specializes in PRVs. Repair or replacement maintenance, unless minor, is usually performed by the contractor. The City plans to implement an in-house repair maintenance program.

Rebuilds of PRVs are typically done every three to five years based on the rebuild schedule.

6.2.6 Utility Locating Service

Two Water Utility staff are designated as the Utility Locators for all City utilities and roadway infrastructure (Water, Storm Drainage, Sanitary Sewer, and Street lights and traffic signals) and additional staff may also be present to provide flagging when safety issues arise. The number of location requests varies daily but averages out to a full-time commitment. The Utility Locators report to the Water Operation Supervisor, but location requests may be made indirectly by the Water Distribution, Sanitary Sewer, or Storm Drainage Supervisors.

6.2.7 Fire Hydrant Inspection

In 1999, a fire hydrant inspection goal was initiated. The intent was to inspect, repair, and test at least one third of the utility owned fire hydrants in the system each year. The importance of this program cannot be understated since fire hydrants are the first defense against loss of life or property due to fire. The inspections also improve water quality due to the stagnant water that is purged from the hydrant stubs. A water de-chlorination program, in response to Ecology guidelines, was initiated in 2001 to treat water purged from hydrant stubs. The Water Distribution Supervisor has made public hydrant inspection a year-round routine task of Water Utility operations. Secondary maintenance of public hydrants such as rust removal, painting, street reflector replacement, clearing obstructions, etc., is handled by seasonal part time staff when time permits. Property owners with private hydrants are solely responsible for obtaining annual, satisfactory inspections of their private hydrants from a qualified inspector.

6.2.8 Dead-end Flushing

A key component of water quality control is dead-end line flushing. The City has approximately 548 dead-end mains throughout the distribution system. The water in dead-end mains tends to stagnate due to lack of turnover which can have an impact on water quality for customers in the immediate vicinity. Flushing dead-ends is the only effective way to purge the lines of stagnant water and associated particulate matter.

In 2000, an engineering consulting firm was hired to assist the City with the development of a Dead-end Flushing Program. They examined the City's distribution system via GIS data and supplemented the study with field inspections. A comprehensive operating procedure detailing separate flushing instructions for each dead-end was developed and continues to be used today.

Maintenance staff, under the direction of the Water Distribution Supervisor, follow the program instructions and record their activities. This program has been incorporated into the Unidirectional Flushing program, see Section 6.3.8.

6.2.9 Valve Exercising

The AWWA technical manual *M44 Distribution Valves: Selection, Installation, Field Testing, and Maintenance*, suggests that valve exercising should be conducted each year and more frequently for valves 16 inches and larger.

The Water Utility has a Valve Exercising Program, which is in concert with the Unidirectional and Dead-end Flushing programs. Historically, distribution valves have only been exercised on a limited and sporadic basis. Through the Valve Exercising Program, the City's goal is to exercise 25 percent of the distribution valves each year. Hydrant foot valves are not included in the valve exercising program and instead, are exercised as part of the hydrant inspection process.

Opening and closing valves by hand is a repetitive, ergonomically unsafe, and time-consuming task. The City has purchased a portable valve exercising machine and vacuum device to speed up removal of debris that collects in the bottom of valve boxes. Valves requiring repair or replacement are documented and corrected by City Staff or contractors.

Additionally, Distribution staff work with GIS staff to correct inaccurate valve information in the City's GIS data.

6.2.10 Unidirectional Flushing

In 2013, the City implemented a comprehensive Unidirectional Flushing (UDF) program to flush its water system. The program's goals include:

- Improving cleaning of accumulated deposits on pipes,
- Reducing water use, as compared with conventional flushing, and
- Reducing the impact on customers.

The Water Distribution Supervisor is responsible for the UDF program to maintain Water Quality.

The UDF process concentrates flow within a pipe by closing valves and using specific hydrants to isolate each pipeline and create flow in a single direction. The concentrated flows increase velocities within the pipe that results in scouring of accumulated deposits on pipes. UDF may remove sand, gravel, plastic, biofilms, and other accumulated materials that are not removed by conventional flushing. The cleaned mains may have improved water clarity or color, reduced turbidity, and improved chlorine residual.

Flushing times of a half hour or less are typical, which can equate to substantial water savings. Therefore, UDF is a key component of the City's Water Use Efficiency (WUE) program. The reduced flushing time also limits the impact on the Water Utility's customers.

As previously mentioned, the City has incorporated the valve exercising and dead-end flushing programs into the UDF program. Valves not used as part of a flushing sequence along each pipe length are exercised by distribution system staff to complete the Valve Exercising Program. While the UDF program flushes dead-end mains, more frequent dead-end main flushing may be required for water quality reasons. The UDF program also provides static pressure measurements.

The City's goal is to conduct UDF of approximately 20 percent of the system each year.

6.2.11 System Loss Program

The City has committed to an active System Loss Program to maintain water loss under 10 percent. The achievement is documented each year in the Distribution System Leakage Report. Elements of the Program include Leak Detection, Source Meter Calibration, Large Meter Testing, and Meter Replacement. Each of these is discussed in detail below.

6.2.11.1 Leak Detection

The City is committed to a tight, non-leaking water distribution system. As of 2016, the city implemented an in-house Leak Detection program, with a goal to inspect 90 miles of water main every year.

6.2.11.2 Source Meters

Source meters, also known as production meters, measure the amount of water emitted from the City's springs and wells. They are calibrated by an outside contractor under the direction of the Water Operations Supervisor and if a meter cannot be calibrated properly, it is replaced with a new one.

6.2.11.3 Meter Replacement Program

Between 2017 and 2018, the City replaced all service meters with an Automated Metering Infrastructure (AMI) system, under the Water Meter and Billing System Improvements project. The system automatically receives meter reads via radio transmission and integrates the data into the City's billing software. The benefits of an AMI system include increased accuracy and efficiency; early leak detection; high usage, zero usage, and backflow detection; and improved customer service. This has saved staff time associated with regular meter reading, missed or incorrect reads, final reads for customer account close-out, and confirmation of high reads for potential leaks. An optional interactive customer portal allows customers to view their monthly, daily, and hourly usage to see exactly when they are using water and how much. This allows customers to better understand their water usage, encourages conservation, and potentially saves them money.

The AMI system is anticipated to have a 20-year life. That includes the system components and batteries in the radios. Meter replacement will be on a 20-year program to coincide with the AMI system.

6.2.11.4 Meter Services

Water Distribution staff are responsible for all new service connections under three inches and contractors are usually secured for installation of sizes three inches and larger. Repairs, retrofits, or replacements of existing services are typically conducted by Water Distribution Staff unless unusual circumstances arise. Meter services consist of meters, meter vaults, meter boxes, service lines, valves, setters, and other associated equipment. The City uses master meters when beneficial to the City and its customers. Master meters are currently used at several mobile home parks, the Auburn Business Park, and Muckleshoot Indian Tribe (MIT) commercial properties.

6.2.11.5 Large Meter Testing

Large meters are devices that measure water consumed by customers with significant demand requirements. They are usually employed by the following customer classes:

- Commercial
- Farms or Parks – Irrigation
- Schools
- Multifamily Complexes
- Industrial / Manufacturing Businesses
- Wholesale Customers
- Municipal Buildings

Large meters are defined as water meters three inches or larger. The system contains a total of 151 large meters, all of which are calibrated annually, as part of the City's System Loss Program.

Calibration of large meters is conducted by an outside contractor, but one maintenance staff member under the direction of the Water Distribution Supervisor assists in the process. If a meter cannot be calibrated, it is replaced with a new one.

6.2.12 Distribution System Corrosion Inspection

One program that the Water Distribution Division would like to activate, if additional funds and labor resources are available, is a Distribution System Corrosion Inspection program. A significant percentage of the City's piping system is constructed of metal which is subject to corrosive deterioration. Corrosion is an electrochemical reaction whereby metal is eroded and reduced. It is not possible to stop corrosion of metal pipe, but it can be substantially reduced if proper anti-corrosive measures are taken.

The Distribution System Corrosion inspection will identify which pipes can benefit from corrosion resistance measures, resulting in a longer serviceable life. Popular measures taken to resist corrosion include coatings, poly-bagging, and anode packs, and they are described further below:

- Coatings are electrical insulator types of finishes applied to a surface and is the most common method of corrosion protection. Though coatings are common, they are subject to damage and decay. Damage from soil stress such as contraction and expansion can rip coatings from pipes. Pinholes in the insulation, also known as holidays, can allow seepage between the coating and pipe and accelerate corrosion. Penetration of the pipe occurs even more rapidly when pinholes are present than it would on a bare line.

- Anode packs are metal cylinders that are connected to a metal structure via electrically conductive wires and inserted into the ground adjacent to the structure. The ground is subject to stray electric currents and these currents are the electrical component of the electrochemical nature of corrosion. Anode packs become the sacrificial metal to corrode in lieu of the structure. This type of treatment, when initiated, provides benefits in two ways: 1) it could save substantial amounts of money by reducing unnecessary, early replacement of pipe and 2) it would reduce possible disruptive service to the City's customers that could occur if pipe replacement were necessary. Though anodes packs are effective and economical, their current capacity is limited and they typically have a short lifespan.

- Poly-bagging is the process of wrapping the exterior of buried water mains and appurtenances, typically under the influence of corrosive soils, with polyethylene, creating a protective layer around the mains and appurtenances. Poly-bagging is an effective method for corrosion protection of water mains and they are resistant to tearing or puncturing. Though economical, they are not as environmentally friendly and add another layer to maintenance activities.

6.3 Comprehensive Water Quality Monitoring

The Water Operations staff maintains an active and ongoing program of water quality monitoring and reporting to ensure a safe, high quality water supply. Two staff members are responsible for water quality monitoring, sampling, control, and record keeping. The Water Operations staff also receives assistance from the Engineering Services - Water Quality Program Coordinator. A detailed description of the City's water quality monitoring and results is presented in Appendix Q, which includes the following:

- Summary of the City's water quality monitoring programs.
- Summary of recent water quality testing results.
- Summary of the Wholesale Interties Blending Evaluation.

The City's Water Quality Monitoring Program is detailed in a manual entitled "City of Auburn Public Water System Water Quality Monitoring Plan" provided in Appendix O. The document includes plans associated with coliform, lead and copper, disinfection by-products and treatment specific monitoring, and the Water Quality Monitoring Schedule. These plans comply with DOH regulations for Group A public water systems. All sampling is conducted in accordance with the annual Water Quality Monitoring Schedule received from DOH. The City samples for inorganic and physical parameters, synthetic and volatile organic compounds, asbestos, nitrate and nitrite, radionuclides, coliforms, residual chlorine, disinfection byproducts, lead and copper, fluoride, and per and poly-fluoroalkyl substances (PFAS). A map of the sampling locations is included with the documents provided in Appendix O.

Additional sampling also occurs based on special requests by DOH or by customers concerned about water quality issues involving unusual taste, odor, or color.

The Water Manager maintains hard copies of the water quality analysis laboratory reports. These reports are kept at the M&O Building in files organized by years and analysis type. As specified by DOH regulations, chemical analysis reports are kept indefinitely, and bacteriological reports are maintained for a minimum of five years.

The City will comply with the Follow-Up Action Requirements of WAC 246-290-320 whenever water quality results exceed a prescribed level. The Water Utility also complies with the requirements of WAC 246-290 for public notification, as established by the Safe Drinking Water Act (SDWA) and DOH.

Forms for "Water Boil Notification" and "Drinking Water Problem Corrected Notification" have been developed and are available for immediate distribution, if necessary. A list of the appropriate print, TV, and radio media to contact for public notice is included in the electronic Emergency Response Manual. An additional procedure described in the Emergency Response Manual to address water quality issues involves an "Action Plan for Water System Contamination Via Threat Warning."

The City maintains equipment to perform some basic water quality monitoring functions. However, all testing required for water quality regulatory compliance is contracted to independent testing laboratories. The current primary laboratory used by the City is:

Water Management Laboratory
1515 80th Street East
Tacoma, Washington 98404
206-531-3121

If testing cannot be done on a timely basis, the City also uses the following laboratory:

Analytical Resources, Inc.
4611 South 134th Place, Suite 100
Tukwila, WA 98168
206-695-6200

6.4 Emergency Preparedness and Response

The City has prepared an electronic Public Works Emergency Response Manual (Manual) as a guide for management of emergency situations, with the objective of protecting life and property and restoration of essential services, such as providing clean water, as quickly as possible. The Manual is only one element of the City's overall Emergency Response Plan, which serves as a guide and was first developed in 1999 in response to the potential impact of Y2K. The Emergency Response Plan is updated annually at the first of the year. It is not all-inclusive for every type of disaster that could occur but is a valuable tool for dealing with many of the emergency situations that most utilities could face.

The Manual contains a detailed table of contents and is tabbed to allow quick access to information. Three copies of the Manual have been published. Copies are located at the M&O Building, in Engineering Services with the Public Works Director, and at the Valley Regional Fire Authority, Station 31. The Manual is also available in digital format on the City's computer server.

The master response program for the entire City is documented in the Comprehensive Emergency Management Plan (CEMP), which provides guidance to the Emergency Management Organization for mitigation, preparedness, responsibilities, recovery operations, training, and community education activities. The CEMP also describes the functions of local government and incorporation of essential non-governmental organizations into the Emergency Management Organization. Copies are in each City Department, the Public Works M&O Building, and the Valley Regional Fire Authority, Station 31. The CEMP is also available in digital format on the City's Emergency Operation Center (EOC) computer server.

An additional emergency response manual that is available for use is the Water Division Intertie Locations and Policy Manual. This manual contains contact names, addresses, and phone numbers for cities and water districts that have intertie connections with the City. Included are photos of the intertie vaults, valves, and meters, along with information for activating or deactivating an intertie. Three copies have been published and are located at the M&O Building, in Engineering Services with the Water Utility Engineer, and at the Valley Regional Fire Authority, Station 31.

The City has been involved with several tabletop exercises to prepare for emergencies and they are an ongoing feature of the City's Emergency Response Program. Staff, depending on their position, have also been trained for emergencies in accordance with the Federal Emergency Management Authority (FEMA)

under the auspices of Homeland Security. The training program, known as the National Incident Management System (NIMS), offers educational classes tailored for the Incident Command System (ICS).

The NIMS and ICS program is a solid blueprint for federal and local emergency command activities, but it does not provide the type of response details needed by PW maintenance staff and managers. Consequently, the PW Emergency Response Manual is the reference tool referred to on a more intimate scale.

6.4.1 Vulnerability Assessment

The City's Vulnerability Assessment (VA) was prepared in 2004 under the guidance of an engineering consultant firm and it was submitted to the USEPA on November 15, 2004. A Water System Security Improvement Plan (WSSIP) was also prepared in conjunction with the VA to prevent or significantly lessen the impact of intrusive activities.

Recommendations noted in the WSSIP have been adequately addressed by completing the SCADA system upgrades and physical security project. As further upgrades are completed at City facilities, the recommendations noted in the WSSIP are considered, as well as other considerations as technology continues to advance.

6.4.2 Wellhead Protection Program

The City's wellhead protection program is key to managing potential sources of groundwater contamination prior to their entry into the drinking water system. The wellhead protection plan (WHP) was updated as part of the Plan and summarized in Chapter 5.

Engineering Services staff are charged with implementation of the program. Staff track and follow up on construction projects, spills, and monitor possible contamination sources, as possible.

6.4.3 Water Shortage Contingency Plan

In Auburn City Code (ACC) 13.14 the Mayor may order water use restrictions and conservation measures, when necessary, to protect public health, safety, and welfare during a water shortage or emergency caused by drought conditions, city water utility damage or destruction, or any other cause which threatens to disrupt or diminish the City's water supply below its ability to meet normal demands.

The City has also updated its Water Shortage Contingency Plan, attached as Appendix R, which establishes actions and procedures during impending or actual water shortages. These actions and activities maintain levels of service essential for public health and safety, minimize adverse impacts on economic activity, and protect customers' lifestyles. The plan addresses both progressive situations, such as those that are weather-related, and more drastic and immediate situations such as facility emergencies (e.g., a pipeline break). Initial stages of the Water Shortage Contingency Plan may coincide with efforts in the WUE program; however, it is distinct as it is a response to a specific situation, and it may lead to mandatory restrictions and curtailment.

6.5 Safety Procedures

The City has a comprehensive safety program that meets Occupational Safety and Health Administration (OSHA) and Washington Industrial Safety and Health Act (WISHA) regulations. The safety policies and procedures for the water department are documented in 25 policies that are summarized in Table 6-3. The

policies cover the full range of hazards staff may experience while operating the water system. These include, but are not limited to, operation of motor vehicles and equipment, chemicals, confined spaces, falls, traffic, and fires. Each policy includes a purpose, organization affected, references, the policy, definitions, procedures to implement the policy, and responsibilities for the implementation. Responsibilities are assigned to individual roles, such as employee, supervisor, or safety manager. The policies and procedures clearly identify contact information of the applicable regulating agencies in case of a serious incident. All policies are available on the City's intranet.

Table 6-3 | Safety Policies and Procedures

Number	Policy Name	Description
300-01	Workplace Health & Safety	Document workplace health and safety policy
300-03	Hearing Conservation	Implement program to protect employee hearing
300-04	Personal Protective Equipment	Establish policy that requires employees to always use personal protective equipment when performing certain tasks or when in an unsafe environment
300-05	Flagger Certification	Flagger certification requirements
300-06	First Aid	Employee first aid training, first aid supplies and emergency stations
300-07	Hazard Reporting	Procedure to report an obvious or potential safety or health hazard
300-08	Incident Reporting	Procedures for reporting non-vehicular incidents
300-09	On The Job Injury	Establish policy to monitor on-the-job injuries
300-10	Safety Inspection of City Owned Facilities	Procedure for inspection of all City-owned and operated facilities
300-11	Central Safety Committee	Establish function and structure of Central Safety Committee
300-13	Emergency Evacuations of City Buildings	Procedure for evacuation of City buildings in the event of an emergency
300-14	Safety Restraints & Seat Belts	Requires mandatory use of safety restraints/seat belts while driving or riding in the City vehicles
300-15	Excavation Trenching & Shoring	Establish policy for shoring and sloping all excavations or trenches over four (4) feet in depth
300-16	Safety Line Procedure All Cranes, Backhoes, & Hoists	Procedures for controlling moving loads being hoisted or swinging ground or truck using hoists, backhoes, cranes, or any mechanical device use in moving loads
300-17	Chemical Hazard Communication (Worker Right To Know)	Establish chemical and global hazard communication program to assure the health and safety of City employees
300-18	Welding, Brazing, & Cutting	Procedure for welding, cutting or brazing work or practices which may result in an injury or death
300-19	Lockout & Tagout	Requirements for the lockout or tagout of energy isolating devices
300-20	Bloodborne Pathogens	Procedure to prevent exposure to blood or other substances and materials that may carry bloodborne pathogens. Procedures for decontamination of equipment and evaluation and treatment of employees who experience exposure.
300-21	Reporting Vehicle Accidents	Procedure for reporting vehicle accidents
300-22	Heat Related Illness	Training for potential heat related illness

Number	Policy Name	Description
300-23	Confined Spaces	Procedures for entering a confined space
300-24	Green Housekeeping Guidelines	Procedures that sustain a "Green Cleaning" environment
300-25	Respiratory Protection Program	Procedures that will prevent employees from inhaling hazardous airborne chemicals
300-26	Fall Protection & Rooftop Safety	Procedures for rooftop safety and use of fall protection
300-27	Powered Industrial Trucks	Training, operation, and safety of powered industrial vehicles

In addition to the policies, all M&O staff receive safety training. The contents of the training are periodically reviewed and updated, if necessary, through departmental and city-wide safety committees. The Human Resources and Risk Management Department maintains information and schedules on safety training.

The City maintains appropriate safety equipment and information. Each vehicle and facility have a fire extinguisher and first aid kit. All staff use personal protective equipment, such as hard hats, safety glasses, safety vests, etc., appropriate to the task. Climbing equipment and lockout/tagout equipment is available and stored at the M&O Building and the Well 7 storage facility. Additionally, each site with chemicals has a Safety Data Sheets (SDS) book that contains the Material Safety Data Sheets (MSDS) for all chemicals on site. A master sheet of all chemicals used by the Water Utility is maintained at the M&O Building.

6.6 Cross Connection Control Program

The City's Cross Connection Control Program (provided in Appendix Q) protects the public water system as defined by WAC 246.290.010, WAC 246.290.490, and Auburn City Code (ACC) 13.12 from contamination via cross connection hazards. It describes minimum operating policies, provides guidelines for installation, testing, and maintenance of approved backflow prevention assemblies, permitting process, inspection, and survey requirements for existing and new water service connections. The program is maintained by two Cross Connection Specialists under the direction of the Water Operations Supervisor. The specialists are responsible for identification and elimination of potential and actual cross connections and contamination hazards within the public water system.

6.7 Sanitary Survey Findings

DOH completes periodic inspections of the City's water facilities, their operations, and facility records to identify potential health risks to the public. The sanitary survey, conducted by DOH on August 22, 2022, identified significant deficiencies such as air gaps or backflow assemblies that must be added to the water supply lines at Wells 5 and 5A. Additionally, repair needs were identified for the reservoir overflow screens at Reservoirs 8A and 8B.

DOH identified the need to terminate the pump to waste line at Well 5 above grade and either raise the casing at Well 5A or provide a sump pump or alarms to address potential water accumulation in the vault. Weekly vault inspections, especially after significant storms, were recommended until a permanent solution is implemented.

The survey noted that the reservoir vents at Reservoirs 4A, 4B, and 8A should open downward to prevent debris entry. It also identified a need for evaluation of the overflow piping at Reservoirs 2, 4A, and 4B, to ensure compliance with regulations.

The next DOH sanitary survey is scheduled for 2027.

The City has taken the following actions to address some of the deficiencies identified in the sanitary survey.

- A backflow assembly was installed at Well 5A.
- The reservoir overflow screen at Reservoirs 8A and 8B was repaired on September 13, 2022.
- The City implemented an inspection and maintenance program to conduct weekly inspections at Well 5A and immediately after a significant storm even.
- The direct connections of reservoir overflows (Reservoirs 4A and B to drains, sanitary sewer, and/or storm sewer) have been addressed.

The following deficiencies identified in the sanitary survey will be addressed with ongoing or planned Capital Improvement Projects identified in Chapter 8 and are captured in Section 6.10.2 as recommended improvements:

- Reservoir vents will be retrofitted or replaced as part of the ongoing Reservoirs 4A, 4B, 8A, and 8B Seismic Valves Retrofit capital project.
- The request for the pump to waste line at Well 5 to terminate above grade will be addressed with a capital improvement project.
- The direct connections of reservoir overflows (Reservoirs 2) to drains, sanitary sewer, and/or storm sewer, will be addressed with a capital improvement project.

6.8 Customer Complaint Response Program

One member of the Water Distribution staff is a Customer Service Representative. This individual is responsible for meter turn-on and turn-off, delinquency notices, meter rereads, new service reads, final service reads, leak adjustments, high consumption investigations, account documentation, and other duties, as assigned. The employee maintains a modified work schedule, which provides more flexibility in dealing with emergency service requests by customers.

Beginning in 2006, the Water Utility, along with the rest of PW transitioned to an asset management software system called CarteGraph. Some of the benefits include:

- Ability to assign and track citizen complaints and requests
- Produce work orders
- Monitor work and maintenance projects
- Track costs for labor, equipment, and material
- Enhanced inventory control
- Integration with GIS
- Benchmark analysis
- Generate reports
- Track infrastructure conditions – GASB 34

The City has a customer service program accessible by the public and City staff via the City's website. Customers fill out the online Citizen Report form and describe the services they are seeking. The submitted form downloads into the CarteGraph system for review and action by staff. In addition, customers can stay connected with the City on mobile devices with a SeeClickFix application. The SeeClickFix app allows customers to report graffiti, abandoned vehicles or potholes, water issues, etc.

6.8.1 Customer Request Response Program

As described above, the CarteGraph system can assign and track customer requests (or complaints) and produce work orders. The City maintains a list of requests and identifies the work done to respond to any requests from the public. The City categorizes the citizen reported issues into the following five categories:

- Water Appearance: contains all requests related to the color of the water (brown, discoloration, cloudy, etc.)
- Odor: contains all requests related to water smell (chemical, sulfur, chlorine smell, etc.)
- Pressure: contains all requests related to change in water pressure (pressure drop, high water pressure, fluctuation in pressure, etc.)
- Taste: contains all requests related to water taste (poor, bitter, strong chlorine taste, etc.)
- Water Quality: contains all requests related to a combination of odor, taste, and discoloration issues.

Customer requests are entered into the CarteGraph or SeeClickFix and a work order is generated. Typically, a Distribution staff member or team will investigate the issue and respond directly to the customer.

A table summarizing the number and type of requests or complaints is provided in Chapter 3.

6.9 Recordkeeping and Reporting

All recordkeeping and reporting practices follow DOH regulations as specified in WAC 246-290-480. The Water Manager maintains hard copies of the water quality analysis laboratory reports. These reports are kept at the M&O Building in files organized by year and analysis type.

Analytical laboratories submit reports directly to DOH. As specified by the regulations, chemical analysis reports are kept indefinitely, and bacteriological reports are maintained for a minimum of five years. Additionally, Construction Completion Reports are submitted to DOH, as required. Construction Completion Reports for distribution main projects are maintained on file at the City and are available upon request by DOH, in accordance with WAC 246-290-125.

Water production and purchase source meters are read daily (during the work week). Paper copies are scanned at the end of the month and digital copies in pdf format are maintained on the City computer server by month and year. Annual summary spreadsheets are also maintained on the computer server. This data is added to the monthly DOH reports. Records are maintained for a minimum of 10 years.

Chlorine residual samples are collected in the distribution system and analyzed on a weekly basis. Summary spreadsheets are maintained on the City computer server by year. Records are maintained for a minimum of three years.

Monthly reports containing water production and treatment data are submitted to DOH by the 10th day of the following month, using forms provided by DOH. Signed paper copies are scanned to produce a digital copy and are maintained on the City computer server, organized by year. Digital copies are maintained for a minimum of 10 years.

Most records that Water Utility collected in the past are based on hard copy paper forms. This includes forms that track maintenance and inspection records used for pumps, valves, meters, reservoirs, hydrants, operating equipment, etc. A portion of the integration process with CarteGraph involved the collection and collation of historical data into a form that can be downloaded into the software system. The City's goal is a near-paperless documentation system that can be accessed by staff in the office, field, or home on a 7-day, 24-hour basis. Existing electronic records include those described below.

6.9.1 Cross Connection Control Program

Cross Connection Control records are managed with Tokay software and Laserfiche. Test reports conducted are stored in Laserfiche and are kept for 5 years. Tokay is used for creating reports, identifying and updating when tests are required, and general data entry and management of cross connection devices per parcel.

6.9.2 Water Meter Consumption

Water meter consumption records are maintained by the Finance Department using the Springbrook Utility Billing System. These records include customer account data for classes of customers, billing, service, comments, and questions. The system also includes a tracking feature for water sold each month as well as annual total water sales. The tracking feature is useful because data on water consumption by customer type and season supports the City's WUE Program, per Chapter 4. The Finance Department also provides staff with monthly financial reports regarding Water Utility operations.

The City also uses AMI throughout the system as a tool for the WUE Program. Using AMI data, the City may be able to identify customer leaks and, as a result, provide cost savings in the Leak Detection, Repair, and Service Meter Replacements programs. Advanced metering also aids the City's efforts to reduce non-payment of bills and water theft.

6.9.3 Supervisory Control and Data Acquisition (SCADA)

The SCADA system monitors, records, and controls water system operations at various facilities. The electronic records are maintained by the IT Department and a back-up copy is made each evening to ensure that records are retrievable should hardware or software failure occur.

Please note that the SCADA system is discussed more thoroughly in Section 6.2 of this chapter.

6.9.4 Water Meter Reading

Effective January 1, 2019, the City transitioned to monthly consumption billing. The Utility Billing staff imports the water meter reads monthly into the City Utility Billing System. With the implementation of the AMI system, the City obtained a Cloud-Based Data Analytics Solution with meter data management capabilities called Sensus Analytics. Within Sensus Analytics, is a billing access application, which enables Utility Billing staff to generate and export a billing request file defined by a billing cycle and billing window. Subsequently, the file that contains meter numbers, account numbers, and current water meter reads are imported into the City Utility Billing System. The Utility Billing staff reviews abnormally high or low consumption levels compared to previous readings from the previous year, same period.

Water service meters are read monthly to document customers' water usage for billing purposes. The AMI system automatically stores and transmits the water use data for utility billing, without the need for personnel to collect the data on site.

6.10 Summary of O&M Deficiencies and Recommended Improvements

6.10.1 Water Facilities Evaluation Study

The City completed an extensive Water Facilities Evaluation Study in 2014. The study conducted a physical inspection and evaluation of 40 out of the City's 97 water supply facilities. Inspections included pump stations, treatment facilities, reservoirs, wells, transmission mains, and PRVs. Inspections considered general conditions, corrosion and rust, structural deficiencies, ability to meet current code, and operational constraints. In addition to the inspections, the remaining useful life of the facilities were developed in a desktop analysis for pump, motor, pipe, valve, general electrical equipment, and major electrical equipment.

Where notable deficiencies were identified in the inspections or assets exceeded their usable life, improvements were recommended. Many of the recommended improvements have been completed or are currently scheduled to be completed and identified in the Capital Improvement Plan. Remaining improvements less than or equal to $10,000 are considered capital maintenance projects, which the City staff or a small works contractor will address as part of the normal M&O budget and are not identified in the Capital Improvement Plan.

Based on the observed facilities, general maintenance improvements are recommended for each facility to create a schedule of improvements based on the facility's remaining useful life. Regular facility inspections are also recommended, as summarized Table 6-4. Additionally, maintenance plans were developed for each inspected water system facility. These plans included the improvement type, estimated project cost, and frequency the improvement is required.

Table 6-4 | Recommended Inspections

Asset Type	Recommended Inspection	Frequency (years)
Pump	Perform pump test	5
Motor	Check motor amp draw	5
Reservoir	Inspect coating thickness	5
Reservoir	Inspect reservoir interior	5
PRV Station	Inspect for corrosion and signs of flooding	1
Structure	Inspect for cracks in grout (where applicable)	1
Piping	Inspect for general coating conditions	3

6.10.2 Recommended Improvements

The City operates and maintains an efficient, environmentally sound, and safe water system. Recommended improvements include the outstanding projects identified from the 2014 Facility Evaluation Study, outstanding items to be corrected from the 2022 Sanitary Survey, and general continued repairs and maintenance activities that are conducted by M&O staff or contracted out. Table 6-5 provides a summary of the identified O&M projects and their costs.

Table 6-5 | O&M Improvement Projects

O&M Deficiency	Planned Year	Notes
The pump to waste line at Well 5 to terminate above grade will be addressed with a capital improvement project. (Identified in 2022 Sanitary Survey)	2026-2028	Included with the Well 5/Well 5A Upgrades Project
Raising the casing at Well 5A to terminate above grade or the provision of a sump pump or alarms to activate when water accumulates in the vault. (Identified in 2022 Sanitary Survey)	2026-2028	Included with the Well 5/Well 5A Upgrades Project
Reservoir vents will be retrofitted or replaced as part of the ongoing Reservoirs 4A, 4B, 8A, and 8B Seismic Valves Retrofit capital project. (Identified in 2022 Sanitary Survey)	2024-2025	Included in CP2219 – Reservoirs 4 and 8 Seismic Rehabilitation
The direct connections of reservoir overflows at Reservoirs 2 to drains, sanitary sewer, and/or storm sewer, will be addressed with a capital improvement project. (Identified in 2022 Sanitary Survey)	2024-2025	Included in Reservoir 2 Valves Project
Conduct inspections of facilities at frequency recommended in the Facilities Evaluation Study.	--	Refer to **Table 6-4**. To be completed via annual M&O operating budget.
Continue distribution system corrosion inspection.	TBD	To be completed via annual M&O operating budget as funds are available.
Develop a UDF Program for the Lakeland Service Areas.	TBD	To be completed via annual M&O operating budget as funds are available.
Replace source water supply meters with flow transmitters for improved electronic data transmission and record keeping.	TBD	To be completed via annual M&O operating budget as funds are available.
Continue PRV Vault Repairs	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Pump and Equipment Repairs and Maintenance	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Annual HVAC Maintenance and Repairs	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Fencing Repairs at Water Facilities	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Generator Maintenance and Repair	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Large Meter Repair and Testing	2024-2026	To be completed via annual M&O operating budget as funds are available.
Continue Chlorine Feed and Analyzer Maintenance	2024-2026	To be completed via annual M&O operating budget as funds are available.

O&M Deficiency	Planned Year	Notes
Continue Vegetation Control and Maintenance at Water Facilities	2024-2026	To be completed via annual M&O operating budget as funds are available.

CHAPTER 7

Distribution Facilities Design and Construction Standards

This chapter outlines the Engineering Design and Construction Standards (EDCS) of the City of Auburn (City), concerning its water system. It encompasses policies and procedures governing project review and approval. To ensure the highest level of water system reliability, integration of the EDCS into the broader city infrastructure is essential. The City recognizes the interdependence of its water system with other municipal services. As such, there is an ongoing collaborative effort between the Water Division and other relevant City departments, such as Community Development and Finance, as well as non-City stakeholders, such as the Valley Regional Fire Authority (VRFA).

The integration of the EDCS in this Water System Plan empowers the City to employ an alternative review process for distribution main projects, through the submittal exception process, which permits the City to approve project reports and construction documents without written approval from the Department of Health (DOH). This submittal exception is granted provided the conditions specified in WAC 246-290-125(2) are met.

The submittal exception does not apply for source of supply, reservoir, pump station, and water treatment projects. For those projects, the City will seek approval from DOH through the submittal process outlined in WAC 246-290-110 and 246-290-120.

The following topics are addressed in this chapter:

7.1 Project Review Procedures
7.2 Policies and Requirements for Outside Parties
7.3 Design and Construction Standards
7.4 Construction Certification

7.1 Project Review Procedures

For all construction activities related to the City's water system, coordination must be done directly through the City's Water Department. The City's Water Department reviews plans, including calculations, reports, and AutoCAD files, to verify conformity with development requirements, City standards, City policies, as well as other federal, state, and local requirements. The plan sets are required to feature an overall utility plan illustrating public water facilities and private connections within the water service boundary, regardless of whether the project is inside or outside the City limits. City staff also review projects proposed by developers or other water purveyors to determine impacts to the City's water system facilities.

Development review processes are detailed in the Engineering Design Standards (EDS), available on the City's website. Compliance with Washington State Department of Transportation (WSDOT) "Standard Specifications for Road, Bridge, and Municipal Construction," and relevant City, State, and Federal regulations is also evaluated during the review process.

All water-related improvements projects, whether for capital improvement or development, undergo a thorough review process by the Water Division, including evaluation by the VRFA and City's Fire Authority for fire protection standards. Additionally, all plans involving main extensions, modifications, and fire service installations must be stamped by a Professional Engineer licensed in Washington State.

7.2 Policies and Requirements for Outside Parties

The City manages the water utility in accordance with established water- system policies that govern various facets of utility operations. City policies are established by the City to provide a vision or mission of the water utility and to provide a framework for the design, operation, and ongoing wellbeing of the City's water utility.

Policies are developed specifically for the City's multi-source municipal water system and seek to provide consistent treatment to all utility customers and to provide documentation to current water-system customers as well as those considering service from the City. What is included in these policies is limited to those things related to the water system and its design, maintenance, and operation. There are other policies and criteria that pertain to the water utility the City has in place regarding land use, development, and financial components that could still have an impact on the needs of the water system. These policies and criteria may include factors such as zoning regulations, building codes, infrastructure requirements, and financing options. These additional factors will be considered when planning for the water system, to meet the needs of the community in a sustainable and effective matter.

Policies set forth for development are described in the Water System Policies provided as Appendix A of this Plan.

7.3 Design and Construction Standards

Within the Retail Water Service Area (RWAS), the City has established specific standards governing the design and construction of water mains, detailed in the City's EDCS. The EDCS collectively contains the following:

- City of Auburn Engineering Design Standards (EDS).
- City of Auburn Engineering Construction Standards (ECS):
    - City of Auburn Engineering Construction Standards – Standard Details (STD DTL)
    - City of Auburn Engineering Construction Standards – General Special Provisions (GSP)
    - City of Auburn Engineering Construction Standards – Technical Special Provisions (TSP)

These standards undergo periodic updates, with the most recent revision in 2024. The City's 2024 design standards and construction specifications related to the water system are outlined in Appendix P. Additionally, this plan incorporates relevant sections of the City's current construction standards, including materials, methods, and standard details applicable to the construction of water system appurtenances.

For detailed information, the latest versions of the collective EDCS are accessible for view on the City's Public Works web page.

Table 7-1 lists sections of the EDCS sections for the specifications, drawing standards, and special conditions of water main installations, extensions, and replacements. Standards for supply sources, reservoirs, pump stations, and water treatment facilities are not presented due to the complex nature of these facilities. For

those projects, the City will seek approval from DOH through the submittal process outlined in WAC 246-290-110 and 246-290-120.

Table 7-1 | Water Main Design and Construction Standards

Specifications for:	
Pipe material and pipe class. ANSI/NSF Standard 61 certified materials required for all pipes.	EDS Section 7.01.02
Disinfection procedures (include de-chlorination or chlorinated water disposal specifications).	TSP – 7.09.3(24)
Pipe bedding and installed depth of bury.	EDS Section 9.05
Bacteriological testing.	TSP – 7.09.3(24)N
Pressure and leakage testing.	TSP – 7.09.3(23)
Separation from sewer mains, non-potable conveyance systems, and other buried utilities.	EDS Section 6.02
Valve spacing.	EDS Section 7.03
Construction Drawings Standards	
Plan and profile views drawn to a particular scale	EDS Sections 3.03, 3.04 & 3.04.07
Easement locations and dimensions	EDS Sections 2.02, 3.04 & 3.04.07.B, 6.01, 7.01.04, 7.01.05, 7.02.01, 7.03 and STD DTL W-06.3, W-22.2, W-23.3,
Appurtenant Design Standard Drawings	
Pipeline trench cross-section, including pipe bedding, backfill, compaction, and road restoration standard details	STD DTL T-01
Hydrants (for fire, flushing)	STD DTL W-07, W-08
Valves	STD DTL W-17, W-18, W-19
Service Meters	STD DTL W-15, W-16, W-16a
Service lines and service connection to main	STD DTL W-9, W-13, W-14
Air relief, vacuum relief, and combination air-vacuum relief valve and valve vault	STD DTL W-02
Pressure reducing valve stations	Submittal review (project specific)
Thrust blocking	STD DTL W-01
Backflow prevention assemblies	STD DTL W-21, W-22, W-23, W-24, W-25
Blow-offs	STD DTL W-03, W-04
Special Conditions	
Pipeline corrosion mitigation measures	TSP 7.09.03(25)
Potable/non-potable pipeline crossing construction details	EDS Section 6.02
Stream-crossing construction details	N/A
Individual service booster pumps	N/A
Temporary water service (i.e., employed during water main replacement or emergency repair)	N/A

7.4 Construction Certification

Construction work aimed at improving City roads and utilities, whether initiated by private developers or the City itself, must adhere to approved contract documents. City approval is mandatory for any modifications to approved plans before implementation, especially for work within the public right-of-way (ROW) or designated easements. Compliance with general WSDOT/APWA Standard Specifications, approved plans, and the City's EDCS is strictly enforced.

Prior to the start of construction, a pre-construction meeting must be held by the City and the developer, contractor, and/or designated representative. Pre-construction meetings establish the first touch point between the City and developer/contractor to discuss the schedule, certain unique aspects of the work, any special restrictions, and general coordination and communication protocols. Consistent presence of the approved set of plans with redline markups identified and requisite permits at the job site during construction is a shared responsibility of the City, the developer, and the construction contractor. The City exercises its authority to enforce standards through appointed project engineers, assistants, and inspectors, ensuring collective adherence to specified standards. Inspections, test measurements, and actions outlined in the City's Development Guidelines and Public Works Standards are pivotal. Post-construction, the submission of as-built drawings is mandated.

Non-compliance with approved project documents can lead to stop-work orders and potential removal of completed elements, subject to penalties established by ordinance. The project's conclusive status is granted only when the City issues a formal letter of acceptance to the responsible party.

Upon completion of construction activities related to the water system, including disinfection, flushing, and pressure testing for water mains, a construction completion report must be submitted. This document becomes part of the project records, and the release of water meters for any lot or building linked to a project is contingent upon final acceptance.

CHAPTER 8

Capital Improvements Program

This chapter's objective is to develop a cohesive Capital Improvement Program (CIP) for the City of Auburn (City) by summarizing and prioritizing all capital projects identified in the previous chapters. The CIP provides a comprehensive accounting of capital projects needed to continue consistent, efficient water supply to the City's Retail Water Service Area (RWSA) through the 20-year planning horizon. The recommended projects were developed in coordination with City staff.

Projects identified as part of the City's asset management program that are anticipated to cost greater than $50,000 were included as capital projects. The capital projects discussed in Section 8.2 include water supply and storage improvements, improvements to the distribution system, and upgrades or replacement of aging facilities and distribution piping as discussed in Chapter 3.

Projects were allocated to the 10-year (2025 to 2034) and 20-year (2035-2044) planning horizons. Planned projects coincide with the City's current Capital Facilities Plan (CFP) and have been placed into specific years for planned completion. These timeframes are intended to be a framework for future funding decisions that directs when future actions and decisions are intended to occur. However, these timeframes are estimates, and depending on factors involved in the processing of applications and project work, and availability of funding, the timing may change from the included timeframes. The framework does not represent actual commitments from the City, which may depend on funding and staffing resources available.

8.1 Prioritization

8.1.1 Project Identification

Capital projects are organized into two categories to help provide a better understanding of the primary project driver as follows:

- Capacity Projects (CAP): These projects are needed to expand infrastructure capacity to meet increased demands associated with current deficiencies or projected growth.
- Non-Capacity (Non-CAP): These projects are needed to address aged and/or obsolete equipment to maintain and/or improve the reliability of the infrastructures system. These projects are needed to improve existing infrastructure for reasons other than capacity.

The capital projects are also identified and grouped into categories based on the infrastructure they are focused on. Each project is assigned an identification number (Project ID) with the following ID prefixes:

- Supply (S): These projects are associated with the City's water supply sources and treatment facilities.

- Storage (R): These projects are associated with the City's storage reservoirs or allow modifications in the system impacting reservoir storage transfer throughout the RWSA.
- Pump Stations (PS): These projects are associated with the City's pump stations or booster pump stations (BPS).
- Distribution (D): These projects are associated with the City's transmission and distribution piping systems.
- General Improvements (G): General improvement projects do not fit into the other categories and may be broader, impacting multiple components of the City's water system.

8.1.2 Prioritization Factors

The capital projects for the facilities improvements were prioritized based on system deficiencies, safety concerns, maintenance or capacity requirements, and regulatory requirements.

The capital projects for the capacity driven distribution system improvements were prioritized based on the fire flow availability; projects resolving the largest deficits were prioritized higher, and as such are planned to be completed sooner than projects resolving smaller deficits. The capital projects for the condition driven distribution improvements were prioritized based on the existing pipe age, size, and material. More details are discussed in Chapter 3.

The priority order of these improvements is reflected in the schedule of improvements, which is presented in Section 8.3 and Appendix W.

8.1.3 Estimated Costs

"Active projects" are projects that are currently underway for completion. The project costs presented include total project costs for the current and future years and are presented in 2024 dollars.

For projects already included in the City's 2023 CFP, it was assumed that the project cost in 2024 dollars remains the same, unless the costs were identified as needing to be reassessed.

For planned capital projects identified in the 2015 WSP that have not been completed and are not included in the City's 2023 CFP, the project costs were escalated from 2014 dollars as presented in the 2015 WSP to 2024 dollars using the Engineering News Record (ENR) Construction Cost Index (CCI).

For all other projects that were newly identified, modified, or reassessed, planning-level project cost estimates were developed for the improvements using average costs from RSMeans, HeavyBid Construction Cost Data, recent City of Auburn project bid tabs, City input, industry experience, and local contractor and supplier costs. These project costs are planning-level estimates and are categorized as Class 5 estimates, as defined by the Association for the Advancement of Cost Engineering (AACE) International:

> *Class 5 estimates are generally prepared based on very limited information, and subsequently have wide accuracy ranges. As such, some companies and organizations have elected to determine that due to the inherent inaccuracies, such estimates cannot be classified in a conventional and systemic manner.*
>
> *Class 5 estimates are prepared for any number of strategic business planning purposes, such as but not limited to market studies, assessment of initial viability, evaluation of alternate schemes, project*

screening, project location studies, evaluation of resource needs and budgeting, long-range capital planning, etc.

Typical accuracy ranges for Class 5 estimates are -50 % to -20% on the low side and +30% to +100% on the high side, depending on the construction complexity of the project, appropriate reference information and other risks (after inclusion of an appropriate contingency determination). Ranges could exceed those shown if there are unusual risks.

All project descriptions and cost estimates in this WSP represent planning-level accuracy and opinions of costs (-50 percent to +100 percent).

During the pre-design phase of each project, the project definition, scope, and specific information (e.g., pipe length and diameter, roadway restoration requirements, permitting requirements) should be verified. The final cost of individual projects will vary depending on actual labor and material costs, site conditions, market conditions, regulatory requirements, project schedule and other factors. Because of these factors, project feasibility and risks must be carefully reviewed prior to making specific financial decisions or establishing project budgets to support proper project evaluation and adequate funding.

Total estimated project costs were developed through a progression of steps and multiple methodologies. The steps included development of component unit costs, construction costs and, finally, total project costs. The component unit cost includes the sum of materials, labor and equipment of a project's basic features. The construction cost is the sum of component costs and construction markups, which includes a 30 percent allowance for contingency and 10.2 percent for sales tax. The total project costs presented is the sum of construction costs with the following additional allowances:

- 15 percent for City management, survey, legal, and project administration.
- 15 percent engineering design.
- 15 percent construction management and inspection.

The following costs are not included, unless specifically noted:

- Land or right-of-way acquisition.
- Maintenance expenses.
- Operation expenses.

All cost estimates were developed as total project costs in March 2024 dollars. In Table 8-10, costs have been inflated and escalated using an annual increase rate from 2024 dollars to their planned implementation year. For projects that will be designed or constructed in 2024, an annual increase of eight percent was used. For projects that will be designed or constructed after 2024, an annual increase of five percent was used. For future budgeting purposes, the latest engineering news record (ENR) Construction Cost Index (CCI) can be used to project current estimates to the year of implementation. The cost estimates for the Auburn area used the ENR CCI in Seattle of 15,477 (March 2024).

8.1.3.1 Pipeline Component Unit Costs

The pipelines unit costs were developed using recent City construction bid tabs assuming the use of ductile iron pipe and a typical cover depth of four feet. The estimated unit cost is provided by pipe diameter per linear foot of pipe in Table 8-1, which includes the cost for the pipe, trench, roadway restoration, appurtenances, installation, and direct construction markups. As the diameter of pipe and the trench width increase, the costs also increase.

Table 8-1 | Water Pipeline Construction Costs per Linear Foot

Pipe Diameter (inch)	Unit Construction Cost ($/linear foot)
8	$490
10	$510
12	$520
14	$570
16	$630
18	$730
20	$780
24	$880

8.1.3.2 Reservoir Component Unit Costs

Reservoir (storage tank) unit costs were determined based on the tank volume in gallons. Conceptual costs for tanks vary based on the material of storage: prestressed concrete and welded steel being the most common options. Unit costs for the different reservoir options are presented in Table 8-2 in terms of cost per gallon of storage. The unit costs do not include site piping, site improvements, land acquisition, repair, or recoating. Storage reservoir costs are sensitive to site-specific geotechnical and seismic considerations. A tank siting study is necessary whenever a new tank project is initiated to obtain the information required to inform the design.

Table 8-2 | Reservoir Tank Construction Costs per Gallon

Tank Material	Unit Construction Cost ($/gallon)
Prestressed Concrete	$1.50
Welded Steel	$1.25

8.2 Capital Improvement Program Summary and Schedule

8.2.1 Completed Projects

The following projects have been completed since 2015 WSP was completed:

- S-01: Onsite Improvements Projects, completed in 2016.
- S-02: Emergency Power Improvements Project, completed in 2016.
- S-17: West Hill Springs Flow Control Improvements, completed in 2017.
- S-19: Fulmer Field Improvements Project, completed in 2018.
- R-01: Lakeland Hills Reservoir 5 Improvements, completed in 2016.
- D-03: SCADA Upgrades, completed in 2015.
- D-10: Pipeline Asset Management Study, completed in 2020.
- D-13: Lea Hill PRV Station Improvements, completed in 2018.
- D-14: Valley AC Main Replacement, completed in 2015.
- PS-03: Green River Pump Station Emergency Power, completed in 2020.
- PS-07: Academy Pump Station No.1 Improvements, completed in 2023.
- G-06: Muckleshoot Indian Tribe (MIT) Casino Master Meters, completed in 2016.
- G-09: Water Meter & Billing System Improvements, completed in 2018

The following projects have been eliminated since 2015 WSP was prepared:

- G-05 - Utilities Field Operations Center: This project was replaced with a more comprehensive upgrade to the City's Operations and Maintenance Facilities as reported in the 2021 Limited Comprehensive Plan Update.

- D-12 - Academy Transmission Replacement: This project was eliminated, after further investigation found no issues with the existing pipeline.

- D-15: Braunwood Transmission: This project was split from Reservoir Seismic Rehabilitation (R-06) identified in the 2015 WSP. This project was originally planned to incorporate the Braunwood Satellite System, however after further evaluation, there is not a business case to support this project. Instead, it is replaced in this WSP with a mechanical upgrades project for the Braunwood Pump Station to maintain operation. The potential for incorporation of the Braunwood Satellite System may be more viable in the future pending potential development in the southern portion of the City's RWSA.

- D-16 - Game Farm Park Transmission: This project was originally planned to allow for the decommissioning and removal of the Game Farm Park Pump Station, however after further evaluation, there is not a business case to support this project. Instead, it is replaced in this WSP with a mechanical upgrades project to maintain operation of the Game Farm Park Pump Station. Elimination of the Game Farm Park Pump Station may be more viable in the future pending potential development in the southern portion of the City's RWSA.

- S-12 - West Hill Springs Water Quality Improvements: The City had planned to replace the aging West Hill Springs chlorination building and equipment with a new liquid chlorination system. However, since this project is not required to meet regulatory requirements and after further review of the City's Financial Program, this project was eliminated to prioritize projects required to resolve deficiencies. This project will be completed later, likely beyond the planning horizon for this WSP.

- S-14 - Algona Well 1 Redevelopment: This project was eliminated until the Algona Well 1 Study is completed. A new capital project may be developed in the 10 to 20-year planning horizon pending the outcome of the study.

8.2.2 Active Projects

The following projects are currently underway for completion by the City and are referred to as "Active Projects" that have remaining costs to be spent in the near term:

- CP2021 - Well 4 Facility Improvements: This project was split from the Well 4 Pump Improvements project (S-22) identified in the 2015 WSP. This project includes upgrades to much of the mechanical systems at the facility.

- CP2043 - Well 4 Electrical Improvements: This project was split from the Well 4 Pump Improvements project (S-22) identified in the 2015 WSP to accommodate beneficial electrical improvements outside the original scope of the project. The well facility is over 40 years old and much of the electrical equipment is original. Upgrades to the electrical system will improve the overall efficiency of the facility.

- CP2219 - Reservoir 4 and 8 Seismic Rehabilitation: This project was split from Reservoir Seismic Rehabilitation (R-06) identified in the 2015 WSP. The City plans to install seismic control valves on outlet piping of the Lea Hill Reservoirs (4A & 4B) and Academy Reservoirs (8A & 8B). A seismic control valve isolates the reservoir to prevent catastrophic flows from the reservoir during a seismic pipe failure. This project will also address outstanding deficiencies identified in the 2022 Sanitary Survey, including vent modifications, overflow connection modifications and overflow screen repairs.

- CP2134 - Comprehensive Water System Plan Update: This project was split from identified in the 2015 WSP (G-08), which originally included updates for both 2024 and 2034. This project will be carried forward in the CIP with further WSP updates being required in 2034 and 2044.

- CP1603 - Coal Creek Springs Transmission Main Replacement: This project was identified in the 2015 WSP as project (D-11) will be completed in 2024. The project will replace the existing 24-inch diameter steel transmission main crossing the White River with a new transmission main suspended from a utility and pedestrian bridge to cross the White River.

- CP2204 - Coal Creek Springs Rehabilitation (Phase 1): The Coal Creek Springs Rehabilitation project aims to investigate the cause of low yield and identify potential upgrades to improve water production. The updates will be completed in Phase 2 of the project.

- CP2413 - Reservoir 2 Valves: This project was split from Reservoir Seismic Rehabilitation (R-06) identified in the 2015 WSP. This project will replace the existing 20-inch supply valve with a seismic control valve and replace the 12-inch drain valve at Reservoir 2. Both valves will be installed in a vault. This project was identified as a maintenance issue due to limited access to the valves. The addition of a seismic control valve will improve the resiliency of the distribution system. This project will address the outstanding deficiency identified in the 2022 Sanitary Survey by modifying the overflow connection.

- CP1914 - Cascade Water Alliance Water Purchase: This project was identified in the 2015 WSP as project (S-04) and finances System Development Charges for the right to purchase water from Tacoma Public Utilities (TPU) through the Second Supply Pipeline to meet future projected demand, based on agreements with Cascade Water Alliance. Council approved the agreements for permanent and reserve wholesale supply in September 2013, and a new agreement was executed in 2014. Budget reflects purchase of permanent supply; payments will continue through 2029.

- S-08 - Water Resources Protection Program (Wellhead Protection): This program provides annual funding for implementing strategies identified in the Wellhead Protection Plan. Although some tasks will be performed as part of the water operations budget, other tasks will require consultants with expertise in review and investigation of contaminant sites and other environmental databases, development of spill response plans, and leaking underground storage tanks. This program will continue through the 20-year planning horizon.

- R-03 - Reservoir Repair and Replacements: This is an annual program that provides budget for general reservoir maintenance and minor repairs. This program will continue through the 20-year planning horizon.

- R-05 - Reservoir Painting: This is a program that operates on a 10-year cycle to complete reservoir coatings. This program will continue through the 20-year planning horizon with the next anticipated painting project planned in 2025.

The following projects include distribution improvements identified in the 2015 WSP to be completed as part of either the Annual Distribution System Improvements Program (D-02), Water Repair and Replacement Program (D-09) or are in partnership with other City utilities and are funded by budget available in the Street Utility Improvements annual program (D-06). All three programs have been updated and will continue through the 20-year planning horizon. In total the following active projects will replace approximately 9,000 linear feet of water main in the City's system. The locations of all active distribution system improvement projects are identified in Figure 3-12 in Chapter 3.

- CP1619 - 104th Park Development (104th to 102nd Water Main Loop)
- CP2301 - 104th Avenue SE PRV Replacement
- CP2123 - C St SW Preservation
- CP2125 - D St SE and 23rd Street SE Storm Improvements
- CP2410 - 112th Pl SE Water Main Replacement
- CP1622 - Auburn Way South - Hemlock St SE to Poplar St SE
- CP2022 - Garden Avenue Realignment
- CP2210 - M Street NE Widening
- CP2116 - R Street SE Widening
- CP2308 - R St SE and 21st St SE Roundabout
- CP2315 - R St SE Preservation - 33rd St SE to 37th St SE
- CP2319 - Lea Hill Road/104th Ave SE Roundabout
- CP2404 - 12th St SE and Auburn Way South Water R&R
- CP2412 - 2025 Local Street Preservation
- 2026 Local Street Preservation

The following active projects were not identified in the 2015 WSP:

- CP2405 - Fulmer Treatment Facility VFD Replacements: The variable frequency drive (VFD) for pumps 1 and 2 at Fulmer Corrosion Control Treatment Facility (CCTF) were installed in 2002. They are at the end of their useful life and require replacement as repair parts are no longer available.

- CP2329 - Coal Creek Springs Flowmeter Replacement: The project will replace existing source meters on the Coal Creek Springs collectors to improve the accuracy and frequency of production readings.

- Algona Well 1 Study – Phase 1: The project will conduct a preliminary assessment of options to utilize the existing water right.

- Valley Service Area Reservoir No. 3 Siting Analysis: The project will conduct a siting analysis to identify and evaluate possible locations for the new reservoir.

- Braunwood Pump Station Assessment: The project will identify process mechanical upgrades necessary to continued operation. The project will also evaluate roofing replacement material options and costs.

- Coal Creek Springs Rehabilitation – Phase 1: The project will investigate the cause of reduced production from Coal Creek Springs and recommend improvements to increase production capacity.

8.2.3 Capital Improvement Projects

The following projects identified in the 2015 WSP have not been completed since the WSP was prepared, but have been revisited and are discussed in detail in the following sections for completion during this planning period. The timing of most projects has been adjusted based on the City's financial analysis and project prioritization updates.

- S-03 - Well 7 Back-Up Power: Delayed to 2032 since Well 7 has been offline due to high levels of Manganese. The timing of this project will be aligned with the completion of the Well 7 Treatment Phase 1 project (S-15) that will allow the Well to resume operation.
- S-06 - Well 5/5A Upgrades: Delayed from 2022 to 2026.
- S-07 - Well Inspection and Redevelopment Program: Delayed from 2015-2033 to 2026.
- S-09 - Coal Creek Springs Rehabilitation: Delayed from 2018 to 2027 based on awaiting results of ongoing investigations to identify the cause and possible solutions to improve production from Coal Creek Springs. The timing of this project may be adjusted pending results of the on-going investigation.
- S-11 - Wells 3A/3B Treatment: Delayed from 2035 to 2036.
- S-13 - Algona Well 1 Study: Delayed from 2015 to 2039.
- S-15 - Well 7 Treatment Phase 1: Delayed from 2022 to 2030 based on City financial analysis and updated project prioritization.
- S-16 - Well 7 Treatment Phase 2: Moved forward from 2035 to 2033.
- S-18 - Howard Road CCTF Expansion: Delayed from 2025 to 2032. The timing of this project must be aligned with the completion of the Coal Creek Springs Rehabilitation project, as its purpose is to provide increased treatment capacity to accommodate increased flows from Coal Creek Springs.
- S-20 - Well 2 Replacement: Moved forward from 2035 to 2030.
- S-21 - Coal Creek Springs Chlorination Building Replacement: Moved forward from 2035 to 2030.
- R-04 - Valley Service Area Reservoir No. 3: Delayed from 2025 to 2041.
- R-07 - Reservoir Capital Improvements: Delayed from 2025 to 2027 to avoid timing conflicts with other current projects at Reservoirs 4A, 4B, and 8A.
- R-07 - Braunwood Reservoir Improvements: Separated from "Reservoir Capital Improvements" project and delayed from 2025 to 2039.
- PS-04 - Intertie Booster Pump Station Improvements: Delayed from 2021 to 2024.
- PS-09 - Game Farm Park Pump Station Mechanical Upgrades: Replaces original project 'Game Farm Park Pump Station/Distribution System Improvements. Delayed from 2025 to 2034.
- PS-10 - Lea Hill Pump Station Replacement: Delayed from 2025 to 2027 to avoid conflicts with concurrent work in area being completed as part of a separate project.

- G-08 - Comprehensive Water System Plan Update: This project was split into two separate completion years for future updates (2034 and 2044).

Based on the information provided by the City, information included in the 2023 CFP, asset management program input, and results of the system capacity analysis provided in **Chapter 3**, the following new projects were identified that are included in the CIP and are discussed in further detail below:

- Rehabilitate & Clean Wells 2 and 6 (3-year Cycle).
- On-Site Chlorine Generation Systems (OSEC) at Wells 1 and 4.
- Academy PRV Project.
- Braunwood Pump Station Mechanical Upgrades.
- Water Trench Patches Program.
- West Hill Springs Transmission Main Replacement.
- Lea Hill 648 Zoning Adjustment.

8.2.3.1 Water Supply

The City's water supply strategy details both project sizing and timing. A summary of the 0 to 10-year and 10 to 20-year capital projects recommended for securing adequate supply to meet the system's future demands are presented in **Table 8-3**. Project IDs have been revised to reflect the updated prioritization and planned timing of projects presented in this WSP. Previous project IDs from the 2015 WSP as presented above will be discontinued for clarity purposes. Active projects identified above are not discussed in detail as they are already well defined and in progress.

8.2.3.1.1 Cascade Water Alliance Water Purchase (S-01)

Financing to purchase water from Tacoma Public Utilities (Tacoma) to meet water demands is based on an agreement with Cascade Water Alliance (Cascade), which had purchased water supply from Tacoma. The Council approved the agreement for permanent wholesale supply in September 2013. The agreement provides an additional 3.32 mgd of supply during the peak day and 1.5 mgd of average day supply. The City's permanent and reserve agreement requires System Development Charges (SDC) payments of $21,073,743 between 2017 and 2029. A total of $934,810 of payments will continue from 2023 through 2029. The SDC costs will decrease if less than the full reserve amount is purchased. The project ID was previously S-04 in the 2015 WSP.

8.2.3.1.2 Water Resources Protection Program (Wellhead Protection) (S-02)

Annual funding for implementing strategies identified in the Wellhead Protection Plan. Although some tasks will be performed as part of the water operations budget, other tasks will require consultants with expertise in review and investigation of contaminant sites and other environmental databases, development of spill response plans, and leaking underground storage tanks. The project ID was previously S-08 in the 2015 WSP.

8.2.3.1.3 Rehabilitate & Clean Wells 2 and 6 (3-year Cycle) (S-3)

Rehabilitation work completed in 2013-2014 indicated it would be beneficial to clean and rehabilitate both wells on a regular basis to improve production capacity and pumping efficiencies. Cleaning was completed in 2020 and again in late 2023/early 2024. This program was originally established as a 5-year cycle, however based on more recent evidence, more frequent cleaning is required. Cleaning and rehabilitation for Wells 2 and 6 will be performed over a 3-year cycle. This program was not identified in the 2015 WSP.

8.2.3.1.4 Well Inspection and Redevelopment Program (S-04)

The City allocates annual funding for investigations and redevelopment of supply wells and springs necessary to support production at maximum capacity for efficient utilization. This program is to be used for production wells and spring collectors, and is not intended to finance the replacement of pumps, motors, buildings, etc. The project ID was previously S-07 in the 2015 WSP.

8.2.3.1.5 On-Site Chlorine Generation Systems (OSEC) at Wells 1 and 4 (S-05)

The existing liquid chlorine (sodium hypochlorite) used at Wells 1 and 4 degrades during low winter demand periods when the volume used is much lower and product turnover is decreased. This results in more chemical consumption to achieve the same chlorine dose which is not cost effective. The hypochlorite systems will be replaced with on-site chlorine generation systems sized to meet peak summer demands while providing flexibility during winter months. This project was not identified in the 2015 WSP.

8.2.3.1.6 Fulmer CCTF Replace On-Site Chlorine Generation System (OSEC) (S-06)

The existing on-site chlorine generating equipment was installed in 2002. The generation cell was replaced in 2012. Sourcing parts for equipment repairs has become increasingly difficult due to the equipment age. An analysis performed in 2018 comparing chlorine alternatives indicated that on-site generation has the lowest overall cost. This project will replace the entire generation system. The chlorination system will be sized to accommodate future production from Well 7.

8.2.3.1.7 Well 5/5A Upgrades (S-07)

Well 5 needs significant improvements including a new building, a backup generator, chlorination, and a hydrologic investigation to evaluate observed decreased production. Due to the small size of the existing site, the acquisition of an adjacent parcel may be required. Additionally, the project will address the recommended Capital Improvements identified in the 2014 Facility Evaluation Study (CIP Project G-01), including a new pump at Well 5 and new pump and motor at Well 5A. Additional upgrades may be identified in the hydrologic investigation; therefore, the cost of this CIP item should be revisited upon completion of the study. This project will also include improvements to address outstanding deficiencies identified in the 2022 Sanitary Survey, including modifications to the pump waste line for Well 5 and addressing water accumulation in the vault at Well 5A. The project ID was previously S-06 in the 2015 WSP.

8.2.3.1.8 Coal Creek Springs Rehabilitation – Phase 2 (S-08)

Complete rehabilitation of the Coal Creek Springs collectors to improve production capacity resulting in greater utilization of the water right. Improvements are to be defined by the outcomes of the 2023/2024 hydrogeologic study currently being completed as Phase 1 (S-04). Additional upgrades may be identified in the hydrologic investigation; therefore, the cost of this CIP item should be revisited upon completion of the study.

8.2.3.1.9 Coal Creek Springs Chlorination Building Replacement (S-09)

Coal Creek Springs chlorination building was identified as requiring replacement in the 2013 Facility Evaluation Study. Additionally, the project will upgrade the source treatment from chlorine gas to a liquid sodium hypochlorite disinfection system. Sizing of the new equipment will be dependent upon capacity improvements completed as part of the Coal Creek Springs Rehabilitation Project. A new building will be constructed to house the equipment. The project ID was previously S-21 in the 2015 WSP.

8.2.3.1.10 Well 7 Treatment Phase 1 (S-10)

Well 7 is not operational due to high manganese levels. Manganese treatment is required to allow operation of this facility to be restored and to utilize the full water right for this well. Due to space limitations at the Well 7 site, the treatment facilities will be added at the Fulmer Field CCT Facility. The treatment facility will be installed in two phases. The first phase will provide 2.5 mgd of capacity. Additionally, phase 1 of the project will address the recommended improvements to the Fulmer Field CCT Facility identified in the 2013 Facility Evaluation Study, including a new pump and motor. The project ID was previously S-15 in the 2015 WSP.

8.2.3.1.11 Well 2 Replacement (S-11)

The Fulmer Well Field Improvement project found that Well 2 can continue to serve the City but would need to be replaced to resolve ongoing operational challenges. This project includes installation of a new large diameter well. It is assumed that the well will remain on its existing site, or other City-owned property. The project ID was previously S-20 in the 2015 WSP.

8.2.3.1.12 Howard Road CCTF Expansion (S-12)

The inflow to the Howard Road CCTF will increase with the completion of the Well 1 Improvements project in 2016 and planning production improvements for Coal Creek Springs Collector Improvements. The existing facility will be expanded to its full capacity to provide additional treatment capacity and redundant pump capacity to match increased flows. Additionally, the project will address the recommended improvements to Howard Road CCTF identified in the 2013 Facility Evaluation Study, including a new pump and motor. The expansion will include an additional aeration tower and a pump to match existing. The project ID was previously S-18 in the 2015 WSP.

8.2.3.1.13 Well 7 Back-up Power (S-13)

Well 7 is currently out of service, but the City has plans to bring the facility back online once manganese treatment is provided as part of the Well 7 Treatment Phase 1 Project. Without back-up power to its pumps, Well 7 is not considered a reliable source of supply for the Valley Service Area. The City has limited land available at the Well 7 site, therefore, backup power will be installed at the Fulmer Field CCT Facility. The project also includes installing underground electrical transmission capability between Well 7 and the Fulmer Field CCT Facility. The project ID was previously S-03 in the 2015 WSP.

8.2.3.1.14 Well 7 Treatment Phase 2 (S-14)

Well 7 Treatment Phase 2 will complete the manganese treatment facilities at the Fulmer Field CCT Facility to allow year-round use of Well 7. Phase 2 will add 2.5 mgd of treatment for a total capacity of 5.0 mgd. The project ID was previously S-16 in the 2015 WSP.

8.2.3.1.15 Wells 3A/3B Treatment (S-15)

Wells 3A and 3B are not operated due to high manganese levels. Manganese treatment is required to allow these wells to be used, which would add 4.03 mgd of instantaneous flow capacity to the City's supply capabilities. The project includes manganese treatment, a new well and treatment building, well pumps, and onsite backup-power. Additionally, a new sodium hypochlorite system for chlorination will be installed. The project ID was previously S-11 in the 2015 WSP.

Table 8-3 | Prioritized Water Supply Improvement Projects

Project Name	Project ID	Project Timing	Added Qi Capacity (mgd)	Estimated Cost 2024 USD	Brief Project Description
0 to 10-Year Planning Horizon					
Cascade Water Alliance Water Purchase	S-01	2024-2029	3.32	$5,608,860	The agreement provides an additional 3.32 mgd of supply during the peak day and 1.5 mgd of average day supply.
Water Resources Protection Program (Wellhead Protection)	S-02	2024-2044 (Annual)		$1,287,700	Annual funding for Wellhead Protection activities.
Rehabilitate & Clean Wells 2 and 6 (3-year Cycle)	S-03	2025-2044		$1,750,000	3-year cycle program to clean and rehab Wells 2 and 6.
Well Inspection and Redevelopment Program	S-04	2026-2027		$420,000	Annual funding allocation for investigations and redevelopment of wells and springs to maximize production capacity.
On-Site Chlorine Generation Systems (OSEC) at Wells 1 and 4	S-05	2026-2027		$275,000	Replace liquid hypochlorite systems with on-site generation systems.
Fulmer CCTF Replace On-Site Chlorine Generation System (OSEC)	S-06	2026-2027		$500,000	Replace aged on-site chlorine generation equipment.
Well 5/5A Upgrades	S-07	2026-2028		$2,715,000	New building, back-up generator, chlorination, and a hydrologic investigation to evaluate the reasons for decreased production.
Coal Creek Springs Rehabilitation – Phase 2	S-08	2027-2030	4.32	$5,337,000	Rehabilitation of the Coal Creek Springs collectors to improve production.
Coal Creek Springs Chlorination Building Replacement	S-09	2030-2031		$2,081,000	Replace chlorination system and building at Coal Creek Springs Facility with hypochlorite disinfection system.
Well 7 Treatment Phase 1	S-10	2030-2032	2.5	$10,097,000	Requires manganese treatment facilities
Well 2 Replacement	S-11	2030-2031	3.46	$1,960,000	Replace Well 2 to resolve ongoing operational challenges.
Howard Road CCTF Expansion	S-12	2032-2033		$1,450,000	Expand the facility to its full capacity (including an additional aeration tower and pumps).
Well 7 Back-Up Power	S-13	2032-2033		$2,075,000	Provide back-up power for this source.
Well 7 Treatment Phase 2	S-14	2033-2035	2.5	$8,054,000	Requires completion of manganese treatment facilities.
10 to 20-Year Planning Horizon					
Wells 3A/3B Treatment	S-15	2036-2038	4.03	$13,945,000	Provide manganese treatment for well operation
Algona Well 1 Study – Phase 2	S-16	2039		$250,000	Evaluate possible uses of water right.
Subtotal				**$57,805,560**	

8.2.3.1.16 Algona Well 1 Study – Phase 2 (S-16)

Algona Well 1 has been abandoned and all related facilities removed. This project will study possible options to utilize the existing water right. One option may be to redevelop the well on-site at its previous location. Another alternative may be to pursue an alternative well location or how to use the water right at another existing facility. The project does not include the development of design, permitting or construction of well infrastructure. The project ID was previously S-13 in the 2015 WSP.

8.2.3.2 Storage

Table 8-4 provides a summary of the planned reservoir projects. Project IDs have been revised to reflect the updated prioritization and planned timing of projects presented in this WSP. Previous project IDs from the 2015 WSP as presented above will be discontinued for clarity purposes. Active projects identified above are not discussed in detail as they are already well defined and in progress.

8.2.3.2.1 Reservoir Repair & Replacements (R-01)

The City has allocated an annual capital expenditure for general reservoir maintenance and minor improvements. Projects are identified by the City on an as-needed basis. The project ID was previously R-03 in the 2015 WSP.

8.2.3.2.2 Reservoir Painting (10-year Cycle) (R-02)

The City plans to paint the welded steel reservoirs to extend their useful life. This program finances the painting of two reservoirs every 10 years. The project ID was previously R-05 in the 2015 WSP.

8.2.3.2.3 Academy PRV Project (R-03)

A new PRV facility will be located to rezone a portion of the Valley 242 pressure zone to the Academy 350 pressure zone to resolve fire flow deficiencies in the area. This PRV facility will also allow storage transfer from the Academy Service Area where this is surplus storage to the Valley Service Area to resolve 2034 storage deficit projections, allowing for more system flexibility. The PRV facility location is assumed to be in a cul-de-sac where U St SE meets 28th St SE but will be confirmed during design. The PRV vault is assumed to house a 2-inch PRV for low flows (normal operation) and a 6-inch PRV for fire flows. This project was not identified in the 2015 WSP.

8.2.3.2.4 Reservoir Capital Improvements (R-04)

The 2013 Facility Evaluation Study identified improvements to reservoir facilities based on the condition and remaining useful life of the assets within the facilities. Improvements were identified at Reservoir 1, Reservoir 4A & 4B, and Reservoir 8A & 8B. The project ID was previously R-07 in the 2015 WSP.

8.2.3.2.5 Braunwood Reservoir Improvements (R-05)

The 2013 Facility Evaluation Study identified improvements to reservoir facilities based on the condition and remaining useful life of the assets within the facilities. Improvements were identified at the Braunwood Reservoir and were previously included in Reservoir Capital Improvements project (R-07) in the 2015 WSP.

8.2.3.2.6 Valley Service Area Reservoir No. 3 (R-06)

To meet future storage requirements in the Valley Service Area, it is recommended that a new, 2-MG storage reservoir. A siting study should be conducted to identify the preferred reservoir location and other details; it is assumed that the reservoir will be in the northeast portion of the Valley 242 pressure zone.

Property acquisition is expected to be required and an allowance of $1M is included in the project budget. The project ID was previously R-04 in the 2015 WSP. It was assumed that the new reservoir will be a prestressed concrete tank, however this should be confirmed during the siting study.

Table 8-4 | Storage Improvements Projects

Project Name	Project ID	Project Timing	Added Storage (MG)	Estimated Cost 2024 USD	Brief Project Description
0 to 10-Year Planning Horizon					
Reservoir Repair & Replacements	R-01	2024-2044 (Annual)		$1,392,000	Annual program for reservoir maintenance and minor improvements.
Reservoir Painting (10-year Cycle)	R-02	2025-2044		$3,500,000	Required for maintenance and reservoir longevity in both Academy and Lea Hill service areas.
Academy PRV Project	R-03	2027		$470,000	PRV for storage transfer and rezoning to meet fire flow demands.
Reservoir Capital Improvements	R-04	2027		$470,000	Improvements to Reservoir 1, Reservoir 4A&4B, Reservoir 8A&8B based on the condition and remaining useful life.
10 to 20-Year Planning Horizon					
Braunwood Reservoir Improvements	R-05	2039-2040		$250,000	Improvements based on condition and remaining useful life.
Valley Service Area Reservoir No. 3	R-06	2041-2044	2.0	$11,745,000	Required to meet future storage requirements in the Valley service area.
Subtotal				**$17,827,000**	

8.2.3.3 Pump Stations

Table 8-5 provides a summary of the planned pump station projects. Project IDs have been revised to reflect the updated prioritization and planned timing of projects presented in this WSP. Previous project IDs from the 2015 WSP as presented above will be discontinued for clarity purposes. Active projects identified above are not discussed in detail as they are already well defined and in progress.

8.2.3.3.1 Intertie Pump Station/Lea Hill BPS Improvements (PS-01)

The Lea Hill BPS serves the closed 648 Pressure Zone and does not have sufficient capacity to meet fire flow requirements under current or future demand projections. To meet fire flow requirements, an additional 2,500 gpm of firm capacity is required. The Lea Hill BPS and that Intertie Pump Station share a building. To increase capacity of the Lea Hill PS, the project will provide additional piping and modify the existing Intertie Pump Station/Lea Hill BPS building to utilize the existing Intertie Pump Station pumps to serve the Lea Hill 648 pressure zone. The project will also add pressure reducing valves and control valves at Lea Hill reservoirs, and system valves to provide efficient operation of the 132nd Ave Tacoma Intertie. On-site back-up power improvements for the Lea Hill BPS are also included to improve facility reliability.

In the 2015 WSP, this project also included distribution system improvements to rezone a portion of the Lea Hill Service Area; this work has been shifted to a separate project titled the Lea Hill 648 Zoning Adjustment project. This project ID was previously PS-04 in the 2015 WSP.

8.2.3.3.2 Lea Hill Pump Station Replacement (PS-02)

The Lea Hill Pump Station will be reconstructed to provide redundant pumped supply to the Lea Hill area. If the Green River Pump Station is out of service for maintenance, a redundant pump station would avoid the need to purchase more expensive regional surface water through the 132nd Intertie. The pump station needs to be relocated from its current location on the shoulder of Lea Hill Road at the base of a steep hill for safety and reliability considerations. Two separate active projects (Garden Avenue Realignment and Lea Hill Roundabout) will construct approximately 900 feet and 835 feet of 12-inch diameter transmission main respectively, that is required for the future pump station. The project ID was previously PS-10 in the 2015 WSP.

8.2.3.3.3 Braunwood Pump Station Mechanical Upgrades (PS-03)

The Braunwood Pump Station is an aging facility that serves the Braunwood Satellite System. The project will include minor mechanical or electrical improvements to rehabilitate the facility for continued use. This project ID was previously PS-09 in the 2015 WSP. This project was not identified in the 2015 WSP.

8.2.3.3.4 Game Farm Park Pump Station Mechanical Upgrades Project (PS-04)

The Game Farm Wilderness Park Pump Station is an aging facility that serves the Game Farm Wilderness and recreational area. The 2013 Facility Evaluation Study identified improvements to allow continued use of the station including pump replacement and building repairs. Additional minor mechanical or electrical improvements may be warranted to rehabilitate the facility for continued use. This project ID was previously PS-09 in the 2015 WSP.

Table 8-5 | Pump Station Improvement Projects

Project Name	Project ID	Project Timing	Added Firm/Reliable Capacity (gpm)	Estimated Cost 2024 USD	Brief Project Description
0 to 10-Year Planning Horizon					
Intertie Pump Station/Lea Hill BPS Improvements	PS-01	2024-2026	2,500 gpm	$2,325,000	Expand the fire flow capacity of the Lea Hill BPS by connecting to the Intertie PS pumps.
Lea Hill Pump Station Replacement	PS-02	2027-2029		$6,365,000	Decommission and replace the pump station at the end of its usable life.
10 to 20-Year Planning Horizon					
Braunwood Pump Station Mechanical Upgrades	PS-03	2034-2035		$250,000	Rehabilitate Pump Station to allow continued use.
Game Farm Park Pump Station Mechanical Upgrades	PS-04	2034-2035		$250,000	Rehabilitate Pump Station to allow continued use.
Subtotal				**$9,190,000**	

8.2.3.4 Distribution System

The City's water distribution system will require many improvements to address fire flow deficiencies identified by the system analysis presented in **Chapter 3**. Additionally, the City has undersized, and aging piping within the water system that needs to be replaced to reduce the risk of breaks and leaks. The identified distribution system improvements programs are described below and summarized in **Table 8-7**.

Project IDs have been revised to reflect the updated prioritization and planned timing of projects presented in this WSP. Previous project IDs from the 2015 WSP as presented above will be discontinued for clarity purposes. Active projects identified above are not discussed in detail as they are already well defined and in progress.

8.2.3.4.1 Annual Distribution System Improvements Program (D-01)

The Annual Distribution System Improvements Program is focused on capacity related improvements to the City's water distribution system as identified in **Figure 3-12** and **Table 3-33** of **Chapter 3**. These improvements address deficiencies during fire flow demand scenarios. A comprehensive list of the projects and their individual estimated costs are provided in **Appendix W**. The total of all project costs is distributed across the 20-year planning horizon and will be prioritized to address the areas with the greatest deficiency first. This project ID was previously D-02 in the 2015 WSP.

8.2.3.4.2 Street Utility Improvements (D-02)

The City Street Utility program provides an annual budget to perform water main improvements in coordination with the Street Preservation programs and general arterial street improvements. By replacing water infrastructure concurrent with other utility or street improvement projects, the City can reduce overall project costs. Identified projects are anticipated to occur annually throughout the planning period. This project ID was previously D-06 in the 2015 WSP.

8.2.3.4.3 Water Repair & Replacements (D-03)

Previous WSPs identified pipelines for the City's Water Repair & Replacement program focus on replacement of old cast iron pipes, pipes under 6-inches that serve fire hydrants, dead-end mains in non-residential areas, and decommissioned duplicate pipes. The budget for this project has been re-evaluated and is revised to focus on the replacement of undersized cast iron pipe. The budget was developed focusing specifically on 4-inch diameter cast iron pipe, however the City may also allocate this budget to replace other undersized cast iron pipe within the system. **Table 8-6** summarizes the basis of the program budget using the same unit cost assumptions and allowances established in **Section 8.1.3**. The City's pipeline water repair and replacement program will be accomplished through the combination of the Street Utility Improvements (D-02) and this program. Ideally, Water Repair and Replacement and Street Utility projects will be constructed on alternating years to maintain consistent levels of capital expenditures. This project ID was previously D-09 in the 2015 WSP.

Table 8-6 | Water Repair & Replacements Cost Estimate

Length (LF)	Existing Size (inch)	New Size (inch)	Unit Cost	Component Cost	Construction Cost	Project Cost
11,740	4	8	$490/LF	$5,752,500	$8,241,000	$11,950,000

8.2.3.4.4 Water Trench Patches Program (D-04)

This program provides annual funding for roadway restoration of trench patches from water main leak repairs and water service installation that are beyond the scope of work done by City maintenance staff. This project was not identified in the 2015 WSP.

8.2.3.4.5 West Hill Springs Transmission Main Replacement (D-05)

The 2020 pipeline assessment indicated the existing cast iron transmission main is in poor condition. The main has experienced two breaks in the past. The project will replace approximately 1,250 LF of 10-inch

diameter cast iron pipe with 12-inch diameter ductile iron pipe. The project includes preliminary geotechnical investigations prior to design and construction. This project was not identified in the 2015 WSP.

8.2.3.4.6 Lea Hill 648 Zoning Adjustment (D-06)

The system capacity analysis identified deficiencies in the upper portion of the Lea Hill 563 pressure zone where the highest service elevations of the zone are located. This project includes system piping and valving modifications to rezone a portion of the Lea Hill 563 pressure zone to the Lea Hill 648 pressure zone. GIS and site verification, as well as minimal system modeling are required to verify necessary modifications.

Table 8-7 | Distribution System Improvements Projects

Project Name	Project ID	Project Timing	Estimated Cost 2024 USD	Brief Project Description
0 to 20-Year Planning Horizon				
Annual Distribution System Improvements Program	D-01	2025-2044 (Annual)	$59,699,000	Pipe improvement projects required to address system capacity deficits.
Street Utility Improvements	D-02	2025-2044 (Annual)	$24,618,000	Water main improvements concurrent with street improvements.
Water Repair & Replacements	D-03	2025-2044 (Annual)	$11,950,000	Pipe improvements to replace aging and undersized pipes.
Water Trench Patches Program	D-04	2024-2044 (Annual)	$3,360,000	Annual program for restoration following water and service leaks.
West Hill Springs Transmission Main Replacement	D-05	2024, 2026-2027	$1,401,000	Transmission piping replacement.
Lea Hill 648 Zoning Adjustment	D-06	2027	$104,000	Pressure zone modifications to address fire flow capacity deficit.
Subtotal			**$101,132,000**	

8.2.3.5 General Utility Projects

The general water system projects and their estimated costs are provided in **Table 8-8**. Project IDs have been revised to reflect the updated prioritization and planned timing of projects presented in this WSP. Previous project IDs from the 2015 WSP as presented above will be discontinued for clarity purposes.

8.2.3.5.1 Water System Plan Updates (G-01, G-02)

DOH requires Water System Plans to be updated every ten years. The City has allocated budget to complete Water System Plan Updates in 2034 and 2044. The project ID for both updates was previously G-08 in the 2015 WSP.

Table 8-8 | General Water System Projects

Project Name	Project ID	Project Timing	Estimated Cost 2024 USD	Brief Project Description
0 to 10-Year Planning Horizon				
Water System Plan Update - 2034	G-01	2033-2034	$750,000	Mandated by Washington Department of Health.
10 to 20-Year Planning Horizon				
Water System Plan Update - 2044	G-02	2043-2044	$750,000	Mandated by Washington Department of Health.
Subtotal			**$1,500,000**	

8.3 CIP Summary and Schedule

Table 8-9 summarizes the total CIP cost by project categories for the 20-year planning horizon. All costs shown are in 2024 dollars. Distribution system improvements comprise more than 50 percent of the allocated costs for the CIP.

Table 8-9 | Total CIP Cost by Project Category from 2024 through 2044

Category	Total CIP Cost Summary 2024 – 2044 (2024 USD)
Supply	$60,416,013
Storage	$21,579,621
Pump Stations	$9,230,000
Distribution	$121,858,681
General	$1,750,000
TOTAL	**$214,834,315**

The results of prioritizing the improvements were used to establish an implementation schedule that can be used by the City for preparing its 20-year CIP and 6-year CFP. The implementation schedule for the active projects and planned CIP projects is summarized in **Table 8-10**. More details are included in **Appendix W**. The City uses this information to develop rates and SDC charges.

The City will schedule the water main projects in the Annual Distribution Improvements Program and Water Repair and Replacements during the annual budget process. This provides the City with the flexibility to coordinate these projects with roadway or other projects within the same area.

Table 8-10 | Capital Improvements Program Costs and Phasing

CIP ID	Name	CAP/ Non-CAP	Total Estimated Cost 2024 USD	2024	10-Year										20-Year		
					2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035-38	2039-42	2043-44

CHAPTER 9

Financial Program

9.1 Introduction

This chapter was prepared by FCS GROUP to provide a financial program that allows the City of Auburn (City) water utility to remain financially viable during the planning period. This financial viability analysis considers the historical financial condition, current and identified future financial and policy obligations, operation and maintenance (O&M) needs, and the financial impacts of the capital projects identified in this Water System Plan (WSP). Furthermore, this chapter provides a review of the water utility's current rate structure with respect to rate adequacy and customer affordability.

9.2 Past Financial Performance

This section includes a historical summary of financial performance as reported by the City, including fund resources and uses arising from cash transactions.

9.2.1 Comparative Financial Statements

The City legally owns and operates a water utility. Table 9-1 shows a summary of water fund resources and uses arising from cash transactions for the previous 6 years (2017 through 2022). 2023 financial statements were not available at the time the chapter was developed. Table 9-2 shows a summary of assets and liabilities, with the difference between the two reported as "net position." Increases and decreases in net position are useful indicators of the financial position of the City's utility. Noteworthy findings and trends for the historical performance and condition of the City's water utility are then discussed.

9.2.1.1 Findings and Trends

- The City's water charges for services increased from $14.8M in 2017 to $16.5M in 2022. The average annual increase was approximately 2.2 percent per year, with a total increase of 11.4 percent from 2017 to 2022. Charges for services increase each year, except for 2019 and 2020 where revenues fell by 1.5 percent and 1.4 percent respectively. Operating Expenditures increased by $1.7M across the six years with an average annual increase of 2.8 percent. Similar to observations made in revenues, expenditures dropped in 2020 but to a greater extent, decreasing by 2.0 percent. Despite total operating expenses slightly outpacing growth in operating revenues, operating income has been positive in all years observed. 2019 and 2020 had slightly less operating income than other years, observed at $2.7M, with the remainder of the years averaging $3.1M.

- The O&M coverage ratio (total operating revenues divided by total operating expenses) was 126.3 percent in 2017. With expenses slightly outpacing revenues this metric decreased and ended 2022 at 122.8 percent. A ratio of 100.0 percent or greater shows that operating revenue will successfully cover operating expenses, and the utility has remained above this ratio for all years observed.

Table 9-1 | Summary of Historical Fund Resources and Uses Arising From Cash Transactions

	2017	2018	2019	2020	2021	2022

Debt to Net Position Ratio	0.26	0.23	0.20	0.33	0.29	0.26
Debt to Noncurrent Capital Assets Ratio	0.22	0.21	0.19	0.31	0.26	0.24

- Net operating income as a percentage of operating revenue was 20.8 percent in 2017, decreasing to a low of 17.9 percent in 2019, before ending 2022 at 18.6 percent. Similar to the O&M coverage ratio, these trends show how successfully operating revenue actually covered operating expenses, with higher positive numbers being the best and negative numbers showing a need for improvement. In addition, these trends demonstrate the ability of the utility to invest in capital, whether through direct cash transfers or the issuance and servicing of debt.

- The debt service coverage ratio measures the amount of cash flow available to meet principal and interest payments. Typically, revenue bond debt service coverage requires a minimum factor of 1.25 during the life of the loans. This ratio is calculated by dividing cash or net operating income (operating revenues less operating expenses) by annual revenue bond debt service. The debt service coverage ratio for all outstanding revenue bond debt ended 2017 at 3.83, decreasing to 2.85 by 2022, as the City took on more debt liabilities. The fact that this ratio has sustained levels higher than the minimum target of 1.25 indicates a stable capacity for new debt and will likely result in favorable terms when entering the bond market.

9.2.1.2 Findings and Trends

- The current ratio is calculated by dividing unrestricted current assets by current liabilities and measures an entity's ability to pay short-term obligations. This ratio ranges from a low of 2.8 in 2017 to a high of 6.9 in 2020, ending at 6.0 in 2022. Anything above 2.0 for this liquidity ratio is good.

- The Debt to Net Position Ratio compares total debt to total net position, which is the difference between total assets and liabilities. This ratio ranged from a high of 0.33 or 33 percent in 2020 to a low of 0.20 or 20 percent in 2019. For utilities, a ratio of 40 to 60 percent helps to moderate rate impacts by spreading costs over a longer period of time. Based on these results, the City may consider utilizing debt service for future capital investments, especially if it benefits system expansion.

- The Debt to Noncurrent Capital Asset Ratio compares total debt to noncurrent capital assets, which are also known as property, plant and equipment. This ratio begins at 0.22 or 22 percent debt to 78 percent noncurrent assets in 2017. Noncurrent capital assets increase by $20.6 million throughout the six-year history while debt increased by $6.2 million, and the ratio increases to 24 percent by 2022. Similar to the debt to net position ratio, these results indicate the utility has ample borrowing capacity and may consider utilizing debt service for future capital investments, especially if it benefits system expansion. A ratio of 40 percent debt to 60 percent equity or below is a general industry target.

9.3 Financial Plan

The water utility is responsible for generating sufficient revenue to meet all of its costs. The primary source of funding is derived from ongoing monthly service charges, with additional revenue coming from late penalties and interest earnings. The City controls the level of user charges and, with City Council approval, can adjust user charges as needed to meet financial objectives.

The financial plan can only confirm financial feasibility if it considers the total system costs of providing water services, both operating and capital. To meet these objectives, the following elements have been completed.

1. **Capital Funding Plan.** Identifies the total capital improvement plan (CIP) obligations of the planning period. The plan defines a strategy for funding the CIP, including an analysis of available resources from rate revenues, existing reserves, connection charge revenues, debt financing, and any special resources that may be readily available (e.g., grants, developer contributions, etc.). The capital funding plan impacts the financial plan through the use of debt financing (resulting in annual debt service) and the assumed rate revenue made available for capital funding.

2. **Financial Forecast.** Identifies future annual non-capital costs associated with the operation, maintenance, and administration of the water system. Included in the financial plan is a reserve analysis that forecasts cash flow and fund balance activity, along with testing for satisfaction of actual or recommended minimum fund balance policies. The financial plan ultimately evaluates the sufficiency of utility revenues in meeting all obligations, including cash uses such as operating expenses, debt service, capital outlays, and reserve contributions, as well as any coverage requirements associated with long-term debt. The plan also identifies the future adjustments required to fully fund all utility obligations in the planning period.

9.3.1 Capital Funding Plan

To properly evaluate future capital funding needs, capital costs were escalated by 3.00 percent annually to the year of planned spending. The CIP developed for this WSP identifies $143.3M in escalated project costs over the 11-year planning horizon from 2024-2034. The 20-year period, through 2043, includes $262.6M in total escalated project costs.

A summary of the 11-year and 20-year CIPs are shown in **Table 9-3**. As shown, each year has varied capital cost obligations depending on construction schedules and infrastructure planning needs.

Table 9-3 | 11-Year and 20-Year CIPs

Year	Unescalated $	Escalated $
2024	$ 15,368,740	$ 15,368,740
2025	13,020,848	13,411,473

9.4 Available Funding Assistance and Financing Resources

9.4.1 City Resources

Resources appropriate for funding capital needs include accumulated cash in the capital fund, rate revenues designated for capital spending purposes, developer contributions, and capital-related charges such as system development charges. The first two resources will be discussed in the **Fiscal Policies** section of the **Financial Forecast**. Capital-related charges are discussed below.

9.4.1.1 System Development Charges

A connection charge such as the City's system development charge (SDC) refers to a one-time charge imposed on new customers as a condition of connecting to the water system. The purpose of the SDC is two-fold: 1) to promote equity between new and existing customers; and 2) to provide a source of revenue to fund capital projects necessary for meeting growth. This revenue can only be used to fund utility capital projects or to pay debt service incurred to finance those projects. In the absence of a connection charge, growth-related capital costs would be borne in large part by existing customers. In 2024, the City charged all new customers an SDC of $9,553 per meter capacity equivalent (MCE). MCEs are defined by the American Water Works Association and represent the maximum safe operating flow capacity in gallons per minute, relative to the base meter size.

9.4.1.2 Local Facilities Charges

While a connection charge is the manner in which new customers pay their share of system investment costs, local facilities charge funding is used to pay the costs of local facilities that connect each property to the system's infrastructure. Local facilities funding is often overlooked in rate forecasting because it is funded upfront by either connecting customers and developers, or through an assessment to properties, but never from rates.

A number of mechanisms can be considered toward funding local facilities. One of the following scenarios typically occurs: (a) the utility charges a connection fee based on the cost of the local facilities (under the same authority as the facilities assessment fee); (b) a developer funds an extension of the system to its development and turns those facilities over to the utility (contributed capital); or (c) a local assessment is set up called a Utility Local Improvement District (ULID/LID) or a Local Utility District (LUD), which collects tax revenue from benefited properties.

A local facilities charge (LFC) is a variation of the connection charge. It is a city-imposed charge to recover the cost related to service extension to local properties. Often called a front-footage charge and imposed on the basis of footage of the main "fronting" a particular property, it is usually implemented as a reimbursement mechanism to a city for the cost of a local facility that directly serves a property. It is a form of a connection charge and thus can accumulate up to 10 years of interest. It typically applies in instances when no developer-installed facilities are needed through developer extension due to the prior existence of available mains already serving the developing property.

The developer extension is a requirement that a developer install on-site and sometimes off-site improvements as a condition of extending service. These are in addition to the connection charge required and must be built to City standards. Part of the agreement between the City and the developer planning to extend service might include a latecomer agreement (also called payback agreements), resulting in a latecomer charge to new connections for the developer extension.

Latecomer charges are a variation of developer extensions, whereby new customers connecting to a developer-installed improvement make a payment to the City based on their share of the developer's cost. The City passes this charge on to the developer who installed the facilities. As part of the developer extension process, this defines the allocation of costs and records latecomer obligations on the title of affected properties. No interest is allowed, and the reimbursement agreement cannot exceed 20 years in duration.

ULID/LID is another mechanism for funding infrastructure that assesses benefited properties based on the special benefit received by the construction of specific facilities. Most often used for local facilities, some

ULIDs also recover related general facilities costs. Substantial legal and procedural requirements can make this a relatively expensive process, and there are mechanisms by which a ULID can be rejected.

9.4.2 Outside Resources

This section outlines various grant, loan, and bond opportunities available to the City through federal and state agencies to fund the CIP identified in the WSP.

9.4.2.1 Grants and Low-Cost Loans

Historically, federal and state grant programs were available to local utilities for capital funding assistance. However, these assistance programs have been mostly eliminated, substantially reduced in scope and amount, or replaced by loan programs. Remaining grant programs are generally lightly funded and heavily subscribed. Nonetheless, the benefit of low-interest loans makes the effort of applying worthwhile.

The State of Washington's Department of Commerce maintains a document currently entitled "*Funding Programs for Drinking Water and Wastewater Projects; Updated 3-5-2024*", which contains details on government programs, eligibility requirements, and contact information, should the City wish to inquire about program offerings and eligibility requirements.

9.4.2.2 Bond Financing

General Obligation Bonds – General obligation (G.O.) bonds are bonds secured by the full faith and credit of the issuing agency, committing all available tax and revenue resources to debt repayment. With this high level of commitment, G.O. bonds have relatively low interest rates and few financial restrictions. However, the authority to issue G.O. bonds is restricted in terms of the amount and use of the funds, as defined by the Washington constitution and statute. Specifically, the amount of debt that can be issued is linked to assessed valuation.

Revised Code of Washington (RCW) 39.36.020 states:

> (2)(a)(ii) Counties, cities, and towns are limited to an indebtedness amount not exceeding one and one half percent of the value of the taxable property in such counties, cities, or towns without the assent of three-fifths of the voters therein voting at an election held for that purpose.
>
> (b) In cases requiring such assent counties, cities, towns, and public hospital districts are limited to a total indebtedness of two and one-half percent of the value of the taxable property therein.

While bonding capacity can limit the availability of G.O. bonds for utility purposes, these can sometimes play a valuable role in project financing. A utility rate savings may be realized through two avenues: the lower interest rate and related bond costs, and the extension of repayment obligation to all tax-paying properties (not just developed properties) through the authorization of an ad valorem property tax levy.

Revenue Bonds – Revenue bonds are commonly used to fund utility capital improvements. The debt is secured by the revenues of the issuing utility. With this limited commitment, revenue bonds typically bear higher interest rates than G.O. bonds and require security conditions related to the maintenance of dedicated reserves (a bond reserve) and financial performance (added bond debt service coverage). The City agrees to satisfy these requirements by resolution as a condition of bond sale.

Revenue bonds can be issued in Washington without a public vote. There is no bonding limit, except perhaps the practical limit of the utility's ability to generate sufficient revenue to repay the debt and provide coverage. In some cases, poor credit might make issuing revenue bonds problematic.

9.4.3 Capital Financing Strategy

An ideal capital financing strategy would include the use of grants and low-cost loans when debt issuance is required. However, these resources are very limited and competitive in nature and do not provide a reliable source of funding for planning purposes. It is recommended that the City pursue these funding avenues but assume revenue bond financing to meet the needs which can't be met by available cash resources. The capital financing strategy developed to fund the CIP identified in this WSP assumes the following funding resources:

- Accumulated cash reserves,
- Transfers of excess cash (over minimum balance targets) from the Operating Fund,
- System development charge revenue,
- Interest earned on Capital Fund balances,
- Grant proceeds, and
- Revenue bond financing.

The cash resources described above are anticipated to fund 58.1 percent of the 11-year CIP and 56.4 percent of the 20-year CIP. The remaining funding is assumed to be from new debt obligations of $69.1M in the next 11-year planning period and an additional $45.3M between 2034-2043. Table 9-5 presents the 11-year and 20-year capital financing strategy.

Table 9-5 | 11-Year and 20-Year Capital Financing Strategy

Year	Capital Expenditures Escalated	System Development Charge Revenue	Grant Funding	Revenue Bond Proceeds	Cash / Reserve Funding	Total Financial Resources
2024	**$ 15,368,740**	$ 325,000	$ 2,717,531		$ 12,326,209	**$ 15,368,740**

9.5 Financial Forecast

The financial forecast, or revenue requirement analysis, forecasts the amount of annual revenue that needs to be generated by user rates. The analysis incorporates operating revenues, O&M expenses, debt service payments, rate-funded capital needs, and any other identified revenues or expenses related to operations. The objective of the financial forecast is to evaluate the sufficiency of the current level of rates. In addition

to annual operating costs, the revenue needs also include debt covenant requirements and specific fiscal policies and financial goals of the City.

For this analysis, two revenue sufficiency tests have been developed to reflect the financial goals and constraints of the City: cash needs must be met; and debt coverage requirements must be realized. In order to operate successfully with respect to these goals, both tests of revenue sufficiency must be met.

Cash Test – The cash flow test identifies all known cash requirements for the City in each year of the planning period. Typically, these include O&M expenses, debt service payments, rate-funded system reinvestment funding or directly funded capital outlays, and any additions to specified reserve balances. The total annual cash needs of the City are then compared to projected cash revenues using the current rate structure. Any projected revenue shortfalls are identified, and the rate increases necessary to make up the shortfalls are established.

Coverage Test – The coverage test is based on a commitment made by the City when issuing revenue bonds and some other forms of long-term debt. For the purposes of this analysis, revenue bond debt is assumed for any needed debt issuance. As a security condition of issuance, the City would be required per covenant to agree that the revenue bond debt would have a higher priority for payment (a senior lien) compared to most other expenditures; the only outlays with a higher lien are O&M expenses. Debt service coverage is expressed as a multiplier of the annual revenue bond debt service payment. For example, a 1.00 coverage factor would imply that no additional cushion is required. A 1.25 coverage factor means revenue must be sufficient to pay O&M expenses, annual revenue bond debt service payments, and an additional 25.0 percent of annual revenue bond debt service payments. The excess cash flow derived from the added coverage, if any, can be used for any purpose, including funding capital projects. Targeting a higher coverage factor can help the City achieve a better credit rating and provide lower interest rates for future debt issues.

9.5.1 Current Financial Structure

The City maintains a fund structure and implements financial policies that target management of a financially viable and fiscally responsible water system.

9.5.1.1 Fiscal Policies

A summary of the key financial policies employed by the City, as well as those recommended and incorporated in the financial program, are discussed below.

Operating Reserve – Operating reserves are designed to provide a liquidity cushion to ensure that adequate cash working capital will be maintained to deal with significant cash balance fluctuations, such as seasonal fluctuations in billings and receipts, unanticipated cash expenses, or lower than expected revenue collections. Like other types of reserves, operating reserves also serve another purpose: they help smooth rate increases over time. Target funding levels for an operating reserve are generally expressed as a certain number of days of O&M expenses, with the minimum requirement varying with the expected revenue volatility. Industry practice for utility operating reserves ranges from 30 days (8.0 percent) to 120 days (33.0 percent) of O&M expenses, with the lower end more appropriate for utilities with stable revenue streams and the higher end more appropriate for utilities with significant seasonal or consumption-based fluctuations. The City's current goal is to maintain a minimum balance in the Operating Fund equal to 90 days of O&M expenses for working capital.

Capital Reserve – A capital contingency reserve is an amount of cash set aside in case of an emergency should a piece of equipment or a portion of the utility's infrastructure fail unexpectedly. The reserve also could be used for other unanticipated capital needs, including capital project cost overruns. Industry practices range from maintaining a balance equal to 1.0 to 2.0 percent of fixed assets, an amount equal to a 5-year rolling average of CIP costs, or an amount determined sufficient to fund equipment failure (other than catastrophic failure). The final target level should balance industry practices with the risk level of the City.

This financial plan targets a minimum balance in the water utility capital fund equal to 1.0 percent of fixed assets.

System Reinvestment – System reinvestment funding promotes system integrity through ongoing repair and replacement of system infrastructure. Ideally, a detailed asset management plan would guide the level of rate funded system reinvestment, however, in absence of this level of effort, annual depreciation expense is commonly used as a measure of the decline in asset value associated with routine use of the system. Particularly for utilities that do not already have an explicit system reinvestment policy in place, implementing a funding level based on full depreciation expense could significantly impact rates. An alternative benchmark is annual depreciation expense net of debt principal payments on outstanding debt. This approach recognizes that customers are still paying for certain assets through the debt component of their rate and intends to avoid simultaneously charging customers for an asset and its future replacement. The specific benchmark used to set system reinvestment funding targets is a matter of policy that must balance various objectives, including managing rate impacts, keeping long-term costs down, and promoting "generational equity" (i.e., not excessively burdening current customers with paying for facilities that will serve a larger group of customers in the future).

The City is currently phasing in system reinvestment funding, aiming to reach 100 percent of annual depreciation levels by 2030. With this phase-in strategy in place, the City is forecast to fund an average of $4.1 million in capital costs annually through dedicated rate revenues within the 11-year forecast period.

Debt Management – It is prudent to consider policies related to debt management as part of a broader utility financial policy structure. Debt management policies should be evaluated and formalized, including the level of acceptable outstanding debt, debt repayment, bond coverage, and total debt coverage targets. The City has three outstanding water revenue bonds, a Public Works Trust fund loan, and two other low interest loans. This forecast meets or exceeds the required revenue bond debt service coverage of 1.25.

9.5.1.2 Financial Forecast

The financial forecast is primarily based upon the City's budget through 2024 and takes into consideration other key factors and assumptions needed to develop a complete portrait of the City's annual water utility financial obligations. The following is a list of the key revenue and expense factors and assumptions used to develop the financial forecast.

- Growth – Rate revenue is escalated utilizing a 0.45 percent growth rate developed based on actual historical trends at the City.

- Revenue – The City has two general revenue sources: 1) water service charges (rate revenue); and 2) miscellaneous (non-rate) revenue. In the event of a forecasted annual shortfall, rate revenue can be increased to meet the annual revenue requirement. For the purpose of this financial forecast, rate revenues are forecasted to increase with customer growth. Non-rate revenues are

held constant throughout the forecast period, with the exception of interest earnings which are calculated based on projected balances and assumed investment rates.

- System Development Charge Revenue – the existing system development charges are applied to the projected new connections to forecast revenue. Connection charges are forecast to generate an average of $512,000 annually from 2024-2034. This equates to an average of 46 new MCEs per year. Connection charge revenue is directed towards annual capital needs.

- Expenses – O&M expense projections are based on the City's budget through 2024 with general cost inflation increases of 3.0 percent, labor cost inflation of 5.0 percent for 2025 and 2026, decreasing to 3.0 percent thereafter and benefit cost inflation increases of 12.50 percent for 2025 and 2026, decreasing to 5.5 percent per year thereafter. Budget figures were used for taxes in 2024. Future taxes are calculated based on forecasted revenues and prevailing tax rates.

    - Facilities GO Bond - In order to construct a new facility for Maintenance and Operations for the City, the water utility will fund part of a General Obligation Bond totaling approximately $39.1 million. Beginning in 2025, the water utility's proportionate share of the bond is forecasted at $333,000 annually for the remainder of the twenty-year forecast.

- Existing Debt – The water utility has six (6) outstanding debt issues: three (3) revenue bonds, one (1) Public Works Trust Fund (PWTF) loan and two (2) Drinking Water State Revolving Fund (DWSRF) loans. Total annual existing debt service obligations begin 2024 at $2.7 million, decreasing to $1.1 million by 2034 as four (4) of the six (6) loans are fully repaid.

- Future Debt – The capital financial strategy developed for this WSP forecasts the need for $69.1M in new debt proceeds in five (5) separate instances throughout the eleven-year forecast. The analysis performed assumes all new debt is through revenue bond financing. Annual new debt service obligations are forecasted to begin in 2025 at $1.5 million increasing to $6.1 million by 2034.

- Transfers to Capital - Operating fund balance above the minimum requirement is assumed to be available to fund capital projects and projected to be transferred to the Capital Fund each year, if needed. In total, the utility is forecast to fund $17.9 million in capital projects from excess operating fund cash within the 11-year forecast period.

Although the financial plan is completed through 2043, the rate strategy focuses on the shorter-term planning period of 2024 through 2034. It is recommended that the City revisit the proposed rates every 3 to 4 years to ensure that the rate projections developed remain adequate. Any significant changes should be incorporated into the financial plan and future rates should be adjusted as needed.

Table 9-6, following, summarizes the annual revenue requirements based on the forecast of revenues, expenditures, fund balances, and fiscal policies.

Table 9-6 | 11-Year Financial Forecast

Revenue Requirement	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034

Annual Rate Adjustment	**0.00%**	**7.50%**	**9.50%**	**9.50%**	**9.50%**	**9.50%**	**9.50%**	**3.00%**	**3.00%**	**3.00%**	**3.00%**
Cumulative Annual Rate Adjustment	**0.00%**	**7.50%**	**17.71%**	**28.90%**	**41.14%**	**54.55%**	**69.23%**	**74.31%**	**79.54%**	**84.92%**	**90.47%**
Rate Revenues After Rate Increase	$ 18,398,987	$ 19,866,440	$ 21,850,041	$ 24,031,724	$ 26,431,269	$ 29,070,437	$ 31,973,157	$ 33,078,288	$ 34,221,651	$ 35,404,570	$ 36,628,414
Additional Taxes from Rate Increase	-	229,097	543,446	890,472	1,273,446	1,695,963	2,161,979	2,330,808	2,505,891	2,687,448	2,875,704
Net Cash Flow After Rate Increase	**$ 207,259**	**$ 272,124**	**$ 315,632**	**$ 244,027**	**$ 353,928**	**$ 420,347**	**$ 1,016,334**	**$ 768,653**	**$ 982,962**	**$ 1,044,486**	**$ 1,299,958**
Coverage After Rate Increases	3.00	2.10	2.40	1.91	2.24	2.19	2.52	2.41	2.50	2.43	2.51

The financial forecast indicates that at existing rate levels the utility will become deficient in 2025 as growth in expenses outpaces growth in revenues and the utility takes on additional debt obligations to fund capital infrastructure investment. The City has adopted a 7.50 percent increase for 2025, to resolve the remaining projected deficiency, rates will need to increase by 9.50 percent annually from 2026 through 2030, before decreasing to 3.00 percent annually through 2034.

9.5.1.3 City Funds and Reserves

Table 9-7 shows a summary of the projected Operating Fund and Capital Fund ending balances through 2034 based on the rate forecasts presented above. The Operating Fund is maintained above 90 days of O&M expenses. The Capital Fund balance meets or exceeds the minimum target of 1 percent of fixed assets in most years of the study timeframe with the exception of 2026, 2028 and 2030 where balances fall below target. Fund balances are rebuilt and meet or exceed target balances by the end of the eleven-year timeframe.

Table 9-7 | Ending Cash Balance Summary

Ending Fund Balances	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
Operating Fund	$ 8,988,743	$ 9,260,867	$ 3,943,874	$ 4,036,866	$ 4,140,073	$ 4,246,604	$ 4,357,435	$ 4,472,125	$ 4,591,586	$ 4,715,137	$ 4,843,692
Capital Fund	2,019,201	6,659,039	1,226,711	9,587,690	1,038,144	4,653,056	1,096,853	9,910,203	3,003,538	8,649,973	3,293,834
Total	**$ 11,007,944**	**$ 15,919,905**	**$ 5,170,585**	**$ 13,624,556**	**$ 5,178,217**	**$ 8,899,660**	**$ 5,454,288**	**$ 14,382,328**	**$ 7,595,123**	**$ 13,365,110**	**$ 8,137,526**

9.6 Current and Projected Rates

9.6.1 Current Rates

The existing water rates are composed of a fixed monthly charge that varies by meter size and a variable consumption charge per hundred cubic feet (CCF) for all water usage. While fixed charges are consistent across customer classes for all meter sizes except one inch, usage charges are different for each customer class. Consumption for the single family class is divided into three escalating pricing tiers that are applied year-round. This type of inclining tier structure is designed to discourage discretionary usage of water and encourage conservation. All other customers are charged a uniform rate for all consumption used. Table 9-8 shows the existing City of Auburn water system rate schedule.

Table 9-8 | Existing Schedule of Rates

Description	2024 Existing
Monthly Fixed Charges (All Classes)	
3/4"	$ 21.08
1" - Single Family	21.08
1" - All Other Classes	23.66
1 1/2"	25.76
2"	29.69
3"	57.11
4"	71.66
6"	91.57
8"	118.30
10"	167.97
Volume Charges per CCF	
Single Family	
0-7 CCF	$ 4.18
7-15 CCF	5.11
Greater Than 15 CCF	5.81
Multi-Family	$ 5.00
Commercial	5.27
Manufacturing / Industrial	5.15
Schools	5.61
Municipal	5.19
Irrigation	6.94

9.6.2 Projected Rates

The financial forecast discussed above indicates the need for annual rate adjustments to satisfy all forecasted financial obligations. The City has adopted a 7.50 percent increase for 2025, with annual 9.50 percent increases forecasted from 2026 through 2030, and 3.00 percent increases from 2031 to 2034. Table 9-9 shows the projected rates with increases applied uniformly to the water fixed and volume components for all classes. A more detailed rate study that will analyze the projected increases beyond the current adopted rates will be conducted in 2025.

Table 9-9 | Proposed Schedule of Rates

Description	Existing	Proposed									
	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
Monthly Fixed Charges (All Classes)											
3/4"	$ 21.08	$ 22.66	$ 24.81	$ 27.17	$ 29.75	$ 32.58	$ 35.68	$ 36.75	$ 37.85	$ 38.99	$ 40.16
1" - Single Family	21.08	22.66	24.81	27.17	29.75	32.58	35.68	36.75	37.85	38.99	40.16
1" - All Other Classes	23.66	25.43	27.85	30.50	33.40	36.57	40.04	41.24	42.48	43.75	45.06
1 1/2"	25.76	27.69	30.32	33.20	36.35	39.80	43.58	44.89	46.24	47.63	49.06

Schools	5.61	6.03	6.60	7.23	7.92	8.67	9.49	9.77	10.06	10.36	10.67
Municipal	5.19	5.58	6.11	6.69	7.33	8.03	8.79	9.05	9.32	9.60	9.89
Irrigation	6.94	7.46	8.17	8.95	9.80	10.73	11.75	12.10	12.46	12.83	13.21

9.6.3 Conservation Based Rates

In 2003 the Washington State Legislature passed the Municipal Water Supply Efficiency Requirements Act. The Water Use Efficiency rules went into effect on January 22, 2007 and typically apply to Water System Plans that each jurisdiction is required to develop every six to ten years. The Revised Code of Washington (RCW) outlines the rules of this act, under RCW 70.119.180. In section 4(B), the RCW states that jurisdictions must perform an "evaluation of the feasibility of adopting and implementing water delivery rate structures that encourage water conservation." The City of Auburn currently charges their single family residential customers based on an inclining block rate structure to incentivize water use conservation, therefore no additional evaluation was performed.

9.7 Affordability

The Washington State Department of Health and the Department of Commerce Public Works Board use an affordability index to prioritize low-cost loan awards depending on whether rates exceed 2.5 percent of the median household income for the service area. The average median household income for the City was $87,406 between 2018 and 2022, expressed in 2022 dollars, according to the U.S. Census Bureau. The 2022 value is escalated based on the actual rate of inflation in 2023 of 4.31 percent and the 3.00 percent inflation rate used in the financial forecast to project the median household income in future years. Table 9-10

presents the City's monthly water bill, projected to 2034 and tested against the 2.5 precent monthly affordability threshold.

Table 9-10 | Community Affordability Test

Year	Inflation	Median HH Income	2.5% Monthly Threshold	Projected Monthly Bill	% of Median HH Income
2022		$ 87,406			
2023	4.31%	91,173			
2024	3.00%	93,908	$ 195.64	$ 50.34	0.64%
2025	3.00%	96,726	201.51	54.09	0.67%
2026	3.00%	99,627	207.56	59.25	0.71%
2027	3.00%	102,616	213.78	64.90	0.76%
2028	3.00%	105,695	220.20	71.05	0.81%
2029	3.00%	108,866	226.80	77.80	0.86%
2030	3.00%	112,132	233.61	85.17	0.91%
2031	3.00%	115,495	240.62	87.71	0.91%
2032	3.00%	118,960	247.83	90.35	0.91%
2033	3.00%	122,529	255.27	93.10	0.91%
2034	3.00%	126,205	262.93	95.88	0.91%

Applying the 2.5 percent monthly affordability test, the City's rates are forecasted to remain within the indicated affordability range through 2034.

9.8 Conclusion

The results of this analysis indicate that at existing rate levels the utility will be deficient beginning in 2025. To keep pace with expenses and prepare for new debt obligations needed to fund system infrastructure needs, the City has adopted a 7.50 percent rate increase in 2025. Forecasting into the future a 9.5 percent annual rate increase will be required from 2026 through 2030, followed by 3.00 percent increases through 2034. It is recommended that the City regularly review and update the key underlying assumptions that compose the multi-year financial plan to ensure that adequate revenues are collected to meet the City's total financial obligations.

POLICIES AND CRITERIA

INTRODUCTION

The City of Auburn (City) manages the water utility in accordance with established water- system policies that govern various facets of utility operations. City policies are established by the City in order to provide a vision or mission of the water utility and to provide a framework for the design, operation, and ongoing wellbeing of the City's water utility.

The policies included in this Water Comprehensive Plan are developed specifically for the City's multi-source municipal water system and seek to provide consistent treatment to all utility customers and to provide documentation to current water-system customers as well as those considering service from the City. It should be noted that what is included in these policies is limited to those things related to the water system and its design, maintenance, and operation. There are other policies and criteria that pertain to the water utility the City has in place regarding land use, development, and financial components, which are not directly addressed in this plan, that could still have an impact on the needs of the water system. These policies and criteria may include factors such as zoning regulations, building codes, infrastructure requirements, and financing options. These additional factors will be considered when planning for the water system, to meet the needs of the community in a sustainable and effective matter.

The City's Water Comprehensive Plan is based upon the following mission statement for the water utility:

"The City will provide for the efficient, environmentally sound and safe management of the existing and future water system within Auburn's service area."

The City's Water utility policies are grouped within goal statements that are headlined under the following categories:

- Business Practices
- Service Area
- Operations and Maintenance
- Financial
- Planning
- Environmental Stewardship
- Design and Construction

1.0 BUSINESS PRACTICES

Goal 1: To employ recognized best business practices resulting in creating a sustainable, efficient, and cost-effective operation of the water utility.

Policy 1.1 Element of City Comprehensive Plan

Incorporate the Water Comprehensive Plan as an Element of the City's Comprehensive Plan.

Policy 1.2 Water Service By Others

Water Service supplied by outside purveyors within Auburn City limits are required to obtain a franchise with the City and are required to conform to all federal, state, and local laws and regulations. [ACC 20.02.040 and 20.04]

Policy 1.3 Asset Improvements

The City will develop and implement system improvements, infrastructure renewal (repair, rehabilitation, or replacement), and operations and maintenance programs for the water system according to asset management principles that address levels of service, address the triple bottom line (economic, social, and environmental benefits and costs), minimize asset life cycle costs, and incorporate risk management into decision-making.

Policy 1.4 Connections to Water System

Any connection to the public water system requires obtaining an approved utility permit for service and said connection shall be made in accordance with City of Auburn Engineering Design and Construction Standards. [ACC 13.06.050, 13.06.090 and 13.06.100]

Policy 1.5 Asset Database

The City will maintain an asset database to be used in prioritizing asset maintenance and repair and replacement activities. The database includes asset age and material information, and will be validated and updated through inspections, records review, and other available information.

Policy 1.6 Condition Assessments of Assets

The City will perform condition assessments of assets through development and implementation of an inspection schedule for all assets.

Policy 1.7 Design Life of Assets

The City will assign industry standard design life for all assets. The actual physical assessment will be compared to the theoretical design life to determine the optimal economic life. The City will attempt to repair or replace system assets before they exceed their economic life.

Policy 1.8 Maintenance Activities for Asset Management

The City will conduct maintenance activities at a level that is consistent with optimizing system reliability, asset economic life, and system performance. The City will develop schedules for maintenance of all water system assets.

Policy 1.9 Addressing Water Quality Complaints

The City will monitor the frequency, location, and details of all water quality complaints. At a minimum, the City will respond, research the cause of, and propose control methods once an issue is verified and documented.

Policy 1.10 Security of Assets

Adequate measures will be taken to ensure system security. At a minimum, the City will maintain security at water facilities using the Supervisory Control and Data Acquisition system for intrusion alerts.

Policy 1.11 Public Health Protection

The City will conduct regular inspections of its water system and any non-public water supply systems connected to it, in collaboration with the Washington State Department of Health.

To protect the municipally owned water supply from contamination, the City will establish and publish rules and regulations as needed. The City will take all necessary measures to enforce the regulations to prevent any risks to public health associated with water supply contamination. [ACC 13.12.080]

Policy 1.12 Cross-Connection Prohibited

Installing or maintaining a cross connection which will endanger the water quality of the municipal water system is strictly prohibited and shall be abated immediately or water service may be discontinued. [ACC 13.12.040]

Policy 1.13 Cross-Connection Control

To obtain water service to a property, the City may require any customer to install a pressure reducing valve, backflow prevention assembly, or pressure relief valve or similar devices at any location where the City determines there is a need to protect the municipal water system. [ACC 13.12.070]

Policy 1.14 All Meters

All water meters owned by the City shall not be removed except by the City. Lost, broken, or damaged water meters shall be replaced or repaired by or under the direction of the City. [ACC 13.06.330]

Policy 1.15 Fire Hydrant Use

Fire hydrant use is a permitted activity unless that use is conducted by authorized City or Fire Authority employees. [ACC 13.06.415 & 13.12.035]

Policy 1.16 Delinquent Accounts

The City has established procedures for disconnecting water service to delinquent accounts for non-payment. [ACC 13.06.290]

Policy 1.17 Leak Adjustment

The City has established procedures for property owners to request a limited leak adjustment of the water bill for water that leaked from the service line between the City water meter and the point where the line enters the building.

2.0 SERVICE AREA

Goal 2: Ensure sustainable provision of retail water services through the development and implementation of policies that define the duty to serve and conditions of service, while adhering to best management practices to meet the needs of the community.

Policy 2.1 Wholesale Water

The City will plan to provide water service to wholesale customers with firm contracts. As supply

permits, the City may provide water to wholesale customers without firm contracts unilaterally or as part of a capital improvement partnership agreement.

Policy 2.2 Government Consistency

The City's Water Comprehensive Plan will be consistent with local, county, and state land use authorities.

Policy 2.3 Duty to Serve

The City commits to providing reliable water service to all customers within its Retail Water Service Area (RWSA) in compliance with Washington Administrative Code (WAC) 246-290-106. The City also ensures adherence to King County Codes 13.24.138 and 13.24.140 where applicable for areas outside city limits in unincorporated King County. Revisions to the City's RWSA shall be made only by written agreement and in accordance with local, county and state regulations.

Policy 2.4 Conditions of Service

For areas within the Retail Water Service Area, the City will provide water service to new customers, conditioned on the agreement that any infrastructure improvements provided by the developer/development is in compliance with City water system standards.

In addition, the City requires that residents within the City's Potential Annexation Areas will receive water services from the City, to the extent practical. The City will work with existing water purveyors within the City limits and within the City's Potential Annexation Areas in order to provide fair and equitable water service. New customers within the City's Potential Annexation Areas are to sign an Annexation Agreement before a Water Availability Certificate is issued.

Policy 2.5 Satellite Systems Assistance

The City recognizes there may be instances where satellite system water providers require assistance with providing water service. In these cases, the City may consider providing assistance on a case-by-case basis. The assistance could take a variety of forms, such as offering technical support and/or access to City infrastructure to help with the provision of water service. Ultimately, the decision to provide assistance will be based on the specific needs and circumstances of the water provider and will be made on a case-by-case basis after careful consideration.

Policy 2.6 Satellite System Connecting to City Service

The City will not assume ownership of any satellite water system unless it meets all current City standards. The responsibility and all costs to bring a satellite system up to City standards and any infrastructure necessary to connect the satellite system to the City's water system network, shall be the system owner(s). [ACC 13.06.150]

Policy 2.7 Water Supply Management and Planning

The City will promote effective water supply management and planning consistent with the "South King County Coordinated Water System Plan," as well as regional water supply and conservation goals.

Policy 2.8 Concurrency of Improvements for Service

Provision of water service, including supply, in the City's Retail Water Service Area is conditioned on concurrency with development and the necessary water facilities, including water right permit(s) and certificate(s), are available and adequate to serve the development at the time it is ready for occupancy and use, as required by the Water Comprehensive Plan. Water service may not always be immediately available for a new development. The property developer must provide the required water system facilities before the City can provide water service, if the facilities do not already exist, or are not under construction or under a binding development agreement.

3.0 OPERATIONS AND MAINTENANCE

Goal 3: Employ operations and maintenance best management practices, which includes a commitment to training and certification opportunities for its employees.

Policy 3.1 System Monitoring and Operation

The City will monitor the water system through the use of computerized control system and adjust operations as necessary for efficient water system operation.

Policy 3.2 Regular Inspection of Facilities

The City will conduct routine inspections and maintenance on its water facilities including wells, springs and booster pump stations, in accordance with the frequency outlined in the operation and maintenance section of the Water Comprehensive Plan.

Policy 3.3 Meter Reading

Water service meters shall be read regularly to document customers' water usage for billing purposes.

Policy 3.4 Customer Service

The City is committed to resolving customer complaints. All complaints are documented and reviewed and tended to by the appropriate staff member for investigation and resolution.

Policy 3.5 Pressure Reducing Valve Program

To maximize system operational efficiency, conserve resources and provide consistent water service to customers of the water system, the City will adjust all water pressure reducing valves to the proper setting based on the frequency outlined in the operation and maintenance chapter of the Comprehensive Water Plan.

Policy 3.6 Employee Certification

The City will pay for annual certification, provide time and tuition for certification training courses, and time for certification exams. In addition, the City will provide its staff opportunities for obtaining the continuing education required to maintain certification.

Policy 3.7 ADU Metering

Property owners with accessory dwelling units (ADUs) on a single-family property may choose to supply the ADU from a master meter serving both units or separate meter installed to serve the ADU at owner's expense. Water usage of each ADU will be billed to the property owner based on

readings from the master meter or individual meter serving the ADU, whichever is applicable.

4.0 FINANCIAL

Goal 4: Manage the water utility in a professional manner in compliance with applicable laws, regulations, and City financial policies, which requires ongoing monitoring of revenues and expenses in order to make prudent business decisions and report to City officials, as needed, regarding the status of utility operations.

Policy 4.1 Source Meters

All sources will be metered to measure the amount of water produced and calibrated annually to ensure an accurate accounting of water produced.

Policy 4.2 Fiscal Stewardship

All money due to the City for water service of any kind or for penalties relating to the municipally owned water system of the City shall be paid to the water fund. The water fund will not be commingled with any other fund or funds of the City. [ACC 13.06.030]

Policy 4.3 Rates and Charges

The City Council establishes rates and charges for water service to be paid by a customer receiving water service from the city. While the City reserves the right to discontinue service without notice, it is committed to maintaining water service during times of extreme weather conditions, when the National Weather Service issues heat-related warnings or advisories for Auburn, Washington, to ensure public safety. The City is not liable for damages resulting from service interruptions. [ACC 13.06.0657]

Policy 4.4 Self-Sufficient Funding

The City maintains the water utility fund as a self-supporting enterprise fund. Water utility revenues come primarily from customer charges and are dependent upon established rates. The Revised Code of Washington requires that utility funds be used only for stated utility purposes. Although General Fund revenues can be used to fund water utility programs, the City has a general policy of not doing so. The City budgeting process should include a balanced and controlled annual water utility budget. This requires careful preparation of expense and revenue projections that may be reviewed by City management, the general public, and the City Council before approval of any rate increases.

Policy 4.5 Capital Improvement Program Level

Funding for the Capital Improvement Program (CIP) identified in the budget will be maintained at a level sufficient to assure system integrity. To the extent that the annual level of the CIP investment can be managed by scheduling and scoping of projects, the funding will be provided at a uniform level to avoid significant fluctuations and to reduce impacts on the operating budget and related rate increases. The City will maintain a reasonable level of reserves in the CIP fund in order to manage cash flow variation caused by the nature of the cost and timing of projects. Utility sold revenue bonds, Utility Local Improvement Districts, State Public Works Trust Fund loans, any available grants, system development charges and developer contributions will be considered for funding the future CIP projects.

Policy 4.6 System Development Charges

A water utility systems development charge is imposed upon all lands inside the boundary of the City and all lands outside the boundary of the City, which utilize water facilities. The utility systems development charge as set forth in the City fee schedule will be computed to consider the future and/or current value of the utility system's fixed assets, excluding contributions by developers, and outstanding bonded indebtedness, and will also consider an appropriate service unit. [ACC 13.41.030]

Policy 4.7 Development Charge Cost Recovery

The City shall continue to recognize the overall system impacts of new development upon the City water system through the collection and appropriate use of system development charges or similar fees. [ACC 13.41.020]

Policy 4.8 Payback Agreement

Payback agreements for public street and utility system improvements may be approved by the City Council. The City engineer may execute the agreements once the City Council has granted approval. [ACC 13.25.050]

Policy 4.9 Water Rate Levels

Water rates will be set at a level sufficient to cover the on-going expenses of the water utility, including operations, maintenance, repair, replacement, and capital improvements, as well as the general business expenses. Additionally, rates shall account for the depreciation of assets to ensure that the utility has adequate funds to maintain its infrastructure and facilities. Furthermore, the rates shall enable the water utility to maintain sufficient reserves.

Policy 4.10 Water Rate Structure

The water-rate structure will be set by customer class based on costs to serve each customer class. The water-rate structure shall support water conservation and wise use of water resources objectives as required by State law.

Policy 4.11 Water Rate Equity

The water-rate structure will allocate costs between the different customer classes. Rates will be established on a "Cost of Service" basis so that each customer class pays its prorated share of the total costs needed to operate and maintain the water utility. All projected future costs will be allocated to each customer class by using established criteria that reflect the benefit that each customer class receives from the service. A Cost of Service and Rate Study will be performed periodically to ensure ongoing equity between customer classes.

Policy 4.12 Frequency of Water Rate Adjustments

Water rates will be evaluated as part of the water utility budgeting process to ensure that budgeted expenses, including the impact of increasing water-supply regulations, are reflected in current rates.

Policy 4.13 Financial Reserve Levels

The City shall maintain water utility cash balances to serve as a contingency reserve fund. The

fund should maintain a balance of $1,000,000 to cover working capital needs and emergency contingencies and cash flow fluctuations.

Policy 4.14 Charges for Services Outside the City Limits

The City may include a rate adjustment for water service outside the City limits.

Policy 4.15 Low-Income Assistance Program

The Utility Rate Exemption Program currently provides water rate assistance for specific low-income senior customers or for specific low-income totally or permanently disabled customers. [ACC 13.24.010]

5.0 PLANNING

Goal 5: Employ best management practices related to water supply planning and capital facility planning activities, which includes conditions for service extensions, fire system responsibility, oversizing, and service pressures and flow.

Policy 5.1 Service Extension

The City will consider extending water system services to areas within its existing RWSA, consistent with adopted annexation policies, and subject to the recovery of costs and the availability of sufficient financial and staffing resources. Property owners will be responsible for an equitable share of extension costs upon connection to the system.

Water system extensions must comply with current City codes and engineering design and construction standards. Connection to existing systems not meeting City water system standards must be upgraded at property owner's expense before service is provided.

To serve new developments, water system extensions must be built prior to or simultaneously with development, according to the size and configuration identified by the Comprehensive Water Plan. The City may participate in financing through System Development Charges credits, Local Improvements Districts (LID), and/or payback agreements, as allowed by law, to support such improvements.

All persons or LIDs desiring to extend City water mains in the City must extend across the full width of the property being served to accommodate future extensions. [ACC 13.08.020]

Policy 5.2 Facility Extension Agreement

The City requires a Facility Extension Agreement to be executed for all public water system extensions constructed by development.

Policy 5.3 System-Wide Reliability

The City shall invest the resources necessary to construct, maintain, and renew water-system infrastructure and equipment to ensure that customers are provided consistent, reliable service in accordance with WAC 246-290-420 Reliability and Emergency Response. Wherever possible, the City should anticipate system interruptions and design and operate the system to minimize the impact of such interruptions to customers.

Policy 5.4 Emergency Preparedness

The City shall update, as needed, a citywide Emergency Response Plan, complying with applicable RCW and WAC requirements, that will include the water system operations. The water system portion of the plan should ensure that adequate provisions are in place to provide for an organized response to the most likely kinds of emergencies that might endanger the health and safety of the public or the operation of the municipal water system.

Policy 5.5 Capital Facilities Plan

The City is required by the Washington State Growth Management Act to adopt a Capital Facilities Plan. The plan will include capital projects and capital project programs for the water utility for a six-year period. Identified projects and programs will be financially constrained and broken down into capacity and non-capacity projects and programs. The City will match revenue sources to capital projects based on sound fiscal policies.

Policy 5.6 Emergency Interties

The City should support emergency interties with adjacent water systems where there is a benefit to both water systems. Interties increase reliability of the City-wide water system during emergencies and other unusual operating circumstances.

Policy 5.7 Water Supply Interties

The City should consider water-supply interties on a case-by-case basis. Water supply interties should provide benefits to both water service providers and should not compromise the City's ability to serve its existing customers or its future water supply needs.

Policy 5.8 Water Supply Planning

The City's objective is to ensure a continuous, safe water supply to meet firm customer demands. Provision of water service must be consistent with the goals, objectives, and policies of the City of Auburn Comprehensive Water Plan. Effects of past water conservation will be considered when projecting future water needs. Future water demands will be estimated using existing water usage patterns and projected future populations developed by the City's comprehensive Plan and consistent with the Puget Sound Regional Council data.

Policy 5.9 Oversizing

When determined to be necessary by the City to install water lines larger than are required to serve adjacent properties, the City may enter into an agreement to compensate the developer for the difference in cost of the oversizing. [ACC 13.08.040]

Policy 5.10 Service Pressure

The City should provide potable water to customers in sufficient quantity to meet maximum day demands at a pressure that meets or exceeds all minimum applicable regulations, except during emergency conditions. Property owners may install private booster pumps to achieve higher pressures under supervision of the City and in accordance with WAC 246-290-230 Distribution Systems.

Policy 5.11 Water for Irrigation

Water used for irrigation by non-single-family residential customers shall be provided through an irrigation meter. Deduct meters shall not be used to supply water for irrigation. [ACC 13.06.230]

Policy 5.12 Water Meters

Water meters shall be placed on every domestic and irrigation service line. [ACC 13.06.320]

6.0 ENVIRONMENTAL STEWARDSHIP

Goal 6: Employ best management practices related to water environmental stewardship and the Water utility's dedication to develop and implement facilities and programs that will protect the environment, including water conservation, demand management and water shortage response.

Policy 6.1 Conservation Promotion

The City will promote water conservation and the efficient use of water resources to help ensure a sustainable water supply.

Policy 6.2 Water Shortage or Emergency Response

In the event of a current or threatened water-supply shortage, the Mayor may declare a water shortage or emergency and issue water use restrictions or conservation measures as necessary and consistent with the Water Shortage Response plan. The Public Works Department is responsible for implementing these measures and making reasonable attempts to notify affected customers. [ACC 13.14]

Policy 6.3 Water Quality Responsibility

The City shall provide water to all water-system customers that meet all state and federal water quality standards. The City shall take the actions necessary to ensure that all water quality standards are met to the point of delivery (meter). The customer is responsible for maintaining water quality from the meter to the actual point of use.

Policy 6.4 Water Resource Protection

The City shall maintain a Water Resource Protection Program that incorporates best management practices and adaptive management concepts, to protect the City's groundwater supplies from degradation.

The Comprehensive Water Plan shall provide for the evaluation of existing and potential future groundwater sources with regard to threats to the quantity and quality of such sources. The Plan shall ensure that strategies are established for the protection of groundwater sources that are used or likely to be used for public water supplies.

Policy 6.5 Sustainable Development

The City strives to be a sustainable community: meeting the needs of the present while preserving the ability of future generations to meet their own needs.

Policy 6.6 Springs Protection

Protection of the City's Coal Creek Springs and West Hill Spring watersheds, wells, and other

sources shall be a high priority in the designation of appropriate land uses in the vicinity of these areas and facilities.

Policy 6.7 Aquifer Recharge Area

The City shall consider the impacts of new development within aquifer recharge areas of potable water sources as part of its environmental review process and require any appropriate mitigation measures. [ACC 16.10.120.E]

Policy 6.8 Water Use Efficiency Goals

The City will continue implementation of its existing Water Use Efficiency Program. The City will target a 1 percent reduction in equivalent residential unit value for each year until reaching a planning Equivalent Residential Unit (ERU) value of 172 gpd/ERU. The goal of the City is to reduce peaking factors that occur during the high usage periods to maximize existing water supply sources. The city's goal shall be in compliance and consistent with all applicable local, state, and federal laws and regulations within the Retail Water Service Area.

Policy 6.9 Non-Revenue Water

The City will strive to maintain levels of water leakage for its distribution system at less than 10 percent.

Policy 6.10 Leak Detection

The City is committed to a tight, non-leaking water distribution system. Each year the City will check approximately one-quarter of the water distribution system for leakage.

Policy 6.11 Reclaimed Water

The City will explore opportunities and evaluate options for wastewater reuse and rainwater reclamation on a case by case basis. These can serve as cost-effective and environmentally beneficial sources of water thereby increasing the security and reliability of the drinking water supply.

Policy 6.12 Aquifer Storage and Recovery

The City shall consider the use of aquifer storage and recovery as a conservation and demand management tool to make best use of City water resources.

7.0 DESIGN AND CONSTRUCTION

Goal 7: Employ best management practices related to the design and construction of water facilities.

Policy 7.1 Service Ownership / Responsibility

The City shall own and maintain the service line between the main and the meter, the meter and setter, the meter box, and tail piece. The property owner shall own and maintain the service line from the tail piece to the point of service including pressure-reducing valves, pumps, or cross-connection assemblies beyond the meter. [ACC 13.06.027]

For unmetered connections (fire sprinklers), City ownership ceases at the fitting on the water line.

Where on-site fire hydrants are required, the City shall own the mains and hydrants located within established easements, unless the on-site mains and hydrants are located behind a master meter and designated as private.

Policy 7.2 Source of Supply

The City shall have sufficient system-wide supply facilities (including both permanent and emergency interties) to meet the Maximum Day Demand with the largest active water supply source out of service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the well or spring pumps should be provided.

Policy 7.3 Pump Stations

A minimum of two pumps or a complete spare pump will be provided for each distribution system pump station to provide flexibility and system redundancy. Where multiple pumps are provided, the pumps will be sized so that the station can meet Maximum Day Demand flow conditions with the largest pump out-of-service. If the area is not served by gravity by a reservoir, booster pumps (along with any supply available) will be sized to provide peak hour demand and fire demand for the service area should the largest pump be out-of- service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the station with any single pump out of service should be provided.

Policy 7.4 Storage Reservoirs

Reservoir redundancy is not a requirement for service areas where the Maximum Day Demand and fire demand can be met by supply or pumping.

Policy 7.5 Distribution System

The City will plan for and develop a dependable distribution network with pipeline redundancy for redirecting water to affected customers during pipeline failures and establishing multiple connections between service zones at various locations. While the aim is to create a looped water distribution system for reliability and fire flow, there may be cases where looping is not feasible, necessitating off-site improvements in developing areas. Larger water mains may be required for major distribution lines or areas with higher fire flow needs. Additionally, subdividing service area zones into smaller pressure zones aligned with topographic elevations guarantees consistent pressure in each zone.

Whenever a street is to be substantially reconstructed or a new street built, the City shall determine whether water facilities in the street right a way shall be constructed or brought up to the size and configuration indicated by the Water Plan and Comprehensive Plan.

Policy 7.6 Fire Flow Requirements

The City has established two distinct and independent parts to the municipal water-system fire flow requirements within the City Retail Water Service Area. The first is a fire flow requirement established by the Fire Authority as a building-specific fire flow based on building use and materials of construction. The second is a multi-source municipal water system level of service criterion. The City shall require that both parts of the fire flow requirements be met as a condition of development and as a condition of any extension of the City water system.

New development, redevelopment, or change in use or occupancy (as defined by Auburn City Code) shall meet the full fire flow requirements as established by this policy. Change of occupancy is not intended to include change of tenants or proprietors. The applicant shall be responsible for installing all necessary facilities needed to serve the property and for complying with the City's development, and design and construction standards to meet these requirements.

Fire flow requirements for existing structures and uses or occupancies are those that were required at the time of construction, as determined by the Fire Authority and the City's water utility (since 1995). Such existing structures shall not be required to upgrade the municipal water-system infrastructure to meet current fire flow and development standards. Similarly, the City shall not be obligated to upgrade the existing water- system infrastructure to meet current fire-flow criteria and standards. The City should consider the benefits of improved fire flows when analyzing the need, design, and merits of municipal water-system improvements.

Policy 7.7 Fire-Flow Improvements

As resources become available, the City shall make the City's municipal water-system improvements to meet the current fire flow criteria. Such system improvements may include replacing undersized water mains and pumping stations or correcting fire hydrant deficiencies of spacing and standardization where current standards are not met. When prioritizing and scheduling system improvements, the City capital facilities planning procedures should consider the severity of deficiencies. The City should seek opportunities to make improvements in conjunction with other City projects to achieve economic efficiency.

Policy 7.8 Fire-Flow Quantity

The quantity of water available for firefighting establishes an important level of service for a water system. The fire flow requirements shall be based on the minimum City fire flow requirements specified in the current City of Auburn Engineering Design Standards. Additional fire flow may be required per the International Fire Code.

Where the City determines higher fire flows are required than the minimums, the higher flow will be the criterion used to determine the required system improvements. Fire flows are to be provided during Maximum Day Demand at the pressure requirements discussed in the paragraphs on Distribution System.

Policy 7.9 Reservoir Sizing

The City reservoir storage components shall be sized to meet WAC 246-290-235 and Department of Health recommendations and requirements.

Policy 7.10 Individual Service Area Water Supply Requirements

The City will provide sufficient water supply capacity to meet Maximum Day Demand for each of the four service areas (Valley service area, Academy service area, Lea Hill service area and the Lakeland Hills service area) and any sub systems within these service areas utilizing a combination of reliable sources, reliable pump stations and reservoirs in accordance with system reliability criteria.

Policy 7.11 System Pressure

The City of Auburn has established a criterion for minimum pressure within the water distribution system of 30 psi for all new facilities during Peak Hour Demand.

The distribution system shall be capable of providing the required fire flow under Maximum Day Demand conditions. During these conditions, a minimum pressure of 20 psi is allowed at any point within the distribution system when firefighting storage and equalizing storage are depleted (WAC 246-290-230 Distribution Systems). The maximum target pressure within the water distribution system is 80 psi.

Policy 7.12 Elements of Required Storage

The City storage reservoir volume requirements are comprised of three separate categories: Equalizing Storage (when necessary), Fire Fighting Storage, and Emergency Storage. In addition, reservoirs may include a "dead storage" volume that is not useful because of the water system configuration.

Auburn will provide sufficient storage volume so that each storage component is provided separately, recognizing that a fire could occur during an emergency (supply or pump station out-of-service). As a result, nesting of storage (using the same storage for both emergency and firefighting) is not acceptable and the City requires these volumes to be stacked. Evaluation of the required reservoir volume must be done by analyzing each reservoir independently to ensure that adequate storage is provided to meet the needs of customers within the reservoir service area. Storage within a zone of higher elevation can be used to meet the storage requirements of lower zones served by the reservoir.

CITY OF AUBURN WASHINGTON
MAYOR NANCY BACKUS
25 WEST MAIN STREET, AUBURN, WA 98001
253-931-3000
AUBURNWA.GOV

DETERMINATION OF NON-SIGNIFICANCE (DNS)
City of Auburn Comprehensive Water Plan Update
SEP24-0015

The City of Auburn is issuing a Determination of Non-Significance (DNS) for the following described project. The permit applications and listed studies may be reviewed at the Auburn Department of Community Development at One E Main St., 2nd Floor, Customer Service Center, Auburn, WA 98001 and by visiting www.auburnwa.gov/landuse.

Proposal: The proposed non-project action includes adoption of the Comprehensive Water System Plan as an element of the city's Comprehensive Plan. The City of Auburn's Water System Plan (WSP) has been developed in accordance with Chapter 426-290 of the Washington Administrative Code (WAC), as presented in Washington State Department of Health (DOH) regulations for Group A Public Water Systems. This WSP supersedes the City of Auburn's 2015 WSP, approved on May 11, 2016, and the 2021 Limited WSP Update approved by DOH on December 16, 2021. The purposed of this WSP is to develop a long-term strategy for the City's Retail Water Service Area. Updated every ten years per DOH, the WSP evaluates the existing system and its ability to meet the anticipated requirements for water source, treatment, transmission, storge and distribution over the 20-year planning period.

Location: City-wide

Notice of Application:
Not applicable
Application Complete:
October 2, 2024
Permit Application:
September 6, 2024

File Nos.
SEP24-0015

Property Owner:
City of Auburn
25 W Main St.
Auburn WA, 98001

Applicant:
City of Auburn
Senait Gebreeyesus
25 W Main St.
Auburn WA, 98001

Studies/Plans Submitted with Application:
SEPA Environmental Checklist, prepared by City of Auburn, dated August 15, 2024
Draft Water System Plan, prepared by Consor, dated August 2024

Other Permits, Plans, and Approvals Needed:
Not Applicable.

Statement of Consistency and List of Applicable Development Regulations: This proposal is subject to and shall be consistent with the Auburn City Code, Comprehensive Plan, and Public Works Design and Construction Standards.

Lead Agency: City of Auburn. The lead agency for this proposal has determined that it does not have probable significant adverse impact on the environment. An environmental impact statement (EIS) is not required under RCW 43.21C.030(2)(c). This decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public on request.

SEPA Environmental Review: This DNS is issued under WAC 197-11-340(2); the lead agency will not act on this proposal for 14 days from the date below.

Public Comment Period: This may be your only opportunity to comment on the environmental impact of the proposal. All persons may comment on this application. Comments must be in writing and submitted by **5:00 p.m. on October 22, 2024** to the mailing address of 25 W Main St., Auburn, WA, 98001 or emailed to the contact below. Any person wishing to become a party of record, shall include in their comments that they wish to receive notice of and participate in any hearings, if relevant, and request a copy of decisions once made. *The responsible official will reconsider the DNS based on timely comments and may retain, modify, or, if significant adverse impacts are likely, withdraw the DNS.* ***If the DNS is retained, it will be final after the expiration of the comment deadline.***

Any person aggrieved of the City's determination may file an appeal with the Auburn City Clerk at 25 West Main Street, Auburn, WA 98001-4998 within 14 days of the close of the comment period, or by 5:00 p.m. on September 9, 2024.

For questions regarding this project, please contact Dinah Reed, Senior Planner, at planning@auburnwa.gov or 253-931-3092.

Public Hearing: N/A

RESPONSIBLE SEPA OFFICIAL:
Alexandria D. Teague, Planning Services Manager

ADDRESS:
25 West Main St., Auburn, WA 98001
253-931-3090

DATE ISSUED: October 8, 2024 SIGNATURE: Alexandria D. Teague

Note: This determination does not constitute approval of the proposal. Approval of the proposal can only be made by the legislative or administrative body vested with that authority. The proposal is required to meet all applicable regulations.

SEPA[1] Environmental Checklist

Purpose of checklist

Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization, or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

Instructions for applicants

This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. **You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown.** You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to **all parts of your proposal**, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for lead agencies

Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals

For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B, plus the Supplemental Sheet for Nonproject Actions (Part D). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in "Part B: Environmental Elements" that do not contribute meaningfully to the analysis of the proposal.

[1] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/Checklist-guidance

A.Background

Find help answering background questions[2]

1. **Name of proposed project, if applicable:**

   City of Auburn, 2024 Comprehensive Water Plan

2. **Name of applicant:**

   City of Auburn, Public Works Department, Water Division

3. **Address and phone number of applicant and contact person:**

   Public Works Department

   25 West Main Street

   Auburn, WA 98001

   253-931-3010

   Senait Gebreeyesus, Water Utility Engineer

   253-804-5061

4. **Date checklist prepared:**

   August 15, 2024

5. **Agency requesting checklist:**

   City of Auburn

6. **Proposed timing of schedule (including phasing, if applicable):**

   The Comprehensive Water Plan is slated for adoption by December 2024. It outlines both short-term projects intended to be initiated over the next decade (2025-2034) and long-term projects forecasted for the following two decades (2035-2044). The exact locations of these projects are detailed within the proposed Comprehensive Water Plan.

7. **Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.**

   There are no current plans for further expansions or additional activities related to this proposal. This plan serves as a comprehensive outline for the City's capital improvement initiatives over the next ten years, with a vision extending to twenty years. Any projects that are not exempt from SEPA will undergo a detailed project-level review. The proposed locations of these projects are presented within the Comprehensive Water Plan.

8. **List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.**

[2] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-A-Background

The specific environmental documentation related to this proposal will be developed as individual projects are brought forward for implementation. Each project will undergo an environmental checklist and threshold determination based on its scope and impact.

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

Currently, there are no known pending applications for government approvals directly affecting the properties covered by this proposal. However, there may be ongoing applications related to improvements within the water system, such as developer extensions and plat developments within the water service area.

10. List any government approvals or permits that will be needed for your proposal, if known.

The Comprehensive Water Plan requires approval from City of Auburn and the Washington State Department of Health.

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

The proposal involves adopting a new Comprehensive Water Plan to replace the City of Auburn's existing plan from 2015 and its limited update in 2021. This updated plan reflects the changes within the City's water system, identifies necessary system modifications, and details capital improvement projects designed to meet future water demands, system maintenance, and improvement activities. The maintenance of an up-to-date plan is crucial for compliance with Washington State Department of Health regulations and the Washington Growth Management Act. The plan encompasses the entire water service area, including most of the City limits, covering approximately 30 square miles.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

The Comprehensive Water Plan applies to the City of Auburn's water service area, which includes most of the area within the City limits. Auburn is located between Seattle and Tacoma in both King County and Pierce County, Washington, spanning approximately 30 square miles.

B.Environmental Elements

1. Earth

Find help answering earth questions[3]

a. General description of the site:

Circle or highlight one: Flat, rolling, hilly, steep slopes, mountainous, other:

The project area features a varied terrain, including both flat regions and steep slopes.

b. What is the steepest slope on the site (approximate percent slope)?

The steepest slopes within the planning area can reach gradients as high as 100%. Notable steep slope areas are located east and north of the Green River on Lea Hill, south of the White River on Lakeland Hills, and along the West Valley Highway toward West Hill.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them, and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

The soils in the region predominantly consist of glacial and interglacial deposits in the uplands, with modern alluvium, undifferentiated deltaic deposits, and Osceola Mudflow in the valley. Soil textures range from gravelly, sandy loam to gravelly loam.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

There is potential for unstable soils on steep slopes in the identified areas. Geologic hazard zones, including those prone to volcanic activity, seismic events, landslides, and erosion, are mapped within the City's Comprehensive Plan and sensitive areas maps.

e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

This plan does not directly involve any filling, excavation, or grading activities. However, water system construction projects identified in the plan will likely require these activities, with specific details to be determined during individual project reviews.

f. Could erosion occur because of clearing, construction, or use? If so, generally describe.

While this non-project action does not directly cause erosion, individual projects will be reviewed for potential erosion impacts and corresponding mitigation measures.

[3] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-earth

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

Water system projects typically do not create significant impervious surfaces, as most infrastructure is installed beneath existing roadways or in easements where structures are restricted, or within an existing building. Specific projects will be subject to environmental review before implementation.

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any.

Although this non-project action does not involve direct earth disturbances, individual projects will include erosion and sedimentation control measures, with best management practices applied in areas prone to erosion.

2. Air

Find help answering air questions[4]

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

This non-project action does not generate air emissions. However, specific construction projects will be evaluated for air quality impacts during their environmental review, and appropriate mitigation measures will be applied.

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

No off-site sources of emissions are expected to affect this proposal. However, individual projects will be assessed for air quality impacts during their environmental review.

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

Although this plan itself does not involve direct air emissions, standard emission controls will be implemented during the construction of projects recommended by this plan.

[4] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-Air

3. Water

Find help answering water questions[5]

a. Surface:

Find help answering surface water questions[6]

1. **Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.**

   The service area contains several significant water bodies, including the Green River and White River, as well as streams like Mill Creek and various drainage ways leading to these rivers. The area also includes numerous wetlands.

2. **Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.**

   This non-project action does not involve direct work near water bodies. However, the Comprehensive Water Plan recommends various water system improvements, including well rehabilitation and upgrades, which may occur near these water bodies. Such projects will undergo environmental review in compliance with the City's Shoreline Master Program.

3. **Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.**

   This plan itself does not involve the placement or removal of material in or near surface waters. However, future projects may involve such activities, which will be subject to environmental review.

4. **Will the proposal require surface water withdrawals or diversions? Give a general description, purpose, and approximate quantities if known.**

   The plan does not propose surface water withdrawals. The City's water supply primarily relies on a system of groundwater wells detailed in the comprehensive plan.

5. **Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.**

   While this plan does not involve direct action within floodplains, portions of the City's water service area are within or adjacent to floodplain areas. Individual projects will identify floodplain boundaries during their environmental review.

[5] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water
[6] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water/Environmental-elements-Surface-water

6. **Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.**

   This plan does not propose any discharges of waste materials into surface waters.

b. Ground:

Find help answering ground water questions[7]

1. **Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give a general description, purpose, and approximate quantities if known.**

   The adoption of the Comprehensive Water Plan does not entail direct groundwater withdrawals. The City's existing groundwater wells and their associated water rights are thoroughly documented in the plan.

2. **Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (domestic sewage; industrial, containing the following chemicals…; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.**

   No waste material will be discharged into the ground as a result of this plan.

c. Water Runoff (including stormwater):

1. **Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.**

   The adoption of this plan will not generate stormwater runoff. However, individual projects will be assessed for their potential to generate runoff during their environmental review.

2. **Could waste materials enter ground or surface waters? If so, generally describe.**

   This non-project action does not introduce the risk of waste materials entering ground or surface waters.

3. **Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.**

   The adoption of this plan will not affect drainage patterns. However, individual projects will be reviewed for such impacts.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

[7] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water/Environmental-elements-Groundwater

While the plan itself does not directly impact water resources, specific projects will include measures to control erosion, manage runoff, and mitigate drainage impacts as necessary, based on their environmental review.

4. Plants

Find help answering plants questions

a. Check the types of vegetation found on the site:

☐ **deciduous tree: alder, maple, aspen, other**

☐ **evergreen tree: fir, cedar, pine, other**

☐ **shrubs**

☐ **grass**

☐ **pasture**

☐ **crop or grain**

☐ **orchards, vineyards, or other permanent crops.**

☐ **wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other**

☐ **water plants: water lily, eelgrass, milfoil, other**

☐ **other types of vegetation**

This item does not apply to the current non-project action. The Plan area encompasses a diverse range of vegetation types. The presence and treatment of specific plant types will be addressed as part of individual construction projects within the Plan.

b. What kind and amount of vegetation will be removed or altered?

This inquiry is not applicable to the non-project action being undertaken. The adoption of the Comprehensive Water Plan itself will not result in any direct environmental changes, including the alteration of vegetation. However, specific projects and programs that stem from the Plan may involve the removal or modification of vegetation. The precise impacts of such actions are currently indeterminate. Each project will undergo environmental review to evaluate potential impacts and appropriate mitigation measures before execution.

c. List threatened and endangered species known to be on or near the site.

This question does not pertain to the current non-project action. Any threatened or endangered species in proximity to the proposed projects under this Plan will be identified during the environmental review process for each individual project.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any.

This item does not apply to the non-project action. Landscaping, the use of native plants, or other measures to preserve or enhance vegetation will be considered on a project-specific basis during environmental reviews before project implementation.

e. List all noxious weeds and invasive species known to be on or near the site.

This query is not applicable to this non-project action. Any noxious weeds or invasive species present in or near the recommended projects under this Plan will be identified during the environmental review process for each respective project.

5. Animals

Find help answering animal questions[8]

a. List any birds and other animals that have been observed on or near the site or are known to be on or near the site.

Examples include:

- **Birds: hawk, heron, eagle, songbirds, other:**
- **Mammals: deer, bear, elk, beaver, other:**
- **Fish: bass, salmon, trout, herring, shellfish, other:**

This question does not apply to the current non-project action, as the adoption of the Comprehensive Water Plan does not involve a specific site. A variety of species, such as those mentioned, may inhabit the Plan area. Specific projects will undergo environmental review to identify any species present before they are carried out.

b. List any threatened and endangered species known to be on or near the site.

According to the City of Auburn Comprehensive Plan, the water service area is home to species such as the Great Blue Heron and Bald Eagles. Additionally, Chinook Salmon, classified as endangered by the National Marine Fisheries Service, and Bull Trout, listed as endangered by the US Fish and Wildlife Service, are known to inhabit the area. Chinook Salmon are present in Mill Creek and the Green and White Rivers, while Bull Trout may be found in the Green and White Rivers.

c. Is the site part of a migration route? If so, explain.

This question does not pertain to the current non-project action. The adoption of the Comprehensive Water Plan does not involve any specific site. Migration routes of any threatened or endangered species in proximity to the recommended projects will be identified during the environmental review process for each individual project.

d. Proposed measures to preserve or enhance wildlife, if any.

This item does not apply to the current non-project action. The adoption of the Comprehensive Water Plan itself will not directly impact any listed species or their habitats. However, proposed improvement projects under the Plan may potentially affect listed species, though the specific impacts are not currently known. Environmental reviews for each project will assess potential impacts and propose

[8] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-5-Animals

appropriate mitigation measures and best management practices before project implementation.

e. List any invasive animal species known to be on or near the site.

This question does not apply to the current non-project action. Any invasive animal species in or near the proposed projects under this Plan will be identified during the environmental review process for each individual project.

6. Energy and natural resources

Find help answering energy and natural resource questions[9]

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

This question does not apply to the current non-project action. The adoption of the Comprehensive Water Plan itself will not necessitate the use of energy. Specific projects will undergo individual reviews to determine their energy and natural resource needs.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

There will be no impact on the potential use of solar energy by adjacent properties.

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any.

This question does not apply to the current non-project action. The adoption of the Comprehensive Water Plan itself will not directly result in energy conservation or control measures. However, certain programs and projects under the Plan may include energy-saving features. The exact conservation benefits of these measures are not yet known and will be evaluated on a case-by-case basis for each project.

7. Environmental health

Health Find help with answering environmental health questions[10]

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur because of this proposal? If so, describe.

This item is not applicable to the current non-project action. The adoption of the Comprehensive Water Plan itself will not lead to environmental health hazards, such as exposure to toxic chemicals or the risk of fire and explosion. However, specific programs and projects within the Plan may pose such risks. The potential impacts of these actions are currently unknown. Each project will be subject to environmental review to assess potential risks and determine appropriate mitigation measures before implementation.

[9] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-6-Energy-natural-resou
[10] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-7-Environmental-health

1. **Describe any known or possible contamination at the site from present or past uses.**

   This item does not apply to the current non-project action. Specific projects will undergo individual environmental reviews before they are implemented to identify any potential site contamination.

2. **Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.**

   This question does not pertain to the current non-project action. Specific projects will be subject to environmental review to identify any existing hazardous chemicals or conditions that could impact project development or design.

3. **Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.**

   This item is not applicable to the current non-project action. Specific projects will be reviewed to determine if any toxic or hazardous chemicals might be used, stored, or produced during construction or operation.

4. **Describe special emergency services that might be required.**

   This item does not apply to the current non-project action. Specific projects will undergo environmental review to determine if any special emergency services might be required.

5. **Proposed measures to reduce or control environmental health hazards, if any.**

   This query does not apply to the current non-project action. Any measures to reduce or control environmental health hazards will be evaluated and proposed during the environmental review process for each specific project.

b. Noise

1. **What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?**

   This question does not apply to the current non-project action. Any noise affects will be evaluated as part of the individual projects.

2. **What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site)?**

   This item does not apply to the current non-project action. The adoption of the Comprehensive Water Plan itself will not generate noise. However, specific programs and projects under the Plan may produce noise, though the potential impacts are currently unknown. Each project will undergo environmental review to evaluate potential noise impacts and determine appropriate mitigation measures before implementation.

3. **Proposed measures to reduce or control noise impacts, if any:**

This inquiry does not apply to the current non-project action. Noise reduction measures will be considered and proposed during the environmental review process for each specific project.

8. Land and shoreline use

Find help answering land and shoreline use questions[11]

a. **What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.**

The water service area includes a mix of land uses, primarily residential, with other uses such as industrial, commercial, manufacturing, public, and park spaces also present.

b. **Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses because of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or nonforest use?**

The adoption of the Comprehensive Water Plan itself will not impact any remaining agricultural or forest land. Future projects under the Plan will be subject to environmental review to assess potential impacts and determine appropriate mitigation measures.

1. **Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how?**

No, the proposal will not impact surrounding working farm or forest land or their normal business operations.

c. **Describe any structures on the site.**

The water service area features various types of structures, including residential, commercial, institutional, manufacturing, and industrial buildings.

d. **Will any structures be demolished? If so, what?**

This question does not apply to the current non-project action. Any structures proposed for demolition will be identified during the environmental review process for each specific project.

e. **What is the current zoning classification of the site?**

The water service area encompasses various zoning districts within Auburn and unincorporated King and Pierce Counties. These districts include single-family and multi-

[11] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-8-Land-shoreline-use

family residential, light and heavy commercial, light and heavy industrial, public, and open spaces.

f. What is the current comprehensive plan designation of the site?

The water service area contains multiple Comprehensive Plan designations. The City of Auburn oversees the majority of this service area. Projects recommended by the Plan will be required to comply with the City's Shoreline program if they fall within the shoreline management area.

g. If applicable, what is the current shoreline master program designation of the site?

The City's shoreline designations include natural, shoreline residential, and urban conservancy. Projects recommended by the Plan will need to adhere to the City's Shoreline Master Program requirements.

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

Yes, the water service area includes lands classified as critical areas, such as wetlands, geologic hazard areas, aquifer recharge zones, habitat areas, groundwater protection areas, and frequently flooded areas.

i. Approximately how many people would reside or work in the completed project?

The water service area's population was estimated to be 63,450 in 2022, with projections indicating an increase to 85,519 by 2034 and 97,328 by 2035. The employment in the water service area was estimated to be 48,419 in 2021, with forecasts showing an increase to 59,205 in 2034 and 68,944 in 2044.

j. Approximately how many people would the completed project displace?

This question does not apply to the current non-project action. The adoption of the Comprehensive Water Plan will not displace any people. The Plan's programs and projects are not intended to cause displacement.

k. Proposed measures to avoid or reduce displacement impacts, if any.

This inquiry does not pertain to the current non-project action.

l. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any.

The Comprehensive Water Plan has been developed in alignment with all relevant local, county, and state regulations. This includes the City Comprehensive Plan created under the Growth Management Act policies, the South King County Coordinated Water System Plan, and the Pierce County Comprehensive Plan.

m. Proposed measures to reduce or control impacts to agricultural and forest lands of long-term commercial significance, if any:

The Comprehensive Water Plan is fully compliant with existing local, county, and state regulations, including the City Comprehensive Plan, the South King County Coordinated Water System Plan, and the Pierce County Comprehensive Plan.

9. Housing

Find help answering housing questions[12]

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

This query is not applicable to this non-project action. The adoption of the Comprehensive Water Plan does not involve the provision of housing units. The Plan is focused on water-related infrastructure and does not encompass housing development or residential unit allocation.

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

This question is not applicable to this non-project action. The adoption of the Comprehensive Water Plan will not lead to the removal of any housing units. The Plan's scope is confined to water infrastructure and does not include the elimination or alteration of housing.

c. Proposed measures to reduce or control housing impacts, if any:

As this is a non-project action centered on water infrastructure, there are no housing impacts anticipated, and thus, no mitigation measures are proposed.

10. Aesthetics

Find help answering aesthetics questions[13]

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

This question does not pertain to this non-project action. The adoption of the Comprehensive Water Plan will not result in the construction of any structures. Any future projects involving structures will determine the specifics, including height and materials, during their design phases.

b. What views in the immediate vicinity would be altered or obstructed?

This query is not applicable to this non-project action. The adoption of the Comprehensive Water Plan does not involve the construction of any structures that could obstruct or alter views in the vicinity.

c. Proposed measures to reduce or control aesthetic impacts, if any:

Future projects stemming from the Plan will undergo individual environmental reviews, where potential aesthetic impacts and appropriate mitigation measures will be assessed and implemented before construction begins.

[12] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-9-Housing
[13] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-10-Aesthetics

11. Light and glare

Find help answering light and glare questions[14]

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

This question does not pertain to this non-project action. The adoption of the Comprehensive Water Plan will not result in the construction of any structures. Any future projects involving structures will determine the specifics, including height and materials, during their design phases.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

This query is not applicable to this non-project action. The adoption of the Comprehensive Water Plan does not involve the construction of any structures that could obstruct or alter views in the vicinity.

c. What existing off-site sources of light or glare may affect your proposal?

Future projects stemming from the Plan will undergo individual environmental reviews, where potential aesthetic impacts and appropriate mitigation measures will be assessed and implemented before construction begins.

d. Proposed measures to reduce or control light and glare impacts, if any:

This query is not applicable to this non-project action.

12. Recreation

Find help answering recreation questions

a. What designated and informal recreational opportunities are in the immediate vicinity?

The service area includes a variety of parks and recreational spaces. Additionally, there are rivers and streams within the water service area that offer recreational activities, and a golf course is also located nearby.

b. Would the proposed project displace any existing recreational uses? If so, describe.

This question does not apply to this non-project action. The adoption of the Comprehensive Water Plan will not displace any existing recreational uses.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

Any specific projects resulting from the Plan will undergo environmental reviews where potential impacts on recreational activities will be evaluated, and corresponding mitigation measures will be developed before implementation.

[14] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-11-Light-glare

13. Historic and cultural preservation

Find help answering historic and cultural preservation questions[15]

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers? If so, specifically describe.

The water service area covers parts of the City of Auburn and Unincorporated King County. Numerous sites within these areas are listed on preservation registers and will be addressed through individual environmental reviews as specific construction projects are proposed.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

This query is not applicable to this non-project action. Individual projects will be subject to environmental reviews that will assess the presence and importance of such features before implementation.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

This question does not pertain to this non-project action. Specific projects will be reviewed through environmental assessments, which may include consultations with tribal entities, the Department of Archaeology and Historic Preservation, and the use of tools like archaeological surveys and historic maps.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

This non-project action does not require specific mitigation measures. However, individual projects will be reviewed, and necessary steps will be taken to protect cultural and historic resources as per applicable laws and guidelines.

[15] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-13-Historic-cultural-p

14. Transportation

Find help with answering transportation questions[16]

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

The service area is intersected by several streets and highways, including State Highways 18 and 167, Auburn Way North, Auburn Way South (SR 164), West Valley Highway, and 15th Street Northwest.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

The City of Auburn is currently served by Sound Transit, King County Metro, and Pierce Transit. Any areas within the City that are not served by public transit will be considered as individual construction projects are proposed.

c. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle, or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

This non-project action does not necessitate the construction of new roads or the improvement of existing transportation facilities.

d. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

This question does not apply to this non-project action. The adoption of the Comprehensive Water Plan will not involve the use of water, rail, or air transportation. However, some projects may occur near these transportation facilities and will be reviewed accordingly.

e. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?

This question does not apply to this non-project action as the adoption of the Comprehensive Water Plan will not generate vehicular trips.

f. Will the proposal interfere with, affect, or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

This query is not applicable to this non-project action. The adoption of the Comprehensive Water Plan will not affect the transportation of agricultural or forest products. Any relevant projects will be reviewed for potential impacts during their environmental assessments.

[16] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-14-Transportation

g. Proposed measures to reduce or control transportation impacts, if any:

As this is a non-project action, no specific transportation impact mitigation measures are required.

15. Public services

Find help answering public service questions[17]

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

This non-project action will not result in an increased demand for public services such as fire protection, police services, public transit, healthcare, or educational facilities.

b. Proposed measures to reduce or control direct impacts on public services, if any.

Since the adoption of the Comprehensive Water Plan does not impact public services, no mitigation measures are proposed.

16. Utilities

Find help answering utilities questions[18]

a. Circle utilities currently available at the site: electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system, other:

The service area is equipped with a variety of utilities, including electricity, natural gas, water, refuse service, telephone, and sanitary sewer.

b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

The Comprehensive Water Plan recommends necessary repairs, replacements, improvements, and extensions to water system facilities to meet service level criteria established by local, county, and state regulations. These facilities include wells, springs, reservoirs, pump stations, pressure reducing stations, water mains, and related appurtenances. Each project will undergo an individual environmental review process. Water services will be provided by the City of Auburn's water division.

C.Signature

Find help about who should sign[19]

[17] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-15-public-services
[18] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-16-utilities
[19] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-C-Signature

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

D.Supplemental sheet for nonproject actions

Find help for the nonproject actions worksheet[20]
Do not use this section for project actions.

Because these questions are very general, it may be helpful to read them in conjunction with the list of the elements of the environment.

When answering these questions, be aware of the extent the proposal, or the types of activities likely to result from the proposal, would affect the item at a greater intensity or at a faster rate than if the proposal were not implemented. Respond briefly and in general terms.

1. **How would the proposal be likely to increase discharge to water; emissions to air; production, storage, or release of toxic or hazardous substances; or production of noise?**

   The adoption of the Comprehensive Water Plan is a non-project action and does not inherently increase discharges to water or air, nor does it contribute to noise production. However, the construction activities recommended in the Plan could result in temporary increases in exhaust emissions from construction equipment and dust from exposed soils. These impacts will be evaluated through environmental reviews before any project begins.

   - **Proposed measures to avoid or reduce such increases are:**

     No specific mitigation measures are proposed at this stage. The potential for discharges and emissions will be minimized by adhering to best management practices and ensuring that all designs and construction activities comply with local, state, and federal regulations. Each project will be reviewed individually by the appropriate agencies to assess and address environmental impacts.

[20] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-d-non-project-actions

2. **How would the proposal be likely to affect plants, animals, fish, or marine life?**

   The adoption of the Plan itself does not affect flora or fauna. It is anticipated that none of the proposed projects within the Plan will negatively impact fish or wildlife.

   - **Proposed measures to protect or conserve plants, animals, fish, or marine life are:**

     No specific conservation measures are proposed at this stage. Individual projects will undergo thorough reviews to ensure the protection of plants, animals, fish, and marine life, and appropriate agencies will be consulted as needed.

3. **How would the proposal be likely to deplete energy or natural resources?**

   The Comprehensive Water Plan is focused on maintaining and improving existing water infrastructure, which is not expected to have a significant impact on energy or natural resource depletion. However, individual projects will be evaluated to determine their specific impacts on these resources.

   - **Proposed measures to protect or conserve energy and natural resources are:**

     The Plan emphasizes maximizing gravity flow wherever possible to conserve energy. It also includes a water use efficiency program that aims to achieve significant water resource savings over time. Additionally, the Plan proposes improvements to pump stations to enhance efficiency, although the exact conservation benefits are currently unquantifiable. Each project will be individually assessed for energy and resource conservation by the relevant agencies.

4. **How would the proposal be likely to use or affect environmentally sensitive areas or areas designated (or eligible or under study) for governmental protection, such as parks, wilderness, wild and scenic rivers, threatened or endangered species habitat, historic or cultural sites, wetlands, floodplains, or prime farmlands?**

   The proposed action, which involves adopting the Comprehensive Water Plan, is not expected to directly impact environmentally sensitive areas, such as parks, wilderness areas, wild and scenic rivers, threatened or endangered species habitats, historic or cultural sites, wetlands, floodplains, or prime farmlands. However, since the Plan outlines future programs and projects that could be near these sensitive areas, the exact nature of potential impacts remains undetermined at this stage. Any projects that could affect sensitive areas will be required to adhere to City policies and regulations designed to protect these resources.

   - **Proposed measures to protect such resources or to avoid or reduce impacts are:**

     The Plan does not inherently expand the authority of any entity—be it an individual, company, or agency—to initiate developments that might negatively impact sensitive areas. Each proposed project will undergo individual review and will need to obtain approval from the appropriate agencies before moving forward. Compliance with all relevant local, state, and federal regulations will be mandatory to ensure the protection of these sensitive environments.

5. **How would the proposal be likely to affect land and shoreline use, including whether it would allow or encourage land or shoreline uses incompatible with existing plans?**

The adoption of the Comprehensive Water Plan does not facilitate or promote land or shoreline uses that would be incompatible with existing land-use plans. Any specific projects arising from the Plan will be individually assessed through environmental reviews before they are implemented.

- **Proposed measures to avoid or reduce shoreline and land use impacts are:**

  Each project proposed under the Plan will be evaluated on its own merits, with oversight from the appropriate agencies to ensure that it aligns with existing land-use regulations. Adherence to applicable local, state, and federal guidelines will be enforced to prevent any negative impacts on land and shoreline use.

6. **How would the proposal be likely to increase demands on transportation or public services and utilities?**

   The adoption of the Comprehensive Water Plan itself will not directly lead to an increase in demand for transportation, public services, or utilities. In fact, the Plan is designed to address the City's water utility needs in response to anticipated population growth.

   - **Proposed measures to reduce or respond to such demand(s) are:**

     The Comprehensive Water Plan includes a range of projects and programs aimed at meeting the City's growing demand for water services. By planning for future needs, the Plan helps ensure that the City's infrastructure can accommodate growth without placing undue strain on existing transportation networks or public services.

7. **Identify, if possible, whether the proposal may conflict with local, state, or federal laws or requirements for the protection of the environment.**

   The 2024 Comprehensive Water Plan aligns with current legal frameworks designed to protect the environment, ensuring that all proposed projects and actions will be in full compliance with these regulations.

Local Government Consistency Determination Form

331-568 • 8/10/2023

Water System Name: City of Auburn PWS ID: 03350V

Planning/Engineering Document Title: Water System Plan Plan Date: August 2024

Local Government with Jurisdiction Conducting Review: City of Auburn

Before the Department of Health (DOH) approves a planning or engineering submittal under Section 100 or Section 110, the local government must review the documentation the municipal water supplier provides to prove the submittal is consistent with **local comprehensive plans, land use plans and development regulations** (WAC 246-290-108). Submittals under Section 105 require a local consistency determination if the municipal water supplier requests a water right place-of-use expansion. The review must address the elements identified below as they relate to water service.

By signing this form, the local government reviewer confirms the document under review is consistent with applicable local plans and regulations. If the local government reviewer identifies an inconsistency, the reviewer should include the citation from the applicable comprehensive plan or development regulation and explain how to resolve the inconsistency, or confirm that the inconsistency is not applicable by marking N/A. See more instructions on page 2.

Local Government Consistency Statement	For Use by Water System: Identify page(s) in submittal	For Use by Local Government: Yes or Not Applicable
a) The water system service area is consistent with the adopted land use and zoning within the service area.	2-19 to 2-21	Yes
b) The growth projection used to forecast water demand is consistent with the adopted city or county's population growth projections. If a different growth projection is used, provide an explanation of the alternative growth projection and methodology.	2-23 to 2-33	Yes
c) For cities and towns that provide water service: All water service area policies of the city or town described in the plan conform to all relevant utility service extension ordinances.	2-6	Yes
d) Service area policies for new service connections conform to the adopted local plans and adopted development regulations of all cities and counties with jurisdiction over the service area.	1-21	Yes
e) Other relevant elements related to water supply are addressed in the water system plan, if applicable. This may include Coordinated Water System Plans, Regional Wastewater Plans, Reclaimed Water Plans, Groundwater Management Area Plans, and the Capital Facilities Element of local comprehensive plans.	5-1 to 5-4	Yes

I certify that the above statements are true to the best of my knowledge and that these specific elements are consistent with adopted local plans and development regulations.

Agenda Subject:
Auburn Valley Humane Society General Shelter Update (Thomas) (15 Minutes)

Date:
April 4, 2023

Department:
Finance

Attachments:
AVHS Presentation

Budget Impact:

Administrative Recommendation:

For discussion only.

Background for Motion:

Background Summary:

Auburn Valley Humane Society (AVHS) is contracted to provide animal control services for the City of Auburn. As part of this contract, the Council periodically reviews the mandatory services and related fee schedule to ensure fees are competitive with other local shelters. Additionally, AVHS recently celebrated 10 years of operations and will be presenting a summary of their 10 years of service in Auburn.

I. CALL TO ORDER

II. PUBLIC PARTICIPATION

A. Public Participation

The City Council Meeting was held in person and virtually.

B. Roll Call

Councilmembers present: Deputy Mayor James Jeyaraj, Bob Baggett, Kate Baldwin, Larry Brown, Cheryl Rakes, and Yolanda Trout-Manuel. Councilmember Robyn Mulenga was excused.

Department directors and staff members present include: Senior City Staff Attorney Harry Boesche, Assistant Chief of Police Samuel Betz, Director of Innovation and Technology David Travis, Director of Finance Jamie Thomas, Director of Community Development Jeff Tate, Assistant Director of Engineering Services Jacob Sweeting, Senior Traffic Engineer James Webb, Assistant Traffic Engineer Kenneth Clark, Senior Transportation Planner Cecile Malik, Economic Development Coordinator Abid Rahmani, Utility Engineering Manager Ryan Vondrak, Senior Planner Josh Steiner, Sewer Utility Engineer Robert Elwell, Water Utility Engineer Senait Gebreeyesus, Storm Drainage Engineer Tim Carlaw, Business Systems Analyst Chrissy Malave, and Deputy City Clerk Hannah Scholl.

III. AGENDA MODIFICATIONS

There were no modifications to the agenda.

IV. ANNOUNCEMENTS, REPORTS, AND PRESENTATIONS

A. Auburn Valley Humane Society General Shelter Update (Thomas) (15 Minutes)

Director Thomas introduced Phil Morgan, President of the Auburn Valley Humane Society (AVHS), who provided Council with an overview of the history of AVHS, the AVHS Thrift Store, and the merge with NW Spay &

Neuter Center, statistics over the last 10 years, special programs, fundraising events, pet licensing, services offered, and proposed fee increases.

Council discussed public stray intake statistics, number of Veterinarians and their compensation, breed restrictions, volunteer services, after hour emergency care, and revenue increases. Council thanked Phil for all his hard work over the years.

V. AGENDA ITEMS FOR COUNCIL DISCUSSION

A. Ordinance No. 6900 (Thomas) (20 Minutes)

An Ordinance amending Ordinance No. 6879, the 2023-2024 Biennial Operating Budget Ordinance, and Ordinance No. 6888, the 2023-2024 Biennial Capital Budget, authorizing amendment to the City of Auburn 2023-2024 Budget as set forth in Schedule “A” and Schedule “B”

Director Thomas provided Council with an overview of the 2023 Budget Amendment No. 1 including types of adjustments, summary of changes for the General Fund, General Fund impact, APRA projects budget, summary of changes for all other remaining funds; Hotel/Motel Tax, Parks Construction Fund, Mitigation Fee Fund, and the Capital Improvement Fund.

Council discussed the ARPA Funds, and the Broken Window Program.

Councilmember Baldwin requested to explore and discuss what it would look like to potentially add the Broken Window Repair Assistance Program as a line item in the Budget with an earmark of $100,000.00. Consensus was asked for and received.

B. Resolution No. 5701 (Thomas) (15 Minutes)

A Resolution reviewing a schedule of prices for services provided by the Auburn Valley Humane Society to ensure competitive service prices

Director Thomas provided Council with an overview of Resolution No. 5701.

Council discussed the proposed fees.

C. 2024 Comprehensive Plan Update (Tate) (60 Minutes)

A presentation by City staff as an introduction to the Periodic Comprehensive Plan update due in 2024, including anticipated program milestones

Planner Steiner provided Council with an overview of the 2024 Comprehensive Plan Framework and updates including the Community Development Elements, the purpose and scope, planning policies, state and regional requirements, and policy updates.

Council discussed the Planned Unit Development (PUD) requirements, the

Business Improvement Area (BIA) and Downtown Auburn Cooperative (DAC), demographics, historic preservation element, and the climate change element.

Coordinator Abid Rahmani provided Council with an overview of the Economic Development Element including the goals and objectives, challenges, policies and actions.

Council discussed unoccupied commercial spaces and policies.

Assistant Director Sweeting and Planner Malik provided Council with the Capital Facilities Element including the 2023-2028 Capital Facilities Plan, anticipated policy and framework. They also discussed the Transportation Element including the role within the Comprehensive Plan, required components, new approaches, and policy.

Manager Vondrak and Engineers Elwell, Carlaw, and Gebreeyesus provided Council with an overview of the Public Works Utilities Elements including general and private utilities, water, sanitary sewer, and storm drainage, considerations and policies.

Council discussed capacity planning, clean water, recycling, and illegal dumping.

Director Faber provided Council with an overview of the Parks, Recreation, and Open Space Element including anticipated policy and framework, and the timeline.

Council discussed number of park spaces and acres, and the Auburn Arts and Culture Center opening timeframe.

D. Transportation Advisory Board 2022 Annual Report (Gaub) (10 Minutes)

Planner Malik introduced Peter Di Turi, Board Chair of the Transportation Advisory Board (TAB), they provided Council with an overview of the TAB 2022 Annual Report including roles of staff and Board members, focus areas, and the 2023 workplan.

Council discussed the Sounder Train Schedule, and Light Rail opportunities for Auburn.

E. 2022 State of Our Streets (SOS) Report (Gaub) (20 Minutes)

Engineers Webb and Clark provided Council with an overview of the 2022 State of Our Streets including definitions, Pavement Condition Index, Summary of the 2022 Street Conditions, Local Street Program Fund, Arterial/Collector Program Fund, projects completed in 2022, future projects, and next steps.

Council discussed current and future projects.

VI. ADJOURNMENT

There being no further business to come before the Council, the meeting was adjourned at 8:46 p.m.

APPROVED this 1st day of May, 2023.

_____ _____

JAMES JEYARAJ, DEPUTY MAYOR Hannah Scholl, Deputy City Clerk

Agendas and minutes are available to the public at the City Clerk's Office, on the City website (http://www.auburnwa.gov), and via e-mail. Complete agenda packets are available for review at the City Clerk's Office.

Date: July 3, 2023

Re: Ordinance #6911 – 2023-2024 Budget Amendment #2

Budget Amendment #2 is the second amendment of the City of Auburn's 2023-2024 biennial budget, and the second budget amendment for calendar year 2023. For details on specific requests to amend the 2023 budget, please refer to the accompanying ***Schedule A, Summary of 2023 Budget Adjustments by Fund***.

The main purpose of the second budget amendment of the year is to adjust budgeted 2023 beginning fund balances to match 2022 ending fund balances per accounting records at year end. City-wide 2023 budgeted beginning fund balances are adjusted by a net increase of $0.9 million.

Additional items included in this amendment are a conversion of one part-time FTE to full-time, closure of the BIA Fund, acceptance and expenditure of new grants, funding adjustments, limited new fund costs not anticipated in the 2023 budget, and transfer dollars among funds to enable certain amendments.

Adjust Budgeted Beginning Fund Balance: This amendment adjusts 2023 budgeted beginning fund balances to be equal to 2022 ending fund balances. Total adjustments by fund type are:

• General Fund (Fund 001)	$ 6,294,923
• Special Revenue Funds	398,519
• Debt Service Funds	-202,529
• Capital Funds	-2,545,105
• Enterprise Funds	-3,251,870
• Other Funds	218,961
TOTAL	**$ 912,899**

FTE Conversion: The Administration Department requests to reclassify one Multimedia Assistant position from 0.75 FTE to 1.0 FTE. The department has agreed to permanently reduce budget in other areas in order to fund this position, creating a net-zero impact to operating expenditures. The request is presented here for transparency and approval.

BIA Fund: The Business Improvement Area Fund was originally scheduled to be spent down and closed in 2024, with its activity moving to the General Fund. This timeline has been accelerated, and the fund will now be closed in 2023. This amendment requests an additional **$45,941** in budget authority in order to spend down the BIA Fund's remaining balance.

Grants: New grants and grant adjustments in this budget amendment total **$4,429,360** in revenues and **$4,930,516** in associated expenditures, including:

• General Fund (Fund 001)	$ 30,200
• Arterial Street Fund (Fund 102)	560,000
• Arterial Street Preservation Fund (Fund 105)[1]	1,284,356
• Municipal Park Construction Fund (Fund 321)	50,000
• Capital Improvement Projects Fund (Fund 328)[2]	1,104,610
• Local Revitalization Fund (Fund 330)	1,598,650
• Storm Drainage Capital Fund (Fund 462)[3]	302,700
TOTAL	**$ 4,930,516**

Funding Adjustments: Funding adjustment requests included in this budget amendment revise the revenue or expenditure authority for existing programs. Total expenditure funding adjustment requests net to **$1,995,945**, and include:

• Increase budget for M&O Facility Improvements (upgrade electrical service and add light duty maintenance bays)	$ 866,000
• Increase budget for C Street SW Preservation[4]	838,465
• Adjust fleet budget for prior year expenses	332,980
Carry forward water rights mitigation plan	230,000
• M&O Fuel Island Replacement	175,300
• Contribution of Affordable Housing Tax revenue to SKHHP	152,900
• Flock safety cameras and software for Police Department[5]	150,000
• Reallocate funding from Dykstra Footbridge to Arts & Culture Center[6]	100,000
• Increase budget for D Street SE/23rd Street SE Storm Improvements[7]	0
• Reschedule R Street SE Widening Project to future years	(830,000)
• Net other adjustments in this category	(19,700)
TOTAL	**$ 1,995,945**

[1] Includes Lea Hill Roundabout Project WSDOT grant and matching funds accelerated from 2024 to 2023.
[2] Includes Lea Hill Safe Routes to Schools grant and matching funds accelerated from 2024 to 2023.
[3] Includes unanticipated TIB grant for cp2102 4th Street Preservation.
[4] This expenditure increase is mitigated by $288,465 in expected revenue from a pavement mitigation agreement with Icon Materials, lowering the net fund balance impact to $550,000.
[5] This is a reallocation of funding from the ARPA-mitigated Cameras for Qualified Census Tracts project. This increase to the IT Operations Fund budget has an accompanying reduction in expense in the IT Capital Projects Fund.
[6] This is a reallocation of funding from the ARPA-mitigated Dykstra Footbridge project. This increase to the Capital Improvements Fund budget has an accompanying reduction in expense in the Municipal Park Construction Fund.
[7] This increase is offset by unanticipated grant revenue received for the 4th Street preservation project, so has a net zero impact on expenditures. The $302,700 increase is presented in the **Grants** section. It is included here for transparency.

New Funding Requests: Requests for new funding included in this budget amendment add spending authority for new programs and unexpected expenditures. Total new funding requests equal $903,100[8], and include:

• SKHHP and Habitat for Humanity affordable homeownership project	$ 300,000
• Utilize insurance recovery fund Auburn Avenue Theater rebuild	228,200
• Use of drug seizure funds to improve Auburn PD range	70,000
• Utilize insurance recovery to fund replacement of public art stolen from Centennial Park	55,900
• National Opioid Settlement funding	52,000
• 2024 Comprehensive Transportation Plan update	50,000
• Police supernumerary position fully reimbursed by Criminal Justice Training Center[9]	0
TOTAL	**$ 756,100**

Transfers: Transfers between funds to accomplish specific budget amendment requests total **$4,859,180**.

The following table summarizes the current and revised budget as a result of this amendment.

Table 1: 2023 Budget as Amended

2023 Amended Budget	**$ 481,653,642**
Budget Amendment #2 (Ord #6911)	12,359,913
Budget as Amended	**$494,013,555**

- ❖ 2. Summary of proposed 2023 budget adjustments by fund and department (Schedule A)
- ❖ 3. Summary of proposed changes to adopted 2023 budget by fund (Schedule B)

[8] The SKHHP homeownership project is recognized as a $300,000 expense in both the General Fund and SKHHP agency Fund for accounting purposes, but is only presented here once.

[9] Funding for one Officer to be assigned to CJTC for a 3-year duration. The reimbursement received for the Officer's costs will be used to fund a supernumerary position to backfill the Officer assigned to CJTC. No additional expenditure authority is authorized by this amendment, as supernumerary positions are not budgeted.

ORDINANCE NO. 6911

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AMENDING ORDINANCE NO. 6879, THE 2023-2024 BIENNIAL OPERATING BUDGET ORDINANCE, AND ORDINANCE NO. 6888, THE 2023-2024 BIENNIAL CAPITAL BUDET, AUTHORIZING AMENDMENT TO THE CITY OF AUBURN 2023-2024 BUDGET AS SET FORTH IN SCHEDULE "A" AND SCHEDULE "B"

WHEREAS, the Auburn City Council at its regular meeting of November 21, 2022, adopted Ordinances No. 6879 and 6888 which adopted the City of Auburn 2023-2024 Biennial budget; and

WHEREAS, the Auburn City Council at its regular meeting of April 14, 2023, adopted Ordinance No. 6900 (BA#1), which amended Ordinances No. 6879 and 6888 which adopted the City of Auburn 2023-2024 biennial budget; and

WHEREAS, the City of Auburn deems it necessary to appropriate additional funds to the various funds of the 2023 budget as outlined in this Ordinance (BA#2); and

WHEREAS, this Ordinance has been approved by one more than the majority of all councilpersons in accordance with RCW 35A.34.200.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON DO ORDAIN AS FOLLOWS:

Section 1. Amendment of the 2023-2024 Biennial Budget. The 2023-2024 Biennial Budget of the City of Auburn is amended pursuant to Chapter 35A.34 RCW, to reflect the revenues and expenditures as shown on Schedule "A" attached hereto and incorporated herein by reference. The Mayor of the City of Auburn,

Washington is hereby authorized to utilize revenue and expenditure amounts shown on said Schedule “A” and Schedule “B”. A copy of said Schedule “A” and Schedule “B” is on file with the City Clerk and available for public inspection.

Section 2. Implementation. The Mayor is authorized to implement those administrative procedures necessary to carry out the directives of this legislation.

Section 3. Severability. The provisions of this ordinance are declared to be separate and severable. The invalidity of any clause, sentence, paragraph, subdivision, section, or portion of this ordinance, or the invalidity of the application of it to any person or circumstance, will not affect the validity of the remainder of this ordinance, or the validity of its application to other persons or circumstances.

Section 4. Effective date. This Ordinance will take effect and be in force five days from and after its passage, approval, and publication as provided by law.

2023 Budget Amendment #2

CITY COUNCIL STUDY SESSION

JULY 10, 2023

Budget Adjustment #2

Types of Adjustments in BA#2

1. Adjust Beginning Fund Balance in each fund
2. New requests
3. Add grant funded programs
4. Adjust capital projects

General Fund – Summary of Changes

1. $6,294,923 net adjustment to Beginning Fund Balance
2. $133,000 in new requests (9 items)
   - Includes reinstating authority for a supernumerary in PD
3. $15,200 in new Grant funded programs (1 grant)

General Fund Adjustments – New Request Details and Fund Balance Impact

NEW REQUEST DETAILS

Description	Revenue	Expenditure	Net Impact	
HR Safety App	$ -	$ 50,000	$ (50,000)	*
2024 Transportation Comp Plan	-	50,000	(50,000)	*
Golf Course Equipment	-	27,100	(27,100)	*
National Opiod Settlement	52,000	52,000	-	
SKHHP Capital Project	300,000	300,000	-	
SHB 1406 Tax to SKHHP	-	152,900	(152,900)	
Training Officer at WSCJTC	147,000	-	147,000	
Reallocate Vehicle Budget	58,000	58,000	-	
Replace Stolen Art	55,900	55,900	-	
Total	**$ 612,900**	**$ 745,900**	**$ (133,000)**	

*2022 Carryforward items missed in BA#1

GENERAL FUND BALANCE IMPACT

Budgeted Ending Fund Balance	**$**	**9,369,560**
Add: 1/1/2023 Adjustment		6,294,923
Less: New Requests		(133,000)
Amended Ending Fund Balance	**$**	**15,531,483**

All Other Funds - Summary of Changes

1. $(5,382,024) Net Fund Balance Adjustments to all funds other than the General Fund
2. $626,921 in new requests (6 items)
3. $1,092,156 in grant funded projects (8 items)
4. $2,100 in capital projects (5 items)

All Other Funds – Detailed Requests

Type of Request	Description	Fund	Revenue	Expenditure	Net Impact
1x New Requests	Range Improvements	Drug Forfeiture	$ -	$ 70,000	$ (70,000)
1x New Requests	BIA Fund Closure	BIA Fund	-	45,941	(45,941)
1x New Requests	Equipment for Storm and Golf Course	Equipment Replacement	27,100	332,980	(305,880)
1x New Requests	Reimbursed Costs from Lumen	Arterial Street	24,900	-	24,900
1x New Requests	Water Rights Mitigation	Water Fund	-	230,000	(230,000)
Ongoing	Convert .75 FTE to 1.0 FTE Mutimedia Asst.	Mulitmedia	-	-	-
Grant Funded	Lea Hill Rd/104th Ave SE	Arterial Street	476,000	560,000	(84,000)
Grant Funded	Lake Tapps Pkwy	Arterial Street Preservation	750,000	1,284,356	(534,356)
Grant Funded	M&O Facility Improvements	Equipment Replacement	141,000	641,000	(500,000)
Grant Funded	R St SE/21st St SE Roundabout	Mitigation Fees	185,000	-	185,000

Grant Funded	Arts and Culture Center	Capital Improvement	968,060	968,060	-
Grant Funded	Auburn Ave. Theater	Local Revitalization	1,826,850	1,826,850	-
Capital Projects	R St SE/29th St SE	Arterial Street	-	(830,000)	830,000
Capital Projects	F Street Non-Motorized Imp.	Arterial Street	-	65,000	(65,000)
Capital Projects	C Street SW Preservation	Arterial Street Preservation	288,465	838,465	(550,000)
Capital Projects	Fulmer Park	Parks Construction	-	37,600	(37,600)
Capital Projects	M&O Fuel Island	Equipment Replacement	-	175,300	(175,300)
Total			**$ 4,715,125**	**$ 6,432,102**	**$ (1,716,977)**

Next Steps:

July 17, 2023

- Adopt BA#2

AGENDA BILL APPROVAL FORM

Agenda Subject:
Water System Comprehensive Plan Update - Policy Review (Gaub) (30 Minutes)

Date:
July 3, 2023

Department:
Public Works

Attachments:
Presentation
Draft 2024 Water System Policies & Criteria

Budget Impact:
Current Budget: $0
Proposed Revision: $0
Revised Budget: $0

Administrative Recommendation:

For discussion only.

Background for Motion:

Background Summary:

The City is updating the Water System Comprehensive Plan (Plan) in coordination with the update of the City's overall Comprehensive Plan. The purpose of the Plan is to guide the City with respect to future activities and improvements for the Storm Drainage Utility.

The purpose of this discussion is to provide Council with the staff recommended policies to be incorporated into the Plan. The policies are the foundation of the Plan and outline how the water system should be operated and maintained and are grouped within goal statements that are headlined under the following categories:

- Business Practices
- Service Area
- Operations and Maintenance
- Financial
- Planning
- Environmental Stewardship
- Design and Construction

Staff will review the recommended policies as provided in the attachment with specific focus on the additions, changes and removals from the previous Plan.

COUNCIL SCHEDULE OVERVIEW

April 10, 2023	• City Comprehensive Plan Overview
July 10, 2023	• General Water Policies Review & Discussion
2023 Date TBD	• Draft Plan Discussion
2024 Date TBD	• Final Draft Review & Discussion • Resolution for Adoption

SERVICE • ENVIRONMENT • ECONOMY • CHARACTER • SUSTAINABILITY • WELLNESS • CELEBRATION

GOALS – POLICIES

Goals

- Broad statements indicating a general aim or purpose to be achieved.

Policies

- Topic-specific statement providing guidelines for current and future decision-making.
- Indicates a clear commitment of the local legislative body.

SERVICE • ENVIRONMENT • ECONOMY • CHARACTER • SUSTAINABILITY • WELLNESS • CELEBRATION

GOALS – POLICIES

- Policies Format
  - Goal Statements
  - Policies Reflecting Goal Statements

1. BUSINESS PRACTICES

Goal 1.1: To employ recognized best business practices resulting in creating a sustainable, efficient, and cost-effective operation of the water utility.

Policy 1.1.1 Element of City Comprehensive Plan
Incorporate the Water Comprehensive Plan as an Element of the City's Comprehensive Plan.

Policy 1.1.2 Water Service By Others
Water Service supplied by outside purveyors within Auburn City limits are required to obtain a franchise with the City and are required to conform to all federal, state, and local laws and regulations. [ACC 20.02.040 and 20.04]

INTRODUCTION

- 4 Water Service Areas
  - Academy, Lakeland Hills, Lea Hill & Valley
- Sources of Water:
  - 7 active Wells, 2 Springs & 2 Interties
- ≈ 302 miles Water Main
- 15,047 Service Connections
- 10 Pump Stations
  - 2 Treatment Facilities
- 8 Reservoirs

Academy Pump Station

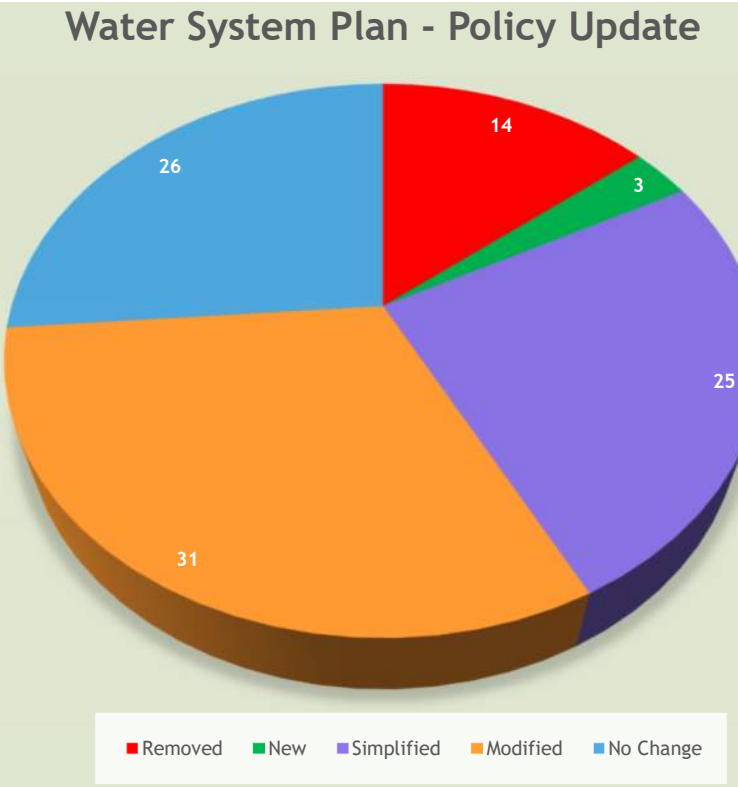
WATER POLICY CATEGORIES

1. Business Practices
2. Service Area
3. Operations and Maintenance
4. Financial
5. Planning
6. Environmental Stewardship
7. Design and Construction

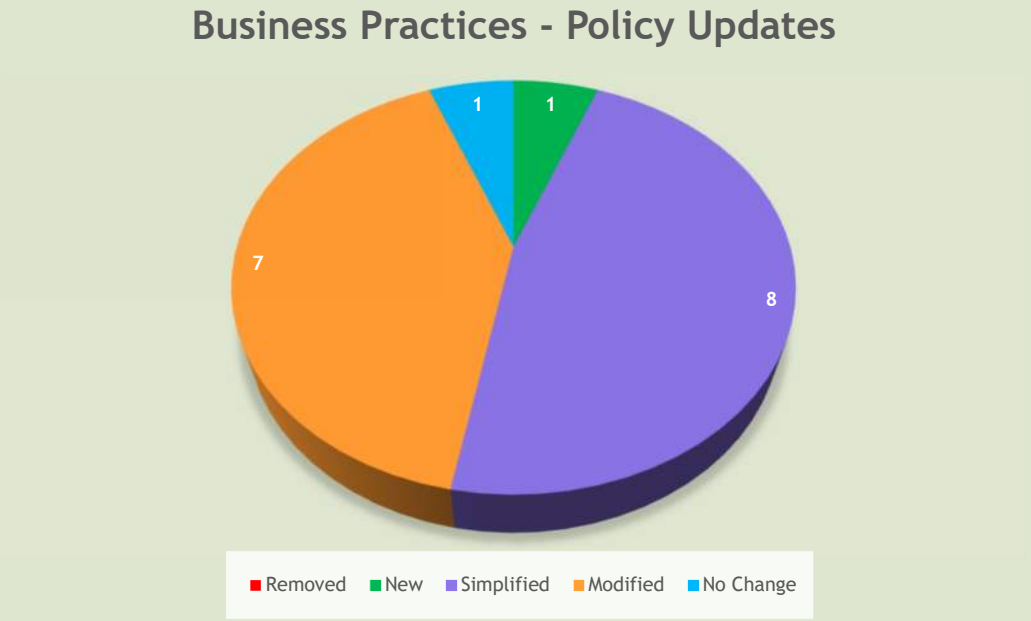


WATER POLICY UPDATE

- **Types of Updates (from Previously Adopted Plan)**

1. **Removed Policies**
2. **Simplified Policy Language**
3. **Modified Policies**
4. **New Policies**

WATER POLICY UPDATE



- **Policy Update Criteria**
  - Compliance with other Regulations
  - Increase Efficiency
  - Enhance Sustainability
  - Avoid Redundancy
  - Remove Action Plan
  - Minimize Circular References

SERVICE • ENVIRONMENT • ECONOMY • CHARACTER • SUSTAINABILITY • WELLNESS • CELEBRATION

BUSINESS PRACTICES - GOAL

Goal 1: To employ recognized best business practices resulting in creating a sustainable, efficient, and cost-effective operation of the water utility.

SERVICE • ENVIRONMENT • ECONOMY • CHARACTER • SUSTAINABILITY • WELLNESS • CELEBRATION

BUSINESS PRACTICES – MODIFIED POLICIES

- **Policy 1.2 Water Service By Others**
  - Water Service supplied by outside purveyors within Auburn City limits are required to obtain a franchise with the City and are required to conform to all federal, state, and local laws and regulations. [ACC 20.02.040 and 20.04]

- **Policy 1.3: Asset Improvements**
  - The City will develop and implement system improvements, infrastructure renewal (repair, rehabilitation, or replacement), and operations and maintenance programs for the water system according to asset management principles that address levels of service, address the triple bottom line (economic, social, and environmental benefits and costs), minimize asset life cycle costs, and incorporate risk management into decision-making.

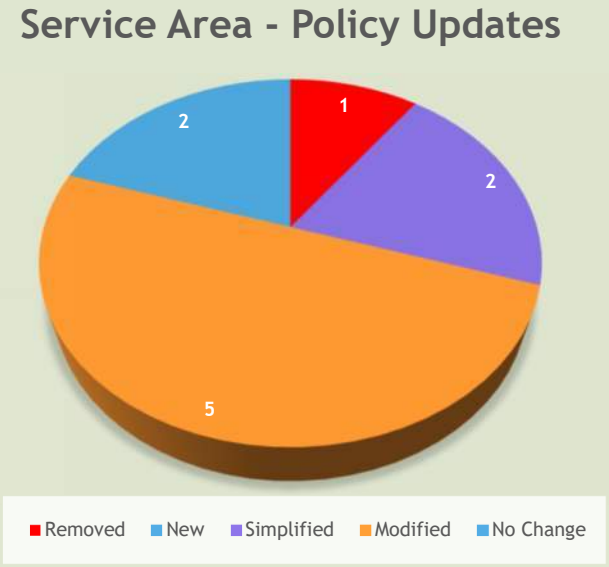
- **Policy 1.6: Condition Assessments of Assets**
  - The City will perform condition assessments of assets through development and implementation of an inspection schedule for all assets.

BUSINESS PRACTICES – MODIFIED POLICIES

- **Policy 1.7: Design Life of Assets**
  - The City will assign industry standard design life for all assets. The actual physical assessment will be compared to the theoretical design life to determine the optimal economic life. The City will attempt to repair or replace system assets before they exceed their economic life.
- **Policy 1.9: Addressing Water Quality Complaints**
  - The City will monitor the frequency, location, and details of all water quality complaints. At a minimum, the City will respond, research the cause of, and propose control methods once an issue is verified and documented.

BUSINESS PRACTICES – MODIFIED POLICIES

- **Policy 1.11: Public Health Protection**
  - The City will conduct regular inspections of its water system and any non-public water supply systems connected to it, in collaboration with the Washington State Department of Health.
  - To protect the municipally owned water supply from contamination, the City will establish and publish rules and regulations as needed. The City will take all necessary measures to enforce the regulations to prevent any risks to public health associated with water supply contamination. [ACC 13.12.080]



- **Policy 1.15: Fire Hydrant Use**
  - Fire hydrant use is a permitted activity unless that use is conducted by authorized City or Fire Authority employees. [ACC 13.06.415 & 13.12.035]

BUSINESS PRACTICES – NEW POLICIES

- **Policy 1.1: Element of City Comprehensive Plan**
  - **Incorporate the Water Comprehensive Plan as an Element of the City's Comprehensive Plan.**

SERVICE AREA - GOAL

Goal 2: Ensure sustainable provision of retail water services through the development and implementation of policies that define the duty to serve and conditions of service, while adhering to best management practices to meet the needs of the community.

SERVICE AREA – REMOVED POLICIES

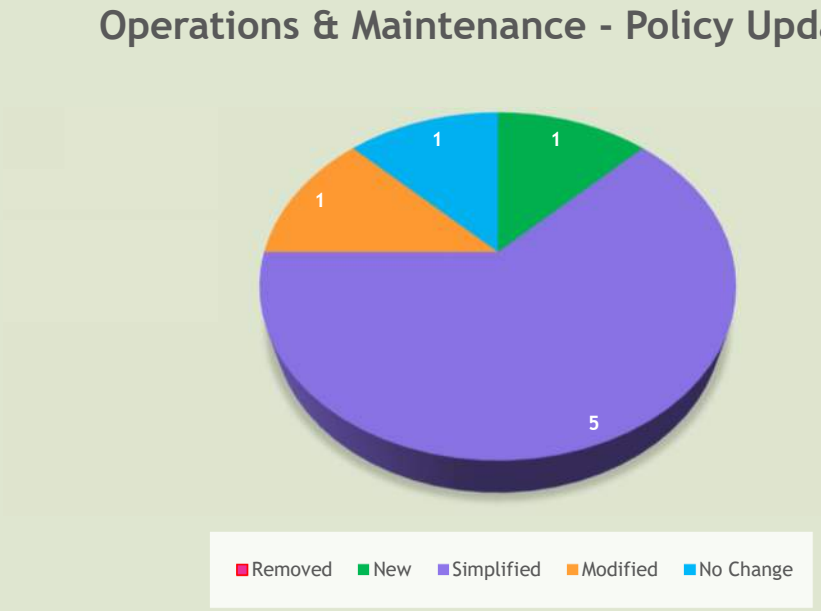
- **Policy 3.3.7: Agency Coordination**
  - The City should coordinate closely with adjacent jurisdictions to determine applicable regulatory requirements, growth projections, and opportunities for joint projects. Agreements should be prepared between the pertinent parties on all joint projects.
  - The City shall protect the municipal water supply from adverse impacts resulting from the activities of adjacent purveyors.

SERVICE AREA – MODIFIED POLICIES

- **Policy 2.4: Conditions of Service**
  - For areas within the Retail Water Service Area, the City will provide water service to new customers, conditioned on the agreement that any infrastructure improvements provided by the developer/development is in compliance with City water system standards.
  - In addition, the City requires that residents within the City's Potential Annexation Areas will receive water services from the City, to the extent practical. The City will work with existing water purveyors within the City limits and within the City's Potential Annexation Areas in order to provide fair and equitable water service. New customers within the City's Potential Annexation Areas are to sign an Annexation Agreement before a Water Availability Certificate is issued.

SERVICE AREA – MODIFIED POLICIES

- **Policy 2.5: Satellite Systems Assistance**
  - The City recognizes there may be instances where satellite system water providers require assistance with providing water service. In these cases, the City may consider providing assistance on a case-by-case basis. The assistance could take a variety of forms, such as offering technical support and/or access to City infrastructure to help with the provision of water service. Ultimately, the decision to provide assistance will be based on the specific needs and circumstances of the water provider and will be made on a case-by-case basis after careful consideration.



- **Policy 2.6: Satellite System Connecting to City Service**
  - The City will not assume ownership of any satellite water system, unless it meets all current City standards. The responsibility and all costs to bring a satellite system up to City standards and any infrastructure necessary to connect the satellite system to the City's water system network, shall be the system owner(s). [ACC 13.06.150]

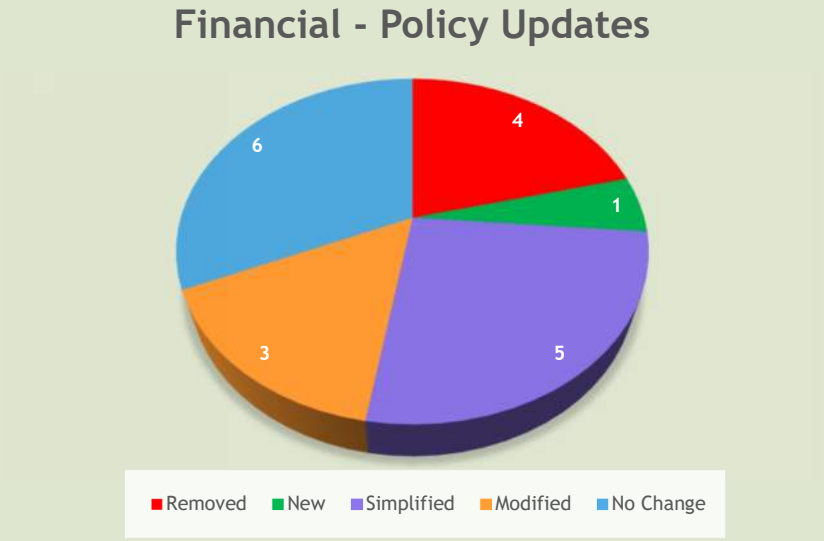
SERVICE AREA – MODIFIED POLICIES

- **Policy 2.8: Concurrency of Improvements for Service**
  - **Provision of water service, including supply, in the City's Retail Water Service Area is conditioned on concurrency with development and the necessary water facilities, including water right permit(s) and certificate(s), are available and adequate to serve the development at the time it is ready for occupancy and use, as required by the Water Comprehensive Plan. Water service may not always be immediately available for a new development. The property developer must provide the required water system facilities before the City can provide water service, if the facilities do not already exist, or are not under construction or under a binding development agreement.**

OPERATIONS AND MAINTENANCE - GOAL

Goal 3: Employ operations and maintenance best management practices, which includes a commitment to training and certification opportunities for its employees.

OPERATIONS AND MAINTENANCE – MODIFIED POLICIES



- **Policy 3.5: Pressure Reducing Valve Program**
  - To maximize system operational efficiency, conserve resources and provide consistent water service to customers of the water system, the City will adjust all water pressure reducing valves to the proper setting based on the frequency outlined in the operation and maintenance chapter of the Comprehensive Water Plan.

OPERATIONS AND MAINTENANCE – NEW POLICIES

- **Policy 3.7: ADU Metering**
  - **Property owners with accessory dwelling units (ADUs) on a single-family property may choose to supply the ADU from a master meter serving both units or separate meter installed to serve the ADU at owner's expense. Water usage of each ADU will be billed to the property owner based on readings from the master meter or individual meter serving the ADU, whichever is applicable.**

FINANCIAL - GOAL

Goal 4: Manage the water utility in a professional manner in compliance with applicable laws, regulations, and City financial policies, which requires ongoing monitoring of revenues and expenses in order to make prudent business decisions and report to City officials, as needed, regarding the status of utility operations.

FINANCIAL – REMOVED POLICIES

- **Policy 3.5.2: Water Use from Fire Hydrants**
  - All hydrant water sales shall be metered and require a hydrant meter use permit that authorizes the use of hydrants.

- **Policy 3.5.7: Capital Facilities Plan (summary)**
  - Fund utilities through user fees and grants.
  - Explore joint ventures for facility construction and coordination.
  - Provide assistance and funding for beneficial developer-initiated improvements.
  - Prioritize financial feasibility before constructing facilities.

FINANCIAL – REMOVED POLICIES

- **Policy 3.5.8: Capital Project**
  - Enterprise fund working capital in excess of that needed for operations may be used for capital needs in order to conserve the debt capacity of those funds for major facility expansions to meet future needs. [BBP Policies – 6, (Page 41)]

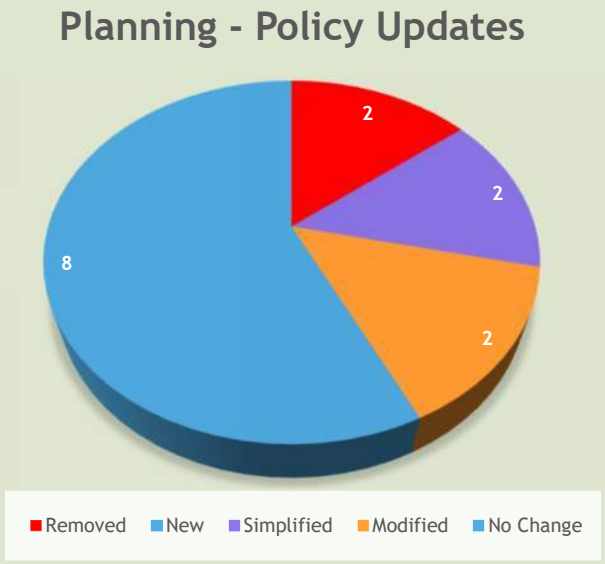
- **Policy 3.5.14: Water Rate Uniformity**
  - Water rates should be uniform for all water utility customers of the same class throughout the City.

FINANCIAL – MODIFIED POLICIES

- **Policy 4.7: Development Charge Cost Recovery**
  - The City shall continue to recognize the overall system impacts of new development upon the City water system through the collection and appropriate use of system development charges or similar fees. [ACC 13.41.020]

- **Policy 4.9: Water Rate Levels**
  - Water rates will be set at a level sufficient to cover the on-going expenses of the water utility, including operations, maintenance, repair, replacement, and capital improvements, as well as the general business expenses. Additionally, rates shall account for the depreciation of assets to ensure that the utility has adequate funds to maintain its infrastructure and facilities. Furthermore, the rates shall enable the water utility to maintain sufficient reserves.

FINANCIAL – MODIFIED POLICIES



- **Policy 4.11: Water Rate Equity**
  - The water-rate structure will allocate costs between the different customer classes. Rates will be established on a "Cost of Service" basis so that each customer class pays its prorated share of the total costs needed to operate and maintain the water utility. All projected future costs will be allocated to each customer class by using established criteria that reflect the benefit that each customer class receives from the service. A Cost of Service and Rate Study will be performed periodically to ensure ongoing equity between customer classes.

FINANCIAL – NEW POLICIES

- **Policy 4.3: Rates and Charges**
  - **The City Council establishes rates and charges to be paid by a customer receiving water service from the City. As a condition of supplying a customer water service, the City reserves the right to temporarily discontinue service at any time without notice to the customer and the City will not be liable for damages for service interruptions or failure. [ACC 13.06.065]**

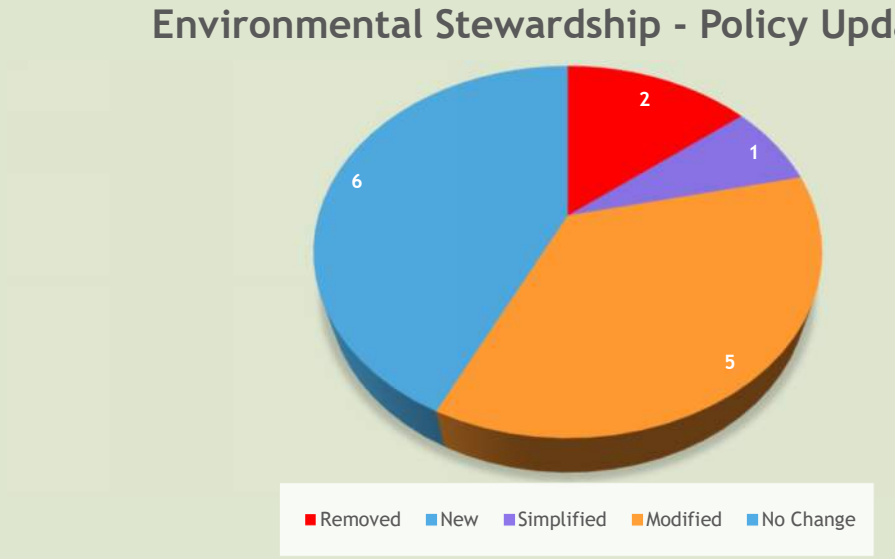
PLANNING - GOAL

Goal 5: Employ best management practices related to water supply planning and capital facility planning activities, which includes conditions for service extensions, fire system responsibility, oversizing, and service pressures and flow.

PLANNING – REMOVED POLICIES

- **Policy 3.6.1: Connections for Existing Wells (summary)**
  - Landowners must extend the municipal water system at their own cost when applying for water service. Owners near a water line must connect to the municipal system for new nonresidential construction.
  - Private well owners must seek authorization to transfer water rights and decommission wells before connecting to the municipal system. Auburn water system applicants must agree not to install irrigation wells.

- **Policy 3.6.6: Fire System Responsibility**
  - The City should provide and maintain water-system infrastructure to deliver adequate water for fire protection to retail customers served by the multi-source municipal water system. The multi-source water system, including water mains, storage facilities, hydrants, booster-pump stations, and related facilities, shall be designed to meet all applicable codes at the time of construction. The City should maintain, repair, or replace mains, lines, hydrants, and valves as necessary to keep the facilities in good working order.



PLANNING – MODIFIED POLICIES

- **Policy 5.1: Service Extension (summary)**
  - Water system extensions must meet City codes and standards. Upgrades are required for systems not meeting City standards. Water mains must be extended across the full width of the property for future extensions.
  - Water system extensions for new developments should be built before or alongside development. Financing options like System Development Charges credits, Local Improvements Districts, and payback agreements may be utilized.

- **Policy 5.5: Capital Facilities Plan**
  - The City is required by the Washington State Growth Management Act to adopt a Capital Facilities Plan. The plan will include capital projects and capital project programs for the water utility for a six-year period. Identified projects and programs will be financially constrained and broken-down into capacity and non-capacity projects and programs. The City will match revenue sources to capital projects based on sound fiscal policies.

ENVIRONMENTAL STEWARDSHIP - GOAL

Goal 6: Employ best management practices related to water environmental stewardship and the Water utility's dedication to develop and implement facilities and programs that will protect the environment, including water conservation, demand management and water shortage response.

ENVIRONMENTAL STEWARDSHIP – REMOVED POLICIES

- **Policy 3.7.3: Natural Resources**
  - Promote conservation of energy, water, and other natural resources in the location and design of public facilities. [CFP Policy 3.1, (Page 13)]

- **Policy 3.7.9: Mining Impacts**
  - The City shall consider impacts of mining on groundwater and surface water quality as well as possible changes in hydrology as a result of the mining during the environmental review process and require appropriate mitigating measures to prevent water quality degradation. [EN-50, (Page 9-11)]

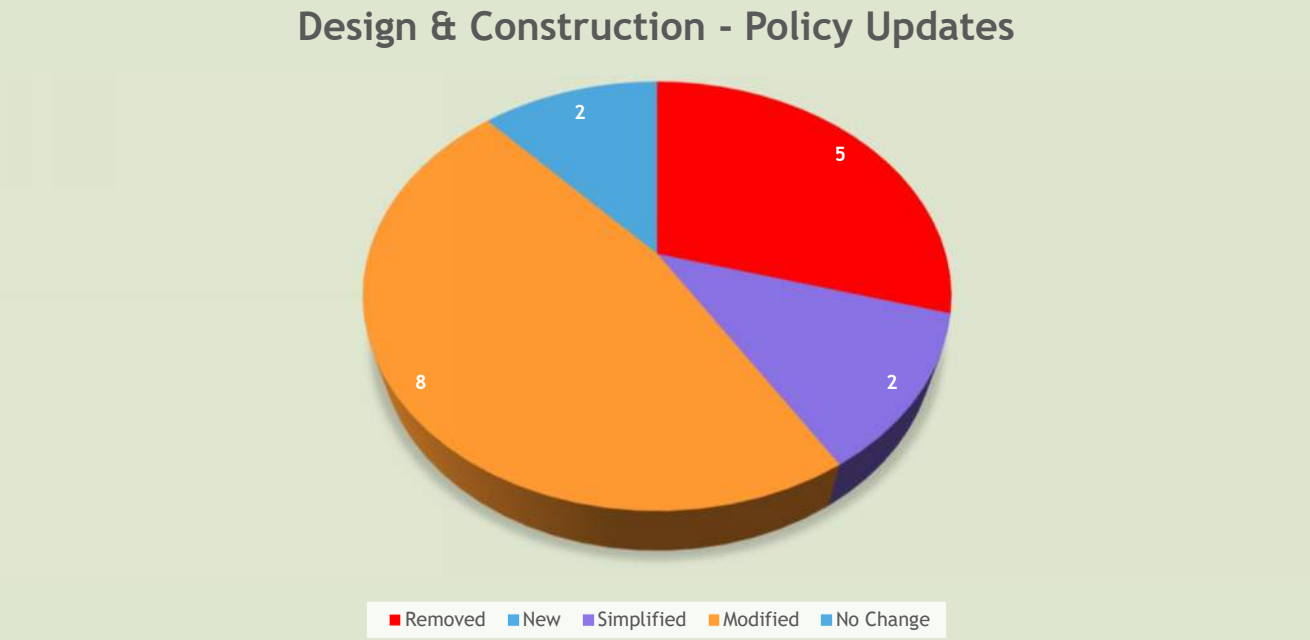
ENVIRONMENTAL STEWARDSHIP – MODIFIED POLICIES

- **Policy 6.2: Water Shortage or Emergency Response**
  - In the event of a current or threatened water-supply shortage, the Mayor may declare a water shortage or emergency and issue water use restrictions or conservation measures as necessary and consistent with the Water Shortage Response plan. The Public Works Department is responsible for implementing these measures and making reasonable attempts to notify affected customers. [ACC 13.14]

- **Policy 6.3: Water Quality Responsibility**
  - The City shall provide water to all water-system customers that meet all state and federal water quality standards. The City shall take the actions necessary to ensure that all water quality standards are met to the point of delivery (meter). The customer is responsible for maintaining water quality from the meter to the actual point of use.

ENVIRONMENTAL STEWARDSHIP – MODIFIED POLICIES

- **Policy 6.4: Water Resource Protection**
  - The City shall maintain a Water Resource Protection Program that incorporates best management practices and adaptive management concepts, to protect the City's groundwater supplies from degradation.
  - The Comprehensive Water Plan shall provide for the evaluation of existing and potential future groundwater sources with regard to threats to the quantity and quality of such sources. The Plan shall ensure that strategies are established for the protection of groundwater sources that are used or likely to be used for public water supplies.



- **Policy 6.6: Springs Protection**
  - Protection of the City's Coal Creek Springs and West Hill Spring watersheds, wells, and other sources shall be a high priority in the designation of appropriate land uses in the vicinity of these areas and facilities.

ENVIRONMENTAL STEWARDSHIP – MODIFIED POLICIES

- **Policy 6.8: Water Use Efficiency Goals**
  - **The City will continue implementation of its existing Water Use Efficiency Program. The City will target a 1 percent reduction in equivalent residential unit value for each year until reaching a planning Equivalent Residential Unit (ERU) value of 172 gpd/ERU. A goal of the City is to reduce peaking factors that occur during the high usage periods to maximize existing water supply sources. City's goal shall be in compliance and consistent with all applicable local, state, and federal laws and regulations within the Retail Water Service Area.**

DESIGN AND CONSTRUCTION - GOAL

Goal 7: Employ best management practices related to the design and construction of water facilities.

SERVICE • ENVIRONMENT • ECONOMY • CHARACTER • SUSTAINABILITY • WELLNESS • CELEBRATION

DESIGN AND CONSTRUCTION – REMOVED POLICIES

- **Policy 3.8.6: Fire Protection Services**
  - Services for fire protection are required to be installed with the proper backflow assemblies. It shall be mandatory for the installation to be made with an approved water flow alarm, as approved by the City and the chief of the Fire Authority, or their delegate, on each such service installation. [ACC 13.06.270]

- **Policy 3.8.10: Fire Flow Duration**
  - The time or duration, for which a fire flow is to be provided, is based on the quantity of fire flow required:
    - Required Fire Flow; Duration
      - 2,000 gpm or less: 2 hours
      - 2,001 to 3,000 gpm: 3 hours
      - 3,001 to 4,000 gpm: 4 hours
      - 4,001 to 5,000 gpm: 5 hours
      - 5,001 to 6,000 gpm: 6 hours
      - 6,001 to 7,000 gpm: 7 hours
      - 7,001 to 8,000 gpm: 8 hours

DESIGN AND CONSTRUCTION – REMOVED POLICIES

- **Policy 3.8.13: Construction Standards (summary)**
  - Projects must comply with standard plans and specifications from the Washington State Department of Transportation and County road standards. City will maintain services during construction and reconnect owner-maintained service pipes upon completion.

- **Policy 3.8.14: Hydrants (summary)**
  - Dead-end mains supplying hydrants over 50 feet must be at least 8 inches in size.
  - New hydrants in commercial, industrial, and multifamily residential areas must be supplied by at least 8-inch mains.
  - Hydrants must meet specific standards for valve opening, hose nozzles, steamer port, and connections.
  - Maximum distances between fire hydrants vary based on zone type.
  - Hydrant spacing requires approval from the Fire Authority, typically at street intersections.
  - Hydrant leads should be at least 6 inches in diameter, with leads over 50 feet being at least 8 inches in diameter.

DESIGN AND CONSTRUCTION – REMOVED POLICIES

- **Policy 3.8.15: Dead-End Mains**
  - **Provisions shall be made wherever appropriate in any project for looping all dead-end or temporarily dead-end mains. Construction plans must be approved by the appropriate water authority prior to the commencement of construction. Where it is not feasible at the time of approval and installation to loop a water system, the loop requirement may be relaxed if the intent of the code is met and a stub is provided on the main for future expansion. (Ordinance 3064 § 1, 1976) [ACC 13.16.090]**

DESIGN AND CONSTRUCTION – MODIFIED POLICIES

- **Policy 7.1: Service Ownership / Responsibility**
  - The City shall own and maintain the service line between the main and the meter, the meter and setter, the meter box, and tail piece. The property owner shall own and maintain the service line from the tail piece to the point of service including pressure-reducing valves, pumps, or cross-connection assemblies beyond the meter. [ACC 13.06.027]
  - For unmetered connections (fire sprinklers), City ownership ceases at the fitting on the water line. Where on-site fire hydrants are required, the City shall own the mains and hydrants located within established easements, unless the on-site mains and hydrants are located behind a master meter and designated as private.

- **Policy 7.2: Source of Supply**
  - The City shall have sufficient system-wide supply facilities (including both permanent and emergency interties) to meet the Maximum Day Demand with the largest active water supply source out of service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the well or spring pumps should be provided.

DESIGN AND CONSTRUCTION – MODIFIED POLICIES

- **Policy 7.3: Pump Stations**
  - A minimum of two pumps or a complete spare pump will be provided for each distribution system pump station to provide flexibility and system redundancy. Where multiple pumps are provided, the pumps will be sized so that the station can meet Maximum Day Demand flow conditions with the largest pump out-of-service. If the area is not served by gravity by a reservoir, booster pumps (along with any supply available) will be sized to provide peak hour demand and fire demand for the service area should the largest pump be out-of- service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the station with any single pump out of service should be provided.

- **Policy 7.4: Storage Reservoirs**
  - Reservoir redundancy is not a requirement for service areas where the Maximum Day Demand and fire demand can be met by supply or pumping.

DESIGN AND CONSTRUCTION – MODIFIED POLICIES

- **Policy 7.8: Fire-Flow Quantity**
  - The quantity of water available for firefighting establishes an important level of service for a water system. The fire flow requirements shall be based on the minimum City fire flow requirements specified in the current City of Auburn Engineering Design Standards. Additional fire flow may be required per the International Fire Code.
  - Where the City determines higher fire flows are required than the minimums, the higher flow will be the criterion used to determine the required system improvements. Fire flows are to be provided during Maximum Day Demand at the pressure requirements discussed in the paragraphs on Distribution System.

DESIGN AND CONSTRUCTION – MODIFIED POLICIES

- **Policy 7.9: Reservoir Sizing**
  - The City reservoir storage components shall be sized to meet WAC 246-290-235 and Department of Health recommendations and requirements.

- **Policy 7.11: System Pressure**
  - The City of Auburn has established a criterion for minimum pressure within the water distribution system of 30 psi for all new facilities during Peak Hour Demand.
  - The distribution system shall be capable of providing required fire flow under Maximum Day Demand conditions. During these conditions, a minimum pressure of 20 psi is allowed at any point within the distribution system when firefighting storage and equalizing storage are depleted (WAC 246-290-230 Distribution Systems). The maximum target pressure within the water distribution system is 80 psi.

DESIGN AND CONSTRUCTION – MODIFIED POLICIES

- **Policy 7.12: Elements of Required Storage**
  - The City storage reservoir volume requirements are comprised of three separate categories: Equalizing Storage (when necessary), Fire Fighting Storage, and Emergency Storage. In addition, reservoirs may include a "dead storage" volume that is not useful because of the water system configuration.
  - Auburn will provide sufficient storage volume so that each storage component is provided separately, recognizing that a fire could occur during an emergency (supply or pump station out-of-service). As a result, nesting of storage (using the same storage for both emergency and firefighting) is not acceptable and the City requires these volumes to be stacked. Evaluation of the required reservoir volume must be done by analyzing each reservoir independently to ensure that adequate storage is provided to meet the needs of customers within the reservoir service area. Storage within a zone of higher elevation can be used to meet the storage requirements of lower zones served by the reservoir.

WATER POLICY REVIEW

Any Questions?

POLICIES AND CRITERIA

INTRODUCTION

The City of Auburn (City) manages the water utility in accordance with established water- system policies that govern various facets of utility operations. City policies are established by the City in order to provide a vision or mission of the water utility and to provide a framework for the design, operation, and ongoing wellbeing of the City's water utility.

The policies included in this Water Comprehensive Plan are developed specifically for the City's multi-source municipal water system and seek to provide consistent treatment to all utility customers and to provide documentation to current water-system customers as well as those considering service from the City. It should be noted that what is included in these policies is limited to those things related to the water system and its design, maintenance, and operation. There are other policies and criteria that pertain to the water utility the City has in place regarding land use, development and financial components, which are not directly addressed in this plan, that could still have an impact on the needs of the water system. These policies and criteria may include factors such as zoning regulations, building codes, infrastructure requirements, and financing options. These additional factors will be considered when planning for the water system and to meet the needs of the community in a sustainable and effective matter.

The City's Water Comprehensive Plan is based upon the following mission statement for the water utility:

"The City will provide for the efficient, environmentally sound and safe management of the existing and future water system within Auburn's service area."

The City's Water utility policies are grouped within goal statements that are headlined under the following categories:

- Business Practices
- Service Area
- Operations and Maintenance
- Financial
- Planning
- Environmental Stewardship
- Design and Construction

1.0 BUSINESS PRACTICES

Goal 1: To employ recognized best business practices resulting in creating a sustainable, efficient, and cost-effective operation of the water utility.

Policy 1.1 Element of City Comprehensive Plan

Incorporate the Water Comprehensive Plan as an Element of the City's Comprehensive Plan.

Policy 1.2 Water Service By Others

Water Service supplied by outside purveyors within Auburn City limits are required to obtain a franchise with the City and are required to conform to all federal, state, and local laws and regulations. [ACC 20.02.040 and 20.04]

Policy 1.3 Asset Improvements

The City will develop and implement system improvements, infrastructure renewal (repair, rehabilitation, or replacement), and operations and maintenance programs for the water system according to asset management principles that address levels of service, address the triple bottom line (economic, social, and environmental benefits and costs), minimize asset life cycle costs, and incorporate risk management into decision-making.

Policy 1.4 Connections to Water System

Any connection to the public water system requires obtaining an approved utility permit for service and said connection shall be made in accordance with City of Auburn Engineering Design and Construction Standards. [ACC 13.06.050, 13.06.090 and 13.06.100]

Policy 1.5 Asset Database

The City will maintain an asset database to be used in prioritizing asset maintenance and repair and replacement activities. The database includes asset age and material information, and will be validated and updated through inspections, records review and other available information.

Policy 1.6 Condition Assessments of Assets

The City will perform condition assessments of assets through development and implementation of an inspection schedule for all assets.

Policy 1.7 Design Life of Assets

The City will assign industry standard design life for all assets. The actual physical assessment will be compared to the theoretical design life to determine the optimal economic life. The City will attempt to repair or replace system assets before they exceed their economic life.

Policy 1.8 Maintenance Activities for Asset Management

The City will conduct maintenance activities at a level that is consistent with optimizing system reliability, asset economic life, and system performance. The City will develop schedules for maintenance of all water system assets.

Policy 1.9 Addressing Water Quality Complaints

The City will monitor the frequency, location, and details of all water quality complaints. At a minimum, the City will respond, research the cause of, and propose control methods once an issue is verified and documented.

Policy 1.10 Security of Assets

Adequate measures will be taken to ensure system security. At a minimum, the City will maintain security at water facilities using the Supervisory Control and Data Acquisition system for intrusion alerts.

Policy 1.11 Public Health Protection

The City will conduct regular inspections of its water system and any non-public water supply systems connected to it, in collaboration with the Washington State Department of Health.

To protect the municipally owned water supply from contamination, the City will establish and publish rules and regulations as needed. The City will take all necessary measures to enforce the regulations to prevent any risks to public health associated with water supply contamination. [ACC 13.12.080]

Policy 1.12 Cross-Connection Prohibited

Installing or maintaining a cross connection which will endanger the water quality of the municipal water system is strictly prohibited and shall be abated immediately or water service may be discontinued. [ACC 13.12.040]

Policy 1.13 Cross-Connection Control

To obtain water service to a property, the City may require any customer to install a pressure reducing valve, backflow prevention assembly, or pressure relief valve or similar devices at any location where the City determines there is a need to protect the municipal water system. [ACC 13.12.070]

Policy 1.14 All Meters

All water meters owned by the City, shall not be removed except by the City. Lost, broken, or damaged water meters shall be replaced or repaired by or under the direction of the City. [ACC 13.06.330]

Policy 1.15 Fire Hydrant Use

Fire hydrant use is a permitted activity unless that use is conducted by authorized City or Fire Authority employees. [ACC 13.06.415 & 13.12.035]

Policy 1.16 Delinquent Accounts

The City has established procedures for disconnecting water service to delinquent accounts for non-payment. [ACC 13.06.290]

Policy 1.17 Leak Adjustment

The City has established procedures for property owners to request a limited leak adjustment of the water bill for water that leaked from the service line between the City water meter and the point where the line enters the building.

2.0 SERVICE AREA

Goal 2: Ensure sustainable provision of retail water services through the development and

implementation of policies that define the duty to serve and conditions of service, while adhering to best management practices to meet the needs of the community.

Policy 2.1 Wholesale Water

The City will plan to provide water service to wholesale customers with firm contracts. As supply permits, the City may provide water to wholesale customers without firm contracts unilaterally or as part of a capital improvement partnership agreement.

Policy 2.2 Government Consistency

The City's Water Comprehensive Plan will be consistent with local, county, and state land use authorities.

Policy 2.3 Duty to Serve

The City will plan to provide water service to all customers within the City's Retail Water Service Area (RWSA) in accordance with WAC 246-290-106. Revisions to the City's RWSA shall be made only by written agreement and in accordance with local, county and state regulations.

Policy 2.4 Conditions of Service

For areas within the Retail Water Service Area, the City will provide water service to new customers, conditioned on the agreement that any infrastructure improvements provided by the developer/development is in compliance with City water system standards.

In addition, the City requires that residents within the City's Potential Annexation Areas will receive water services from the City, to the extent practical. The City will work with existing water purveyors within the City limits and within the City's Potential Annexation Areas in order to provide fair and equitable water service. New customers within the City's Potential Annexation Areas are to sign an Annexation Agreement before a Water Availability Certificate is issued.

Policy 2.5 Satellite Systems Assistance

The City recognizes there may be instances where satellite system water providers require assistance with providing water service. In these cases, the City may consider providing assistance on a case-by-case basis. The assistance could take a variety of forms, such as offering technical support and/or access to City infrastructure to help with the provision of water service. Ultimately, the decision to provide assistance will be based on the specific needs and circumstances of the water provider and will be made on a case-by-case basis after careful consideration.

Policy 2.6 Satellite System Connecting to City Service

The City will not assume ownership of any satellite water system, unless it meets all current City standards. The responsibility and all costs to bring a satellite system up to City standards and any infrastructure necessary to connect the satellite system to the City's water system network, shall be the system owner(s). [ACC 13.06.150]

Policy 2.7 Water Supply Management and Planning

The City will promote effective water supply management and planning consistent with the "South King County Coordinated Water System Plan," as well as regional water supply and conservation

goals.

Policy 2.8 Concurrency of Improvements for Service

Provision of water service, including supply, in the City's Retail Water Service Area is conditioned on concurrency with development and the necessary water facilities, including water right permit(s) and certificate(s), are available and adequate to serve the development at the time it is ready for occupancy and use, as required by the Water Comprehensive Plan. Water service may not always be immediately available for a new development. The property developer must provide the required water system facilities before the City can provide water service, if the facilities do not already exist, or are not under construction or under a binding development agreement.

3.0 OPERATIONS AND MAINTENANCE

Goal 3: Employ operations and maintenance best management practices, which includes a commitment to training and certification opportunities for its employees.

Policy 3.1 System Monitoring and Operation

The City will monitor the water system through use of computerized control system and adjust operations as necessary for efficient water system operation.

Policy 3.2 Regular Inspection of Facilities

The City will conduct routine inspections and maintenance on its water facilities including wells, springs and booster pump stations, in accordance with the frequency outlined in the operation and maintenance section of the Water Comprehensive Plan.

Policy 3.3 Meter Reading

Water service meters shall be read regularly to document customers water usage for billing purposes.

Policy 3.4 Customer Service

The City is committed to resolving customer complaints. All complaints are documented and reviewed and tended to by the appropriate staff member for investigation and resolution.

Policy 3.5 Pressure Reducing Valve Program

To maximize system operational efficiency, conserve resources and provide consistent water service to customers of the water system, the City will adjust all water pressure reducing valves to the proper setting based on the frequency outlined in the operation and maintenance chapter of the Comprehensive Water Plan.

Policy 3.6 Employee Certification

The City will pay for annual certification, provide time and tuition for certification training courses, and time for certification exams. In addition, the City will provide its staff opportunities for obtaining the continuing education required to maintain certification.

Policy 3.7 ADU Metering

Property owners with accessory dwelling units (ADUs) on a single-family property may choose to supply the ADU from a master meter serving both units or separate meter installed to serve the ADU at owner's expense. Water usage of each ADU will be billed to the property owner based on readings from the master meter or individual meter serving the ADU, whichever is applicable.

4.0 FINANCIAL

Goal 4: Manage the water utility in a professional manner in compliance with applicable laws, regulations, and City financial policies, which requires ongoing monitoring of revenues and expenses in order to make prudent business decisions and report to City officials, as needed, regarding the status of utility operations.

Policy 4.1 Source Meters

All sources will be metered to measure the amount of water produced and calibrated annually to ensure an accurate accounting of water produced.

Policy 4.2 Fiscal Stewardship

All moneys due to the City for water service of any kind or for penalties relating to the municipally owned water system of the City shall be paid to the water fund. The water fund will not be commingled with any other fund or funds of the City. [ACC 13.06.030]

Policy 4.3 Rates and Charges

The City Council establishes rates and charges to be paid by a customer receiving water service from the City. As a condition of supplying a customer water service, the City reserves the right to temporarily discontinue service at any time without notice to the customer and the City will not be liable for damages for service interruptions or failure. [ACC 13.06.065]

Policy 4.4 Self-Sufficient Funding

The City maintains the water utility fund as a self-supporting enterprise fund. Water utility revenues come primarily from customer charges and are dependent upon established rates. The Revised Code of Washington requires that utility funds be used only for stated utility purposes. Although General Fund revenues can be used to fund water utility programs, the City has a general policy of not doing so. The City budgeting process should include a balanced and controlled annual water utility budget. This requires careful preparation of expense and revenue projections that may be reviewed by City management, the general public, and the City Council before approval of any rate increases.

Policy 4.5 Capital Improvement Program Level

Funding for the Capital Improvement Program (CIP) identified in the budget will be maintained at a level sufficient to assure system integrity. To the extent that the annual level of the CIP investment can be managed by scheduling and scoping of projects, the funding will be provided at a uniform level to avoid significant fluctuations and to reduce impacts on the operating budget and related rate increases. The City will maintain reasonable level of reserves in the CIP fund in order to manage cash flow variation caused by the nature of the cost and timing of projects. Utility sold

revenue bonds, Utility Local Improvement Districts, State Public Works Trust Fund loans, any available grants, system development charges and developer contributions will be considered for funding the future CIP projects.

Policy 4.6 System Development Charges

A water utility systems development charge is imposed upon all lands inside the boundary of the City and all lands outside the boundary of the City, which utilize water facilities. The utility systems development charge as set forth in the City fee schedule will be computed to consider the future and/or current value of the utility system's fixed assets, excluding contributions by developers, and outstanding bonded indebtedness, and will also consider an appropriate service unit. [ACC 13.41.030]

Policy 4.7 Development Charge Cost Recovery

The City shall continue to recognize the overall system impacts of new development upon the City water system through the collection and appropriate use of system development charges or similar fees. [ACC 13.41.020]

Policy 4.8 Payback Agreement

Payback agreements for public street and utility system improvements may be approved by the City Council. The City engineer may execute the agreements once City Council has granted approval. [ACC 13.25.050]

Policy 4.9 Water Rate Levels

Water rates will be set at a level sufficient to cover the on-going expenses of the water utility, including operations, maintenance, repair, replacement, and capital improvements, as well as the general business expenses. Additionally, rates shall account for the depreciation of assets to ensure that the utility has adequate funds to maintain its infrastructure and facilities. Furthermore, the rates shall enable the water utility to maintain sufficient reserves.

Policy 4.10 Water Rate Structure

The water-rate structure will be set by customer class based on costs to serve each customer class. The water-rate structure shall support water conservation and wise use of water resources objectives as required by State law.

Policy 4.11 Water Rate Equity

The water-rate structure will allocate costs between the different customer classes. Rates will be established on a "Cost of Service" basis so that each customer class pays its prorated share of the total costs needed to operate and maintain the water utility. All projected future costs will be allocated to each customer class by using established criteria that reflect the benefit that each customer class receives from the service. A Cost of Service and Rate Study will be performed periodically to ensure ongoing equity between customer classes.

Policy 4.12 Frequency of Water Rate Adjustments

Water rates will be evaluated as part of the water utility budgeting process to ensure that budgeted expenses, including the impact of increasing water-supply regulations, are reflected in current

rates.

Policy 4.13 Financial Reserve Levels

The City shall maintain water utility cash balances to serve as a contingency reserve fund. The fund should maintain a balance of $1,000,000 to cover working capital needs and emergency contingencies and cash flow fluctuations.

Policy 4.14 Charges for Services Outside the City Limits

The City may include a rate adjustment for water service outside the City limits.

Policy 4.15 Low-Income Assistance Program

The Utility Rate Exemption Program currently provides water rate assistance for specific low-income senior customers or for specific low-income totally or permanently disabled customers. [ACC 13.24.010]

5.0 PLANNING

Goal 5: Employ best management practices related to water supply planning and capital facility planning activities, which includes conditions for service extensions, fire system responsibility, oversizing, and service pressures and flow.

Policy 5.1 Service Extension

The City will consider extending water system services to areas within its existing RWSA, consistent with adopted annexation policies, and subject to the recovery of costs and the availability of sufficient financial and staffing resources. Property owners will be responsible for equitable share of extension costs upon connection to the system.

Water system extensions must comply with current City codes and engineering design and construction standards. Connection to existing systems not meeting City water system standards must be upgraded at property owner's expense before service is provided.

To serve new developments, water system extensions must be built prior to or simultaneously with development, according to the size and configuration identified by the Comprehensive Water Plan. The City may participate in financing through System Development Charges credits, Local Improvements Districts (LID), and/or payback agreements, as allowed by law, to support such improvements.

All persons or LIDs desiring to extend City water mains in the City must extend across the full width of the property being served to accommodate future extensions. [ACC 13.08.020]

Policy 5.2 Facility Extension Agreement

The City requires a Facility Extension Agreement to be executed for all public water system extensions constructed by development.

Policy 5.3 System-Wide Reliability

The City shall invest the resources necessary to construct, maintain, and renew water-system infrastructure and equipment to ensure that customers are provided consistent, reliable service in accordance with WAC 246-290-420 Reliability and Emergency Response. Wherever possible, the City should anticipate system interruptions and design and operate the system to minimize the impact of such interruptions to customers.

Policy 5.4 Emergency Preparedness

The City shall update, as needed, a citywide Emergency Response Plan, complying with applicable RCW and WAC requirements, that will include the water system operations. The water system portion of the plan should ensure that adequate provisions are in place to provide for an organized response to the most likely kinds of emergencies that might endanger the health and safety of the general public or the operation of the municipal water system.

Policy 5.5 Capital Facilities Plan

The City is required by the Washington State Growth Management Act to adopt a Capital Facilities Plan. The plan will include capital projects and capital project programs for the water utility for a six-year period of time. Identified projects and programs will be financially constrained and broken-down into capacity and non-capacity projects and programs. The City will match revenue sources to capital projects based on sound fiscal policies.

Policy 5.6 Emergency Interties

The City should support emergency interties with adjacent water systems where there is a benefit to both water systems. Interties increase reliability of the City-wide water system during emergencies and other unusual operating circumstances.

Policy 5.7 Water Supply Interties

The City should consider water-supply interties on a case-by-case basis. Water supply interties should provide benefits to both water service providers and should not compromise the City's ability to serve its existing customers or its future water supply needs.

Policy 5.8 Water Supply Planning

The City's objective is to assure a continuous, safe water supply to meet firm customer demands. Provision of water service must be consistent with the goals, objectives, and policies of the City of Auburn Comprehensive Water Plan. Effects of past water conservation will be considered when projecting future water needs. Future water demands will be estimated using existing water usage patterns and projected future populations developed by the City's comprehensive Plan and consistent with the Puget Sound Regional Council data.

Policy 5.9 Oversizing

When determined to be necessary by the City to install water lines larger than are required to serve adjacent properties, the City may enter into an agreement to compensate the developer for the difference in cost of the oversizing. [ACC 13.08.040]

Policy 5.10 Service Pressure

The City should provide potable water to customers in sufficient quantity to meet maximum day demands at a pressure that meets or exceeds all minimum applicable regulations, except during emergency conditions. Property owners may install private booster pumps to achieve higher pressures under supervision of the City and in accordance with WAC 246-290-230 Distribution Systems.

Policy 5.11 Water for Irrigation

Water used for irrigation by non-single-family residential customers, shall be provided through an irrigation meter. Deduct meters shall not be used to supply water for irrigation. [ACC 13.06.230]

Policy 5.12 Water Meters

Water meters shall be placed on every domestic and irrigation service line. [ACC 13.06.320]

6.0 ENVIRONMENTAL STEWARDSHIP

Goal 6: Employ best management practices related to water environmental stewardship and the Water utility's dedication to develop and implement facilities and programs that will protect the environment, including water conservation, demand management and water shortage response.

Policy 6.1 Conservation Promotion

The City will promote water conservation and the efficient use of water resources to help ensure a sustainable water supply.

Policy 6.2 Water Shortage or Emergency Response

In the event of a current or threatened water-supply shortage, the Mayor may declare a water shortage or emergency and issue water use restrictions or conservation measures as necessary and consistent with the Water Shortage Response plan. The Public Works Department is responsible for implementing these measures and making reasonable attempts to notify affected customers. [ACC 13.14]

Policy 6.3 Water Quality Responsibility

The City shall provide water to all water-system customers that meet all state and federal water quality standards. The City shall take the actions necessary to ensure that all water quality standards are met to the point of delivery (meter). The customer is responsible for maintaining water quality from the meter to the actual point of use.

Policy 6.4 Water Resource Protection

The City shall maintain a Water Resource Protection Program that incorporates best management practices and adaptive management concepts, to protect the City's groundwater supplies from degradation.

The Comprehensive Water Plan shall provide for the evaluation of existing and potential future groundwater sources with regard to threats to the quantity and quality of such sources. The Plan

shall ensure that strategies are established for the protection of groundwater sources that are used or likely to be used for public water supplies.

Policy 6.5 Sustainable Development

The City strives to be a sustainable community: meeting the needs of the present while preserving the ability of future generations to meet their own needs.

Policy 6.6 Springs Protection

Protection of the City's Coal Creek Springs and West Hill Spring watersheds, wells, and other sources shall be a high priority in the designation of appropriate land uses in the vicinity of these areas and facilities.

Policy 6.7 Aquifer Recharge Area

The City shall consider the impacts of new development within aquifer recharge areas of potable water sources as part of its environmental review process and require any appropriate mitigation measures.[ACC 16.10.120.E]

Policy 6.8 Water Use Efficiency Goals

The City will continue implementation of its existing Water Use Efficiency Program. The City will target a 1 percent reduction in equivalent residential unit value for each year until reaching a planning Equivalent Residential Unit (ERU) value of 172 gpd/ERU. A goal of the City is to reduce peaking factors that occur during the high usage periods to maximize existing water supply sources. City's goal shall be in compliance and consistent with all applicable local, state, and federal laws and regulations within the Retail Water Service Area.

Policy 6.9 Non-Revenue Water

The City will strive to maintain levels of water leakage for its distribution system at less than 10 percent.

Policy 6.10 Leak Detection

The City is committed to a tight, non-leaking water distribution system. Each year the City will check approximately one-quarter of the water distribution system for leakage.

Policy 6.11 Reclaimed Water

The City will explore opportunities and evaluate options for wastewater reuse and rainwater reclamation on a case by case basis. These can serve as cost-effective and environmentally beneficial sources of water thereby increasing the security and reliability of the drinking water supply.

Policy 6.12 Aquifer Storage and Recovery

The City shall consider the use of aquifer storage and recovery as a conservation and demand management tool to make best use of City water resources.

7.0 DESIGN AND CONSTRUCTION

Goal 7: Employ best management practices related to the design and construction of water facilities.

Policy 7.1 Service Ownership / Responsibility

The City shall own and maintain the service line between the main and the meter, the meter and setter, the meter box, and tail piece. The property owner shall own and maintain the service line from the tail piece to the point of service including pressure-reducing valves, pumps, or cross-connection assemblies beyond the meter. [ACC 13.06.027]

For unmetered connections (fire sprinklers), City ownership ceases at the fitting on the water line. Where on-site fire hydrants are required, the City shall own the mains and hydrants located within established easements, unless the on-site mains and hydrants are located behind a master meter and designated as private.

Policy 7.2 Source of Supply

The City shall have sufficient system-wide supply facilities (including both permanent and emergency interties) to meet the Maximum Day Demand with the largest active water supply source out of service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the well or spring pumps should be provided.

Policy 7.3 Pump Stations

A minimum of two pumps or a complete spare pump will be provided for each distribution system pump station to provide flexibility and system redundancy. Where multiple pumps are provided, the pumps will be sized so that the station can meet Maximum Day Demand flow conditions with the largest pump out-of-service. If the area is not served by gravity by a reservoir, booster pumps (along with any supply available) will be sized to provide peak hour demand and fire demand for the service area should the largest pump be out-of- service. Since power continuity is a concern, auxiliary power, such as an installed or portable generator of sufficient capacity to power the station with any single pump out of service should be provided.

Policy 7.4 Storage Reservoirs

Reservoir redundancy is not a requirement for service areas where the Maximum Day Demand and fire demand can be met by supply or pumping.

Policy 7.5 Distribution System

The City will plan for and develop a dependable distribution network with pipeline redundancy for redirecting water to affected customers during pipeline failures and establishing multiple connections between service zones at various locations. While the aim is to create a looped water distribution system for reliability and fire flow, there may be cases where looping is not feasible, necessitating off-site improvements in developing areas. Larger water mains may be required for major distribution lines or areas with higher fire flow needs. Additionally, subdividing service area zones into smaller pressure zones aligned with topographic elevations guarantees consistent pressure in each zone.

Whenever a street is to be substantially reconstructed or a new street built, the City shall determine

whether water facilities in the street right a way shall be constructed or brought up to the size and configuration indicated by the Water Plan and Comprehensive Plan.

Policy 7.6 Fire Flow Requirements

The City has established two distinct and independent parts to the municipal water-system fire flow requirements within the City Retail Water Service Area. The first is a fire flow requirement established by the Fire Authority as a building-specific fire flow based on building use and materials of construction. The second is a multi-source municipal water system level of service criterion. The City shall require that both parts of the fire flow requirements be met as a condition of development and as a condition of any extension of the City water system.

New development, redevelopment, or change in use or occupancy (as defined by Auburn City Code) shall meet the full fire flow requirements as established by this policy. Change of occupancy is not intended to include change of tenants or proprietors. The applicant shall be responsible for installing all necessary facilities needed to serve the property and for complying with the City's development, and design and construction standards in order to meet these requirements.

Fire flow requirements for existing structures and uses or occupancies are those that were required at the time of construction, as determined by the Fire Authority and the City's water utility (since 1995). Such existing structures shall not be required to upgrade the municipal water-system infrastructure to meet current fire flow and development standards. Similarly, the City shall not be obligated to upgrade the existing water- system infrastructure to meet current fire-flow criteria and standards. The City should consider the benefit of improved fire flows when analyzing the need, design, and merits of municipal water-system improvements.

Policy 7.7 Fire-Flow Improvements

As resources become available, the City shall make the City's municipal water-system improvements to meet the current fire flow criteria. Such system improvements may include replacing undersized water mains and pumping stations or correcting fire hydrant deficiencies of spacing and standardization where current standards are not met. When prioritizing and scheduling system improvements, the City capital facilities planning procedures should consider the severity of deficiencies. The City should seek opportunities to make improvements in conjunction with other City projects to achieve economic efficiency.

Policy 7.8 Fire-Flow Quantity

The quantity of water available for firefighting establishes an important level of service for a water system. The fire flow requirements shall be based on the minimum City fire flow requirements specified in the current City of Auburn Engineering Design Standards. Additional fire flow may be required per the International Fire Code.

Where the City determines higher fire flows are required than the minimums, the higher flow will be the criterion used to determine the required system improvements. Fire flows are to be provided during Maximum Day Demand at the pressure requirements discussed in the paragraphs on Distribution System.

Policy 7.9 Reservoir Sizing

The City reservoir storage components shall be sized to meet WAC 246-290-235 and Department of Health recommendations and requirements.

Policy 7.10 Individual Service Area Water Supply Requirements

The City will provide sufficient water supply capacity to meet Maximum Day Demand for each of the four service areas (Valley service area, Academy service area, Lea Hill service area and the Lakeland Hills service area) and any sub systems within these service areas utilizing a combination of reliable sources, reliable pump stations and reservoirs in accordance with system reliability criteria.

Policy 7.11 System Pressure

The City of Auburn has established a criterion for minimum pressure within the water distribution system of 30 psi for all new facilities during Peak Hour Demand.

The distribution system shall be capable of providing required fire flow under Maximum Day Demand conditions. During these conditions, a minimum pressure of 20 psi is allowed at any point within the distribution system when firefighting storage and equalizing storage are depleted (WAC 246-290-230 Distribution Systems). The maximum target pressure within the water distribution system is 80 psi.

Policy 7.12 Elements of Required Storage

The City storage reservoir volume requirements are comprised of three separate categories: Equalizing Storage (when necessary), Fire Fighting Storage, and Emergency Storage. In addition, reservoirs may include a "dead storage" volume that is not useful because of the water system configuration.

Auburn will provide sufficient storage volume so that each storage component is provided separately, recognizing that a fire could occur during an emergency (supply or pump station out-of-service). As a result, nesting of storage (using the same storage for both emergency and firefighting) is not acceptable and the City requires these volumes to be stacked. Evaluation of the required reservoir volume must be done by analyzing each reservoir independently to ensure that adequate storage is provided to meet the needs of customers within the reservoir service area. Storage within a zone of higher elevation can be used to meet the storage requirements of lower zones served by the reservoir.

Ordinance 6912 Auburn Wholesale Rate update 2023
Exhibit A - Auburn Wholesale Water Rates 13-06-360
Memorandum Auburn Wholesale Water Rate
Auburn Wholesale Water Rate Presentation

Budget Impact:

Administrative Recommendation:

For discussion only.

Background for Motion:

Background Summary:

The City of Auburn has agreements to provide wholesale water to Lake Meridian Water District and the City of Algona. In 2022, the City contracted with FCS Group to perform a utility rate study, which included wholesale water rates, to review the adequacy of existing rates and propose new rates as appropriate. Ordinance 6912 amends section 13.06.360 of the City Code with proposed updates to the existing wholesale water rates in accordance with the findings of the FCS Group rate study analysis.

Meeting Date: July 10, 2023 Item Number:

ORDINANCE NO. 6912

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AMENDING SECTION 13.06.360 OF THE AUBURN CITY CODE (ACC), RELATING TO CITY UTILITY RATES

WHEREAS, pursuant to its powers in RCW 35.92, the City has established a water utility to serve its residents;

WHEREAS, consistent with its responsibilities to operate this utility in a cost-effective manner and in a manner that reflects the City's actual operating costs, the City periodically reviews its utility rate structure to ensure that its rates are set appropriately;

WHEREAS, in 2022, the City consulted with FCS Group to study the City's current water utility rates (including wholesale rates) against the City's cost of service delivery and revenue requirements;

WHEREAS, following the FCS Group utility rate review for wholesale customers conducted at City staff request, City staff recommends that City water utility rates should be adjusted as reflected in this Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, DO ORDAIN as follows:

Section 1. Amendment to City Code. Section 13.06.360 of the Auburn City Code is hereby amended to read as set forth in Exhibit A to this Ordinance.

Section 2. Implementation. The Mayor is authorized to implement those administrative procedures necessary to carry out the directives of this legislation.

Section 3. Severability. The provisions of this ordinance are declared to be separate and severable. The invalidity of any clause, sentence, paragraph, subdivision, section, or portion of this ordinance, or the invalidity of the application of it to any person or circumstance, will not affect the validity of the remainder of this ordinance, or the validity of its application to other persons or circumstances.

Section 4. Effective date. This Ordinance will take effect and be in force five days from and after its passage, approval, and publication as provided by law.

EXHIBIT A—ORD. 6912

ACC 13.06.360 Water service Rates – Generally.

A. Except as provided in subsections B and C of this section, effective January 1,2023, the monthly base rate for all water user classifications except interruptible wholesale shall be as set forth in Table 13.06.360-1 below.

Table 13.06.360-1.

	Monthly Charge		
Meter Size (inches)	**Effective January 1, 2023**	**Effective January 1, 2024**	**Effective January 1, 2025**
5/8, 3/4	$ 19.61	$ 21.08	$ 22.66
1 (Single-Family Residential)	$ 19.61	$ 21.08	$ 22.66
1 (All Other Classes)	$ 22.01	$ 23.66	$ 25.43
1-1/2	$ 23.96	$ 25.76	$ 27.69
2	$ 27.62	$ 29.69	$ 31.92
3	$ 53.13	$ 57.11	$ 61.39
4	$ 66.66	$ 71.66	$ 77.03
6	$ 85.18	$ 91.57	$ 98.44
8	$ 110.05	$ 118.30	$ 127.17
10	$ 156.25	$ 167.97	$ 180.57

	Charge per 100 cubic feet (ccf)		
Customer Class	**Effective January 1, 2023**	**Effective January 1, 2024**	**Effective January 1, 2025**
Single-Family Residential:			
0 to 7 ccf	$ 3.89	$ 4.18	$ 4.49
7.01 to 15 ccf	$ 4.75	$ 5.11	$ 5.49
Over 15 ccf	$ 5.40	$ 5.81	$ 6.25
Multifamily Residential	$ 4.65	$ 5.00	$ 5.38
Commercial	$ 4.90	$ 5.27	$ 5.67
Manufacturing/Industrial	$ 4.79	$ 5.15	$ 5.54
Schools	$ 5.22	$ 5.61	$ 6.03
Municipal/City Accounts	$ 4.83	$ 5.19	$ 5.58
Irrigation	$ 6.46	$ 6.94	$ 7.46
Wholesale (Algona)	$ 2.39	$ 2.45	$ 2.51

Fifty percent shall be added to all rates for water service for customers outside the city limits. City of Auburn utility taxes are included in the monthly rate for all customers except wholesale accounts. Wholesale rates exclude the 50 percent out-of-city service charge and state excise taxes.

B. Interruptible wholesale water supply customers shall pay monthly the sum of the following:

1. Standby Service Charge: the cost to maintain, repair, and replace the infrastructure required to provide water utility service to the interruptible wholesale water customer when the customer requests water supply from the city of Auburn. This is a fixed monthly charge and does not include the delivery of any quantity of water.

2. Usage Charge: the cost of water supply. The charge is based on actual water deliveries, if any, during the month times the usage rate.

3. Purchased Water Surcharge: In any month in which water is purchased from Tacoma Public Utilities or other external agency, the interruptible wholesale customer shall pay an additional charge of $1.82 per ccf, applied to the quantity of water purchased by the city of Auburn during the month to supply the interruptible wholesale customer.

Interruptible Wholesale Rates

Charge	Effective January 1, 2023	Effective January 1, 2024	Effective January 1, 2025
Standby Service Charge (per month)	$ 1,575.49	$ 1,583.74	$ 1,592.61
Usage Charge (per ccf)	$ 2.13	$ 2.19	$ 2.24
Purchased Water Surcharge (per ccf of water purchased)*	$ 1.82	$ 1.82	$ 1.82

* Subject to change if Tacoma Public Utilities updates its wholesale summer season peaking rate.

C. Water customers served by the City's Braunwood water system. City water customers served by the City's Satellite Water System for Braunwood Estates (approved by City Resolution 2114) shall be subject to the following monthly water service rates, effective January 1, 2023:

Monthly Charge

Meter Size (inches)	Effective January 1, 2023	Effective January 1, 2024	Effective January 1, 2025
3/4"	$ 19.61	$ 21.08	$ 22.66
1”	$ 19.61	$ 21.08	$ 22.66
1-1/2”	$ 23.96	$ 25.76	$ 27.69
2”	$ 27.62	$ 29.69	$ 31.92
3”	$ 53.13	$ 57.11	$ 61.39
4”	$ 66.66	$ 71.66	$ 77.03
6”	$ 85.18	$ 91.57	$ 98.44
8”	$ 110.05	$ 118.30	$ 127.17
10”	$ 156.25	$ 167.97	$ 180.57

Variable Charges based on ccf (100 cubic feet of water used)

Description	Effective January 1, 2023	Effective January 1, 2024	Effective January 1, 2025
B1 (0-7 ccf)	$3.89	$4.18	$4.49
B2 (7.01-15 ccf)	$4.75	$5.11	$5.49
B3 (15.01 – 25 ccf)	$5.40	$5.81	$6.25
B4 (25.01-38 ccf)	$6.00	$6.45	$6.93
B5 (38+ ccf)	$12.00	$12.90	$13.87

RE Wholesale Rate Update

INTRODUCTION

A Wholesale Water Rate Update is part of the 2022 contracted services with the City of Auburn under the Water, Sewer, and Storm Utilities Rate Study. The rate update is consistent with wholesale service agreements in effect and incorporates current conditions. The update uses the previously established wholesale rate study methodology for assignment of eligible asset infrastructure and utility operating costs.

The City currently has two wholesale water agreements in effect. One of the agreements is to provide permanent wholesale water services to the City of Algona (Algona). The other agreement is to provide interruptible wholesale service to Lake Meridian Water District (LMWD).

For both types of wholesale customers (permanent and interruptible) the City of Auburn charges wholesale rates that reflects the cost of providing the specific type of wholesale water service, with wholesale costs of service analyzed in the context of the overall City cost of water service. The cost-of-service analysis completed for this study is in accordance with the requirements of both Agreements.

WHOLESALE RATE UPDATE

The wholesale rate methodology used to establish and update wholesale rates is the Utility Basis approach. This approach recovers applicable operating and maintenance costs, plus a capital cost recovery based on the original cost of capital investment committed to the wholesale customer's service. The capital cost recovery includes two components: depreciation of fixed assets and a rate of return on the net investment or book value of those wholesale serving assets. The three key wholesale rate components are summarized below:

- ***Operating and Maintenance Expenses (O&M)*** – related to ongoing maintenance and operation of eligible assets.
- ***Annual Depreciation Expense*** – of eligible fixed assets related to the loss in value of facilities, not restored by current maintenance, due to wear and tear, decay, and obsolescence as useful life is consumed.
- ***Return on Investment*** – applied to net system investment intended to pay the annual interest cost of debt capital and provide owner equity return for the facilities used to provide water service.

WHOLESALE RATE UPDATE

The purpose of a cost-of-service analysis is to provide a rational basis for distributing the eligible costs of utility service to each customer based on the facilities used to deliver water service and in proportion to the demands they place on the system. The following list highlights some of the key documents and assumptions used in the development of the wholesale water rate update.

- 2022 operations and maintenance (O&M) budget, projected forward for the 2023 test year
- Debt service balance through 12/31/2022 (to calculate the weighted average cost of capital)
- Booked fixed assets through 12/31/2021 including original cost, accumulated depreciation, and annual depreciation
- Customer use and revenue for 2022
- Contract capacity demands per Agreements

Basis of Cost Allocation

Cost allocation is accomplished by developing customer specific allocation factors identifying characteristics including number of accounts, contracted peak demand, actual consumption levels, and share of eligible fixed assets. Allocation factors used in the wholesale rate update are summarized in **Exhibit 1**.

Exhibit 1: Summary of Key Allocation Factors

Allocation Factors				
	Algona	**LMWD**	**Retail**	**Total**
Accounts	0.0%	0.0%	100.0%	100.0%
Fixed Asset Allocation	2.0%	4.6%	93.4%	100.0%
% of Usage	5.7%	0.0%	94.3%	100.0%
Conservation	2.0%	0.0%	98.0%	100.0%
Contracted Demand Capacity	5.6%	12.6%	81.7%	100.0%

Notes: Algona few accounts do not show up due to rounding.

Allocation of Assets and Costs Relevant to Wholesale Water Customers

The City's water system asset schedule drives several calculations in the wholesale rate calculation, including both the allocation of capital assets (depreciation) and the allocation of asset-related operating costs to functions of service (and ultimately to wholesale customers). The 2023 rate update is based on plant-in-service for year-end 2021. A detailed asset-by-asset review was completed with the assistance of staff identifying assets by function as shown in **Exhibit 2** (e.g., Supply/Treatment, Storage, Pumping, Transmission/Distribution, etc.).

Exhibit 2: Total Existing System Assets

Functional Category	Total
Original Cost	
1 - Supply/Treatment	$ 46,221,039
2 - Pumping	9,919,079
3 - Storage	9,850,524
4 - Transmission & Distribution	100,882,465
5 - Meters & Services	7,261,201
6 - Hydrants	1,126,857
7 - General Plant	1,736,399
8 - Customer	62,150
Total Eligible Existing Assets	**$ 177,059,713**

The total system assets of $177.1 million are adjusted for contributed assets of $43.5 million and accumulated depreciation of $56.4 million to determine the net book value of system assets. **Exhibit 3** provides the functional detail of the calculated net book value ("rate base") of non-donated assets.

Exhibit 3: Functional Net Book Value (Rate Base)

Net Book Value (non-Donated Assets)	Total
1 - Supply/Treatment	$ 31,684,234
2 - Pumping	6,685,101
3 - Storage	4,631,462
4 - Transmission & Distribution	31,141,809
5 - Meters & Services	2,819,133
6 - Hydrants	23,286
7 - General Plant	179,348
8 - Customer	300
Net Book Value (Rate Base)	**$ 77,164,673**

During the detailed asset-by-asset review, staff identified which individual assets are used to provide wholesale service. Assets within each functional category were allocated to wholesale or City retail customers using the allocation basis shown in **Exhibit 4**.

Exhibit 4: Fixed Asset Allocation Basis

Functional Category	Allocation Basis
1 - Supply/Treatment	Share of system peak demand or Retail only
2 - Pumping	Share of system peak demand or Retail only
3 - Storage	Share of peak demand excluding Algona, contracted share of Lakeland Hills Reservoir, or Retail Only
4 - Transmission & Distribution	Retail only, Algona only or share of peak demand excluding Algona
5 - Meters & Services	Retail Only or Algona Only
6 – Hydrants	Retail Only
7 - General Plant	Retail Only or Common to All
8 – Customer	Retail Only or Customer Billing System

WHOLESALE RATE UPDATE: ALGONA

The allocated costs in the wholesale update for Algona include consideration that permanent wholesale water service is provided. The eligible assets and applicable operating and maintenance costs that comprise the return on rate base, depreciation and O&M costs for Algona are as follows:

Rate Base

Exhibit 5 shows the total eligible existing system assets identified for Algona by applying the fixed asset allocation basis in Exhibit 4. Algona assets total $3.5 million – roughly 2.0% of the total system existing assets.

Exhibit 5: Algona Eligible Assets

Functional Category	Algona
Original Cost	
1 - Supply/Treatment	$ 2,492,897
2 - Pumping	194,752
3 - Storage	273,020
4 - Transmission & Distribution	283,427
5 - Meters & Services	240,169
6 - Hydrants	-
7 - General Plant	33,237
8 - Customer	4
Total Eligible Existing Assets	**$ 3,517,506**

Exhibit 6 calculates the net book value for Algona after making deductions for assets that were paid for directly ($906K) and for accumulated depreciation on non-donated eligible assets ($672K).

Exhibit 6: Algona Net Book Value (Rate Base)

Net Book Value (non-Donated Assets)	Algona
1 - Supply/Treatment	$ 1,747,890
2 - Pumping	81,403
3 - Storage	31,712
4 - Transmission & Distribution	74,978
5 - Meters & Services	-
6 - Hydrants	-
7 - General Plant	3,490
8 - Customer	0
Net Book Value (Rate Base)	**$ 1,939,472**

Return on Investment

The return on investment (rate base) component of the revenue requirement is a function of the *rate base* and the *weighted average cost of capital* (WACC), which in turn is a function of the average rate on the City's outstanding debt and the assumed return on equity rate. The net book value is multiplied by the weighted average cost of capital to determine the return on rate base.

Weighted Average Cost of Capital (WACC)

The City's *outstanding debt rate* is currently 4.18% – a weighted average of the current outstanding six (6) bonds and loans.

For an *equity rate*, this analysis assumes a rate of 4.30%, representing the average of the 25-Bond Revenue Bond Index and 20-Bond GO Index as of Oct 2022 (these indices are published by *The Bond Buyer* at the time this update began). In our judgment, the average between these two indices is a rough approximation of what the City could expect to pay for a newly issued revenue bond series.

The equity rate of return generally incorporates a risk premium to compensate City ratepayers for the risk they are assuming as a result of the City's decision to secure excess supply capacity beyond the needs of the retail customer base. The City chose to forego this risk premium in prior analysis. For consistency, the risk premium has not been included in this update.

Exhibit 7 shows how the assumed equity rate of 4.18% is blended with the 4.30% average outstanding debt rate. Auburn's water capital structure is currently about 32% debt, 68% equity (total outstanding debt ÷ total net book value). Applying those weights to the average debt percentage and the assumed equity percentage, the City's weighted average cost of capital is 4.26%.

Exhibit 7: Rate of Return

Auburn Rate of Return			
	% of Net Book Value	Rate	Weighted Rate
Debt	32%	4.18%	1.33%
Equity	68%	4.30%	2.93%
Weighted Average Cost of Capital			**4.26%**

Exhibit 8 shows the return on investment component of the revenue requirement for Algona. This is calculated by multiplying the $1.9 million rate base by the 4.26% weighted average cost of capital.

Exhibit 8: Algona Return on Rate Base

Algona Rate Base	**$ 1,939,472**
Weighted Average Cost of Capital (WACC)	4.26%
Return on Investment	**$ 82,645**

Depreciation

Annual depreciation is calculated on the total assets identified in **Exhibit 5** and exclude amounts contributed by others. The annual depreciation value is calculated using the straight-line method. This method takes the value of an asset and reduces it uniformly over each period until it reaches the end of its useful life. Total depreciation for Algona eligible assets is approximately $40,737.

Operating & Maintenance Expenses

The 2023 operating budget is grouped into the cost centers of administration, finance, and operations. A line-by-line analysis was completed of the detailed accounts allocating each cost in part or in full to either wholesale or City retail customers using total fixed asset allocation, accounts, or percentage of use. Although most costs are allocated based on the percent of eligible fixed assets, utility billing costs were based on accounts and operating supplies, chemicals, utilities, and Tacoma water purchase emergency supply were based on percent of use. The result is approximately $285,476 of O&M expenses are assigned to Algona comprising 2.2% of total water system operating and maintenance expenses.

Total Algona-Cost of Service and Rate Calculation

Exhibit 9 summarizes the three components of the wholesale cost of service: return on investment, depreciation, and O&M costs - as well as the resulting Algona wholesale rate per hundred cubic feet

(CCF) of water use. The calculated rate of $2.39/CCF is an increase of $0.06 from the current rate of $2.33/CCF.

Exhibit 9: Total Algona Wholesale Cost of Service Rate

Wholesale Rate Calculation	Algona
Return on Rate Base	$ 82,645
Depreciation	40,737
O&M	285,476
Total Annual Costs	$ 408,857
2022 Use in CCF	*170,933*
Rate per CCF	**$ 2.39**

Projected Algona Rate Calculation

The rates in this analysis are based on the 2023 operating budget. Algona rates are composed of both a fixed meter charge, by size of meter, and the volume rate shown in **Exhibit 9**. The base meter rates will be tied to the retail rate charges by meter size (3 – 8" meters and 1 – 6" meter) that were updated during the retail rate study completed in 2022. The fixed charges are intended to pay for the replacement of the meters over time.

In between cost-of-service analysis updates, it has been City practice to adjust the rates each year based on the annual increase in the CPI-U for Seattle-Tacoma-Bellevue from October of one year to October of the next year. This is a practice that the City can continue to monitor adjusting as needed to align with underlying cost increases. **Exhibit 10** shows the Algona wholesale base and volume rates for 2023 - 2025. Future volume rates per CCF are adjusted by the five-year average (2016-2020) CPI-U for Seattle-Tacoma-Bellevue. Years 2021 and 2022 were excluded due to the higher than normal inflation rates experienced during that time.

Exhibit 10: Algona Proposed 2023 - 2025 Rates

Algona Rate Schedule	Current Rate	2023 Cost of Service	2024	2025
Estimated CPI Adjustment			2.50%	2.50%
Wholesale Rate per CCF				
City of Algona	$2.33	**$2.39**	**$ 2.45**	**$ 2.51**
Meter Charge per Month				
8" Meter	$ 102.37	**$ 110.05**	**$ 118.30**	**$ 127.17**
6" Meter	$ 79.24	**$ 85.18**	**$ 91.57**	**$ 98.44**

Under the terms of the agreement, the Algona rate change can take place whenever the cost-of-service analysis is updated. We recommend that the cost-of-service analysis be updated every 3-5 years, so that wholesale rates do not drift too far away from their underlying cost factors.

WHOLESALE RATE UPDATE: LAKE MERIDIAN WATER DISTRICT (LMWD)

Wholesale water service to LMWD is interruptible service. LMWD has indicated that they may request water service from Auburn, if needed. If Auburn has the supply available, Auburn will provide it to LMWD (as interruptible wholesale supply). It is likely that no service may be requested or delivered in any given year, yet facilities must be available and in good repair to provide service when requested. The existing utility basis methodology still applies in determining eligible costs and assets for LMWD. When and how the costs will be recovered will depend on use.

Per the Agreement with LMWD, the City will serve up to 2.5 million gallons a day if requested and available. The eligible assets and applicable operating and maintenance costs are based on this capacity commitment. The return on rate base, depreciation, and O&M costs allocable to LMWD are as follows:

Rate Base

Exhibit 11 shows the total eligible existing system assets identified for LMWD by applying the fixed asset allocation basis in Exhibit 4. LMWD assets total $8.1 million – roughly 4.5% of the total system existing assets.

Exhibit 11: LMWD Eligible Assets

Functional Category	LMWD
Original Cost	
1 - Supply/Treatment	$ 5,586,174
2 - Pumping	435,335
3 - Storage	550,103
4 - Transmission & Distribution	1,459,069
5 - Meters & Services	-
6 - Hydrants	-
7 - General Plant	76,607
8 - Customer	-
Total Eligible Existing Assets	**$ 8,107,288**

Notes: Transmission & Distribution includes Tacoma Pipeline 5 assets.

Exhibit 12 calculates the net book value for LWMD after making deductions for assets that were paid for directly ($1.8 million) and for accumulated depreciation on non-donated eligible assets ($2.0 million).

Exhibit 12: LMWD Net Book Value (Rate Base)

Net Book Value (non-Donated Assets)	LMWD
1 - Supply/Treatment	$ 3,915,780
2 - Pumping	182,682
3 - Storage	33,529
4 - Transmission & Distribution	168,262
5 - Meters & Services	-
6 - Hydrants	-
7 - General Plant	8,045
8 - Customer	-
Net Book Value (Rate Base)	**$ 4,308,298**

Notes: Transmission & Distribution includes Tacoma Pipeline 5 assets.

When water is not being delivered, the eligible assets are reduced by the $3.9 million supply/treatment net book value for a modified net book value (or rate base) of $392,518. The supply/treatment assets have been removed from allocable costs as water is not being delivered.

Exhibit 13: LMWD Net Book Value – Rate Base (No Supply/Treatment)

Net Book Value (non-Donated Assets)	LMWD (< Supply/Treat)
Net Book Value of Non-Donated Assets	
1 - Supply/Treatment	$ -
2 - Pumping	182,682
3 - Storage	33,529
4 - Transmission & Distribution	168,262
5 - Meters & Services	-
6 - Hydrants	-
7 - General Plant	8,045
8 - Customer	-
Net Book Value (Rate Base)	**$ 392,518**

Notes: Transmission & Distribution includes Tacoma Pipeline 5 assets.

Standby Charge

The charges applicable to LMWD include a standby charge that is paid monthly regardless of use. When water is used, a volume charge will apply in addition to the fixed stand-by charge.

The monthly standby charge is comprised of the following components:

- Annual depreciation of the facilities required to deliver service. The depreciation on the remaining assets is eligible as the City must maintain the delivery assets ready for operation. As shown in **Exhibit 14**, the supply/treatment assets have been eliminated from the stand-by charge as assets are not being utilized when water is not requested for delivery. The storage value is shown as zero as the eligible assets are fully depreciated or represent land which does not depreciate. The monthly depreciation amount on eligible assets totals $579.29 ($6,951 ÷ 12 months)

Exhibit 14: Annual Depreciation Eligible Assets – No Supply/Treatment

Depreciation on Non-Donated Assets	LMWD (< Supply/Treat)
Existing System Eligible Assets	
1 - Supply/Treatment	$ -
2 - Pumping	499
3 - Storage	-
4 - Transmission & Distribution	6,295
5 - Meters & Services	-
6 - Hydrants	-
7 - General Plant	158
8 - Customer	-
Total Existing System Assets Depreciation	**$ 6,951**

Note: Transmission & Distribution includes Tacoma Pipeline 5 assets.

- Tacoma Ready to Serve charge. This fixed charge to the City is based on contracted peak capacity and is a new cost addition for this update. The fixed charge is paid by the City to Tacoma to have water readily available when needed. The City pays this fixed charge per MGD of requested contract peak capacity regardless of use. This cost is allocated to LMWD based on the allocation of peak capacity to LMWD (12.63%) and recovered 50% in the standby charge. The remaining 50% of the allocated LMWD cost will be recovered in the volume charge when water is delivered.
- Meter charge equal to the retail rate by meter size intended to pay over time for the replacement of the 8" meter servicing the District.

Exhibit 15 summarizes the 2023-2025 standby charge paid monthly regardless of water being delivered or not to LMWD.

Exhibit 15: LMWD Monthly Standby Charge

	Current	2023	2024	2025
Mo. Depreciation on Eligible Assets	$ 1,045.55	$579.29	$ 579.29	$ 579.29
Tacoma Contract Peak Capacity (50% of eligible cost)		886.15	886.15	886.15
8" Meter Replacement (Retail Published Rate)	102.37	110.05	118.30	127.17
Total LMWD Mo. Standby Charge	**$ 1,147.92**	**$ 1,575.49**	**$ 1,583.74**	**$ 1,592.61**

In total, the calculated charge is higher than the current rate. There is a reduction in the depreciation charge as the eligible asset value has been reduced, likely due to retirements. However, the charge is increased with the addition of the Tacoma Ready to Serve charge which is a change from the last wholesale rate update.

Wholesale Rate Delivered Water

When water is requested and delivered, all wholesale rate components apply - rate of return on investment, depreciation, and O&M costs on the full eligible assets (including supply/treatment) as shown in **Exhibit 11** ($8.1 million).

Return on Investment

As noted previously, the return on investment (rate base) component of the revenue requirement is a function of the *rate base* and the *weighted average cost of capital* (WACC) – **Exhibit 7**, which in turn is a function of the average rate on the City's outstanding debt and the assumed return on equity

rate. The net book value is multiplied by the weighted average cost of capital to determine the return on rate base. **Exhibit 16** summarizes the total eligible assets and return under full service delivery.

Exhibit 16: LMWD Return on Rate Base

	LMWD
Eligible Rate Base	**$ 4,308,298**
Weighted Average Cost of Capital (WACC)	4.26%
Return on Investment	**$ 183,585**

The return listed in **Exhibit 16**, is recoverable when water is delivered. The unit cost associated with the return is $0.15/CCF. The calculation is derived by identifying the eligible assets and return on rate base of $183,585 divided by the contract demand capacity of 2.5 MGD (converted to CCF 2,500,000 MGD x 365 days ÷ 748 = 1,219,920 annual CCF).

Depreciation

Annual depreciation is calculated on the total net book value of eligible assets identified in Exhibit 12 ($4.3 million) and exclude amounts contributed by others as well as excludes the amount of depreciation recovered in the stand-by charge identified in **Exhibit 15**. The annual depreciation value is calculated using the straight-line method. This method takes the value of an asset and reduces it uniformly over each period until it reaches the end of its useful life. Depreciation for LMWD total eligible assets is approximately $91,222. Similar to the rate of return, the depreciation calculation is derived by taking the net amount divided by the annual contract demand in CCF resulting in $0.07/CCF.

Operating & Maintenance Expenses

As noted, when describing the Key Assumptions, a line-by-line analysis of the detailed 2023 budget was completed, allocating each O&M line item to either wholesale or City retail. The wholesale O&M unit costs are consistent for both wholesale customers and have been adjusted only for those O&M costs that have been identified as having a higher allocable cost resulting from the line-by-line analysis. As most costs are allocated based on the "by fixed assets" allocation factor, LMWD has a higher O&M allocation of total costs. This is due to the higher contractual amount of 2.50 MGD resulting in a higher allocation amount when water is delivered. The resulting cost differential of 1.26 is applied to the admin, finance, and operations cost centers. A factor was not applied for costs such as operating supplies, chemical analysis and the Tacoma emergency supply and standby contract peak capacity costs.

Total LMWD Delivered Water Rate

The delivered water rate for LMWD is shown in **Exhibit 17**. The rate is composed of a fixed monthly charge and a volume charge when water is delivered and available.

The fixed charge is the same as the standby charge shown in **Exhibit 15**. The volume charge is developed to recover eligible costs when water is requested and delivered. It should be noted that the volume charge includes the remaining 50% of the allocated LMWD costs related to the Tacoma Ready to Serve charge (incurred by the City to have water readily available) and eliminates the Tacoma Emergency Supply as City water sources are assumed when water is delivered. The unit cost per CCF is $2.13.

Exhibit 17: LMWD Delivered Water Rate

	2023 Rates
Fixed Monthly Charge	
Depreciation (standby portion)	$579.29
Contract Peak Capacity (50% of eligible total)	886.15
8" meter (published rate)	110.05
Total Fixed Monthly Charge	**$1,575.49**
Volume Charge (water delivery)	
Depreciation (not recovered in standby charge)	$0.07
Return	$0.15
O&M	
Admin Cost Centers	$0.55
Finance Cost Center	0.09
Operations Cost Center	0.48
Supplies	0.05
Chemical Analysis	0.02
Tacoma Emergency Supply	-
Tacoma Standby Contract Peak Capacity	0.03
Utilities	0.33
As all other (general)	0.05
Transfer/Taxes	0.30
Subtotal O&M	$1.91
Total Depreciation, Return, O&M, per CCF	**$2.13**

In between cost-of-service analysis updates, it has been City practice to adjust the rates each year based on the annual increase in the CPI-U for Seattle-Tacoma-Bellevue from October of one year to October of the next year. **Exhibit 18** shows the LMWD wholesale standby charge and usage charge for 2023 - 2025. Future usage charges per CCF are adjusted by the five-year average (2016-2020) CPI-U for Seattle-Tacoma-Bellevue. Years 2021 and 2022 were excluded due to the higher than normal inflation rates experienced during that time.

Exhibit 18: LWMP Proposed 2023 - 2025 Delivered Water Rates

	Current	2023	2024	2025
Mo. Depreciation on Eligible Assets	$ 1,045.55	$ 579.29	$ 579.29	$ 579.29
Tacoma Contract Peak Capacity (50% of eligible cost)		886.15	886.15	886.15
8" Meter Replacement (Retail Published Rate)	102.37	110.05	118.30	127.17
Total LMWD Mo. Standby Charge	**$ 1,147.92**	**$ 1,575.49**	**$ 1,583.74**	**$ 1,592.61**
Estimated CPI Adjustment			2.50%	2.50%
Usage Charge	**$ 2.07**	**$2.13**	**$2.19**	**$2.24**

The rates in this analysis are based on the 2023 operating budget. Under the terms of the agreement, the rate change can take place whenever the cost-of-service analysis is updated. We recommend that the cost-of-service analysis be updated every 3-5 years, so that the wholesale rates do not drift too far away from their underlying cost factors.

Wholesale Purchased Water Surcharge

The wholesale rate review includes updating the City's wholesale purchased water surcharge to cover costs when the City water resources are not sufficient and Tacoma water purchases are required to meet demands. The purchased water surcharge was developed using the LMWD costs of service

rates and the 2023 Tacoma wholesale rate published in the Tacoma Municipal Code, Title 12 Utilities – 12.10.400 Rates Inside and Outside City Limits.

Exhibit 19 details the calculation of the updated wholesale purchase water surcharge. Applicable costs include fixed costs that would remain regardless of the water source being used and include the administrative and finance cost centers along with transfer/taxes. The Tacoma Emergency Supply peaking rate and the Tacoma Ready to Serve charge would replace the variable costs associated with the City's own supply source inclusive of the operations center, supplies, chemical analysis, utilities and other. The current Tacoma published peaking rate is $2.569/CCF. In addition, as of the last update, Tacoma has imposed a fixed Ready to Serve charge. The LMWD eligible portion (based on peak capacity) of this cost is collected 50% from the standby fixed fee and 50% from the variable charge or $0.03/CCF. The total cost applicable when Tacoma water is used totals $3.76/CCF.

The difference between the total cost of $3.76 (when Tacoma water is being purchased) less the cost-of-service rate of $2.13 becomes the pre-tax purchased water surcharge of $1.63/CCF. This rate would be paid in addition to the regular volume charge. Additional City taxes would be assessed based on the higher costs/revenue received making the final purchased water surcharge rate, including taxes $1.82/CCF.

Exhibit 19 shows the costs that comprise the purchased water surcharge. The rates shown are for 2023. The Tacoma wholesale peaking rate may change again in 2024 per the published rates. It is recommended that the City monitor the published rates and update the purchased water surcharge in alignment with any changes. It should be noted that the surcharge has been reduced from the current rate of $3.31/CCF. This reduction is due to the restructuring of the Tacoma Wholesale rate to reduce the peak usage charge ($3.96 to $2.57/CCF) and add a Wholesale Ready to Serve Charge ($2,741.53) assessed per million gallons a day (MGD) of contracted peak capacity.

Exhibit 19: Purchased Water Surcharge Calculation

	2023 Rates	2023 Applicable Unit Costs/CCF
Volume Charge		
Depreciation (not recovered in standby charge)	$0.07	$0.07
Return	$0.15	$0.15
O&M		
Admin Cost Centers	$0.55	$0.55
Finance Cost Center	0.09	0.09
Operations Cost Center	0.48	-
Supplies	0.05	-
Chemical Analysis	0.02	-
Tacoma Emergency Supply	-	2.57
Tacoma Standby Contract Peak Capacity	0.03	0.03
Utilities	0.33	-
As all other (general)	0.05	-
Transfer/Taxes	0.30	0.30
Subtotal O&M	$1.91	$3.54
Total Depreciation, Return, O&M, per CCF	**$2.13**	**$3.76**
Total Recoverable Variable Costs	$2.13	
Calculated Total Costs w/ Tacoma Rate	3.76	
Cost Difference	$1.63	
Plus Additional Taxes	0.19	
Total Wholesale Purchased Water Surcharge /CCF	**$1.82**	

Summary

The Wholesale rates are updated for Algona and LMWD based on the water cost of service study completed in 2022. The rate projection for Algona includes a fixed charge per meter size based on the retail published meter charge rates plus an updated volume charge of $2.39/CCF, an increase of $0.06/CCF.

The rate for LMWD considers they are served as an interruptible customer. The stand-by charge has been updated for the retail published meter charge rate, depreciation on current eligible asset values and the Tacoma Ready to Serve charge. The rate is calculated at $1,575.49 per month. The volume charge has been updated to $2.13 from a current rate of $2.07 when water is requested and available based on 2023 budget operating costs. In addition, the wholesale purchased water surcharge intended to cover costs when the City is required to purchase Tacoma Water to meet demands, has been updated. The annual purchased water surcharge is calculated at $1.82 per CCF in addition to the general volume charge. The rate is down from the current surcharge of $3.31 per CCF due to the restructuring of rates by Tacoma that reduces the peak water consumption rate and adds a fixed ready to serve charge per MGD.

Wholesale Water Rate Update

Angie Sanchez Virnoche, Vice President/Principal

July 10, 2023

FCS GROUP
Solutions-Oriented Consulting

Background

- **Wholesale rate update part of greater utility rate study completed in 2022**
  - Last update in 2018
  - Per agreements

    "Auburn has created a customer classification for wholesale customers, and rates for service charges for wholesale customers shall be based on a rate study for the wholesale customer classification.''

    ''Wholesale water rates shall be based on costs of providing the service."
- **Two wholesale customers**
  - City of Algona – continual service wholesale customer
  - Lake Meridian Water District (LMWD) – interruptible "ready to serve" upon request

Wholesale Rate Methodology

- **Current update uses the previously established wholesale rate study methodology**
- **Using industry* accepted practice – "utility basis" methodology**
- **Methodology includes**
  - » Operating Costs – costs related to ongoing maintenance and operation of eligible assets
  - » Annual depreciation – of the facilities required to deliver service, related to the loss in value of facilities due to wear and tear, decay, and obsolescence
  - » Return - to provide a fair rate of return for the past investment made to finance facilities used to provide water service

*American Water Works Association Principles of Water Rates, Fees and Charges, M1 Manual

Algona Wholesale Water Rates

- **Charges composed of:**
  - Fixed meter charge, by size
  - Usage charge per hundred cubic feet

	Current Charges	COSA 2023	Proposed 2024	Proposed 2025
Meter Charge, per month per meter 6-inch – (1) 8-inch – (3)	 $85.18 $110.05	 $85.18 $110.05	 $91.57 $118.30	 $98.44 $127.17
Charge per 100 cubic feet (ccf)	$2.33	$2.39	$2.45	$2.51

COSA = cost of service analysis

LMWD Standby Charge

- **Charged each month**
- **Recovers the cost to maintain, repair, and replace delivery assets and provide the ability to serve if, and when requested (ready to serve)**
- **Charge Includes:**
  - » Depreciation on delivery assets
  - » Tacoma ready to serve charge (50% fixed charge/ 50% usage charge)
    - – City pays Tacoma "ready to serve charge" per month for each MGD of contracted peak capacity ($2,741.53/MGD)
  - » Meter charge (equal to retail rates)

	Current Charges	COSA 2023	Proposed 2024	Proposed 2025
Mo. Depreciation	$1,045.55	$579.29	$579.29	$579.29
Tacoma Ready to Serve	n/a	886.15	886.15	886.15
Meter Charge 8-inch – (1)	102.37	110.05	118.30	127.17
Total Mo Charge	$1,147.92	$1,575.49	$1,583.74	$1,592.61

MGD = million gallons per day

LMWD Delivery Charges

- **Delivery charge when using City of Auburn sources**

	Current Charge	COSA 2023	Proposed 2024	Proposed 2025
Charge per 100 cubic feet (ccf)	$2.07	$2.13	$2.19	$2.24

- **Purchase Water Surcharge**
  - » Applied to water purchased from Tacoma for delivery to LMWD
    - – Tacoma peaking rate $2.569/CCF
    - – 50% of ready to serve charge $0.03/CCF
  - » Total purchased water surcharge $1.82/CCF

CCF = 100 cubic feet

Summary of LMWD Rates

	Current Charges	COSA 2023	Proposed 2024	Proposed 2025
Standby Charge per month	$1,147.92	$1,575.49	$1,583.74	$1,592.61
Usage Charge:				
Usage Charge - per 100 cubic feet (ccf)	$2.07	$2.13	$2.19	$2.24
Purchased Water Surcharge per ccf of water purchased from Tacoma	$1.82	$1.82	$1.82	$1.82

- **Proposed charges based on interruptible/ready to serve upon request**
- **2023 cost of service analysis assumes no actual water deliveries**

DOWNTOWN AUBURN COOPERATIVE & BIA UPDATE

BIA ACTIVITY DURING 2nd QUARTER:

APRIL BIA MEETING WAS HELD, BUT THE MAY & JUNE MEETING WERE CANCELLED DUE TO A LACK OF QUORUM.

THE BIA HAS FUNDED SEVERAL PROJECTS THAT ARE ADMINISTERED AND IMPLEMENTED BY THE DAC.

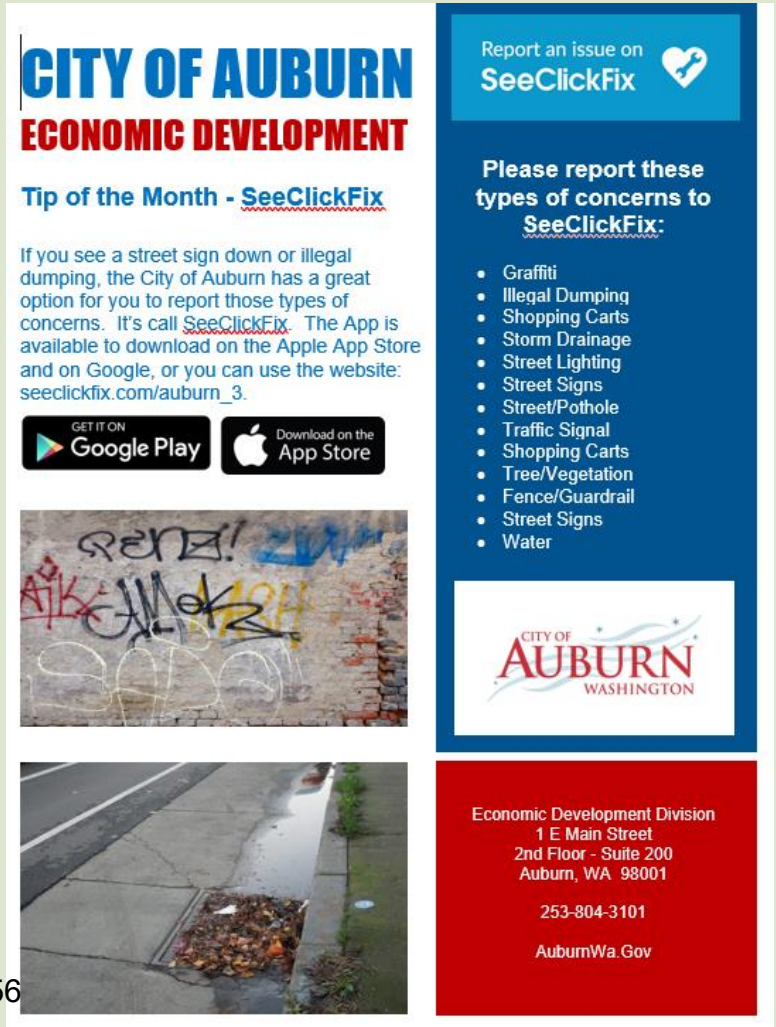
THE PROJECTS THIS QUARTER INCLUDED PLANTERS & MURALS.

DAC & BIA PARTNERSHIP PROJECTS IN THE FUTURE

PAINTING: DOOR FRONTS OF SEVERAL BUILDINGS ON MAIN STREET

LIGHTING: THE DAC IS PLANNING TO HAVE SOLAR LIGHTS INSTALLED ALONG THE FRONT OF DOWNTOWN BUSINESSES.

THE DAC WILL HIRE A CONTRACTOR FOR INSTALLATION AND COMPLETE THE PROJECT IN PHASES.



BIKE RACKS: DAC CONSIDERING THE PURCHASE AND INSTALLATION OF UP TO 6 ARTISTIC BIKE RACKS.

DOWNTOWN ENGAGEMENT

Monthly Engagement Flyer

Topics:

- SeeClickFix

- Other?

DOWNTOWN ENGAGEMENT

THE 2nd PHASE OF PLACING NEW DOWNTOWN PLANTERS TOOK PLACE ON JUNE 14th, 2023.

THE DAC PLANTED PLANTS ON JUNE 17th.

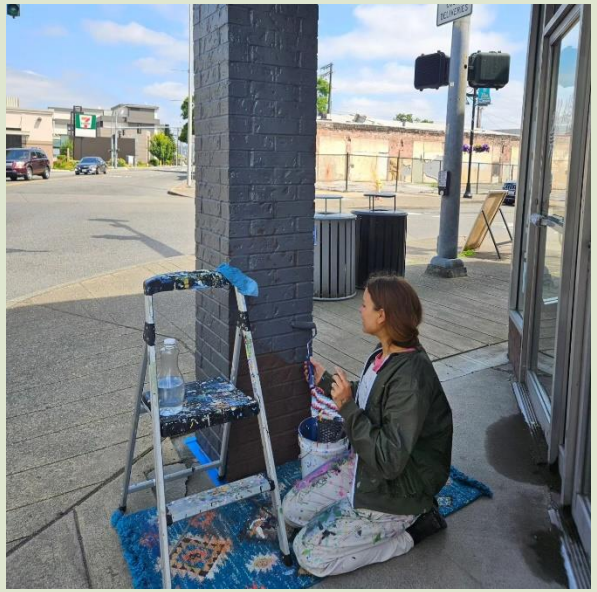
SO FAR, 24 PLANTERS HAVE BEEN PLACED IN THE DOWNTOWN AREA, MOSTLY ON THE MAIN STREET.

THERE ARE 2 PLANTERS STILL AVAILABLE FOR ADOPTION. AND LOCATIONS STILL NEED TO BE APPROVED BY PUBLIC WORKS.

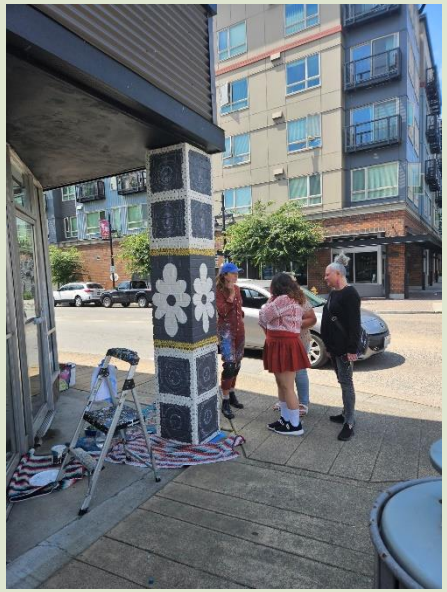
MURALS IN THE DOWNTOWN

DAC HAS DRAFTED A CONTRACT FOR BUSINESS OWNERS AND BUILDING OWNERS THAT OUTLINES EXPECTATION AND RELEASE CITY, DAC AND BIA FROM LIABILITY.

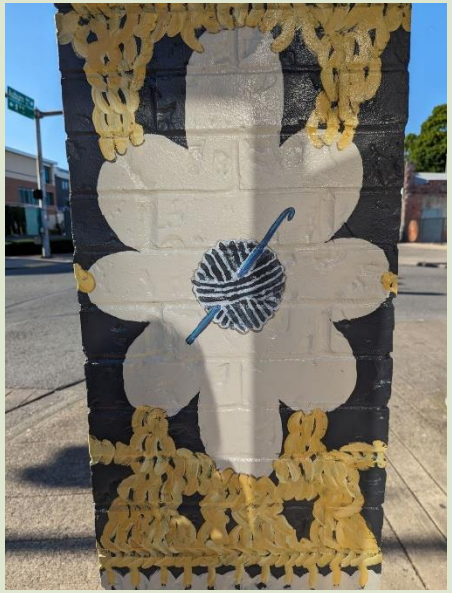
MANY BUSINESSES HAVE EXPRESSED INTEREST IN HAVING MURALS AND ARE WAITING FOR BUILDING OWNER APPROVAL.

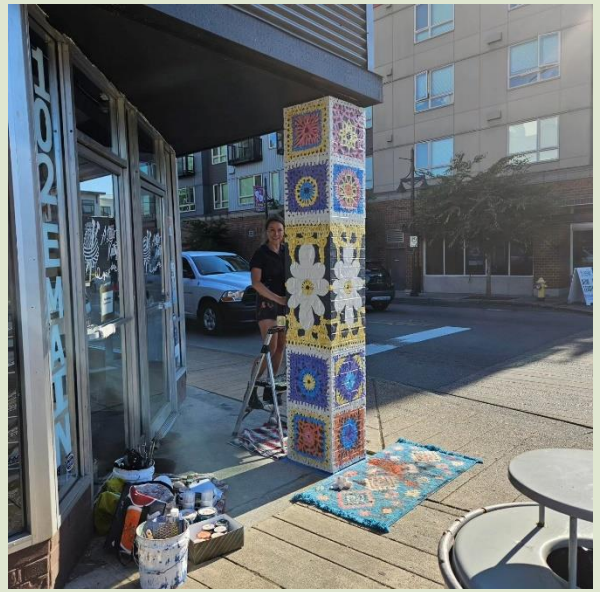


EXISTING MURALS: A STREET LEGAL, AGRISHOP, DAC OFFICE AND THE BUILDING ON THE CORNER OF AUBURN WAY N & MAIN STREET.



AND.....





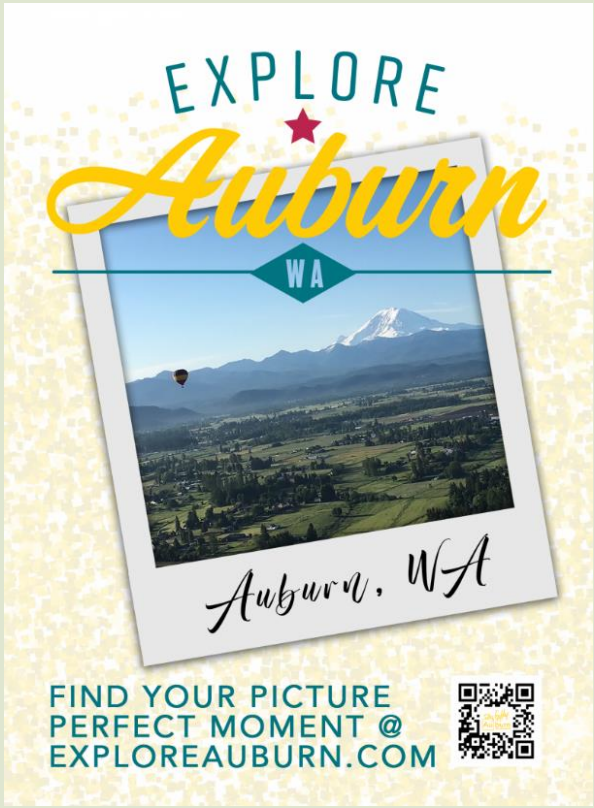
MURALS IN THE DOWNTOWN

A LITTLE KNITTY

DOWNTOWN BUSINESSES RIBBON CUTTINGS

3 RIBBON CUTTING CEREMONIES HAPPENED

- EMERALD CITY FASHION IN APRIL
- ROSES MAKERS MARKET BOUTIQUE IN MAY
- SMOKES ON MAIN IN JUNE



OUTLET COLLECTION MARKETING CAMPAIGN

BUSINESS OUTREACH MEETINGS

FOLLOW UP SAFETY MEETING

AUBURN MARKETPLACE & SURROUNDING AREA

WHEN
Tuesday, June 27th
4:00 – 6:00 pm

WHERE
City Hall Council Chambers
25 W Main Street,
Auburn, WA 98001

DISCUSSION TOPICS
Emphasis Patrols · Legislation Update · Feedback From Businesses · Crime Statistics

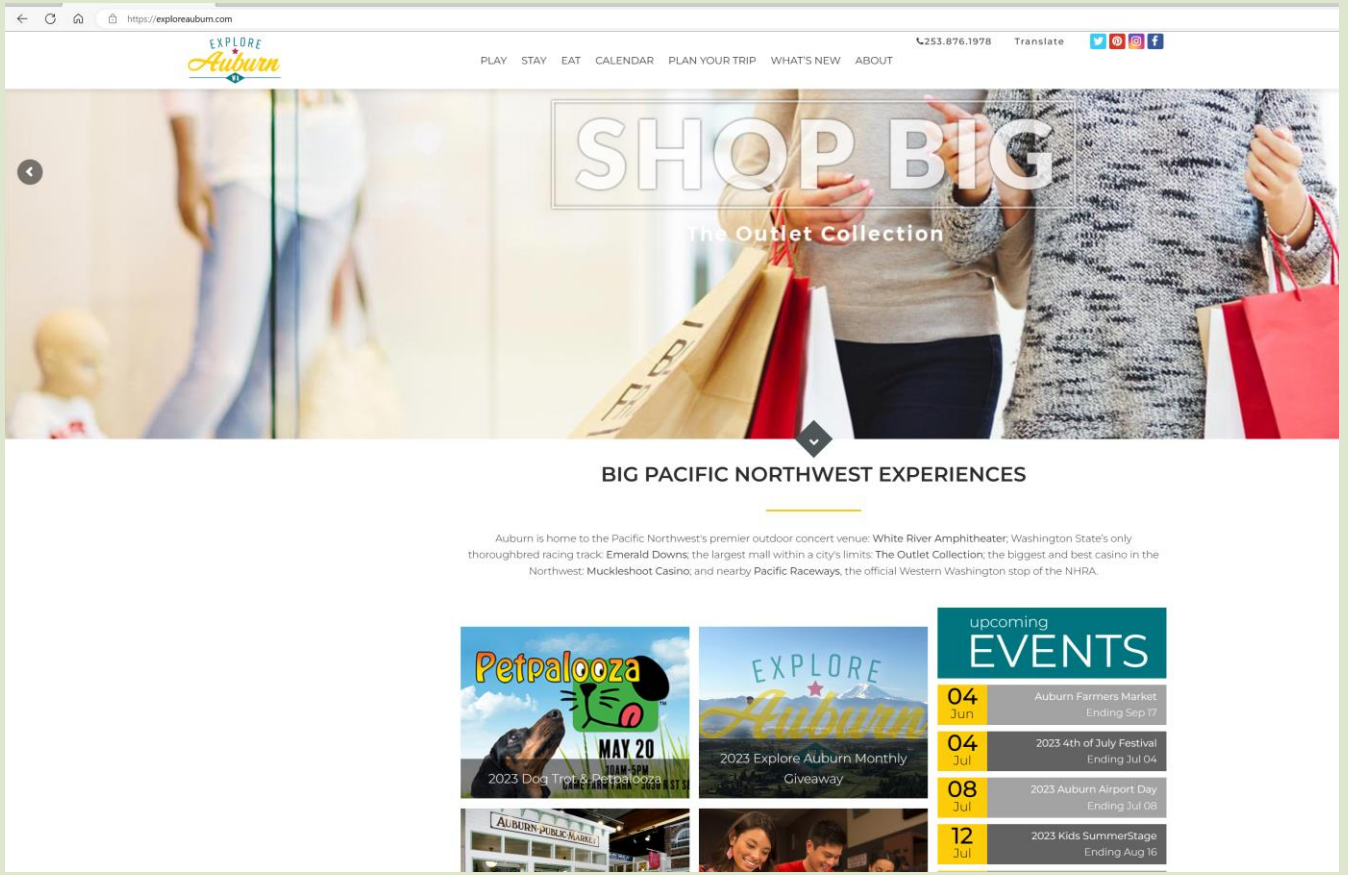
CITY OF AUBURN WASHINGTON

INVITATION TO MEET WITH MAYOR BACKUS

The Auburn Marketplace and surrounding businesses are very important to the vibrancy of our city.

Mayor Backus will be hosting a follow up meeting with business owners located between 15th St NW to 5th St NE and C St NW to A St NW regarding safety in that area – including by not limited to:

- Legislation Update
- City Initiated Actions
- Feedback from business owners
- Emphasis Patrol Update
- Crime Statistics



The City of Auburn is aware of the increase in incidents and would like to work with all stakeholders to find solutions that will increase safety and improve conditions overall.

TOURISM

The Auburn Area Chamber has been working with a consultant to update the Explore Auburn Website.

The goal is to have it launched by July 19th prior to the NHRA weekend events.

GOOD NEIGHBOR AGREEMENT
2ND QUARTERLY MEETING AT DON'S PLACE

I. CALL TO ORDER

II. PUBLIC PARTICIPATION

A. Public Participation

The City Council Meeting was held in person and virtually.

B. Roll Call

Councilmembers present: Deputy Mayor James Jeyaraj, Kate Baldwin, Larry Brown, Robyn Mulenga, Cheryl Rakes, and Councilmember Yolonda Trout-Manuel. Councilmember Bob Baggett attended the meeting virtually.

Department directors and staff members present included: City Attorney Kendra Comeau, Chief of Police Mark Caillier, Director of Public Works Ingrid Gaub, Director of Equity and Inclusion Brenda Goodson-Moore, Director of Innovation and Technology David Travis, Director of Human Resources Jamie Thomas, Financial Planning Manager Frank Downard, Neighborhood Programs Coordinator Chris Lovings, Utility Engineering Manager Ryan Vondrak, Water Engineer Senait Gebreeyesus, Diversity, Equity, and Inclusion Analyst Kia McGlone, Economic Development Manager Jenn Francis, Business Systems Analyst Jonathan Barbano, and City Clerk Shawn Campbell.

III. AGENDA MODIFICATIONS

Ordinance No. 6912 and Inclusive Auburn Coalition presentation were moved to presentations.

IV. ANNOUNCEMENTS, REPORTS, AND PRESENTATIONS

A. Ordinance No. 6912 (Thomas) (10 Minutes)

Manager Downard and Vice President, Angie Sanchez, with FCS Group provided Council with an overview of the Wholesale Water Rate Update including background, customers, methodology, the continual service rates, and standby charges.

Council discussed continuous water costs and water demands in regards to Tacoma Water.

B. Inclusive Auburn Coalition Presentation (Goodson-Moore) (20 Minutes)

Director Goodson-Moore and Analyst McGlone provided Council with an overview of the Office of Equity. She explained they are working on normalizing racial equity in the City and explained what normalizing racial equity means.

Diversity, Equity, Inclusion, and Justice (DEIJ) Consultant, Sapna Sopori, with Sapna Strategies provided Council with the plan for the Coalition. She reviewed the purpose of creating the Coalition, shared the job description for the Auburn Coalition membership, reviewed the groups that will be apart of the Coalition, the dispositions and skills to be a Coalition member, and reviewed the nomination process. Scott Miller reviewed what the goal for the Coalition is.

Council discussed makeup of the Coalition, the meeting locations, creating a toolbox, the work from the previous consultant, and frequency of updates to Council.

V. AGENDA ITEMS FOR COUNCIL DISCUSSION

A. Ordinance No. 6911 (Thomas) (20 Minutes)

An Ordinance amending Ordinance No. 6879, the 2023-2024 Biennial Operating Budget Ordinance, and Ordinance No. 6888, the 2023-2024 Biennial Capital Budget, authorizing amendment to the City of Auburn 2023-2024 Budget as set forth in schedule “A” and schedule “B”

Director Thomas provided Council with an overview of Ordinance No. 6911 regarding the second Budget Amendment including the adjustment of the beginning fund Balances, new requests, addition of grant funds, and adjustments to Capital Projects.

Council discussed the closure of the BIA fund.

B. 2023 National Night Out Presentation (Tate) (15 Minutes)

An update on Auburn’s 2023 National Night Out event

Neighborhood Coordinator Lovings provided Council with the 2023 National Night Out Presentation. He reviewed the Neighborhood Programs, provided a recap of the National Night Out event from 2022, and discussed the plan for the 2023 National Night Out.

Council discussed getting neighborhoods involved, and appreciation of the inclusive nature of the event.

C. Water System Comprehensive Plan Update - Policy Review (Gaub) (30 Minutes)

Manager Vondrak and Engineer Gebreeyesus provided Council with an overview of the Water System Comprehensive plan update, they reviewed the goals and polices of the update, an introduction into the water system including removal, addition and modification of polices in regarding business practices, service area goal, operation and maintenance goals, financial goals, planning, environmental stewardship, and design and construction goals.

Council discussed the reduction goals.

VI. FINANCE, TECHNOLOGY AND ECONOMIC DEVELOPMENT DISCUSSION ITEMS

A. Economic Development Update – 2nd Quarter 2023 (Tate) (15 Minutes)
An update on Economic Development Division activity

Councilmember Baldwin Chaired this section of the meeting.

Manager Francis provided Council with an overview of the Economic Development Second Quarter update. She reviewed the Downtown Auburn Cooperative and the BIA update including the partnership projects, downtown engagement, murals in the downtown, downtown business ribbon cutting, the Outlet Collection Marketing Campaign, the Pacific Raceway Marketing Campaign, Pacific Raceways NHRA FanFest 2023, Business Connect Events, the Economic Development element of the Comprehensive Plan, business outreach meetings, tourism, Good Neighbor Agreement, National Night Out, Request for Proposals for Web Location Intelligence Application, and plans for the next update.

Council discussed the SHAG allowance for tenant improvements, the advertising signs and return on investment, the Explore Auburn website, the Muckleshoot Tribal Hotel, the Muckleshoot Canoe Journey event, and partnership opportunities with the Muckleshoot Tribe.

Deputy Mayor announced that the Ad Hoc Committee for the Council Rules of Procedure has been formed and consists of himself, Councilmember Brown, and Councilmember Rakes. Councilmember Rakes will Chair the Committee and their first meeting is July 11, 2023.

VII. ADJOURNMENT

There being no further business to come before the Council, the meeting was adjourned at 7:58 p.m.

APPROVED this 17th day of July, 2023.

Lead & Copper Rule – (b)3 Status Accepted

Dear Susan Fenhous:

Thank you for submitting your request for a "(b)3 determination" per Title 40 CFR Chapter 1 part 141.81(b)(3). The letter dated August 11, 2021 was received in this office on August 17, 2021.

The summary of the two sets of distribution system tap samples for lead and copper collected in November 2020 and May 2021 demonstrates that the City meets the criteria in Title 40 CFR Chapter 1 part 141.81(b)(3). Therefore, the City of Auburn is not required to collect and report optimal water quality parameters, more specifically the representative distribution system sampling for pH. Future revisions in the rules may be more stringent and require further action.

Sincerely,

Brietta Carter

ORDINANCE NO. 2383

AN ORDINANCE OF THE CITY OF AUBURN, WASHINGTON, GRANTING TO THE CITY OF TACOMA AND ITS ASSIGNS, THE RIGHT, PRIVILEGE AND AUTHORITY TO CONSTRUCT AND MAINTAIN A TRANSMISSION MAIN IN CERTAIN STREETS IN THE CITY OF AUBURN FOR THE TRANSMISSION OF FRESH WATER FOR MUNICIPAL PURPOSES.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, DO ORDAIN AS FOLLOWS:

Section 1. GRANT AND TERMS. That there be and is hereby granted to the City of Tacoma a municipal corporation and its assigns, the right, privilege, authority and franchise for a period of fifty (50) years from and after passage of this Ordinance to lay down, build, construct and maintain and operate, through and across certain streets of the City of Auburn, underground pipes and conduits for thepurpose of transmitting fresh water for municipal purposes.

Section 2. TRANSMISSION MAIN. For the purpose aforesaid, the grantee and its assigns are hereby granted the right, liberty and privilege of laying down, relaying, connecting, disconnecting, and repairing such transmission main through and under the avenues, streets, lanes, alleys andpublic highways, and public parks and grounds of the City of Auburn as may be necessary, proper and convenient for transmitting the fresh water supply of the grantee through the city limits of the grantor.

Section 3. PLANS AND SPECIFICATIONS. Before said grantee and assigns shall begin the construction of the transmission main underneath the said streets or places in the City of Auburn, it shall file with the City Engineer of the grantor detailed plans, specifications and profiles of the pipeline and shall show the place in said streets or places proposed to be used for and/or crossed by said pipeline, the size of the pipeline and its depth from the surface of the ground. The said plans, specifications and profiles shall be approved by the City Engineer of the grantee and a permit granted for the same before any excavation or the construction of said pipes shall be commenced, which approval shall not be unreasonably withheld. The grantee upon receiving such construction permit shall hasten the work of construction with all convenient speed and shall repair the pavement or surface in as good condition as it was before being disturbed by said grantee and repair it with the same kind of material as now laid on said streets or surface and subject to the approval of the City Engineer of the grantor, shall place an inspector upon the said street during the reconstruction of the pavement thereon and the salary of such inspector shall be paid by the grantee, and said street shall not be torn up in any event for a longer period than ninety (90) days after the said grantee shall begin the work of construction. If the grantee shall fail to build said street or surface in

as good condition as it was before or shall fail to rebuild it at all, the grantor may proceed to repair said street or surface and charge the expense thereof to the grantee. All excavations shall be carefully guarded so as to prevent accidents by reason thereof, and the grantee shall save the grantor free and harmless of and from all costs, damages and expenses of any kind whatsoever occasioned by such work or by the maintenance of such conduits and pipes through and across the street or place and should any final judgment be recovered against said city on account of any damages, said grantee shall forthwith pay the same, including grantor's reasonable attorney fees and costs, after having been notified in writing to do so by the grantor, and the failure of said grantee to make such payment within a period of sixty (60) days after such notice has been given shall operate as a forfeiture of the rights and privileges herein granted; provided, however, that the grantor shall in any suit brought against it on account of such damages and within twenty (20) days after service of process upon it give written notice to the grantee of the pendency of said suit, and thereon, grantee shall have the option of defending said litigation on behalf of the City at its own cost.

Section 4. NOT TO INTERFERE WITH OTHER PIPES. Said pipes shall be laid down in such manner as not to interfere with the sewer or water pipes or any other pipes in said streets and places and all pipes and conduits to be laid down by the grantee shall be of first quality material.

Section 5. FRANCHISE NOT EXCLUSIVE. Nothing in this Ordinance shall be construed as granting to the said grantee and assigns an exclusive right or prevent the granting to other companies or individuals a franchise for like purposes.

Section 6. SERVICE AVAILABILITY. In the event that the City has need for additional domestic water and the grantee determines that it can provide such water from the transmission line and at the rates it charges other consumers, similarly located, the grantee shall so make available points of distribution in order to provide the additional supply so determined.

Section 7. ACCEPTANCE. In order to claim the rights and privileges granted by this franchise, the grantee or assigns shall, within thirty (30) days after the approval of this Ordinance, file with the City Clerk of the grantor its acceptance in writing of the franchise granted by this Ordinance.

Section 8. EFFECTIVE DATE. That this Ordinance shall take effect five (5) days from and after its passage, approval and publication as provided by law.

AGREEMENT ESTABLISHING USE AND

SERVICE AREAS OF THE PARTIES

AGREEMENT between King County Water District No. 111, a special purpose district of the state of Washington, hereinafter called "District," and the City of Auburn, a municipal corporation of the state of Washington, hereinafter called "City."

1. Purpose. The District and the City have previously informally agreed to the establishment of a boundary between the service areas of the two parties and are now desirous of confirming the previous understanding and agreement in writing.

2. Agreement. It is hereby agreed between the parties that the boundary between the areas served by each of the parties shall be as follows:

> Beginning at the intersection of a line which is 330 feet south of and parallel with the north line of Section 3, Township 21 North, Range 5 East, W.M. with the northwesterly margin of S.R. 18; thence west along a line which is 330 feet south of, and parallel with, the north line of Sections 3 and 4, to the west line of the northeast one quarter of said Section 4.

District shall serve the area lying generally north of said boundary line and City shall serve the area lying generally south of said boundary line.

RESOLUTION NO. 1341

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR OF THE CITY OF AUBURN, TO EXECUTE AN AGREEMENT BETWEEN THE CITY OF AUBURN AND KING COUNTY WATER DISTRICT NO. 87 CONCERNING THE TRANSFER OF KING COUNTY WATER DISTRICT NO. 87'S WATER SYSTEM TO THE CITY OF AUBURN.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

THE Mayor of the City of Auburn, Washington, is herewith authorized and directed to execute an Agreement between the City of Auburn and King County Water District No. 87 concerning the transfer of King County Water District No. 87's water system. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

THE Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directions of this legislation.

MAYOR

ATTEST:

Coralee McConnehey

City Clerk

Resolution No. 1341
7/6/82

AGREEMENT CONCERNING TRANSFER OF KING COUNTY
WATER DISTRICT NO. 87'S WATER SYSTEM TO THE
CITIES OF AUBURN AND KENT

April 1, 1982

IT IS AGREED by and between WATER DISTRICT 87, King County, a Washington Municipal Corporation ("WD 87"); and the Cities of AUBURN ("Auburn") and KENT, ("Kent") Washington, collectively, "the cities") as follows:

1. Authority

This agreement is entered into pursuant to RCW 35A.13.070, which authorizes one or more cities and water districts to contract regarding ownership of property, providing or water service, and operation of facilities.

2. Transfer of Water System

The ownership of WD 87's entire "water system" shall, as of the above date, be transferred and conveyed to Auburn and Kent, in the manner provided below.

The term "water system" shall include, but not be limited to, all WD 87 water mains and appurtenances; hydrants; easements; licenses; franchises; permits and facilities, rights and assets of any kind or nature whatsoever.

Said transfer is subject to the cities' performance of all of the terms and conditions of this agreement.

The cities hereby accept their respective portions of the water system on the terms of this agreement.

3. Division of System

The entire WD 87 water system lying southerly of the following described line will become the property of the Auburn and the remaining portion of the water system (lying northerly of the following described line) shall become the property of Kent:

> Starting at a point of intersection on the westerly boundary line of WD #87 which is the easterly margin of the Chicago Milwaukee and St Paul Railroad right-of-way with the southerly right-of-way line of S. 277th street and projecting easterly therefrom along said southerly right-of-way line to an intersection point with the easterly margin of the Burlington Northern Railroad right-of-way thence northerly therefrom along said easterly line to an intersection point with the northerly right-of-way line of S. 277th street thence projecting easterly therefrom along said northerly right-of-way line to the easterly boundary line of WD #87 which is the westerly line of S.S. Highway #5 (aka) East Valley Highway.

WD 87's customer records will be divided between the cities, according to the above division of the water system and any temporary services.

The limited hand tools and miscellaneous personal property owned by WD 87 will be transferred to Auburn.

4. Connection to Auburn System

The cost of inter-connecting the WD 87 water system to Auburn's water system shall be paid for from monies presently in the WD 87 maintenance fund.

The City of Kent is presently connected to the WD 87 water system, and no further connections are presently needed.

5. Costs and Expenses/WD 87 Money

The following shall be paid from WD 87 money, in the following order of priority:

WD 87 routine debts and expenses.

WD 87's attorney's fees for drafting of this agreement, and related work.

Any attorney's fees and/or costs in obtaining boundary review board or other governmental approvals (per paragraph 10 hereof).

Cost of inter-conecting the WD 87 system to Auburn's water system (per paragraph 4 hereof).

To the extent that any WD 87 money remains after payment of the above, the same shall be divided evenly between the cities proportionate to the number of WD 87 customers to be served permanently by the cities.

To the extent that the WD 87 funds are inadequate to pay all of the above, then the City of Auburn shall bear any remaining cost of inter-connecting the water systems. If there is insufficient WD 87 money to pay all of the other above-listed items in full (other than WD debts), then any amount remaining due shall be borne by the cities according to the same permanent customer ratio as above.

6. Service Interruptions

The cities each agree that transfer of the water system will not result in any interruption of water service to any WD 87 customer other than that normally experienced in the day-to-day operation of the respective water systems.

7. Water Rates

The cities each agree that former WD 87 customers shall, following transfer and in the future, be charged for water service, and pay the same connection and other charges, as the cities charge in each case, its other customers in the same class of service. Sevice shall also be of the same quality as that received by other customers in the same class.

8. Temporary Service

Auburn and Kent recognize, and agree, that until their respective water systems are readily available within the present WD 87 service area, each will have to extend temporary water service to existing customers on the opposite side from them on the above described boundary line. During such temporary service, the customers shall pay the serving city's rates and charges, and the serving city will maintain the water mains, hydrants and meters serving those temporary customers.

The city temporarily serving such customers will turn over the customers to the other city on request. Both cities agree to cooperate in the transition of these customers from one city to the other and agree that water service to the customers will not be interrupted unnecessarily during the transition.

No property temporarily served by one of the cities shall be assessed, or otherwise required to pay, for new water mains or facilities in order to transfer their services over to the other city unless said property is specifically benefitted beyond the availability of the existing service.

No new water services including five hydrants and five service lines will be connected to a water main owned by one city but temporarily being utilized to serve the above said customers (property), without the written consent of the other city.

9. Preferential Employment

The employees of WD 87 shall be entitled to offers of comparable full-time employment from both Auburn and Kent, in accordance with RCW 35.13A.090.

10. Governmental Approvals

If, in the opinion of either city, it is necessary to so obtain approval of this agreement by the King County Boundary Review Board, King County Council, and/or any other governmental body, then that city shall so notify the other parties to this agreement prior to transfer of WD 87's remaining monies to the cities.

The cities shall determine, between themselves, which city (or WD 87) shall obtain such approval(s). Regardless of who obtains the approval(s), the cost thereof shall be paid from WD 87 funds to the extent available.

11. Financial Records

WD 87's financial and other records are available on request, for inspection and copying by either of the cities.

12. WD 87 Indebtedness

WD 87 shall, as above, pay all of its debts from its present funds. WD 87 warrants that on the effective date of this agreement it will have no debts. Further WD 87 has no bonds, warrants or similar oblications outstanding, and will not issue any in the future. WD 87 also warrants that it does not have any ULID or other assessments receivable, and will not form any improvement districts in the future.

WD 87 warrants that, to the best of its knowledge and the knowlege of its Water Commissioners, there are no pending, asserted or threatened claims, suits or liens against it or any of its water system, monies or other assets. IF WD 87 or any its commissioners should receive notice or knowledge of any such claim, suit or lien prior to the effective date of this agreement, WD 87 will immediately notify other cities. The Water Commissioners of WD 87 shall not be personally liable for the foregoing warranties; and shall not be personally liable for performance of any of the terms of this agreement unless they shall, by Board of Water Commissioners's action, vote or otherwise cause te breach of this agreement.

13. WD 87 Continuing Authority.

Following the effective date of this agreement, WD 87 shall remain a municipal corporation, and its commissioners shall remain in office for at least their present terms of office, unless WD 87 is sooner dissolved as set forth below. During the continued existence of WD 87, its commissioner shall not exercise any rights, privileges, powers or functions provided by law to WD 87, except at the request of one or both of the cities. If such request is made by only one of the parties, then such actions shall be taken only with respect to that city's portion of the WD 87 water system. The WD 87 Commissioners shall not be obliged to undertake any action unless it is necessary to implement, clarify or carry out this agreement and, in such case, the other city(ies) requesting the action shall thereby agree to save the WD 87 Commissioners harmless from any liability in respect to the same.

14. Dissolution of WD 87.

Any one or more of the parties to this agreement, or anyone else having standing to do so, may petition and/or take such steps having standing to do so, may petition and/or take such steps as are necessary to dissolve WD 87 under any available statutory authority and procedure. In the event that WD 87 has not been dissolved within five (5) years of the effective date of this agreement, then the cities agree that they will immediately thereafter petition for the dissolution of WD 87 pursuant of RCW 57.90 governing the disincorporation of special districts that have not actively carried out any of the district's purposes or functions for a period of

five years, or any similar or other statutes then in effect. The cost of such disincorporation shall be borne by the cities in the same proportion as other expenses are provided for in this agreement.

15. Approval by Parties

This agreement shall be submitted to the governing bodies of each of the parties and approved by City Ordinance and Water District Resolution. Certified copies of said ordinances and resolution shall be furnished each of the parties to this agreement. Adoption of said ordinances and resolution shall serve in lieu of signature to this agreement. Notwithstanding the effective date set forth as the beginning of this agreement, this agreement shall be effective 45 days after it is approved by all three (3) parties.

DATED as of the date set forth hereinabove.

Resolution No. 1021
10-12-79

SERVICE AREA BOUNDARY AGREEMENT

THIS AGREEMENT made and entered into this 20th day of November, 1979 by and between City of Auburn, a municipal corporation located in King County, Washington, hereinafter referred to as "City", and WATER DISTRICT NO. 124, a municipal corporation located in King County, Washington, hereinafter referred to as "District 124":

W I T N E S S E T H :

1. That the purpose of this Agreement is:

A) To define current service area boundaries, and

B) To establish a method for altering those boundaries in order to provide for:

1) Maximum efficient use of existing and future facilities.

2) Maximum flexibility between the service areas in order to allow the continued and future existence of interties between the parties herein.

3) Maximum public water system coordination.

4) Orderly and efficient public water system planning.

2. That the current service area boundary between the City and the District 124 is as is set forth on Exhibit "A" attached hereto and incorporated herein by reference.

3. That in the event either the City or District 124 desire to change the existing boundary such a change shall be by mutual agreement.

4. That provisions for looped systems and interties are to be encouraged so as to provide:

A) For the most efficient use of current and future facilities.

B) For maximum service to consumers at the lowest possible cost.

C) For mutual aid between the City and District 124 in the event of an emergency.

D) For maximum public water system coordination.

5. That both the City and District 124 recognize that they are "Purveyors" as defined in R.C.W. 70.116.030(4) and hereby acknowledge their duties under R.C.W. 70.116 and the regulations promulgated thereunder and adhere to the purposes described therein.

DATED this 20 TH day of NOVEMBER, 19 79.

RESOLUTION NO. 2 1 1 4

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A SATELLITE WATER SYSTEM SERVICE CONTRACT FOR BRAUNWOOD ESTATES (PREVIOUSLY SALTMARK ESTATES)

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. AUTHORIZATION. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Satellite Water System Service Contract for Braunwood Estates (previously Saltmark Estates). A copy of said Contract is attached hereto and denominated Exhibit "A".

Section 2. AUTHORITY. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED and SIGNED this 6th day of August, 1990.

CITY OF AUBURN

MAYOR

ATTEST:

Robin Wohlhueter, City Clerk

APPROVED AS TO FORM:

Michael J. Reynolds,
Acting City Attorney

CITY OF AUBURN

WATER DEPARTMENT

SATELLITE WATER SYSTEM SERVICE CONTRACT

FOR BRAUNWOOD ESTATES (PREVIOUSLY SALTMARK ESTATES)

IT IS AGREED by and between the CITY OF AUBURN ("the City") and the undersigned ("the Owners") as follows:

1. **Parties.** The City is a municipal corporation organized under and existing by virtue of Chapter 57 of the Revised Code of Washington. The Owners are, collectively, the owners of property provided water service by a water source and distribution system which is independent of and unconnected to another public or private water system (the "satellite system").

2. **Legal Description.** The property presently served, and to be served in the future, by the satellite system is located in King County, Washington and is legally described as follows:

   THE SW 1/4 OF THE NE 1/4 OF SECTION 33, TWP 21 N., R. 5 E., W.M. AND THE W 1/2 OF THE SE 1/4 OF THE NE 1/4 OF SECTION 33, TWP 21 N., R. 5 E., W.M.

   The above property is inside the City's service area under the South King County Coordinated Water Supply Plan.

3. **City Services.** The City will provide services to the satellite system, as identified below:

   * Operation and management of the satellite system from the tail piece on the house side of the meters to the well source.

   * Routine inspection, maintenance and repair of the satellite system in accordance with reasonable and accepted standards and practices for public water systems.

   * Emergency repairs, within a reasonable time after the owners have notified the City.

   * Preparation and filing of reports and other data (including water sample testing) as required.

4. **City Charges.** The property owners within the plat of Braunwood Estates agree to pay the following to the City:

   A. Services charges. The City will charge for the above-identified services at a rate equivalent to that

applied in the Auburn City Code, Title 13, Chapter 13.04.

B. Connection Charge. All persons connecting to the City's water system are obliged to pay a standard service installation charge as identified in the Auburn City Code, Title 13, Chapter 13.04.

C. Reserve Account. All parcels within said plat, upon connection to the City's water system, shall pay to the City one thousand dollars ($1,000) per parcel as a reserve account.

The reserve account can be utilized for water system repair, replacement or maintenance at the City's discretion, upon completion of the one (1) year maintenance period, as set out in the Developers Extension Agreement.

The property owners are not entitled to return of the reserve account money or interest on the reserve account, and the money in the account may be co-mingled with other Water Department funds.

5. **Terms and Conditions.** This Agreement includes all of the terms and conditions in the Auburn City Code as applicable and as amended in the future.

Without limiting the foregoing, it is agreed as follows:

A. The City owns the satellite water system and will provide service as set forth above, performed in accordance with accepted public utility practices.

B. The property owners hereby agree to limit the total number of connections irrigating their property at any one time to seven (7). The restrictive irrigation requirements shall be conducted by address on an odd and even number basis. The even numbered addresses shall be permitted to irrigate on even numbered calendar days, while the odd numbered addresses shall be permitted to irrigate on the odd numbered calendar days. The design of private irrigation systems shall be limited to a maximum of ten (10) gallons per minute total consumption for each lot.

C. The property owners hereby agree in the event that the satellite system water source is interrupted, due to unpredictable conditions, such as severe volume reductions, contaminated water or any other unforeseen condition, the City at its discretion may utilize the alternate well site as described on the development plan or any other reasonable measure to ensure a source of water.

D. The property owners will not be assessed a System Development Charge (SDC) as allowed for in the Auburn City Code, unless there is a failure of the existing system as described in paragraph 5. C. above and it is deemed necessary by the City in the event a suitable and reliable source of water cannot be developed and the City must utilize Water Department funds beyond the reserve account to provide an alternate water source.

E. The designed, approved and constructed satellite water system shall be limited to a maximum of thirteen (13) total single-family residential connections.

F. All customers must be connected to the satellite system via a meter supplied by the City, after property owner application. The service must be in accordance with the City of Auburn standards and the City's standard meter charge must be paid in advance of the City providing service.

6. **Source Interruption Responsibility.** Because a satellite system will receive water from a single well or aquifer and may be so located that no emergency water service is reasonably available, the City will not, under any circumstances, undertake liability for emergency or supplemental supply in the event of diminution in, loss of, or contamination of the satellite system's water supply.

7. **Waiver of Right to Protest Formation of a U.L.I.D.** The property owners waive any and all rights granted by statute or otherwise, to object to or protest against formation by the City of a Utility Local Improvement District for the purpose of constructing water improvements extending the City's system to provide City water to the properties. The foregoing does not waive the property owners' right to object to the amount of the property owners' assessment, in the manner provided by statute.

8. **Future Connection to City System.** If the City's water system were extended to provide City water in lieu of the present satellite system source, the present and future owners of the property agree to connect to the City's system, at their expense, in accordance with the terms and conditions of the Auburn City Code valid at the time of connection.

9. **Duration.** This Agreement shall remain in full force and effect until the City's basic system is extended to serve the satellite system area. Neither party may terminate this Agreement until that time.

10. **Integration.** This Agreement constitutes the entire agreement between the parties. There are no other verbal or written agreements or representations which modify or affect this Agreement.

11. **Covenant Running with the Property.** It is agreed that this Contract is a covenant running with the property described in Paragraph 2 above and any other properties receiving water in the future from the satellite system, and shall be binding on the owners of all such property, their heirs and successors and it shall be recorded as an encumbrance against each of the thirteen (13) land parcels.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE FOR OPERATING AND MAINTAINING A PUBLIC WATER SYSTEM.

WHEREAS, the cities of Auburn and Bonney Lake are responsible for operating and maintaining a public water system in accordance with federal, state and local laws and regulations; and

WHEREAS, the parties recognize the responsibility of public water utilities to provide for the highest quality of water and reliability of service to their customers at reasonable cost; and

WHEREAS, the parties further recognize that water resources are finite and vulnerable, and the prudent use and management of these resources requires cooperation among utilities;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Interlocal Agreement between the City of Auburn and the City of Bonney Lake for operating and maintaining a public water system in accordance with federal, state and local laws and regulations.

INTERLOCAL AGREEMENT BETWEEN THE CITY OF BONNEY LAKE AND THE CITY OF AUBURN

ORIGINAL

This agreement made and entered into this 15th day of August, 1994, by and between the City of Auburn (hereinafter referred to as "Auburn"), and the City of Bonney Lake (hereinafter referred to as "Bonney Lake"), WITNESSETH THAT:

WHEREAS, Auburn and Bonney Lake are responsible for operating and maintaining a public water system in accordance with federal, state and local laws and regulations, and

WHEREAS, the parties recognize the responsibility of public water utilities to provide for the highest quality of water and reliability of service to their customers at reasonable cost, and

WHEREAS, The parties further recognize that water resources are finite and vulnerable, and the prudent use and management of these resources requires cooperation among utilities, and

NOW, THEREFORE, the City of Bonney Lake and the City of Auburn enter into the following agreement.

A. RECITALS

1. Bonney Lake will sell water to Auburn for the purpose of serving a maximum of two rural-residential domestic service connections for lots that abut the Pierce/King County (Auburn City Limits) line, in vicinity of Kersey Way S. E.

2. City of Auburn would install their own meters to individual services and one of these services would be to tax lot 9056 on Kersey Way S. E., adjacent to the county line.

3. The meter shall be in the Bonney Lake water service area. (Pierce County) The City of Auburn shall pay the connection charge plus the actual cost of the meter installation. The City of Bonney Lake shall own the meter.

4. The size of the meter shall be determined by the City of Auburn.

5. All the properties served within the City of Auburn water service area will be the responsibility of the City of Auburn.

6. Bonney Lake will sell water to the City of Auburn at the standard Outside the City rates. Per Bonney Lake Municipal Code Section 13.04.100(C).

7. Bonney Lake shall only furnish domestic needs for the two (2) rural residential connections. Bonney Lake is not responsible for fire flow.

RES No. 2551
Exhibit "A"

8. The City of Auburn will require new service connections from this supply to be protected by a residential fire sprinkler system in accordance with Auburn Fire Department ordinance.

9. This agreement shall become null and void at the time Auburn has water available through it's own system to serve these properties.

10. The City of Bonney Lake shall use reasonable effort to provide a regular uninterrupted supply of water to Auburn. Bonney Lake shall not be liable for any shortage or interruption in delivery of water. In addition Bonney Lake shall not be liable for any failure, interruption or shortage of water or any loss or damage resulting therefrom, occasioned by any cause beyond the control of the City of Bonney Lake

11. Auburn shall be a customer of Bonney Lake and shall be given the same consideration as any other customer under the ~~City~~ Bonney Lake's rules, regulations, and Municipal Codes, for domestic service only.

12. This Agreement to provide water services by Bonney Lake shall continue from year to year on the anniversary date of the later approval date shown below, unless notice of intent not to renew this Agreement is provided by the Mayor of the City of Bonney Lake in writing to the Mayor of the City of Auburn on or before the anniversary date.

RESOLUTION NO. 2721

A RESOLUTION OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK OF THE CITY OF AUBURN, TO EXECUTE INTERLOCAL AGREEMENT NO. 2 FOR THE LEA HILL INTERTIE PROJECT BETWEEN THE COVINGTON WATER DISTRICT, KING COUNTY WATER DISTRICT #111 AND THE CITY OF AUBURN.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREBY RESOLVES THAT:

SECTION 1. The Mayor and City Clerk of the City of Auburn, Washington, are hereby authorized to execute Interlocal Agreement No. 2 for the Lea Hill Intertie Project between the Covington Water District, King County Water District #111 and the City of Auburn. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

SECTION 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

CITY ATTORNEY
City of Auburn
25 W. Main
Auburn, WA 98001
(206) 931-3030

Interlocal Agreement 2
for the
Lea Hill Intertie Project
between
Covington Water District,
King County Water District #111,
and the
City of Auburn

I. Project Title: Lea Hill Intertie, consisting of construction and operation of piping, pump stations, meters, and source facilities for a water supply intertie between the City of Auburn (Auburn), Covington Water District (CWD) and King County Water District #111 (WD111), jointly termed the Participants. The project facilities are as shown on Exhibit A - Facilities Plan.

II. General:

A. This Interlocal Agreement 2 (IA2) is consistent with the Joint Operating Agreement (JOA) of the South King County Regional Water Association (SKCRWA) dated 26 July 1995.

B. There is an immediate need to provide for additional water supply to meet the needs of CWD and WD111, and meet the emergency needs of Auburn.

C. Performance by Auburn under IA2 shall be subject to its pre-existing contractual and/or water supply obligations to Algona, Kent, Muckleshoot Indian Tribe, and Pacific. Future Interlocal Agreements shall be subject to the terms and conditions of IA2. It is the intent of Auburn to create a first in time, first in service approach to wholesale of water within the limitations of Auburn's water rights and/or supply capacity.

D. Auburn has the necessary water system capacity to meet a portion of the near term, interruptable, public water supply needs of CWD and WD111. CWD and WD111 have the necessary system capacity to meet a portion of the emergency needs of Auburn.

E. Each Participant desires to develop firm supplies to meet long term, continuing needs.

F. Each Participant hereby identifies its authorized representative as the "General Manager" of CWD, the "General Manager" of WD111, and as the "City Engineer" of Auburn.

G. For wholesale water purposes per Section 4. C. of the JOA, the following interties exist or are expected to exist in the near future for the Participants to IA2:

EXHIBIT "A"
CITY OF AUBURN
RESOLUTION NO. 2721
ADOPTED 09/03/96

1. CWD
   a) Auburn (future)
   b) Black Diamond (future)
   c) Tacoma (future)
   d) King County Water District 94 (future)
   e) WD111, and
   f) Cedar River Water and Sewer District.

2. WD111
   a) Auburn,
   b) CWD,
   c) Kent, and
   d) Soos Creek Water and Sewer District.

3. Auburn
   a) Algona,
   b) Kent,
   c) WD111,
   d) Pacific,
   e) Bonney Lake,
   f) Lakehaven Utility District (future),
   g) Muckleshoot Indian Tribe (future), and
   g) CWD (future).

H. Interlocal Agreement No. 1, 132nd Avenue Interim Intertie Project, dated 7 November 1995, is terminated by mutual agreement of the WD111 and Auburn upon completion of the improvements described in Exhibit B of this IA2.

III. Description of Project:

A. The project facilities are generally described in the Engineering Report prepared by EES, dated September 1995, and any subsequent amendments thereto.

B. The project includes design, construction, and operation of facilities to provide water as follows:

Year	Auburn Maximum Day Demand (mgd)	CWD Maximum Day Demand (mgd)	WD111 Maximum Day Demand (mgd)	Total Maximum Day Demand (mgd)
1998	2.0	1.0	2.0	5.0
2000	2.0	1.5	2.5	6.0
2002	2.0	2.5	2.5	7.0
2005	2.0	2.5	2.5	7.0
2010	2.0	2.5	2.5	7.0

EXHIBIT "A"
CITY OF AUBURN
RESOLUTION NO. 2721
ADOPTED 09/03/96

Additional water may be available as mutually agreed to by the Auburn City Council and the Board of Commissioners of either District. Water is to be provided from the Auburn system to the Lea Hill Reservoir Site, and then to the pipeline on 132nd SE running north to the Districts. The project will provide for flow control facilities as necessary and a master meter which will be used to measure the water supplied. The reverse order is used for water to be provided from the Districts to Auburn.

C. Respective Facility Ownership, Capacity Rights, and responsibility for operation, maintenance, and renewal and/or replacement (r/r) are as described in Exhibit B. Operational parameters shall be as defined in Exhibit C - Project Criteria.

D. Auburn will design, construct and maintain the facilities constructed under IA2 in accordance with reasonably accepted water utility standards for similar municipal water utilities. Facilities will be designed in compliance with the City's adopted design standards as described in the 1995 Comprehensive Water Plan.

E. The participants agree that an independent Value Engineering Analysis will be done at the 75 percent design level.

IV. Project Costs:

A. The project costs are estimated as shown on Exhibit D - Project Cost. Final project costs shall be reviewed and approved by the Participants. The Participants shall maintain individual cost records on their expenses for the project. Auburn will retain a consultant to maintain total cost records for the project.

B. Costs associated with the development of new water sources will be shared based on the basis quantity of water each Participant is allocated from the sources.

V. Project Financing: The Participants shall fully finance and pay for their proportionate share as shown in Exhibit D - Project Cost. The Districts shall deposit funds with Auburn to perform the project work for the proposed facilities in accordance with the schedule shown in Exhibit E - Project Schedule.

VI. Service Charges:

A. Auburn has prepared a Cost of Service Study to determine the cost of service to its customers. A customer classification for "wholesale" has been created, and rates for service charges shall be based on a rate study for the wholesale customer classification. Auburn will regularly update the cost of service analysis. Wholesale water rates will be based on costs of providing the service. Cost of developing the initial Cost of Service Study and Rate Study will be included within the project costs.

EXHIBIT "A"
CITY OF AUBURN
RESOLUTION NO. 2721
ADOPTED 09/03/96

B. WD111 and CWD shall provide a rate to Auburn to be applied for emergency service charges. Such rate shall be based on costs of providing the service, or, in the interim until a Cost of Service / Rate Study is completed, shall be equal to or less than Auburn's current wholesale rate.

C. Adjustments to the service charges will be made in accordance with Section 4.H. of the JOA.

VII. Project Coordination:

A. The Participants shall meet monthly for project coordination, or more frequently as needed.

B. Auburn will retain a consultant to be the overall Project Coordinator. Assignment of responsibilities to the Project Coordinator shall be by agreement of the Participants' authorized representatives.

C. The Participants shall be responsible for design, construction management, and commissioning of facilities to be constructed in conformity to facility ownership. Responsibilities may be assigned otherwise by agreement of the Participants' authorized representatives.

VIII. Conditions of Service:

A. Auburn does not presently have the necessary capacity (i.e., water supply and/or water rights) to guarantee delivery of firm uninterruptible water. It is acknowledged and agreed that in the event Auburn experiences any failure or decreased capacity for any reason or increased demand within its retail service area, the supply to the Districts may be immediately reduced or stopped under such conditions at the sole discretion of Auburn. The Districts agree that Auburn may take such action irrespective of any cost, investment in capacity, or other reliance which may have been placed upon the intertie facilities and interruptible water supply referenced in this IA2.

B. The Districts specifically acknowledge and agree that failure of Auburn to obtain additional primary water rights in excess of Auburn needs shall be cause for not bringing the Districts on a par with Auburn customers. For purposes of this IA2, on par shall mean: Upon receiving new primary water rights for additional water sources in the amount of at least 7 mgd the quantities of water described in paragraph III. B., the Districts will be served on the same basis and with the same reliability as service is provided to Auburn's retail customers, and Auburn will include the maximum total quantity of water cited in paragraph III. B. in all of its water system planning as if the quantity was served to direct service customers and any curtailment, restrictions or limitations on delivery would be on the same basis as curtailment, restrictions, or limitations on delivery to retail customers.

CITY OF AUBURN
RESOLUTION NO. 2721
ADOPTED 09/03/96

C. The Participants will proceed with development and implementation of projects in accordance with the project schedule shown in Exhibit E to increase firm system capacity and a wholesale supply capacity as described in paragraph III. B., designed to ensure service to the Districts. It is anticipated the necessary projects required to provide firm supply will be proposed wells numbers 6 and 7 described in the City's 1995 Comprehensive Water Plan. The City has obtained Supplemental Water Rights for the proposed wells numbers 6 and 7. It is the intent of the Auburn to obtain Primary Water Rights for wells number 6 and 7 and additional new wells, if required, sufficient to provide the quantities of water described in paragraph III. B. which shall bring the Districts on a par with Auburn customers.

D. It is the intent of Auburn to provide the water described in paragraph III. B. whenever it is available subject to the limitations described in paragraphs VIII. A. and B. Auburn shall use reasonable diligence and best efforts to provide immediate notice in the event it becomes aware that it may not be able to fulfill the requirements of paragraph III. B. for any reason.

IX. Term of Duration of Agreement: This IA2 shall remain in full force unless terminated by mutual agreement of the Participants.

X. Amendments:

A. This IA2 may be amended only in writing by agreement signed by the Participants.

B. The authorized representatives shall have authority to update exhibits attached hereto. The exhibits shall be updated and/or revised only upon written agreement signed by the Participants' authorized representatives. Updates must be ratified by Auburn's City Council.

XI. Dispute Resolution:

A. Should a dispute arise between the participants regarding the technical aspects of the planning, design, construction, funding, or operation of the facilities contemplated under IA2, the authorized representatives of the participants, as defined in paragraph II. E., shall meet and select two persons who, along with the authorized representatives of the participants, will form a dispute resolution panel to resolve the dispute. Should the dispute resolution panel not be able to reach a mutually satisfactory resolution the dispute will be resolved as described below.

B. Legal disputes between the participants to IA2 shall be resolved through the use of mediation by a mediator mutually acceptable to the participants with each participant agreeing to equally share the cost of the mediator. Should the participants not be able to satisfactorily resolve the dispute through mediation, the forum for resolution shall be King County Superior Court. The substantially prevailing party will be entitled to attorney fees and costs.

RESOLUTION NO. 2721
ADOPTED 09/03/96

XII. Hold Harmless: Each Participant agrees to indemnify and hold harmless the other participant from and against any loss, cost, damage, or expense of any kind and nature arising out of injury to person or damage to property in any manner caused by the negligent act or omission of the indemnified individual participant in the performance of its work pursuant to or in connection with this IA2.

XIII. Severability: If any provision of this IA2 is invalid or unenforceable the remaining provisions shall remain in force and effect.

IN WITNESS WHEREOF, the Participants hereto have caused this IA2 to be executed by their proper Officers on the 2nd day of October, 1996.

Exhibit C
Project Criteria
to
Interlocal Agreement 2
for
Lea Hill Intertie Project

Project Criteria:

- Waterlines shall be sized as shown on Exhibit A.
- No storage shall be included in the project. All storage required to enable the Districts to optimally use facilities constructed shall be provided by the Districts.
- Pumping Facilities shall be constructed to provide flow rates as described in paragraph III. B.
- The New Lea Hill Pump Station is to operate at design capacity with one pump in stand-by mode.
- The Lea Hill Booster Pump Station is to operate at design capacity with one pump in stand-by mode.
- Pump Stations to be designed with single speed pumps.
- Emergency Power not provided at pump stations.
- Flow rates to the Districts from Auburn through the facilities shall be set for constant flow for full 24 hour periods, subject to reasonable hydraulic and mechanical tolerances.
- The Districts will notify Auburn by 9:00 AM if the District requests adjustment of the desired pumping rate for the following day, except in case of an emergency.
- In the event Auburn desires emergency water from the Districts, the Districts will provide Auburn a daily estimate of the volume of water which will likely be available during the following 24 hour period.

RESOLUTION NO. 2 7 8 2

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE A NEW FRANCHISE AGREEMENT BETWEEN THE CITY OF AUBURN AND KING COUNTY TO CONSTRUCT, OPERATE AND MAINTAIN A WATER SYSTEM IN COUNCIL DISTRICTS 7, 9 AND 13, UNTIL YEAR 2021, AND A SHORT TERM FRANCHISE TO CONSTRUCT, OPERATE AND MAINTAIN A SEWER SYSTEM IN COUNCIL DISTRICT 7, 9 AND 13 UNTIL MARCH, 1998.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLE, HEREWITH RESOLVES THAT:

SECTION 1. AGREEMENT The Mayor of the City of Auburn is herewith authorized to execute a Franchise Agreement between the City of Auburn and King County to construct, operate and maintain a water system in Council Districts 7, 9 and 13, until year 2021, and a short term franchise to construct, operate and maintain a sewer system in Council Districts 7,9, and 13 until March, 1998. A copy of said Agreement is attached hereto, denominated as Exhibit "A", and a copy of King County Ordinance No. 12473 approving the franchise is

attached hereto denominated as Exhibit "B", and made a part hereof as though set forth in full herein.

SECTION 2. AUTHORIZATION. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED and SIGNED this 18th day of November, 1996.

FRANCHISE NO.____

In the matter of the application for a franchise to operate, maintain, repair, and construct water mains and service lines, and appurtenances in, over, along, and under County roads and rights-of-way in King County, Washington.

The application of the CITY OF AUBURN for a franchise to operate, maintain, repair and construct water mains and service lines, and appurtenances in, over, along, and under County roads and rights-of-way located within the area described in attached Exhibit "A" has been heard on this 30th day of September, 1996. All of the property described in Exhibit "A" lies outside the limits of any incorporated Town or City.

Legal notice of the franchise application and of the hearing has been given as is required by law.

The King County Council, having considered the interests proposed and advanced, and finding that the granting of this franchise is in the public interest, ORDERS that a franchise be granted to the CITY OF AUBURN, the Grantee, subject to the conditions set forth in Exhibit "B" attached hereto, this franchise and Ordinance No. 12473. This franchise grants the right, privilege, authority and franchise to operate, maintain, repair and construct mains and service lines and appurtenances as a part of its distribution system in, over, along, and under County roads and rights-of-way located within the area described in Exhibit "A".

12473

This franchise is granted subject to all of the terms and conditions contained herein, within Ordinance No. 12473 and Exhibit "B", and shall expire in twenty-five years on 9/30, 2021.

Dated this 14th day of October, 1996.

KING COUNTY, WASHINGTON

BY Gary Locke

TITLE King County Executive

The undersigned accepts all the rights, privileges, and duties of this franchise subject to all terms, conditions, stipulations, and obligations contained herein, within Ordinance 12473 and Exhibit "B".

CITY OF AUBURN
GRANTEE

BY Charles A. Booth

TITLE Mayor

Dated this 26th day of November, 1996.

Exhibit "A"

Beginning at the northwest corner of the George E King Donation Land Claim No. 40 situate in Section 31, Township 22 North, Range 5 East, W.M. also known as the southeast corner of the R H Beatty Donation Land Claim No. 37 and No. 44 situate in Section 31, Township 22 North, Range 5 East, W.M. and in Section 36, Township 22 North, Range 4 East, W.M.; Thence westerly along the south boundary of said R H Beatty Donation Land Claim No. 37 and 44 and the south boundary of the John M. Thomas Donation Land Claim No. 42 situate in Section 36, Township 22 North, Range 4 East, W.M. to the easterly boundary of the corporate city limits of the City of Auburn as described in the City of Auburn annexation Ordinance No. 4770; Thence northerly along said easterly boundary of the corporate city limits, 49.5 feet; thence easterly along a line parallel with said south boundary of the John M Thomas Donation Land Claim No. 42 an the south boundary of said R H Beatty Donation Land Claim No. 37 and 44 to the east boundary of said R H Beatty Donation Land Claim No 37 and 44; Thence easterly along a line parallel with and 49.5 feet north, measured at right angles of the north boundary of said George E King Donation Land Claim No. 40, and along said parallel line extended easterly, to the thread of the Green River; Thence southerly along said thread of the Green River to the north boundary of said George E King Donation Land Claim No. 40, extended easterly; thence westerly to the point of beginning.

Together with:

Beginning with the northwest corner of Section 5, Township 21 North, Range 5 East, W.M. Together with:

Beginning at the southwest corner of the S E 1/4 of the S W 1/4 of Section of Section 32, Township 22 North, Range 5 East, W.M.; Thence northerly along the west boundary of said S E 1/4 of the S W 1/4 of Section 32 to the north boundary of the South 30.00 feet of said Section 32; Thence easterly along said north boundary of Section 32 and along the north boundary of the south 30.00 feet of Section 33, Township 22 North, Range 5 East, W.M. to the west boundary of the east 285 feet of the S W 1/4 of said Section 33 as measured along the south boundary of said Section 33; Thence southerly along said west boundary to said south boundary of Section 33; Thence southerly along a line parallel with the east boundary of the West 1/2 of Section 4, Township 21 North, Range 5 East, W.M.; Thence easterly parallel with the north boundary of said Section 4, a distance of 100 feet; Thence southerly parallel with said east boundary of the West 1/2 of Section 4, a distance of 114.00 feet; Thence easterly parallel with said north boundary of Section 4, a distance of 155.00 feet to the west boundary of the east 30.00 feet of said West 1/2 of Section 4; Thence southerly along said west boundary of the east 30.00 feet to the south boundary of the North 1/2 of the South 1/2 of said Section 4; Thence easterly along said south boundary and along the south boundary of the North 1/2 of the South 1/2 of Section 3, Township 21 North, Range 5 East, W.M. to the northwesterly margin of Primary State Highway No. 2, also known as State Route 18; Thence southerly and westerly along said northwesterly margin to the easterly corporate

city limits of the City of Auburn; Thence northerly and westerly along said easterly corporate city limits of the City of Auburn to the south boundary of Government Lot No. 4 in Section 5, Township 21 North, Range 5 East, W.M. extended westerly; Thence easterly to the southeast corner of said Government Lot No 4; Thence northerly to the point of beginning.

Together with:

Beginning at the southwest corner of the N E 1/4 of the S W 1/4 of Section 21, Township 21 North, Range 5 East, W.M., said point located on the easterly corporate city limits of the City of Auburn; Thence northerly along said corporate city limits of the City of Auburn to the southeasterly margin of said Primary State Highway No. 2, also known as State Route No. 18; Thence northeasterly along said southeasterly margin to the thread of the Green River; Thence southeasterly along said thread of the Green River to the east boundary of Section 26, Township 21 North, Range 5 East, W.M.; Thence southerly along said east boundary of Section 26 and southerly along the east boundary of Section 35, Township 21 North, Range 5 East, W.M. to the southeast corner of said Section 35; Thence westerly along the south boundary of said Section 35 to the thread of the White River and the easterly corporate city limits of the City of Auburn; Thence north and westerly along said easterly corporate city limits of the City of Auburn to the point of beginning.

Together with:

Beginning at the southwest corner of Section 36, Township 22 North, Range 4 East, W.M.; Thence northerly along the westerly boundary of said Section 36 to the northerly margin of South 277th Street, also known as 52nd Street N W, which is the southerly corporate limits of the City of Kent; Thence easterly along said northerly margin of South 277th Street and along the southerly corporate limits of the City of Kent and along the northerly corporate limits of the City of Auburn to the westerly margin of Auburn Way North; Thence southeasterly along said westerly margin 2100 feet, more or less, to the westerly corporate city limits of the City of Auburn as described in the City of Auburn Ordinance No. 2511; Thence southerly along said westerly corporate city limits to the southerly boundary of the W A Cox Donation Land Claim No. 38 and 41; Thence westerly along said southerly boundary to the easterly boundary of the Plat of White River Valley Home Tracts as recorded in Volume 13 of Plats, Page 17, records of King County, Washington; Thence northerly along said easterly boundary of the Plat of White River Valley Home Tracts to the northeast corner of Tract 20 of said Plat of White River Valley Home Tracts; Thence westerly along the north boundary of said Tract 20 to the westerly margin of 80th Avenue South; Thence southerly along said westerly margin of 80th Avenue South to the southerly boundary of Section 36, Township 22 North, Range 4 East, W.M. Thence westerly to the point of beginning.

Less that portion of the above described franchise areas lying within the corporate city limits of the City of Auburn, Washington and less that portion of the above described franchise areas lying within the corporate city limits of the City of Kent, Washington.

EXHIBIT "B"

TERMS AND CONDITIONS APPLICABLE TO

UTILITIES FRANCHISES GRANTED BY KING COUNTY

THIS FRANCHISE is subject to the following terms and conditions:

1. DEFINITIONS

References to any County official or office also refers to any office that succeeds to any or all of the responsibilities of the named office or official. References to laws or "applicable laws" include federal, state, and local laws and regulations adopted pursuant to those laws; unless otherwise stated, references to laws include laws now in effect, as the same may be amended from time to time during the operation of this franchise. In addition, the following definitions shall apply:

Cable Services. The term "Cable Services" is used as defined in 47 United States Code 522 (5), as amended.

Cable System. The term "Cable System" is used as defined in 47 United States Code 522 (6), and King County Code 6.a.010 (J) as amended.

County Road Rights-of-Way. The term "County Road Rights-of-Way" includes any road, street, avenue, or alley located within the area described in the attached Exhibit "A", it does not include recreational or nature trails except where the trails intersect or are within roads, streets, avenues or alleys.

Director. The term "Director" refers to the chief executive of the King County Department of Transportation.

Grantee. The term "Grantee" refers to the CITY OF AUBURN its successors and those assignees approved pursuant to paragraph 16 herein.

Utility. The term "utility" refers either to the Grantee or, depending on the context, to any other person, firm, or corporation, public or private, which may hold a franchise to maintain and operate similar facilities in, under, over, across, and along any of the County property described in Exhibit "A".

Council. The term "Council" refers to the King County Council, acting in its official capacity.
Other Governing Body. The term "Other Governing Body" refers to any public official or other public board or body as may have the power and jurisdiction to permit or regulate the installation and maintenance of utilities and other facilities in, under, over, across, and along any of the county property described in Exhibit "A".

2. ACCEPTANCE BY GRANTEES OF TERMS AND CONDITIONS

The full acceptance of this franchise and all of its terms and conditions shall be filed with the Clerk of the Council within forty-five (45) days from _____, 19____, by the Grantee. Full acceptance of this franchise is a condition precedent to its taking effect, and unless this franchise is accepted within the time specified, this grant will be null and void and have no force or effect.

3. NON-EXCLUSIVE FRANCHISE

This franchise is not exclusive. It does not prohibit King County from granting franchises for other public or private utilities, in, under, over, across, and along any County property, including County road rights-of-way.

This franchise does not prevent or prohibit King County from constructing, altering, maintaining or using any County road rights-of-way covered by this franchise. King County retains full power to make all changes, relocations, repair, maintenance, etc. as it may deem fit.

4. JURISDICTION

This franchise is intended to convey limited rights and interest only as to those roads and rights- of-way in which King County has an actual interest. It is not a warranty of title or of interest in County road rights-of-way.

Whenever any of the County road rights-of-way as designated in this franchise, by reason of the subsequent incorporation of any Town or City or extension of the limits of any Town or City, shall later fall within the City or Town limits, this franchise shall continue in force and effect until such time as the incorporation and/or annexation is complete according to applicable State law, after which time the County will no longer have any responsibility for maintenance of any County roads, rights-of-way or other County property within the area of annexation/incorporation.

None of the rights granted to the Grantee shall affect the jurisdiction of King County over County road rights-of-way or the County's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating.

All of the rights herein granted shall be subject to and governed by this franchise; provided, however, that nothing in this franchise may be construed in any way as limiting King County's rights to adopt ordinances which are necessary to protect the health, safety and welfare of the general public.

5. REGULATION OF USE AND CONTROL

This franchise does not deprive King County of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the County road rights-of-way covered by this franchise.

This franchise authorizes the use of County rights-of-way solely for the delivery by the Grantee of natural gas to it customers. Additional uses of County rights-of-way by the Grantee, including for cable communication services, shall first require a separate franchise from King County which conforms to the requirements of K.C.C. 6.27 as amended, or K.C.C. 6.27A as amended, and other applicable law.

Any use of the Grantee's equipment of facilities in County rights-of-way by others, including for telecommunication or cable communication services, is prohibited unless separately authorized and approved in writing by King County. The Grantee agrees that prior to authorizing any person to use the Grantee's equipment or facilities located in County rights-of-way, the Grantee will require the user to provide the Grantee with an affidavit that it has obtained the necessary franchise or other approval from the County to operate and provide the proposed service in County rights-of-way. At least thirty (30) day prior to executing any agreement with a potential user for the use of the Grantee's equipment or facilities, the Grantee shall fax the affidavit to the King County Office of Cable Communication at 206-296-0842.

6. EMINENT DOMAIN

This franchise and the limited rights and interests for the operation, maintenance, repair, and construction of Grantee's transmission and service lines and appurtenances are subject to the exercise of eminent domain. In the event of an exercise of eminent domain by King County, the value to be attributed to all the rights and interests granted under this franchise shall not exceed the actual amount the Grantee paid to King County in obtaining this franchise.

7. ENFORCEMENT

Failure of King County, on one or more occasions to exercise a right or to require compliance or performance under this franchise or any applicable law, shall not be deemed to constitute a waiver of such right or a waiver of compliance or performance, unless such right has been specifically waived in writing. Failure of King County to enforce or exercise its rights under any provision of this franchise or applicable law does not constitute a waiver of its rights to enforce or exercise a right in any other provision of this franchise or applicable law.

8. INDEMNITY AND HOLD HARMLESS

The Grantee agrees to indemnify and hold harmless King County as provided herein to the maximum extent possible under law. Accordingly, the Grantee agrees for itself, its successors, and assigns to defend, indemnify and hold harmless King County, its appointed and elected officials, and employees from and against liability for all claims, demands, suits, and judgments, including costs of defense thereof, for injury to persons, death, or property damage which is caused by, arises out of, or is incidental to Grantee's exercise of rights and privileges granted by this franchise. The Grantee's obligations under this section shall include:

(a) Indemnification for such claims whether or not they arise from the sole negligence of the Grantee, the concurrent negligence of both parties, or the negligence of one or more third parties.

(b) The duty to promptly accept tender of defense and provide defense to the County at the Grantee's own expense.

(c) Indemnification of claims made by the Grantee's own employees or agents.

(d) Waiver of the Grantee's immunity under the industrial insurance provisions of Title 51 RCW, which waiver has been mutually negotiated by the parties.

In the event it is necessary for the County to incur attorney's fees, legal expenses, or other costs to enforce the provisions of this section, all such fees, expenses and costs shall be recoverable from the Grantee.

In the event it is determined that RCW 4.24.115 applies to this franchise agreement, the Grantee agrees to defend, hold harmless and indemnify King County to the maximum extent permitted thereunder, and specifically for its negligence concurrent with that of King County to the full extent of Grantee's negligence. Grantee agrees to defend, indemnify and hold harmless the County for claims by Grantee's employees and agrees to waiver of its immunity under Title 51 RCW, which waiver has been mutually negotiated by the parties.

King County shall give the Grantee timely written notice of the making of any claim or of the commencement of any such action, suit, or other proceeding covered by the indemnity in this section. In the event any such claim arises, the County or any other indemnified party shall tender the defense thereof to the Grantee and the Grantee shall have the duty to defend, settle, or compromise any claims arising hereunder and the County shall cooperate fully therein.

Notwithstanding the above, the County shall have no obligation to tender a defense as a condition of the indemnity where there is a material conflict between the interests of the Grantee and King County.

9. VACATION

If at any time King County vacates any County road rights-of-way covered by this franchise, King County will not be held liable for any damages or loss to the Grantee by reason of such vacation. King County may, after giving thirty (30) days written notice to the Grantee, terminate this franchise with respect to any County road rights-of-way vacated.

10. REPAIR, REMOVAL OR RELOCATION

The Grantee hereby covenants, at its own expense, to repair, remove, or relocate existing facilities including all appurtenant facilities and service lines connecting its system to users, within King County road rights-of-way if such repair, removal, or relocation is required by King County for any County road purpose. Such repair, removal, or relocation shall not be unreasonably required.

The grantee shall, at no expense to the County, adjust, remove or relocate existing facilities within County road rights-of-way, including all appurtenant facilities and service lines connecting its system to users, if the County determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the County in such road right-of-way. The County shall give the Grantee written notice of such requirement as soon as practicable, at the beginning of the pre-design stage for projects that are part of the County's capital improvement program, including such available information as is reasonably necessary for the Grantee to plan for such adjustment, removal or relocation.

For projects that are a part of the County's capital improvement program, in addition to any other notice given to the Grantee, the County shall provide a vertical and horizontal profile of the roadway and drainage facilities within it, both existing and as proposed by the County, and the proposed construction schedule; notwithstanding any permit conditions that may later be applied to the County project, this initial design information shall be given at least 180 days before construction is scheduled to begin, except in cases of urgent construction or emergencies. The Grantee shall respond to this notice, and to any later notices of revised designs based on permit conditions, within no more than thirty (30) days by providing to the County the best available information as to the location of all of the Grantee's facilities, including all appurtenant facilities and service lines connecting its system to users and all facilities that it has abandoned, within the area proposed for the public works project.

The County shall offer the Grantee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Grantee's facilities. Such bid documents shall provide for an appropriate cost allocation between the parties. The County shall have sole authority to choose the contractor to perform such work. The Grantee and the County may negotiate an agreement for the Grantee to pay the County for its allocation of costs, but neither party shall be bound to enter into such an agreement. Under such an agreement, in addition to the Grantee's allocation of contractor costs, the Grantee shall reimburse the County for cost, such as for inspections or soils testing, related to the Grantee's work and reasonably incurred by the County in the administration of such joint construction contracts. Such costs shall be calculated as the direct salary cost of the time of County professional and technical personnel spent productively engaged in such work, plus overhead costs at the standard rate charged by the County on other similar projects, including joint projects with other County agencies.

11. REQUIREMENT OF CONSTRUCTION PERMITS

The Grantee, its successors or assigns, has the right, privilege, and authority to enter the County road rights-of-way for the purpose of operating, maintaining, repairing or construction its transmission and service lines and appurtenances on the condition that it obtains permits approved by the Director and Property Services Division and, when applicable, by the Department of Development and Environmental Services. Applications for work permits shall be presented to the Property Services Division which may require copies of plans, blueprints, cross-sections, or further detailing of work to be done. In the event of an emergency, the Grantee may immediately commence the necessary work and shall apply the next business day for the work permit. Any work done, whether by Grantee, its contractors, or third parties will include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the County road rights-of-way. All work shall be done to the satisfaction of the Director.

All equipment, lines and appurtenances which are used in the operation, maintenance, repair or construction of the Grantee's service and which are located within the County road rights-of-way shall be considered to be part of the Grantee's system and shall be the responsibility of the Grantee. All permits for the operation, maintenance, repair or construction of said system shall be applied for and given in the name of the Grantee, who will be responsible for all work done under the permit. The Grantee remains responsible whether the work is done by the Grantee, its contractors, or by third parties.

The Grantee shall, at no expense to the County, assume the following obligations with respect to the facilities connected to its system that are within County road rights-of-way and which it does not own, including appurtenant facilities and service lines connecting its system to users:

(a) The Grantee shall apply for, upon request and on behalf of the owner of the facilities, a County right-of-way construction permit for any repairs required for such facilities; provided such owner agrees to reimburse the Grantee for all costs incurred by the Grantee and any other reasonable conditions the Grantee requires as a precondition to applying for the permit. All work to be performed in the County right-of-way shall comply with all conditions of the County permit and all applicable County requirements. The Grantee may at its option perform any part of the repair with its own forces or require the owner to employ a contractor for that purpose, provided such contractor is approved by the County;

(b) In the event that the County determines emergency repair of such facilities is necessary to halt or prevent significant damage to County road rights-of-way or significant threats to the health, safety and welfare of parties other than the owner or the occupants of the building served by such facilities, the Grantee shall take prompt remedial action to correct the emergency to the County's approval, which the County shall not unreasonably withhold;

(c) When the County or its contractor provides notice to the Grantee, pursuant to RCW 19.122, of its intent to excavate within County road rights-of-way, the Grantee shall provide to the County or its contractor the best information available from the Grantee's records or, where reasonable, from the use of locating equipment as to the location of such facilities, including surface markings where these would reasonably be of use in the excavation. If the Grantee fails to make good faith efforts to provide the above information within the deadlines provided by RCW 19.122, the Grantee shall hold the County harmless for all reasonable costs that result from damage to such facilities if such damage occurs as a result of the failure to provide such information. Nothing in this subsection is intended or shall be construed to create any rights in any third party or to form the basis for any obligation or liability on the part of the County or the Grantee toward any third party, nor is anything in this subsection intended to be construed to alter the rights and responsibilities of the parties under RCW 19.122, as amended.

12. RESTORATION OF COUNTY ROAD RIGHTS-OF-WAY

After work on, under or adjacent to County road rights-of-way, the Grantee is responsible for and will leave all County road rights-of-way in as good a condition as they were in before any work was done. In the event that the Grantee, its contractors, or third parties working under permit should fail to restore County road rights-of-way to the satisfaction of the Director, King County may make such repairs or restorations as are necessary to return the County road rights-of-way to its pre-work condition. Upon presentation of an itemized bill for repairs or restorations, including the costs of labor and equipment, the Grantee will pay the bill within thirty (30) days. If suit is brought upon the Grantee's failure to pay for repair and restoration, and if judgment in such a suit is entered in favor of King County, then the Grantee shall pay all of the actual costs, including interest from the date the bill was presented, disbursements, and attorney's fees and litigation related costs incurred.

13. PERFORMANCE OF WORK

The Grantee covenants that in consideration for the rights and privileges granted by this franchise, all work performed by the Grantee on County road rights-of-way shall conform to all County requirements including, but not limited to, the requirements of the current edition of the County Road Standards in force when the work is performed and all traffic control shall also conform to the current edition of the Manual of Uniform Traffic Control Devices in force when the work is performed.

14. BLASTING REQUIREMENTS

The right to operate, maintain, repair and construct Grantee's distribution and service lines and appurtenances granted by this franchise does not preclude King County, its agents or contractors from blasting, grading, or doing other road work to the Grantee's lines and appurtenances. Except in the case of an emergency, the Grantee will be given ten (10) business days written notice of any blasting so that the Grantee may protect its lines and appurtenances. If the Grantee notifies the County within ten (10) business days that the facilities will have to be relocated to protect them from blasting, the County will defer the blasting for up to ninety (90) days from the date of the original notice. In no event will the Grantee be given less than two (2) business days written notice of any blasting. Notification of any excavation shall be provided through the One-Call System as provided by RCW 19.122, as hereinafter amended.

15. SURVEY MARKERS AND MONUMENTS

It shall be the responsibility of the Grantee performing any construction work in the County road rights-of-way to restore any survey markers or monuments disturbed by such construction in accordance with RCW 58.09.130, and as hereinafter amended.

16. ASSIGNMENT

The Grantee shall not have the right to assign this franchise without the consent of the Metropolitan King County Council given by Ordinance. No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions, and responsibilities contained within the franchise, as well as surety bonds which the Council deems necessary to be posted are received. Council approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the franchise.

17. EXPIRATION AND RENEWAL

To the extent described in Exhibit "A", all rights granted by this franchise to County road rights-of-way outside incorporated Towns and Cities apply to all existing County road rights-of-Way improved and unimproved and to all County road rights-of-way acquired by King County during the term of this franchise.

If the Grantee has initiated a renewal of this franchise before it expires, the County may, at its sole discretion, extend the term of the franchise on a month to month basis for up to one year. Should the County elect to extend the franchise, written notice shall be provided to the Grantee before the franchise expiration date.

If the Grantee has not applied for a renewal of this franchise before it expires, King County has the right to remove or relocate any lines and appurtenances of the Grantee as is reasonably necessary for the public's health, welfare, safety, or convenience including, but not limited to, the safe operation of County roads, franchise holders, or for the construction, renewing, altering, or improving of any County road right-of-way, or for the installation of lines and/or facilities of other franchise holders. Grantee shall be liable for the costs incurred in any removal or relocation of its lines and appurtenances under this section. Costs include the expense of labor and equipment.

Upon expiration of this franchise, the Grantee shall continue to be responsible for the operation and maintenance of existing facilities in the County road rights-of-way until removed, assigned to another franchised utility or abandoned; however, the Grantee shall not have the right to provide additional services or construct new facilities. King County will issue permits required for the repair and maintenance of the existing facilities in accordance with K.C.C. 14.44.055 as amended and Section 11 of this franchise. This section and sections 8, 10-13 and 15 of this franchise shall continue in force until such time as the lines are removed from County road rights-of-way, assigned to another franchised utility, or abandoned in place with the approval of the Manager of the Department of Transportation, Road Services Division.

18. RESERVATION OF RIGHTS

King County specifically reserves for itself the right to impose a utility tax on the Grantee if such taxing authority is granted by State of Washington and the local option is exercised by the King County Council.

King County also specifically reserves the right to exercise authority it has or may acquire in the future to secure and receive fair market compensation for the use of its property, pursuant to an ordinance. If King County elects to exercise such authority, the fair market compensation requirement for Grantee shall be imposed by ordinance not less than one hundred eighty (180) days after written notice ("Compensation Notice") is delivered to the Grantee, said Compensation Notice identifying with specificity the definition, terms and/or formula to be used in determining such fair market compensation. Acceptance of King County's definition terms and/or formula identified in the Compensation Notice will occur if the Grantee accepts in writing within thirty (30) days of receipt of the Compensation Notice; or, if Grantee takes no action in writing within thirty (30) days of receipt of the Compensation Notice; in which case the applicable ordinance that the King County Council passes will be determinative.

Nothing in this section shall be construed as an agreement by the Grantee of King County's right to exercise authority it has or may acquire in the future to secure and receive fair market compensation for the use of property. Nothing in this section shall be construed to prohibit the Grantee from challenging, in King County Superior Court or a court of competent jurisdiction, the legality of such right.

Grantee's rejection of the definition, terms, and/or formula identified in the Compensation Notice will only occur if such rejection is in written form, identifying with specificity the grounds for such rejection, and delivered to King County within thirty (30) days after receipt of the Compensation Notice, in which case the below identified arbitration terms will apply:

(a) The Grantee and King County will select one arbitrator each, and the two selected arbitrators will select a third arbitrator. If the two arbitrators have not selected a third arbitrator within thirty (30) days after the selection of the last selection of the two, either the Grantee or King County may apply to the presiding judge of the King County Superior Court for the appointment of a third arbitrator. The three arbitrators will determine the method for determining the fair market compensation for the County property used by the Grantee. The arbitration procedure employed shall be consistent with the rules and procedures of the American Arbitration Association. The decision of a majority of the arbitrators will bind both the Grantee and King County. At the conclusion of the arbitration, the arbitrators will submit written reports to the Grantee and King County which shall contain all pertinent evidence that led to their conclusion together with an explanation of their reasoning for such conclusion.

(b) The fees of the arbitrators selected by each party shall be paid by that party, and the fees of the third arbitrator shall be paid one-half by the County and the Grantee. The other costs of the proceeding shall be shared equally by the County and the Grantee.

(c) In event that the question of fair market compensation is not resolved prior to the effective date specified by the ordinance authorizing said compensation, the arbitration decision will be applied retroactively to the effective date in the ordinance. The Grantee will pay the retroactive sum plus interest in the amount of twelve percent (12%) per annum.

Nothing in this franchise may be construed to limit the exercise of authority now or later possessed by the County or any other governing body having competent jurisdiction to fix just, reasonable and compensatory rates or other requirements for services under this franchise. Nothing in this section shall be construed to prohibit the Grantee from challenging, in King County Superior Court or a court of competent jurisdiction, the authority of the County or any other governing body to fix rates or other requirements for services.

19. COMPLIANCE WITH LAWS

Grantee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and King County environmental standards and ordinances.

20. NON-DISCRIMINATION CLAUSE

In all hiring or employment made possible or resulting from this franchise agreement, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, creed, national origin, marital status or the presence of any sensory, mental, or physical handicap, unless based upon a bona fide occupational qualification, and this requirement shall apply to but not be limited to the following: employment, advertising, lay-off or termination, rates of pay or other forms of compensation, and selection for training, including apprenticeship.

No person shall be denied, or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this agreement on the grounds of sex, sexual orientation, race, color, creed, national origin, age except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap.

Any violation of this provision shall be considered a violation of a material provision of this agreement and shall be grounds for cancellation, termination or suspension in whole or in part, of the agreement by the County and may result in ineligibility for further County agreements.

The Grantee shall make the best efforts to make opportunities for employment and/or contracting services available to women and minority persons. The Grantee recognizes that King County has a policy of promoting affirmative action, equal opportunity and has resources available to assist Grantee in these efforts.

21. PENALTY FOR VIOLATION OF CONDITIONS

If the Grantee shall violate or fail to comply with any of the material terms, conditions, or responsibilities of this franchise through neglect or failure to obey or comply with any notice given the Grantee under the provisions of this franchise or if the Grantee abandons its franchise, the Council may revoke this franchise. King County shall give written notice of its intent to revoke this franchise. A public hearing shall be scheduled within forty-five (45) days following the notification. The decision to revoke this franchise will become effective ninety (90) days following the public hearing if the County, by ordinance, finds:

A. That the Grantee has not substantially cured the violation or failure to comply which was the basis of the notice; or

B. that the violation or failure to comply which was the basis of the notice is incapable of cure; or

C. that the Grantee has repeatedly violated or failed to comply with any of the material terms, conditions, or responsibilities of the franchise, even though the individual violations have been cured; and

D. that the revocation of the franchise is in the public interest.

During the forty-five (45) days following the notification, the Grantee shall have the opportunity to remedy the failure to comply.

22. RIGHT OF APPEAL

Decisions, requirements, or approvals of the Director are binding on the parties to this document. Appeals from the Director's determinations will be made by filing a complaint with the King County Superior Court.

23. SEVERANCE

This franchise gives effect to purposes and uses which are consistent with economical and efficient services rendered in the public interest. If any provision of this franchise, or its application is determined to be invalid by a court of law, then the remaining provisions of this franchise shall continue and remain valid unless the dominant purpose of the franchise would be prevented or the public interest is no longer served.

Revised 07/25/96

12473

FRANCHISE EXTENSION AGREEMENT

RECITALS

WHEREAS, the City of Auburn currently holds water and sewer Franchise 7543 granted by King County, Washington for the operation of its sewer and water system in unincorporated King County; and

WHEREAS, the City of Auburn franchise expired on November 30, 1994; and

WHEREAS, the City of Auburn has requested a renewal of said franchise; and

WHEREAS, a water and sewer franchise was approved by the Council under Ordinance 7543 on May 22, 1989. This extension is for the sewer portion only; and

WHEREAS, the water franchise for that portion of the water system will be incorporated in the franchise for proposed Ordinance No. 96-682, which consolidates all of the City of Auburn water franchises into one franchise agreement; and

WHEREAS, the City of Auburn, King County and the Utilities Technical Review Committee recommend that said franchise be extended until March 1, 1998 to give the City the opportunity to complete and obtain approval of its updated sewer comprehensive plan; and

WHEREAS, no objections have been raised to the granting of this request; and

WHEREAS, King County has approved the extension of this franchise until March 1, 1998 through the passage of Ordinance No. 12473 subject to the conditions contained in the ordinance and this agreement.

NOW, THEREFORE, King County, Washington and the City of Auburn, agree as follows:

1. The terms of King County Water and Sewer Franchise 7543 is hereby approved and extended so that it will now expire on March 1, 1998.

2. All other conditions of King County Water and Sewer Franchise 7543 shall remain in full force and effect and are not modified or amended by this agreement or Ordinance No. _____.

THIS AGREEMENT entered into this 26th day of November, 1996.

CITY OF AUBURN, WASHINGTON	KING COUNTY, WASHINGTON
BY: Charles A. Booth	BY: [signature]

CHRISTOPHER VANCE
Introduced By: Brian Derdowski
Proposed No: 96-682

ORDINANCE NO. 12473

AN ORDINANCE approving a franchise for the City of Auburn to construct, operate and maintain water system in Council Districts 7, 9 and 13, and a short term franchise to construct, operate and maintain a sewer system in Council Districts 7, 9 and 13, and authorizing the Executive to execute the franchise agreements.

STATEMENT OF FACTS:

1. The City of Auburn has filed an application for franchises in council districts 7, 9 and 13 to construct, operate and maintain water and sewer systems to serve residential, multi-family and commercial areas in accordance with R.C.W. 36.55.010 and K.C.C. 6.27.

2. The city's comprehensive plan for water was approved on June 17, 1996, by King County Ordinance 12342.

3. The city's sewer plan was approved in 1982. K.C.C. 13.24.110 requires that the sewer plan be updated by the end of 1996, and further, that it be updated every 6 years or that a demonstration be made that the plan is consistent with the 1994 King County Comprehensive Plan. There is no documentation offered to show that such a demonstration has been made.

4. The existing franchises expired in May of this year.

5. The application has been referred to the relevant county departments for review.

6. The King County executive has recommended approval of the franchise.

7. The Utilities Technical Review Committee reviewed and approved the district's franchise, legal description and map on April 26, 1995.

BE IT ORDAINED BY THE COUNCIL OF KING COUNTY:

SECTION 1. The granting of a franchise to the City of Auburn to construct, operate and maintain a water system within King County is hereby approved for a period of twenty-five years. The granting of a franchise extension to the City of Auburn to construct, operate and maintain a sewer system within King County until March 1, 1998 is hereby approved. The extension period is provided to allow time for the City to demonstrate its compliance with K.C.C. 13.24.110. The King County executive is authorized to enter into and execute the water system franchise and the sewer franchise extension for the terms specified, which by this reference is fully incorporated herein. Said franchises shall

include all of the general and special conditions required by the county.

SECTION 2. If within 45 days after the granting of this franchise, the applicant shall have failed to sign the written acceptance incorporated herein, then the rights and privileges granted herein shall be forfeited and said franchise shall be null and void.

INTRODUCED AND READ for the first time this 19th day of August, 1996.

PASSED by a vote of 12 to 0 this 30th day of September, 1996.

RESOLUTION NO. 2873

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A SERVICE AGREEMENT ESTABLISHING WATER UTILITY SERVICE AREA BOUNDARIES BETWEEN THE CITY OF AUBURN AND THE CITY OF AUBURN AND PIERCE COUNTY.

WHEREAS, service area agreements are required by WAC 246-293-250 to help assure that water reserved for public water supply purposes with Pierce County will be utilized in the future in an efficient and planned manner.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES AS FOLLOWS:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Service Agreement establishing water utility service area boundaries between the City of Auburn and Pierce County. A copy of said Agreement is attached hereto and denominated as Exhibit "A" and incorporated herein by reference.

ORIGINAL

STANDARD SERVICE AGREEMENT
ESTABLISHING WATER UTILITY
SERVICE AREA BOUNDARIES

PREAMBLE

THIS AGREEMENT establishing water utility service area boundaries is entered into this day for purposes of identifying the external boundaries of the service area for which this water purveyor has assumed water service responsibility.

WHEREAS, service area agreements are required by WAC 246-293-250 to help assure that water reserved for public water supply purposes with Pierce County will be utilized in the future in an efficient and planned manner; and

WHEREAS, the designation of retail water service area and future service planning areas, together with the cooperation of other utilities, will help assure efficient planning to accommodate growth, avoid duplication of service, and facilitate the best use of resources;

WHEREAS, the responsibilities applicable to water purveyors are outlined in the Pierce County Coordinated Water System Plan (CWSP) and by the adopted rules and regulations of the Washington State Department of Health (DOH); and

WHEREAS, it is not the intent of this Agreement to give new authority or responsibilities to the water purveyor or to the County or State regulatory agencies, in addition to those requirements imposed by law; and

NOW, THEREFORE, the undersigned party, having entered into this Agreement by its signature, concur with and will abide by the following provisions:

Section 1. The terms used within the contract shall be as defined in the implementing regulations of Chapter 70.116 RCW, except as identified below.

A. Lead Agency shall mean the department or organization within Pierce County that has been designated by the Pierce County Executive as being administratively responsible for the coordination and filing of the Pierce County Water Service Area map, Standard Service Agreement Establishing Water Utility Service Area Boundaries, Agreements for Retail Service Areas, Utility Service Policies, and other administrative documents necessary for the implementation of the Pierce County CWSP.

B. Pierce County Coordinated Water System Plan (CWSP) shall mean the latest plan adopted by the Pierce County Council for public water systems within critical water supply service areas within Pierce County Council which identifies the present and future needs of the systems and sets forth means for meeting those needs in the most efficient manner possible.

C. Pierce County Water Service Area Map shall mean the map referenced in this Agreement for the retail service area signed by the water purveyor except as amended in accordance with the CWSP procedures, with the concurrence of the affected water purveyors, or by operation of law.

D. Retail Service Area shall mean the designated geographical area within Pierce County in which the undersigned water purveyor assumes full responsibility for providing water service to individual customers.

E. Utility Service Policies shall mean those policies and conditions of service that are attached to the provision of water service for individual customers. The identified policies and conditions of service are those conditions incorporated within the water purveyor's water system improvement and expansion plans required under the provisions of the Public Water Systems Coordination Act and DOH.

Section 2. Lead Agency. The lead agency for administering the Pierce County Water Utility service area agreements shall be the Pierce County Department of Public Works and Utilities unless otherwise established by the Pierce County Executive. The lead agency shall function only as a coordination center. The lead agency will maintain the original documents and will be responsible for updating the water system map and agreements as provided for in the CWSP.

Section 3. Authority. The authority for this Agreement is granted by the Public Water Systems Coordination Act of 1977, Chapter 70.116 RCW.

Section 4. Service Area Boundaries. The undersigned Water Purveyor acknowledges that the Pierce County Water Service Area Maps identifying its retail service area boundaries, dated July 8, 1997 and included as Attachment A to this Agreement, identify the Water purveyor's present and future service area within Pierce County. The undersigned further acknowledges that there are no service area conflicts with an adjacent water utility or purveyor, or, if such a conflict exists, agrees that no new water service will be extended within disputed areas except as stipulated in an adjudication by DOH, a final decision made by a court of competent jurisdiction, or by operation of law.

This agreement shall apply to service area boundaries claimed and identified in the above referenced maps. Revisions may be may require an amendment to the purveyor's or utility's service plans and shall be filed with the lead agency.

Section 5. Boundary Adjustments. If, at some time in the future it is in the best interests of the undersigned parties to make service area boundary adjustments, such modifications must be by: (1) written concurrence of all involved utilities and the proper legislative authority(ies), and must be noted and filed with the designated Pierce County lead agency and DOH; or (2) by operation of law. It is understood by the undersigned

utility that it may decline to provide service within its designated service area boundary, but in that case, an applicant may be referred to other adjacent purveyors or utilities or a new utility may be created and the original service area boundary will be adjusted accordingly.

Section 6. System Extension Policies. The undersigned utility agrees that in order to expand its existing water service area, (other than by addition of retail customers to existing water mains), or to serve in the capacity of a pre-qualified satellite system management agency (SSMA), it shall have adopted design standards and Utility Service extension policies. The design standards shall meet or exceed the Pierce County Water System Minimum Standards and Specifications.

A water utility anticipating expansion of retail service in unincorporated areas of Pierce County, or intending to operate as an SSMA, shall identify utility service policies in its updated water system plan. The undersigned utility agrees to identify, for information, its utility service policies or provide a copy of the updated water system plan to the Lead Agency prior to application for extension of its existing water system into new service areas within the unincorporated areas of Pierce County.

Municipalities further agree that if they identify a service area outside of their existing municipal corporate boundaries, the municipality will assume full responsibility for providing water service equivalent to the level of service provided for their customers inside the city limits with similar service requirements, and must also meet or exceed Pierce County's minimum design standards.

Section 7. Special Working Agreements. Special working agreements, if they exist and are relevant, between this water purveyor and an adjacent water purveyor shall be attached to this Agreement as Attachment B and incorporated herein by this reference.

Section 8. Compliance with the CWSP. Nothing in this Agreement shall waive any requirement of the state, federal or local government regarding the provision of water service. This Agreement shall comply with the interlocal agreement requirement of the CWSP.

IN WITNESS WHEREOF, the undersigned party has executed this Agreement as of 9/16/97.

AN AGREEMENT BETWEEN THE CITIES OF FEDERAL WAY AND AUBURN RELATING TO POTENTIAL ANNEXATION AREA DESIGNATION

THIS IS AN AGREEMENT between the Cities of Federal Way, a municipal corporation of the State of Washington ("Federal Way"), and Auburn, a municipal corporation of the State of Washington ("Auburn"), hereinafter collectively referred to as the "Cities."

RECITALS

A. Pursuant to RCW 36.70A.110(2), the Washington State Growth Management Act of 1990 as amended requires each City within the County to propose the location of an urban growth area, and

B. The Countywide Planning Policies adopted and approved by Ordinance 10450 on July 6, 1992 by the County Council and amended by Ordinance 11446 on July 19, 1994 and ratified by Cities within the County, establishes rules for designating potential annexation areas for cities within the countywide urban growth boundary, and

C. Countywide Planning Policy LU-31 states that in collaboration with adjacent counties and cities and King County, and in consultation with residential groups in affected areas, each City shall designate a Potential Annexation Area (PAA), and

D. It is in the public interest that the jurisdictions cooperate to designate logical and achievable PAA boundaries, and

NOW THEREFORE, the Cities hereby agree:

1. PURPOSE.

The purpose of this agreement is to confirm the decision made between the Cities for the identification of PAA boundaries.

2. DEFINITIONS.

Potential Annexation Area (PAA): The incorporated urban area adjacent to a City, within which urban growth shall be encouraged and phased, and which is expected to annex to the city. Annexation is expected to occur sometime during the next 20 years at which time the city will provide services and utilities. Potential Annexation Area is another term for a City's Urban Growth Area.

Urban Growth Areas: Areas proposed by the Cities and designated by the County within which urban growth shall be encouraged and phased and outside of which growth can occur only if it is not urban in nature. A City's Urban Growth Area is another term for its Potential Annexation Area.

9602210337

9602210337 09:16:00 AM KING COUNTY RECORDS 006 SN 12.00

REF: Resolution No. 2873
September 15, 1997

Urban Growth Boundary: The boundary marking the limit between the urban growth areas and other areas such as rural and resource area where urban growth is not permitted. The boundary shall be designated by the County in consultation with the appropriate Cities, under the requirement of the Growth Management Act, as amended.

3. PUBLIC PROCESS.

The designation of PAAs in Exhibit A (map) attached hereto and by this reference made a part of this agreement are of interest to a variety of affected parties, including property owners, area residents, the general public, special service districts and the municipalities.

4. RELATIONSHIP TO EXISTING LAWS AND STATUTES.

This Agreement in no way modifies nor supersedes existing laws and statues and is consistent with existing laws and statues. In meeting the commitments encompassed in this Agreement, all parties will comply with the requirements of the annexation Statutes, Open Public Meetings Act, State Environmental Policy Act, Growth Management Act and Countywide Planning Policies for King County.

5. RESPONSIBILITIES.

A. The Cities acknowledge the PAA boundary described in Exhibit A.

B. The Cities will only annex territory within their designated PAAs.

C. The Cities shall conduct a public involvement process that includes, but is not limited to workshops, surveys, or hearings in areas within the PAA, prior to the inclusion of any additional areas within the PAA.

9602210337

6. AMENDMENTS.

A. A city which desires to modify the Potential Annexation Area shall contact the other party to this Agreement to begin discussions regarding potential annexation area boundary amendments. The Cities agree to participate in such discussions when called. Either Party is authorized to call a meeting upon 30 days written notice.

B. The proposed amendments shall be supported by written evidence of a significant change in one of the criteria listed in paragraph 6D. Below. The Cities shall concur that the substantial change warrants an amendment to the original designated PAA.

C. A public process shall be conducted regarding an amendment to a potential annexation area as described in 5(C) above.

D. *Criteria for Designation of Potential Annexation Areas*

- Recognition of resident community identification.
- Financial and technical ability to provide municipal services.

- Creation of logical service areas (vehicular accessibility and utility construction).
- Recognition of physical boundaries.
  - Bodies of water
  - Topographical features
  - Watersheds
  - Freeways
- Protection of critical/resource areas significant to a particular jurisdiction.
  - Protection of critical areas
  - Opportunities for urban separators
- Logical boundaries.
  - Elimination of unincoporated islands
  - No overlapping potential annexation areas

E. The proposed amended PAA agreement shall be submitted to the respective legislative authorities for approval.

7. DURATION AND TERMINATION.

This Agreement is effective upon signature of both parties and shall continue in effect from year to year unless terminated by a six month written notice by one party to the others.

9602210337

8. SEVERABILITY CLAUSE.

Any provision of this Agreement which is declared invalid or illegal shall in no way affect or invalidate any other provision hereof and such other provisions shall remain in full force and effect.

9. INDEMNIFICATION.

A. The City of Federal Way shall indemnify and hold harmless the City of Auburn and its officers, agents and employees, or any of them from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of or arising out of any negligent act or omission of the City of Federal Way, its officers, agents and employees, or any of them, in the performance of this Agreement. In the event that any such suit based upon such a claim, action, loss or damage is brought against the City of Auburn, the City of Federal Way shall defend the same at its sole cost and expense; provided, that the City of Auburn reserves the right to participate in such suit if any principle of governmental or public law is involved. If final judgment be rendered against the City of Auburn and its officers, agents and employees, or any of them, or jointly against the City of Federal Way and the City of Auburn and their respective officers, agents and employees, or any of them, the City of Federal Way shall satisfy the same, including all chargeable costs and attorney's fees.

B. In executing this Agreement, the City of Auburn does not assume liability or responsibility for or in any way release the City of Federal Way from any liability or responsibility which arises in whole or in part from the existence or affect of Federal Way City ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceeding is commenced in which the enforceability and/or validity of any such Federal Way City ordinance, rule or regulation is at issue, the City of Federal

Way shall defend the same at its sole expense and if judgment is entered or damages are awarded against the City of Auburn, the City of Federal Way shall satisfy the same, including all chargeable costs and attorney's fees.

C. The City of Auburn shall indemnify and hold harmless the City of Federal Way and its officers, agents and employees, or any of them from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of or arising out of any negligent act or omission of the City of Auburn, its officers, agents and employees, or any of them, in the performance of this Agreement. In the event that any such suit based upon such a claim, action, loss or damage is brought against the City of Federal Way, the City of Auburn shall defend the same at its sole cost and expense; provided, that the City of Federal Way reserves the right to participate in such suit if any principle of governmental or public law is involved. If final judgment be rendered against the City of Federal Way and its officers, agents and employees, or any of them, or jointly against the City of Federal Way and the City of Auburn and their respective officers, agents and employees, or any of them, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

D. In executing this Agreement, the City of Federal Way does not assume liability or responsibility for or in any way release the City of Auburn from any liability or responsibility which arises in whole or in part from the existence or affect of Auburn City ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceeding is commenced in which the enforceability and/or validity of any such Auburn City ordinance, rule or regulation is at issue, the City of Auburn shall defend the same at its sole expense and if judgment is entered or damages are awarded against the City of Federal Way, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

9602210337

10. ADMINISTRATION.

This Agreement shall be administered by:

A. The Federal Way City Manager or the City Manager's designee, and

B. The Mayor of Auburn or the Mayor's designee.

AN AGREEMENT BETWEEN THE CITIES OF PACIFIC AND AUBURN RELATING TO URBAN SERVICE AREA DESIGNATION

THIS IS AN AGREEMENT between the Cities of Pacific, a municipal corporation of the State of Washington ("Pacific"), and Auburn, a municipal corporation of the State of Washington ("Auburn"), hereinafter collectively referred to as the "Cities."

RECITALS

A. Pursuant to RCW 36.70A.110(2), the Washington State Growth Management Act of 1990 as amended requires each City within the County to propose the location of an urban growth area, and

B. The Pierce County Countywide Planning Policies adopted and approved by Resolution R92-86 on June 30, 1992 by the County Council and ratified by Cities within the County, establishes rules for designating City urban growth areas within the countywide urban growth boundary, and

C. The Pierce County Comprehensive Plan adopted and approved by Ordinance 94-82S by the County Council identifies an urban growth area overlap between the Cities of Auburn and Pacific.

D. It is in the public interest that the jurisdictions cooperate to designate logical and achievable urban growth area boundaries,

NOW THEREFORE, the Cities hereby agree:

1. PURPOSE.

The purpose of this agreement is to resolve the boundary overlap between the Cities of Auburn and Pacific.

2. DEFINITIONS.

Urban Service Area (USA): The incorporated urban area adjacent to a City, within which urban growth shall be encouraged and phased, and which is expected to annex to the city. Annexation is expected to occur sometime during the next 20 years at which time the city will provide services and utilities. Urban Service Area is another term for a City's Urban Growth Area.

Urban Growth Areas (UGA): Areas designated by the County within which urban growth shall be encouraged and phased and outside of which growth can occur only if it is not urban in nature. A City's Urban Growth Area is another term for its Urban Service Area.

Comprehensive Urban Growth Area Boundary (CUGA Boundary): The boundary marking the limit between the urban growth areas and other areas such as rural and resource area where urban growth is not permitted. The boundary shall be designated by the County in

consultation with the appropriate Cities, under the requirement of the Growth Management Act, as amended.

3. PUBLIC PROCESS.

The designation of USAs in Exhibit A (map) are of interest to a variety of affected parties, including property owners, area residents, the general public, special service districts and the municipalities.

4. RELATIONSHIP TO EXISTING LAWS AND STATUTES.

This Agreement in no way modifies nor supersedes existing laws and statues and is consistent with existing laws and statues. In meeting the commitments encompassed in this Agreement, all parties will comply with the requirements of the annexation statutes, Open Meetings Act, State Environmental Policy Act, Growth Management Act and the Pierce County Countywide Planning Policies.

5. RESPONSIBILITIES.

A. The Cities acknowledge the USA boundary as shown in Exhibit A. The City of Pacific urban service area boundary will not include any area shown in exhibit A.

B. The Cities will only annex territory within their designated USAs.

C. The Cities shall conduct a public involvement process that includes, but is not limited to workshops, surveys, or hearings in areas within the USA, prior to the inclusion of any additional areas within the USA.

6. AMENDMENTS.

A. A city which desires to modify the USA shall contact the other party to this Agreement to begin discussions regarding urban service area boundary amendments. The Cities agree to participate in such discussions when called. Either Party is authorized to call a meeting upon 30 days written notice.

B. The proposed modifications shall be supported by written evidence of a significant change in one of the criteria listed in paragraph 6D. Below. The Cities shall concur that the substantial change warrants an amendment to the original designated urban service area.

C. A public process shall be conducted regarding an amendment to an urban service area.

D. *Criteria for Designation of Potential Annexation Areas*

- Recognition of resident community identification.
- Financial and technical ability to provide municipal services.
- Creation of logical service areas (vehicular accessibility and utility construction).
- Recognition of physical boundaries.

Exhibit "A" Resolution No. 2763
Adopted 12/2/96

Bodies of water

Watersheds
Freeways

- Protection of critical/resource areas significant to a particular jurisdiction.
  Protection of critical areas
  Opportunities for urban separators
- Logical boundaries.
  Elimination of unincoporated islands
  No overlapping potential annexation areas

E. The proposed amended USA agreement shall be submitted to the respective legislative authorities for approval.

7. DURATION AND TERMINATION.

This Agreement is effective upon signature of both parties and shall continue in effect from year to year unless terminated by a six month written notice by one party to the others.

8. SEVERABILITY CLAUSE.

Any provision of this Agreement which is declared invalid or illegal shall in no way affect or invalidate any other provision hereof and such other provisions shall remain in full force and effect.

9. INDEMNIFICATION.

A. The City of Pacific shall indemnify and hold harmless the City of Auburn and its officers, agents and employees, or any of them from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of or arising out of any negligent act or omission of the City of Pacific, its officers, agents and employees, or any of them, in the performance of this Agreement. In the event that any such suit based upon such a claim, action, loss or damage is brought against the City of Auburn, the City of Pacific shall defend the same at its sole cost and expense; provided, that that the City of Auburn reserves the right to participate in such suit if any principle of governmental or public law is involved. If final judgment be rendered against the City of Auburn and its officers, agents and employees, or any of them, the City of Pacific shall satisfy the same, including all chargeable costs and attorney's fees.

B. In executing this Agreement, the City of Pacific does not assume liability or responsibility for, or in any way release, the City of Auburn from any liability or responsibility which arises in whole or in part from the existence or affect City of Auburn ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceedings is commenced in which the enforceability and/or validity of any such City of Auburn ordinance, rule or regulation is at issue, the City of Auburn shall defend the same at its sole expense and if judgment is entered or damages are

awarded against the City of Pacific, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

C. The City of Auburn shall indemnify and hold harmless the City of Pacific and its officers, agents and employees, or any of them, from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of our arising out of any negligent act or omission of the City of Auburn, its officers, agents or employees or any of them, relating to or arising out of the performance of this Agreement. In the event that any suit based on such a claim, action, loss or damage is brought against the City of Pacific, the City of Auburn shall defend the same at its sole costs and expense; provided by the City of Auburn retains the right to participate in and suit of any principle of government law is involved; and if final judgment be rendered against the City of Pacific, and its officers, agents and employees, or any of them, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

D. In executing this Agreement, the City of Auburn does not assume liability or responsibility for or in any way release the City of Pacific from any liability or responsibility which arises in whole or in part from the existence or affect City of Pacific ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceedings is commenced in which the enforceability and/or validity of any such City of Pacific ordinance, rule or regulation is at issue, the City of Pacific shall defend the same at its sole expense and if judgment is entered or damages are awarded against the City of Auburn, the City of Pacific shall satisfy the same, including all chargeable costs and attorney's fees.

10. ADMINISTRATION.

This Agreement shall be administered by:

A. The Mayor of Pacific or the Mayor's designee, and

B. The Mayor of Auburn or the Mayor's designee.

AN AGREEMENT BETWEEN THE CITIES OF SUMNER AND AUBURN RELATING TO POTENTIAL ANNEXATION AREA DESIGNATION

THIS AGREEMENT is entered into on this 16th day of JULY, 1996, by and between the City of Sumner, a municipal corporation of the State of Washington (hereinafter referred to as "Sumner") and the City of Auburn, a municipal corporation of the State of Washington (hereinafter referred to as "Auburn").

WHEREAS, pursuant to RCW 36.70A.110(2), the Washington State Growth Management Act of 1990 as amended, requires each city within Pierce County to propose the location of an urban growth area; and

WHEREAS, the King Countywide Planning Policies adopted and approved by Ordinance 10450 on July 6, 1992, by the King County Council and amended by Ordinance 11446 on July 19, 1994 and ratified by cities within King County, establish rules for designating potential annexation areas for cities within the countywide urban growth boundary; and

WHEREAS, King Countywide Planning Policy LU-31 states that each city shall designate a Potential Annexation Area (PAA) in collaboration with adjacent counties and cities and King County, and in consultation with residential groups in affected areas; and

WHEREAS, Pierce Countywide Planning Policies adopted and approved by Resolution No. R92-86 on June 30, 1992 by the Pierce County Council reestablish rules for designating urban growth areas for cities within Pierce County; and

WHEREAS, Pierce Countywide Planning Policy No. 1 on Urban Growth areas states "The County shall designate urban growth areas for the County and each municipality in the County based on consultations between the County and each municipality"; and

WHEREAS, the Pierce County Comprehensive Plan approved November 29, 1994 by the Pierce County Council establishes procedures for the adoption of Urban Service Areas (USA's) as a part of a Comprehensive Urban Growth Area (CUGA). The plan also adopts Urban Service Areas for the jurisdictions within Pierce County. The plan indicates an overlap of the USA's for the Cities of Auburn and Sumner in the general vicinity of an approved private development called Lakeland; and

WHEREAS, it is of mutual interest to Sumner and Auburn to resolve the overlaps between the Potential Annexation Areas in order to allow for continued land use and capital facility planning without threat of litigation or appeals; and

WHEREAS, in the spirit of cooperation and mutual understanding, Sumner and Auburn desire to address mutual interests, work together on issues of mutual benefit, and enter into agreements to work constructively on issues of concern; **NOW THEREFORE,**

Exhibit A Resolution No. 2762
August 5, 1996

In consideration of the mutual benefits, Sumner and Auburn hereby agree to the terms and conditions as set forth below:

SECTION 1. PURPOSE.

The purpose of this agreement is to confirm the decision made between Sumner and Auburn for the identification of Potential Annexation Area boundaries and Urban Service Areas.

SECTION 2. DEFINITIONS.

A. Potential Annexation Area (PAA): is a term used in the King Countywide Planning Polices meaning the incorporated urban area adjacent to a city, within which urban growth shall be encouraged and phased, and which is expected to annex to the city. Annexation is expected to occur sometime during the next twenty (20) years at which time the city will provide services and utilities. For purposes of this agreement, the term Potential Annexation Area is the same as Urban Service Area (USA) as applied in the Pierce County Comprehensive Plan.

B. Urban Growth Areas: means areas proposed by the Sumner and Auburn and designated by the county within which urban growth shall be encouraged and passed and outside of which growth can occur only if it is not urban in nature.

C. Urban Growth Boundary: means the boundary marking the limit between the urban growth areas and other areas such as rural and resource area where urban growth is not permitted. The boundary shall be designated by the county in consultation with Sumner and Auburn, under the requirements of the Growth Management Act.

SECTION 3. PUBLIC PROCESS.

The designation of PAAs in Exhibit A (map) attached hereto and by this reference made a part of this agreement are of interest to a variety of affected parties, including property owners, area residents, the general public, special service districts and the municipalities.

SECTION 4. RELATIONSHIP TO EXISTING LAWS AND STATUES.

This Agreement shall in no way modify nor supersede existing laws and statutes and is consistent with existing laws and statutes. In meeting the commitments encompassed in this Agreement, all parties shall comply with the requirements of the annexation statutes, Open Public Meetings Act, State Environmental Policy Act, Growth Management Act and Countywide Planning Policies for King and Pierce Counties.

SECTION 5. RESPONSIBILITIES.

A. Sumner and Auburn acknowledge the PAA boundary described in Exhibit A.

B. Sumner and Auburn shall only annex territory within their designated PAAs.

C. Sumner and Auburn shall conduct a public involvement process that includes, but is not limited to, workshops, surveys, or hearings in areas within the PAA prior to the inclusion of any additional areas within the PAA.

SECTION 6. JOINT PLANNING

Sumner and Auburn shall work cooperatively together in the planning and delivery of services to the respective PAA to the extent feasible as described below:

A. Sumner and Auburn shall initiate discussions between staff to review the feasibility of sharing the costs associated with the construction and operation of a water storage facility. Both cities shall also explore the possibility of shared water resources.

B. Sumner and Auburn shall work cooperatively on other issues of mutual concern which may arise including:
   1. Design, funding, and construction of the 8th Street Corridor from Lake Tapps to SR 167;
   2. Railroad traffic and the mitigation of increased rail activity on transportation;
   3. Mitigation of stormwater impacts to the valley;
   4. Modifications to the Mud Mountain Dam to reduce base flood levels;
   5. Joint fire services and operations such as training, hazardous spill response, mutual aide, and special operations;
   6. Bicycle and pedestrian trails connecting the Sumner and Auburn;
   7. Watershed planning and management related to the Stuck (White) River and its tributaries; and
   8. Joint planning and participation with Pierce County.

SECTION 7. AMENDMENTS.

A. A city which desires to modify the Potential Annexation Area shall contact the other party to this Agreement to begin discussions regarding potential annexation or boundary amendments. Sumner and Auburn agree to participate in such discussions when called. Either city is authorized to call a meeting upon providing the other city has at least a thirty (30) day written notice.

B. The proposed amendments shall be supported by written evidence of a significant change in one of the criteria listed in paragraph 7D below. Sumner and Auburn shall concur that the substantial change warrants an amendment to the original designated PAA.

C. A public process shall be conducted regarding an amendment to a potential annexation area as described in 5(c) above.

D. Criteria for Designation of Potential Annexation Areas

1. Recognition of resident community identification.
2. Financial and technical ability to provide municipal services.
3. Creation of logical service areas (vehicular accessibility and availability of utility service).
4. Recognition of physical boundaries.
   -bodies of water
   -topographical features
   -watersheds
   -freeways
5. Protection of critical/resource areas significant to a particular jurisdiction.
   -protection of critical areas
   -opportunities for urban separators
6. Logical boundaries.
   -elimination of unincorporated islands
   -no overlapping potential annexation areas

E. The proposed amended PAA agreement shall be submitted to the respective legislative authorities for approval.

SECTION 8. DURATION AND TERMINATION.

This Agreement shall be in effect upon signature of both parties and shall continue in effect from year to year unless terminated by a six month written notice by one party to the others.

SECTION 9. SEVERABILITY CLAUSE.

Any provision of this Agreement which is declared invalid or illegal shall in no way affect or invalidate any other provision hereof and such other provisions shall remain in full force and effect.

SECTION 10 ADMINISTRATION.

This Agreement shall be administered by the Mayor of the City of Sumner and the City of Auburn, or their designees.

AN AGREEMENT BETWEEN THE CITIES OF KENT AND AUBURN RELATING TO POTENTIAL ANNEXATION AREA DESIGNATION

THIS IS AN AGREEMENT between the Cities of Kent, a municipal corporation of the State of Washington ("Kent"), and Auburn, a municipal corporation of the State of Washington ("Auburn"), hereinafter collectively referred to as the "Cities."

RECITALS

A. Pursuant to RCW 36.70A.110(2), the Washington State Growth Management Act of 1990 as amended requires each City within the County to propose the location of an urban growth area, and

B. The Countywide Planning Policies adopted and approved by Ordinance 10450 on July 6, 1992 by the County Council and amended by Ordinance 11446 on July 19, 1994 and ratified by Cities within the County, establishes rules for designating potential annexation areas for cities within the countywide urban growth boundary, and

C. Countywide Planning Policy LU-31 states that in collaboration with adjacent counties and cities and King County, and in consultation with residential groups in affected areas, each City shall designate a Potential Annexation Area (PAA), and

D. It is in the public interest that the jurisdictions cooperate to designate logical and achievable PAA boundaries, and

NOW THEREFORE, the Cities hereby agree:

1. PURPOSE.

The purpose of this agreement is to confirm the decision made between the Cities for the identification of PAA boundaries.

2. DEFINITIONS.

Potential Annexation Area (PAA): The incorporated urban area adjacent to a City, within which urban growth shall be encouraged and phased, and which is expected to annex to the city. Annexation is expected to occur sometime during the next 20 years at which time the city will provide services and utilities. Potential Annexation Area is another term for a City's Urban Growth Area.

Urban Growth Areas: Areas proposed by the Cities and designated by the County within which urban growth shall be encouraged and phased and outside of which growth can occur only if it is not urban in nature. A City's Urban Growth Area is another term for its Potential Annexation Area.

Urban Growth Boundary: The boundary marking the limit between the urban growth areas and other areas such as rural and resource area where urban growth is not permitted. The boundary shall be designated by the County in consultation with the appropriate Cities, under the requirement of the Growth Management Act, as amended.

3. PUBLIC PROCESS.

The designation of PAAs in Exhibit A (map) attached hereto and by this reference made a part of this agreement are of interest to a variety of affected parties, including property owners, area residents, the general public, special service districts and the municipalities.

4. RELATIONSHIP TO EXISTING LAWS AND STATUTES.

This Agreement in no way modifies nor supersedes existing laws and statues and is consistent with existing laws and statues. In meeting the commitments encompassed in this Agreement, all parties will comply with the requirements of the annexation Statutes, Open Public Meetings Act, State Environmental Policy Act, Growth Management Act and Countywide Planning Policies for King County.

5. RESPONSIBILITIES.

A. The Cities acknowledge the PAA boundary described in Exhibit A.

B. The Cities will only annex territory within their designated PAAs.

C. The Cities shall conduct a public involvement process that includes, but is not limited to workshops, surveys, or hearings in areas within the PAA, prior to the inclusion of any additional areas within the PAA.

6. AMENDMENTS.

A. A city which desires to modify the Potential Annexation Area shall contact the other party to this Agreement to begin discussions regarding potential annexation area boundary amendments. The Cities agree to participate in such discussions when called. Either Party is authorized to call a meeting upon 30 days written notice.

B. The proposed amendments shall be supported by written evidence of a significant change in one of the criteria listed in paragraph 6D. Below. The Cities shall concur that the substantial change warrants an amendment to the original designated PAA.

C. A public process shall be conducted regarding an amendment to a potential annexation area as described in 5(C) above.

D. *Criteria for Designation of Potential Annexation Areas*

- Recognition of resident community identification.
- Financial and technical ability to provide municipal services.

- Creation of logical service areas (vehicular accessibility and utility construction).
- Recognition of physical boundaries.
  - Bodies of water
  - Topographical features
  - Watersheds
  - Freeways
- Protection of critical/resource areas significant to a particular jurisdiction.
  - Protection of critical areas
  - Opportunities for urban separators
- Logical boundaries.
  - Elimination of unincoporated islands
  - No overlapping potential annexation areas

E. The proposed amended PAA agreement shall be submitted to the respective legislative authorities for approval.

7. DURATION AND TERMINATION.

This Agreement is effective upon signature of both parties and shall continue in effect from year to year unless terminated by a six month written notice by one party to the others.

8. SEVERABILITY CLAUSE.

Any provision of this Agreement which is declared invalid or illegal shall in no way affect or invalidate any other provision hereof and such other provisions shall remain in full force and effect.

9. INDEMNIFICATION.

A. The City of Kent shall indemnify and hold harmless the City of Auburn and its officers, agents and employees, or any of them from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of or arising out of any negligent act or omission of the City of Kent, its officers, agents and employees, or any of them, in the performance of this Agreement. In the event that any such suit based upon such a claim, action, loss or damage is brought against the City of Auburn, the City of Kent shall defend the same at its sole cost and expense; provided, that the City of Auburn reserves the right to participate in such suit if any principle of governmental or public law is involved. If final judgment be rendered against the City of Auburn and its officers, agents and employees, or any of them, or jointly against the City of Kent and the City of Auburn and their respective officers, agents and employees, or any of them, the City of Kent shall satisfy the same, including all chargeable costs and attorney's fees.

B. In executing this Agreement, the City of Auburn does not assume liability or responsibility for or in any way release the City of Kent from any liability or responsibility which arises in whole or in part from the existence or affect of Kent City ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceeding is commenced in which the enforceability and/or validity of any such Kent City ordinance, rule or regulation is at issue, the City of Kent shall defend the same at its

sole expense and if judgment is entered or damages are awarded against the City of Auburn, the City of Kent shall satisfy the same, including all chargeable costs and attorney's fees.

C. The City of Auburn shall indemnify and hold harmless the City of Kent and its officers, agents and employees, or any of them from any and all claims, actions, suits, liability, loss, costs, expenses and damages of any nature whatsoever, by reason of or arising out of any negligent act or omission of the City of Auburn, its officers, agents and employees, or any of them, in the performance of this Agreement. In the event that any such suit based upon such a claim, action, loss or damage is brought against the City of Kent, the City of Auburn shall defend the same at its sole cost and expense; provided, that the City of Kent reserves the right to participate in such suit if any principle of governmental or public law is involved. If final judgment be rendered against the City of Kent and its officers, agents and employees, or any of them, or jointly against the City of Kent and the City of Auburn and their respective officers, agents and employees, or any of them, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

D. In executing this Agreement, the City of Kent does not assume liability or responsibility for or in any way release the City of Auburn from any liability or responsibility which arises in whole or in part from the existence or affect of Auburn City ordinances, rules or regulations. If any cause, claim, suit, action or administrative proceeding is commenced in which the enforceability and/or validity of any such Auburn City ordinance, rule or regulation is at issue, the City of Auburn shall defend the same at its sole expense and if judgment is entered or damages are awarded against the City of Kent, the City of Auburn shall satisfy the same, including all chargeable costs and attorney's fees.

10. ADMINISTRATION.

This Agreement shall be administered by:

A. The Mayor of Kent or the Mayor's designee, and

B. The Mayor of Auburn or the Mayor's designee.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE SETTLEMENT AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE.

WHEREAS, Auburn and Bonney Lake are currently involved in several related disputes regarding the provision of water service to a development known as "Lakeland Hills South" within Auburn's currently-designated Pierce County Potential Annexation Area; and

WHEREAS, Auburn is currently seeking to annex a portion of its Pierce County Potential Annexation Area; and

WHEREAS, Bonney Lake is currently opposing said annexation proposal; and

WHEREAS, Bonney Lake has initiated litigation against Auburn in Pierce County Superior Court alleging tortious interference with a contractual relationship; and

WHEREAS, Auburn has threatened legal and/or administrative action with respect to various water rights owned by Bonney Lake; and

WHEREAS, Bonney Lake has threatened legal and/or administrative action with respect to various water rights owned by Auburn; and

WHEREAS, the parties hereto desire to enter into a settlement agreement, the express intent of which is to settle all claims and disputes between Auburn and Bonney Lake relating to the provision of water service to Auburn's Pierce County Potential Annexation Area and related water rights issues; and

WHEREAS, Bonney Lake and Auburn are both desirous of entering into cooperative arrangements to provide for the efficient and cost-effective provision of water to their customers.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES AS FOLLOWS:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Settlement Agreement between the City and the City of Bonney Lake. A copy of said Settlement Agreement is attached hereto, designated as Exhibit "A" and incorporated by reference in this Resolution.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED and SIGNED this 2nd day of March, 1998.

SETTLEMENT AGREEMENT

CITY OF AUBURN AND CITY OF BONNEY LAKE

THIS SETTLEMENT AGREEMENT ("Agreement") is entered into this 5th day of March, 1998, by and between the **CITY OF AUBURN**, ("Auburn"), a municipal corporation, and the **CITY OF BONNEY LAKE** ("Bonney Lake"), a municipal corporation.

WHEREAS, Auburn and Bonney Lake are currently involved in several related disputes regarding the provision of water service to a development known as Lakeland Hills South ("LHS") within Auburn's currently-designated Pierce County Potential Annexation Area ("PC PAA");

WHEREAS, Auburn is currently seeking to annex a portion of its PC PAA; and

WHEREAS, Bonney Lake is currently opposing said annexation proposal; and

WHEREAS, Bonney Lake has initiated litigation against Auburn in Pierce County Superior Court alleging tortious interference with a contractual relationship; and

WHEREAS, Auburn has threatened legal and/or administrative action with respect to various water rights owned by Bonney Lake; and

Exhibit "A"
Auburn Resolution No. 2925

WHEREAS, Bonney Lake has threatened legal and/or administrative action with respect to various water rights owned by Auburn; and

WHEREAS, the parties hereto desire to enter into a settlement agreement, the express intent of which is to settle all claims and disputes between Auburn and Bonney Lake relating to the provision of water service to Auburn's PC PAA and related water rights issues; and

WHEREAS, Bonney Lake and Auburn are both desirous of entering into cooperative arrangements to provide for the efficient and cost-effective provision of water to their customers.

NOW, THEREFORE, the parties agree as follows:

1. Bonney Lake's claims against Auburn in Pierce County Cause No. 97-2-05212-8 shall be dismissed with prejudice and without costs to either party.

2. Bonney Lake shall withdraw its opposition to Auburn's proposed annexation of a portion of Auburn's PC PAA in Pierce County Boundary Review Board Case No. A-97-5.

3. Auburn recognizes and agrees to Bonney Lake's exclusive right to serve with water all portions of Bonney Lake's water service area as designed by the 1995 Pierce County Coordinated Water System Plan for a period of seven years from the effective date of any Auburn annexation of

any area within such service area. It is understood that Auburn anticipates multiple annexation proceedings regarding such areas. Bonney Lake shall not oppose such annexation proposals, and pursuant to this paragraph, Bonney Lake shall have the exclusive right to serve each annexation area for seven years from the effective date of annexation.

4. Upon the expiration of each seven-year period, or sooner if requested by Bonney Lake, provided for in paragraph 3 with respect to a particular portion of Bonney Lake's water service area, Auburn shall, at its option, have the exclusive right to serve such area with water, subject to the further requirements and conditions contained in paragraphs 5 and 6 of this Agreement.

5. Upon the expiration of each seven-year period, or sooner if requested by Bonney Lake, provided for in paragraph 3 with respect to a particular portion of Bonney Lake's water service area, Bonney Lake shall, at Auburn's option, transfer to Auburn, by bill of sale, all of its ownership rights in water system facilities located within and used to serve such area, with the exception of facilities retained by Bonney Lake in accordance with paragraph 6, below. Auburn shall have no obligation to compensate Bonney Lake for such facilities as are transferred by Bonney Lake pursuant to this Section.

Facilities to be transferred pursuant to this paragraph shall include water pipes, but shall not include source or storage facilities, including but not limited to Bonney Lake's Tacoma Point Wells and Tacoma Point Reservoir, nor those facilities reserved to Bonney Lake under paragraph 6.

6. In contemplation of Auburn's anticipated eventual takeover of water service from Bonney Lake within Auburn's annexation area, and for the purpose of providing Bonney Lake a looped system after Auburn's takeover of water service within its annexed areas hereunder, Auburn shall, prior to the takeover of service within any portion of Bonney Lake's current water service area, construct or cause to be constructed and transfer or cause to be transferred to Bonney Lake, free of charge, future 12" water transmission line as shown on the attached Exhibit A to the southern boundary of Auburn's PC PAA; provided, that in the event the particular alignment shown on Exhibit A shall prove impractical or unavailable, such lines shall be constructed in an alignment as mutually agreed to by the parties. Auburn shall construct or cause these facilities to be constructed and transferred to Bonney Lake without regard to the progress or lack of progress of the development of LHS. Such facilities shall be constructed in accordance with applicable Bonney Lake standards. In addition, Auburn will

not take over water service from Bonney Lake, and Bonney Lake will retain ownership of its water system, within that area shown on Exhibit B, attached hereto. This area will remain part of Bonney Lake's water service area and the facilities serving it will remain part of Bonney Lake's water system in perpetuity, notwithstanding possible annexation of the area by Auburn at any time in the future.

7. Auburn shall guarantee Bonney Lake the right, in perpetuity, to transport water through Auburn's corporate boundaries within Pierce County, in order that Bonney Lake's ability to serve its water service area as recognized in this Agreement is not hindered or rendered impractical. Such guarantee shall be effectuated by the execution of such easements, agreements, franchises, licenses or other documents as are appropriate, on terms that are in no respect less favorable or advantageous to Bonney Lake than those governing the operations of Auburn's own water utility within its corporate limits. Auburn shall not condemn or otherwise interfere with any Bonney Lake water facilities covered by this paragraph or paragraph 6.

8. Neither Auburn nor any of its agents, employees, attorneys or contractors shall challenge, directly, indirectly or through third parties, through legal or administrative proceedings or any other means, Bonney Lake's

existing water rights, including but not limited to Bonney Lake's water rights associated with its Tacoma Point Wells. The rights associated with its Tacoma Point Wells are, specifically, as follows:

(1) Lake Tapps Water Co. Certificate No. C 2809-A, with a date of priority 1/23/57, for 100gpm and 45af;

(2) Tacoma Point Well No. 2 Certificate No. C G2-26853, with a date of priority of 2/5/86, for 1000gpm and 800af; and

(3) Tacoma Point Well No. 4 Permit Number G2-27693, with a date of priority of 1/30/90, for 1200gpm and 1600af.

Because of production problems associated with Bonney Lake's current wells at Tacoma Point, Auburn's agreement not to protest or interfere extends to and includes Bonney Lake's drilling of another well or wells at Tacoma Point to achieve full production of its certificated and permitted water rights. It also includes Bonney Lake's effort to proceed to certificate on its permit rights in Tacoma Point Well No. 4, referenced above. Bonney Lake agrees not to seek to increase its water rights in the Tacoma Point well field for any appropriation beyond these permitted/certificated levels. Bonney Lake shall not challenge, directly,

indirectly or through third parties, through legal or administrative proceedings or any other means, Auburn's existing water rights or Auburn's efforts to use those rights in order to serve its PC PAA with water, including any application to permit the withdrawal of water from wells located within LHS commonly known as Lakeland wells 5b and 5c, provided that such rights in Lakeland wells 5b and 5c are supplemental to Auburn's existing rights in wells 5 and 5a. For purposes of this paragraph, the word "challenge" shall include both direct actions, such as the filing of any lawsuit, complaint or letter of protest, as well as indirect actions, such as assisting, facilitating, encouraging or approving any such actions on the part of a third party. Each party will terminate and withdraw any pending challenges to the other's water rights that have been initiated.

Each party expressly reserves the right to challenge any application for new water right or change in water right that is made after the date of this Agreement; provided, that any application for certification of a water right for which a party already holds a permit shall not be deemed an application for new water right or change in water right made after the date of this Agreement.

9. In order to facilitate the practical and efficient provision of water service to the portion of LHS outside Bonney Lake's current water service area, the parties will work together cooperatively to agree on an amendment of their respective water service area boundaries in this area.

10. At such time as either party wishes to pursue the development of additional water source or supply or water storage facilities in the vicinity of LHS, the party will provide notice of same to the other party and the parties will thereupon meet to confer with respect to their respective needs and interests in regard to additional source, supply or storage. Should it appear that the interests of the parties are sufficiently aligned, the parties will mutually agree to join in the development of said additional source, supply or storage facilities, on such terms as the parties may agree are equitable.

11. In the future, at such time as Auburn's water system has been more fully developed in the area of LHS and/or on its common boundary with Bonney Lake's water service area, the parties may agree that it is in their mutual best interests, and the best interests of their respective customers, to enter into an agreement providing for one or more interties between their water systems to be constructed.

12. Each party agrees to sign such documents and to take such actions as are necessary to implement the purpose and intent of this Agreement.

13. Time is of the essence under this Agreement. The terms of this Agreement shall be specifically enforceable by the parties hereto.

14. Each of the individuals signing this Agreement on behalf of a party warrants that he/she has the authority to sign the Agreement and thereby to bind the party on whose behalf he/she signs.

15. This Agreement shall be binding on the heirs, successors and assigns of the parties.

16. This Agreement is designed strictly for the purpose of compromising disputed claims and avoiding the expense and risks of litigation. The Agreement shall be construed according to the fair intent of the language as a whole, and not for or against either party.

17. In the event of any disputes arising out of the implementation or enforcement of this Agreement, the parties agree to submit said disputes first to mediation and, if mediation is unsuccessful, then to binding arbitration in accordance with Ch. 7.04 RCW; provided, however, that each party reserves the right to seek injunctive or other similar equitable relief from a court of competent jurisdiction in

order to preserve the status quo pending any mediation or arbitration or to otherwise protect a right or remedy that might otherwise be lost if such interim relief were not obtained.

18. This Agreement shall not waive Auburn's right to assess and collect any taxes, assessments or fees which it is otherwise authorized under law to assess or collect on any water service; provided, that Auburn's assessment and collection of any such taxes, assessments or fees with respect to any area served with water by Bonney Lake shall be upon the same terms as Auburn's assessment and collection of any such taxes, assessments or fees with respect to areas served with water by Auburn.

RESOLUTION NO. 2 9 5 5

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE FIRST AMENDMENT TO LAKELAND ANNEXATION AND UTILITIES AGREEMENT BETWEEN THE CITY AND THE LAKELAND COMPANY, INC.

WHEREAS, the City and The Lakeland Company, Inc. have previously entered into the Lakeland Annexation and Utilities Agreement in June, 1996; and

WHEREAS, disputes arose between the parties on the interpretation and enforcement of the said Agreement and the parties now desire to resolve any disputes with respect to that Agreement and with respect to all claims and obligations between the parties arising from events which pre-date the execution on of this Agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES AS FOLLOWS:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute First Amendment to Lakeland Annexation and Utilities Agreement with The Lakeland Company, Inc. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED this 4th day of May, 1998.

AMENDMENT
TO
LAKELAND ANNEXATION AND UTILITIES AGREEMENT

THIS AGREEMENT made and entered into this 14th day of May, 1998, by and between the **CITY OF AUBURN**, a municipal corporation, organized under Title 35A, Optional Municipal Code, hereinafter referred to as **"CITY"** and **THE LAKELAND COMPANY, INC.**, a Washington corporation, its heirs, successors and assigns and all related entities and all shareholders, and/or owners, jointly and severally and their marital communities, including all parties that have an interest in the property affected by this Agreement, herein referred to as **"TLC"**.

WHEREAS, the parties to this Agreement have previously entered into the Lakeland Annexation and Utilities Agreement, referred to as "PRE-ANNEXATION/UTILITIES

9805210624

AGREEMENT" in June, 1996, which agreement was approved by Auburn City Council under Ordinance No. 4867; and

WHEREAS, disputes arose between the parties on the interpretation and enforcement of the Pre-Annexation/Utilities Agreement referred to above, and the parties desire to resolve any disputes with respect to all claims and obligations between the parties arising from events which pre-date the execution of this Agreement; and

WHEREAS, the parties desire to end all disputes and claims, including any and all claims for damages, attorney fees and costs arising from events which pre-date the execution of this Agreement; and

WHEREAS, the parties have engaged in numerous meetings to resolve all issues between the parties and this Agreement reflects a compromised position between the parties for the purposes of attaining a complete settlement; and

WHEREAS, it is the intent of this Agreement that the agreement entitled Lakeland Annexation and Utilities Agreement, recorded under Recording No. 9608120131 shall remain in force and effect except as specifically amended by this Agreement; and

WHEREAS, the parties acknowledge that a dispute existed between the City of Bonney Lake and the CITY with respect to

9805210624

water service, which dispute has been settled between the City of Bonney Lake and the CITY and in such settlement comments were taken from TLC and incorporated into the final Settlement Agreement between the CITY and Bonney Lake; and

WHEREAS, it is the intent of the parties that the CITY proceed with the annexation of the TLC property and that TLC develops that property which is either annexed or will be annexed in accordance with the standards and land use polices and procedures of the CITY; and

WHEREAS, this Agreement and the requirements for any monetary payment from TLC to the CITY under this Agreement were specifically requested by TLC to result in a more marketable development for TLC and any payments are acknowledged to be not requested by the CITY but placed in the Agreement by TLC unilaterally and is not considered payment under RCW 82.02.020; and

WHEREAS, the parties acknowledge that TLC, in cooperation with the State of Washington and other local government units, other than the City of Auburn, is proceeding with the construction of the certain portions of the Lake Tapps Parkway East, as defined in a mitigation agreement executed between Pierce County and TLC and that the CITY has no responsibility to construct, make any

payments nor guarantee in any way any obligations for the construction of TLC's portion of the Parkway project. However, the parties acknowledge the importance of this construction project to TLC and that the execution of this Agreement is vital to TLC's ability to secure financing for its construction, and understand that the sole purpose of the expedited handling of this Agreement is to obtain a resolution of disputes prior to May 4, 1998. May 4, 1998 is a TLC funding date which requires this Agreement for TLC to obtain the necessary funding to construct this roadway; and

WHEREAS, the parties acknowledge the existence of an Agreement referred to as the "Crabtree Agreement" and agree that the settlement provisions in this Agreement settle all disputes including but not limited to any claims that TLC may have as a successor under the Crabtree Agreement; and

WHEREAS, the Crabtree Agreement and all its terms, including those terms relating to customer equivalent charges for services, expire on June 6, 1998; and

WHEREAS, the parties agree that TLC has had input with regard to the resolution of the CITY and the City of Bonney Lake dispute and agree that the settlement provisions in this Agreement settle any claims TLC may have against the CITY with respect to water, including but not limited to the

9805210624

providing of water, the providing of water pressure, fire flow or any other claims related to the water utility.

NOW, THEREFORE, BASED UPON MUTUAL COVENANTS TO BE DERIVED, THE PARTIES AGREE AS FOLLOWS:

1. LAKELAND ANNEXATION AND UTILITIES AGREEMENT:

The parties reaffirm the terms and conditions of the Lakeland Annexation and Utilities Agreement recorded under Recording No. 9608120131, except as specifically amended herein.

This Agreement affects that real property identified on the map attached hereto and incorporated by reference as Exhibit "1" and legally described on attached Exhibit "2", hereafter referred to as "TLC Property".

3. DEVELOPMENTAL APPROVALS FROM PIERCE COUNTY:

The parties acknowledge that as provided in the PRE-ANNEXATION/UTILITIES AGREEMENT, paragraphs 2.2,2.9,2.13, and 4.1, prior to annexation of the subject project TLC, must obtain developmental approvals from Pierce County and in so doing agrees to comply with the Pierce County requirements and the CITY standards and land use polices and procedures.

In the event that the imposition of CITY standards on a development application submitted to Pierce County for

9805210624

an area not yet annexed to the CITY would result in the denial of the application by Pierce County, then the Pierce County standard will prevail. The CITY agrees to provide sewer service consistent with the terms and conditions of this Agreement.

4. POLICE AND FIRE SERVICES:

Upon annexation the CITY will provide to the area annexed, police and fire services that it provides to its other citizens. Fire service shall be provided to the annexed property provided that TLC has met all requirements of ACC Titles 15, and Chapter 13.16 as it relates to fire flow, and provided that the CITY may contract fire services if it cannot practicably provide fire service to some of the annexed area. Sprinklers shall be required for multifamily and commercial development. Sprinklers shall be required for single-family residential development only if necessary to satisfy the CITY's fire flow standards as described in Title 15.

5. PARKS:

Paragraph 4.5, "Parks", of the PRE-ANNEXATION/ UTILITIES AGREEMENT, is amended to read as follows:

4.5(a) TLC shall dedicate to CITY, one developed 15-acre park, one undeveloped 15-acre park, two developed 5-acre parks, and a linear park along Lakeland Hills Way for a total of approximately 42.91 acres.

4.5(b) The parks will be located as indicated on Exhibit 1. Except for the linear park and Park P4, the topography and soil conditions shall be approved by the CITY to ensure each site is suitable for active park use. The CITY has reviewed Park P4 and agrees to accept this undeveloped park "as is". The park locations indicated on Exhibit 1 are acceptable to the CITY. However, the parties acknowledge that in order to locate the parks where indicated on Exhibit 1, TLC must obtain a major amendment approval pursuant to Pierce County Code. TLC agrees to process the major amendment application by submitting an application to the CITY and Pierce County concurrently within 30-days of execution of this Agreement. While reserving the right to review any other aspects of the major amendment, the CITY agrees not to object to the proposed park locations.

4.5(c) As soon as reasonably possible upon legal segregation, but no later than six months after approval of the preliminary plat for Lakeland Division One,

TLC shall dedicate Park P4 to the CITY. The linear park depicted on Exhibit 1 shall be designed to standards approved by the CITY Parks Director and shall be developed concurrent with construction of Lakeland Hills Way. The CITY agrees that TLC's commitment to dedicate Park P4 and the linear park, as described in this Agreement, satisfies the CITY's concurrency and mitigation requirements for issuance of 800 residential building permits. Prior to the issuance of residential building permits for 801 dwelling units within the PUD, TLC shall develop and dedicate Park P2 to the CITY or make arrangements for dedication and use acceptable to the CITY as necessitated by financing. CITY and TLC agree that upon dedication of Parks P2 and P4, TLC shall have satisfied concurrency requirements for the issuance of residential building permits for a total of 2,173 dwelling units. Thereafter, prior to the issuance of residential building permits for dwelling units in excess of a total of 2,173, CITY and TLC agree that additional park improvements must be dedicated to CITY (or the land dedicated, the improvements bonded, and an improvement schedule agreed upon) consistent with the formula described below:

9805210624

The ratio of improved parks required per thousand population shall be calculated based upon the following mathematical assumptions:

3,408 units approved in Lakeland South

42.91 acres of both improved and unimproved parks required

2.8 residents per household assumed for conversion of people to units

Accordingly the ratio of improved park required per thousand population shall be calculated as follows:

Total	(42.91 acs / (3408 x 2.8 = 9542)) = 4.5 acres combined parks/1000 population
Less	(15.0 acs / (739 x 2.8 = 2069)) = 7.25 acres of unimproved park/1000
	(27.91 acs /(2669 x 2.8 = 7473)) = 3.73 acres of unimproved park/1000

Based upon the foregoing calculations, TLC shall be entitled to the issuance of 95.62 residential building permits for each acre of improved park dedicated to the CITY (or unimproved/bonded park) dedicated to the CITY.

4.4 TLC and CITY shall work cooperatively in development of specific plans that meet CITY park standards. Each party shall respond promptly to proposals and submittals relating to the design and construction of park improvements. The CITY reserves final approval authority of park plans and CITY approval must be granted prior to

construction. The level of improvements required in Parks P1, P2 and P3 shall be based upon $1.82 per square foot of total park areas for P1, P2 and P3. The cost per square foot is based upon improvements made to Lakeland Hills Park in 1992 and the improvements shall be made at that rate adjusted by Consumer Price Index from 1992 until the date of Park plan approval by the CITY. The CITY has the right to distribute improvement funds between and among the Parks but in any event, TLC's financial obligation shall not exceed the total per square foot cost as specified above.

4.5(d) The CITY shall assume the responsibility for proper maintenance of the parks dedicated to it, provided, however, that the CITY may allow TLC to provide additional maintenance within parks dedicated to the CITY with the CITY's written consent. Except for Park P4, TLC must give CITY 1-year notice prior to dedication of any park land to the CITY.

4.5(e) TLC and/or appropriate homeowner associations, agree to develop, own, maintain, repair, and pay real estate taxes and assessments (if any) on all other park areas indicated on Exhibit 1 which are less than five acres in size.

9805210624

4.5(f) The CITY agrees that TLC's satisfactory performance of the terms contained in this Section of the Agreement shall constitute full and complete satisfaction of the CITY's park standards and requirements and shall be deemed to meet all park mitigation and concurrency requirements for the development of the TLC Property.

4.5(g) TLC agrees that any park impact fees paid to Pierce County pursuant to Pierce County requirements will not affect or reduce the park commitments to the CITY contained in this Agreement.

4.5(h) In addition to the parks referenced in this Section, TLC agrees to develop recreational trails within the relocated power line haul road depicted on Exhibit 1 pursuant to a design and construction schedule to be mutually determined by CITY and TLC. Upon completion of trail construction, maintenance of this recreational trail shall be the responsibility of the CITY.

6. INSPECTING AGENCY:

A building permit that has been issued by Pierce County shall be inspected by Pierce County even if the subject property is annexed after permit approval. Building permits approved by the CITY shall be inspected by the CITY.

9805210624

7. COVENANT RUNNING WITH THE LAND:

The parties agree that this Agreement is a covenant running with the land and is binding and benefiting the TLC Property. In order to insure that purchasers of homes, rental, commercial or other properties may obtain title free of the encumbrances of this Agreement, the issuance of a building permit for such property shall be satisfactory evidence of compliance with all provisions of this Agreement.

8. SCHOOL IMPACT FEE ORDINANCE:

The parties acknowledge that at the request of the Dieringer School District, and without objection by TLC, the CITY has enacted a School Impact Fee Ordinance. TLC agrees not to challenge the School Impact Fee Ordinance and agrees not challenge any school impact fees up to $1425 for single-family and $750 for multifamily. The CITY reserves the right to increase the above fees in the future, TLC reserves the right to challenge any school impact fees which exceed the above stated amounts.

9. PROTOCOL FOR SUBMISSION OF APPLICATIONS:

Paragraph 4.1(b) of the PRE-ANNEXATION/UTILITIES AGREEMENT is amended as follows:

9805210624

For TLC Property not yet annexed, and therefore under Pierce County jurisdiction, development applications shall be submitted to Pierce County. However, TLC agrees to simultaneously submit all such applications, except single-family building and grading permits, to the CITY. Except as provided in paragraph 2 of this Agreement, TLC agrees to comply with all applicable CITY standards and land use polices and procedures as determined by City Planning Director. Failure to comply with the provisions of this paragraph shall be determined a "Default" of this Agreement. To assure such compliance, TLC agrees to pay to CITY liquidated damages in the amount of $1,000 per day for each day that development is in Default. Notwithstanding any other provision of this Agreement, the liquidated damages shall not begin to accrue if the Default is cured within thirty (30) days from the date that the CITY mails or delivers written notice of the Default to The Lakeland Company, PO Box 3866, Bellevue, Washington 98009 If any Default is capable of being cured and the cure cannot be reasonable completed within the thirty (30) day cure period, the cure period shall be extended up to ninety (90) days so

9805210624

long as TLC has commenced action to cure within the thirty (30) day cure period and is proceeding to cure the Default with due diligence.

The decision of the CITY Planning Director may be appealed to the CITY Hearing Examiner within thirty (30) days from the date written decision. The day of filing of the appeal to the Hearing Examiner shall stay accrual of the liquidated damages. The stay of damages shall be released on the effective date of the Hearing Examiner's written decision. If the Hearing Examiner's decision is appealed, pursuant to paragraph 5.3 of the PRE-ANNEXATION/UTILITIES AGREEMENT, accrual of liquidated damages shall be stayed again until a written decision is issued by the mediator/arbitrator pursuant to provisions of Section 5.3 of the PRE-ANNEXATION/UTILITIES AGREEMENT. However, in no event shall any stay following appeal of the Hearing Examiner's decision exceed ninety (90) days.

Those permit applications filed with Pierce County which are considered complete and approved by Pierce County before annexation shall be built in compliance with the conditions placed upon it by Pierce County and pursuant to the conditions of this Agreement.

10. RELEASES:

The parties to this Agreement hereby release, discharge, resolve and settle any and all claims arising from events which pre-date the execution of this Agreement including their officials, employees, staff, consultants, shareholders, owners, attorneys, and including attorney fees and costs, including but not limited to claims involving providing of water or other utilities and any claims that TLC may claim to have under the Crabtree Agreement. This Agreement is not intended to waive or release any claims or address any disputes or potential disputes that TLC may have with the City of Bonney Lake.

11. TRANSPORTATION:

Paragraph 4.3 of the PRE-ANNEXATION/UTILITIES AGREEMENT is replaced in its entirety by the following:

TLC agrees to pay the CITY at the time a building permit is issued by either CITY or Pierce County, the following:

(1) $839.57 per detached single-family residential unit,

(2) $544.94 per attached single-family or multifamily unit,

(3) $187.26 per residence for residential units within the senior housing zone, and

9805210624

(4) $2.18 per gross foot of commercial or retail structures.

For building permits which are issued by Pierce County prior to execution of this Agreement, TLC shall pay the above amounts for such permits within 30 days of execution of this Agreement.

The fee amounts described above shall be adjusted to reflect the increase in the Consumer Price Index for the Seattle-Metropolitan area beginning as the base year January 1, 2000 and on January 1st each year thereafter the percentage difference of each year shall equal the adjustment

Payment of these fees shall constitute complete satisfaction of any transportation mitigation and concurrency requirements for the development of the TLC Property.

TLC agrees that all streets shall be constructed consistent with CITY standards including design criteria, construction specifications, operational criteria, and approved engineering submittals, except that the CITY may agree to modify the standards for private streets.

The parties acknowledge that there is a transportation cap which will allow a generation of up to

800 pm peak hour trips for TLC development and that the development of TLC property subject to this Agreement cannot exceed that capacity cap until the extension of Lakeland Hills Way to the Lake Tapps Parkway and the construction of TLC's portion of the Lake Tapps Parkway East connection 8th Street East as required in the TLC/Pierce County transportation mitigation agreement. The Lake Tapps Parkway East project is identified as Lake Tapps Parkway East (WEST), MAP ID No. 166, in the 1998-2003 Transportation Improvement Program for Pierce County. Upon completion of The Lake Tapps Parkway East connection to 8th Street East as described in the TLC/Pierce County transportation mitigation agreement, the transportation cap shall expire.

The calculation of peak hour trips shall be determined at building permit approval.

The CITY shall consider the 800 pm peak hour trips to be present in the transportation system in its review of development applications for property not included in Exhibits 1 and 2.

12. STORM WATER:

Paragraph 4.4(a) of the PRE-ANNEXATION/UTILITIES AGREEMENT is amended as follows:

The CITY agrees to receive the storm water from the

9805210624

Lakeland property described herein subject to the construction and dedication of necessary infrastructure which meets CITY standards including design criteria, construction specifications, operational criteria, and approved engineering submittals upon the effective date of annexation under the same terms and conditions as storm water is received from other developments within the CITY, including payment of any charges required by the CITY's utility ordinances provided, the water received from properties in TLC property not yet annexed shall be of the same quality and flow rate as from the property prior to development, shall not exceed the capacity of the CITY's existing storm drainage system, and shall be subject to the same charges as any other property in the CITY for storm water.

The CITY and TLC acknowledge that substantial mater storm drainage planning has been completed for TLC properties in the form of the Comprehensive Drainage Plan Lakeland Hills Development Area, prepared by CH2Mhill Engineers, dated March 1991 and the Lakeland Hills South Development Area Conceptual Storm Drainage Plan, prepared by Stephen/Dowl Engineers, dated March 1995. Both parties also acknowledge that supplemental drainage basin information

9805210624

will need to be developed by TLC to address changed conditions such as the Lake Tapps Parkway, certain differences between CITY and County standards, and impacts associated with grading activities. In addition, the parties agree that TLC will need to continue to develop more precise drainage subbasin planning information to insure the adequacy and timely staging of necessary storm drainage facilities associated with specific development proposals.

13. SANITARY SEWER:

Paragraph 4.4(b) "SEWER", PRE-ANNEXATION/UTILITIES AGREEMENT is replaced in its entirety as follows:

The CITY shall allow the TLC Property to connect to the CITY's sanitary sewer utility under the same terms and conditions as if the property were within the CITY limits subject to obtaining expanded service area boundaries and all other terms of this Agreement, including, but not limited to, Section 3. The CITY shall apply to Pierce County for any franchise that would be required for the property not yet annexed with the understanding that applying for the franchise and any subsequent Pierce County approval does not waive any conditions set forth herein for the provision of sanitary sewer service.

For the orderly development of its property TLC

will need sanitary sewer from the CITY prior to CITY's annexation of the subject property. TLC agrees to construct all sanitary sewer in accordance with CITY standards including design criteria, construction specifications, operational criteria and approved engineering submittals, and the CITY agrees, upon verification, of TLC's compliance with its standards to connect to the CITY system the TLC system for sanitary sewer upon payment of all charges set forth in Auburn City Code.

The CITY and TLC acknowledge that substantial master sanitary sewer planning has been completed for TLC properties in the form of the Comprehensive Sanitary Sewer Study Lakeland Hills Development Area, prepared by Dowl Engineers, dated March 1991. Both parties also acknowledge that supplemental sanitary sewer information will need to be developed by TLC to address changed conditions such as density changes and impacts associated with grading activities. In addition, the parties agrees that TLC will need to continue to develop more precise sanitary sewer subbasin planning information to insure the adequacy and timely staging of necessary storm drainage facilities associated with specific development proposals.

9805210624

14. WATER:

Paragraph 4.4(c) is amended as follows:

The parties acknowledge that pursuant to the Settlement Agreement with the City of Bonney Lake, the City of Bonney Lake is the water purveyor for portions of the TLC Property as set forth in the Settlement Agreement. In the event the CITY determines that the City of Bonney Lake water system fails to provide adequate fire flow pursuant to Title 15 of the Auburn City Code the CITY agrees to work in good faith with the City of Bonney Lake in an attempt to help achieve a system which meets the CITY requirements for the provision of urban water services.

Immediately upon legal segregation of the relevant parcels, TLC shall convey title to the CITY of the following: the water wells commonly known as 5b and 5c, the water rights it owns or controls on such wells, and the property depicted on the easements which were granted to the CITY as indicated in Exhibit 3. The CITY and TLC agree that the use of the real property described in Exhibit 3 shall be subject to the restrictions indicated in Exhibit 4.

As consideration for TLC's conveyance of the water wells and the real property described in Exhibit 3, the CITY agrees to pay TLC the appraised value for the land and a

mutually agreeable fair market value for the wells up to a maximum of $370,000, adjusted at 10% per annum until closing of the conveyance. TLC agrees to convey the subject property free and clear of all liens and encumbrances and provide the CITY with a policy of title insurance in the value of the purchase price insuring the property free and clear of all liens and encumbrances and agrees to provide a Statutory Warranty Deed.

16. FIRE:

The parties acknowledge that the property subject to this Agreement which is not yet annexed may not be provided fire service directly by the CITY. TLC shall arrange for fire service coverage through Fire District 22 and any agreement between TLC and Fire District 22 shall contain provisions which allow termination upon annexation by the CITY, so that the property may be served by the CITY if the CITY chooses to provide fire services directly rather than by contract. Upon forty-five (45) days written notice from the City of its intent to provide fire service directly or by contract with another service provider, TLC agrees to provide Fire District 22 thirty (30) days written notice of termination. For all building permits issued subsequent to the forty-five (45) day notice period, TLC agrees to pay

mitigation fees to the CITY at the time of building permit issuance for developments within the annexed property, in the amounts indicated below:

1. $419.78 per detached single-family residential unit.

2. $272.47 per attached single or multi-family residential unit.

3. $93.63 per residential unit within the Senior Housing Zone.

4. $1.09 per gross foot of commercial or retail structures.

The above amounts shall be adjusted to reflect the increase in the Consumer Price Index for the Seattle-Metropolitan area beginning as the base year January 1, 2000 and on January 1st of each year thereafter the percentage difference shall equal the adjustment. Payment of these fees shall constitute complete satisfaction of any fire service mitigation and concurrency requirements by CITY for the property described herein.

17. PENDING APPLICATIONS IN PIERCE COUNTY:

The development applications indicated on Exhibit 5, attached hereto and incorporated by reference, were submitted to Pierce County by TLC prior to annexation. The CITY agrees to allow TLC to process the applications indicated on Exhibit 5 through Pierce County's development

review process to issuance of a final decision, even if the subject property is annexed to the CITY prior to completion of the Pierce County review process.

ORDINANCE NO. 5 1 6 3

AN ORDINANCE OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE A NEW FRANCHISE AGREEMENT BETWEEN THE CITY OF AUBURN AND PIERCE COUNTY TO CONSTRUCT, OPERATE AND MAINTAIN WATER PIPELINES FOR A WATER SYSTEM OVER, IN, ALONG, ACROSS, UNDER, AND UPON CERTAIN PUBLIC ROADS AND HIGHWAYS IN PIERCE COUNTY, WASHINGTON UNTIL SEPTEMBER, 2003.

WHEREAS, the City of Auburn wishes to expand their water line system to areas outside the current boundaries; and

WHEREAS, the City of Auburn has applied to Pierce County and has been granted a nonexclusive franchise to construct and maintain water pipelines with appurtenances for a water system in, across, under, upon, along and over certain public roads and highways in Pierce County, Washington, as hereinafter set forth;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, DO ORDAIN AS FOLLOWS:

Section 1. AGREEMENT. The Mayor of the City of Auburn is herewith authorized to execute a Franchise Agreement between the City of Auburn and Pierce County to construct, operate, and maintain water pipelines for a water system over, in, across, under, and upon certain public roads and highways in Pierce County Washington. A copy of said Agreement is attached hereto, denominated as Exhibit "A", and a copy of Pierce County Ordinance No. 98-72 approving the franchise is

attached hereto denominated as Exhibit "B", and made a part hereof as though set forth in full herein.

Section 2. AUTHORIZATION. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This Ordinance shall take effect and be in force five (5) days from and after its passage, approval and publication, as provided by law.

FILE NO. 80 PROPOSAL NO. 98-72

Sponsored by: Councilmember Jan Shabro

Requested by: County Executive/Public Works and Utilities Department

ORDINANCE NO. 98-72

AN ORDINANCE OF THE PIERCE COUNTY COUNCIL GRANTING A NON-EXCLUSIVE FRANCHISE TO THE CITY OF AUBURN, A MUNICIPAL CORPORATION OF THE STATE OF WASHINGTON, FOR LOCATION OF WATER LINES ON CERTAIN COUNTY-OWNED RIGHTS-OF-WAY; AND AUTHORIZING THE COUNTY EXECUTIVE TO EXECUTE THE FRANCHISE.

WHEREAS, The City of Auburn, a municipal corporation of the State of Washington, has applied for a non-exclusive franchise to construct, operate, and maintain a water line system in, across, over, upon, along, and under certain County roads, highways, and other County property in Pierce County, Washington, as hereinafter set forth; and

WHEREAS, Said application came on regularly for hearing before the Pierce County Council on the date set forth below under the provisions of Chapter 36.55, State Session Laws of 1937; and

WHEREAS, It appears to the Council that notice of said hearing has been duly given to the public and those interested in providing the same service applied for by the applicant as required by law and that it is in the public interest to grant the franchise; NOW, THEREFORE, BE IT ORDAINED by the Council of Pierce County:

Section 1. A non-exclusive franchise, a copy of which is attached hereto and identified as Exhibit "A", is hereby given and

Exhibit "B", Ordinance 5163

9812020061

ORDINANCE NO. 98-72, continued

granted to the City of Auburn, a municipal corporation of the State of Washington, hereinafter referred to as the Grantee, for a period of five years, from and after the date of filing of the franchise to be granted with the Clerk of the Pierce County Council.

Section 2. The City of Auburn must indicate its full acceptance of this franchise and all its terms and conditions within thirty days from the effective date of this Ordinance. Said acceptance is to be in writing and filed with the Clerk of the Pierce County Council and shall be a condition precedent to the validity of said franchise, and unless the franchise is accepted within such time, this grant of permission shall be null and void.

Section 3. The Executive of Pierce County is hereby authorized to execute said franchise.

PASSED this 15th day of September, 1998.

EXHIBIT "A" TO ORDINANCE NO. 98-72

In the Matter of the Application of the City of Auburn, a municipal corporation of the State of Washington, for a franchise to construct, operate and maintain water pipelines for a Water System over, in, along, across, under and upon certain Public Roads and Highways in Pierce County Washington)

EXHIBIT "A"

F R A N C H I S E

Application of City of Auburn, a municipal corporation of the State of Washington, for a non-exclusive franchise to construct and maintain water pipelines with appurtenances for a water system in, across, under, upon, along and over certain public roads and highways in Pierce County, Washington, as hereinafter set forth, having come on regularly for hearing before the County Council of Pierce County, Washington, under the provisions of Chapter 36.55, Revised Code of Washington, and it appearing to the Council that notice of said Hearing has been duly given as required by law, and that it is in the public interest to grant the franchise herein granted;

NOW, THEREFORE, IT IS ORDERED, that a franchise be, and the same is hereby given and granted to City of Auburn, a municipal corporation of the State of Washington, hereinafter called the "Grantee" for a term of five (5) years from and after the date of filing this franchise with the Clerk of the Pierce County Council. This franchise is a license for the privilege, and authority to construct, maintain, and operate for the said period of time, a water pipeline with appurtenances for a water system in, across, under,

Exhibit "A", Ordinance 5163

I

In the construction and installations of water system appurtenances and the excavation of trenches on county roads for the purposes of laying, relaying, connecting, disconnecting, and repairing mains and pipes and making connections between the same to the dwellings and other buildings of the consumers, the Grantee shall be governed by and conform to the general rules adopted by the Public Works and Utilities - Transportation Services of Pierce County, Washington; and the Grantee, at no expense to the County, shall

complete all such work and shall repair the county roads and leave the same in as good condition as before the work was commenced; PROVIDED, HOWEVER, that no such work shall be done prior to the obtaining of a permit therefor issued by the Pierce County Public Works and Utilities Director (hereinafter "Director"), which permits shall set forth conditions pertaining to the work to be done and specifications for the restoration of the roads to the same condition as they were prior to such work; and PROVIDED FURTHER, the Director may in his or her discretion require a bond in a sum sufficient to guarantee to Pierce County that such roads shall be restored to the same condition as existed prior to such work. If the Grantee does not repair the county roads to the satisfaction of the Director, the County Department of Public Works and Utilities - Transportation Services may, at its sole discretion, repair such county roads, or cause them to be repaired, and the Grantee hereby agrees to reimburse the County of Pierce for the cost of such work, including overhead costs.

II

The water mains and pipes shall be laid down as directed by the Director at a depth of not less than thirty-six inches below the surface of the ground along the county roads, and in such a manner as not to interfere unnecessarily with the construction of sewers and drains, nor with the grading of the county roads. All surface appurtenances to the water system shall be installed or constructed as approved by the Director.

EXHIBIT "A" TO 98-72

III

All work done under this franchise shall be done in a thorough and professional manner. During the laying of water pipes and conduits and the digging of ditches therefor, the Grantee shall leave ditches in such a way as to interfere as little as possible with public travel and shall take all due and necessary precautions to insure that damage or injury shall not occur or arise by reason of such work; and that where any ditches or trenches are left open at night, the Grantee shall place at all crossings suitable lights in such a position to guard against danger, and the Grantee shall be liable for all property damage or personal injury which may be caused by reason of any injury sustained through its negligence by reason of any person, animal or property being injured through any negligence of the Grantee, or by reason of any damage caused through the neglect to properly guard any ditches or trenches dug or maintained by the Grantee. The Director may specify actions to be taken to insure the safety of the public and the Grantee shall comply with such specifications.

IV

The County of Pierce, in the granting of this franchise does not waive any rights which it now holds or may hereafter acquire and this order shall not be construed so as to deprive the County of Pierce of any powers, rights, or privileges which it now has or may hereafter acquire, including the right of eminent domain, to regulate the use and control of the county roads covered by this franchise, or to go upon any and all county roads and highways for the purpose of

9812020061

constructing and improving the same in such a manner as the County of Pierce, or its representatives may elect.

V

Grantee shall provide a certificate of insurance showing evidence of commercial general liability and property damage liability insurance, which includes but is not limited to, the operations of the Grantee, the Grantee's protective liability, products-completed operations coverage, broad form blanket contractual liability:

COVERAGES	LIMITS OF LIABILITY
Commercial General Liability Insurance Bodily Injury Liability	$1,000,000 Each Occurrence
Property Damage Liability	$250,000 Each Occurrence
	or COMBINED SINGLE LIMIT COVERAGE OF $1,000,000

The general requirements of the policy shall contain:

Pierce County is named as an additional insured as respects in this lease and such insurance as is carried by the Grantee for the operation of its facility.

In the event of non-renewal, cancellation or material change in the coverage provided, thirty days written notice will be furnished to the County prior to the date of non-renewal, cancellation, or change. Such notice shall be

sent to the Director, Public Works and Utilities - Transportation Services, 2401 South 35th Street, Suite 150, Tacoma, Washington 98409.

Pierce County has no obligation to report occurrences to the insurance companies unless a claim is filed with the Pierce County Council; and Pierce County has no obligations to pay premiums.

The Grantee's insurance policies shall contain a "cross liability" endorsement substantially as follows: The inclusion of more than one Insured under this policy shall not affect the rights of any Insured as respects any claim, suit, or judgment made or brought by or for any other insured or by or for any employee of any other Insured. This policy shall protect each Insured in the same manner as though a separate policy has been issued to each, except that nothing herein shall operate to increase the company's liability beyond the amount or amounts for which the company would have been liable had only one Insured been named.

The Grantee's insurance is primary over any insurance that may be carried by Pierce County. Grantee agrees to provide proof of insurance each year to Pierce County.

The Grantee agrees to defend, indemnify, and save harmless

EXHIBIT "A" TO 98-72

Pierce County, its appointed and elected officials and employees, from and against all loss or expense, including but not limited to, judgments, settlements, attorney's fees and costs by reasons of any and all claims and demands upon the County, its elected or appointed officials or employees for damages because of personal or bodily injury including death at any time resulting therefrom, sustained by any person or persons, and on account of damage to property including loss of use thereof, whether such injury to persons or damage to property is due to the negligence of the Grantee, its contractors, its or their employees or agents, Pierce County, its appointed or elected officers, or its employees or agents, except only such injury or damage as shall have been occasioned by the sole negligence of Pierce County, its appointed or elected officials or employees.

If the claim, suit, or action for injuries, death, or damages as provided for in the preceding paragraph of this franchise agreement is caused by or results from the concurrent negligence of (a) Pierce County or Pierce County's agents or employees, and (b) the Grantee, or the Grantee's agents or employees, the indemnity provisions provided for in the preceding paragraph of this franchise shall be valid and enforceable only to the extent of the Grantee's negligence.

Grantee specifically and expressly waives any immunity under Industrial Insurance Title 51 RCW, and acknowledges that this waiver was mutually agreed upon by the parties herein.

EXHIBIT "A" TO 98-72

VI

If, at any time, the County of Pierce shall vacate any public street, road or alley which is subject to rights granted by this franchise, the Pierce County Council may, at their option, and by giving thirty days written notice to the Grantee, its successors and assigns, terminate this franchise with reference to such county road, street, or alley so acquired and the County of Pierce shall not be liable for any damages or loss to the Grantee by reason of such termination.

VII

If, at any time, a new county road is created or established, and constructed, or an existing county road is reconstructed, realigned, or its grade is changed, or if sewer or drainage facilities, or any other facilities, within future or existing county road right-of-way are constructed, reconstructed, maintained, or relocated (all such work to be called "County Projects" hereinafter) and if the installation of the facilities as allowed in this franchise) and all supplements and changes thereto, should interfere in any manner with any such county projects then the Grantee at no expense to the Pierce County shall, upon notice, change the location or adjust the elevation of its facilities so that such facilities shall not interfere with such county projects.

When relocation of Grantee's facilities are required by such county projects the following procedures shall be followed:

9812020061

EXHIBIT "A" TO 98-72

1. Pierce County shall make available to Grantee a list of anticipated projects for each new budget period as soon as is reasonably practicable.

2. Pierce County shall provide to Grantee two sets of preliminary plans for individual projects as soon as such plans are developed to a state of reasonable certainty, and shall advise Grantee of the anticipated date of start of work on such projects.

3. Grantee shall, when requested by Pierce County in writing, locate their facilities in the field, show those locations on one set of the preliminary plans provided, and return that set to Pierce County Public Works and Utilities - Transportation Services within four weeks of receiving the written request.

4. Pierce County shall provide to Grantee final plans for such projects as soon as such plans are available and shall confirm or correct the anticipated date of start of work on such projects.

5. Pierce County shall assist Grantee in determining how its facilities shall be relocated. Such assistance by Pierce County shall include, at a minimum, copies of plans (as required above) and specifications for such county projects, and information known to Pierce County as to

existing survey control available for location of such county projects. Such assistance shall not subject Pierce County to any liability for the costs of relocating the subject facilities a second time if Grantee incorrectly relocated its facilities the first time.

6. When requested, Pierce County and Grantee shall meet to discuss how county projects and utility relocations can be accomplished with the least impact on the other. Pierce County's decision shall be final in such matters, but shall not be unreasonable.

7. Relocation of Grantee's facilities shall be completed in a timely manner defined as follows:

> Relocation of Grantee's facilities shall normally be accomplished in advance of county projects. In the event relocation of Grantee's facilities shall be done concurrently with such projects, Pierce County shall be so notified and agree to a written schedule for relocation. Compliance with such a written schedule shall be Grantee's duty. In no event shall relocation of Grantee's facilities interfere with the prosecution of county projects.

9812020061

8. If Grantee should not relocate its facilities in a timely manner as required above, Pierce County may relocate, or cause to be relocated, such facilities of Grantee as Pierce County deems necessary, and in the manner Pierce County deems necessary, in its sole discretion. Grantee hereby indemnifies and holds Pierce County, its employees, officers, officials and agents totally free and harmless from all and any liability which may arise from damages caused by the relocation by Pierce County of the facilities of Grantee, even if such damages and liability arise from the negligence of Pierce County, its employees, officers, officials and agents.

9. Grantee hereby indemnifies and hold harmless Pierce County, its officers, officials, and employees, from damages which may arise from Grantees's failure to relocate its facilities in accordance with the dates for completion of relocation of facilities set forth above, or any other act or omission by Grantee, its contractor(s), agents, officers, or employees related to the provisions of this franchise.

10. It shall be conclusively presumed that Pierce County will have suffered damages as a result of exercising its rights as set forth in Item 8, above, and compensation for such damages will be difficult to ascertain, and, therefore, Grantee shall compensate Pierce County for

such damages in the amount of twice the amount of the cost of such relocation of Grantee's facilities by Pierce County.

11. The exercise of its rights, as set forth in Item 8, above, by Pierce County in no way relieves Grantee of completing and/or finalizing the relocation of its facilities at no expense to Pierce County if the relocation work done by Pierce County is incomplete.

12. In the event a law suit is brought by Pierce County against Grantee to collect damages presumed under Item 10, above, for the exercise by Pierce County of its rights under Item 8, above, Grantee hereby agrees the only issue will be the actual cost to Pierce County for relocating Grantee's facilities. The party prevailing in such an action shall be allowed its legal fees and costs.

VIII

The Grantee shall not sell, transfer, or assign this franchise without first securing the written permission to do so upon such terms and conditions as determined by the Council of Pierce County. If such permission is granted, the terms and conditions set forth herein shall be binding on the Grantee's successors and assigns unless others are imposed by the Council of Pierce County when such permission is granted.

9812020061

EXHIBIT "A" TO 98-72

IX

This franchise is granted upon the further express condition that it shall not be an exclusive franchise and shall not, in any manner, prohibit the County of Pierce from granting any other franchise over, in, along, under, upon, and across any of the said county roads of any kind and character or territories that may be deemed proper by the Pierce County Council, and this franchise shall not in any way prevent the County of Pierce from using the county roads and highways, or affect the jurisdiction over them and every part of them by the County of Pierce with full power to make the necessary repairs, changes and alterations in the same and like manner as though this franchise had never been granted.

Pierce County reserves for itself the right to so change, amend, modify or amplify this franchise to conform to any state statute, order of the Washington Utilities and Transportation Commission or county regulation, ordinance or right-of-way regulation, as may hereafter be enacted, adopted or promulgated. And this franchise may be terminated at any time upon ninety days written notice to the Grantee to terminate this franchise if the Grantee fails to comply with its terms and conditions, or if the Grantee fails to comply with such changes, amendments, modifications or amplifications and upon termination Pierce County shall have a lien upon all equipment and materials erected or placed under this franchise, which lien may be enforced to reimburse Pierce County for any reasonable expenses and payments incurred in terminating this franchise and to cure defaults by the Grantee.

9812020061

EXHIBIT "A" TO 98-72

Grantee agrees to and shall provide available financial information to the County upon reasonable request. Grantee agrees to and shall during regular business hours and at its office located in Pierce County, Washington, allow agents of Pierce County access for inspection and reproduction of all of Grantee's business records, gross revenue reports, or rules and regulations relevant to a determination of the gross revenues received by Grantee from the area served by the facilities permitted by this franchise.

X

In the event that the territory covered by this franchise shall at any time during the franchise period be included within the limits of any incorporated city or town, the authorities of said city or town shall have the right, to be exercised at their discretion, to acquire by purchase or condemnation, any part of such pipes, conduits and water system other than transmission lines at a price to be based upon the reasonable value of the same at the time, without any additional value for the franchise or any unexpired period thereof, and upon such acquirement, this grant and franchise shall immediately terminate.

XI

Grantee acknowledges that Pierce County Charter Section 9.20 franchises provides in part: "All franchises shall be subject to the right of the County, or the people acting for themselves through referendum, to repeal for cause, amend, or modify the franchise in the interest of the public" and agrees to said condition.

9812020061

EXHIBIT "A" TO 98-12

XII

Any failure to render adequate service to the patrons of said water system, or the discontinuance of such water services without fault on the part of the patron or patrons involved, for a period of thirty days, shall work a forfeiture of this franchise, at the discretion of the Pierce County Council unless the failure should result from causes beyond human control.

XIII

Venue and jurisdiction for any controversy arising from this franchise shall be in Pierce County, Washington.

XIV

The full acceptance of this franchise and all its terms and conditions within thirty days from September 28, 1998, by the City of Auburn, a municipal corporation of the State of Washington, in writing, is to be filed with the Clerk of the Pierce County Council and shall be a condition precedent to its taking effect, and unless the franchise is accepted within such time, this franchise shall be null and void.

9812020061

EXHIBIT "A" TO 98-72

Pursuant to RCW 36.55.080, a copy of this franchise shall be recorded in the Office of the Pierce County Auditor.

DATED at Tacoma, Washington, this 26th day of October, 19____.

RESOLUTION NO. 3018

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A SERVICE AREA AGREEMENT BETWEEN THE CITY AND THE CITY OF BONNEY LAKE TO ESTABLISH A BOUNDARY BETWEEN THEIR CONTIGUOUS SERVICE AREA RELATING TO WATER SERVICE.

WHEREAS, Bonney Lake is engaged in the business of providing water service to the public located in certain areas of Pierce County in the State of Washington; and

WHEREAS, the City of Auburn is engaged in the business of providing water service to the public located in certain areas of King and Pierce Counties in the State of Washington; and

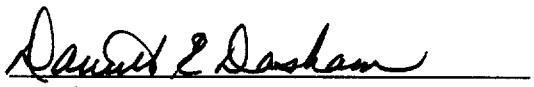
WHEREAS, the parties desire to enter into a formal Service Area Agreement to establish a boundary between their contiguous service area in Pierce County in order to avoid any duplication or overlap of water service and to provide the most efficient service to their respective customers; and

WHEREAS, the City of Auburn and the City of Bonney Lake have entered into a Settlement Agreement related to water service to the Lakeland Hills South development in which, according to Section 9, the Cities have agreed to work together cooperatively to facilitate a practical efficient boundary between the two systems.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Service Area Agreement between the City and the City of Bonney Lake to establish a boundary between their contiguous service area relating to water service. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.



DATED this 7th day of December, 1998.

CITY OF AUBURN

Charles A. Booth

CHARLES A. BOOTH
MAYOR

ATTEST:

Danielle E. Daskam,
City Clerk

APPROVED AS TO FORM:

Michael J. Reynolds,
City Attorney

SERVICE AREA AGREEMENT

This Agreement, dated December 10, 1998, is made and entered into by and between the City of Bonney Lake, a Washington municipal corporation, **("Bonney Lake")** and the City of Auburn, a Washington municipal corporation **("Auburn").**

Whereas, Bonney Lake is engaged in the business of providing water service to the public located in certain areas of Pierce County in the State of Washington. **Auburn** is engaged in the business of providing water service to the public located in certain areas of King and Pierce Counties in the State of Washington, and;

Whereas, the parties desire to enter into a formal service area agreement to so establish a boundary between their contiguous service area in Pierce county in order to avoid any duplication or overlap of water service and to provide the most efficient service to their respective customers, and;

Whereas, The City of Auburn and the City of Bonney Lake have entered into a Settlement Agreement related to water service to the Lakeland Hills South development in which, according to section 9, the Cities have agreed to work together cooperatively to facilitate a practical efficient boundary between the two systems.

Bonney Lake and **Auburn** therefore agree as follows:

1. This Agreement is entered into pursuant to the Pierce County Coordinated Water System Plan which Plan and Appendices are incorporated herein by this reference.

2. The contiguous water service boundary between **Bonney Lake** and **Auburn** is agreed upon by both parties as shown on the attached maps (Exhibit "A") and as described in Exhibit "B", which by this reference are incorporated herein.

3. **Bonney Lake** and **Auburn** may by mutual written amendment(s) to this Agreement make such adjustments to the service boundary as they may mutually agree upon from time to time so that water service to new service locations in close proximity to the service boundary may be provided in an efficient, effective and economical manner. Any such adjustments shall be documented by modifying the attached maps which when so modified and agreed to by the parties shall constitute amendments to this Agreement. Minor adjustments consisting of ten acres or less may be authorized by the Public Works Director or Superintendent of each party.

4. Except as specifically set forth herein, this Agreement shall not modify the Settlement Agreement referenced above.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. 3 0 1 9

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY FIRE FLOW PROTECTION AGREEMENT BETWEEN THE CITY AND THE CITY OF BONNEY LAKE.

WHEREAS, by Resolution No. 2925 the City of Auburn approved an agreement with Bonney Lake on water service; and

WHEREAS, by unanimous adoption at the March 2, 1998 Council Workshop, Bonney Lake approved an agreement with the City of Auburn on water service; and

WHEREAS, the Lakeland PUD in Pierce County is located in the Bonney Lake water service area as defined in the 1995 Pierce County Coordinated Water System Plan; and

WHEREAS, in the Lakeland Annexation and Utilities Agreement, Ordinance No. 4867, and Amendment to the Lakeland Annexation and Utilities Agreement, Resolution No. 2955, The Lakeland Company, hereinafter referred to as TLC agreed to comply with City of Auburn's urban service standards; and

WHEREAS, by separate agreement The Lakeland PUD in Pierce County is served by the Auburn Fire Department, as agreed in Section 16 of the Amendment to the Lakeland Annexation and Utilities Agreement, Resolution No. 2955, and the Lakeland Annexation and Utilities Agreement, Ordinance No. 4867; and

WHEREAS, the City of Auburn's minimum fire flow service standard is 2500 gpm for 3 hours with residual pressure of 20 psi, as defined in the 1995 Comprehensive Water Plan and amended in 1997 by Ordinance No. 5051; and

WHEREAS, TLC desires to build Multi-Family Developments Division 1 Phase 4 (1P4) and Lots 5, 6, and 7, hereinafter referred to as the "Multifamily Development Area", in the immediate future, within the Lakeland PUD in the Bonney Lake Water Service Area; and

WHEREAS, TLC has requested Bonney Lake enter into an agreement with the City of Auburn to provide an emergency intertie for fire flow in order that TLC's development meet AUBURN's fire flow service standards; and

WHEREAS, Bonney Lake is unable at this time to meet AUBURN's fire flow requirements and desires to enter into an agreement for an emergency intertie for fire flow for the proposed Lakeland Company "Multifamily Development Area"; and

WHEREAS, the City of Auburn's water service area abuts BONNEY LAKE's water service area, and Auburn's system has adequate infrastructure to provide the emergency intertie for fire flow protection to the "Multifamily Development Area"; and

WHEREAS, AUBURN is willing to provide emergency fire flow to TLC's proposed "Multifamily Development Area", in consideration of Lakeland's agreement to pay to the City of Auburn a fire flow development charge; and

WHEREAS, TLC, pursuant to a separate agreement, has agreed to compensate the City of Auburn for Auburn's providing to Bonney Lake, pursuant to this agreement, an intertie for emergency fire flows to the proposed "Multifamily Development Area".

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Emergency Fire Flow Protection Agreement between the City and the City of Bonney Lake. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

EMERGENCY FIRE FLOW PROTECTION AGREEMENT

City of Auburn and the City of Bonney Lake

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as "AUBURN" and the City of BONNEY LAKE, hereinafter referred to as "BONNEY LAKE".

WITNESSETH:

WHEREAS, By Resolution 2925 AUBURN approved an agreement with BONNEY LAKE on water service, and

WHEREAS, By unanimous adoption at the March 2, 1998 Council Workshop, BONNEY LAKE approved an agreement with AUBURN on water service, and

WHEREAS, the Lakeland PUD in Pierce County is located in the BONNEY LAKE water service area as defined in the 1995 Pierce County Coordinated Water System Plan, and

WHEREAS, in the Lakeland Annexation and Utilities Agreement, Ord. 4867, and Amendment to the Lakeland Annexation and Utilities Agreement, Res. 2955, The Lakeland Company, hereinafter referred to as TLC agreed to comply with AUBURN's urban service standards, and

WHEREAS, by separate agreement The Lakeland PUD in Pierce County is served by the AUBURN Fire Department, as agreed in Section 16 of the Amendment to the Lakeland Annexation and Utilities Agreement, Res. 2955, and the Lakeland Annexation and Utilities Agreement, Ord. 4867, and

WHEREAS, AUBURN's minimum fire flow service standard is 2500 gpm for 3 hours with residual pressure of 20 psi, as defined in the 1995 Comprehensive Water Plan and amended in 1997 by Ordinance 5051, and

WHEREAS, TLC desires to build Multi-Family Developments Division 1 Phase 4 (1P4) and Lots 5, 6, and 7, hereinafter referred to as the "MULTIFAMILY DEVELOPMENT AREA", in the immediate future, within the Lakeland PUD in the BONNEY LAKE Water Service Area,

WHEREAS, TLC has requested BONNEY LAKE enter into an agreement with AUBURN to provide an emergency intertie for fire flow in order that TLC's development meet AUBURN's fire flow service standards, and

WHEREAS, BONNEY LAKE is unable at this time to meet AUBURN's fire flow requirements and desires to enter into an agreement for an emergency intertie for fire flow for the proposed Lakeland Company "MULTIFAMILY DEVELOPMENT AREA", and

WHEREAS, AUBURN's water service area abuts BONNEY LAKE's water service area, and AUBURN's system has adequate infrastructure to provide the emergency intertie for fire flow protection to the "MULTIFAMILY DEVELOPMENT AREA", and

WHEREAS, AUBURN is willing to provide emergency fire flow toTLC's proposed "MULTIFAMILY DEVELOPMENT AREA", in consideration of Lakeland's agreement to pay to AUBURN a fire flow development charge, and

WHEREAS, TLC, pursuant to a separate agreement, has agreed to compensate AUBURN for AUBURN's providing to BONNEY LAKE, pursuant to this agreement, an intertie for emergency fire flows to the proposed "MULTIFAMILY DEVELOPMENT AREA, and

NOW THEREFORE, IT IS MUTUALLY AGREED as follows:

1. In the event a fire flow emergency occurs within the Lakeland South Multi-Family Developments of Division 1 Phase 4 (1P4) and Lots 5, 6, and 7, hereinafter referred to as the "MULTIFAMILY DEVELOPMENT AREA", requiring fire flows beyond what the BONNEY LAKE System can deliver, the AUBURN Fire Chief, or his/her designee, is hereby authorized to open the valve in the water main between the two systems to provide the required fire flow.

2. The authorization granted in section 1 above herein is intended to serve as emergency fire flow protection for the "MULTIFAMILY DEVELOPMENT AREA", only. Water shall not be withdrawn from the AUBURN Water System for any other purpose than that described in section 1, without prior written approval from AUBURN.

3. A fire flow emergency is defined as a fire event that requires fire flow capacity beyond that which the BONNEY LAKE System is able to provide as required under AUBURN's 1995 Comprehensive Water Plan and amended in 1997 by Ordinance 5051, to the "MULTIFAMILY DEVELOPMENT AREA".

4. In the event if it becomes necessary for the AUBURN Fire Chief or his/her designee to open the valve as described in the above sections no fees will be charged to BONNEY LAKE for water consumed.

5. This agreement does not authorize or permit AUBURN to utilize water from the BONNEY LAKE Water System.

6. This agreement shall terminate when BONNEY LAKE provides documentation that demonstrates to AUBURN that infrastructure has been developed to meet AUBURN's urban service standards for fire flow.

7. Each participant agrees to defend, indemnify and hold harmless the other participant from and against any liability, loss, cost, damage, or expense of any kind and nature arising out of injury to person or damage to property in any manner caused by the negligent act or omission of the indemnifying individual participant in performance of its work pursuant to in connection with this agreement.

8. Should a dispute arise between the parties that cannot be resolved satisfactorily, a mediator mutually acceptable to the parties shall resolve the dispute through the use of mediation at equal cost to each party. Should the parties not be able to satisfactorily resolve the dispute through mediation, the forum for resolution shall be Pierce County Superior Court. The prevailing party will be entitled to attorney fees and costs.

9. If any provision of this agreement shall be unenforceable or invalid for any reason, the remaining sections shall be in force and effect.

10. In the event TLC fails to make payment as provided in its Emergency Fire Flow Protection Agreement with AUBURN, AUBURN is under no obligation to provide emergency fire flow to BONNEY LAKE for the MULTI-FAMILY DEVELOPMENT AREA.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. 3190

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AMENDMENT NO. 1 TO THE BILATERAL COMPLIANCE AGREEMENT BETWEEN THE CITY AND THE STATE DEPARTMENT OF PUBLIC HEALTH.

WHEREAS, the City entered into a Bilateral Compliance Agreement in 1996, which identified a step plan to meet the provisions of the Lead and Copper Rule of the Safe Drinking Water Act; and

WHEREAS, the step plan must be expanded to include treatment for Well 6 and Well 7, as they are supplemental supply for the City's water system; and

WHEREAS, it has been determined the timeline for completion of the project must be expanded to account for the development of the new wells;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

SECTION 1. The Mayor and City Clerk of the City of Auburn, Washington, are herewith authorized to execute Amendment No. 1 to the Bilateral Compliance Agreement between the City of Auburn and the State Department of Health, including treatment for Well 6 and Well 7 and modifying

the timeline for the treatment facility to be operational. A copy of said Amendment is attached hereto and denominated as Exhibit "A".

SECTION 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

BILATERAL COMPLIANCE AGREEMENT
Amendment No. 1

Water System Name: City of Auburn Water System

Subject: Compliance with the Lead and Copper Rule, Chapter 246-290-WAC

The following compliance agreement is hereby established between the Department of Health (hereafter, Department), and City of Auburn Water System (hereafter, City).

The Department and the City agree on the following corrosion control issues, approaches and schedules:

1. Auburn has slightly exceeded the copper action level at the 90th percentile per the Lead and Copper Rule (1.5 and 1.57 mg/L copper at 90th percentile compared to standard of 1.3 mg/L copper for medium size systems).

2. The best utility system approach is to adjust the pH of the water in the distribution system to reduce corrosiveness towards copper, and may include other appropriate measures such as replacement of susceptible materials, changes to electrical grounding practices, etc.

3. Corrosion control optimization is realized when the elevated pH levels will have caused the following:

    - Copper levels are reduced and maintained below the action level of 1.3 mg/L at the 90th percentile (see items 4 and 5 for clarifications);

    - No significant adverse impacts of the treatment on bacteriological quality in the distribution system;

    - No significant adverse impacts of the treatment on domestic customer satisfaction (e.g., red water due to disturbances in unlined cast irons); and

    - No significant adverse impact on commercial and industrial customers, health care facilities, and wastewater facilities.

    Any significant adverse impacts occurring as a result of corrosion control will be investigated and documented along with possible mitigation measures in a report prepared by the City and submitted to DOH.

Exhibit "A", Resolution 3190

4. The 90th percentile copper level will be calculated using the original 60 monitoring sites per the Lead and Copper Rule plus an estimated 30 additional monitoring sites in the vicinity of untreated sources. Results of all analyses of samples from all monitoring sites in the system will be evaluated in one sampling pool to determine Lead and Copper Rule Compliance. The limits of the zones surrounding untreated sources are depicted on Exhibit 1.

5. Untreated sources of supply will be sampled within the limits of the zones of influence using the number of connections and the population of the zone and a factor of 2.5 people per connection as a conversion factor as follows:

Population	Number of Sample Sites
<100	5
101—500	10
501—3,300	20
3,301—10,000	40

Sample sites will be selected per the Lead and Copper Rule. Any previous monitoring sites in the untreated zones of influence will be retained and can be used in lieu of a new site.

6. Treatment is anticipated in 4 stages at this time.

Source	Stage
Coal Creek Springs, plus blending of well (#4)	1
Well #2, 6 and 7	1
Well #1	To be determined.
Well #4	2. if needed
West Hill Springs	3, if needed
Wells 5 and 5A (Lakeland Hills)	No treatment. Monitoring indicates supply is not corrosive.
Wells 3Aand3B	To be determined.
Future Sources	To be determined.

7. Monitoring will be conducted after each stage to determine if optimization is achieved. If optimization is achieved, no further treatment stages are needed. If optimization is not achieved, the City plans to proceed to next stage with Department approval.

8. Schedule for Stage 1.

Project Schedule for Stage 1	Date
Submit Lead and Copper Compliance Report DOH July 1, 1995 – Schedule Met	July 19, 1995
Finalized BCA (assumed start)	October 7, 1996
Submit 30% Design Reports for Coal Creek and Fulmer Field to DOH	October -- 1999
DOH Approval of 30 % Design Reports	Pending
BCA Amendment No. 1	March 20 , 2000
Submit Final Plans and Specifications	September 15, 2000
DOH Approval of the Final Plans and Specifications	October 12, 2000
Complete Construction of Facilities	July 18, 2002
Monitoring Report - 2 Rounds	July 17, 2003
Submit Report to Determine if System is Optimized	October 23, 2003

9. If the Lead and Copper Rule is amended or changed, the Department and City will review the changes and their effects on the City, and if needed, will jointly renegotiate this agreement.

The City of Auburn agrees to perform the following:

Submit a project report and construction documents. In accordance with WAC 246-290-110 and 120 submit for review and approval a project report (Predesign Engineering Report) and construction documents (plans and specifications) for the installation of the corrosion control treatment equipment approved by the Department.

Construct corrosion control treatment facilities. Complete the installation of Stage 1 corrosion control treatment facilities in accordance with Department approved construction documents prior to July 18, 2002.

Monitor water quality parameters. Monitor water quality parameters in accordance with Title 40 CFR Chapter 1 Part 141.87(c), (d), and (e) beginning on July 19, 2002.

Monitor tap water quality for lead and copper. Monitor tap water quality in accordance with Title 40 CFR Chapter 1 Part 141.86 (d) and complete two six-month monitoring compliance periods prior to July 19, 2003.

Well #4. Discharge Well #4 into Reservoir #1 for blending under normal operating procedures. Monthly production records will be kept to document where the water is directed and made available to the Department upon request. Department will allow Well No. 4 to be discharged directly into the distribution system should distribution system pressure drop below 35 psi during an emergency (fire, main break, etc.).

Optimization Report. Prepare and submit an optimization report that addresses copper monitoring results, any significant adverse effects that may reasonably be associated with corrosion control, any copper staining incidents that occur in the untreated zones of influence, and any copper staining or corrosion incidents in new construction. The report will document what action the City plans to take to address these occurrences. Further, the optimization report will recommend a pH operating range for optimization and will recommend if Stage 2 treatment needs to be implemented.

The Department of Health agrees to:

Concur with Optimization. The Department agrees that optimization is achieved, that Auburn will be considered in compliance with the LCR, and that no further stages of implementation will be required when the following conditions are met.

- Copper levels are reduced and maintained below the action level of 1.3 mg/L at the 90th percentile (see items 4 and 5 for clarifications);
- No significant adverse impacts of the treatment on bacteriological quality in the distribution system;
- No significant adverse impacts of the treatment on domestic customer satisfaction; and
- No significant adverse impact on commercial and industrial customers, health care facilities, and wastewater facilities.

The Department will also consider the Optimization Report in determining compliance with the LCR.

Defer enforcement. The Department shall not initiate any enforcement actions for violations of the Lead and Copper Rule as long as the conditions of this agreement are being met.

Renegotiate agreement. The Department will negotiate the level of activity or the schedules in this agreement if requested by the City.

Terminate agreement. The Department agrees to terminate this agreement within 30 days upon request by the City.

All documents or reports required by this agreement, questions about compliance and request to modify this agreement shall be directed to DOH—Northwest Drinking Water Operations, 1511 3rd Avenue, Suite 719, Seattle, Washington 98101.

RESOLUTION NO. 3374

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, REPEALING RESOLUTION NO. 3358 AND THE AUTHORIZATION THEREFOR AND APPROVING THIS RESOLUTION NO.3374 AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF KENT.

WHEREAS, Resolution No. 3358 authorizing the execution of an Emergency Water System Intertie Agreement was approved by the City Council on June 18, 2001; and

WHEREAS, the Emergency Water System Intertie Agreement attached as Exhibit "A" to Resolution No. 3358 was a draft of the final Emergency Water System Intertie Agreement agreed to by Auburn and Kent; and

WHEREAS, changes were made by both parties to the draft agreement attached to Resolution No. 3358 that were intended to be in the agreement executed by both parties; and

WHEREAS, pursuant to RCW 35A.11.040, Auburn and Kent have legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Kent have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, the City of Auburn and the City of Kent currently have an emergency water system intertie; and

WHEREAS, the existing intertie station is going to be removed and relocated as part of the South 277th Street Improvement project; and

WHEREAS, a temporary emergency water system intertie will be constructed and available for use during the South 277th Street Improvement project; and

WHEREAS, an agreement outlining the design, construction and operation of the temporary and permanent emergency water system intertie is needed.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Kent have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Emergency Water System Intertie Agreement which was agreed to between the City and the City of Kent. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED this 6th day of August, 2001.

EMERGENCY WATER SYSTEM INTERTIE AGREEMENT
Kent/Auburn Intertie Agreement No. 1

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as Auburn, and, the City of Kent, hereinafter referred to as Kent, for the purposes of planning, designing, constructing, maintaining, and operating an emergency system intertie between the respective parties,

WITNESSETH:

WHEREAS, both Cities have water facilities in the vicinity, and

WHEREAS, both Cities can increase fire protection and emergency water supply reliability for their customers, and

WHEREAS, the Cities are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The emergency water system intertie is intended to be operated manually as a two way emergency supply between the Auburn and Kent Systems. The intertie facility shall be located near South 277th Street at the Water Service Area Boundaries between the two cities. An existing intertie located at B Street NE and South 277th Street will be replaced with a temporary metering station and eventually a permanent metering station. Final location and configuration of the facilities shall be determined at the time of final design.

2. The emergency water system intertie shall be operated only in the event of an emergency. For purposes of this agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other agreed upon emergency within the water supply system.

3. Auburn has acquired the right of way for the metering station and Kent will design and administer the contract for the construction of the temporary facilities within the right of way acquired by the City of Auburn. The permanent facilities will be constructed as part of the South 277th Street Improvement Project. All of the facilities will be designed and constructed in accordance with reasonably accepted water utility standards for similar municipal water utilities. Auburn will own and maintain the piping, interior

2001 102 3000194

equipment, emergency meter and interior appurtenances, and all piping up to the Kent side of the vault for both the temporary and permanent metering stations.

4. Upon completion of construction, Auburn will transfer ownership of all exterior appurtenances, and all piping which is located on the Kent side of the vault, to Kent. Kent will own and maintain the exterior appurtenances and all piping on Kent's side of the vault.

5. Each City will each have unlimited access to the vault via a dual padlock or ownership of keys to the vault.

6. Each City will operate the respective normally locked valve inside of the vault. Auburn will solely unlock and operate the locked valve on Auburn's side of the meter and Kent will solely unlock and operate the locked valve on Kent's side of the meter.

7. The procedure for operating the intertie in the event of such emergency shall be as follows:

   A. Each City shall determine that an emergency of sufficient magnitude has occurred which warrants the need to request that the intertie be activated.

   B. The Public Works Director or appointed person or authorized personnel shall provide a verbal request to the other City's Public Works Director or appointed person. Upon agreement that an emergency exists which shall allow for the intertie to be opened, the intertie will be activated as soon as reasonably possible. Both Cities' personnel shall be present at the vault to open the valves to activate the facility.

   C. The City requesting the activation shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

   D. The intertie shall remain activated until the City requesting activation determines that the need for activation of the emergency intertie has ceased and shall request in writing to close the intertie.

   E. In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the City supplying the water may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; water service may be temporarily interrupted, limited for purposes of making repairs,

2001 102 3000194

2001 102 3000194

extensions or doing other necessary work; and the City supplying the water shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the City receiving the water (City requesting activation) shall save and hold harmless the City supplying the water from any loss, damages or suites to or by customers of the City receiving the water resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the City supplying the water's negligence. Prior to a planned interruption or limiting of service, the City supplying the water will notify the City receiving the water of such not less than three days prior to the service disruption. The City supplying the water agrees to use best efforts and reasonable diligence to notify the City receiving the water as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

8. Auburn shall read the meter upon activation and upon deactivation of the intertie. The city supplying the water shall verify the information and shall then calculate and invoice the other City for the water used during the request. The invoice shall be calculated by the total water used during the event. The rate shall be at the current Auburn or Kent Wholesale Rate depending on which city is supplying the water. This shall be complete payment for the water, labor, and administration of activating the intertie.

9. The total project costs shall include costs for consulting design service, and construction. These costs shall be paid for by the City of Kent. The project costs shall be reviewed and agreed upon by Public Work Directors of both Cities at the beginning and end of each stage described above. Each City is responsible for associated staff, administration and legal costs associated with the implementation of the agreement.

10. To the extent allowed by law, the City of Kent shall defend, indemnify, and hold harmless the City of Auburn, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or nature arising out of or in connection with or incident to an act or omission of the City of Kent, its employees, agents, and contractors in the performance of the City of Kent's obligations under the Agreement and this Amendment. This indemnification provision shall include, but is not limited to, all claims against the City of Auburn by an employee or former employee of the City of Kent or its contractors and, as to such claims, the City of Kent expressly waives all immunity and limitation of liability under Title 51 RCW.

2001 102 3000194

To the extent allowed by law, the City of Auburn shall defend, indemnify and hold harmless the City of Kent, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties, and damages or whatsoever kind or nature arising our of, in connection with or incident to an act or omission of the City of Auburn, its employees, agents, and contractors in the performance of the City of Auburn's obligations under this Agreement. This indemnification obligation shall include, but is not limited to, all claims against the City of Kent by an employee or former employee of the City of Auburn or its contractors and, as to such claims, the City of Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

11. This Agreement shall remain in force until terminated by either party hereto upon 60-days written notice to the other party. Any project costs, incurred up to the date of such notice, as described herein, shall be shared in accordance with the provisions of this Agreement.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. 3383

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO PERFORM THE NECESSARY ADMINISTRATIVE MEASURES TO APPROVE AUBURN'S WITHDRAWAL FROM THE EXISTING SOUTH KING COUNTY REGIONAL WATER ASSOCIATION JOINT OPERATING AGREEMENT, DATED OCTOBER 8, 1996, AND TO INDICATE AUBURN'S ACCEPTANCE AND CONTINUANCE AS A SIGNATORY MEMBER OF THE REVISED SOUTH KING COUNTY REGIONAL WATER ASSOCIATION JOINT OPERATING AGREEMENT DATED DECEMBER 19, 2000.

WHEREAS, Auburn is a member of the South King County Regional Water Association (SKCRWA) consisting of the cities of Algona, Black Diamond, Kent, and Pacific, and Lakehaven Utility District, Soos Creek Water & Sewer District, and King County Water District #111 as authorized by Resolution No. 2568, adopted June 5, 1995, and modified by Resolution No. 2781, adopted December 2, 1996; and

WHEREAS, the Board of Directors of the SKCRWA saw a need to make certain amendments to the Joint Operating Agreement, dated October 8, 1996, to provide clarification to the intent of the agreement; and

WHEREAS, the Board of Directors of the SKCRWA have now prepared and recommended for approval by each participatory member an update of the Joint Operating Agreement to which Auburn is a signatory member.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES AS FOLLOWS:

Section 1. The Mayor and City Clerk of the City of Auburn are hereby authorized to perform the necessary administrative measures to approve Auburn's withdrawal from the existing SKCRWA Joint Operating Agreement, dated October 8, 1996, and to indicate Auburn's acceptance and continuance as a signatory member of the revised SKCRWA Joint Operating Agreement, dated December 19, 2000. A copy of said Agreement is attached hereto and denominated as Exhibit "A" and incorporated by reference in this Resolution.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED and SIGNED this 4th day of September, 2001.

SOUTH KING COUNTY REGIONAL WATER ASSOCIATION
JOINT OPERATING AGREEMENT
December 19, 2000

WHEREAS, an adequate and safe water supply for South King County Regional Water Association (SKCRWA) and its members is vital to both existing citizens and in implementing the long-term comprehensive plans of SKCRWA members; and

WHEREAS, the State and SKCRWA prepared a Coordinated Water System Plan (CWSP) for South King County; and

WHEREAS, projects that provide for the coordinated and cooperative use and operation of supply, transmission, storage, treatment, and pumping facilities to minimize cost, provide for improved water quality, protect the environment, provide for emergency needs, and maximize the best use of the resource is in the best interest of the citizens of the region;

WHEREAS, the current and near-term water needs of the local governments and SKCRWA require steps to establish a cooperative subregional water supply system; and

WHEREAS, the SKCRWA is committed to cooperate toward regional solutions for both emergency and long range water supply needs: and

WHEREAS, the SKCRWA signatory members developed a Joint Operating Agreement in 1995 and revised the Joint Operating Agreement in 1996 and now want to further revise the Agreement.

NOW THEREFORE, the SKCRWA signatory members of this Joint Operating Agreement (JOA), agree as follows:

20020716000970

1. **GENERAL**

A. The Signatory Members acknowledge the requirement to incorporate land use planning as defined by the Growth Management Act with water supply planning; and

B. The Signatory Members recognize the benefits of developing a subregional water supply system that will allow the optimum use of surface and groundwater to better manage and protect the area's water resources; and

C. The Signatory Members will hold an Annual Meeting about September 30th to review the status of this JOA and any Amendments as well as other problems of mutual concern. The specific date, time, and location of the meeting will be set by mutual agreement.

D. Merger shall mean when two signatory members merge or when a signatory member and a non-signatory member merge.

E. Termination – This agreement shall cease to be binding on or to any signatory member that is not in good standing or whenever a merger occurs.

2. **INTENT**

A. The general intent is to create a method for the Signatory Members to cooperatively use certain existing facilities and construct new facilities needed to develop a subregional water system. The Signatory Members may mutually agree by Interlocal Agreement to produce additional water and distribute it within the Subregional Service Area, with or without change to their retail service area.

B. The JOA provides a framework for joint development of specific projects that may include two or more Participants. Each facility, project, and/or intertie shall be developed under a separate Interlocal Agreement (IA) consistent with this JOA subject to approval by appropriate affected city council and/or water district boards. The specific intent of this JOA is to make provisions for a standardized form to create or expand cooperative agreements to meet the public water supply needs for both emergency and long-term use, and to establish a basis for agreement between Participants for financing, ownership, construction, and operation of mutually beneficial projects required to achieve cooperative objectives. These projects may include common facilities with other Agencies outside the SKCRWA planning area.

Interlocal Agreements (IA) negotiated under the provisions of this JOA shall speak for themselves and should reference the version of the JOA, which is in place at the time that the agreement is reached. It is the intent of the Signatory Members that any Interlocal Agreements negotiated under the JOA would survive the withdrawal of a Signatory Member from the JOA or from the South King County Regional Water Association.

It is further the specific intent of this JOA to preserve Signatory Members' existing water rights and protect the established or planned interest and needs of each Signatory Member with respect to sources of water.

Suggested content for an Interlocal Agreement is shown in Exhibit A.

C. It is the desire of the Signatory Members that this JOA be incorporated into the South King County CWSP at the next update.

D. The term "Participant" as used in this JOA shall mean all the signatories of an IA consistent with and implemented subsequent to this JOA.

2002071600760

E. The term "Signatory Members" as used in this JOA shall mean a member, in good standing, of the South King County Regional Water Association who has signed this JOA. Good standing includes but is not limited to being current on all dues to the SKCRWA.

3. SUBREGIONAL SERVICE AREA AND FACILITIES

A. "Subregional Service Area " shall mean the Signatory Members' Designated Water Service Areas identified in the CWSP or as approved by amendments to the CWSP or as identified in a Signatory Member's approved Comprehensive Water Plan.

B. "Subregional Facilities" shall mean:

(a) that portion of the Participants' sources, interties, transmission, and storage systems required to supply water to the service areas of the Participants or new facilities as defined by a separate IA pursuant to this JOA.

(b) those designated capacities within a Participant system as specifically defined in an appropriate IA.

C. "Facility Ownership". Ownership of the physical facilities that exist on the date of this JOA shall remain with the individual Signatory Members. Unless otherwise agreed to within a specific IA, ownership and operational responsibilities of new facilities shall be based generally on location in designated service areas, with capacity rights defined by appropriate IA.

20020716000760

4. WATER SUPPLY - CAPACITY RIGHTS

A. Capacity Rights - Participants may purchase capacity by IA. Any changes in these capacity rights shall be recognized by an IA, approved by the appropriate affected city councils and/or water district boards.

B. Additional JOA Participants - Other agencies may purchase capacity rights in subregional facilities subject to the provisions of paragraph 4.C. Other agencies who become Signatory Members of the SKCRWA and become Participants in future projects undertaken under this JOA and future IAs will be assessed past costs associated with development of this JOA as specified in Exhibit B.

C. Wholesaling Water -

a) A Signatory Member may wholesale water through lease or otherwise, delivered through subregional facilities to areas outside of the Signatory Member's Service Area, so long as the other Signatory Members' capacity rights are not negatively impacted. Signatory Members of the SKCRWA agree that, where feasible and mutually beneficial, they will coordinate planning and development of water resources.

b) Signatory Members further agree that prior to entering into any agreement to deliver long term water supply or construct joint facilities with a non-Signatory Member agency, they will first make a good faith effort to offer such supplies and/or capacities to Signatory Members (provide the right of first refusal). Such offers shall be made on a cost of service basis as established by separate IA. Signatory Members shall have 60 days to respond.

c) Signatory Members agree that when entering into any agreement to deliver long term water supply or construct joint facilities with a non-Signatory Member agency in accordance with this JOA, they will include and collect for remittance to the SKCRWA a fee for reimbursement of the costs for development of the JOA as specified in Exhibit B.

d) Regular meetings of the SKCRWA shall be the forum for making Signatory Members aware of discussions regarding water sales and joint projects, however all offers of participation or requests for participation shall be in writing with copies to other Signatory Members.

D. Conservation - All Participants will develop and implement a conservation plan that is consistent with State guidelines. Additional or supplemental conservation requirements beyond basic programs may be included in a specific Interlocal Agreement.

E. Curtailment - In general, curtailment for delivery of "firm water" shall be on a uniform percentage basis for both wholesale and retail customers and curtailment for delivery of "interruptible water" shall be on a "last in first out" basis as determined by the date of formal agreement. Specific curtailment requirements and provisions shall be included in Interlocal Agreements implemented under this JOA.

F. Quality - An objective of the Signatory Members is to maintain the quality of the water in the subregional facilities at or above the quality required by the State drinking water standards. The purchasing Participant will be responsible for ensuring water quality blending analyses and other water quality issues are resolved to their own satisfaction. The Signatory Members may meet periodically to ensure that water quality and operational issues are addressed, and that needed

20020716000760

information is exchanged in a timely fashion. The written results of these meetings will be circulated in a timely manner to all members and participants and reviewed at the annual meeting.

G. Additional Facilities - Projected needs will be identified by the Participants based on the Participant's designated service areas. As five or more years may be needed to bring major new source capacity capabilities on line, five-year and ten-year forecasts are required, and must be updated whenever a Participant becomes aware of any significant change in their forecast demand. These will be discussed jointly as they arise, and reviewed at the annual meeting.

H. Financing - Each Project IA will include pertinent details of financing for that project. Financial participation in existing and additional facilities will be based on each Participant's projected need for each facility, as designated capacity rights.

20020716000760

I. Cost of Service Charge - The Signatory Members and Participants will establish wholesale water sales charges for both emergency and long-term supply that include: (1) capital cost, (2) fixed operating cost, and (3) a variable operating cost based on quantity of water delivered based on actual costs of providing the service.

Fixed and variable operating and maintenance costs payments will be made monthly per meter and use rates. Projected annual rate adjustments and documentation shall be provided at the annual meeting. Any rate increase will be effective beginning January 1, of the following year.

(1) The Rates and Charges for the capital, operation, and maintenance of the system shall be based on the following:

(a) Capital Cost - Those construction related costs incurred for Capacity Rights. Capital Costs for facilities contracted solely for a specific project (described in an IA) are allocated based on designated capacity to be purchased.

Capital costs shall include the debt service for each Participant. Such debt service shall be defined as the actual debt service on debt issued for the Participant's proportionate share of capacity rights, or if no debt is issued for the Participant's costs by the financing Participant, the amortized value at the interest rate of the most recent revenue bond issued by the financing Participant over 20 years. However, should all capital costs be paid in full by any Participant purchasing capacity rights prior to the time of the financing Participant incurring the costs, no interest charges shall be assigned to the Participant purchasing capacity rights.

Capital Costs associated with a supplying Participant's construction of their internal water system facilities may be included in the fixed and variable operating costs as appropriate, using cost of service principles, in the same manner as those costs are included in the supplying Participant's customer rate base.

(b) Fixed Operating Cost - The cost of labor, supervision, supplies, utilities, services, taxes, insurance, and all other costs required to operate and maintain the system other than those items included under Variable Operating Cost. The operating cost will include an allocation for renewal and replacement.

(c) Variable Operating Cost - Those costs directly proportionate to the volume of water produced, including chemicals, electric power, and other costs required to meet customer and system needs not included in (a) and (b) above.

(2) Accounting

Subregional facilities accounting shall be documented in accordance with generally accepted accounting practices acceptable to the Participants.

20020716000760

5. ADMINISTRATIVE, LEGAL AND OTHER PROVISIONS

A. Each Signatory Member shall designate in writing their representative responsible for coordination and implementation of the JOA and the subsequent IAs. The designated individuals will be the primary contact for all project approvals and communication and shall prepare and publish a schedule and plan to facilitate the planning, design and day-by-day operation of facilities associated with the subsequent IAs.

B. Signatory Members in good standing may propose Amendments to this JOA at any time. Signatory Members in good standing shall vote on proposed Amendments at the Annual Meeting. A quorum of Signatory Members present shall approve any Amendments to this JOA prior to their submittal to Signatory Members city councils and/or utility district boards for approval. A Special Meeting of the Signatory Members may be called for the purpose of amending this JOA by two thirds of the Signatory Members in good standing.

C. A Signatory Member may withdraw from this JOA by providing 120 days notice to other Signatory Members. Notice shall be provided to each Signatory Member in writing and shall include the reason for withdrawal.

D. Any Signatory Member that withdraws from the SKCRWA also withdraws from this JOA.

E. This JOA shall remain in full force unless terminated in writing by mutual agreement of all Signatory Members in good standing. Termination of the JOA or withdrawal by any signatory member shall not affect any Interlocal Agreements negotiated under a JOA.

F. A Signatory Member who merges with any Agency which is not a Signatory Member of this JOA must withdraw from the JOA. The merged agency would then be allowed to reapply for Signatory Membership in the JOA as the merged Agency.

IN WITNESS WHEREOF, the SKCRWA members hereto have caused this agreement to be executed by their proper Officers on the 21 day of May 2002.

South King County
Regional Water Association
Joint Operating Agreement

Exhibit A
Check List for Interlocal Agreements

2002071600760

1. Project Title

2. General

   - List of Utilities to be parties to the Interlocal Agreement (IA) and approval of the appropriate city councils and/or water district boards.
   - Consistency with the Joint Operating Agreement (JOA).
   - Description of need for the project.
   - Listing of potential wholesale customers for the water in accordance with Section 4.C of the JOA.
   - Recognition of assessment of costs associated with development of JOA in accordance with Section 4.B of the JOA.
   - Recognition of right of first refusal to excess capacity of Signatory Members of the South King County Regional Water Association (SKCRWA) in accordance with Section 4.C of the JOA.
   - Recognition that capacity and water rights are available to meet the needs of the IA.

3. Description of Project

   - Include a drawing (or description) which identifies all the facilities to be considered within the IA. Included within the description should be all jointly or solely owned facilities that are to be operated or paid for by a party to the IA.
   - Description of long term ownership of the facility.
   - Identification of the party responsible for operation and/or maintenance of the facility.
   - Identification of the party responsible for payment for the design and construction of the facility.

4. Project Costs, Financing, Capacity Rights

   - Description of all project costs and the allocation to each party.
   - Definition of capacity rights for all facilities.
   - Definition of cost sharing for long-term maintenance for each facility.
   - Definition of method of reimbursement for moneys expended (if required).
   - Description of any applicable latecomer fees or hook-up charges.
   - Description of requirements for record keeping and monitoring of costs.

5. Project Design and Construction Management

   - Definition of overall project management responsibilities.
   - Definition of design and construction management responsibilities for individual facilities.
   - Description of basic periodic meeting schedule for review of project progress.

6. Conditions of Service
    - Limitations to source sharing or delivery of water (if any).
    - Design criteria for the project facilities.
    - Minimum and maximum flow rates and pressures.
    - Items specifically excluded from the project.

7. Term of Duration of the Agreement

    - Discussion of the length of time the agreement is in effect as well as the method to terminate the agreement and succeeding agencies' obligations.

8. Amendments

    - Method by which the agreement could be amended.

9. Hold Harmless, Liability Language, etc.

REVISED BYLAWS
of
REGIONAL WATER ASSOCIATION OF SOUTH KING COUNTY

I. MEMBERSHIP

A. Regular Members. Governmental Bodies providing water service in South King County are entitled to regular membership in this Corporation, upon approval by the Board of Directors and payment of any then required fees and/or dues.

The term "member" as used in these Bylaws shall mean "regular member" unless otherwise designated.

B. Affiliate Members. Any governmental body, Association of Water Purveyors, water purveyor, individual or business, may become an Affiliate Member upon approval by the Board of Directors and payment of any then required fees and/or dues,

Affiliate Members have no proprietary or other interest in the Corporation; are not entitled to vote: are not entitled to attend meetings as a matter of right: and have no right to participate in any distributions, in dissolution or otherwise, by the Corporation.

Affiliate Members may, with the approval of the Board of Directors, attend any regular meeting and participate in all discussions at any regular meeting.

C. Assignment. Neither regular nor affiliate membership in this Corporation is assignable by the member.

II. DIRECTORS

A. Number. The Articles of Incorporation provide for not less than three nor more than twenty-five Directors. At the present, there shall be as many Directors as there shall be regular members, plus the Alternate Directors provided for herein below. The number of Directors and Alternate Directors may be changed by the membership at any regular meeting or at a special meeting called for that purpose.

B. Qualifications. Directors and Alternate Directors must be elected officials or the designee of members of the Corporation. Each regular member shall be entitled to select one Director and two Alternate Directors provided herein below.

C. Selection and Term. Directors and Alternate Directors shall normally be selected by the Regular Member prior to the Annual Meeting and serve for a term of one year, or until such time

thereafter as their successors shall be selected by the Regular Member. Notice of selection shall be in a written form satisfactory to the Board of Directors.

D. Alternate Directors. In the absence of a Director at a meeting of the Board of Directors, or in the event that a Director is unavailable or unable to act on any matter between meetings, an Alternate Director representing the same member may attend the meeting and vote and/or act outside a meeting. Members may designate the order in which their Alternate Directors may act. In the absence of such designations it shall be as agreed by that member's Alternate Directors.

E. Vacancies. The Regular Member in accordance with the Selection requirements of these Bylaws shall fill any vacancies occurring among its Directors and Alternate Directors.

F. Board of Directors. The Director from each Regular Member, or in the absence of the Director, the Alternate Director shall constitute the Board of Directors of the Corporation.

No one need look beyond the fact that a vote or act was performed by either a Director or an Alternate Director. All such votes and actions shall be binding on the Corporation and may be relied upon as the act of the Board of Directors and the Corporation by all persons dealing with the Corporation.

G. Compensation. Directors shall not receive any compensation for acting as such but may be reimbursed for expenses incurred in the business of the Corporation, provided the expenses were approved in advance by the Board of Directors or Executive Committee.

III. AFFILIATE DELEGATES

A. Affiliate Delegates. Each Affiliate Member shall be entitled to an Affiliate Delegate and an Alternate Affiliate Delegate.

A. Qualifications. Affiliate Delegates and Alternate Affiliate Delegates may be elected officials of or a designee of the Affiliate Member.

C. Selection and Term. Affiliate Delegates and Alternate Affiliate Delegates shall be selected by the Affiliate Member and serve until such time thereafter as their successors shall be selected by the Affiliate Member. Notice of selection shall be in a written form satisfactory to the Board of Directors.

D. Vacancies. The Affiliate Member in accordance with the selection requirements of these Bylaws shall fill any vacancies occurring among its Affiliate Delegates and Alternate Affiliate Delegates.

F. Compensation. Affiliate Delegates and Alternate Affiliate Delegates shall not receive any compensation from the Corporation.

IV. OFFICERS AND COMMITTEES

A. Number. The Officers of the Corporation shall be a President, Vice- President, Secretary and a Treasurer. In addition to the foregoing, the Board of Directors may elect such assistant or other Officers as the Board, from time to time, deems appropriate.

B. Term. Officers shall be elected by the Board of Directors at the Annual Meeting of the Board of Directors, and shall serve for a term of one year, commencing on their election, or until such time as their successors are elected.

C. Vacancies. The Board of Directors may fill a vacancy in any office for the un-expired portion of the term.

D. Qualifications. No person may serve as an Officer of the Corporation unless he/she is also a Director or Alternate Director.

E. President. The President shall be the managing Executive Officer of the Corporation and shall be subject to the ultimate authority of the Board of Directors and/or any Executive or other committees appointed by it, have general charge of the business of the Corporation.

The President shall, together with the Secretary, execute all documents and instruments which are required in the ordinary course of the Corporation's business or which are required by law to be executed by the Corporation.

F. Vice-President. In the absence of the President, or his/her inability or refusal to act, the Vice-President shall perform the duties of the President, and, when so acting, shall have all the powers of and be subject to all of the restrictions upon the President.

G. Secretary. The Secretary shall, in person or through any Assistant Secretary or authorized employee: (a) Keep the minutes of all meetings; (b) give all notices which must be given under these Bylaws or by statute: (c) be custodian of the corporate records and seal; and (d) in general, perform all of the duties incident to the office of Secretary and such other duties as, from time to time, may be assigned to him/her by the President or by the Board of Directors.

H. Treasurer. The Treasurer shall, in person or through any Assistant Treasurer or authorized employee: (a) Have charge and custody of all funds and securities of the Corporation; (b) deposit all corporate moneys in the name of the Corporation in such Banks as shall be selected by the Board Of Directors: and (c) in general, perform all of the duties incident to the office of Treasurer

and such other duties as, from time to time, may be assigned to him/her by the President or by the Board of Directors.

I. **Assistant Secretary and Assistant Treasurer**. Any Assistant Secretary or Assistant Treasurer, when elected, may act in the absence, death, inability or refusal to act, of the Secretary or Treasurer, respectively. In addition, any Assistant Secretary or Treasurer shall perform such duties as shall be assigned to him/her, from time to time, by the Board of Directors or the Secretary or Treasurer.

J. **Executive Committee.** The President, Vice-President, Secretary and Treasurer shall constitute the Executive Committee of the Corporation and shall be allowed to act on behalf of the Board of Directors whenever action is required and it is not practicable for the Board of Directors to call a meeting and act. Any action of the Executive Committee shall require the votes of three of the Executive Committee members. Actions taken by the Executive Committee shall be brought to the next Regular Meeting of the Board of Directors for ratification.

K. **Audit Committee.** The President shall annually appoint an Audit Committee. The Audit Committee shall review the financial condition and financial transactions of the Corporation at the end of each calendar year. The Audit Committee shall include the Treasurer, as chair, and at least two additional Delegates or Alternate Delegates from different Members. The Audit Committee shall report its findings to a Regular Meeting of the Board of Directors.

K. **Evaluation Committee.** The President shall annually appoint an Evaluation Committee. The Evaluation Committee shall complete a performance review and evaluation of any employees of the Corporation. Employee reviews and evaluations shall normally be completed by December 1, and shall generally cover the previous 12 months. The President shall serve as chair of the Evaluation Committee and the committee shall include at least two additional Delegates or Alternate Delegates from different Members. The Evaluation Committee shall report its findings to a Regular Meeting of the Board of Directors.

L. **Other Committees.** The President, with the approval of the Board of Directors, may establish other committees as may be appropriate to conduct the business of the Corporation. The President shall appoint the members of and the chair for any committee established under this paragraph. Committees shall consist of at least three Delegates or Alternate Delegates from different Members. Affiliate Members may serve on committees established under this paragraph, with full participation in discussion and other committee work, however Affiliate Members shall have no vote in the committee. Committees established under this paragraph shall terminate in 12 months from the time of formation, unless reestablished by the Board of Directors. Committees formed under this paragraph shall report to the Board of Directors at a Regular Meeting of the Board of Directors.

V. MEETINGS

A. Regular Meetings. The Board of Directors shall generally meet monthly at a regularly scheduled time and place as necessary to conduct the business of the Corporation. The Board of Directors may change the time and place of Regular Meetings or cancel a Regular Meeting as necessary to meet the needs of the Directors and the Corporation. The Directors shall be notified in writing of the time and place of regular meetings. Upon each Director being so notified, no further notice of regular meetings need be given unless the time and place thereof is changed.

B. Annual Meeting. The Annual Meeting of the Board of Directors shall be the January Regular Meeting of the Board of Directors.

C. Joint Operating Agreement Annual Meeting. The Regular Members who are signatory members of the Joint Operating Agreement shall normally hold a Joint Operating Agreement Annual Meeting in September. The Board of Directors shall set the time and place for the Joint Operating Agreement Annual Meeting and the President shall preside. All business of the Joint Operating Agreement Annual Meeting shall be conducted with the same procedures and manner as other meetings of the Corporation, except as required by the terms of the Joint Operating Agreement. The Directors of signatory members of the Board of Directors shall be notified in writing of the time and place of the Joint Operating Agreement. Upon each Director being so notified, no further notice of regular meetings need be given unless the time and place thereof is changed.

D. Special Meetings. Special meetings of the Board of Directors may be called at any time by or at the request of the President or any three Directors. The President or Directors calling the special meeting shall give notice of the purpose thereof to the Corporation. The Secretary shall then fix the date, place and time of the meeting and give notice thereof, and of its purpose to all of the Directors at least five days in advance of the meeting.

E. Quorum. A majority of the Regular Members of the Corporation, present in person or by proxy shall constitute a quorum for the transaction of business at any meeting of the Board of Directors.

The vote of a majority of the Regular Members present, in person or by proxy, shall be necessary for the adoption of any matters unless a greater percentage is required by state law.

F. Informal Action. Any action which must or might be taken at a meeting of the Board of Directors, or any committee thereof, may be taken without a meeting if a consent in writing, setting forth the action so taken, shall be signed by all of the Directors or committee members as the case may be.

VI. VOTING

A. General. Each Regular Member shall be entitled to one vote on each matter submitted to a vote at a meeting of the Corporation. .

B. Proxies. Regular Members may vote in person or by proxy. A proxy, to be valid, must be in writing; signed by the member; and submitted to the Corporation prior to voting. No proxy shall be valid after thirteen months from the date of its execution, unless otherwise provided in the proxy

C. Mail Voting. At the discretion of the Board of Directors, voting may be conducted by mail. In such case, a written ballot shall be sent to each Regular Member at least twenty days in advance of the date for canvass of the votes. The written ballot shall contain and describe the issues or persons to be voted upon and shall provide space for the Regular Member to vote for or against the issue or for the candidates of his or her choice.

VII. CORPORATION FUNDS

A. Deposits. All funds of the Corporation, other than a reasonable amount for petty cash, shall be deposited, in the name of the Corporation, in such banks or other depositories as the Board of Directors shall select.

B. Checks. All disbursements by the Corporation, other than small amounts from petty cash, shall be by check, drawn direct to the ultimate payees and signed by at least two Directors of the Corporation.

VIII. EMPLOYEES

A. Employees. The Board of Directors may employ or appoint such organizations and persons, as it deems appropriate, and shall establish or approve salaries and/or other charges for such services. Employees shall not be elected or appointed officials, or employees of any regular member entity, and shall serve at the will of the Board of Directors. The Regional Water Association of South King County is an at will employer.

B. Annual Review. Annually, the Board of Directors, with the assistance of the Evaluation Committee, shall review the performance and compensation of any employees of the Corporation.

IX. MEMBER AGREEMENTS

A. Member Agreements. From time to time, the Board of Directors may offer member agreements to members for consideration and or participation. Approval or participation in any agreement so offered shall not be a condition of membership in the Corporation.

B. Joint Operating Agreement. The South King County Regional Water Association Joint Operating Agreement is a Member Agreement as defined in these Bylaws. As such, participation in the Joint Operating Agreement is not a condition of membership in the Corporation.

X. AMENDMENTS

The Board of Directors, may adopt new Bylaws, or may alter, amend or repeal these Bylaws, at a Regular Meeting, or at a Special Meeting, provided such meeting is held with proper notice as required by these Bylaws or through the mail voting procedures of the Corporation.

XII. DUES AND CHARGES

Membership fees, dues and/or other charges; the time for payment thereof; and procedures in the event of delinquency; shall be as established, from time to time, by the Board of Directors.

XII. CONTRACTS, LOANS AND CHECKS

A. Contracts. The Board of Directors may authorize any Officer or Officers, agent or agents, to enter into any contract or execute and deliver any instrument in the name of and on behalf of the Corporation, and such authority may be general or confined to specific instances.

A. Loans. No loans shall be contracted on behalf of the Corporation and no evidences of indebtedness shall be issued in its name unless authorized by a resolution of the Board of Directors, or the Executive Committee, if such authority is delegated it by the Board of Directors. Such authority when granted may be general or confined to specific instances.

C. Loans to Directors and Officers. The Corporation shall make no loans to its Directors or Officers. Any director who votes for or assents to the making of a loan to a Director or Officer of the Corporation, and any Officer or Officers participating in the making of such loan, shall be jointly and severally liable to the Corporation for the amount of such loan until repayment thereof.

XIII. SEAL

The Board of Directors shall provide for a corporate seal, which shall have inscribed thereon the name of the Corporation and the words. "State of Washington', and "Corporate Seal". Until changed by the Board of Directors, the Corporations seal shall be that affixed to this page.

RESOLUTION NO. 3434

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE.

WHEREAS, pursuant to RCW 35A.11.040, Auburn and Bonney Lake have legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Bonney Lake have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, the City of Auburn and the City of Bonney Lake currently have water facilities in the vicinity; and

WHEREAS, both cities can increase fire protection and emergency water supply reliability for their customers; and

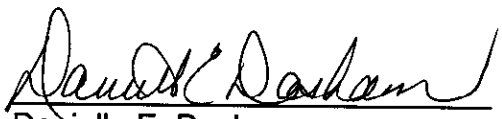
WHEREAS, both cities are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set for in the Emergency Water System Intertie Agreement.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Bonney Lake have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Emergency Water System Intertie Agreement between the City and the City of Bonney Lake. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.



DATED this 19 day of MARCH, 2002.

EXHIBIT A

EMERGENCY WATER SYSTEM INTERTIE AGREEMENT
Bonney Lake/Auburn Intertie Agreement No. 3

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as Auburn, and, the City of Bonney Lake, hereinafter referred to as Bonney Lake, for the purposes of planning, designing, constructing, maintaining, and operating an emergency system intertie between the respective parties,

WITNESSETH:

WHEREAS, both Cities have water facilities in the vicinity, and

WHEREAS, both Cities can increase fire protection and emergency water supply reliability for their customers, and

WHEREAS, the Cities are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The emergency water system intertie is designed to be operated manually as a two way emergency supply between the Auburn and Bonney Lake Systems. The facility shall be located in Evergreen Way SE at the Water Service Area Boundaries between the two cities. Final location and configuration of the facilities shall be determined at the time of final design. Initially the Intertie is assumed to be a one-way supply from Bonney Lake to Auburn.

2. The emergency water system intertie shall be operated only in the event of an emergency. For purposes of this agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other agreed upon emergency within the water supply system.

3. Auburn will design and administer the contract for the construction of the metering station. The facility will be designed and constructed in accordance with reasonably accepted water utility standards for similar municipal water utilities. Auburn will own and maintain the piping, interior equipment, emergency meter and interior appurtenances, and all piping up to the Bonney Lake side of the vault for the metering station.

20020716000761

20020716000761

4. Upon completion of construction, Auburn will transfer ownership of all exterior appurtenances, and all piping, which is located on the Bonney Lake side of the vault, to Bonney Lake. Bonney Lake will own and maintain the exterior appurtenances and all piping on Bonney Lake's side of the vault.

5. Each City will each have unlimited access to the vault via a dual padlock or ownership of keys to the vault.

6. Each City will operate the respective normally locked valve inside of the vault. Auburn will solely unlock and operate the locked valve on Auburn's side of the meter and Bonney Lake will solely unlock and operate the locked valve on Bonney Lake's side of the meter.

7. The procedure for operating the intertie in the event of such emergency shall be as follows:

   A. Each City shall determine that an emergency of sufficient magnitude has occurred which warrants the need to request that the intertie be activated.

   B. The Public Works Director or appointed person or authorized personnel shall provide a verbal request to the other City's Public Works Director or appointed person. Upon agreement that an emergency exists which shall allow for the intertie to be opened, the intertie will be activated as soon as reasonably possible. Both Cities' personnel shall be present at the vault to open the valves to activate the facility.

   C. The City requesting the activation shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

   D. The intertie shall remain activated until the City requesting activation determines that the need for activation of the emergency intertie has ceased and shall request in writing to close the intertie.

   E. In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the City supplying the water may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and the City supplying the water shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the City

200207160000761

receiving the water (City requesting activation) shall save and hold harmless the City supplying the water from any loss, damages or suites to or by customers of the City receiving the water resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the City supplying the water's negligence. Prior to a planned interruption or limiting of service, the City supplying the water will notify the City receiving the water of such not less than three days prior to the service disruption. The City supplying the water agrees to use best efforts and reasonable diligence to notify the City receiving the water as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

8. Auburn shall read the meter upon activation and upon deactivation of the intertie. The city supplying the water shall verify the information and shall then calculate and invoice the other city for the water used during the request. The invoice shall be calculated by the total water used during the event. The rate shall be at the current Auburn Wholesale Rate or the lowest Bonney Lake retail rate depending on which city is supplying the water. This shall be complete payment for the water, labor, and administration of activating the intertie.

9. The total project costs shall include costs for consulting design service, and construction. Auburn shall bear the total project costs, until and unless it can be demonstrated that Bonney Lake can benefit from the intertie. At such time, the parties agree to negotiate the fair share of the total actual project costs that correspond to the benefit Bonney Lake could receive. Bonney Lake agrees to pay such fair share of the total project costs upon billing for same by Auburn. Bonney Lake will have the right to build an intertie from Auburn to Bonney Lake at another location. Bonney Lake will bear the cost of building a separate intertie. Each City is responsible for associated staff, administration and legal costs associated with the implementation of the agreement.

10. To the extent allowed by law, the City of Bonney Lake shall defend, indemnify, and hold harmless the City of Auburn, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or nature arising out of or in connection with or incident to an act or omission of the City of Bonney Lake, its employees, agents, and contractors in the performance of the City of Bonney Lake's obligations under the Agreement and this Amendment. This indemnification provision shall include, but is not limited to, all claims against the City of Auburn by an employee or former employee of the City of Bonney Lake or its contractors and, as to such claims, the City of

Bonney Lake expressly waives all immunity and limitation of liability under Title 51 RCW.

To the extent allowed by law, the City of Auburn shall defend, indemnify and hold harmless the City of Bonney Lake, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties, and damages or whatsoever kind or nature arising our of, in connection with or incident to an act or omission of the City of Auburn, its employees, agents, and contractors in the performance of the City of Auburn's obligations under this Agreement. This indemnification obligation shall include, but is not limited to, all claims against the City of Bonney Lake by an employee or former employee of the City of Auburn or its contractors and, as to such claims, the City of Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

11. This Agreement shall remain in force until terminated by either party hereto upon 60-days written notice to the other party. Any project costs, incurred up to the date of such notice, as described herein, shall be shared in accordance with the provisions of this Agreement.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. 3444

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND COVINGTON WATER DISTRICT AND WATER DISTRICT #111.

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn, Covington Water District (Covington) and Water District #111 (#111) have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, Auburn has existing water interties and associated water supply agreements with Covington and #111, and

WHEREAS, Auburn will enter into Emergency Water Supply Agreement No. 1 with Lakehaven Utility District, hereinafter referred to as "LUD", whereby LUD can provide water it has available, in the event of an emergency, and

WHEREAS, the LUD Intertie No. 1 and agreement can increase the reliability of Auburn's water supply for Covington and #111 if water is available from LUD in the event of an emergency,

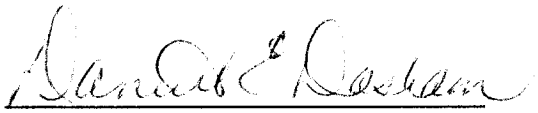
WHEREAS, it is in the public interest for the parties herein to enter into an emergency water supply agreement,

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn, Covington and #111 have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

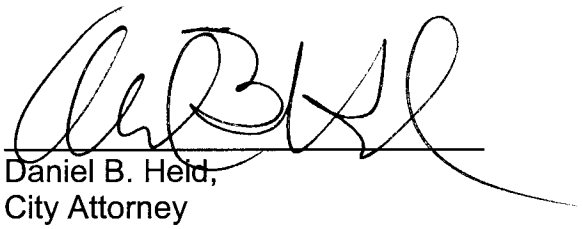
Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Emergency Water System Intertie Agreement between the City and Covington Water District and Water District #111 with minor administrative changes if required. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.



DATED this 1st day of April, 2002.

CITY OF AUBURN



PETER B. LEWIS
MAYOR

ATTEST:

Danielle E. Daskam,
City Clerk

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

EMERGENCY WATER SUPPLY AGREEMENT
Auburn/Covington/Water District #111

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as "Auburn", and Covington Water District, hereinafter referred to as "Covington", and Water District #111, hereinafter referred to as "#111".

WITNESSETH:

WHEREAS, Auburn has existing water interties and associated water supply agreements with Covington and #111, and

WHEREAS, Auburn has entered into Emergency Water Supply Agreement No. 1 with Lakehaven Utility District, hereinafter referred to as "LUD", whereby LUD can provide water it has available, in the event of an emergency, and

WHEREAS, the LUD Intertie No. 1 and agreement can increase the reliability of Auburn's water supply for Covington and #111 if water is available from LUD in the event of an emergency,

WHEREAS, it is in the public interest for the parties herein to enter into an emergency water supply agreement,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. **Intertie Project Description.** LUD has granted to Auburn the right to connect, for the purposes described herein, an emergency intertie and appurtenances to the end of the 16-inch water main located in the vicinity of 15th Street Northwest and Terrace Drive in Auburn, Washington, more specifically shown on Exhibit A. The intertie facility shall be sited on property owned by Auburn.

2. **Intertie Project Payment.** Covington and #111 agree to pay for the design and construction of the emergency intertie described in Paragraph No. 1, and the replacement of +/- 140 linear feet of existing water main with a 16-inch transmission line in 15th St NW, between "R" St. NW and the proposed intertie vault. Covington will act as the contracting agency, paying for purchase and installation of the facilities described herein. Water District #111 will act as the design agency, providing design and construction support services. At the completion of construction, the total of design, construction support, purchase, and installation costs shall be summed and divided evenly between Covington and #111. The intertie facilities and piping are to be designed and constructed in accordance with Auburn's design standards. The emergency intertie shall comply with all LUD resolutions and rules applicable to a connection to LUD's water system including, but not limited to, the requirements that the LUD provide written approval of plans and specifications for the connection of intertie facilities prior to construction. Upon completion of the emergency intertie project, Covington will transfer to

Auburn through Bill of Sale all facilities constructed under this Agreement. Auburn will transfer through Bill of Sale to LUD ownership of and maintenance responsibility for the meter, associated appurtenances necessary to monitor emergency use of the intertie, the gate valve upstream of the vault and all piping upstream of that gate valve. Auburn will retain ownership of and maintenance responsibility for the vault, control valve, and all other piping and appurtenances.

3. **Intertie Project Purpose.** The emergency intertie described in Paragraph No. 1 herein is being installed to provide an emergency water supply. In the event Auburn perceives that curtailment of water supply to Covington or #111 will be necessary, Auburn will notify the parties of the situation and request whether or not the parties would like the LUD intertie activated. If Covington or #111 would like the LUD intertie activated, the requesting party must submit such request to Auburn in writing. Upon receipt of a request from Covington or #111, Auburn will submit a written request to LUD. Water shall not be withdrawn from the supply without the prior written approval of LUD. At the time approval is sought, Auburn shall state the requested time of commencement of use, the expected duration of withdrawal and quantity of water to be withdrawn. Auburn shall request an extension or termination of intertie operation in writing, if the duration of expected withdrawal is extended or shortened.

4. **Payment of Service and Quantity Charges.** Covington and #111 shall pay Auburn all monthly service charges, and quantity charges for any water received from LUD for the benefit of Covington and #111. Monthly service and quantity charge rates shall be established by LUD resolution for the use of an 8-inch meter and the applicable water rate. The rate for emergency water use will be the greater of LUD's rate to Auburn plus a wheeling charge, or the Auburn Wholesale rate for Covington and #111 as established by City Ordinance. These rates may be revised without notice to Covington and #111 and such revised rates shall apply to emergency water deliveries made pursuant to this agreement. Examples of the current rates are included in Exhibit B.

5. **Conditions of Use.**

   (a.) In the event LUD determines that the use of the emergency intertie is or will impose a negative impact to the public health, safety, or the equitable distribution of water within LUD, LUD may change, reduce or limit the time of use, or temporarily discontinue the supply of water without notice;
   (b.) In the event LUD must change, reduce, limit or temporarily discontinue service, Auburn may be required to change, reduce or limit the time of use, or temporarily discontinue the supply of water without notice to Covington and #111;
   (c.) Water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and
   (d.) Prior to a planned interruption or limiting of service as set forth in (c) above the City will notify Covington and #111 of such planned

interruption or limiting of service. The City agrees to use best efforts to notify Covington and #111 as soon after it becomes aware of the need for such a service disruption.

(e.) Activation procedures are as described in Exhibit C

6. **Water Quality.** Water available to the parties to this Agreement shall be in compliance with all applicable state and federal drinking water laws, regulations and standards.

7. **Discontinuation of Use.** In the event of non-performance of any provision herein by Covington and/or #111, Auburn may shut off water supplied pursuant to this Agreement.

8. **Hold Harmless.** Covington and #111 agree to indemnify, defend and hold harmless Auburn, its officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from Covington's and #111's default, failure of performance, or negligent conduct associated with this Agreement, and any failure of the Auburn water system to deliver flow to Covington and #111, in whole or in part, as described in this Agreement. This indemnification provision shall include, but is not limited to, all claims against Auburn by an employee or former employee of Covington and #111 or their contractors and, as to such claims, Covington and #111 expressly waive all immunity and limitation of liability under Title 51 RCW.

   Auburn agrees to indemnify, defend and hold harmless Covington and #111, their officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from Auburn's default, or negligent conduct associated with this Agreement. This indemnification provision shall include, but is not limited to, all claims against Covington and #111 by an employee or former employee of Auburn or its contractors and, as to such claims, Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

9. **Agreement Termination.** This Agreement may be terminated by mutual agreement of all parties hereto upon 60-days written notice to the other parties.

10. **Dispute Resolution.** The parties shall make good faith efforts to resolve by informal discussion any dispute arising under or in connection with this Agreement. If at any time a party to this Agreement determines that such informal discussions will not result in a resolution of the dispute, such party may request formal discussion by all parties identified in Paragraph 11. If formal discussion by the parties identified in Paragraph 11 does not resolve the dispute, a settlement conference shall be held within thirty (30) days of the unsuccessful resolution meeting. The settlement conference will be held at the Seattle office of Judicial Arbitration and Mediation Services, Inc. ("JAMS"). The complaining party must contact JAMS to schedule the conference. The parties may agree on a retired judge from the JAMS panel.

If they are unable to agree, JAMS will provide a list of three available judges and each party may strike one. The remaining judge will serve as the mediator at the settlement conference.

11. **Notices.** Notices should be sent to the parties at the following addresses:

Exhibit B

EMERGENCY WATER SUPPLY AGREEMENT
Auburn/ Covington/Water District #111

Example of Monthly Meter Cost:

In accordance with Auburn/LUD Emergency Intertie Agreement #1, LUD currently does not have an adopted monthly rate for an 8" meter, and would use Tacoma Public Utilities' (TPU) monthly meter rate until such time as Lakehaven adopts a rate for this size meter.

TPU's rate for an 8" meter is	$804.00 (Effective 4/23/01)
Cost to Covington and #111	$402.00 each

Example of Emergency Water Rates in 2002

Emergency Intertie Water Use Rate (based on LUD rate to Auburn)	$1.092 /ccf in 2002
Auburn Wheeling Rate	$0.15 /ccf
Total	$1.242 /ccf
Auburn Water Utility Rates (Ord 5291)	
Wholesale #111 (and Covington)	$1.10 /ccf*
Covington and #111 Water Use Rate equals	$1.242 /ccf in 2002

* Rate subject to change due to a proposed take or pay agreement between Auburn and Covington and #111

Exhibit C

EMERGENCY WATER SUPPLY AGREEMENT

Auburn/ Covington/Water District #111

Operation Procedures

1. Water supply requests of Covington and/or #111, or any combination of the two, plus Auburn water use exceeds available supply from Auburn due to an emergency.

2. Auburn determines that it can not provide requested supply and therefore must curtail flow to Covington and/or #111. Auburn notifies Covington and #111 of need to curtail.

3. Covington and/or #111 request Lakehaven Intertie be activated by Auburn.

4. Auburn notifies Lakehaven of emergency and asks how much water Lakehaven can supply and for how long.

5. Lakehaven responds with rate and duration.

6. Auburn requests Intertie be activated for a given flow rate and duration.

7. a) If Lakehaven plus Auburn supply will be greater or equal to the supply requested by Covington and #111

   Flush line, read the meter and open the intertie
   When the emergency is over, close intertie and read meter

   b) If Lakehaven plus Auburn supply still is less than the requested supply, Auburn notifies Covington and #111 of available supply and requests a breakdown of how the LUD supply plus the Auburn supply is to be distributed. When this information is received:

   Flush line, read the meter and open the intertie
   When the emergency is over, close intertie and read meter

Deactivation

8. If Auburn determines that the water supply emergency is over and it can supply Auburn plus Covington and #111's requested water supply without use of the LUD intertie, Auburn will request of LUD that the intertie be closed.

9. If LUD determines that it must reduce or terminate supply, LUD will notify Auburn (subject to Paragraph 5 (a) of this Agreement). Auburn will notify Covington and #111 (subject to Paragraph 5 (b) of this Agreement) that flow will be curtailed, and request how the parties would like any available water distributed.

RESOLUTION NO. 3443

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND LAKEHAVEN UTILITY DISTRICT.

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Lakehaven Utility District (LUD) have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, the City has water facilities in the vicinity of a water main of LUD, and

WHEREAS, the City can increase the reliability of water for its customers, including Covington Water District and Water District No. 111, if water is available from LUD in the event of an emergency, and

WHEREAS, LUD is willing to provide to the City emergency service upon the terms and conditions set forth herein,

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Lakehaven Utility District have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Emergency Water System Intertie Agreement between

the City and Lakehaven Utility District with minor administrative changes if required. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED this 1st day of April, 2002.

EMERGENCY WATER SUPPLY AGREEMENT
Lakehaven/Auburn Intertie No. 1

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as "City", and Lakehaven Utility District, hereinafter referred to as "District".

WITNESSETH:

WHEREAS, the City has water facilities in the vicinity of a water main of the District, and

WHEREAS, the City can increase the reliability of water for its customers, including Covington Water District and Water District No. 111, if water is available from the District in the event of an emergency, and

WHEREAS, the District is willing to provide to the City emergency service upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The District hereby grants to the City the right to connect, for the purposes described herein, a water meter and appurtenances to the end of the 16-inch water main located in the vicinity of 15th Street Northwest and Terrace Drive in King County, Washington, more specifically shown on Exhibit A. The intertie facility shall be sited on property owned by the City.

2. The meter described in Paragraph No. 1 herein is installed to provide an emergency water supply. Water shall not be withdrawn from the supply without the prior written approval of the District. At the time approval is sought, the City shall state the requested time of commencement of use, the expected duration of withdrawal and the quantity of water to be withdrawn. The City shall request in writing an extension of, or reduction in the duration of the withdrawal if the duration of the withdrawal is expected to vary from the original estimate. The District and City shall read the meter upon activation and upon deactivation of the intertie. The District may periodically bill the City for water used while the intertie is in operation or may bill for all such use after the withdrawal has ended.

3. It is anticipated by the parties that because the facility will be funded by agencies with emergency or interruptible water supply agreements with the City (specifically Covington Water District and Water District #111), the City may be called upon by adjoining agencies to provide an emergency supply of water beyond the City's ability to produce such supply, and therefore requests for emergency service under this Agreement may originate on behalf of those adjoining agencies.

4. Upon completion of the Emergency Intertie construction, the District will own and maintain the meter, associated appurtenances necessary to monitor emergency use of the intertie, the gate valve upstream of the vault and all piping upstream of the meter. The City will own and maintain the vault, control valve, and all other piping and appurtenances downstream of the meter (see Exhibit B). The City and the District shall have mutual access to the vault for periodic inspection and maintenance or repair of their respective facilities.

5. The City shall comply with all District resolutions and rules applicable to a connection to the District's water system including, but not limited to, the requirement that the District provide written approval of plans and specifications for the connection of intertie facilities prior to construction.

6. The City shall pay to the District the base monthly service charge and quantity charge for any water received. Monthly service and quantity charge rates shall be established or amended by District resolution for the use of an eight (8)-inch meter and the applicable water rate. The rate for emergency water use will be the greater of the District's adopted summer non-residential (Commercial/Public Authority) water rate or the City of Tacoma's (Tacoma) adopted wholesale water rate plus a District wheeling rate determined by the District. Examples of the current rates are included in Exhibit C. The District or Tacoma may revise these rates from time to time without notice to the City and such revised rates shall apply to emergency water deliveries made pursuant to this agreement.

7. This Agreement shall not authorize or permit the City to take water from the connection described herein beyond what is described in paragraph 2, 3, and Exhibit D.

8. Conditions
   (a.) In the event the District determines that the use of the emergency intertie is or will impose a negative impact to the public health, safety, or the equitable distribution of water within the District, the District may change, reduce or limit the time for, or temporarily discontinue, the withdrawal of water without notice;
   (b.) Water service may be temporarily interrupted or otherwise limited for purposes of making repairs, extensions or doing other necessary work to the water system; and
   (c.) Prior to a planned interruption or limiting of service as set forth in (b) above the District will notify the City of such planned interruption or limiting of service. The District agrees to use best efforts to notify the City as soon after it becomes aware of the need for such a service disruption.
   (d.) Operating conditions are as described in Exhibit C

9. Payment of all invoices for services and charges from the District shall be paid within 45 days of the invoice date.

10. In the event of non-performance of any provision herein by the City, District may shut off water supplied pursuant to this Agreement.

11. The use of this intertie is contingent upon receiving approval of same from the Department of Health pursuant to applicable regulations.

12. The City agrees to indemnify, defend and hold harmless the District, its officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from the City's default, failure of performance, or negligent conduct associated with this Agreement. This indemnification provision shall include, but is not limited to, all claims against the District by an employee or former employee of the City or their contractors and, as to such claims, the City expressly waives all immunity and limitation of liability under Title 51 RCW.

The District agrees to indemnify, defend and hold harmless the City, its officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from the District's default, failure of performance or negligent conduct associated with this Agreement. This indemnification provision shall include, but is not limited to, all claims against the City by an employee or former employee of the District or its contractors and, as to such claims, the District expressly waives all immunity and limitation of liability under Title 51 RCW.

13. The parties shall make good faith efforts to resolve by informal discussion any dispute arising under or in connection with this Agreement. Should a dispute arise between the parties that cannot be resolved satisfactorily, a mediator mutually acceptable to the parties shall resolve the dispute through the use of mediation at equal cost to each party. Should the Parties not be able to satisfactorily resolve the dispute through mediation, the forum for resolution shall be the King County Superior Court. The prevailing party shall be entitled to attorney fees and costs.

14. This Agreement may be terminated by either party hereto upon 60-days written notice to the other party.

15. Notices should be sent to the City and the District at the following addresses:

Public Works Director
City of Auburn
25 West Main Street
Auburn, WA 98001

General Manager
Lakehaven Utility District
P.O. Box 4249

Exhibit C

Example of Monthly Meter Cost:

Lakehaven currently does not have an adopted monthly rate for an 8" meter, and would use an amount near Tacoma's monthly meter rate until such time as Lakehaven adopts a rate for this size meter.

Tacoma's rate for an 8" meter is	$815.04 (Effective 4/23/01)
Lakehaven's proposed starting monthly rate:	$804.00

Example of Emergency Water Rates in 2002

Lakehaven Utility District Rates (Resolution 99-906)

Commercial/Public Authority Water Rate	1.060 $/ccf (Effective 1/1/2000)

City of Tacoma Rates (Ordinance No. 26800) plus Lakehaven Wheeling Rate

Summer Wholesale Water Rate to Lakehaven	0.912 $/ccf (Effective 4/22/02)
Lakehaven Wheeling Rate	0.180 $/ccf (Current Estimate)
Total	1.092 $/ccf

Emergency Water Use Rate equals	1.092 $/ccf in 2002

Exhibit D
Operating Conditions

1. Prior to intertie activation the 16" water main upstream of the District's meter shall be flushed by the District. Any costs incurred by the District beyond labor time and the cost of water used for the flushing operation shall be paid by the City.

2. The City will maintain a back pressure-sustaining feature within the metering facility in order to maintain adequate pressure within the District's service area while also preventing uncontrolled flows. The District will maintain the right to authorize or direct the City to change the minimum up-stream pressure setting if an adjustment is warranted to increase flow capacity or maintain adequate pressure in the District's distribution system. The initial settings for the pressure-sustaining valve shall be noted on the approved construction plans and shall be stored in a waterproof container in the vault. Records of any future revised pressure settings shall be maintained and noted on the "record drawings" for the metering facility retained by the parties, and the information stored in the vault shall be updated.

3. The City will control the delivery flow rate from Lakehaven. The current estimated maximum allowable flow rate from Lakehaven is 1750 gpm (or 2.5 mgd) more or less, so long as Lakehaven customers are not impacted. The City's system has the capacity to receive water at a maximum instantaneous rate of up to approximately 5 mgd.

4. The District and City will coordinate the telemetry system so each will receive the signal required for its operation and monitoring.

ORDINANCE NO. 5592

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A FRANCHISE AGREEMENT BETWEEN THE CITY OF BONNEY LAKE AND THE CITY OF AUBURN, ALLOWING THE CITY OF BONNEY LAKE TO CONNECT, INSTALL, OPERATE, MAINTAIN AND REPAIR A WATER SYSTEM, FACILITIES, AND APPURTENANCES IN, OVER, ALONG, ACROSS AND UNDER THE FRANCHISE AREA FOR THE PURPOSE OF PROVIDING WATER SERVICE.

WHEREAS, the City of Auburn and the City of Bonney Lake have entered into a Settlement Agreement, executed March 5, 1998 pursuant to Resolution 2925 adopted March 2, 1998, related to water service to the Lakeland Hills South development in which, according to Section 3, Auburn recognizes and agrees to Bonney Lake's exclusive right to serve with water all portions of Bonney Lake's water service area as designated by the 1995 Pierce County Coordinated Water System Plan; and

WHEREAS, the City of Auburn and the City of Bonney Lake have entered into a Service Area Agreement, executed December 10, 1998 pursuant to Resolution 3018 adopted December 7, 1998, which revised the boundary between their respective water service areas; and

WHEREAS, the City of Auburn has annexed portions of the City of Bonney Lake's water service area; and

WHEREAS, according to Section 7 of said Settlement Agreement, the City of Auburn guaranteed the City of Bonney Lake the right to transport water through Auburn's corporate boundaries within Pierce County; and

WHEREAS, Section 7 of said Settlement Agreement states that the guarantee to transport water shall be effectuated by the execution of easements, agreements, franchises, licenses or other documents as are appropriate; and

WHEREAS, the City of Bonney Lake desires to connect, install, operate, maintain and repair a water system, facilities, and appurtenances in, over, along, across and under the franchise area for the purpose of providing water service.

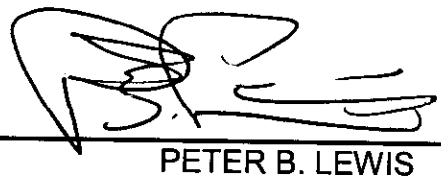
WHEREAS, in order to maintain control over the use of City of Auburn right-of-ways by utilities operating within the City of Auburn, it is appropriate to enter into franchise agreements with such utilities; and

WHEREAS, City of Bonney Lake is such a utility, and has negotiated this franchise agreement with the City of Auburn acceptable to both parties; and

WHEREAS, the City of Auburn has determined that it is in the best interests of the public to grant the City of Bonney Lake a franchise on the terms and conditions set forth in this Agreement.

NOW, THEREFORE, CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, DO ORDAIN AS FOLLOWS:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Franchise Agreement between the City of Bonney Lake and the City. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.



Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This Ordinance shall take effect and be in force five (5) days from and after its passage, approval and publication, as provided by law.

EXHIBIT "A"

CITY OF AUBURN, WASHINGTON
FRANCHISE AGREEMENT WITH THE CITY OF BONNEY LAKE

WHEREAS, the City of Auburn and the City of Bonney Lake have entered into a Settlement Agreement, executed March 5, 1998 pursuant to Resolution 2925 adopted March 2, 1998, related to water service to the Lakeland Hills South development in which, according to Section 3, Auburn recognizes and agrees to Bonney Lake's exclusive right to serve with water all portions of Bonney Lake's water service area as designated by the 1995 Pierce County Coordinated Water System Plan; and

WHEREAS, the City of Auburn and the City of Bonney Lake have entered into a Service Area Agreement, executed December 10, 1998 pursuant to Resolution 3018 adopted December 7, 1998, which revised the boundary between their respective water service areas; and

WHEREAS, the City of Auburn has annexed portions of the City of Bonney Lake's water service area; and

WHEREAS, according to Section 7 of said Settlement Agreement, the City of Auburn guaranteed the City of Bonney Lake the right to transport water through Auburn's corporate boundaries within Pierce County; and

WHEREAS, Section 7 of said Settlement Agreement states that the guarantee to transport water shall be effectuated by the execution of easements, agreements, franchises, licenses or other documents as are appropriate; and

WHEREAS, the City of Bonney Lake desires to connect, install, operate, maintain and repair a water system, facilities, and appurtenances in, over, along, across and under the franchise area for the purpose of providing water service.

WHEREAS, in order to maintain control over the use of City of Auburn right-of-ways by utilities operating within the City of Auburn, it is appropriate to enter into franchise agreements with such utilities; and

WHEREAS, City of Bonney Lake is such a utility, and has negotiated this franchise agreement with the City of Auburn acceptable to both parties; and

WHEREAS, the City of Auburn has determined that it is in the best interests of the public to grant the City of Bonney Lake a franchise on the terms and conditions set forth in this Agreement.

NOW, THEREFORE THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE AGREE AS FOLLOWS:

SECTION 1 DEFINITIONS

Where used in this franchise ("Franchise"), the following definitions shall apply:

1.1 "Franchisee" means the City of Bonney Lake, a Washington municipal corporation, and its respective successors and assigns.

1.2 "City" means the City of Auburn, a Washington municipal corporation.

1.3 "Franchise Area" means all of the public roads, streets, avenues, alleys, highways, and other rights-of-way of the City as now laid out, platted, dedicated or improved; and any and all public roads, streets, avenues, alleys, highways, and other rights-of-way that may hereafter be laid out, platted, dedicated or improved within the area as described with Exhibit "1" attached hereto, which is by this reference incorporated, as if fully set forth herein; provided, that the Franchise Area shall not include or convey any right to Franchisee to install facilities on or to otherwise use City owned or leased properties outside the Franchise Area.

1.4 "Facilities" means the Franchisee's water system, lines, mains, appurtenances, and all other necessary or convenient facilities for the purpose of providing water service.

1.5 "Ordinance" means this ordinance setting forth the terms and conditions of the franchise granted to the Franchisee.

SECTION 2 FRANCHISE GRANT

Subject to the terms and conditions set forth in this ordinance, the City grants to the Franchisee the right to construct and install water pipelines and appurtenances and to excavate trenches in City roads for the purposes of constructing, installing, operating, maintaining, removing, and replacing mains and pipes and making connections between the same to the dwellings and other buildings of the consumers. In exercising the foregoing rights, the Franchisee shall be governed by and conform to the general rules adopted by the Public Works Department of the City of Auburn, and the Franchisee, at no expense to the City, shall complete all work and shall replace and restore the City roads to the condition of the City roads existing immediately prior to such disturbance; PROVIDED, HOWEVER, that no such work shall be done prior to the obtaining of a permit therefor issued by the City's Public Works Director (hereinafter "Director"), which permit shall set forth conditions pertaining to the work to be done and specifications for the restoration of the roads to the same condition as they were prior to such work. If the Franchisee does not repair the City roads to the satisfaction of the Director, the City may, at its sole discretion, repair such City roads, or cause them to be repaired, and the Franchisee hereby agrees to reimburse the City for the cost of such work, including overhead costs.

SECTION 3 FRANCHISE TERM

This Franchise is and shall remain in full force and effect from the effective date of this Ordinance forward, for a period not to exceed seven (7) years from the effective date of any Auburn annexation of any area within the boundary defined in Exhibit 1, for said area, but subject to earlier termination in accordance with the terms and conditions of the Settlement Agreement, provided, that this Franchise shall not take effect and the Franchisee shall have no rights under this Franchise unless the Franchisee files a written acceptance of this Franchise with the City pursuant to Section 4 of this Agreement.

SECTION 4 ACCEPTANCE BY GRANTEE OF TERMS AND CONDITIONS

The full acceptance of this Franchise and all of its terms and conditions shall be filed with the City Clerk within forty-five (45) days from the date of this Ordinance, by the Franchisee. Full acceptance of this Franchise is a condition precedent to its taking effect, and unless this Franchise is accepted within the time specified, this grant will be null and void and have no force or effect.

SECTION 5 NON-EXCLUSIVE FRANCHISE

This Franchise is not exclusive. It does not prohibit the City from granting franchises for other public or private utilities in, over, along, across, and under any City property, including the Franchise Area. This Franchise does not prevent or prohibit the City from constructing, altering, maintaining or using any of the Franchise Area. The City retains full power to make all changes, relocations; repair, maintenance or other work to or in the Franchise Area as the City deems fit.

SECTION 6 JURISDICTION

This Franchise is intended to convey limited rights and interest only as to those roads and rights-of-way in which the City has an actual interest. It is not a warranty of title or of interest in City road rights-of-way. None of the rights granted to the Franchisee shall affect the jurisdiction of the City over City road rights-of-way or the City's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating.

SECTION 7 REGULATION OF USE AND CONTROL

This Franchise does not deprive the City of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the City road rights-of-way covered by this Franchise. The City reserves the right and power at all times to exercise its police powers with respect to the time, manner and location of the placement of the Franchisee's Facilities.

SECTION 8 EMINENT DOMAIN

This Franchise and the limited rights and interests granted by this Franchise are subject to the exercise of eminent domain. In the event of an exercise of eminent domain by the City, the value to be attributed to all the rights and interests granted under this Franchise shall not exceed the actual amount the Franchisee paid to the City in obtaining this Franchise.

SECTION 9 VACATION

If at any time the City vacates any City rights-of-way covered by this Franchise, the City will not be held liable for any damages or loss to the Franchisee by reason of such vacation. The City may, after giving thirty (30) days written notice to the Franchisee terminate this Franchise with respect to any City road or rights-of-way vacated.

SECTION 10 ENFORCEMENT

The City's failure to enforce any provision of this Franchise does not constitute a waiver of its right to enforce that provision or any other provision of this Franchise.

SECTION 11 INDEMNITY AND HOLD HARMLESS

11.1 The Franchisee shall defend, indemnify and hold harmless the City, its appointed and elected officials, and its employees and agents from and against liability for all claims, actions, injuries, demands, liabilities, losses, costs, damages and judgments, including costs of defense thereof, (collectively referred to as "damages") for injury to persons, death or property damage caused by, arising out of, or incidental to the Franchisee's exercise of the rights and privileges granted by this Franchise, except for damages caused by or arising out of the City's sole negligence. In the event that any such claim or demand for damages is presented to or filed with the City, or if any suit or action is initiated against the City based on such claims or demands for damages, the City shall promptly notify the Franchisee of the claim, demand, suit or action and the Franchisee shall have the right, at its election and its sole cost and expense, to settle and compromise such claim, demand, suit or action, or defend the same at the Franchisee's sole cost and expense.

11.2 If it is determined that RCW 4.24.115 applies to this Franchise, the Franchisee agrees to defend, hold harmless and indemnify the City to the maximum extent permitted under that statute, and specifically for the Franchisee's negligence concurrent with that of the City to the full extent of the Franchisee's negligence.

SECTION 12 INSURANCE

12.1 The Franchisee shall keep a policy of insurance in force with a minimum limit of five million dollars ($5,000,000.00). Verification of insurance coverage is a condition precedent to the effectiveness of this Agreement.

12.2 The insurance shall be maintained in full force and effect at the Franchisee's sole expense throughout the term of the Franchise, and, should such insurance be terminated, this Agreement shall terminate as of the date of the termination of insurance coverage.

12.3 The coverage provided by the Franchisee's insurance policies shall be primary to any insurance maintained by the City except as to losses or damages attributable to the sole negligence of the City. Any insurance maintained by the City that might relate to this Franchise shall be in excess to the Franchisee's insurance and shall not contribute with or to it. The City has no obligation to report occurrences to the insurance companies unless a claim is filed with the City's City Council; and the City has no obligations to pay the Franchisee's premiums.

12.4 The Franchisee shall be solely and completely responsible to perform all work related to this Franchise in compliance with all applicable federal, state, county and city statutes, rules, regulations, ordinances, orders and codes. The Franchisee's attention is directed to the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Franchisee shall be solely and completely responsible for safety and safety conditions on its job sites and for its work within the Franchise Area, including the safety of all persons and property during performance of any works therein. The services of the City or City's consultant personnel in conducting construction review of the Franchisee's work relating to the Franchise is not intended to include review of the adequacy of the Franchisee's work methods, equipment, scaffolding, or trenching, or safety measures in, on or near such Franchise Area or job site. The Franchisee shall provide

safe access for the City and its inspectors to adequately inspect the work and its conformance with applicable statutes, ordinances, rules, regulations, and the Franchise.

SECTION 13 INSTALLATION, REPAIR, REMOVAL OR RELOCATION

13.1 The Franchisee shall, at no expense to the City, expeditiously repair all existing Facilities that it owns within the Franchise Area, including any damage caused directly or indirectly by its Facilities, all appurtenant Facilities and service lines connecting its system to users, if the City requires such repair for any reasonable purpose.

13.2 The Franchisee shall, at no expense to the City, adjust, remove or relocate existing Facilities within the Franchise Area, including all appurtenant Facilities and service lines connecting its system to users, if the City determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the City. The City shall give the Franchisee written notice of such requirement as soon as practicable. The written notice shall include all available information, such as plans and specifications, as is reasonably necessary for the Franchisee to plan for such adjustment, removal or relocation.

13.3 Franchisee's Facilities shall be constructed, installed, maintained and repaired within the Franchise Area so as to provide safety of persons and property, and not interfere with the free passage of traffic, all in accordance with the laws of the State of Washington, and the ordinances, resolutions, rules and regulations of the City.

13.4 For projects that are a part of the City's capital improvement program, in addition to any other notice given to the Franchisee, the City shall provide a copy of the capital improvement plan and six (6) year transportation improvement plan when requested. Further the City shall provide a vertical and horizontal profile of the roadway and drainage facilities within it, both existing and as proposed by the City, and the proposed construction schedule. The initial design information shall be given at least one hundred and eighty (180) days before construction is scheduled to begin, except in cases of urgent construction or emergencies. The Franchisee shall respond to this notice, and to any later notices of revised designs, within twenty (20) days of the date of the notice, by providing to the City the Franchisee's best available information as to the location of all the Franchisee's Facilities, including all appurtenant Facilities and service lines connecting its system to users and all Facilities that it has abandoned, within the area proposed for the project.

13.5 The City shall offer the Franchisee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Franchisee's Facilities. The City shall have sole authority to choose the contractor to perform such work. Such bid documents shall provide for an appropriate cost allocation between the parties. In addition to the Franchisee's allocation of contractor costs, the Franchisee shall reimburse the City for all costs, to include but not be limited to legal, engineering, inspections, administration and/or soils testing, related to the Franchisee's work and reasonably incurred by the City in the administration of such joint construction contracts. Such costs shall include the direct salary cost of the time of City professional and technical personnel, including the City's consultants, spent productively engaged in such work, plus overhead costs at the standard rate charged by the City on other similar projects.

13.6 It is understood that emergency situations may arise that could threaten public health and/or continued operation of the Franchisee's utility system and the Franchisee may be unable to notify the City in the manner prescribed in Section 14 of this Franchise. In such a situation the Franchisee shall immediately correct the hazardous situation and continue to use best efforts to contact the City staff. The Emergency Phone Number for the City of Auburn is (253) 931-3053, and the City of Bonney Lake is (253) 862-8602. Dialing 911 is advised for emergency situations.

SECTION 14 REQUIREMENT OF CONSTRUCTION PERMITS

14.1 The Franchisee has the right, privilege and authority to enter the City road rights-of-way for the purpose of constructing, installing, operating, maintaining, replacing or repairing its Facilities on the condition that it obtains construction, excavation, and right-of-way use permits issued by the City. Any work performed, whether by Franchisee, its contractors, or third parties, shall include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the City rights-of-way. All work shall be done to the City's satisfaction.

14.2 All equipment, pipelines and appurtenances which are used in the construction, installation, operation, maintenance or repair of the Franchisee's Facilities and which are located within the City road rights-of-way and owned by the Franchisee shall be considered to be part of the Franchisee's system and shall be the responsibility of the Franchisee. All permits for the construction, installation, operation, maintenance or repair of the Franchisee's system shall be applied for and given in the name of the Franchisee, who will be responsible for all work done under the permit. The Franchisee remains responsible whether the work is performed by the Franchisee, its contractors, or by third parties.

14.3 When required by the Public Works Director, the Franchisee shall post a bond to the City in the amount sufficient for any road repair or restoration. The amount of the bond shall be set by the City and must be filed with the City before a permit will be issued.

SECTION 15 PERFORMANCE OF WORK

15.1 Any work performed by the Franchisee in the Franchise Area shall conform to all City ordinances and requirements including, but not limited to, Auburn City Code and the City's Design and Construction Standards in force when the work is performed. All traffic control shall conform to the current edition of the Uniform Traffic Control Devices in force when the work is performed.

15.2 If work performed under this Franchise makes it necessary to turn off or diminish water pressure to any fire hydrant, the Franchisee shall notify the City's Fire Department by telephone and by written notice, that water pressure or fire flow conditions have been affected. Except in the case of an emergency, the notice shall be provided at least 48 hours prior to the water pressure being turned off or diminished. If more than one fire hydrant will be affected, the Franchisee shall provide a map of the affected area to the Fire Department. Out-of-service fire hydrants must be identified as not operational by covering with a properly secured burlap or plastic bag. Fire hydrants should be returned to full service as soon as reasonably possible or no longer than two working days from the

date service was diminished. The Franchisee shall notify the City's Fire Department when the hydrant is returned to full service.

SECTION 16 RESTORATION OF CITY RIGHTS-OF-WAY

After performing work on, under or adjacent to City road rights-of-way, the Franchisee is responsible for and shall leave all City road rights-of-way in the condition of the City roads rights-of-way existing immediately prior to such disturbance. If the Franchisee, its contractors, or third parties working under permit should fail to diligently restore City road rights-of-way to the satisfaction of the City, the City may make such repairs or restorations as are necessary to return the City road rights-of-way to a condition reasonably comparable to the condition of the City roads rights-of-way existing immediately prior to such disturbance. Upon presentation of an itemized bill for repairs or restorations, including all applicable costs, both direct and indirect, to include but not be limited to the cost of labor, tools, materials and equipment, the Franchisee shall pay the bill within sixty-five (65) days.

SECTION 17 GUARANTEE

The Franchisee shall guarantee work and materials furnished and completed by the Franchisee under this Franchise for a period of two (2) years from the date the City approves the work and/or restoration.

SECTION 18 INFORMATION ON LOCATION OF FACILITIES

Prior to the effective date of this ordinance, the Franchisee shall provide the City with all information requested by the City regarding the location of the Franchisee's current Facilities, including but not limited to copies of all record drawings for such Facilities. If the Franchisee performs any work to install, repair, reconstruct, or replace Facilities in the Franchise Area after this ordinance's effective date, the Franchisee shall provide the City with all information requested by the City regarding the location of those Facilities, including but not limited to copies of record drawings.

SECTION 19 COORDINATION OF WORK IN FRANCHISE AREA

To facilitate the coordination of work in City rights-of-way, if either the Franchisee or the City plans to make excavations in the Franchise Area, the party planning such excavation shall provide written notice to the other of the planned excavation, affording the other party the opportunity to share in the excavation; provided, that (1) such joint use shall not unreasonably delay the work of the party causing the excavation to be made, (2) such joint use shall be arranged and accomplished on terms and conditions satisfactory to both parties, and (3) either party may deny such request for safety reasons.

SECTION 20 BLASTING REQUIREMENTS

The Franchisee's right to construct, install, operate, maintain and repair Facilities does not preclude the City, its agents or contractors from blasting, grading, or doing other road work contiguous to the Franchisee's Facilities. When practical, the City shall give the Franchisee forty-eight (48) hours notice of blasting or excavating.

SECTION 21 SURVEY MARKERS AND MONUMENTS

Before any work is performed under this Franchise, the Franchisee shall establish two or more reference marks to all monuments and markers of every nature relating to

subdivisions, plats, rights-of-way, and all other surveys. The reference points shall be located so that they will not be disturbed during any of Franchisee's operations under this Franchise. The method of referencing monuments or other markers or points shall be approved by the City before placement. The replacement of all markers or monuments disturbed during any construction of the Franchisee shall be made as promptly as conditions permit. The cost of monuments or markers lost, destroyed, or disturbed and the expense or replacement with approved markers or monuments shall be borne by the Franchisee.

SECTION 22 RESERVATION OF RIGHTS

22.1 The City reserves the right to impose a utility tax on the Franchisee, and/or to charge the Franchisee a reasonable fee for services provided or rights granted under this Franchise, to the extent authorized by law.

22.2 The Franchisee agrees that it shall be subject to all authority now or later possessed by the City or any other governing body having competent jurisdiction to fix just, reasonable and compensatory rates for services under this Franchise.

22.3 The City reserves the right, upon thirty (30) days written notice to the Franchisee, to amend or modify the provisions or conditions of this Franchise to conform to any state, county, federal, or City statute, ordinance, rule or regulation. The City may terminate this Franchise upon thirty (30) days written notice to the Franchisee if the Franchisee fails or refuses to comply with such amendment or modification.

SECTION 23 ASSIGNMENT

The Franchisee shall not have the right to assign this Franchise without the written consent of the City. No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions and responsibilities contained within the Franchise, as well as surety bonds which the City deems necessary to be posted, are received as allowed by law. The City's approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the Franchise.

SECTION 24 PENALTY FOR VIOLATION OF CONDITIONS

If the Franchisee fails to comply with any material term, condition or responsibility under this Franchise, the City may provide the Franchisee with written notice of the City's intent to revoke the Franchise if the Franchisee's failure is not cured within thirty (30) days of the date of the notice. During the thirty (30) days following the date of the notice, the Franchisee shall have the opportunity to remedy the failure to comply. A public hearing shall be scheduled before the Auburn City Council at least thirty (30) days following the notification on the issue of the revocation. If at the hearing, the City Council finds that grounds exist to revoke the Franchise under this paragraph and that the revocation is in the public interest, the City Council may by ordinance revoke the Franchise. The revocation shall be effective ninety (90) days after the public hearing.

SECTION 25 EXPIRATION AND RENEWAL

25.1 If the Franchisee requests a renewal of this Franchise prior to its expiration date, the City may, at the City's sole discretion, extend the term of this Franchise for up to one year beyond the expiration date to allow for processing of the renewal. If the

City elects to extend the term of this Franchise, written notice of the extension shall be provided to the Franchisee prior to the Franchise expiration date.

25.2 If the Franchisee has not requested a renewal of this Franchise prior to its expiration date, the City has the right, upon thirty (30) day's prior notice to the Franchisee, to remove or relocate any of the Franchisee's Facilities as is reasonably necessary for the public's health, welfare or safety, or for the construction, alteration, or improvement of the Franchise Area, or for the construction or installation of lines or facilities of other franchise holders. The Franchisee shall be liable for costs incurred in any removal or relocation of the Franchisee's Facilities under this section.

25.3 Upon the expiration of this Franchise, the Franchisee shall continue to be responsible for the operation and maintenance of the Franchisee's existing facilities in the Franchise Area, but shall not have the right to provide additional services. This Section and Sections 11, 13, 14, 15, 16, 19, and 21 of this Franchise shall continue in force until such time as the Franchisee's Facilities are abandoned to the City in accordance with the terms and conditions of the Settlement Agreement.

SECTION 26 COMPLIANCE WITH LAWS

The Franchisee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and the City's Environmental Standards and Ordinances.

SECTION 27 NON-DISCRIMINATION CLAUSE

In all hiring or employment made possible or resulting from this Franchise, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, national origin, marital status or the presence of any sensory, mental, or physical handicap, unless based upon a bona fide occupation qualification. No person shall be denied or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this agreement on the grounds of sex, sexual orientation, race, color, national origin, age, except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap.

SECTION 28 NOTICE

Any notice or information required or permitted under this Franchise may be sent to the following addresses unless otherwise specified:

City of Auburn:
City Engineer
25 West Main Street
Auburn, WA 98001-4998
253-931-3010

City of Bonney Lake:
Public Works Director
19306 Bonney Lake Blvd.
Bonney Lake, WA 98390-0944
253-862-8602

SECTION 29 ATTORNEYS' FEES
If either party commences litigation against the other party relating to the performance or alleged breach of this Franchise, the prevailing party shall be entitled to all costs, including reasonable attorneys' fees incurred, relating to such litigation, including those incurred in any appeal.

SECTION 30 SEVERANCE
If any term, provision, condition or portion of this Franchise is held to be invalid, such invalidity shall not affect the validity of the remaining portions of this Franchise which shall continue in full force and effect, unless the dominant purpose of the Franchise would be prevented or the public interest would no longer be served, as determined by the City.

SECTION 31 EFFECTIVE DATE
This ordinance having been introduced at least five days prior to its date of passage and submitted to the city attorney, and being approved by at least a majority of the entire city council at a regular city council meeting, shall take effect and be in force five days after its passage, approval and publication as required by law.

SECTION 32 EXISTING UTILITIES
This Franchise shall govern City of Bonney Lake, new and existing water Facilities within the City of Auburn.

PASSED by Auburn's City Council this 6th day of May, 2002.

APPROVED by Auburn's Mayor this 6th day of May, 2002.

RESOLUTION NO. 3482

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERIM WATER SALES AGREEMENT BETWEEN THE CITY OF AUBURN AND COVINGTON WATER DISTRICT AND WATER DISTRICT No. 111.

WHEREAS, Covington Water District (Covington), King County Water District No. 111 (WD 111) and the City of Auburn (Auburn) are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act; and

WHEREAS, the parties desire to avoid unpredictable water sales and create a predictable and reliable cost for wholesale water to be sold by Auburn to Covington and WD 111, and

WHEREAS, it is in the public interest for the parties herein to enter into an interim water sales agreement,

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn, Covington and WD 111 have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Interim Water Sales Agreement between Auburn and Covington and WD 111 with minor administrative changes if required. A copy of said

Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 4. This resolution shall be in full force and affect upon passage and signatures hereon.

DATED this 17th day of June, 2002.

Exhibit "A"

INTERIM WATER SALES AGREEMENT
between
COVINGTON WATER DISTRICT,
KING COUNTY WATER DISTRICT NO. 111
and the
CITY of AUBURN

This Agreement ("Agreement") is made and entered into this 14 day of June, 2002, by and between Covington Water District (Covington) a Municipal Corporation, King County Water District No. 111 (WD lll), a Municipal Corporation (collectively referred to herein as "the Districts") and the City of Auburn (Auburn), a Municipal Corporation.

Recitals:

A. The parties to this Agreement are also parties to "Interlocal Agreement 2 for the Lea Hill Intertie Project between Covington Water District, King County Water District #111, and the City of Auburn" ("IA2").

B. The parties desire to avoid unpredictable water sales and create a predictable and reliable cost for wholesale water to be sold by Auburn to the Districts.

C. By guaranteeing a minimum purchase of water for a given period of time, i.e., a take or pay approach, the cost of water, which to a significant extent is based on peaking factors, can be minimized for all of Auburn's customers.

D. This Agreement is intended to establish a rate for a fixed block of water for the mutual benefit of the parties of this Agreement.

E. It is in the interest of the Districts to have a predictable supply of water available, and in Auburn's interest to have a predictable and consistent source of revenue from the sale of such water.

F. The parties are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act.

G. The 1.5 million gallons of water per day ("MGD") take or pay water provided for in this Agreement is a portion of and not in addition to the 5 MGD as addressed in IA2.

Now, therefore, in consideration of the mutual covenants and promises contained herein, and for other good and valuable consideration, the adequacy of which is hereby acknowledged, the parties hereby agree as follows:

1) **TAKE OR PAY:** The Districts agree to purchase an average of 1.5 MGD of water from Auburn on a take or pay basis. Take or pay shall mean that the Districts shall pay for 1.5 MGD whether or not the water is actually taken by the Districts (the "take or pay" water also referred to in this Agreement as "the Block" of water; provided the Block of water may be modified as set forth in Paragraph 4 "Annual Review and Adjustment" herein). If the Districts cannot accept 1.5 mgd due to an emergency, as

defined in Paragraph 6, they will be billed for the water they receive at the Block rate.

2) **CHARGES FOR WATER:** The Districts shall pay the rate per one hundred cubic feet of water ("CCF") for the 1.5 MGD Block shown in Exhibit 1, attached hereto, which is by this reference incorporated, except as further addressed in Paragraph 3 herein. Any water taken in excess ("Excess Water") of the Block during the winter (October 1 through May 31) shall be billed at the winter overage rate shown in Exhibit 1 and during the summer (June 1 through September 30) shall be billed at the summer overage rate shown in Exhibit 1. Any water taken during an emergency within the Covington and/or WD 111 systems, as defined in Paragraph 6, shall be billed at the 1.5 mgd Block rate. Auburn shall send one monthly bill to WD 111 for all water purchased by the Districts.

3) **QUANTITY AVAILABLE / DELIVERED:** The 1.5 MGD Block of water shall be defined as a block of water to be delivered at an average rate of 1.5 MGD measured over a rolling 3 day period with total quantities delivered within any single day being no more than 10% more or less than 1.5 MGD. If the Districts are unable for any reason to accept the Block of water, the minimum monthly payment shall be 1.5 MGD multiplied by the rate then in effect pursuant to Paragraph 2 above. If Auburn is unable to deliver the amount of water requested by the Districts, up to the Block of water, then Auburn will bill the Districts for the amount of water actually delivered at the

block rate pursuant to Paragraph 2 above. For the take or pay water Block provided for herein, the Districts will be served on the same basis and with the same reliability as service is provided to Auburn's retail customers, and any curtailment, restrictions or limitations on delivery shall be on same basis as curtailment, restrictions or limitations on delivery to Auburn's retail customers.

4) **ANNUAL REVIEW AND ADJUSTMENT:** The initial Block of 1.5 MGD shall remain in effect through December 31, 2005. Each year, the "take or pay" Block may be adjusted by mutual agreement. By September 1 of each year the Districts shall notify Auburn of their intent to continue without change or request an increase in the Block quantity. Any requested change in the Block quantity would be effective January 1 of the year following the request. In the event that neither party communicates its intent under this provision, the Block shall be deemed to continue unchanged.

5) **TERM:** This Agreement shall remain in full force and effect from the first day of the month following the execution of this Agreement through December 31, 2005; provided that this Agreement shall automatically be renewed for an additional year at the conclusion of the term of this Agreement or any extension thereof unless any party provides the others with notice of an intent not to extend this Agreement, which notice shall be received by the other parties not less than one year prior to the expiration of the term of this Agreement or any extension thereof. The termination of this Agreement shall

not affect any rights or obligations under IA2.

6) **EMERGENCIES:** For purposes of this Agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other mutually agreed upon emergency within the water supply system. An emergency period shall be for no more than five (5) working days without written request by the Districts and approval by Auburn in writing to extend the emergency period.

The City may change, reduce or limit the time for or temporarily discontinue any water supplied for an emergency in excess of the Block quantity without notice. Prior to a planned interruption or limiting of emergency service, the City will notify the Districts of such not less than three days prior to the service disruption. The City agrees to use best efforts and reasonable diligence to notify the Districts as soon after it becomes aware of the need for emergency service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

7) **JOINT AND SEVERAL OBLIGATION:** The obligation of the Districts as set forth therein shall be a Joint and Several obligation of the Districts. Allocation of the take or pay Block of water and the payment for such water shall be negotiated between the Districts outside of this Agreement.

In witness whereof the participants hereto have caused this Agreement to be executed by their proper officers on the 17th day of June, 2002.

King County
Bilateral Compliance Agreement Amendment No. 2 - Revision of Schedule Only

Honorable Mayor Lewis:

We have discussed schedule modifications to our Bilateral Compliance Agreement (BCA) with Duane Huskey of your staff. The Department is in agreement with the proposed modifications. The BCA was last revised on March 6, 2000 with Amendment No. 1. With your permission and by way of this letter, the BCA is hereby modified with Amendment No. 2 as noted below:

8. Schedule for Stage 1.

Complete Construction of Facilities	**September 18, 2002**
Monitoring Report – 2 Rounds	**September 17, 2003**
Submit Report to Determine if System is Optimized	**December 23, 2003**

The City of Auburn agrees to perform the following:

Construct corrosion control treatment facilities. Complete the installation of Stage 1 corrosion control treatment facilities in accordance with Department approved construction documents prior to **September 18, 2002.**

Monitor water quality parameters. Monitor water quality parameters in accordance with Title 40 CFR Chapter 1 Part 141.87 (c), (d), and (e) beginning on **September 19, 2002.**

Monitor tap water quality for lead and copper. Monitor tap water quality in accordance with Title 40 CFR Chapter 1 Part 141.86 (d) and complete two six-month monitoring compliance periods prior to **September 19, 2003.**

If you have any questions or comments, please call me at (253) 395-6764.

RESOLUTION NO. 3534

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A REVISED WATER SYSTEM INTERTIE AGREEMENT NO. 3A BETWEEN THE CITY OF AUBURN AND THE CITY OF ALGONA.

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Algona have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, the City of Auburn and the City of Algona executed Interlocal Agreement No. 3 (IA No. 3), dated August 19, 1996; and

WHEREAS, information and exhibits in IA No. 3 need to be updated to reflect current status; and

WHEREAS, the Algona well and water right were not completely conveyed by Algona to Auburn as intended under IA No. 3; and

WHEREAS, it is the desire of Algona and Auburn to finalize the IA No. 3 agreement with respect to facilities constructed and agree on a method of payment for constructed and proposed facilities.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Algona have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a revised Water System Intertie Agreement No. 3A between the City and the City of Algona. A copy of said Agreement is attached hereto, denominated as Exhibit "1" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED this 21st day of October, 2002.

WATER SYSTEM INTERTIE AGREEMENT
Algona/Auburn Intertie Agreement No. 3A

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as "Auburn", and, the City of Algona, hereinafter referred to as "Algona", for the purposes of modifying Interlocal Agreement 3 between Algona and Auburn and establishing a payment schedule for the system intertie between the respective parties,

WITNESSETH:

WHEREAS, both Cities have executed Interlocal Agreement 3 (IA#3) for the Algona Intertie Project dated August 19, 1996; and

WHEREAS, both Cities agreed that the following facilities were to be built and funded in part or in whole by Algona as a part of IA#3:

1. Five (5) Meter Stations
2. A Future Reservoir in Lakeland Hills
3. Wells 6 and 7; and

WHEREAS, this agreement identifies one time capital facilities charges for the above referenced projects that serve to increase the capacity of service to the City of Algona; and

WHEREAS, Algona agreed to deed over its primary Water Right(s) (instantaneous flow rate (Qi) of 500 gpm, annual flow rate (Qa) of 175 acre feet per year), well facilities and well property protection zone easement to Auburn in exchange for Auburn providing a portion of the Algona long term water supply; and

WHEREAS, the Cities agreed to terminate a number of preexisting agreements; and

WHEREAS, Algona agreed to implement a water conservation program consistent with Auburn's conservation program; and

WHEREAS, Algona agreed to maintain its 100,000 gallons of system storage, participate in an additional 100,000 gallons of storage in the Auburn system or provide for the storage otherwise; and

WHEREAS, Algona granted Auburn permission to construct, own, operate, maintain, repair and replace Auburn water facilities within Algona right of way at Auburn expense; and

WHEREAS, the Boeing Company "Welded Duct Facility" was transferred to Algona as a direct service customer and the existing meter was converted to a master meter; and

WHEREAS, a 180,000 gallon share of the IA#3 proposed 1.7 million gallon Lakeland Hills Reservoir was to be financed by Algona in accordance with the Algona January 1997 Water

System Plan and with Auburn storage criteria in accordance with the schedule contained in Exhibit D of IA#3; and

WHEREAS, Auburn agreed to provide Algona up to 525,000 gallons of average day demand (ADD) and 1,114,000 gallons of maximum day demand (MDD) through 2014; and

WHEREAS, the estimated project costs were shown in Exhibit D of IA#3 and those estimated costs were understated; and

WHEREAS, the Algona City well and associated water rights were not completely conveyed by Algona to Auburn as intended under IA#3, and

WHEREAS, it is the desire of Algona and Auburn to finalize the IA#3 agreement with respect to facilities constructed and agree on a method of payment for constructed and proposed facilities

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

In order to provide for the construction and operation of water supply facilities, piping and meters for a water supply intertie, and reservoir capacity, all between Auburn and Algona, the Participants mutually agree:

1. Interlocal Agreement 3 (IA#3) for the Algona Intertie Project between the City of Algona and the City of Auburn, dated August 19, 1996 and adopted by City of Auburn Resolution No. 2770 is hereby superceded by this Agreement.

2. Algona shall convey to Auburn Algona's City well and any and all associated water rights by Bill of Sale, included as Exhibit F. The well location is depicted on Exhibit A. In addition, Algona shall convey a Well Site Easement included as Exhibit G, and Access Easement included as Exhibit H for the aforementioned well. All costs for said conveyances will be included within the costs of projects planned under this Agreement. In event of future well abandonment by Auburn, any and all related easements shall be vacated by Auburn, and Algona and others shall no longer be bound thereby.

3. Algona shall have and implement a conservation program. The conservation program shall, at a minimum, be consistent with Auburn's conservation program and include field testing for leak detection, repair of leaks and public information actions equal to Auburn's public information actions. Algona's water conservation plan shall be included in the 2002 Algona Water System Plan.

4. So long as it continues to purchase wholesale water from Auburn, Algona shall continue to maintain and provide no less than the existing storage in its 100,000 gallon reservoir in its westerly service area. Alternately, Algona may elect to increase participation by 100,000 gallons within the future Auburn reservoir per Exhibit B herein, or acquire storage otherwise (such as

from Lakehaven Utility District) and terminate the continued operation of the existing reservoir in its westerly service area.

5. Algona hereby grants Auburn the right to construct, own, operate, maintain, repair, and replace Auburn's municipal water system including pipes, fire hydrants, valves, meters, and other appurtenances located within Algona right-of-way as shown on Exhibit A, in perpetuity per the terms and conditions herein.

5.1. Auburn shall provide to Algona copies of available record drawings showing the location of Auburn's water system within Algona right-of-way.

5.2. Except for the normal operation of Auburn's water system, Auburn shall notify Algona prior to any major waterline improvements or replacements which may interfere with or disrupt any other utilities and/or passage of traffic within Algona. Algona shall notify Auburn prior to any street or other utility improvement which may interfere or disrupt Auburn's water system.

5.3. Auburn shall be responsible to pay for costs associated with improvements to Auburn's water system including necessary street patches. In the event that Algona constructs any street improvements on those rights-of-way containing Auburn's water system, Auburn shall be responsible to adjust all water system appurtenances to finish grade, including lowering or raising said pipelines at conflict with Algona improvements.

6. Algona agrees to financially participate in the supplemental supply development of a portion of Auburn's Well # 6 and Well # 7, in accordance with Exhibit D.

7. This Agreement shall include construction and operation of up to five individual master meter stations. Three master meter stations, including the one currently serving the Boeing "Welded Duct Facility", and two installed under IA#3 are as shown on Exhibit A. The remaining two meter stations will be located and constructed at the discretion of Algona. For adequate water distribution to be obtained, it may also be necessary for Algona to construct additional piping and connections, at its own expense.

8. Algona agrees to transfer title to Auburn for any water lines between existing master meter stations and the existing Auburn mains. Any piping between future master meter stations and Auburn mains will be similarly transferred by Algona to Auburn. Title will be transferred with a bill of sale and the water pipe will be regulated under Paragraphs 5 and 13 of this Agreement.

9. This Agreement shall include future construction of a reservoir by Auburn within the Lakeland Hills development area within Pierce County, Washington. The volume of the new reservoir is presently estimated to be approximately 2.65 million gallons, and this capacity is to be shared with Algona. Financial participation is to be based on a capacity percentage basis by any and all municipalities sharing in the capacity, whether the actual storage volume usage for

any such municipality is directly derived from the reservoir or not. Algona's capacity shall be 180,000 gallons, exclusive of the provision of Paragraph 4 of this Agreement.

10. Algona projects the need for supply source in the following quantities:

Year	Average Daily Demand (mgd)	Maximum Daily Demand (mgd)
2004	0.457	0.945
2009	0.491	1.029
2014	0.525	1.114

11. Additional water supply may be available as mutually agreed to in writing by the Auburn City Council and the Algona City Council.

12. Respective facility ownership, capacity rights, and responsibility for operation, maintenance, and renewal and/or replacement (r/r) are as specifically described in Exhibit B. Operational parameters shall be as specifically defined in Exhibit C.

13. Distribution water pipelines within the city limits of a Participant shall be owned and the responsibility of that Participant, with the exception of Auburn facilities specifically identified on Exhibit A, and permitted by Paragraph 5.

14. Retail customers whose property lies within the city limits of a Participant shall be the retail customers of that Participant.

15. For Auburn facilities within Algona, as specifically identified on Exhibit A, Algona hereby grants a franchise to Auburn.

16. Auburn shall design, construct and maintain its facilities constructed under this Agreement in accordance with the design standards described in the 2001 Auburn Comprehensive Water Plan, and the updates thereto.

17. Both Participants shall exercise good faith and use best efforts in estimating project costs. However, the foregoing notwithstanding, each Participant shall be responsible for and shall pay for one hundred percent (100%) of its actual, proportionate share of the project costs, regardless of the estimate. The project costs are estimated as shown in Exhibit D. The Participants shall maintain individual cost records of their expenses for the project. Auburn will maintain overall coordinated project cost records. Algona has the right to review the design of each project in Exhibit D, prior to the project being bid. Auburn shall allow sufficient time in the project schedule for this review. Should potential cost savings to the design be identified that are not in conflict with accepted industry design standards, Algona and Auburn shall work in good faith and cooperatively to incorporate the potential cost savings into the final design.

18. The Participants shall fully finance and pay for their proportionate share of cost as shown in Exhibit D. Algona shall deposit funds with Auburn to perform the project work for the proposed facilities in accordance with the schedule shown in Exhibit E. As future actual costs of projects in Exhibit D are determined, Auburn will notify Algona of such updates and the authorized representatives will execute an update to Exhibit D which will supercede all prior dated versions of Exhibit D.

19. Auburn has prepared a cost of service study to determine the cost of service to its customers. A customer classification for "wholesale-Algona" has been created, and rates for service charges are based on a rate study for this customer classification. Auburn will regularly update the cost of service analysis. Wholesale water rates to Algona will be based on costs of providing the service.

20. For purposes of this Agreement, each Participant identifies its authorized representative as the "Mayor" of Algona and as the "City Engineer" of Auburn.

21. The Participants shall meet as needed for project coordination.

22. The Participants shall be responsible for design, construction management, and commissioning of all facilities to be constructed in accordance with ownership of the facility. Responsibilities may be assigned otherwise by agreement of the Participants' authorized representatives.

23. It is acknowledged and agreed that in the event Auburn experiences any system failure or decreased capacity for any reason, the supply to Algona may be curtailed to an equal percentage of use as Auburn's curtailment is implemented. Such curtailment shall be imposed by Algona on Algona retail customers immediately and simultaneously as such curtailment is imposed by Auburn on Auburn retail customers.

24. It is the intent of Auburn to provide the water described in Paragraph 10 whenever it is available subject to the limitations described in Paragraph 23. Auburn shall use reasonable diligence and best efforts to provide immediate notice in the event it becomes aware that it may not be able to fulfill the requirements of Paragraph 10 for any reason.

25. Auburn possesses the short-term (approximately five (5) years) capacity to meet the storage requirements for Algona. Long-term storage requirements for Algona shall be met by Algona financial participation within the next increment of storage to be constructed by Auburn. Algona's minimum financial participation shall provide for construction of storage volume capacity of 180,000 gallons, inclusive of standby, equalization, and fire protection volume storage. Such 180,000 gallon capacity is in addition to Algona's existing 100,000 gallon reservoir storage in its westerly service area.

26. Algona's water supply needs above the 0.525 mgd average daily demand, and the 1.114 mgd maximum daily demand, both identified in Paragraph 10 will be dependent upon negotiation of an amendment to this Agreement.

27. This Agreement shall remain in full force unless terminated by mutual agreement of the Participants.

28. This Agreement may be amended only in writing by approval signed by the Participants.

29. The authorized representatives shall have authority to update Exhibits attached hereto. The Exhibits shall be updated and/or revised only upon written agreement signed by the Participants' authorized representatives. Updates must be ratified by each Participant's City Council.

30. Algona agrees to indemnify, defend and hold harmless Auburn, its officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from Algona's default, failure of performance, or negligent conduct associated with this Agreement. It is further agreed that Auburn shall provide water to Algona consistent with its provision of water to all of its retail water customers, and the failure of the Auburn water system to deliver flow to Algona, in whole or in part, as described in this Agreement, so long as Auburn is providing water to Algona consistent with its provision of water to the rest of its retail water customers, and consistent herewith, shall not give rise to an action against Auburn, and Algona agrees to indemnify, defend and hold harmless Auburn, its officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from any such failure of the Auburn water system to deliver flow to Algona, in whole or in part. This indemnification provision shall include, but is not limited to, all claims against Auburn by an employee or former employee of Algona or their contractors and, as to such claims, Algona expressly waives all immunity and limitation of liability under Title 51 RCW.

Auburn agrees to indemnify, defend and hold harmless Algona, their officers, directors, employees and agents, and their successors and assigns, from any and all costs or claims arising out of or in any way resulting from Auburn's default, or negligent conduct associated with this Agreement. This indemnification provision shall include, but is not limited to, all claims against Algona by an employee or former employee of Auburn or its contractors and, as to such claims, Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

31. The parties shall make good faith efforts to resolve by informal discussion any dispute arising under or in connection with this Agreement. If at any time either party to this Agreement determines that such informal discussions will not result in a resolution of the dispute, such party may request formal discussion by both parties. If formal discussion by the parties does not resolve the dispute, a settlement conference shall be held within thirty (30) days of the unsuccessful resolution meeting. The settlement conference will be held at the Seattle office of Judicial Arbitration and Mediation Services, Inc. ("JAMS"). The complaining party must contact JAMS to schedule the conference. The parties may agree on a retired judge from the JAMS panel. If they are unable to agree, JAMS will provide a list of three available judges and each party may strike one. The remaining judge will serve as the mediator at the settlement conference.

32. If any provision of this Agreement is invalid or unenforceable the remaining provisions shall remain in force and effect.

IN WITNESS WHEREOF, the Participants hereto have caused this Agreement to be executed by their proper Officers on the date shown below.

Exhibit C
Project Criteria
to
WATER SYSTEM INTERTIE AGREEMENT
Algona/Auburn Intertie Agreement No. 3A

Project Criteria:

- Meter Stations to be sized on flow volume criteria as opposed to line size.
- Maximum (Qi) daily demand flow is 1.114 million gallons per day for total of all meter stations supply to Algona, except in case of fire or emergency.
- Maximum annual (Qa) average daily demand flow is 0.525 million gallons per day for total of all meter stations supply to Algona.
- Each meter station shall be calibrated annually for the first three years of operations, and thereafter at the discretion of Auburn.
- Reservoir capacity for Algona is 180,000 gallons of the estimated 2.65 mg total capacity in the proposed Lakeland Hills Reservoir.
- Total of all meter stations supply to Algona necessary for peak hourly flow and fire flow shall be determined by Algona, and such data provided to Auburn for meter station design and/or station design review.

RESOLUTION NO. 3 6 1 4

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND KING COUNTY WATER DISTRICT NO. 111

WHEREAS, Auburn and King County Water District No. 111 have legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34, the Interlocal Cooperation Act; and

WHEREAS, pursuant to RCW 39.34, Auburn and King County Water District No. 111 have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, the City of Auburn and King County Water District No. 111 currently have water facilities in the vicinity; and

WHEREAS, both agencies can increase fire protection and emergency water supply reliability for their customers; and

WHEREAS, both agencies are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth in the Emergency Water System Intertie Agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and King County Water District No. 111 have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor is hereby authorized to execute an Emergency Water System Intertie Agreement between the City and King County Water District No. 111 in the form substantially as the agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 4. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

DATED this 2nd day of June, 2003.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

ATTEST:

Danielle E. Daskam,
City Clerk

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

EMERGENCY WATER SYSTEM INTERTIE AGREEMENT
Water District No. 111/Auburn Intertie Agreement No. 1

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as Auburn, and the Water District No. 111, hereinafter referred to as the District, for the purposes of maintaining and operating emergency system interties between the respective parties.

WITNESSETH:

WHEREAS, Auburn and the District executed an interlocal agreement regarding the Duberry Hill Development Project on July 17, 2000; and

WHEREAS, Section I(b) of that agreement states that a new interlocal agreement shall be adopted for the operation of the emergency interties established under that agreement; and

WHEREAS, both Auburn and the District have water facilities in the vicinity, and

WHEREAS, the District can increase fire protection and emergency water supply reliability for their customers in the Duberry Hill development, and

WHEREAS, Auburn can increase fire protection and emergency water supply reliability for their customers in the vicinity of the Duberry Hill development when the District connects the development to the District water system, and

WHEREAS, Auburn and the District are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. Interlocal Agreement regarding the Duberry Hill Development Project between the City of Auburn and Water District No. 111, dated July 17, 2000 and adopted by City of Auburn Resolution No. 3237 is hereby superceded by this Agreement.

2. The emergency water system interties are to be operated manually as a emergency supply whereby Auburn can supply water to the Duberry Hill development for the District and the District can provide water to the Auburn system once the District connects it's system to the Duberry Hill development. There are two intertie facilities, which are located near the intersection of 124th Avenue SE and SE 300th and the intersection of 127th Place SE and SE 300th at the Water Service Area Boundary between Auburn and the District.

3. The emergency water system interties shall be closed during normal operating conditions and will be opened only with prior authorization by Auburn or the District in the event of an emergency. For purposes of this agreement, an emergency shall be defined as resulting from a water shortage (not to exceed seven (7) calendar days), a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other agreed upon emergency within the water supply system.

4. The two valves that constitute the emergency water system interties and all piping leading up to the valves from the Auburn distribution system shall be owned and maintained by Auburn. All piping leading up to the valves from the District distribution system shall be owned and operated by the District.

5. The procedure for operating the intertie in the event of such emergency shall be as follows:

   A. Auburn or the District shall determine that an emergency of sufficient magnitude has occurred which warrants the need to request that the intertie be activated.

   B. Authorized personnel shall provide a verbal request to the system that will be supplying the water. Upon agreement that an emergency exists which shall allow for the intertie to be opened, the intertie will be activated as soon as reasonably possible. Personnel from Auburn and the District shall be present to activate the valve(s).

   C. The party requesting emergency water shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

   D. The intertie shall remain activated until the party requesting emergency water determines that the need for activation of the emergency intertie has ceased and shall request in writing that the intertie be closed.

   E. In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, either party may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; water service may be temporarily

interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the receiving party shall save and hold harmless the providing party from any loss, damages or suits to or by customers of the receiving party resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the providing party's negligence. Prior to a planned interruption or limiting of service, the providing party will notify the receiving party of such not less than three days prior to the service disruption. The providing party agrees to use best efforts and reasonable diligence to notify the receiving party as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

6. To the extent allowed by law, the District shall defend, indemnify, and hold harmless Auburn, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or nature arising out of or in connection with or incident to an act or omission of the District, its employees, agents, and contractors in the performance of the District's obligations under this Agreement. This indemnification provision shall include, but is not limited to, all claims against Auburn by an employee or former employee of the District or its contractors and, as to such claims, the District expressly waives all immunity and limitation of liability under Title 51 RCW.

   To the extent allowed by law, Auburn shall defend, indemnify and hold harmless the District, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties, and damages or whatsoever kind or nature arising our of, in connection with or incident to an act or omission of Auburn, its employees, agents, and contractors in the performance of Auburn's obligations under this Agreement. This indemnification obligation shall include, but is not limited to, all claims against the District by an employee or former employee of Auburn or its contractors and, as to such claims, Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

7. This Agreement shall remain in force until terminated by either party hereto upon 60-days written notice to the other party.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. **3637**

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, SUPERCEDING RESOLUTION NO. 3543 AND AUTHORIZING THE MAYOR TO EXECUTE A TURNOUT CONSTRUCTION AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF TACOMA WATER DIVISION

WHEREAS, Auburn and Tacoma are responsible for operating and maintaining public water systems in accordance with federal, state and local laws and regulations, and

WHEREAS, the parties recognize that water resources are finite and vulnerable, and the prudent use and management of these resources requires cooperation among water utilities, and

WHEREAS, Auburn and Tacoma entered into a Turnout Construction Agreement authorized by City of Auburn Resolution No. 3543, dated November 18, 2002, for the construction of one turnout, and

WHEREAS, Auburn and Tacoma have determined that it would be beneficial to construct two additional turnouts, and

WHEREAS, Auburn has water facilities in the vicinity of the Tacoma Second Supply Project pipeline, and Auburn will have an agreement with one or more SSP Partner to purchase water that will be delivered via the SSP, and

pursuant to this agreement construction of the turnout to the SSP is set forth which turnout will be used for delivering and metering the purchased water, and

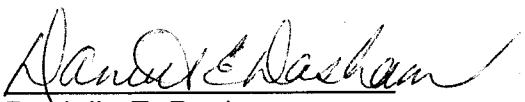
WHEREAS, this agreement will supercede the Turnout Construction Agreement authorized by City of Auburn Resolution No. 3543, dated November 18, 2002.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. This resolution shall supercede Resolution No. 3543, and authorizes the Mayor to execute the Turnout Construction Agreement between the City and the City of Tacoma Water Division, in substantial conformity with the agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.



Dated and Signed this 15th day of September 2003.

TURNOUT

CONSTRUCTION AGREEMENT

BETWEEN TACOMA WATER

AND CITY OF AUBURN

This agreement made and entered into this 9th day of Oct, 2003, by and between the City of Auburn (hereinafter referred to as "Auburn") and City of Tacoma Water Division (dba Tacoma Water and hereinafter referred to as "Tacoma"), WITNESSETH THAT:

A. RECITALS:

WHEREAS, Auburn and Tacoma are responsible for operating and maintaining public water systems in accordance with federal, state and local laws and regulations, and

WHEREAS, the parties recognize that water resources are finite and vulnerable, and the prudent use and management of these resources requires cooperation among water utilities, and

WHEREAS, Auburn and Tacoma have previously entered into a Turnout Construction Agreement authorized by City of Auburn Resolution No. 3543, dated November 18, 2002, for the construction of one turnout, and

WHEREAS, Auburn and Tacoma have determined that it would be beneficial to construct two additional turnouts, and

WHEREAS, Auburn has water facilities in the vicinity of the Tacoma Second Supply Project (SSP) pipeline, and Auburn will have an agreement with one or more SSP Partner to purchase water that will be delivered via the SSP, and pursuant to this agreement construction of the turnout to the SSP is set forth which turnout will be used for delivering and metering the purchased water.

NOW THEREFORE, IT IS MUTUALLY AGREED as follows:

B. The Turnout Construction Agreement between Tacoma Water and City of Auburn dated November 8, 2002, and adopted by City of Auburn Resolution 3543 dated November 18, 2002, is hereby superceded by this Agreement.

C. DEFINITIONS:

The definition of certain terms, when used in this agreement, are as follows:

TURNOUT means a physical connection between water mains of the two parties to this agreement, at specifically identified points, where water may be transferred

from the supplies of one system to the transmission or distribution facilities of the other.

ISOLATION VALVE means a positive shut-off valve that shall be installed immediately downstream of the water meter vault at the point in each water system that is used to accept or deliver water through the turnout. The isolation valve is defined as part of the system connected to the turnout and not part of the turnout. Each connected system has sole responsibility for providing and operating their isolation valve.

TURNOUT CAPACITY means the maximum flow capacity for water to be delivered through a turnout as agreed upon by the parties to this agreement. Turnout facilities shall be designed so as to be capable of conveying no less than the maximum agreed upon flow.

SSP means the Second Supply Project (to bring water to the SSP Partners)

SSP ISOLATION VALVE means a positive shut-off valve that shall be installed at the point in each water system that is used to accept or deliver water through the turnout. The SSP isolation valve is defined as part of the system connected to the turnout upstream of the meter vault. Each connected system has sole responsibility for providing the SSP isolation valve. Tacoma will be responsible for operating the SSP isolation valve.

SSP PARTNERS refers to the City of Kent, Tacoma Water, Covington Water District and Lakehaven Utility District.

D. PURCHASE OF WATER FOR THIS TURNOUT:

The purchase of water to be delivered via this subject turnout shall be by a separate agreement with one or more of the SSP Partners and Auburn. This Turnout Construction Agreement does not guarantee any rights to use or purchase water from any of the SSP Partners. Tacoma will only allow Auburn, its successors and assigns, to obtain water via the subject turnout after the applicable SSP partner has advised Tacoma in writing that an acceptable agreement for water purchase has been executed. In delivering water via the subject turnouts, Tacoma will be relying on directions and/or confirmation from the SSP partner as to the timing and quantities of water deliveries and all other aspects of providing water via the subject turnouts. In the event of a disagreement between Auburn and the applicable SSP Partner pertaining to entitlement to continued water delivery via the subject turnouts, Tacoma is entitled to rely on the written directions or instructions of the SSP partner. Therefore, Auburn agrees that it shall not file any claim or legal action against Tacoma when Tacoma's actions are consistent with the written directions or instructions from the applicable SSP partner from which Auburn has contractual arrangements to purchase water.

E. CONDITIONS:

1. The TURNOUTS described in Exhibits A, B-1, B-2 and B-3 attached to this agreement shall be governed by the terms of this agreement. No future TURNOUTS shall be permissible without a subsequent and separate written agreement between the parties.

2. The cost of design and construction of the TURNOUTS and installation of the meters shall be the responsibility of Auburn, and the design and construction shall be subject to Tacoma's review, inspection and approval.

3. By this agreement Auburn agrees that the ownership of the SSP ISOLATION VALVES directly off of the SSP Project, piping from the SSP ISOLATION VALVES to the meters or spools, the meters or spools, meter vaults, pipe stubs out from the vaults and telemetry shall be with Tacoma (see Exhibit A for more information), with all capital costs to be paid by Auburn. Maintenance and operation of the SSP ISOLATION VALVES, piping and meters will be performed solely by Tacoma, and Auburn will be invoiced for such costs and shall reimburse Tacoma. Meter vault maintenance costs and any cost for maintaining any equipment such as pumps, buildings and other appurtenances downstream of the meter shall also be the responsibility of Auburn. In addition, in the event any of the facilities require replacement or upgrading, this cost is Auburn's responsibility. In the event that access or other permits are necessary for Tacoma to operate and maintain the subject facilities, Auburn shall provide the necessary permits, which shall also become an exhibit to this agreement. (See Exhibit A for a plan showing the facilities and the responsibility of the parties).

4. Upon completion of the construction of the Turnouts, Tacoma will own the meters and associated appurtenances necessary to monitor use of the turnouts.

5. Auburn shall comply with all applicable laws and requirements including City of Tacoma ordinances/resolutions and Customer Service Policies and/or other rules applicable to a connection to Tacoma's water system including, but not limited to, the requirements that Tacoma provide written approval of plans and specifications for the connection of turnout facilities prior to construction.

6. Auburn agrees that it shall make payment of all invoices for services and charges from Tacoma within 45 days of the invoice date. Late payment shall result in a late payment charge of 1% on the unpaid balance, and failure to pay any invoice or bill related to this agreement within 60 days of mailing may result in Tacoma's termination of water service at the turnout.

7. Notices should be sent to Auburn and to Tacoma at the following addresses:

Water Superintendent
Tacoma Water
P. O. Box 11007
Tacoma, WA 98411

Public Works Director
City of Auburn
25 West Main
Auburn, WA 98001-4998

8. Neither this Agreement nor any right or privilege herein shall be assigned by any party without the written consent of the other parties.

9. Uncontrollable forces or state or federal law changes may occur during the time this Agreement is in place. Neither of the parties hereto shall be considered to be in default in respect to any obligations hereunder if prevented from fulfilling such obligations by reason or uncontrollable forces or material changes in state or federal law or enforcement thereof. Parties rendered unable to fulfill any obligation hereunder by reason of an uncontrollable force or material change in state or federal law shall exercise due diligence to deal with such uncontrollable force with all reasonable dispatch and to take actions consistent with the purpose of this agreement.

10. This Agreement describes the entire relationship of the parties with regard to the subject matter herein concerned. Except as maybe explicitly provided otherwise herein, the parties are independent agencies and shall not be deemed to be partners, joint ventures, principals, or agents or each other for any purpose whatsoever. Each party shall have and maintain sole and complete control over all of its employees, agents and operations. Except as may otherwise be explicitly provided herein, or in separate agreement, each and all of the obligations, responsibilities, and liabilities of the parties under and in connection with this Agreement are several, and not joint, and no separate legal or administrative entity will be created to fulfill the purposes of this Agreement.

11. Except as expressly set forth in this Agreement, none of the provisions of this Agreement shall inure to the benefit or be enforceable by any third party.

12. The invalidity or unenforceability of any provision of this Agreement shall not affect the other provisions hereof, and this Agreement shall be construed in all respects as if such invalid or unenforceable provisions were omitted.

13. No change, amendment or modification or any provision of this Agreement shall be valid unless set forth in a written amendment to this Agreement signed by all parties.

14. The SSP Partners must approve this Agreement.

IN WITNESS WHEREOF, the following parties have duly executed this agreement on the date written above:

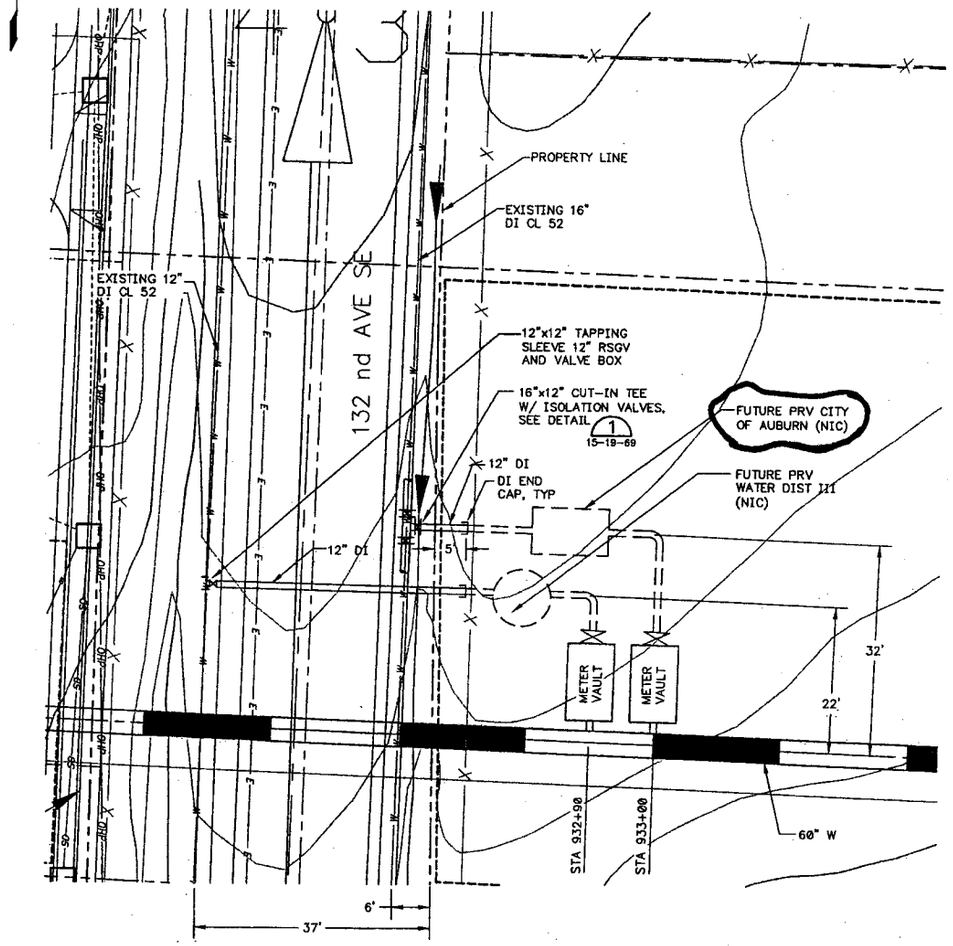
EXHIBIT A

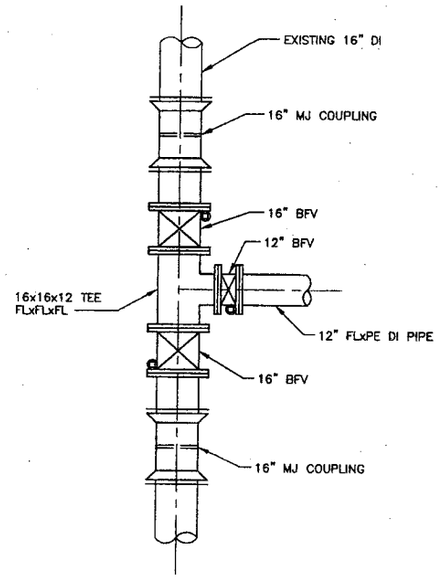
TURNOUT DESCRIPTION

A. TURNOUT #1: A turnout between a 60" diameter water line owned by Tacoma and a 16" diameter water line containing Auburn water. The turnout is located at the intersection of 132nd Avenue SE and SE 296th Street extended. The turnout consists of 12" diameter piping with 12" diameter valves to control flow. A 6-inch diameter water meter will be used to measure the volume of water transferred between the two systems. The meter will be contained in a concrete vault buried in the Second Supply Pipeline right-of-way. Second Supply Pipeline construction drawings 15-19-62 and 15-19-69 are attached and show the detail for the turnout vault construction.



The turnout is designed to be capable of conveying at least 3000 gallons per minute from Tacoma owned facilities to Auburn with approximately 125-foot differential in hydrostatic pressure under normal operating conditions.

B. TURNOUT #2: A 12-inch turnout connection located on the east side of B Street NW and approximately 32nd Street NW between Tacoma's 60"diameter Second Supply Pipeline and Auburn's 16" diameter water line in B Street. An 8-inch diameter water meter will be used to measure the volume of water transferred between the two systems. Second Supply Pipeline construction drawings 15-25-29 and 15-21-62 are attached and show the details for the turnout vault construction.



The turnout is designed to be capable of conveying at least 8300 gallons per minute from Tacoma owned facilities to Auburn with approximately 405-foot differential in hydrostatic pressure under normal operating conditions.

C. TURNOUT #3: A 12-inch turnout connection located at approximately K Street NE and approximately 32nd Street NE between Tacoma's 60" diameter Second Supply Pipeline and Auburn's adjacent water line. An 8-inch diameter water meter will be used to measure the volume of water transferred between the two systems. Second Supply Pipeline construction drawings 15-25-29 and 15-21-66 are attached and show the details for the turnout vault construction.

The turnout is designed to be capable of conveying at least 8300 gallons per minute from Tacoma owned facilities to Auburn with approximately 405-foot differential in hydrostatic pressure under normal operating conditions.

RESOLUTION NO. **3644**

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, RELATING TO THE ANNEXATION OF A PORTION OF PROPERTY TO THE CITY OF AUBURN SIMULTANEOUSLY TO ITS DEANNEXATION FROM THE CITY OF PACIFIC, PURSUANT TO RCW 35.10.217(2)

WHEREAS, the City Council of the City of Auburn adopted Resolution No. 3617 on May 19, 2003, and Resolution No. 3619 on June 16, 2003, notifying the King County Boundary Review Board of the City's intent to annex property to the City of Auburn simultaneous to its de-annexation from the City of Pacific; and

WHEREAS, the City Council of the City of Pacific has concurred with the annexation and de-annexation through its Resolution No. 527 on May 27, 2003, and Resolution No. 530 on June 9, 2003; and

WHEREAS, the King County Boundary Review Board has consented to and approved the annexation and de-annexation; and

WHEREAS, in connection with such annexation/de-annexation, the cities of Auburn and Pacific have committed to coordinate and cooperate with respect to any planning, transportation, utility or development issues that affect the cities; and

WHEREAS, the annexation/de-annexation will result in a change in the water service areas of the cities; and

WHEREAS, Pacific desires to be granted the right to a future franchise for ingress, egress and utilities in the vicinity of the King/Pierce County line on East Valley Highway in order to access the parcels to the west of the Burlington Northern Santa Fe right-of-way; and

WHEREAS, Auburn desires to be granted a franchise for its existing facilities in A Street SE remaining in Pacific after the annexation/de-annexation; and

WHEREAS, the cities wish to amend the existing emergency intertie agreements and relocate the emergency intertie facility serving Pacific on Lakeland Hills Way; and

WHEREAS, the cities have mutual interests in the development "Vista Heights" that currently straddles the existing cities' boundaries and will be completely contained within Auburn when the annexation/de-annexation is finalized; and

WHEREAS, Auburn desires to treat and retain public storm water in public facilities; and

WHEREAS, Auburn and Pacific have agreed that Pacific will, by bill of sale, transfer their interest in the public facilities within the annexation/de-annexation area to Auburn; and

WHEREAS, Auburn and Pacific have agreed that Auburn will provide operation and maintenance services for the portion of A Street SE remaining in Pacific; and

WHEREAS, the requirements of the State Environmental Policy Act and applicable Environmental Procedures have been complied with; and

WHEREAS, a Public Hearing was held on October 6, 2003, for which notice was provided pursuant to the requirements of RCW 35.10.217(2) and at which hearing all persons wishing to speak to the annexation and de-annexation were heard; and

WHEREAS, the City Council of the City of Auburn passed its Resolution No. 3643 on October 6, 2003, finalizing the annexation of a portion of property to the City of Auburn and simultaneous to its de-annexation from the City of Pacific.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute agreements in substantial conformity with the following agreements attached hereto and incorporated herein by this reference:

The Water Service Area Adjustment Agreement marks as Exhibit A,

The Emergency Water System Intertie Agreement marked as Exhibit B,

The Auburn Franchise Agreement With the City of Pacific marked as Exhibit C,

The Pacific Franchise Agreement with the City of Auburn marked as Exhibit D

The Vista Heights Development Agreement marked as Exhibit E,

The Bill of Sale for infrastructure being transferred from Pacific to Auburn marked as Exhibit F, and

An interlocal agreement for maintenance and operation services on a portion of A Street SE attached as Exhibit G.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation, including transmitting a copy of this Resolution to the City Clerk of Pacific.

Section 3. This Resolution shall shall take effect and be in full force upon passage and signatures hereon.

DATED and SIGNED this 20th day of October 2003.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

EXHIBIT A
WATER SERVICE AREA AGREEMENT

This Agreement made and entered into by and between the City of Pacific, a Washington municipal corporation, ("**Pacific**") and the City of Auburn, a Washington municipal corporation ("**Auburn**").

Whereas, Pacific is engaged in the business of providing water service to the public located in certain areas of King County in the State of Washington. Auburn is engaged in the business of providing water service to the public located in certain areas of King and Pierce Counties in the State of Washington, and;

Whereas, the parties desire to enter into a formal service area agreement to revise the boundary between their contiguous service areas in King county in order to avoid any duplication or overlap of water service and to provide the most efficient service to their respective customers, and;

Whereas, Auburn and Pacific have by resolution annexed/de-annexed an area legally described in Attachment "1" attached hereto and shown on the map (Attachment "2") attached hereto. The Cities have agreed to work together cooperatively to facilitate a practical efficient boundary between the two systems.

Pacific and **Auburn** therefore agree as follows:

1. This Agreement is entered into pursuant to the South King County Coordinated Water System Plan which Plan and Appendices are incorporated herein by this reference.

2. The contiguous water service boundary between **Pacific** and **Auburn** is agreed upon by both parties as shown on the attached map (Attachment "2") and as legally described in Attachment "3", which by this reference are incorporated herein.

3. **Pacific** and **Auburn** may by mutual written amendment(s) to this Agreement make such adjustments to the service boundary as they may mutually agree upon from time to time so that water service to new service locations in close proximity to the service boundary may be provided in an efficient, effective and economical manner. Any such adjustments shall be documented by modifying the attached maps which when so modified and agreed to by the parties shall constitute amendments to this Agreement. Minor adjustments consisting of ten acres or less may be authorized by the Public Works Director of the City of Auburn and the Community Development Director of the City of Pacific.

4. Except as specifically set forth herein, this Agreement shall not modify the Resolutions regarding the Annexation/De-annexation process referenced above.

5. **Auburn** will work with Pacific to assist in the negotiations with a Tacoma Second Supply Project Partner (SSP Partner) for future water supply for **Pacific**. The rate for water sold to Pacific from a SSP Partner shall be the rate charged Auburn for the water plus a wheeling charge to be established using cost of service principles.

6. **Pacific** will pay Auburn its costs associated with increasing the capacity of the Auburn Tacoma Second Supply Pipeline connection(s) to allow the wheeling of up to one (1) million gallon per day peak day demand and up to one half million gallon per day average day demand through Auburn to Pacific.

7. Water available to the **Pacific** pursuant to this Agreement shall be in compliance with all applicable state and federal drinking water laws, regulations and standards.

8. If **Pacific** requires additional or different treatment facilities in order for the wheeled water to comply with their water quality goals or standards then **Pacific** will install such treatment facilities on the **Pacific** side of the intertie meters at their expense. If **Auburn** and **Pacific** determine that treatment is required to meet the mutual water quality goals and standards then the treatment facilities will be installed as near the point of connection to the Tacoma pipeline as practical. The treatment facility costs will be shared based upon the capacity required by each city.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

EXHIBIT B

EMERGENCY WATER SYSTEM INTERTIE AGREEMENT
Pacific/Auburn Intertie Agreement No. 3

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as Auburn, and, the City of Pacific, hereinafter referred to as Pacific, for the purposes of planning, designing, constructing, maintaining, and operating an emergency system intertie between the respective parties,

WITNESSETH:

WHEREAS, both Cities have water facilities in the vicinity, and

WHEREAS, both Cities can increase fire protection and emergency water supply reliability for their customers, and

WHEREAS, the Cities are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The Cities hereby concurrently terminate, with the execution of this Agreement the Water Sales Agreement Between City of Auburn and City of Pacific, dated November 4, 1991 and the Water Service Agreement dated July 27, 1984.

2. The four-inch (4") water service connection on Ellingson Road near Pacific's well field will continue to function as an emergency water supply under the terms and conditions of this agreement and the supply of emergency water through this facility will be one-way from Auburn to Pacific.

3. The new emergency water system intertie will be designed to be operated manually as a two way emergency supply between the Auburn and Pacific Systems. The facility shall be located on East Valley Highway in the vicinity of the Water Service Area Boundaries between the two cities. Final location and configuration of the facilities shall be determined at the time of final design.

4. The emergency water system interties shall be operated only in the event of an emergency. For purposes of this agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical

equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other agreed upon emergency within the water supply system.

5. Auburn will design and administer the contract for the construction of the new metering station. The facility will be designed and constructed in accordance with reasonably accepted water utility standards for similar municipal water utilities. Construction of the metering station will occur in the future at a mutually agreed upon time. Auburn will own and maintain the piping, interior equipment, emergency meter and interior appurtenances, and all piping up to the Pacific side of the vault for the metering station.

6. Upon completion of construction, Auburn will transfer ownership of all exterior appurtenances, and all piping that is located on the Pacific side of the vault, to Pacific. Pacific will own and maintain the exterior appurtenances and all piping on Pacific's side of the vault.

7. Each City will have unlimited access to the vault via a dual padlock or ownership of keys to the vault.

8. Each City will operate the respective normally locked valve inside of the vault. Auburn will solely unlock and operate the locked valve on Auburn's side of the meter and Pacific will solely unlock and operate the locked valve on Pacific's side of the meter.

9. The procedure for operating the interties in the event of such emergency shall be as follows:

   A. Each City shall determine that an emergency of sufficient magnitude has occurred which warrants the need to request that the one or both interties be activated.

   B. Upon agreement that an emergency exists, the authorized representative of each City shall allow for one or both of the interties to be opened. The intertie(s) will be activated as soon as reasonably possible. Both Cities' personnel shall be present at the vault(s) to open the valves to activate the facility.

   C. The City requesting the activation shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

D. The intertie(s) shall remain activated until the City requesting activation determines that the need for activation of the emergency intertie(s) has ceased and shall request in writing to close the intertie.

E. In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the City supplying the water may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and the City supplying the water shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the City receiving the water (City requesting activation) shall save and hold harmless the City supplying the water from any loss, damages or suites to or by customers of the City receiving the water resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the City supplying the water's negligence. Prior to a planned interruption or limiting of service, the City supplying the water will notify the City receiving the water of such not less than three days prior to the service disruption. The City supplying the water agrees to use best efforts and reasonable diligence to notify the City receiving the water as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

10. Auburn shall read the meter(s) upon activation and upon deactivation of the intertie(s). The City supplying the water shall verify the information and shall then calculate and invoice the other City for the water used during the request. The total water used during the event shall be used to calculate the invoice. The rate for water consumed through the emergency interties shall be at the Auburn Wholesale Rate to Algona in effect at the time the water is used. This shall be complete payment for the water, labor, and administration of activating the intertie(s).

11. The total project costs for the construction of the new intertie shall include costs for consulting design service, and construction. Auburn shall bear the project costs in exchange for facilities transferred to Auburn as a part of the Lakeland Hills area annexation/de-annexation. Each City is responsible for associated staff, administration and legal costs associated with this implementation of the agreement.

12. To the extent allowed by law, the City of Pacific shall defend, indemnify, and hold harmless the City of Auburn, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs,

expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or nature arising out of or in connection with or incident to an act or omission of the City of Pacific, its employees, agents, and contractors in the performance of the City of Pacific's obligations under the Agreement and this Amendment. This indemnification provision shall include, but is not limited to, all claims against the City of Auburn by an employee or former employee of the City of Pacific or its contractors and, as to such claims; the City of Pacific expressly waives all immunity and limitation of liability under Title 51 RCW.

To the extent allowed by law, the City of Auburn shall defend, indemnify and hold harmless the City of Pacific, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties, and damages or whatsoever kind or nature arising our of, in connection with or incident to an act or omission of the City of Auburn, its employees, agents, and contractors in the performance of the City of Auburn's obligations under this Agreement. This indemnification obligation shall include, but is not limited to, all claims against the City of Pacific by an employee or former employee of the City of Auburn or its contractors and, as to such claims, the City of Auburn expressly waives all immunity and limitation of liability under Title 51 RCW.

13. This Agreement shall remain in force until terminated by either party hereto upon 60-days written notice to the other party. Any project costs, incurred up to the date of such notice, as described herein, shall be shared in accordance with the provisions of this Agreement.

14. Water available to the Pacific pursuant to this Agreement shall be in compliance with all applicable state and federal drinking water laws, regulations and standards.

15. If Pacific requires additional or different treatment facilities in order for the water received under this agreement to comply with their water quality goals or standards then Pacific will install such treatment facilities on the Pacific side of the intertie meters at their expense.

16. If Auburn requires additional or different treatment facilities in order for the water received under this agreement to comply with their water quality goals or standards then Auburn will install such treatment facilities on the Auburn side of the intertie meters at their expense.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

EXHIBIT "C"

CITY OF AUBURN, WASHINGTON
FRANCHISE AGREEMENT WITH THE CITY OF PACIFIC

WHEREAS, the City of Auburn (Auburn) and the City of Pacific (Pacific) have agreed to the annexation/de-annexation a portion of property described in Attachment "1" relating to among other things East Valley Highway (EVH) from the north end of the White River bridge to the King-Pierce County line in which, Auburn recognizes and agrees to Pacific's right to access a portion of EVH near the King/Pierce County line for ingress, egress and utilities; and

WHEREAS, Auburn and Pacific have entered into a Water Service Area Agreement, which revised the boundary between their respective water service areas; and

WHEREAS, the City of Auburn and Pacific have entered into an Emergency Water System Intertie Agreement; and

WHEREAS, according to said Emergency Water System Intertie Agreement, Auburn guaranteed Pacific the right to wheel water through Auburn's water system for an associated wheeling charge; and

WHEREAS, in order to maintain control over the use of Auburn right-of-ways by Pacific within Auburn, it is appropriate to enter into franchise agreements with Pacific; and

WHEREAS, Pacific has negotiated this franchise agreement with Auburn acceptable to both parties; and

WHEREAS, Auburn has determined that it is in the best interests of the public to grant Pacific a franchise on the terms and conditions set forth in this Agreement.

NOW, THEREFORE THE CITY OF AUBURN AND THE CITY OF PACIFIC AGREE AS FOLLOWS:

SECTION 1 DEFINITION

Where used in this franchise ("Franchise"), the following definitions shall apply:

1.1 "Franchisee" means the City of Pacific, a Washington municipal corporation, and its respective successors and assigns.

1.2 "City" means the City of Auburn, a Washington municipal corporation.

1.3 "Franchise Area" means that portion of East Valley Highway where Pacific will own, operate and maintain utilities as described with Attachment 2" attached hereto, which is by this reference incorporated, as if fully set forth herein; provided, that the Franchise Area shall not include or convey any right to Franchisee to install facilities on or to otherwise use City owned or leased properties outside the Franchise Area.

1.4 "Facilities" means the Franchisee's utility system, lines, mains, appurtenances, and all other necessary or convenient facilities for the purpose of providing water service.

1.5 "Agreement" means this Agreement setting forth the terms and conditions of the franchise granted to the Franchisee.

SECTION 2 FRANCHISE GRANT

Subject to the terms and conditions set forth in this Agreement, the City grants to the Franchisee the right to construct and install water pipelines and appurtenances and to excavate trenches in City roads for the purposes of constructing, installing, operating, maintaining, removing, and replacing mains and pipes and making connections between the same to the dwellings and other buildings of the consumers. In exercising the foregoing rights, the Franchisee shall be governed by and conform to the general rules adopted by the Public Works Department of the City of Auburn, and the Franchisee, at no expense to the City, shall complete all work and shall replace and restore the City roads to the condition of the City roads existing immediately prior to such disturbance; PROVIDED, HOWEVER, that no such work shall be done prior to the obtaining of a permit therefor issued by the City's Public Works Director (hereinafter "Director"), which permit shall set forth conditions pertaining to the work to be done and specifications for the restoration of the roads to the same condition as they were prior to such work. If the Franchisee does not repair the City roads to the satisfaction of the Director, the City may, at its sole discretion, repair such City roads, or cause them to be repaired, and the Franchisee hereby agrees to reimburse the City for the cost of such work, including overhead costs.

SECTION 3 FRANCHISE TERM

This Franchise is and shall remain in full force and effect from the effective date of this Agreement forward, for a period not to exceed twenty-five (25) years from the effective date of this Agreement provided, that this Franchise shall not take effect and the Franchisee shall have no rights under this Franchise unless the Franchisee files a written acceptance of this Franchise with the City pursuant to Section 4 of this Agreement.

SECTION 4 ACCEPTANCES BY GRANTEE OF TERMS AND CONDITIONS

The full acceptance of this Franchise and all of its terms and conditions shall be filed with the City Clerk within forty-five (45) days from the date of this Agreement, by the Franchisee. Full acceptance of this Franchise is a condition precedent to its taking effect, and unless this Franchise is accepted within the time specified, this grant will be null and void and have no force or effect.

SECTION 5 NON-EXCLUSIVE FRANCHISE

This Franchise is not exclusive. It does not prohibit the City from granting franchises for other public or private utilities in, over, along, across, and under any City property, including the Franchise Area. This Franchise does not prevent or prohibit the City from constructing, altering, maintaining or using any of the Franchise Area. The City retains full power to make all changes, relocations; repair, maintenance or other work to or in the Franchise Area as the City deems fit.

SECTION 6 JURISDICTIONS

This Franchise is intended to convey limited rights and interest only as to those roads and rights-of-way in which the City has an actual interest. It is not a warranty of title or of interest in City road rights-of-way. None of the rights granted to the Franchisee shall affect the jurisdiction of the City over City road rights-of-way or the City's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating.

SECTION 7 REGULATIONS OF USE AND CONTROL

This Franchise does not deprive the City of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the City road rights-of-way covered by this Franchise. The City reserves the right and power at all times to exercise its police powers with respect to the time, manner and location of the placement of the Franchisee's Facilities.

SECTION 8 EMINENT DOMAIN

This Franchise and the limited rights and interests granted by this Franchise are subject to the exercise of eminent domain. In the event of an exercise of eminent domain by the City, the value to be attributed to all the rights and interests granted under this Franchise shall not exceed the actual amount the Franchisee paid to the City in obtaining this Franchise.

SECTION 9 VACATION

If at any time the City vacates any City rights-of-way covered by this Franchise, the City will not be held liable for any damages or loss to the Franchisee by reason of such vacation. The City may, after giving thirty (30) days written notice to the Franchisee terminate this Franchise with respect to any City road or rights-of-way vacated.

SECTION 10 ENFORCEMENT

The City's failure to enforce any provision of this Franchise does not constitute a waiver of its right to enforce that provision or any other provision of this Franchise.

SECTION 11 INDEMNITIES AND HOLD HARMLESS

11.1 The Franchisee shall defend, indemnify and hold harmless the City, its appointed and elected officials, and its employees and agents from and against liability for all claims, actions, injuries, demands, liabilities, losses, costs, damages and

judgments, including costs of defense thereof, (collectively referred to as "damages") for injury to persons, death or property damage caused by, arising out of, or incidental to the Franchisee's exercise of the rights and privileges granted by this Franchise, except for damages caused by or arising out of the City's sole negligence. In the event that any such claim or demand for damages is presented to or filed with the City, or if any suit or action is initiated against the City based on such claims or demands for damages, the City shall promptly notify the Franchisee of the claim, demand, suit or action and the Franchisee shall have the right, at its election and its sole cost and expense, to settle and compromise such claim, demand, suit or action, or defend the same at the Franchisee's sole cost and expense.

11.2 If it is determined that RCW 4.24.115 applies to this Franchise, the Franchisee agrees to defend, hold harmless and indemnify the City to the maximum extent permitted under that statute, and specifically for the Franchisee's negligence concurrent with that of the City to the full extent of the Franchisee's negligence.

SECTION 12 INSURANCE

12.1 The Franchisee shall keep a policy of insurance in force with a minimum limit of five million dollars ($5,000,000.00). Verification of insurance coverage is a condition precedent to the effectiveness of this Agreement.

12.2 The insurance shall be maintained in full force and effect at the Franchisee's sole expense throughout the term of the Franchise, and, should such insurance be terminated, this Agreement shall terminate as of the date of the termination of insurance coverage.

12.3 The coverage provided by the Franchisee's insurance policies shall be primary to any insurance maintained by the City except as to losses or damages attributable to the sole negligence of the City. Any insurance maintained by the City that might relate to this Franchise shall be in excess to the Franchisee's insurance and shall not contribute with or to it. The City has no obligation to report occurrences to the insurance companies unless a claim is filed with the City's City Council; and the City has no obligations to pay the Franchisee's premiums.

12.4 The Franchisee shall be solely and completely responsible to perform all work related to this Franchise in compliance with all applicable federal, state, county and city statutes, rules, regulations, Ordinances, orders and codes. The Franchisee's attention is directed to the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Franchisee shall be solely and completely responsible for safety and safety conditions on its job sites and for its work within the Franchise Area, including the safety of all persons and property during performance of any works therein. The services of the City or City's consultant personnel in conducting construction review of the Franchisee's work relating to the Franchise is not intended to include review of the adequacy of the Franchisee's work methods, equipment, scaffolding, or trenching, or safety measures in, on or near such Franchise Area or job site. The Franchisee shall provide safe access for the City and its inspectors to adequately inspect the work and its conformance with applicable statutes, Ordinances, rules, regulations, and the Franchise.

SECTION 13 INSTALLATIONS, REPAIR, REMOVAL OR RELOCATION

13.1 The Franchisee shall, at no expense to the City, expeditiously repair all existing Facilities that it owns within the Franchise Area, including any damage caused directly or indirectly by its Facilities, all appurtenant Facilities and service lines connecting its system to users, if the City requires such repair for any reasonable purpose.

13.2 The Franchisee shall, at no expense to the City, adjust, remove or relocate existing Facilities within the Franchise Area, including all appurtenant Facilities and service lines connecting its system to users, if the City determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the City. The City shall give the Franchisee written notice of such requirement as soon as practicable. The written notice shall include all available information, such as plans and specifications, as is reasonably necessary for the Franchisee to plan for such adjustment, removal or relocation.

13.3 Franchisee's Facilities shall be constructed, installed, maintained and repaired within the Franchise Area so as to provide safety of persons and property, and not interfere with the free passage of traffic, all in accordance with the laws of the State of Washington, and the Ordinances, resolutions, rules and regulations of the City.

13.4 For projects that are a part of the City's capital improvement program, in addition to any other notice given to the Franchisee, the City shall provide a copy of the capital improvement plan and six (6) year transportation improvement plan when requested. Further the City shall provide a vertical and horizontal profile of the roadway and drainage facilities within it, both existing and as proposed by the City, and the proposed construction schedule. The initial design information shall be given at least one hundred and eighty (180) days before construction is scheduled to begin, except in cases of urgent construction or emergencies. The Franchisee shall respond to this notice, and to any later notices of revised designs, within twenty (20) days of the date of the notice, by providing to the City the Franchisee's best available information as to the location of all the Franchisee's Facilities, including all appurtenant Facilities and service lines connecting its system to users and all Facilities that it has abandoned, within the area proposed for the project.

13.5 The City shall offer the Franchisee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Franchisee's Facilities. The City shall have sole authority to choose the contractor to perform such work. Such bid documents shall provide for an appropriate cost allocation between the parties. In addition to the Franchisee's allocation of contractor costs, the Franchisee shall reimburse the City for all costs, to include but not be limited to legal, engineering, inspections, administration and/or soils testing, related to the Franchisee's work and reasonably incurred by the City in the administration of such joint construction contracts. Such costs shall include the direct salary cost of the time of City professional and technical personnel, including the City's consultants, spent productively engaged in such work, plus overhead costs at the standard rate charged by the City on other similar projects.

13.6 It is understood that emergency situations may arise that could threaten public health and/or continued operation of the Franchisee's utility system and the Franchisee may be unable to notify the City in the manner prescribed in Section 14 of this Franchise. In such a situation the Franchisee shall immediately correct the hazardous situation and continue to use best efforts to contact the City staff. The Emergency Phone Number for the City of Auburn is (253) 931-3010, and the City of Pacific is (253) 929-1110. Dialing 911 is advised for emergency situations.

SECTION 14 REQUIREMENTS OF CONSTRUCTION PERMITS

14.1 The Franchisee has the right, privilege and authority to enter the City road rights-of-way for the purpose of constructing, installing, operating, maintaining, replacing or repairing its Facilities on the condition that it obtains construction, excavation, and right-of-way use permits issued by the City. Any work performed, whether by Franchisee, its contractors, or third parties, shall include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the City rights-of-way. All work shall be done to the City's satisfaction.

14.2 All equipment, pipelines and appurtenances which are used in the construction, installation, operation, maintenance or repair of the Franchisee's Facilities and which are located within the City road rights-of-way and owned by the Franchisee shall be considered to be part of the Franchisee's system and shall be the responsibility of the Franchisee. All permits for the construction, installation, operation, maintenance or repair of the Franchisee's system shall be applied for and given in the name of the Franchisee, who will be responsible for all work done under the permit. The Franchisee remains responsible whether the work is performed by the Franchisee, its contractors, or by third parties.

14.3 When required by the Public Works Director, the Franchisee shall post a bond to the City in the amount sufficient for any road repair or restoration. The amount of the bond shall be set by the City and must be filed with the City before a permit will be issued.

SECTION 15 PERFORMANCE OF WORK

15.1 Any work performed by the Franchisee in the Franchise Area shall conform to all City Ordinances and requirements including, but not limited to, Auburn City Code and the City's Design and Construction Standards in force when the work is performed. All traffic control shall conform to the current edition of the Uniform Traffic Control Devices in force when the work is performed.

15.2 If work performed under this Franchise makes it necessary to turn off or diminish water pressure to any fire hydrant, the Franchisee shall notify the City's Fire Department by telephone and by written notice, that water pressure or fire flow conditions have been affected. Except in the case of an emergency, the notice shall be provided at least 48 hours prior to the water pressure being turned off or diminished.

If more than one fire hydrant will be affected, the Franchisee shall provide a map of the affected area to the Fire Department. Out-of-service fire hydrants must be identified as not operational by covering with a properly secured burlap or plastic bag. Fire hydrants should be returned to full service as soon as reasonably possible or no longer than two working days from the date service was diminished. The Franchisee shall notify the City's Fire Department when the hydrant is returned to full service.

SECTION 16 RESTORATION OF CITY RIGHTS-OF-WAY

After performing work on, under or adjacent to City road rights-of-way, the Franchisee is responsible for and shall leave all City road rights-of-way in the condition of the City roads rights-of-way existing immediately prior to such disturbance. If the Franchisee, its contractors, or third parties working under permit should fail to diligently restore City road rights-of-way to the satisfaction of the City, the City may make such repairs or restorations as are necessary to return the City road rights-of-way to a condition reasonably comparable to the condition of the City roads rights-of-way existing immediately prior to such disturbance. Upon presentation of an itemized bill for repairs or restorations, including all applicable costs, both direct and indirect, to include but not be limited to the cost of labor, tools, materials and equipment, the Franchisee shall pay the bill within sixty-five (65) days.

SECTION 17 GUARANTEES

The Franchisee shall guarantee work and materials furnished and completed by the Franchisee under this Franchise for a period of two (2) years from the date the City accepts the work and/or restoration.

SECTION 18 INFORMATION ON LOCATION OF FACILITIES

Prior to the effective date of this Agreement, the Franchisee shall provide the City with all information requested by the City regarding the location of the Franchisee's current Facilities, including but not limited to copies of all record drawings for such Facilities. If the Franchisee performs any work to install, repair, reconstruct, or replace Facilities in the Franchise Area after this Agreement's effective date, the Franchisee shall provide the City with all information requested by the City regarding the location of those Facilities, including but not limited to copies of record drawings.

SECTION 19 COORDINATION OF WORK IN FRANCHISE AREA

To facilitate the coordination of work in City rights-of-way, if either the Franchisee or the City plans to make excavations in the Franchise Area, the party planning such excavation shall provide written notice to the other of the planned excavation, affording the other party the opportunity to share in the excavation; provided, that (1) such joint use shall not unreasonably delay the work of the party causing the excavation to be made, (2) such joint use shall be arranged and accomplished on terms and conditions satisfactory to both parties, and (3) either party may deny such request for safety reasons.

SECTION 20 REIMBURSEMENTS OF COSTS

The Franchisee shall reimburse and pay to the City the amount of actual administrative expenses incurred by the City, which are directly or indirectly related to the receipt, review and approval of this Franchise. In the event of non-payment thereafter, the Franchisee shall pay the City's reasonable attorneys' fees and other costs incurred in collecting such amount. Payment must be made within sixty-five (65) days of the Franchisee's receipt of the City's bill/invoice. If payment is not paid in full within the sixty-five (65) days, this Franchise shall become null and void.

SECTION 21 BLASTING REQUIREMENTS

The Franchisee's right to construct, install, operate, maintain and repair Facilities does not preclude the City, its agents or contractors from blasting, grading, or doing other road work contiguous to the Franchisee's Facilities. When practical, the City shall give the Franchisee forty-eight (48) hours notice of blasting or excavating.

SECTION 22 SURVEY MARKERS AND MONUMENTS

Before any work is performed under this Franchise, the Franchisee shall establish two or more reference marks to all monuments and markers of every nature relating to subdivisions, plats, rights-of-way, and all other surveys. The reference points shall be located so that they will not be disturbed during any of Franchisee's operations under this Franchise. The method of referencing monuments or other markers or points shall be approved by the City before placement. The replacement of all markers or monuments disturbed during any construction of the Franchisee shall be made as promptly as conditions permit. The cost of monuments or markers lost, destroyed, or disturbed and the expense or replacement with approved markers or monuments shall be borne by the Franchisee.

SECTION 23 RESERVATIONS OF RIGHTS

The City reserves the right, upon thirty (30) days written notice to the Franchisee, to amend or modify the provisions or conditions of this Franchise to conform to any state, county, federal, or city statute, ordinance, rule or regulation. The City may terminate this Franchise upon thirty (30) days written notice to the Franchisee if the Franchisee fails or refuses to comply with such amendment or modification.

SECTION 24 ASSIGNMENT

The Franchisee shall not have the right to assign this Franchise without the written consent of the City. No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions and responsibilities contained within the Franchise, as well as surety bonds which the City deems necessary to be posted, are received as allowed by law. The City's approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the Franchise.

SECTION 25 PENALTY FOR VIOLATION OF CONDITIONS

If the Franchisee fails to comply with any material term, condition or responsibility under this Franchise, the City may provide the Franchisee with written notice of the City's intent to revoke the Franchise if the Franchisee's failure is not cured within thirty (30) days of the date of the notice. During the thirty (30) days following the date of the notice, the Franchisee shall have the opportunity to remedy the failure to comply. A public hearing shall be scheduled before the Auburn City Council at least thirty (30) days following the notification on the issue of the revocation. If at the hearing, the City Council finds that grounds exist to revoke the Franchise under this paragraph and that the revocation is in the public interest, the City Council may by ordinance revoke the Franchise. The revocation shall be effective ninety (90) days after the public hearing.

SECTION 26 EXPIRATION AND RENEWAL

26.1 If the Franchisee requests a renewal of this Franchise prior to its expiration date, the City may, at the City's sole discretion, extend the term of this Franchise for up to one year beyond the expiration date to allow for processing of the renewal. If the City elects to extend the term of this Franchise, written notice of the extension shall be provided to the Franchisee prior to the Franchise expiration date.

26.2 If the Franchisee has not requested a renewal of this Franchise prior to its expiration date, the City has the right, upon thirty (30) day's prior notice to the Franchisee, to remove or relocate any of the Franchisee's Facilities as is reasonably necessary for the public's health, welfare or safety, or for the construction, alteration, or improvement of the Franchise Area, or for the construction or installation of lines or facilities of other franchise holders. The Franchisee shall be liable for costs incurred in any removal or relocation of the Franchisee's Facilities under this section.

26.3 Upon the expiration of this Franchise, the Franchisee shall continue to be responsible for the operation and maintenance of the Franchisee's existing facilities in the Franchise Area, but shall not have the right to provide additional services. This Section and Sections 11, 13, 14, 15, 16, 19, and 22 of this Franchise shall continue in force until such time as the Franchisee's Facilities are abandoned to the City in accordance with the terms and conditions of the Annexation Resolution.

SECTION 27 COMPLIANCE WITH LAWS

The Franchisee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and the City's Environmental Standards and Ordinances.

SECTION 28 NON-DISCRIMINATION CLAUSES

In all hiring or employment made possible or resulting from this Franchise, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, national origin, marital status or the presence of any sensory, mental, or physical handicap, unless based upon a bona fide occupation qualification. No person shall be denied or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this agreement

on the grounds of sex, sexual orientation, race, color, national origin, age, except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap.

SECTION 29 NOTICES

Any notice or information required or permitted under this Franchise may be sent to the following addresses unless otherwise specified:

City of Auburn:
City Engineer
25 West Main Street
Auburn, WA 98001-4998
253-931-3010

City of Pacific:
Community Development Director
100 3rd Avenue S.E.
Pacific, WA 98047
253-929-1110

SECTION 30 ATTORNEYS' FEES

If either party commences litigation against the other party relating to the performance or alleged breach of this Franchise, the prevailing party shall be entitled to all costs, including reasonable attorneys' fees incurred, relating to such litigation, including those incurred in any appeal.

SECTION 31 SEVERANCES

If any term, provision, condition or portion of this Franchise is held to be invalid, such invalidity shall not affect the validity of the remaining portions of this Franchise which shall continue in full force and effect, unless the dominant purpose of the Franchise would be prevented or the public interest would no longer be served, as determined by the City.

SECTION 32 EFFECTIVE DATE

This Agreement having been introduced at least five days prior to its date of passage and submitted to the city attorney, and being approved by at least a majority of the entire city council at a regular city council meeting, shall take effect and be in force five days after its passage, approval and publication as required by law.

SECTION 33 EXISTING UTILITIES

This Franchise shall govern City of Pacific, new utility Facilities within the City of Auburn.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

THENCE EAST TO SAID EAST MARGIN OF THE EAST VALLEY HIGHWAY;
THENCE SOUTHERLY ALONG SAID EAST MARGIN OF THE EAST VALLEY HIGHWAY A DISTANCE OF 100 FEET TO THE POINT OF BEGINNING.

SITUATE IN KING AND PIERCE COUNTIES, WASHINGTON.

EXHIBIT D

CITY OF PACIFIC, WASHINGTON
FRANCHISE AGREEMENT WITH THE CITY OF AUBURN

WHEREAS, the City of Auburn (Auburn) and the City of Pacific (Pacific) have agreed to the annexation/de-annexation a portion of property described in Attachment "1" relating to among other things East Valley Highway (EVH) from the north end of the White River bridge to the King-Pierce County line in which, Auburn recognizes and agrees to Pacific's right to access a portion of EVH near the King/Pierce County line for ingress, egress and utilities; and

WHEREAS, Auburn and Pacific have entered into a Water Service Area Agreement, which revised the boundary between their respective water service areas; and

WHEREAS, the City of Auburn and Pacific have entered into an Emergency Water System Intertie Agreement; and

WHEREAS, in order to maintain control over the use of City of Pacific right-of-way by utilities operating within the City of Pacific, it is appropriate to enter into franchise agreements with such utilities; and

WHEREAS, City of Auburn is such a utility, and has negotiated this franchise agreement with the City of Pacific acceptable to both parties; and

WHEREAS, the City of Pacific has determined that it is in the best interests of the public to grant the City of Auburn a franchise on the terms and conditions set forth in this Agreement; now, therefore

THE CITY COUNCIL OF THE CITY OF PACIFIC, WASHINGTON, DO ORDAIN AS FOLLOWS:

SECTION 1 DEFINITIONS

Where used in this franchise ("Franchise"), the following definitions shall apply:

1.1 "Franchisee" means the City of Auburn, a Washington municipal corporation, and its respective successors and assigns.

1.2 "City" means the City of Pacific, a Washington municipal corporation.

1.3 "Franchise Area" means the Right of Way of A Street SE as described in Attachment "2" attached hereto, which is by this reference incorporated, as if fully set forth herein; provided, that the Franchise Area shall not include or convey any right to Franchisee to install facilities on or to otherwise use City owned or leased properties outside the Franchise Area.

1.4 "Facilities" means the Franchisee's water system, lines, mains, appurtenances, and all other necessary or convenient facilities for the purpose of providing water service.

1.5 "Agreement" means this Agreement setting forth the terms and conditions of the franchise granted to the Franchisee.

SECTION 2 FRANCHISE GRANT

Subject to the terms and conditions set forth in this Agreement, the City grants to the Franchisee the right for the construction and installation of water pipeline, appurtenances and the excavation of trenches on City roads for the purposes of constructing, installing, operating, maintaining, removing, and replacing mains and pipes and making connections between the same to the dwellings and other buildings of the consumers, the Franchisee shall be governed by and conform to the general rules adopted by the Public Works Department of the City of Pacific, and the Franchisee, at no expense to the City, shall complete all such work and shall replace and restore the City roads to a condition reasonably comparable to the condition of the City roads existing immediately prior to such disturbance; PROVIDED, HOWEVER, that no such work shall be done prior to the obtaining of a permit therefor issued by the City's Community Development Director (hereinafter "Director"), which permit shall set forth conditions pertaining to the work to be done and specifications for the restoration of the roads to the same condition as they were prior to such work. If the Franchisee does not repair the City roads to the satisfaction of the Director, the City may, at its sole discretion, repair such City roads, or cause them to be repaired, and the Franchisee hereby agrees to reimburse the City for the cost of such work, including overhead costs.

SECTION 3 FRANCHISE TERM

This Franchise is and shall remain in full force and effect for a period of twenty-five (25) years from the effective date of this Agreement; provided, that this Franchise shall not take effect and the Franchisee shall have no rights under this Franchise unless the Franchisee files a written acceptance of this Franchise with the City pursuant to Section 4 of this Agreement.

SECTION 4 ACCEPTANCE BY GRANTEE OF TERMS AND CONDITIONS

The full acceptance of this Franchise and all of its terms and conditions shall be filed with the City Clerk within forty-five (45) days from the date of this Agreement, by the Franchisee. Full acceptance of this Franchise is a condition precedent to its taking effect, and unless this Franchise is accepted within the time specified, this grant will be null and void and have no force or effect.

SECTION 5 NON-EXCLUSIVE FRANCHISE

This Franchise is not exclusive. It does not prohibit the City from granting franchises for other public or private utilities in, over, along, across, and under any City property,

including the Franchise Area. This Franchise does not prevent or prohibit the City from constructing, altering, maintaining or using any of the Franchise Area. The City retains full power to make all changes, relocations, repair, maintenance or other work to or in the Franchise Area as the City deems fit.

SECTION 6 JURISDICTIONS

This Franchise is intended to convey limited rights and interest only as to those roads and rights-of-way in which the City has an actual interest. It is not a warranty of title or of interest in City road rights-of-way. None of the rights granted to the Franchisee shall affect the jurisdiction of the City over City road rights-of-way or the City's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating.

SECTION 7 REGULATION OF USE AND CONTROL

This Franchise does not deprive the City of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the City road rights-of-way covered by this Franchise. The City reserves the right and power at all times to exercise its police powers with respect to the time, manner and location of the placement of the Franchisee's Facilities.

SECTION 8 EMINENT DOMAIN

This Franchise and the limited rights and interests granted by this Franchise are subject to the exercise of eminent domain. In the event of an exercise of eminent domain by the City, the value to be attributed to all the rights and interests granted under this Franchise shall not exceed the actual amount the Franchisee paid to the City in obtaining this Franchise.

SECTION 9 VACATION

If at any time the City vacates any City rights-of-way covered by this Franchise, the City will not be held liable for any damages or loss to the Franchisee by reason of such vacation. The City may, after giving thirty (30) days written notice to the Franchisee terminate this Franchise with respect to any City road or rights-of-way vacated.

SECTION 10 ENFORCEMENT

The City's failure to enforce any provision of this Franchise does not constitute a waiver of its right to enforce that provision or any other provision of this Franchise.

SECTION 11 INDEMNITIES AND HOLD HARMLESS

11.1 The Franchisee shall defend, indemnify and hold harmless the City, its appointed and elected officials, and its employees and agents from and against liability for all claims, actions, injuries, demands, liabilities, losses, costs, damages and judgments, including costs of defense thereof, (collectively referred to as "damages") for injury to persons, death or property damage caused by, arising out of, or incidental

to the Franchisee's exercise of the rights and privileges granted by this Franchise, except for damages caused by or arising out of the City's sole negligence. In the event that any such claim or demand for damages is presented to or filed with the City, or if any suit or action is initiated against the City based on such claims or demands for damages, the City shall promptly notify the Franchisee of the claim, demand, suit or action and the Franchisee shall have the right, at its election and its sole cost and expense, to settle and compromise such claim, demand, suit or action, or defend the same at the Franchisee's sole cost and expense.

11.2 If it is determined that RCW 4.24.115 applies to this Franchise, the Franchisee agrees to defend, hold harmless and indemnify the City to the maximum extent permitted under that statute, and specifically for the Franchisee's negligence concurrent with that of the City to the full extent of the Franchisee's negligence.

SECTION 12 INSURANCE

12.1 The Franchisee being a municipality in the State of Washington shall be self-insured through the Washington Cities Insurance Association (WCIA). If required by Pacific, Auburn shall request the WCIA to provide Pacific with a letter sent from the WCIA evidencing such an insurance policy to be in force.

12.2 The insurance shall be maintained in full force and effect at the Franchisee's sole expense throughout the term of the Franchise. The City shall be given at least forty-five (45) days written notice that the Franchisee is no longer a member of the WCIA. Such notice to the City shall be by certified mail, sent to City of Pacific; Public Works Dept.; 100 3rd SE; Pacific, Washington 98047

12.3 The coverage provided by Auburn's insurance policies shall be primary to any insurance maintained by Pacific except as to losses or damages attributable to the sole negligence of Pacific. Any insurance maintained by Pacific that might relate to this Franchise shall be in excess to Auburn's insurance and shall not contribute with or to it. Pacific has no obligation to report occurrences to the insurance companies unless a claim is filed with Pacific's City Council; and Pacific has no obligations to pay Auburn's premiums.

12.4 The Franchisee shall be solely and completely responsible to perform all work related to this Franchise in compliance with all applicable federal, state, county and city statutes, rules, regulations, ordinances, orders and codes. The Franchisee's attention is directed to the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Franchisee shall be solely and completely responsible for safety and safety conditions on its job sites and for its work within the Franchise Area, including the safety of all persons and property during performance of any works therein. The services of the City or City's consultant personnel in conducting construction review of the Franchisee's work relating to the Franchise is not intended to include review of the adequacy of the Franchisee's work methods, equipment, scaffolding, or trenching, or safety measures in, on or near such Franchise Area or job site. The Franchisee shall provide safe access for the City and its inspectors to

adequately inspect the work and its conformance with applicable statutes, ordinances, rules, regulations, and the Franchise.

SECTION 13 INSTALLATION, REPAIR, REMOVAL OR RELOCATION

13.1 The Franchisee shall, at no expense to the City, expeditiously repair all existing Facilities that it owns within the Franchise Area, including any damage caused directly or indirectly by its Facilities, all appurtenant Facilities and service lines connecting its system to users, if the City requires such repair for any reasonable purpose.

13.2 The Franchisee shall, at no expense to the City, adjust, remove or relocate existing Facilities within the Franchise Area, including all appurtenant Facilities and service lines connecting its system to users, if the City determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the City. The City shall give the Franchisee written notice of such requirement as soon as practicable. The written notice shall include all available information, such as plans and specifications, as is reasonably necessary for the Franchisee to plan for such adjustment, removal or relocation.

13.3 Franchisee's Facilities shall be constructed, installed, maintained and repaired within the Franchise Area so as to provide safety of persons and property, and not interfere with the free passage of traffic, all in accordance with the laws of the State of Washington, and the ordinances, resolutions, rules and regulations of the City.

13.4 For projects that are a part of the City's capital improvement program, in addition to any other notice given to the Franchisee, the City shall provide a vertical and horizontal profile of the roadway and drainage facilities within it, both existing and as proposed by the City, and the proposed construction schedule. The initial design information shall be given at least thirty (30) days before construction is scheduled to begin, except in cases of urgent construction or emergencies. The Franchisee shall respond to this notice, and to any later notices of revised designs, within twenty (20) days of the date of the notice, by providing to the City the Franchisee's best available information as to the location of all the Franchisee's Facilities, including all appurtenant Facilities and service lines connecting its system to users and all Facilities that it has abandoned, within the area proposed for the project.

13.5 The City shall offer the Franchisee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Franchisee's Facilities. The City shall have sole authority to choose the contractor to perform such work. Such bid documents shall provide for an appropriate cost allocation between the parties. In addition to the Franchisee's allocation of contractor costs, the Franchisee shall reimburse the City for all costs, to include but not be limited to legal, engineering, inspections, administration and/or soils testing, related to the Franchisee's work and reasonably incurred by the City in the administration of such joint construction contracts. Such costs shall include the direct salary cost of the time of City professional

and technical personnel, including the City's consultants, spent productively engaged in such work, plus overhead costs at the standard rate charged by the City on other similar projects.

13.6 It is understood that emergency situations may arise that could threaten public health and/or continued operation of the Franchisee's utility system and the Franchisee may be unable to notify the City in the manner prescribed in Section 14 of this Franchise. In such a situation the Franchisee shall immediately correct the hazardous situation and continue to use best efforts to contact the City staff. The Emergency Phone Number for the City of Pacific is 253-929-1110, and the City of Auburn is 253-931-3048. Dialing 911 is advised for emergency situations.

SECTION 14 REQUIREMENT OF CONSTRUCTION PERMITS

14.1 The Franchisee has the right, privilege and authority to enter the City road rights-of-way for the purpose of constructing, installing, operating, maintaining, replacing or repairing its Facilities on the condition that it obtains construction, excavation, and right-of-way use permits issued by the City. Any work performed, whether by Franchisee, its contractors, or third parties, shall include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the City rights-of-way. All work shall be done to the City's satisfaction.

14.2 All equipment, lines and appurtenances which are used in the construction, installation, operation, maintenance or repair of the Franchisee's Facilities and which are located within the City road rights-of-way and owned by the Franchisee shall be considered to be part of the Franchisee's system and shall be the responsibility of the Franchisee. All permits for the construction, installation, operation, maintenance or repair of the Franchisee's system shall be applied for and given in the name of the Franchisee, who will be responsible for all work done under the permit. The Franchisee remains responsible whether the work is performed by the Franchisee, its contractors, or by third parties.

14.3 When required by the Director, the Franchisee shall post a bond to the City in the amount sufficient for any road repair or restoration. The amount of the bond shall be set by the City and must be filed with the City before a permit will be issued.

SECTION 15 PERFORMANCE OF WORK

15.1 Any work performed by the Franchisee in the Franchise Area shall conform to all City ordinances and requirements including, but not limited to, Chapter 13.12 PMC and the City's Road Standards in force when the work is performed. All traffic control shall conform to the current edition of the Uniform Traffic Control Devices in force when the work is performed.

15.2 If work performed under this Franchise makes it necessary to turn off or diminish water pressure to any fire hydrant, the Franchisee shall notify the City's Fire Department by telephone and by written notice, that water pressure or fire flow conditions have been affected. Except in the case of an emergency, the notice shall be

provided at least 48 hours prior to the water pressure being turned off or diminished. If more than one fire hydrant will be affected, the Franchisee shall provide a map of the affected area to the Fire Department. Out-of-service fire hydrants must be marked to indicate that it is not operational.

SECTION 16 RESTORATION OF CITY RIGHTS-OF-WAY

After performing work on, under or adjacent to City road rights-of-way, the Franchisee is responsible for and shall leave all City road rights-of-way in a condition reasonably comparable to the condition of the City roads rights-of-way existing immediately prior to such disturbance. If the Franchisee, its contractors, or third parties working under permit should fail to diligently restore City road rights-of-way to the satisfaction of the City, the City may make such repairs or restorations as are necessary to return the City road rights-of-way to a condition reasonably comparable to the condition of the City roads rights-of-way existing immediately prior to such disturbance. Upon presentation of an itemized bill for repairs or restorations, including all applicable costs, both direct and indirect, to include but not be limited to the cost of labor, tools, materials and equipment, the Franchisee shall pay the bill within sixty-five (65) days.

SECTION 17 GUARANTEE

The Franchisee shall guarantee work and materials furnished and completed by the Franchisee under this Franchise for a period of two (2) years from the date the City approves the work and/or restoration.

SECTION 18 INFORMATION ON LOCATION OF FACILITIES

Prior to the effective date of this Agreement, the Franchisee shall provide the City with all information requested by the City regarding the location of the Franchisee's current Facilities, including but not limited to copies of all record drawings for such Facilities. If the Franchisee performs any work to install, repair, reconstruct, or replace Facilities in the Franchise Area after this Agreement's effective date, the Franchisee shall provide the City with all information requested by the City regarding the location of those Facilities, including but not limited to copies of record drawings.

SECTION 19 COORDINATION OF WORK IN FRANCHISE AREA

To facilitate the coordination of work in City rights-of-way, if either the Franchisee or the City plans to make excavations in the Franchise Area, the party planning such excavation shall provide written notice to the other of the planned excavation, affording the other party the opportunity to share in the excavation; provided, that (1) such joint use shall not unreasonably delay the work of the party causing the excavation to be made, (2) such joint use shall be arranged and accomplished on terms and conditions satisfactory to both parties, and (3) either party may deny such request for safety reasons.

SECTION 20 REIMBURSEMENT OF COSTS

The Franchisee shall reimburse and pay to the City the amount of actual administrative expenses incurred by the City which are directly or indirectly related to the receipt, review and approval of this Franchise. In the event of non-payment thereafter, the Franchisee shall pay the City's reasonable attorneys' fees and other costs incurred in collecting such amount. Payment must be made within sixty-five (65) days of the Franchisee's receipt of the City's bill/invoice. If payment is not paid in full within the sixty-five (65) days, this Franchise shall become null and void.

SECTION 21 BLASTING REQUIREMENTS

The Franchisee's right to construct, install, operate, maintain and repair Facilities does not preclude the City, its agents or contractors from blasting, grading, or doing other road work contiguous to the Franchisee's Facilities. When practical, the City shall give the Franchisee forty-eight (48) hours notice of blasting or excavating.

SECTION 22 SURVEY MARKERS AND MONUMENTS

Before any work is performed under this Franchise, the Franchisee shall establish two or more reference marks to all monuments and markers of every nature relating to subdivisions, plats, rights-of-way, and all other surveys. The reference points shall be located so that they will not be disturbed during any of Franchisee's operations under this Franchise. The method of referencing monuments or other markers or points shall be approved by the City before placement. The replacement of all markers or monuments disturbed during any construction of the Franchisee shall be made as promptly as conditions permit. The cost of monuments or markers lost, destroyed, or disturbed and the expense or replacement with approved markers or monuments shall be borne by the Franchisee.

SECTION 23 RESERVATION OF RIGHTS

The City reserves the right, upon thirty (30) days written notice to the Franchisee, to amend or modify the provisions or conditions of this Franchise to conform to any state, county, federal, or city statute, ordinance, rule or regulation. The City may terminate this Franchise upon thirty (30) days written notice to the Franchisee if the Franchisee fails or refuses to comply with such amendment or modification.

SECTION 24 ASSIGNMENT

The Franchisee shall not have the right to assign this Franchise without the written consent of the City. No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions and responsibilities contained within the Franchise, as well as surety bonds which the City deems necessary to be posted, are received. The City's approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the Franchise.

SECTION 25 PENALTY FOR VIOLATION OF CONDITIONS

If the Franchisee fails to comply with any material term, condition or responsibility under this Franchise, the City may provide the Franchisee with written notice of the City's intent to revoke the Franchise if the Franchisee's failure is not cured within thirty (30) days of the date of the notice. During the thirty (30) days following the date of the notice, the Franchisee shall have the opportunity to remedy the failure to comply. A public hearing shall be scheduled before the Pacific City Council at least thirty (30) days following the notification on the issue of the revocation. If at the hearing, the City Council finds that grounds exist to revoke the Franchise under this paragraph and that the revocation is in the public interest, the City Council may by Agreement revoke the Franchise. The revocation shall be effective ninety (90) days after the public hearing.

SECTION 26 EXPIRATION AND RENEWAL

26.1 If the Franchisee requests a renewal of this Franchise prior to its expiration date, the City may, at the City's sole discretion, extend the term of this Franchise for up to one year beyond the expiration date to allow for processing of the renewal. If the City elects to extend the term of this Franchise, written notice of the extension shall be provided to the Franchisee prior to the Franchise expiration date.

26.2 If the Franchisee has not requested a renewal of this Franchise prior to its expiration date, the City has the right, upon thirty (30) day's prior notice to the Franchisee, to remove or relocate any of the Franchisee's Facilities as is reasonably necessary for the public's health, welfare or safety, or for the construction, alteration, or improvement of the Franchise Area, or for the construction or installation of lines or facilities of other franchise holders. The Franchisee shall be liable for costs incurred in any removal or relocation of the Franchisee's Facilities under this section.

26.3 Upon the expiration of this Franchise, the Franchisee shall continue to be responsible for the operation and maintenance of the Franchisee's existing facilities in the Franchise Area, but shall not have the right to provide additional services. This Section and Sections 11, 13, 14, 15, 16, 19, and 22 of this Franchise shall continue in force until such time as the Franchisee's Facilities are removed from the Franchise Area or abandoned in place with approval of the City.

SECTION 27 COMPLIANCE WITH LAWS

The Franchisee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and the City's Environmental Standards and Ordinances.

SECTION 28 NON-DISCRIMINATION CLAUSES

In all hiring or employment made possible or resulting from this Franchise, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, national origin, marital status or the presence of any

sensory, mental, or physical handicap, unless based upon a bona fide occupation qualification. No person shall be denied or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this agreement on the grounds of sex, sexual orientation, race, color, national origin, age, except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap.

SECTION 29 NOTICES

Any notice or information required or permitted under this Franchise may be sent to the following addresses unless otherwise specified:

City of Pacific:
City Community Development Director
100 - 3rd Avenue S.E.
Pacific, Washington 98047
253-929-1110

City of Auburn:
City Engineer
25 West Main Street
Auburn, WA 98001-4998
253-931-3010

SECTION 30 ATTORNEYS' FEES

If either party commences litigation against the other party relating to the performance or alleged breach of this Franchise, the prevailing party shall be entitled to all costs, including reasonable attorneys' fees incurred, relating to such litigation, including those incurred in any appeal.

SECTION 31 SEVERANCE

If any term, provision, condition or portion of this Franchise is held to be invalid, such invalidity shall not affect the validity of the remaining portions of this Franchise which shall continue in full force and effect, unless the dominant purpose of the Franchise would be prevented or the public interest would no longer be served, as determined by the City.

SECTION 32 EFFECTIVE DATE

This Agreement having been introduced at least five days prior to its date of passage and submitted to the city attorney, and being approved by at least a majority of the entire city council at a regular city council meeting, shall take effect and be in force five days after its passage, approval and publication as required by law.

SECTION 33 EXISTING UTILITIES

This Franchise shall govern Franchisee's new and existing Facilities within the City of Pacific.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

Exhibit E

INTERLOCAL AGREEMENT
regarding the
PROPOSED VISTA HEIGHTS DEVELOPMENT AT LAKELAND
City of Pacific and City of Auburn

This Agreement is entered into between the City of Pacific, a municipal corporation under the laws of Washington State, hereinafter referred to as "Pacific", and the City of Auburn, a municipal corporation formed under the laws of Washington State, hereinafter referred to as "Auburn".

WHEREAS, Pacific and Auburn have agreed that Auburn will assume SEPA lead agency responsibilities for a proposed residential development known as "Vista Heights at Lakeland," hereinafter referred to as the "Development," that is situated on adjoining parcels, one with tax identification number 312105-9008 (hereinafter referred to as "Site 7"), in Pacific, and one with tax identification number 312105-9006 (hereinafter referred to as "Site 8"), in Auburn; and

WHEREAS, Pacific and Auburn have agreed that Site 7 will be annexed into Auburn; and

WHEREAS, Pacific and Auburn previously executed an Interlocal Agreement dated July 24, 2000 regarding Emergency Fire Flow Protection for Site 7 from Auburn and domestic water service for Site 7 from Pacific; and

WHEREAS, upon completion of the Annexation, Site 7 will be served with water for domestic use and emergency fire flow protection by Auburn;

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The *Interlocal Agreement regarding Emergency Fire Flow Protection for the Proposed Vista Heights Development At Lakeland, City of Pacific and City of Auburn* is superceded by this agreement.

2. Pacific shall be responsible for collecting Auburn's traffic mitigation fee of $677.71 per single family residential lot if building permits are issued by Pacific prior to the completion of the annexation and the funds will be transmitted to Auburn.

3. Auburn shall be responsible for collecting Pacific's parks mitigation fee of $600.00 per single-family residential lot as authorized by applicable Pacific SEPA finding, Ordinance or Resolution if building permits are issued by Auburn subsequent to the completion of the annexation and the funds will be transmitted to Pacific.

4. Pacific shall be responsible for assisting Auburn in obtaining clear title to the storm water facilities and the underlying property that store and treat public storm water.

5. Each participant to this Agreement shall indemnify and hold the other harmless from and against any liability, loss, cost, damage, or expense of any kind and nature arising out of injury to person or damage to property in any manner, caused by the negligent act or omission of the indemnifying individual participant to this Agreement in the performance of its work or execution of its obligations under the terms of this Agreement. Each participant to this Agreement shall indemnify and hold the other harmless from all damages, which may occur as a result of any failure to comply with the provisions of Chapter 82.02 RCW or other applicable law.

6. Should a dispute arise between the parties that cannot be resolved satisfactorily, a mediator mutually acceptable to the parties shall resolve the dispute through the use of mediation at equal cost to each party. Should the Parties not be able to satisfactorily resolve the dispute through mediation, the forum for resolution shall be the King County Superior Court. The prevailing party shall be entitled to attorney fees and costs.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

EXHIBIT G

AN INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF PACIFIC FOR MAINTENANCE AND OPERATION SERVICES ON 'A' STREET SE

Pursuant to the Interlocal Cooperation Act codified as RCW 39.34, this Agreement is made and entered into this day by and between the **CITY OF AUBURN**, hereafter called "**AUBURN**", and the **CITY OF PACIFIC**, hereafter called "**PACIFIC**", to provide Right of Way maintenance and operation services on A Street SE as legally described on Attachment 1 and shown on Attachment 2.

WHEREAS, PACIFIC will not have the organization and personnel to provide Right of Way maintenance and operation services at the stated location; and

WHEREAS, PACIFIC desires to provide quality maintenance and operation activities for it's Right of Way; and

WHEREAS, AUBURN is able to provide such maintenance and operation services for PACIFIC, and

WHEREAS, it is for the public benefit that AUBURN and PACIFIC cooperate to provide safe and effective maintenance and operation activities; and

NOW THEREFORE, AUBURN and PACIFIC hereby agree:

1. **BASIC SERVICES:**

AUBURN will provide maintenance and operation activities at the area legal activities described in Attachment 1 and shown on Attachment 2:

A. Locate underground facilities for utilities or other digging operations except the Pacific waterlines.

B. Maintain public storm drainage facilities.

C. Maintain the existing street light system.

D. Maintain subgrade, pavement and pavement markings.

E. Maintain signing per the "Manual of Uniform Traffic Control Devices".

2. **AUBURN AND PACIFIC COORDINATION:**

AUBURN will identify a contact person to handle day-to-day operational problems related to the Basic Services. PACIFIC will identify a contact person for the same purposes. Emergency work to protect the public safety will be handled, as the AUBURN contact person deems necessary.

3. **PERSONNEL AND EQUIPMENT:**

A. AUBURN is acting herein as an independent contractor so that:

1. Control of personnel standards of performance, discipline and all other aspects of performance shall be governed entirely by AUBURN

2. Except as described in Sections 3.C. below, all persons rendering services hereunder shall be for all purposes employees of AUBURN

B. AUBURN shall furnish all personnel, resources, and materials deemed by AUBURN as necessary to provide maintenance services as outlined in Section 1 above.

C. In the event AUBURN uses contract services to perform one or more of the Basic Services for PACIFIC, the appropriate supervision and inspection of the contractor's work will be performed by AUBURN.

4. PACIFIC'S RESPONSIBLITIES

In support of AUBURN providing services for PACIFIC in Sections 1 and 2, PACIFIC shall:

A. Authorize AUBURN to perform maintenance services outlined in Section 1 within the City Limits of PACIFIC for the purposes of carrying out this Agreement.

B. PACIFIC will adopt by reference all AUBURN codes necessary to provide authority for AUBURN to perform service of this Agreement.

5. INDEMNIFICATION:

A. In executing this Agreement, AUBURN does not assume liability or responsibility for or in any way release PACIFIC's responsibility or liability which arises in part from the existence, validity or effect of PACIFIC's ordinances, rule, or regulations. In any such cause, claim, suit, action and administration proceeding commences, PACIFIC shall defend the same at its sole expense and if judgment is entered or damages are awarded against PACIFIC, AUBURN, or both, PACIFIC shall satisfy the sam3e, including chargeable costs and attorney's fees.

B. PACIFIC shall indemnify and hold harmless AUBURN and its officers, agents, and employees, from and against any and all claims, actions, suits liability, loss costs and expense, and damages of any nature whatsoever, which are caused by or result from a negligent act or omission of AUBURN, it's officers, agents, and employees in performing services pursuant to this Agreement.

6. NON-DISCRIMINATION:

AUBURN and PACIFIC certify that both agencies are equal opportunity employers.

7. AUDITS AND INSPECTIONS:

All records and documents with respect to this Agreement shall be subjected to inspection, review or audit by AUBURN or PACIFIC for the duration of this Agreement.

8. AMENDMENTS:

The Agreement may be amended in writing at any time by mutual agreement of both parties.

9. ENTIRE AGREEMENT:

The two parties agree that this Agreement is a complete expression of the terms hereto and any oral representations or understandings are not incorporated herein.

10. AGREEMENT ADMINISTRATION:

The parties shall appoint representatives to review Agreement performances and resolve problems, which cannot be dealt with by PACIFIC and AUBURN's contact persons.

11. INVALID PROVISIONS:

If any provision of this Agreement is held invalid, the remainder of the Agreement shall not be affected thereby if such remainder would then continue to serve the purpose and objective of the parties.

IN WITNESS WHEREOF, the parties have executed this Agreement effective as of the date last written below.

RESOLUTION NO. 3649

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A LEASE AGREEMENT BETWEEN THE CITY AND VOICESTREAM PCS III CORPORATION, FOR THE PURPOSE OF LEASING SPACE ON THE LAKELAND HILLS WATER TOWER FOR COMMUNICATION EQUIPMENT

WHEREAS, the City of Auburn has facilities from which cellular and telecommunication equipment could be attached; and

WHEREAS, Voicestream PCS III Corporation has sought use of such facilities and has negotiated an agreement for use thereof with terms acceptable to the City.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREBY RESOLVES as follows:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Lease Agreement between the City and VoiceStream PCS III Corporation, for the purpose of leasing space on the Lakeland Hills water tower for communication equipment, in substantial conformity with the agreement attached hereto, marked as Exhibit "I" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

SECTION 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 17th day of Nov, 2003.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

Exhibit "I"

SITE LEASE AGREEMENT

THIS SITE LEASE AGREEMENT("Lease") is by and between City of Auburn, ("Landlord") and VoiceStream PCS III Corporation, a Delaware corporation (Tenant").

1. Lease Agreement.

(a) Landlord hereby leases to Tenant a portion of the real property legally described as follows: THE SOUTH 175.00 FEET OF THE EAST 110.00 FEET OF THE WEST 1,393.00 FEET OF THE SOUTHEAST QUARTER OF SECTION 31, TOWNSHIP 21 NORTH, RANGE 5 EAST, W.M., CITY OF AUBURN, RECORDS OF KING COUNTY, WASHINGTON, (collectively referred to hereinafter as the "Property"). The lease includes the right to operate a personal communications service antenna installation on the Landlord's water reservoir, on the terms and conditions set forth herein.

(b) The Tenant agrees to the lease, subject to the following terms and conditions. Landlord hereby leases to Tenant the use of that portion of the Property as generally described and depicted in the attached Exhibit A, (collectively referred to hereinafter as the "Lease Area"). The Lease Area, located at Lakeland Hills Water Reservoir facility, Auburn, Washington, comprises approximately an area not to exceed 2,740 square feet.

(c) The lease shall be nonexclusive and shall not preclude the Landlord from granting a similar lease, right, license, franchise, etc., to other carriers or other persons for telecommunications or any other purpose.

2. Term. The initial term of this Lease shall be five (5) years commencing on the date of execution of the Agreement (the "Commencement Date"), and terminating at midnight on the last day of the initial term (the "Initial Term").

3. Antenna Facilities. Tenant may use the Lease Area for the transmission and reception of radio communication signals and for the construction, installation, operation, maintenance, repair, removal or replacement of related facilities necessary for the operation of a telecommunications facility as well as for access and utilities. Tenant may only place its ground based telecommunications equipment within the portion of the Lease Area identified as the "Compound" on Exhibit A. Tenant may install and maintain landscape plantings within the Lease Area. In addition to using the Lease Area, Tenant may utilize the Property to install and use underground conduits that begin at the Lease Area, cross the Property in a generally straight line to the base of the water reservoir (Reservoir) and then extend up the side of the Reservoir to antennas which Tenant will install on the railing of the Reservoir, as shown in Exhibit A (hereinafter referred to as "Antenna Facilities").

4. Rent. Tenant shall pay Landlord, as rent, Twelve Thousand and no/100 dollars ($12,000.00) per year ("Rent"). Rent shall be payable within twenty (20) days following the Commencement Date and thereafter the Rent will be payable yearly, no later than the anniversary of the Commencement Date to City of Auburn Water Utility Fund, Account Number 430.369.900, at Landlord's address specified in Section 12 below. The Rent shall increase annually over the Rent payable the preceding year by not less than three and one half percent (3.5%). If the average increase in the Consumer Price Index – Urban for the Seattle – Tacoma – Bremerton area (CPI) is greater than three and one half percent (3.5%) over the period of the Term, or any Renewal Term, then the rate at which the Rent is increased annually during the following Renewal Term shall be adjusted to that CPI based average percentage rate. If the average increase in the CPI is less than or equal to three and one half percent (3.5%) over the period of the Term, or any Renewal Term, then the rate at which the Rent is increased annually during the following Renewal Term shall be three and one half percent (3.5%). It shall be the responsibility of the Landlord to track the CPI and notify the Tenant of increases or reductions in the Rent. Landlord shall notify Tenant within 90

---

days of the commencement of the Renewal Term as to the revised rate at which the Rent shall be increased annually thereafter. Landlord will invoice Tenant for back Rent due or refund over payment as necessary to correct the payment received for the first year of the Renewal Term. If at any time the CPI ceases to incorporate a significant number of items, if a substantial change is made in the method of establishing the CPI, or if issuance of the CPI shall be discontinued, then the Landlord and Tenant shall mutually agree upon another standard recognized cost of living index issued by the United States Government, provided that if the parties cannot reach agreement on such other standard cost of living index, then the Landlord shall select the index closest to the CPI. In either case, the substitute index chosen shall result in increases in the Rent similar to those that had been, or would have been, generated by the CPI. If this Lease is terminated at a time other than on the anniversary of the Commencement Date, Rent shall be prorated as of the date of termination for any reason (other than a default by Tenant) and all prepaid Rent shall be refunded to Tenant within sixty (60) days.

5. Renewal. Tenant may extend this Lease for (5) additional, five-year terms (each a "Renewal Term"). Each Renewal Term shall be on the same terms and conditions as set forth herein, including the Rent increase set forth in Section 4, above. This Lease shall automatically renew for each successive Renewal Term unless Tenant notifies Landlord, in writing, of Tenant's intention not to renew this Lease, at least ninety (90) days prior to the expiration of the Initial Term or any Renewal Term. Landlord may, during any Renewal Term, notify Tenant, in writing, of Landlord's intention not to renew this Lease for an additional Renewal Term, which notice shall be provided to Tenant at least one hundred and eighty (180) days prior to the expiration of the then in effect Renewal Term. If Tenant shall remain in possession of the Lease Area at the expiration of this Lease or any Renewal Term without a written agreement, such tenancy shall be deemed a month-to-month tenancy under the same terms and conditions of this Lease.

6. Interference. Tenant shall not use the Lease Area in any way which interferes with the use of the Property by Landlord. Tenant's Antenna Facilities and the use thereof shall not interfere with the use of any other communication or similar equipment of any kind and nature owned or operated by Landlord or other lessee, licensees, franchisees etc., on the Property except as might be permitted by applicable laws, provided, however that subsequent to the installation by Tenant of the Antenna Facilities, Landlord agrees to exercise reasonable care to assure equipment of subsequent providers leasing space on the Property does not interfere with Tenants Antenna Facilities operations. The Landlord, however, is not in any way responsible or liable for any interference with Tenants use of Landlords Property, which may be caused by the use and operation of any other tenant's equipment, even if caused by new technology. In the event that any other tenant's activities interfere with Tenant's use of Landlord's property, and Tenant cannot work out this interference with other tenant's, Tenant may, upon 30 days notice to Landlord, terminate this lease and restore the Landlord's Property to its original condition, reasonable wear and tear excepted.

7. Improvements; Utilities; Access.

(a) Tenant shall have the right, at its expense, to erect and maintain on the Lease Area, improvements, personal property and facilities necessary to operate its communications system, including, equipment shelters and/or cabinets and related cables and utility lines and a location based system, including coaxial cable, base units and other associated equipment as such location based system may be permitted by any county, state or federal agency/department. Tennant shall have the right, at its expense, to erect and maintain on the Property including on Landlord's water reservoir, improvements, personal property and facilities necessary to operate its communications system, including, radio transmitting and receiving antennas and related cables and conduits and other associated equipment as such location based system may be permitted by any county, state or federal agency/department. Tenant shall have the right to alter, replace, and expand within the confines of the Lease Area as defined in Section 1 and without interference to other providers / tenants, enhance and upgrade the Antenna Facilities at any time during the term of this Lease. Tenant shall cause all construction to occur lien-free and in compliance with all applicable laws and ordinances. Landlord acknowledges that it shall not interfere with any aspects of construction, including, attempting to direct construction personnel as to the location of or method of installation of the Antenna Facilities. The

Antenna Facilities shall remain the exclusive property of Tenant. Tenant shall have the right to remove the Antenna Facilities at any time during and upon the expiration or termination of this Lease.

(b) Tenant, at its expense, may use any and all appropriate means of restricting access to the Compound, including, without limitation, the construction of a fence.

(c) Tenant shall, at Tenant's expense, keep and maintain the Lease Area and Antenna Facilities now or hereafter located on the Property in commercially reasonable condition and repair during the term of this Lease, normal wear and tear excepted. Upon termination or expiration of this Lease, the Lease Area and Antenna Facilities areas shall be returned to Landlord in good, usable condition, normal wear and tear excepted, within ninety (90) days.

(d) Tenant shall have the right to install utilities, power and telephone, at Tenant's expense, and to improve the present utilities on the Property (including, but not limited to, the installation of emergency power generators). Landlord agrees to cooperate with Tenant in its reasonable efforts to acquire necessary utility service. Tenant shall, wherever practicable, install separate meters for utilities used on the Property by Tenant. Landlord shall diligently correct any variation, interruption or failure of utility service within Landlord's control.

(e) Prior to installation of equipment, Tenant shall submit for Landlord review and approval, which approval shall not be unreasonably withheld or delayed, an electrical and grounding connection plan that assures no interference with the water tank cathodic protection system. The plan shall include a 3 " minimum diameter common use conduit enclosure for cables from the ground level to top of tank. This conduit may be utilized by other telecommunication providers until such time as it is filled to capacity, at which time new providers will need to pay for upsizing. Upon Landlord approval of the plans, Tenant may proceed to install and operate the Antenna Facilities.

(f)Tennant shall have the right during the Initial Term and of this Lease and any Renewal Term for ingress and egress to the Property over the south fifteen (15) feet of Lot 6, Lakeland Hills Division Number 3, Extension, according to the plat thereof recorded in Volume 145 of Plats, pages 72 and 73, in King County Washington.

(g) Tenant shall have 24-hours-a-day, 7-days-a-week access to the Lease Area ("Access") at all times during the Initial Term of this Lease and any Renewal Term. In the event Landlord, its employees or agents unreasonably deny Access to Tenant, its employees or agents, Tenant shall, without waiving any other rights that it may have at law or in equity, deduct from Rent amounts due under this Lease an amount equal to fifty and no/100 dollars per day for each day that Access is impeded or denied. Access to Landlord facilities beyond the Lease Area, including but not limited to the water reservoir site and the water reservoir, require 48 hours notice to the Water Division Supervisor of the City of Auburn Water Utility (phone: 253-931-3066). Access to Landlord facilities will only occur with Landlord supervision. Tenant agrees to reimburse Landlord for Landlord expenses attributed to supervising Tenant while accessing Landlord facilities. The hourly rate for Landlord supervision during City standard office hours will be $31.50 per hour in calendar year 2003. The hourly rate shall increase annually on January 1st over the hourly rate payable the preceding year by not less than three and one half percent (3.5%) or the CPI – Urban for the Seattle / Tacoma area whichever is the greater, unless a different hourly rate amount is negotiated.

8. Termination. Except as otherwise provided herein, this Lease may be terminated, without any penalty or further liability as follows:

(a) upon thirty (30) days' written notice by Landlord if Tenant fails to cure a default for payment of amounts due under this Lease within that thirty (30) day period;

(b) immediately if Tenant notifies Landlord of unacceptable results of any title report, environmental or soil tests prior to Tenant's installation of the Antenna Facilities on the Lease Area, or if Tenant is unable to

obtain, maintain, or otherwise forfeits or cancels any license (including, without limitation, an FCC license), permit or any Governmental Approval necessary to the installation and/or operation of the Antenna Facilities or Tenant's business;

(c) upon ninety (90) days' written notice by Tenant if the Lease Area or the Antenna Facilities are, or become unacceptable under Tenant's design or engineering specifications for its Antenna Facilities or the communications system to which the Antenna Facilities belong;

(d) immediately upon written notice by Tenant if the Lease Area or the Antenna Facilities are destroyed or damaged so as in Tenant's reasonable judgment to substantially and adversely affect the effective use of the Antenna Facilities. In such event, all rights and obligations of the parties shall cease as of the date of the damage or destruction, and Tenant shall be entitled to the reimbursement on a prorated basis of any Rent prepaid by Tenant. If Tenant elects to continue this Lease, then all Rent shall abate until the Lease Area and/or the Antenna Facilities are restored to the condition existing immediately prior to such damage or destruction; or

(e) at the time title to the Property transfers to a condemning authority, pursuant to a taking of all or a portion of the Property sufficient in Tenant's determination to render the Lease Area unsuitable for Tenant's use. Landlord and Tenant shall each be entitled to pursue their own separate awards with respect to such taking.

(f) Landlord may terminate this Lease if Landlord needs the Lease Area for expansion of Landlord's responsibility to provide its services, and Landlord has no reasonable or economical alternative site available, provided Landlord provides Tenant written notice 12 months in advance of Landlord's need to re establish the Landlord's sole use of the Lease Area. Upon Tenant's receipt of written notice, Tenant shall have six (6) months to submit to Landlord alternative locations for its Antenna Facilities. Such alternative locations may be on the Property or other properties owned or managed by Landlord. Landlord shall evaluate such alternatives and advise Tenant in writing if one or more of the alternatives is suitable to accommodate Tenant's Antenna Facilities. If so requested by the Landlord, Tenant shall submit additional relevant information to assist the Landlord in making such evaluation. Landlord shall give each alternative proposed by Tenant full and fair consideration, within a reasonable time so as to allow for the relocation work to be performed in a timely manner. In the event Landlord ultimately determines not less than ninety (90) days from the termination date that there is no other reasonable alternative, Tenant shall remove its Antenna Facilities as otherwise provided in this Section 7 (c) of this Lease. If an alternative location for Tenant's Antenna Facilities is found, Landlord and Tenant agree to enter into a new Lease Agreement with the same terms and conditions of this Lease.

(g) If for reasons related to public health, safety or welfare, or for any operational need of the Water Utility, Landlord determines that this Lease must be terminated, then Landlord reserves rights of unilateral termination and will do so by providing Tenant with a six month written notice.

(h) Tenant shall be entitled to a pro rata refund of its prepaid Rent for any termination of this Lease by Landlord pursuant to Subsection 8(f) or 8(g).

9. Default and Right to Cure. Notwithstanding anything contained herein to the contrary and without waiving any other rights granted to it at law or in equity, each party shall have the right, but not the obligation, to terminate this Lease on written notice pursuant to Section 12 hereof, to take effect immediately, if the other party (i) fails to perform any covenant for a period of thirty (30) days after receipt of written notice thereof to cure or (ii) commits a material breach of this Lease and fails to diligently pursue such cure to its completion after sixty (60) days' written notice to the defaulting party.

10. Taxes. Landlord shall pay when due all real property taxes or other fees and assessments for the Property, including the Lease Area. In the event that Landlord fails to pay any such real property taxes or other fees and assessments, Tenant shall have the right, but not the obligation, to pay such owed amounts and deduct them from Rent amounts due under this Lease. Notwithstanding the

foregoing, Tenant shall pay any personal property tax, State leasehold tax, excise tax, real property tax or any other tax or fee which are directly attributable to the presence or installation of the Tenant's Antenna Facilities, only for so long as this Lease has not expired of its own terms or is not terminated by either party. Landlord hereby grants to Tenant the right to challenge, whether in a Court, Administrative Proceeding, or other venue, on behalf of Landlord and/or Tenant, any personal property or real property tax assessments, State leasehold tax or excise tax that may affect Tenant. If Landlord receives notice of any personal property or real property tax assessment, State leasehold tax or excise tax against the Landlord, which may affect Tenant and is directly attributable to Tenant's installation, Landlord shall provide timely notice of the assessment to Tenant sufficient to allow Tenant to consent to or challenge such assessment. Further, Landlord shall provide to Tenant any and all documentation associated with the assessment and shall execute any and all documents reasonably necessary to effectuate the intent of this Section 10.

11. Insurance and Subrogation and Indemnification.

(a) Tenant shall provide Commercial General Liability Insurance naming Landlord (the City of Auburn) as additional insured in an aggregate amount of Two Million and no/100 dollars ($2,000,000.00). Tenant may satisfy this requirement by obtaining the appropriate endorsement to any master policy of liability insurance Tenant may maintain.

(b) Tenant shall indemnify, protect, defend and hold Landlord and its employees and agents harmless from and against any and all claims, liabilities, judgments, costs, damages, and expenses, including reasonable attorney's fees, arising out of or in any way related to the Antenna Facilities, including, but not limited to, the installation, maintenance, operation or removal thereof, except to the extent that such claim, liability, judgment, cost, damage or expense arises out of the sole negligent act or omission, or willful misconduct of Landlord or its employees or agents. Landlord shall not be liable to Tenant, its agents, employees and contractors for damage to the Antenna Facilities or any other property belonging to Tenant from any cause, except for any damage caused by the sole negligent act or omission or willful misconduct of Landlord or its employees or agents. Tenant waives all claims against Landlord and its employees and agents for damage to persons or Antenna Facilities or property arising for any reason other than a claim based on the sole negligent act or omission or willful misconduct of Landlord or its employees or agents. Landlord and its employees and agents shall have no liability to Tenant for any interruption of any utility service unless solely caused by the negligent act or omission or willful misconduct of Landlord or its employees or agents.

Should a court of competent jurisdiction determine that this Lease is subject to RCW 4.24.115, then, in the event of liability for damages arising out of bodily injury to persons or damages to property caused by or resulting from the concurrent negligence of the Tenant and the Landlord, its officers, officials, employees and volunteers, the Landlord's liability hereunder shall be only to the extent of the Landlord's negligence. It is further specifically and expressly understood that the indemnification provided herein constitutes the Tenant's waiver of immunity under Industrial Insurance, Title 51 RCW, solely for the purposes of this indemnification. This waiver has been mutually negotiated by the parties. The provisions of this section shall survive the expiration or termination of this Lease.

12. Notices. All notices, requests, demands and other communications shall be in writing and are effective three (3) days after deposit in the U.S. mail, certified and postage paid, or upon receipt if personally delivered or sent by next-business-day delivery via a nationally recognized overnight courier to the addresses set forth below. Landlord or Tenant may from time to time designate any other address for this purpose by providing written notice to the other party.

13. Quiet Enjoyment, Title and Authority. Landlord covenants and warrants to Tenant that (i) Landlord has full right, power and authority to execute this Lease; (ii) it has good and unencumbered title to the Property free and clear of any liens or mortgages, except those disclosed to Tenant and which will not interfere with Tenant's rights to or use of the Lease Area; and (iii) execution and performance of this Lease will not violate any laws, ordinances, covenants, or the provisions of any mortgage, lease, or other agreement binding on Landlord.

14. Environmental Laws. Landlord represents that it has no knowledge of any substance, chemical or waste (collectively, "Hazardous Substance") on the Property that is identified as hazardous, toxic or dangerous in any applicable federal, state or local law or regulation. Landlord and Tenant shall not introduce or use any Hazardous Substance on the Property in violation of any applicable law. Landlord shall be responsible for, and shall promptly conduct any investigation and remediation as required by any applicable environmental laws, for all spills or other releases of any Hazardous Substance not caused in whole or in part by Tenant, that have occurred or which may occur on the Property. Each party agrees to defend, indemnify and hold harmless the other from and against any and all administrative and judicial actions and rulings, claims, causes of action, demands and liability (collectively, "Claims") including, but not limited to, damages, costs, expenses, assessments, penalties, fines, losses, judgments and reasonable attorney fees that the indemnitee may suffer or incur due to the existence or discovery of any Hazardous Substances on the Property or the migration of any Hazardous Substance to other properties or the release of any Hazardous Substance into the environment (collectively, "Actions"), that relate to or arise from the indemnitor's activities on the Property. Landlord agrees to defend, indemnify and hold Tenant harmless from Claims resulting from Actions on the Property not caused by Landlord or Tenant prior to and during the Initial Term and any Renewal Term of this Lease. The indemnifications in this section specifically include, without limitation, costs incurred in connection with any investigation of site conditions or any cleanup, remedial, removal or restoration work required by any governmental authority. This Section 14 shall survive the termination or expiration of this Lease.

15. Assignment and Subleasing. All of the terms and provisions contained herein shall inure to the benefit of and shall be binding upon the parties hereto and their respective heirs, legal representatives, successors and assigns. This Agreement shall not be assigned by Tenant without the express written consent of the Landlord, which consent shall not be unreasonably withheld, delayed or conditioned. Any attempted assignment in violation of this Section shall be void. The transfer of the rights and obligations of Tenant to a parent, subsidiary, or other affiliate of Tenant, or to any successor-in-interest or entity

acquiring fifty-one percent (51%) or more of Tenant's stock or assets, shall not be deemed an assignment. Tenant shall give to Landlord thirty (30) days' prior written notice of any such transfer.

Additionally, Tenant may, upon notice to Landlord, mortgage or grant a security interest in this Lease and the Antenna Facilities, and may assign this Lease and the Antenna Facilities to any mortgagees or holders of security interests, including their successors or assigns (collectively "Mortgagees"), provided such Mortgagees agree to be bound by the terms and provisions of this Lease. In such event, Landlord shall execute such consent to leasehold financing as may reasonably be required by Mortgagees. Landlord agrees to notify Tenant and Tenant's Mortgagees simultaneously of any default by Tenant and to give Mortgagees the same right to cure any default as Tenant or to remove any property of Tenant or Mortgagees located on the Lease Area, except that the cure period for any Mortgagees shall not be less than thirty (30) days after receipt of the default notice, as provided in Section 9 of this Lease. All such notices to Mortgagees shall be sent to Mortgagees at the address specified by Tenant. Failure by Landlord to give Mortgagees such notice shall not diminish Landlord's rights against Tenant, but shall preserve all rights of Mortgagees to cure any default and to remove any property of Tenant or Mortgagees located on the Lease Area.

16. Successors and Assigns. This Lease granted herein shall run with the land, and shall be binding upon and inure to the benefit of the parties, their respective successors, personal representatives and assigns. This Agreement shall not be assigned by Tenant without the express written consent of the Landlord, which consent shall not be unreasonably withheld, delayed or conditioned.

17. Removal of Antenna Facilities. The Antenna Facilities are and shall remain the property of the Tenant and upon the expiration or earlier termination of this Lease, Tenant shall, at Tenant's sole cost and expense, remove the Antenna Facilities and restore the Lease Area to its original condition, normal wear and tear excluded.

18. Miscellaneous.

(a) The substantially prevailing party in any litigation, including any arbitration to which the parties shall submit, arising hereunder shall be entitled to its reasonable attorneys' fees and court costs, including appeals, if any.

(b) This Lease constitutes the entire agreement and understanding of the parties, and supersedes all offers, negotiations and other agreements. There are no representations or understandings of any kind not set forth herein. Any amendments to this Lease must be in writing and executed by both parties. At such time as the Auburn City Council approves any regulation affecting telecommunications, Tenant agrees to amend this Lease, as determined by the Landlord in order to comply with any future ordinance related to telecommunications provided, however, that in no event shall such regulation (i) materially interfere with or affect Tenant's operation of its Antenna Facilities; or (ii) increase Tenant's financial obligations under the terms of this Lease, except as provided herein, or impose some new financial obligations not already contemplated by this Lease. No amendment, change or modification of this Lease shall be valid, unless in writing and signed by all parties hereto.

(c) Each party agrees to cooperate with the other in executing any documents (including a Memorandum of Lease in substantially the form attached hereto as Exhibit B) necessary to protect its rights or use of the Lease Area. The Memorandum of Lease may be recorded in place of this Lease by either party. In the event the Property is encumbered by a mortgage or deed of trust, Landlord agrees, upon request of Tenant, to obtain and furnish to Tenant a non-disturbance and attornment agreement for each such mortgage or deed of trust, in a form reasonably acceptable to Tenant. Tenant may obtain title insurance on its interest in the Lease Area.

(d) This Lease shall be construed in accordance with the laws of the state in which the Property is located.

(e) If any term of this Lease is found to be void or invalid, such finding shall not affect the remaining terms of this Lease, which shall continue in full force and effect. The parties agree that if any provisions are deemed not enforceable, they shall be deemed modified to the extent necessary to make them enforceable. No provision of this Lease will be deemed waived by either party unless expressly waived in writing signed by the waiving party. No waiver shall be implied by delay or any other act or omission of either party. No waiver by either party of any provision of this Lease shall be deemed a waiver of such provision with respect to any subsequent matter relating to such provision.

(f) The persons who have executed this Lease represent and warrant that they are duly authorized to execute this Lease in their individual or representative capacity as indicated.

(g) This Lease may be executed in any number of counterpart copies, each of which shall be deemed an original, but all of which together shall constitute a single instrument.

(h) All Exhibits referred to herein and any Addenda are incorporated herein for all purposes. The parties understand and acknowledge that Exhibit A (the Lease Area, Compound, and Antenna Facilities location within the Property), and Exhibit B (Memorandum of Lease) are attached to this Site Lease Agreement. The terms of all Exhibits are incorporated herein for all purposes.

(i) If Landlord is represented by any broker or any other leasing agent, Landlord is responsible for all commission fees or other payment to such agent, and agrees to indemnify and hold Tenant harmless from all claims by such broker or anyone claiming through such broker. If Tenant is represented by any broker or any other leasing agent, Tenant is responsible for all commission fee or other payment to such agent, and agrees to indemnify and hold Landlord harmless from all claims by such broker or anyone claiming through such broker.

19. Headings. The caption and paragraph headings used in this Lease are inserted for convenience of reference only and are not intended to define, limit or affect the interpretation or construction of any term or provision hereof.

20. Liens. Except with respect to activities for which Landlord is responsible, Tenant shall pay as due all claims for work done on, and for services rendered or material furnished to, the Antenna Facility, and shall keep the Antenna Facility free from all liens.

The effective date of this Lease is the date of execution by the last party to sign (the "Effective Date").

RESOLUTION NO. **3650**

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE A FRANCHISE AGREEMENT BETWEEN THE LAKEHAVEN UTILITY DISTRICT AND THE CITY OF AUBURN, ALLOWING THE LAKEHAVEN UTILITY DISTRICT TO CONNECT, INSTALL, OPERATE, MAINTAIN AND REPAIR WATER SYSTEM, FACILITIES, AND APPURTENANCES IN, OVER, ALONG, ACROSS AND UNDER THE FRANCHISE AREA FOR THE PURPOSE OF PROVIDING WATER SERVICE

WHEREAS, the Lakehaven Utility District currently owns, operates, and maintains a water system within Auburn's public right of way located in the franchise area; and

WHEREAS, the Lakehaven Utility District is seeking a new comprehensive franchise with Auburn for public water facilities installed within Auburn's current and future public right of way; and

WHEREAS, in order to maintain control over the use of City of Auburn right-of-ways by utilities operating within the City of Auburn, it is appropriate to enter into franchise agreements with such utilities; and

WHEREAS, Lakehaven Utility District is such a utility, and has negotiated this franchise agreement with the City of Auburn acceptable to both parties; and

WHEREAS, the City of Auburn has determined that it is in the best interests of the public to grant the Lakehaven Utility District a water franchise on the terms and conditions set for in this Agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn is herewith authorized to execute a Franchise Agreement between the Lakehaven Utility District and the City of Auburn in substantial conformity with the Agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 2nd day of February, 2004.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

EXHIBIT "A"

CITY OF AUBURN, WASHINGTON
WATER FRANCHISE AGREEMENT
WITH THE LAKEHAVEN UTILITY DISTRICT

THIS FRANCHISE AGREEMENT, made and entered into this 23rd day of September, 2004, by and between the CITY OF AUBURN, Washington and the LAKEHAVEN UTILITY DISTRICT:

WITNESSETH:

WHEREAS, the Lakehaven Utility District currently owns, operates, and maintains a water system within Auburn's public right-of-way located in the franchise area; and

WHEREAS the Lakehaven Utility District is seeking to establish a comprehensive franchise with the City of Auburn for water system lines within Auburn's current and future public right-of-way; and

WHEREAS, in order to maintain control over the use of City of Auburn rights-of-way by utilities operating within the City of Auburn, it is appropriate to enter into franchise agreements with such utilities; and

WHEREAS, Lakehaven Utility District is such a utility, and has negotiated this franchise agreement with the City of Auburn acceptable to both parties; and

WHEREAS, the City of Auburn has determined that it is in the best interests of the public to grant the Lakehaven Utility District a franchise on the terms and conditions set forth in this franchise agreement.

NOW, THEREFORE THE CITY OF AUBURN AND THE LAKEHAVEN UTILITY DISTRICT AGREE AS FOLLOWS:

SECTION 1 DEFINITIONS

Where used in this franchise agreement ("Franchise"), the following definitions shall apply:

1.1 "Franchisee" means the Lakehaven Utility District, a Washington municipal corporation, and its respective successors and assigns.

1.2 "City" means the City of Auburn, a Washington municipal corporation.

1.3 "Franchise Area" means all of the public roads, streets, avenues, alleys, highways, and other rights-of-way of the City as now laid out, platted, dedicated or improved; and any and all public City roads, streets, avenues, alleys, highways, and other rights-of-way that may hereafter be laid out, platted, dedicated or improved within the area in which the City has jurisdiction, as described in Attachment 1 and as depicted in

Attachment 2, both attachments attached hereto, which is by this reference incorporated as if fully set forth herein; provided, that the Franchise Area shall not include or convey any right to the Franchisee to install facilities on, or to otherwise use, City owned or leased properties; and provided that the terms of this franchise (i.e., permitting and enforcement) shall not apply to those public roads, streets, avenues, alleys, highways, and other rights-of-way that may hereafter be laid out, platted, dedicated or improved within the area as described in Attachment 1 and depicted in Attachment 2 until such time that the City has assumed jurisdiction thereof.

1.4 "Facilities" means the Franchisee's water system, lines, mains, pump stations, appurtenances, and all other necessary or convenient appurtenances for the purpose of providing water service.

SECTION 2 FRANCHISE GRANT

Subject to the terms and conditions set forth in this Franchise, the City grants to the Franchisee the right to construct, own and maintain its Facilities, including, but not limited to, water pipelines, pump stations, and appurtenances within the City's public right-of-way and the Franchisee's water service area. In exercising authority to construct and install its Facilities and to excavate trenches in City roads for the purposes of constructing, installing, operating, maintaining, removing, and replacing its Facilities, and making connections between the same to the dwellings and other buildings of the consumers, the Franchisee shall be governed by and conform to the general rules adopted by the Public Works Department of the City, and the Franchisee, at no expense to the City, shall complete all work and shall replace and restore the City roads to the condition of the City roads existing immediately prior to such disturbance; PROVIDED, HOWEVER, that no such work shall be done prior to the obtaining of a permit therefor issued by the City's Public Works Director (hereinafter "Director"), which permit shall set forth conditions pertaining to the work to be done and specifications for the restoration of the roads to the same condition as they were immediately prior to such work. If the Franchisee does not repair the City roads to the satisfaction of the Director, the City may, at its sole discretion, repair such City roads, or cause them to be repaired, and the Franchisee hereby agrees to reimburse the City for the cost of such work, including reasonable overhead costs.

SECTION 3 FRANCHISE TERM

This Franchise shall take full force and effect five calendar days after being approved by the City, and shall be valid for a period of 25 years, expiring in 2029; provided, that this Franchise shall not take effect and the Franchisee shall have no rights under this Franchise unless the Franchisee files a written acceptance of this Franchise with the City pursuant to Section 4 of this Franchise.

SECTION 4 ACCEPTANCE BY FRANCHISEE OF TERMS AND CONDITIONS

The full acceptance of this Franchise and all of its terms and conditions shall be filed with the City Clerk within forty-five (45) days from the date of the resolution approving this Franchise by the Franchisee's duly elected Board of Commissioners. Full acceptance of this Franchise is a condition precedent to its taking effect, and unless this Franchise is

accepted within the time specified, this grant will be null and void and have no force or effect.

SECTION 5 NON-EXCLUSIVE FRANCHISE

This Franchise is not exclusive. It does not prohibit the City from granting franchises for other public or private utilities in, over, along, across, and under any City property, including the Franchise Area. This Franchise does not prevent or prohibit the City from constructing, altering, maintaining or using any of the Franchise Area. The City retains full power to make all changes, relocations; repair, maintenance or other work to or in the Franchise Area as the City deems fit.

SECTION 6 JURISDICTION

This Franchise is intended to convey limited rights and interest only as to those roads and rights-of-way in which the City has an actual interest within the Franchise Area. It is not a warranty of title or of interest in City road rights-of-way. None of the rights granted to the Franchisee shall affect the jurisdiction of the City over City road rights-of-way or the City's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating. The parties shall comply with all applicable rules and regulations pertaining to them in connection with the matters covered herein.

SECTION 7 REGULATION OF USE AND CONTROL

This Franchise does not deprive the City of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the City road rights-of-way covered by this Franchise. The City reserves the right and power at all times to exercise its police powers with respect to the time, manner and location of the placement of the Franchisee's Facilities.

SECTION 8 EMINENT DOMAIN

This Franchise and the limited rights and interests granted by this Franchise are subject to the exercise of eminent domain. In the event of an exercise of eminent domain by the City, the value to be attributed to all the rights and interests granted under this Franchise shall not exceed the actual amount the Franchisee paid to the City in obtaining this Franchise.

SECTION 9 VACATION

If at any time the City vacates any City rights-of-way covered by this Franchise, the City will not be held liable for any damages or loss to the Franchisee by reason of such vacation. The City may, after giving thirty (30) days written notice to the Franchisee, terminate this Franchise with respect to any City road or rights-of-way vacated. However, should Franchisee notify the City that an easement is required for existing or proposed facilities within the proposed vacation area, the City shall withhold approval of such vacation until the Franchisee has notified the City that the necessary easement(s) have been secured, or provisions otherwise made to maintain the viability and use of existing Facilities.

SECTION 10 ENFORCEMENT

The City's failure to enforce any provision of this Franchise does not constitute a waiver of its right to enforce that provision or any other provision of this Franchise.

SECTION 11 INDEMNITY AND HOLD HARMLESS

11.1 The Franchisee shall defend, indemnify and hold harmless the City, its appointed and elected officials, and its employees and agents from and against liability for all claims, actions, injuries, demands, liabilities, losses, costs, damages and judgments, including costs of defense thereof, (collectively referred to as "damages") for injury to persons, death or property damage caused by, arising out of, or incidental to the Franchisee's exercise of the rights and privileges granted by this Franchise, except for damages caused by or arising out of the City's sole negligence. In the event that any such claim or demand for damages is presented to or filed with the City, or if any suit or action is initiated against the City based on such claims or demands for damages, the City shall promptly notify the Franchisee of the claim, demand, suit or action and the Franchisee shall have the right, at its election and its sole cost and expense, to settle and compromise such claim, demand, suit or action, or defend the same at the Franchisee's sole cost and expense.

11.2 If it is determined that RCW 4.24.115 applies to this Franchise, the Franchisee agrees to defend, hold harmless and indemnify the City to the maximum extent permitted under that statute, and specifically for the Franchisee's negligence concurrent with that of the City to the full extent of the Franchisee's negligence.

SECTION 12 INSURANCE

12.1 The Franchisee shall keep a policy of insurance in force with a minimum limit of five million dollars ($5,000,000.00). Verification of insurance coverage is a condition precedent to the effectiveness of this Franchise.

12.2 The insurance shall be maintained in full force and effect at the Franchisee's sole expense throughout the term of the Franchise, and, should such insurance be terminated, this Franchise shall terminate as of the date of the termination of insurance coverage.

12.3 The coverage provided by the Franchisee's insurance policies shall be primary to any insurance maintained by the City, except as to losses or damages attributable to the sole negligence of the City. Any insurance maintained by the City that might relate to this Franchise shall be in excess to the Franchisee's insurance and shall not contribute with or to it. The City has no obligation to report occurrences to the insurance companies unless a claim is filed with the City's City Council; and the City has no obligations to pay the Franchisee's premiums.

12.4 The Franchisee shall be solely and completely responsible to perform all work related to this Franchise in compliance with all applicable federal, state, county and city statutes, rules, regulations, ordinances, orders and codes. The Franchisee's attention is directed to the requirements of the Washington Industrial Safety and Health Act, Chapter 49.17 RCW. The Franchisee shall be solely and completely responsible for

safety and safety conditions on its job sites and for its work within the Franchise Area, including the safety of all persons and property during performance of any works therein. The services of the City or City's consultant personnel in conducting construction review of the Franchisee's work relating to the Franchise is not intended to include review of the adequacy of the Franchisee's work methods, equipment, scaffolding, or trenching, or safety measures in, on or near such Franchise Area or job site. The Franchisee shall provide safe access for the City and its inspectors to adequately inspect the work and its conformance with applicable statutes, ordinances, rules, regulations, and the Franchise.

SECTION 13 INSTALLATION, REPAIR, REMOVAL OR RELOCATION

13.1 The Franchisee shall, at no expense to the City, expeditiously repair all existing Facilities that it owns within the Franchise Area, including any damage caused directly or indirectly by its Facilities, all appurtenant Facilities and service lines connecting its system to users, if the City requires such repair for any reasonable purpose.

13.2 The Franchisee shall, at no expense to the City, adjust, remove or relocate existing Facilities within the Franchise Area, including all appurtenant Facilities and service lines connecting its system to users, if the City determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the City. The City shall give the Franchisee written notice of such requirement as soon as practicable. The written notice shall include all available information, such as plans and specifications, as is reasonably necessary for the Franchisee to plan for such adjustment, removal or relocation.

13.3 Franchisee's Facilities shall be constructed, installed, maintained and repaired within the Franchise Area so as to provide safety of persons and property, and not interfere with the free passage of traffic, all in accordance with the laws of the State of Washington, and the ordinances, resolutions, rules and regulations of the City.

13.4 For projects that are a part of the City's capital improvement program, in addition to any other notice given to the Franchisee, the City shall provide a copy of the capital improvement plan and six (6) year transportation improvement plan when requested. Further, the City shall provide a horizontal plan and vertical profile of the roadway and drainage facilities within it, both existing and as proposed by the City, and the proposed construction schedule. The initial design information shall be given at least one hundred and eighty (180) days before construction is scheduled to begin, except in cases of urgent construction or emergencies. The Franchisee shall respond to this notice, and to any later notices of revised designs, within twenty (20) days of the date of the notice, by providing to the City the Franchisee's best available information as to the location of all the Franchisee's Facilities, including all appurtenant Facilities and service lines connecting its system to users, and all Facilities that it has abandoned, within the area proposed for the project.

13.5 The City shall offer the Franchisee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Franchisee's Facilities. The City shall have sole authority to choose the contractor to perform such

work. Such bid documents shall provide for an appropriate cost allocation between the parties. In addition to the Franchisee's allocation of contractor costs, the Franchisee shall reimburse the City for all costs, to include but not be limited to legal, engineering, inspections, administration and/or soils testing, related to the Franchisee's work and reasonably incurred by the City in the administration of such joint construction contracts. Such costs shall include the direct salary cost of the time of City professional and technical personnel, including the City's consultants, spent productively engaged in such work, plus overhead costs at the standard rate charged by the City on other similar projects. The specific terms of the joint participation on any public work shall be as set forth in a written agreement between the parties.

13.6 It is understood that emergency situations may arise that could threaten public health and/or continued operation of the Franchisee's utility system and the Franchisee may be unable to notify the City in the manner prescribed in Section 14 of this Franchise. In such a situation the Franchisee shall immediately correct the hazardous situation and continue to use best efforts to contact the City staff. The Emergency Phone Number for the City of Auburn is (253) 931-3048, and that for the Lakehaven Utility District is (253) 941-1516. Dialing 911 is advised for emergency situations that may result in imminent threats to life and/or property.

SECTION 14 REQUIREMENT OF CONSTRUCTION PERMITS

14.1 The Franchisee has the right, privilege and authority to enter the City road rights-of-way for the purpose of constructing, installing, operating, maintaining, replacing or repairing its Facilities on the condition that it obtains construction, excavation, and right-of-way use permits issued by the City. Any work performed, whether by Franchisee, its contractors, or third parties, shall include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the City rights-of-way. All work shall be done to the City's satisfaction.

14.2 All equipment, pipelines and appurtenances which are used in the construction, installation, operation, maintenance or repair of the Franchisee's Facilities and which are located within the City road rights-of-way and owned by the Franchisee shall be considered to be part of the Franchisee's system and shall be the responsibility of the Franchisee. All permits for the construction, installation, operation, maintenance or repair of the Franchisee's system shall be applied for and given in the name of the Franchisee, who will be responsible for all work done under the permit. The Franchisee remains responsible whether the work is performed by the Franchisee, its contractors, or by third parties.

14.3 When required by the City's Public Works Director, the Franchisee shall post a bond to the City in the amount sufficient for any road repair or restoration. The amount of the bond shall be set by the City and must be filed with the City before a permit will be issued.

SECTION 15 PERFORMANCE OF WORK

15.1 Any work performed by the Franchisee in the Franchise Area shall conform to all City ordinances and requirements including, but not limited to, Auburn City Code and the City's Design and Construction Standards in force when the work is performed. All traffic control shall conform to the current edition of the Manual of Uniform Traffic Control Devices in force when the work is performed.

15.2 If work performed under this Franchise makes it necessary to turn off or diminish water pressure or potential flow to any fire hydrant, the Franchisee shall notify the City's Fire Department by telephone and by written notice, that water pressure or fire flow conditions have been affected. Except in the case of an emergency, the notice shall be provided at least 48 hours prior to the water pressure or potential flow being suspended or diminished. If more than one fire hydrant will be affected, the Franchisee shall provide a map of the affected area to the Fire Department. Out-of-service fire hydrants must be identified as not operational by covering with a properly secured burlap or plastic bag. Fire hydrants should be returned to full service as soon as reasonably possible or no longer than two working days from the date service was suspended or diminished. The Franchisee shall notify the City's Fire Department when the hydrant(s) is/are returned to full service.

SECTION 16 RESTORATION OF CITY RIGHTS-OF-WAY

After performing work on, under or adjacent to City road rights-of-way, the Franchisee is responsible for and shall leave all City road rights-of-way in the condition of the City road rights-of-way existing immediately prior to such disturbance. If the Franchisee, its contractors, or third parties working under permit should fail to diligently restore City road rights-of-way to the satisfaction of the City, the City may make such repairs or restorations as are necessary to return the City road rights-of-way to a condition reasonably comparable to the condition of the City road rights-of-way existing immediately prior to such disturbance. Upon presentation of an itemized invoice for repairs or restorations, including all applicable costs, both direct and indirect, to include, but not be limited to, the cost of labor, tools, materials and equipment, the Franchisee shall pay the invoice within sixty-five (65) days of its receipt and approval.

SECTION 17 INFORMATION ON LOCATION OF FACILITIES

The Franchisee shall provide the City with all information requested by the City regarding the location of the Franchisee's current Facilities, including, but not limited to, copies of all record drawings for such Facilities. If the Franchisee performs any work to install, repair, reconstruct, or replace Facilities in the Franchise Area after this Franchise's effective date, the Franchisee shall provide the City with all information requested by the City regarding the location of those Facilities, including, but not limited to, copies of record drawings.

SECTION 18 COORDINATION OF WORK IN FRANCHISE AREA

To facilitate the coordination of work in City rights-of-way, if either the Franchisee or the City plans to make excavations in the Franchise Area, the party planning such excavation shall provide written notice to the other of the planned excavation, affording the other party the opportunity to share in the excavation; provided, that (1) such joint use shall not unreasonably delay the work of the party causing the excavation to be made, (2) such joint use shall be arranged and accomplished on terms and conditions satisfactory to both parties, and (3) either party may deny such request for safety reasons.

SECTION 19 BLASTING REQUIREMENTS

The Franchisee's right to construct, install, operate, maintain and repair Facilities does not preclude the City, its agents or contractors from blasting, grading, or doing other road work contiguous to the Franchisee's Facilities. When practical, the City shall give the Franchisee forty-eight (48) hours notice of blasting or excavating.

SECTION 20 SURVEY MARKERS AND MONUMENTS

Before any work is performed under this Franchise, the Franchisee shall establish two or more reference marks to all monuments and markers of every nature relating to subdivisions, plats, rights-of-way, and all other surveys. The reference points shall be located so that they will not be disturbed during any of Franchisee's operations under this Franchise. The method of referencing monuments or other markers or points shall be approved by the City before placement. The replacement of all markers or monuments disturbed during any construction of the Franchisee shall be made as promptly as conditions permit. The cost of monuments or markers lost, destroyed, or disturbed and the expense or replacement with approved markers or monuments shall be borne by the Franchisee.

SECTION 21 RESERVATION OF RIGHTS

21.1 The City reserves the right to impose, to the extent authorized by law, a utility tax on the Franchisee and/or to charge the Franchisee a reasonable fee for services provided or rights granted under this Franchise.

21.2 The Franchisee agrees that it shall be subject to all authority now or later possessed by the City or any other governing body having competent jurisdiction to fix just, reasonable and compensatory rates for services under this Franchise.

21.3 The City reserves the right, upon thirty (30) days written notice to the Franchisee, to amend or modify the provisions or conditions of this Franchise to conform to any state, county, federal, or City statute, ordinance, rule or regulation. The City may terminate this Franchise upon thirty (30) days written notice to the Franchisee if the Franchisee fails or refuses to comply with such amendment or modification.

SECTION 22 ASSIGNMENT

The Franchisee shall not have the right to assign this Franchise without the written consent of the City. No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions and responsibilities contained within the Franchise, as well as surety bonds which the City deems necessary to be posted, are received as allowed by law. The City's approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the Franchise.

SECTION 23 PENALTY FOR VIOLATION OF CONDITIONS

If the Franchisee fails to comply with any material term, condition or responsibility under this Franchise, the City may provide the Franchisee with written notice of the City's intent to revoke the Franchise if the Franchisee's failure is not cured within thirty (30) days of the date of the notice. During the thirty (30) days following the date of the notice, the Franchisee shall have the opportunity to remedy the failure to comply. A public hearing shall be scheduled before the Auburn City Council at least thirty (30) days following the notification on the issue of the revocation. If at the hearing, the City Council finds that grounds exist to revoke the Franchise under this paragraph and that the revocation is in the public interest, the City Council may by resolution revoke the Franchise. The revocation shall be effective ninety (90) days after the public hearing.

SECTION 24 EXPIRATION AND RENEWAL

24.1 If the Franchisee requests a renewal of this Franchise prior to its expiration date, which renewal shall be granted, on terms reasonable to the parties, unless the City can demonstrate, in good faith, that such renewal would be contrary to its operation of the right of way, the City may, at the City's sole discretion, extend the term of this Franchise for up to one year beyond the expiration date to allow for processing of the renewal. If the City elects to extend the term of this Franchise, written notice of the extension shall be provided to the Franchisee prior to the Franchise expiration date.

24.2 If the Franchisee has not requested a renewal of this Franchise prior to its expiration date, the City has the right, upon thirty (30) day's prior notice to the Franchisee, to remove or relocate any of the Franchisee's Facilities as is reasonably necessary for the public's health, welfare or safety, or for the construction, alteration, or improvement of the Franchise Area, or for the construction or installation of lines or facilities of other franchise holders. The Franchisee shall be liable for costs incurred in any removal or relocation of the Franchisee's Facilities under this section.

24.3 Upon the expiration of this Franchise, the Franchisee shall continue to be responsible for the operation and maintenance of the Franchisee's existing facilities in the Franchise Area, but shall not have the right to provide additional services. This Section and Sections 11, 13, 14, 15, 16, 18, and 20 of this Franchise shall continue in force until such time as the Franchisee's Facilities are abandoned to the City's satisfaction.

SECTION 25 COMPLIANCE WITH LAWS

The Franchisee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and the City's Environmental Standards and Ordinances.

SECTION 26 NON-DISCRIMINATION CLAUSE

In all hiring or employment made possible or resulting from this Franchise, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, national origin, marital status or the presence of any sensory, mental, or physical handicap, unless based upon a bona fide occupation qualification. No person shall be denied or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this Franchise on the grounds of sex, sexual orientation, race, color, national origin, age, except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap.

SECTION 27 NOTICE

All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Auburn:
City Engineer
25 West Main Street
Auburn, WA 98001-4998
Tel: 253-931-3010

Lakehaven Utility District:
General Manager
31627 1st Ave South
PO Box 4249
Federal Way, WA 98063-4249
Tel: 253-941-1516

or to such other representative addresses as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.
If an emergency situation develops, it is recommended that the City or the Franchisee call 911 to solicit an emergency response.

SECTION 28 ATTORNEYS' FEES

If either party shall be required to bring any action to enforce any provision of this Franchise, or shall be required to defend any action brought by the other party with respect to this Franchise, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

SECTION 29 SEVERANCE

If any term, provision, condition or portion of this Franchise is held to be invalid, such invalidity shall not affect the validity of the remaining portions of this Franchise which shall continue in full force and effect, unless the dominant purpose of the Franchise would be prevented or the public interest would no longer be served, as determined by the City.

SECTION 30 EFFECTIVE DATE

The resolution approving the Franchise, having been introduced at least five days prior to its date of passage and submitted to the city attorney, and being approved by at least a majority of the entire city council at a regular city council meeting, shall take effect and be in force five calendar days after its passage and approval by both parties to this Franchise.

SECTION 31 EXISTING UTILITIES

This Franchise shall govern existing and future water system facilities currently owned, operated and maintained by Lakehaven Utility District within the City of Auburn.

SECTION 32 DISPUTE RESOLUTION

In the event that a dispute arises with regard to the terms of this Franchise Agreement, either party may request that the dispute be submitted to non-binding mediation or arbitration prior to court action. Such request for non-binding mediation or arbitration shall be made in writing and mailed by first class, U.S. Mail to the other party. The mediator or arbitrator shall be chosen by agreement of the parties. Either party may refuse to submit to the dispute resolution process. Refusal to engage in the dispute resolution process shall not prejudice the refusing party in any way.

IN WITNESS WHEREOF the parties hereto have executed this Franchise Agreement as of the day and year first above written.

RESOLUTION NO. **3652**

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES BETWEEN THE LAKEHAVEN UTILITY DISTRICT AND THE CITY OF AUBURN

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to RCW 35A.21.150, Auburn has the legal authority to maintain a water system; and

WHEREAS, pursuant to RCW 57.08.044, Lakehaven has the legal authority, whether by contract or otherwise, to provide water service to property owners in areas outside existing district boundaries; and

WHEREAS, the parties recognize the responsibility of public water utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Lakehaven's 1998 Draft Comprehensive Water System Plan notes a region within Auburn's Potential Annexation Area (hereinafter referred to as "Auburn's PAA") to which Lakehaven intends to provide water service; and

WHEREAS, Lakehaven is currently providing water service within Auburn's PAA; and

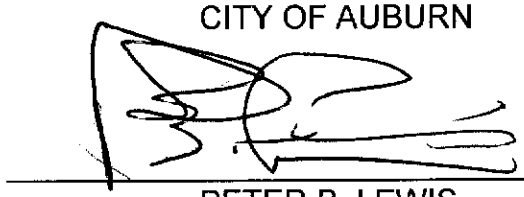
WHEREAS, portions of the Lakehaven water system have been sized and are situated so as to be capable of affording water to a portion of Auburn's PAA; and

WHEREAS, Auburn has evaluated water service issues and determined that it is not cost feasible to provide direct water service within its PAA adjacent to Lakehaven's water infrastructure; and

WHEREAS, Lakehaven's delivery of water service to these areas will provide the maximum efficiency in the use of existing and future facilities and water planning;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn is herewith authorized to execute a Water Service Boundary Agreement between the Lakehaven Utility District and the City of Auburn in substantial conformity with the agreement



attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 2nd day of February, 2004.

LAKEHAVEN UTILITY DISTRICT and CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 23rd day of September, 2004, by and between **LAKEHAVEN UTILITY DISTRICT**, a Washington municipal corporation (hereinafter referred to as "Lakehaven"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to RCW 35A.80.010, Auburn has the legal authority to maintain a water system; and

WHEREAS, pursuant to RCW 57.08.005(3) and 57.08.044, Lakehaven, as a special purpose water/sewer district, has the legal authority, whether by contract or otherwise, to provide water service to property owners in areas outside existing district boundaries; and

WHEREAS, the parties recognize the responsibility of public water utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Lakehaven's adopted and approved 1998 Comprehensive Water System Plan notes a region within Auburn's Potential Annexation Area (hereinafter referred to as "Auburn's PAA") to which Lakehaven intends to provide water service; and

WHEREAS, Lakehaven is currently providing water service within Auburn's PAA; and

WHEREAS, portions of the Lakehaven water system have been sized and are situated so as to be capable of affording water service to a portion of Auburn's PAA; and

WHEREAS, Auburn has evaluated water service issues and determined that it is not cost effective to provide direct water service within its PAA adjacent to Lakehaven's water infrastructure; and

WHEREAS, Lakehaven's delivery of water service to these areas will provide the maximum efficiency in the use of existing and future facilities and water planning;

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. Water Service Area. The parties have agreed to a mutual water service planning boundary as depicted on the maps attached hereto as Attachment 1 and legally described in Attachment 2, which are by this reference incorporated herein. Both parties further agree that, through this designation of the service boundary, Lakehaven shall provide water service to properties mutually within its water service area and Auburn's PAA, also depicted on Attachment 1, in accordance with and subject to the terms and conditions of this Agreement.

2. Management, Regulation and Control of Water System. Lakehaven shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its water system within the area mutually designated as Lakehaven's water service area and Auburn's PAA as depicted in Attachment 1, together with any additions, extensions and betterments thereto. Lakehaven shall also be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation of the water system and improvements to be located therein.

3. Service Rates and Connection Charges.

a) **Permit Required.** No connection shall be made to Lakehaven's water system unless the property owner first pays the associated fees and submits the proper information to obtain a Lakehaven water connection permit, and otherwise meets the requirements for service as provided in duly adopted Resolutions of Lakehaven. The connection shall be subject to inspection for compliance with Lakehaven's standards as adopted at the time the connection is made.

b) **Rates.** The rates charged to the water customer by Lakehaven mutually within Lakehaven's water service area and Auburn's PAA, as depicted on Attachment 1, shall be fixed, altered, regulated and otherwise controlled by Lakehaven pursuant to the limitation on such authority as set forth in Chapter 57 RCW, or other applicable laws.

4. Water Availability Certificates. Lakehaven shall continue to issue water availability certificates for property located both within Auburn's PAA, as depicted in Attachment 1 and Lakehaven's Water Service Area.

5. Future Annexations. Each of the parties agree that Lakehaven shall provide water service to the area depicted in Attachment 1 without regard to the present corporate boundaries of the parties and without regard to future corporate boundaries as they may be periodically altered through annexation.

6. Lakehaven Comprehensive Water Planning. The terms of this Agreement will be included as an amendment to Lakehaven's Comprehensive Water System Plan. Lakehaven will submit to Auburn all Comprehensive Water System Plans and amendments thereto involving areas and/or system improvements within Auburn's PAA, as depicted in Attachment 1.

7. Auburn Comprehensive Water Planning. The terms of this Agreement will be included as an amendment to Auburn's Comprehensive Water Plan. Auburn will submit to Lakehaven all Comprehensive Water System Plans and amendments thereto involving area and/or system improvements within Auburn's PAA, as depicted in Attachment 1.

8. Reliance. Each party hereto acknowledges that the terms hereof will be relied upon by the other in its comprehensive planning to meet the needs of the service area designated herein.

9. Liability. The parties agree that this Agreement shall not be a source of liability for either party for any failure or interruption of service in the service area of the other party, as designated herein.

10. Government Approvals. Auburn will give notice of the adoption of this Agreement to Metropolitan/King County, to the Department of Ecology, to the Department of Health, and to any other agency with jurisdiction over, or other interest in, the terms hereof, and the parties shall cooperate and assist each other in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. Boundary Review Board. In the event that implementation of the terms hereof results in permanent water service to areas that will be outside the respective service boundaries of Lakehaven or Auburn, the parties will, at the time of such service, jointly seek King County Boundary Review Board approval of such service in accordance with RCW 57.08.047.

12. Service Amendments. Any changes to the service areas described herein shall be by mutual written agreement. Each party, through Auburn's Director of Public Works and Lakehaven's General Manager respectively, may give written permission to the other, on a case-by-case basis, to provide service to the other party's adjacent or

nearby water service area based upon considerations of economic efficiency. Such written permission(s) shall be filed with this agreement for future reference.

13. Alteration, Amendment or Modification. Lakehaven and Auburn hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement only upon written consent of both parties to such alteration, amendment or modification.

14. Indemnification and Hold Harmless. Each Party hereto agrees to protect, defend, and indemnify the other Party, its officers, officials, employees and agents from any and all cost, claims judgements and/or awards of damages, arising out of or in any way resulting from the Party's default, failure of performance, or negligent conduct associated with this agreement, by the Party, its employees, subcontractors or agents. Each Party agrees that its obligations under this provision extend to any claim, demand, and/or cause of action brought by or on behalf of any of its employees, or agents. The foregoing indemnity is specifically and expressly intended to constitute a waiver of each Party's immunity under Washington's Industrial Insurance Act, RCW Title 51, as respects the other Party only, and only to the extent necessary to provide each Party with a full and complete indemnity of claims made by the other Party's employees. The Parties acknowledge that these provisions were specifically negotiated and agreed upon by them.

15. Miscellaneous. Auburn and Lakehaven agree that within the area depicted in Attachment 3, existing water customers are currently served by Auburn and that for the purposes of efficiency, water service to these customers shall be transferred to Lakehaven. Service shall be provided by a direct connection with Lakehaven's system at "R" Street NW and Abby Drive, and temporarily by a Booster Pump Station from Auburn's water system on Knickerbocker Drive until such time as a secondary waterline is constructed from Lakehaven's system and paid for pursuant to Attachment 4.

16. Integration. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

17. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Lakehaven or Auburn regarding provision of water service, except as specifically set forth herein.

LAKEHAVEN UTILITY DISTRICT and CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES

BOUNDARY DESCRIPTION

BEGINNING at a point 170 feet east of the Northwest corner of the Northeast quarter of the Southwest quarter of Section 35, Township 22 North, Range 4 East, W.M., in King County, Washington;

THENCE south 1990 feet, more or less, to the North line of the South half of the South half of the Southwest quarter of said Section 35;

THENCE easterly along said North line to a point 300 feet west of the East line of the Southwest quarter of said Section 35;

THENCE south to a point 170 feet north of the South line of the Southwest quarter of said Section 35;

THENCE east 300 feet, more or less, to the East line of the Southwest quarter of said Section 35;

THENCE southerly along said East line to the South line of said Section 35;

THENCE continuing southerly along the West line of the Northeast quarter of Section 2, Township 21 North, Range 4 East, W.M., in King County, Washington, a distance of 221.12 feet;

THENCE easterly, parallel with the North line of said subdivision, 220.20 feet;

THENCE southerly, parallel with the West line of said subdivision, 130 feet;

THENCE easterly along the North line of Lots 1 and 2 of King County Short Plat No. 781092 as recorded under Recording Number 8112210440,records of King County, Washington, a distance of 1306.40 feet, more or less, to the Northeast corner of said Lot 2;

THENCE south along the East line of said Lot 2 a distance of 802.22 feet, more or less, to the Southeast corner of said Lot 2;

THENCE easterly, a distance of 6 feet, more or less to the Northeast corner of Tract A of Eastview Vista according to the plat thereof recorded in Volume 108, Pages 51 through 53, records of King County, Washington;

THENCE south, a distance of 34 feet, more or less, to an angle point in the boundary of said Tract A;

THENCE west, a distance of 34.80 feet, more or less, to an angle point in the boundary of said Tract A;

THENCE south, a distance of 400.44 feet, along the East line of said Tract A to a point 835.56 feet north of the South line of the Northeast quarter of said Section 2;

THENCE east, parallel the South line of the Northeast quarter of said Section 2, a distance of 1140.8 feet, more or less, to the East line of said Section 2;

THENCE south, a distance of 835.56 feet along said East line, to the Northwest corner of the Southwest quarter of Section 1, Township 21 North, Range 4 East, W.M., in King County, Washington;

THENCE east, parallel to the North line of the Southwest quarter of said Section, a distance of 149.18 feet;

THENCE south, parallel to the West line of the Southwest quarter of said Section, a distance of 450 feet;

THENCE west, parallel to the North line of the Southwest quarter of said Section, a distance of 149.18 feet to the East line of Southeast quarter of Section 2, Township 21 North, Range 4 East, W.M., in King County, Washington;

THENCE south, a distance of 532.51 feet along said East line to the North line of the South half of the South half of the North half of said subdivision;

THENCE westerly, along said North line of said subdivision, 518.77 feet;

THENCE southerly, parallel with the East line of said subdivision, 328.01 feet, more or less, to the South line of said subdivision;

THENCE westerly, along the South line of said subdivision, 130.02 feet, more or less to the Northeast corner of the West half of the Southeast quarter of the Southeast quarter of said Section 2;

THENCE southerly, along the East line of said subdivision, 984.40 feet, to the North line of the South half of the South half of last said subdivision;

THENCE westerly, along the North line of said subdivision, 650 feet, more or less, to the East line of the Southwest quarter of the Southeast quarter of said Section 2;

THENCE southerly, along said East line, 328.77 feet, more or less, to the South line of last said subdivision;

THENCE continuing southerly, along the West line of the East half of the East half of Section 11 Township 21 North, Range 4 East, W.M., in King County, Washington, a distance of 3950.28 feet, more or less to the Northwest corner of the Southeast quarter of the Southeast quarter of said Section;

THENCE easterly, along the North line of said subdivision, a distance of 588.55 feet to the most Easterly corner of Tract A of Vistara Division 2 according to the plat thereof recorded in Volume 186, Pages 70 through 76, records of King County, Washington;

THENCE southwesterly along the most Easterly line of said Tract A, a distance of 184.6 feet to the Northeast corner of Lot 16 of said plat of Vistara Division 2;

THENCE southerly along the Easterly line of said Lot 16 a distance of 76 feet;

THENCE southwesterly along last said Easterly line 77.96 feet;

THENCE southerly along last said Easterly line 51.73 feet;

THENCE southeasterly along last said Easterly line 78.15 feet;

THENCE southeasterly along said Easterly line and along the Northeast line of tract B of said plat 168 feet to the West Right-of-Way line of "R" Street Northwest as recorded in said plat;

THENCE southerly along said West Right-of Way line, a distance of 40 feet, more or less, to the most Easterly corner of Lot 18 of said plat;

THENCE northwesterly along the Northeast boundary of said Lot 18, a distance of 188.08 feet;

THENCE southeasterly along the Westerly boundary of said Lot 18, a distance of 83.72 feet, more or less, to the most Northerly corner of Lot 19 of said plat;

THENCE southwesterly along the Westerly boundary of said Lot 19, a distance of 64.76 feet;

THENCE southeasterly along the Southwesterly boundary of said Lot 19, a distance of 154.16 feet, to the most Southerly corner of said Lot 19;

THENCE southeasterly along a line crossing said Right-of-Way to the most Northerly corner of Lot 26 of said plat;

THENCE southeasterly along the Northeast boundary of said Lot 26, a distance of 97.69 feet;

THENCE southerly along the Easterly boundaries of Lots 26, 25, 24 of said plat, a distance of 177.26 ft, more or less, to the Northeast corner of Lot 31 of Vistara Division 1 according to the plat thereof recorded in Volume 174, Pages 78 through 83 and according to Alteration Number 1 thereof recorded in Volume 186, Pages 31 through 33, records of King County, Washington;

THENCE southerly and southeasterly along the Eastern boundaries of Lots 31, 32, and 33 of said plat, a distance of 152.14 feet to the Northwest corner of Lot 34 of said plat;

THENCE easterly along the Northerly boundaries of Lots 34 and 35 of said plat, a distance of 80.00 feet to the Northeast corner of Lot 35 of said plat;

THENCE southerly along the Easterly boundary of Lot 35, a distance of 118.02 feet, to the Southeast corner of said lot 35;

THENCE southerly along a line, crossing the 8th Street Northwest Right-of-Way, to the Northeast corner of Lot 14 of said plat;

THENCE continuing southerly along the Eastern boundaries of Lots 14 and 13 of said plat, a distance of 153.10 feet to the North Line of Section 14, Township 21 North, Range 4 East, W.M., in King County, Washington;

THENCE East along said North line, a distance of 501.28 feet, more or less, to the West Right-of-Way line of State Route 181, also known as West Valley Highway;

THENCE southwesterly along said West Right-of-Way line, a distance of 790.91 feet to the Northeast corner of Lot 3 according to the Replat of Lot 4 Block 1 Knickerbocker Heights as recorded in Volume 90, Page 39, records of King County, Washington;

THENCE northwesterly along the Northerly boundary of said Lot 3 a distance of 342.6 feet, more or less, to the Southwest corner of Lot 2 of said Replat;

THENCE north a distance of 100 feet, more or less, along the East line of Lot 1, Auburn Short Plat 0001-89, as recorded under Recording No. 8906271138, records of King County, Washington;

THENCE westerly and southwesterly a distance of 253.5 feet, more or less, along the Northern boundary of said Lot 1 to the most Northerly corner of Lot 2 of said Short Plat;

THENCE southerly a distance of 359.06 feet, more or less, along the Westerly boundaries of Lots 2, 3, and 4 of said Short Plat to the North margin of the Knickerbocker Drive Right-of Way;

THENCE easterly along said North margin of Knickerbocker Drive Right-of Way, a distance of 475 feet, more or less, to the West line of the State Route 181 Right-of-Way which parallels the centerline of State Route 181 Right-of-Way;

THENCE southwesterly along said West line of said State Route 181 Right-of-Way to the Southern terminus of the Northeast corner radius of Lot 2, Block 3, of Knickerbocker Addition, according to the plat thereof, as recorded in Volume 45, Page 93, records of King County, Washington;

THENCE continuing southwesterly along said West line of said State Route 181 Right-of-Way, a distance of 246.18 feet, to the Southeast corner of said Lot 2;

THENCE west along the South line of said Lot 2, a distance of 150 feet;

THENCE southerly and parallel to said Right-of-Way, a distance of 343.66 feet, more or less, to a point on the North line of Lot 3, King County Short Plat No. SP-18-76, as recorded under Recording No. 7611240117, records of King County, Washington;

THENCE westerly along said North line, a distance of 43.82 feet, more or less, to the Northwest corner of said Lot 3;

THENCE southerly along the West line of said Lot 3, a distance of 120.53 feet, to the Southwest corner of said Lot 3;

THENCE westerly along the South line of Lot 2 of last said short plat, a distance of 5 feet more or less to the Northeast corner of Hi-Crest Number 2, according to the Plat thereof recorded in Volume 64, Page 58, records of King County, Washington;

THENCE south along the East line of said plat, a distance of 270 feet, to the Southeast corner of Lot 13 of said plat;

THENCE easterly along the Easterly extension of the South line of said Lot 13, a distance of 58.92 feet;

THENCE southerly, a distance of 94.97 feet to the Northeast corner of Lot B of City of Auburn Lot Line Adjustment 10-87 recorded under Recording Number 8705190464, records of King County, Washington;

THENCE southerly along the easterly boundary of said Lot B a distance of 9.82 feet;

THENCE southwesterly along said Easterly boundary a distance of 127.12 feet;

THENCE southerly parallel with said State Route 181 Right of Way to a line parallel with and 228 feet Northerly of the South line of the Northeast quarter of said Section 14.

THENCE west along said parallel line to a point 80 feet East of the West line of the Southeast quarter of the Northeast quarter of said Section 14;

THENCE south along last said parallel line a distance of 228 feet to the South line of the Northeast quarter of said Section 14 and the centerline of Mountain View Drive;

THENCE westerly along said centerline, a distance of 10 feet, more or less to the point where the centerline of said Mountain View Drive diverges from the South line of said Section 14;

THENCE northwesterly along said centerline, a distance of 154 feet;

THENCE southwesterly along said centerline, a distance of 140 feet;

THENCE northwesterly along said centerline, a distance of 138 feet;

THENCE southwesterly along said centerline, a distance of 80 feet;

THENCE southeasterly along said centerline, a distance of 114 feet;

THENCE southeasterly along said centerline, a distance of 63 feet;

THENCE southeasterly along said centerline, a distance of 140 feet;

THENCE southeasterly along said centerline, a distance of 95 feet;

THENCE southeasterly along said centerline, a distance of 101 feet;

THENCE southwesterly along said centerline, a distance of 910 feet, more or less, to the intersection of the Northwesterly prolongation of the Southwesterly line of the lands described in instrument filed under Recording Number 8512300596, Records of King County, Washington;

THENCE southwesterly along last said line to a point on the West line of the east 470.26 feet of the Northwest quarter of the Southeast quarter of said Section 14 which is 190.27 feet northerly of the South line of said subdivision;

THENCE southerly along the West line of the east 470.26 feet of said Northwest quarter of said Southeast quarter of said Section 14, a distance of 190.27 feet, more or less to the North line of Southwest quarter of the Southeast quarter of said Section 14;

THENCE west along said North line, a distance of 839.29 feet, more or less, to the Northwest corner of said subdivision;

THENCE south along the West line of said subdivision, a distance of 1313.19 feet, more or less, to the Northeast corner of the Northwest quarter of Section 23, Township 21 North, Range 4 East, W.M.;

THENCE south along the East line of said subdivision, a distance of 821.24 feet;

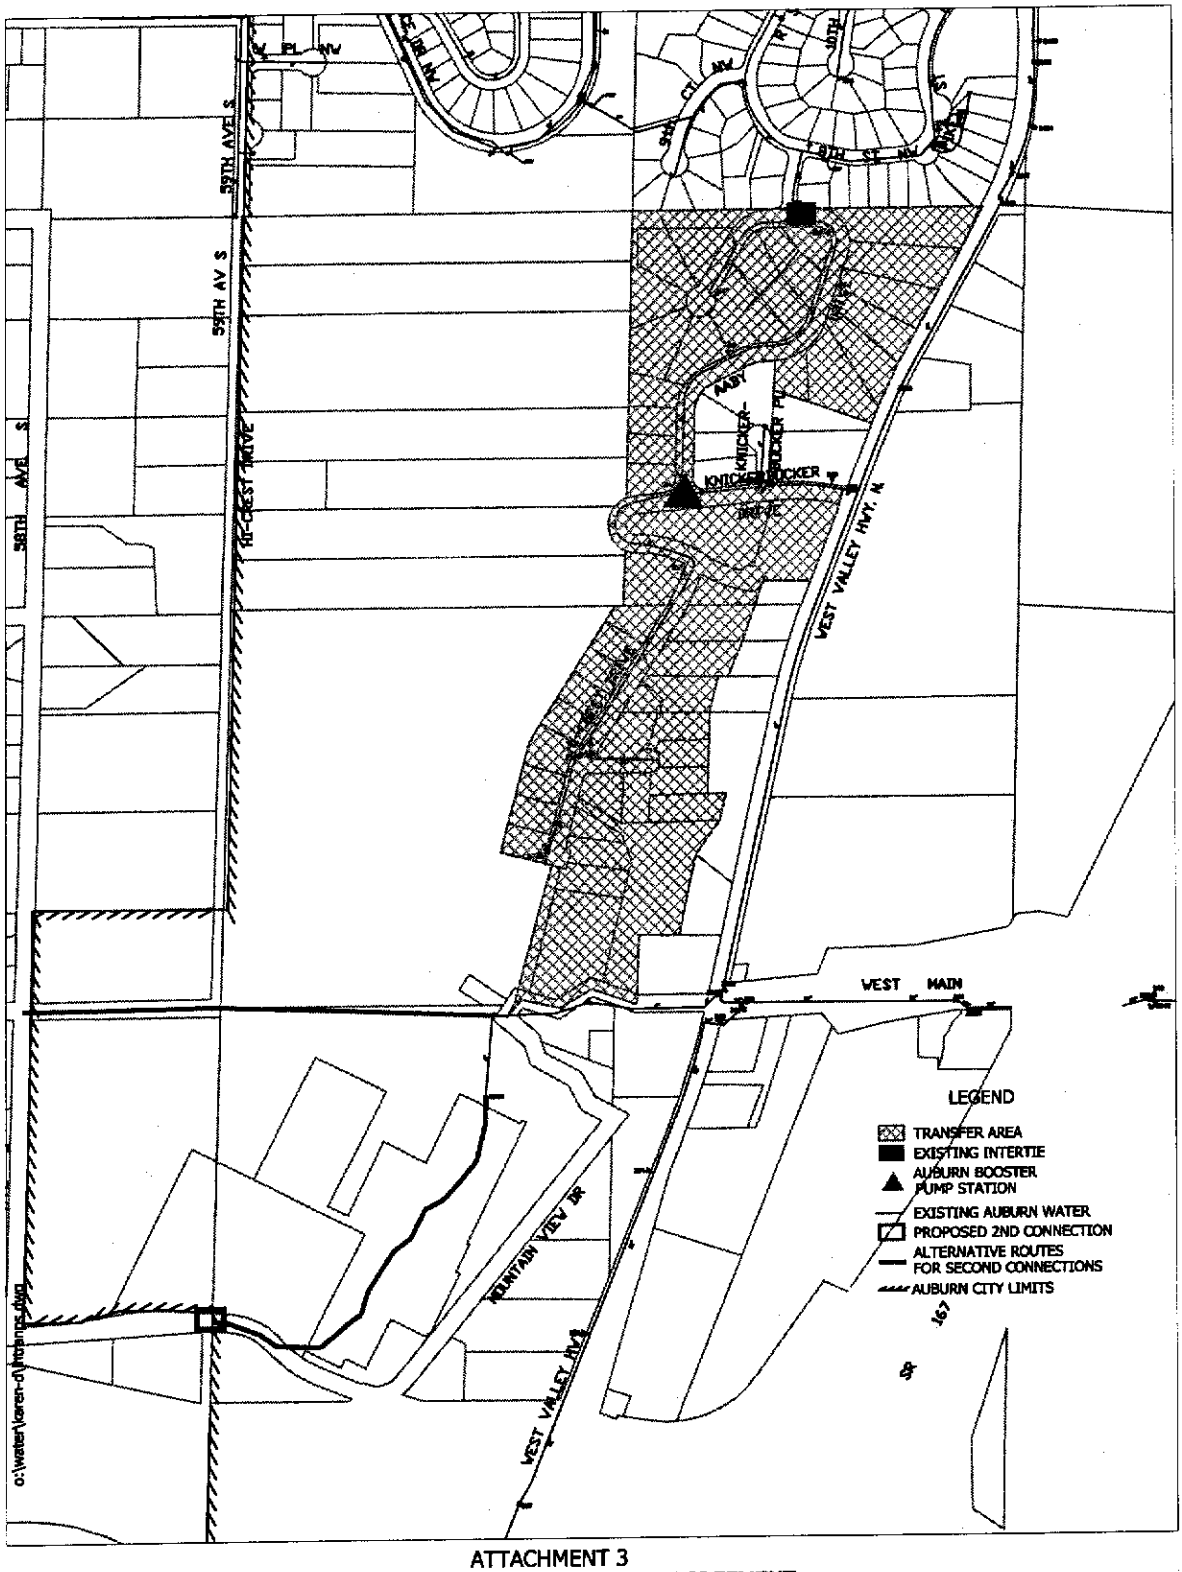
THENCE west, parallel to the North line of the Northwest quarter of said Section 23, a distance of 653.06 feet, more or less, to the Northerly projection of the centerline of 58th Avenue South;

THENCE southerly, along said centerline of 58th Avenue South, to the North line of the Southwest quarter of said Section 23;

THENCE south parallel to the East line of said subsection, a distance of 496 feet, more or less, to the North line of Lot 3, Block 25 of Jovita Heights, according to the plat thereof, as recorded in Volume 20, Page 12, records of King County, Washington;

THENCE east along the North line of said Lot 3, a distance of 80 feet, more or less, to the Northeast corner of said Lot 3;

THENCE southerly along the East line of said Lot 3 and the East line of Lot 4 of said plat to the Northerly margin of Iowa Drive according to said Plat of Jovita Heights, a distance of 92.82 feet;



THENCE easterly along said Northerly margin, a distance of 107.89 feet;

THENCE southerly along said Northerly margin, a distance of 114.85 feet;

THENCE southeasterly along said Northerly margin, a distance of 93.86 feet;

THENCE southeasterly along said Northerly margin, a distance of 81.99 feet;

THENCE southeasterly along said Northerly margin, a distance of 390 feet, more or less, to the East line of the Southwest quarter of said Section 23 and the terminus of this boundary description.

ATTACHMENT 3
LAKEHAVEN - AUBURN INTERLOCAL AGREEMENT
ESTABLISHING WATER SERVICE BOUNDARIES
TRANSFER AREA MAP

Attachment 4

LAKEHAVEN UTILITY DISTRICT and CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES

TRANSFER AREA CONDITIONS

1. Auburn will transfer ownership of the water infrastructure within the area depicted on Attachment 3, including but not limited to, the Booster Pump Station on Knickerbocker Drive, via Bill-of-Sale to Lakehaven. Auburn will also ensure the subject water facilities are in good operational condition and provide all documents and drawings pertaining to as-built information and operational manuals for the facilities.

2. Since Lakehaven's existing system alone can not currently provide minimum fire flow requirements, additional water system facility improvements will be required. The facility improvements (hereinafter referred to as the "secondary water line") include approximately 2000 feet of 8-inch water main and a Pressure Reducing Valve (PRV) station. The water main will connect between Lakehaven's water system in its 578-pressure zone, through a PRV station, to the existing water main in Hi-Crest Drive. Two possible routes for the secondary water line are depicted on Attachment 3, but the actual route for the secondary water line shall be the one deemed by both parties to the Agreement to be most beneficial and efficient of all alternatives identified and analyzed at the time design commences, and not necessarily limited to the two routes depicted.

3. Auburn shall design the secondary water line in accordance with Lakehaven's standards, and provide permanent easements as necessary.

4. Lakehaven shall have the secondary water line constructed and will be reimbursed for funds used to construct the secondary water line, including interest, by a Charge-in-lieu-of-Assessment applied to adjacent benefiting lands (currently Auburn's property) that the secondary water line is intended to serve and by applying a surcharge on Lakehaven's water rates to the transferring customers. The surcharge shall be the difference between Auburn's water rates and Lakehaven's water rates and shall remain in place until all amounts owing from the construction of the secondary water line are paid. When all costs have

been reimbursed, the surcharge will no longer apply and the transferred customers will revert to Lakehaven's then-current rates.

5. Auburn shall permanently make available to Lakehaven the current equivalent annual and instantaneous quantity of water necessary to serve the transferring area in exchange for full credit against applicable Capital Facilities Charges of Lakehaven.

6. The current equivalent annual quantity of water is approximately 255 gallons/day/Equivalent Residential Unit (transfer area has ~ 42 ERU's). The instantaneous quantities are defined historically by the total existing Booster Pump Station capacity. The existing Booster Pump Station has a 90 gpm pump and a 300 gpm pump. The water shall be used as needed to provide domestic water service or emergency fire flows. The water rate Lakehaven will pay Auburn shall be Auburn's current wholesale water rate it charges the City of Algona, or the Lakehaven emergency water rate as determined in accordance with the Emergency Water Supply Agreement for the Lakehaven/Auburn Intertie No. 1 as adopted by Auburn Resolution 3443, whichever is less.

RESOLUTION NO. 3760

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN ADDENDUM TO AN INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE FOR THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

WHEREAS, in March of 1998 the City Council of the City of Auburn adopted Resolution No. 2925 authorizing the Mayor and City Clerk to execute a settlement agreement that was subsequently signed by the City of Auburn and the City of Bonney Lake; and

WHEREAS, among other items, that settlement agreement set forth a water service area boundary between the City of Auburn and the City of Bonney Lake; and

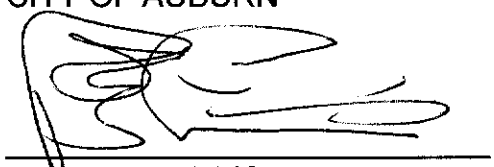
WHEREAS, subsequent to approval of the settlement agreement the Potential Annexation Areas (PAA) for the City of Auburn and City of Bonney Lake were amended to coincide with the water service area boundary; and

WHEREAS, since the time of the agreement it has been found that a parcel was divided by the water service area boundary set forth in said settlement agreement, and by the subsequent PAA boundary established based on the water service area boundary, and said parcel lies partially within and partially outside of the Auburn PAA; and

WHEREAS, part of the Lake Tapps Parkway East extension's right-of-way also lies partially within and partially outside of the Auburn water service area boundary established by the settlement agreement, and partially within and partially outside the subsequent PAA boundary established based on the water service area boundary; and

WHEREAS, sound growth management and transportation planning principles are best served by including entire parcels and entire street right-of-ways entirely within a PAA.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:



Section 1. The Mayor and City Clerk are hereby authorized to execute Addendum No. 1 to the Settlement Agreement between the City of Auburn and the City of Bonney Lake in substantial conformity with the Addendum attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 7th day of February, 2005.

ADDENDUM NO. 1

ADDENDUM TO SETTLEMENT AGREEMENT BETWEEN THE CITY OF BONNEY LAKE AND THE CITY OF AUBURN RELATING TO WATER SERVICE AREA BOUNDARY

THIS ADDENDUM is made and entered into this 14th day of February, 2005, by and between the **CITY OF BONNEY LAKE**, a municipal corporation of the State of Washington (hereinafter referred to as "Bonney Lake") and the **CITY OF AUBURN**, a municipal corporation of the State of Washington (hereinafter referred to as the "Auburn"), as an addendum to the Settlement Agreement between the parties executed on the 5th day of March, 1998.

W I T N E S S E T H:

WHEREAS, in March 1998 the City Council of the City of Auburn passed Resolution No. 2925 authorizing the Mayor and City Clerk to execute a settlement agreement that was subsequently signed by the City of Auburn and the City of Bonney Lake; and

WHEREAS, among other items, the settlement agreement set forth a water service area boundary between the City of Auburn and the City of Bonney Lake; and

WHEREAS, Exhibit B to the settlement agreement implied that Auburn's Urban Growth Area (UGA) was established to conform with the water service area boundary set forth in the settlement agreement; and

WHEREAS, subsequent to approval of the settlement agreement the Potential Annexation Area (PAA) for the City of Auburn was amended to coincide with the water service area boundary; and

WHEREAS, Exhibit B to the settlement agreement stated that the UGA and water service area boundary was established to follow property lines; and

WHEREAS, since the time of the agreement it has been found that a parcel was divided by the water service area boundary set forth in said settlement agreement, and by the subsequent PAA boundary established based on the water service area boundary, and said parcel lies partially within and partially outside of the Auburn PAA; and

WHEREAS, part of the Lake Tapps Parkway East extension's right-of-way also lies partially within and partially outside of the Auburn water service area boundary established by the settlement agreement, and partially within and partially outside the subsequent PAA boundary established based on the water service area boundary; and

WHEREAS, sound growth management and planning principles are best served by including entire parcels within a PAA.

NOW THEREFORE in consideration of their mutual covenants, conditions and promises, the PARTIES DO HEREBY AGREE as follows:

ITEM ONE: ADDITION OF PROPERTY
The Settlement Agreement is revised to include a portion of Pierce County parcel # 052005-4046, a portion of the Lake Tapps Parkway as it extends from the west boundary of 182nd Ave East west to Auburn's existing Urban Growth Area, and a portion of the natural gas pipe line parcel as noted in the attached Exhibit C. Exhibit C, attached hereto and incorporated by reference as if fully set forth herein, shall provide both a graphical representation and a legal description for the parcels that are to be included in Auburn's UGA for urban services and incorporated into the area that Bonney Lake shall be the water purveyor for within Auburn's UGA as defined in the original settlement agreement between Auburn and Bonney Lake.

ITEM TWO: REMAINING TERMS UNCHANGED:
That all other provisions of the Settlement Agreement between the parties executed on the 5th day of March, 1998, shall remain unchanged, and in full force and effect.

IN WITNESS WHEREOF the parties hereto have executed this Agreement as of the day and year first above written.

RESOLUTION NO. 3817

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERIM WATER SALES AGREEMENT BETWEEN THE CITY OF AUBURN AND COVINGTON WATER DISTRICT AND WATER DISTRICT NO. 111

WHEREAS, the City Council of the City of Auburn, Washington, adopted Resolution No. 3482 on June 17, 2002, authorizing the execution of an Interim Water Sales Agreement between Covington Water District (Covington), King County Water District No. 111 (WD 111) and the City of Auburn (Auburn) under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act; and

WHEREAS, the parties desire to continue the intent of the Agreement to avoid unpredictable water sales and create a predictable and reliable cost for wholesale water to be sold by Auburn to Covington and WD 111; and

WHEREAS, it is in the public interest for the parties herein to continue the intent of the interim water sales agreement; and

WHEREAS, this Agreement supersedes and replaces the Interim Water Sales Agreement between Auburn, Covington and WD 111, which was approved by Resolution No. 3482 and executed on June 17, 2002.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an Interim Water Sales Agreement between Auburn and Covington and WD 111 in substantial conformity with the agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 22nd day of February, 2005.

and the
CITY of AUBURN

This Agreement ("Agreement") is made and entered into this 22nd day of February 2005, by and between Covington Water District (Covington) a Municipal Corporation, King County Water District No. 111 (WD III), a Municipal Corporation (collectively referred to herein as "the Districts") and the City of Auburn (Auburn), a Municipal Corporation.

Recitals:

A. The parties to this Agreement are also parties to "Interlocal Agreement 2 for the Lea Hill Intertie Project between Covington Water District, King County Water District #111, and the City of Auburn" ("IA2").

B. The parties desire to avoid unpredictable water sales and create a predictable and reliable cost for wholesale water to be sold by Auburn to the Districts.

C. By guaranteeing a minimum purchase of water for a given period of time, i.e., a take or pay approach, the cost of water, which to a significant extent is based on peaking factors, can be minimized for all of Auburn's customers.

D. This Agreement is intended to establish a rate for a fixed block of water for the mutual benefit of the parties of this Agreement.

E. It is in the interest of the Districts to have a predictable supply of water available, and in Auburn's interest to have a predictable and consistent source of revenue from the sale of such water.

F. The parties are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act.

G. The 1.5 million gallons of water per day ("MGD") take or pay water provided for in this Agreement is a portion of and not in addition to the 5 MGD as addressed in IA2.

Now, therefore, in consideration of the mutual covenants and promises

contained herein, and for other good and valuable consideration, the adequacy of which is hereby acknowledged, the parties hereby agree as follows:

1) **TAKE OR PAY:** The Districts agree to purchase an average of 1.5 MGD of water from Auburn on a take or pay basis. Take or pay shall mean that the Districts shall pay for 1.5 MGD whether or not the water is actually taken by the Districts (the "take or pay" water also referred to in this Agreement as "the Block" of water; provided

the Block of water may be modified as set forth in Paragraph 5 "Annual Review and Adjustment" herein). If the Districts cannot accept 1.5 mgd due to an emergency, as defined in Paragraph 7, they will be billed for the water they receive at the Block rate.

2) **CHARGES FOR WATER:** The Districts shall pay the rate per one hundred cubic feet of water ("CCF") for the 1.5 MGD Block shown in Exhibit 1, attached hereto, which is by this reference incorporated, except as further addressed in Paragraph 3 herein. Any water taken in excess ("Excess Water") during the summer (June 1 through September 30) shall be billed at the summer overage rate shown in Exhibit 1. Any water taken during an emergency within the Covington and/or WD 111 systems, as defined in Paragraph 7, shall be billed at the 1.5 mgd Block rate. Auburn shall send one monthly bill to WD 111 for all water purchased by the Districts.

3) **QUANTITY AVAILABLE / DELIVERED:** The 1.5 MGD Block of water shall be defined as a block of water to be delivered at an average rate of 1.5 MGD measured over a rolling 3 day period with total quantities delivered within any single day being no more than 10% more or less than 1.5 MGD at the Auburn Intertie Pump Station meter (Master Meter). If the Districts are unable for any reason to accept the Block of water, the minimum monthly payment shall be 1.5 MGD multiplied by the rate then in effect pursuant to Paragraph 2 above. If Auburn is

unable to deliver the amount of water requested by the Districts, up to the Block of water, then Auburn will bill the Districts for the amount of water actually delivered at the block rate pursuant to Paragraph 2 above. For the take or pay water Block provided for herein, the Districts will be served on the same basis and with the same reliability as service is provided to Auburn's retail customers, and any curtailment, restrictions or limitations on delivery shall be on same basis as curtailment, restrictions or limitations on delivery to Auburn's retail customers.

4) **ANNUAL TRUE UP OF THE TAKE OR PAY QUANTITY**

DELIVERED: The Master Meter is located at the Lea Hill Intertie Pump Station to measure the flow of water.

The Master Meter will be read in January of each year to adjust for differences between the Master Meter and the water calculated to have been sold under this "take or pay" agreement. Billing for differences between the Master Meter and the calculated quantities will be charged or credited at the "take or pay" rate to the District's accounts.

5) **ANNUAL REVIEW AND ADJUSTMENT:** The initial Block of 1.5 MGD shall remain in effect through December 31, 2010. Each year, the "take or pay" Block may be increased by mutual agreement. By September 1 of each year the Districts shall notify Auburn of their

intent to continue without change or request an increase in the Block quantity. Any requested change in the Block quantity would be effective January 1 of the year following the request. In the event that neither party communicates its intent under this provision, the Block shall be deemed to continue unchanged.

6) **TERM:** This Agreement shall remain in full force and effect from the first day of the month following the execution of this Agreement through December 31, 2010; provided that this Agreement shall automatically be renewed for an additional year at the conclusion of the term of this Agreement or any extension thereof unless any party provides the others with notice of an intent not to extend this Agreement, which notice shall be received by the other parties not less than one year prior to the expiration of the term of this Agreement or any extension thereof. The termination of this Agreement shall not affect any rights or obligations under IA2.

7) **EMERGENCIES:** For purposes of this Agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other mutually agreed upon emergency within the water supply system. An emergency period shall be for no more than five (5) working days without written request

by the Districts and approval by Auburn in writing to extend the emergency period. The City may change, reduce or limit the time for or temporarily discontinue any water supplied for an emergency in excess of the Block quantity without notice. Prior to a planned interruption or limiting of emergency service, the City will notify the Districts of such not less than three days prior to the service disruption. The City agrees to use best efforts and reasonable diligence to notify the Districts as soon after it becomes aware of the need for emergency service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

8) **JOINT AND SEVERAL OBLIGATION:** The obligation of the Districts as set forth therein shall be a Joint and Several obligation of the Districts. Allocation of the take or pay Block of water and the payment for such water shall be negotiated between the Districts outside of this Agreement.

9) **PRIOR AGREEMENT SUPERSEDED:** This Agreement supersedes and replaces the Interim Water Sales Agreement between Auburn, Covington and WD 111 executed on June 17, 2002.

In witness whereof the participants hereto have caused this Agreement to be executed by their proper officers on the 22nd day of February, 2005.

RESOLUTION NO. 3886

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A LEASE AGREEMENT BETWEEN THE CITY AND NEW CINGULAR WIRELESS PCS, LLC, FOR THE PURPOSE OF LEASING PROPERTY FOR COMMUNICATION EQUIPMENT

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREBY RESOLVES as follows:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Lease Agreement between the City and New Cingular Wireless PCS, LLC, in substantial conformity with the agreement attached hereto, for the purpose of leasing property at 5702 South 316th Street, Auburn, for communication equipment. A copy of said Agreement is attached hereto and denominated Exhibit "A" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 19th day of Sept, 2005.

SITE LEASE AGREEMENT

THIS SITE LEASE AGREEMENT ("Lease") is by and between the City of Auburn, a municipal corporation under the existing laws of the State of Washington, having a mailing address of 25 West Main, Auburn, WA 98001 ("Landlord") and New Cingular Wireless PCS, LLC, a Delaware limited liability company, successor in interest to AT&T Wireless Services of Washington, LLC, an Oregon limited liability company, dba AT&T Wireless, by AT&T Wireless Services, Inc., a Delaware corporation, its Member, having a mailing address of 6100 Atlantic Boulevard, Norcross, GA 30071 ("Tenant").

1. Lease Agreement.

(a) Landlord hereby leases to Tenant a portion of the real property legally described as follows:

> **"THE NORTHEAST QUARTER OF THE SOUTHWEST QUARTER OF SECTION 11, TOWNSHIP 21 NORTH, RANGE 4 EAST W.M., EXCEPT THE WEST 663 FEET OF THE NORTH 663 FEET OF THE SOUTH 693 FEET THEREOF, AND EXCEPT THE SOUTH 30 FEET THEREOF CONVEYED TO THE CITY OF AUBURN FOR SOUTH 316TH STREET, BY INSTRUMENT RECORDED UNDER RECORDING NO. 8503210865 AS PROVIDED BY RESOLUTION NO. 1565 OF THE CITY OF AUBURN; SITUATE IN THE CITY OF AUBURN, COUNTY OF KING, STATE OF WASHINGTON",**

(collectively referred to hereinafter as the "Property").

The Lease includes the right to operate a personal communications service antenna installation on Landlord's property, on the terms and conditions set forth herein.

(b) Tenant agrees to the Lease, subject to the following terms and conditions. Landlord hereby leases to Tenant the use of that portion of the Property as legally described as follows:

> **"COMMENCING AT THE SOUTHEAST CORNER OF THE WEST 663.0 FEET OF THE NORTH 663.0 FEET OF THE SOUTH 693.0 FEET OF THE NORTHEAST ONE QUARTER OF THE SOUTHWEST ONE QUARTER OF SECTION 11, TOWNSHIP 21 NORTH, RANGE 4 E., W.M.; THENCE NORTH 0° 25' 35" EAST ALONG THE EAST LINE OF SAID PARCEL 249.00 FEET; THENCE SOUTH 89 ° 34' 25" EAST 40.00 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING SOUTH 89 ° 34' 25" EAST 80.00 FEET; THENCE SOUTH 0 ° 25' 35" WEST 75.00 FEET; THENCE NORTH 89 ° 34' 25" WEST 80.00 FEET; THENCE NORTH 0 ° 25' 35" EAST 75.00 FEET TO THE TRUE POINT OF BEGINNING; SITUATED IN THE CITY OF AUBURN, RECORDS OF KING COUNTY, WASHINGTON"**

(collectively referred to hereinafter as the "Lease Area").

The Lease Area, located at 5702 South 316th Street, Auburn, Washington, comprises approximately an area not to exceed 6,000 square feet.

(c) The Lease shall be nonexclusive and shall not preclude Landlord from granting a similar lease, right, license, franchise, etc., to other carriers or other persons for telecommunications or any other purpose, so long as the subsequent agreement protects Tenant's rights granted by this Lease.

(d) Landlord further hereby leases to Tenant the use of that portion of the Property as legally described as follows:

"BEGINNING AT THE SOUTHEAST CORNER OF THE WEST 663.0 FEET OF THE NORTH 663.0 FEET OF THE SOUTH 693.0 FEET OF THE NORTHEAST ONE QUARTER OF THE SOUTHWEST ONE QUARTER OF SECTION 11, TOWNSHIP 21 NORTH RANGE 4 E., W.M.; THENCE NORTH 0 ° 25' 35" EAST 249.00 FEET; THENCE SOUTH 89 ° 34' 25" EAST 40.00 FEET; THENCE SOUTH 0 ° 25' 35" WEST 75.00 FEET THENCE SOUTH 89 ° 34' 25" EAST 80.00 FEET; THENCE SOUTH 0 ° 25' 35" WEST 47.00 FEET; THENCE NORTH 89 ° 34' 25" WEST 90.00 FEET; THENCE SOUTH 0 ° 25' 35" WEST 40.00 FEET; THENCE SOUTH 48 ° 00' 00" EAST 80.00 FEET; THENCE SOUTH 23 ° 30' 00" EAST 33.60 FEET MORE OR LESS TO THE NORTH MARGIN OF SOUTH 316TH STREET; THENCE SOUTH 88 ° 39' 09" WEST ALONG SAID NORTH MARGIN 103.52 TO THE POINT OF BEGINNING; SITUATED IN THE CITY OF AUBURN, RECORDS OF KING COUNTY, WASHINGTON"

(collectively referred to hereinafter as the "Access and Utility Easement").

The Access and Utility Easement comprises approximately an area not to exceed 16,155 square feet.

2. Term. The initial term of this Lease shall be five (5) years commencing on September 1, 2005 ("Commencement Date"), and terminating at midnight on the last day of the initial term ("Initial Term").

3. Antenna Facilities. Tenant may use the Lease Area for the transmission and reception of radio communication signals and for the construction, installation, operation, maintenance, repair, removal or replacement of related facilities necessary for the operation of a telecommunications facility as well as for access and utilities. These facilities include an antenna tower (not to exceed 150 feet in height) and base, together with a supporting outbuilding for housing of electronic equipment related to the antennas and wireless communications system and an emergency generator (collectively, the "Antenna Facilities"), the maintenance of which shall not violate ACC 8.28.010 regarding noise.

4. Rent. Tenant shall pay Landlord, as rent, Twelve Thousand and no/100 dollars ($12,000.00) per year ("Rent"). Rent shall be payable within twenty (20) days following the Commencement Date and thereafter the Rent will be payable yearly, no later than the anniversary of the Commencement Date to City of Auburn Water Utility Fund, Account Number 430.369.900, at Landlord's address specified in Section 12 below. The Rent shall increase annually over the Rent payable the preceding year in proportion to the increase of the "All Items" category of the Consumer Price Index for Urban Wage Earners and Clerical Workers published by the Bureau of Labor Statistics of the U.S. Department of Labor for Seattle-Everett Metropolitan Area (the "Index"). The first adjustment shall be based on the amount, if any, by which the Index for the 12th month of the Lease term has increased over the Index for the month preceding the commencement of the lease term. Subsequent adjustments will be based on the amount, if any, by which the Index for each subsequent 12th month of the Lease term has increased over the Index for the 12th month of the preceding 12-month period. It shall be the responsibility of the Landlord to track the CPI and notify the Tenant of increases or reductions in the Rent. Landlord shall notify Tenant within 90 days of the commencement of the Renewal Term as to the revised

rate at which the Rent shall be increased annually thereafter. Landlord will invoice Tenant for back Rent due or refund over payment as necessary to correct the payment received for the first year of the Renewal Term. If at any time the CPI ceases to incorporate a significant number of items, if a substantial change is made in the method of establishing the CPI, or if issuance of the CPI shall be discontinued, then the Landlord and Tenant shall mutually agree upon another standard recognized cost of living index issued by the United States Government, provided that if the parties cannot reach agreement on such other standard cost of living index, then the Landlord shall select the index closest to the CPI. In either case, the substitute index chosen shall result in increases in the Rent similar to those that had been, or would have been, generated by the CPI. If this Lease is terminated at a time other than on the anniversary of the Commencement Date, Rent shall be prorated as of the date of termination for any reason (other than a default by Tenant) and all prepaid Rent shall be refunded to Tenant within sixty (60) days.

5. Renewal. Tenant may extend this Lease for (5) additional, five-year terms (each a "Renewal Term"). Each Renewal Term shall be on the same terms and conditions as set forth herein, including the Rent increase set forth in Section 4, above. This Lease shall automatically renew for each successive Renewal Term unless Tenant notifies Landlord, in writing, of Tenant's intention not to renew this Lease, at least ninety (90) days prior to the expiration of the Initial Term or any Renewal Term. Landlord may, during any Renewal Term, notify Tenant, in writing, of Landlord's intention not to renew this Lease for an additional Renewal Term, which notice shall be provided to Tenant at least one hundred and eighty (180) days prior to the expiration of the then in effect Renewal Term. Landlord may, during the final one hundred and eighty (180) days of the Initial Term or any Renewal Term, conduct a market survey to determine the fair market value of the Lease. The Rent for the next Renewal Term will be established by the results of the market survey with each subsequent years Rent governed by the terms of Section 4, however, under no circumstance will the Rent decrease as a result of the market survey below the amount of the most recently established rate in existence prior to the market survey. If Landlord and Tenant cannot reach agreement on the Rent for the next Renewal Term **prior to the end of the initial or any renewal term** the Lease will not renew. If Tenant shall remain in possession of the Lease Area at the expiration of this Lease or any Renewal Term without a written agreement, such tenancy shall be deemed a month-to-month tenancy under the same terms and conditions of this Lease.

6. Interference. Tenant and Landlord shall not operate in a manner which interferes with the other party's operations on the Property. Tenant's Antenna Facilities and the use thereof shall not interfere with the use of any other communication or similar equipment of any kind and nature owned or operated by Landlord or other lessee, licensees, franchisees, etc., existing and operating on the Property prior in time to the commencement of this Lease, and subsequent to the installation by Tenant of the Antenna Facilities, Landlord agrees to exercise reasonable care to assure equipment of subsequent providers leasing space on the Property does not interfere with Tenant's Antenna Facilities operations. The Landlord, however, is not in any way responsible or liable for any interference with Tenant's use of Landlords Property, which may be caused by the use and operation of any other tenant's equipment, even if caused by new technology, so long as such equipment continues to operate within its existing frequencies and in compliance with all applicable laws and FCC rules and regulations. In the event there is interference between Tenant and any third party, such interference will be resolved by and between the parties affected; however, if such interference cannot be resolved to Tenant's satisfaction within forty-eight (48) hours from commencement of such interference, then the parties acknowledge that Tenant will suffer irreparable injury, and therefore, Tenant will have the right, in addition to any other rights that it may have at law or in equity, to terminate this Lease upon 30 days notice to Landlord and restore the Landlord's Property to its original condition, reasonable wear and tear and loss due to casualty or other causes beyond Tenant's control excepted.

7. Improvements; Utilities; Access.

(a) Tenant shall have the right, at its expense, to erect and maintain on the Lease Area, improvements, personal property and facilities necessary to operate its communications system, including, antenna tower and base, radio transmitting and receiving antennas, and related cables and conduits, equipment shelters and/or cabinets and related cables and utility lines and a location based system, including coaxial cable, base units and other associated equipment as such location based system may be permitted by any county, state or federal agency/department. Tenant shall have the right to alter, replace, and expand within the confines of the Lease Area as defined in Section 1 and without interference to other providers / tenants, enhance and upgrade the Antenna Facilities at any time during the term of this Lease. Tenant shall cause all construction to occur lien-free and in compliance with all applicable laws and ordinances. Landlord acknowledges that it shall not interfere with any aspects of construction, including, attempting to direct construction personnel as to the location of or method of installation of the Antenna Facilities. The Antenna Facilities shall remain the exclusive property of Tenant. Tenant shall have the right to remove the Antenna Facilities at any time during and upon the expiration or termination of this Lease.

(b) Tenant shall, at its sole expense, secure the Lease Area with a perimeter security fence including a gate at the entrance.

(c) Tenant shall, at Tenant's expense, keep and maintain the Lease Area and Antenna Facilities now or hereafter located on the Property in commercially reasonable condition and repair during the term of this Lease, normal wear and tear and loss due to casualty or other causes beyond Tenant's control excepted. Upon termination or expiration of this Lease, the Lease Area and Antenna Facilities areas shall be returned to Landlord in good, usable condition, normal wear and tear and loss due to casualty or other causes beyond Tenant's control excepted, within ninety (90) days.

(d) Tenant shall have the right to install utilities, power and telephone, at Tenant's expense, and to improve the present utilities on the Property (including, but not limited to, the installation of emergency power generators). Landlord agrees to cooperate with Tenant in its reasonable efforts to acquire necessary utility service. Tenant shall, wherever practicable, install separate meters for utilities used on the Property by Tenant. Landlord shall diligently correct any variation, interruption or failure of utility service within Landlord's control.

(e) Tenant shall have 24-hours-a-day, 7-days-a-week access to the Lease Area ("Access") at all times during the Initial Term of this Lease and any Renewal Term. In the event Landlord, its employees or agents unreasonably deny Access to Tenant, its employees or agents, Tenant shall, without waiving any other rights that it may have at law or in equity, deduct from Rent amounts due under this Lease an amount equal to Fifty and no/100 Dollars ($50.00) per day for each day that Access is impeded or denied.

8. Termination. Except as otherwise provided herein, this Lease may be terminated, without any penalty or further liability as follows:

(a) upon thirty (30) days' written notice by Landlord if Tenant fails to cure a default for payment of amounts due under this Lease within that thirty (30) day period;

(b) immediately if Tenant is unable to obtain, maintain, or otherwise forfeits or cancels any license (including, without limitation, an FCC license), permit or any Governmental Approval necessary to the installation and/or operation of the Antenna Facilities or Tenant's business;

(c) upon ninety (90) days' written notice by Tenant if the Lease Area or the Antenna Facilities are, or become unacceptable under Tenant's design or engineering specifications for its Antenna Facilities or the communications system to which the Antenna Facilities belong;

(e) at the time title to the Property transfers to a condemning authority, pursuant to a taking of all or a portion of the Property sufficient in Tenant's determination to render the Lease Area unsuitable for Tenant's use. Landlord and Tenant shall each be entitled to pursue their own separate awards with respect to such taking.

(f) Landlord may terminate this Lease if Landlord needs the Lease Area for expansion of Landlord's responsibility to provide its services, and Landlord has no reasonable or economical alternative site available, provided Landlord provides Tenant written notice twelve (12) months in advance of Landlord's need to re-establish Landlord's sole use of the Lease Area. Upon Tenant's receipt of written notice, Tenant shall have six (6) months to submit to Landlord alternative locations for its Antenna Facilities. Such alternative locations may be on the Property or other properties owned or managed by Landlord. Landlord shall evaluate such alternatives and advise Tenant in writing if one or more of the alternatives is suitable to accommodate Tenant's Antenna Facilities. To be a suitable alternative location, such location will not unreasonably result in any interruption of the communications service of Tenant on Landlord's Property; nor will it impair, or in any manner alter, the quality of communications service provided by Tenant on and from Landlord's owned or managed properties. Tenant shall submit additional relevant information to assist the Landlord in making such evaluation. Landlord shall give each alternative location proposed by Tenant full and fair consideration, within a reasonable time so as to allow for the relocation work to be performed in a timely manner. If, in Tenant's reasonable judgment, no suitable alternative location can be found, Tenant shall remove its Antenna Facilities as otherwise provided in this Section 7 (c) of this Lease. If an alternative location for Tenant's Antenna Facilities is found, Landlord and Tenant agree to enter into a new Lease Agreement with the same terms and conditions of this Lease.

(g) If, during the term of this Lease there is a determination made pursuant to an official unappealable order of the Federal Communications Commission or any other applicable law, order, ordinance, regulation, directive, or standard as stated above that use of the Antenna Facilities by the Tenant poses a human health hazard which cannot be remediated, then (a) Tenant shall immediately cease all operations of the Antenna Facilities, and (b) the Lease shall terminate as of the date of such order without further liability. If for reasons related to public health, safety or welfare, Landlord determines that this Lease must be terminated, then Landlord reserves rights of unilateral termination and will do so by providing Tenant with a six (6) month written notice.

(h) Tenant shall be entitled to a pro rata refund of its prepaid Rent for any termination of this Lease by Landlord pursuant to Subsection 8(f) or 8(g).

9. Default and Right to Cure. Notwithstanding anything contained herein to the contrary and without waiving any other rights granted to it at law or in equity, each party shall have the right, but not the obligation, to terminate this Lease on written notice pursuant to Section 12 hereof, to take effect immediately, if the other party (i) fails to perform any covenant for a period of thirty (30) days after receipt of written notice thereof to cure or (ii) commits a material breach of this Lease and fails to diligently pursue such cure to its completion after sixty (60) days' written notice to the defaulting party.

10. Taxes. Landlord shall pay when due all real property taxes or other fees and assessments for the Property, including the Lease Area. In the event that Landlord fails to pay any such real property taxes or other fees and assessments, Tenant shall have the right, but not the obligation, to pay such owed amounts and deduct them from Rent amounts due under this Lease. Notwithstanding the foregoing, Tenant shall pay any personal property tax, State leasehold tax, excise tax, real property tax or any other tax or fee which are directly attributable to the presence or installation of Tenant's Antenna Facilities, only for so long as this Lease has not expired of its own terms or is not terminated by either party. Landlord hereby grants to Tenant the right to challenge, whether in a Court, Administrative Proceeding, or other venue, on behalf of Landlord and/or Tenant, any personal property or real property tax assessments, State leasehold

(d) immediately upon written notice by Tenant if the Lease Area or the Antenna Facilities are destroyed or damaged so as in Tenant's reasonable judgment to substantially and adversely affect the effective use of the Antenna Facilities. In such event, all rights and obligations of the parties shall cease as of the date of the damage or destruction, and Tenant shall be entitled to the reimbursement on a prorated basis of any Rent prepaid by Tenant. If Tenant elects to continue this Lease, then all Rent shall abate until the Lease Area and/or the Antenna Facilities are restored to the condition existing immediately prior to such damage or destruction; or

(e) at the time title to the Property transfers to a condemning authority, pursuant to a taking of all or a portion of the Property sufficient in Tenant's determination to render the Lease Area unsuitable for Tenant's use. Landlord and Tenant shall each be entitled to pursue their own separate awards with respect to such taking.

(f) Landlord may terminate this Lease if Landlord needs the Lease Area for expansion of Landlord's responsibility to provide its services, and Landlord has no reasonable or economical alternative site available, provided Landlord provides Tenant written notice twelve (12) months in advance of Landlord's need to re-establish Landlord's sole use of the Lease Area. Upon Tenant's receipt of written notice, Tenant shall have six (6) months to submit to Landlord alternative locations for its Antenna Facilities. Such alternative locations may be on the Property or other properties owned or managed by Landlord. Landlord shall evaluate such alternatives and advise Tenant in writing if one or more of the alternatives is suitable to accommodate Tenant's Antenna Facilities. To be a suitable alternative location, such location will not unreasonably result in any interruption of the communications service of Tenant on Landlord's Property; nor will it impair, or in any manner alter, the quality of communications service provided by Tenant on and from Landlord's owned or managed properties. Tenant shall submit additional relevant information to assist the Landlord in making such evaluation. Landlord shall give each alternative location proposed by Tenant full and fair consideration, within a reasonable time so as to allow for the relocation work to be performed in a timely manner. If, in Tenant's reasonable judgment, no suitable alternative location can be found, Tenant shall remove its Antenna Facilities as otherwise provided in this Section 7 (c) of this Lease. If an alternative location for Tenant's Antenna Facilities is found, Landlord and Tenant agree to enter into a new Lease Agreement with the same terms and conditions of this Lease.

(g) If, during the term of this Lease there is a determination made pursuant to an official unappealable order of the Federal Communications Commission or any other applicable law, order, ordinance, regulation, directive, or standard as stated above that use of the Antenna Facilities by the Tenant poses a human health hazard which cannot be remediated, then (a) Tenant shall immediately cease all operations of the Antenna Facilities, and (b) the Lease shall terminate as of the date of such order without further liability. If for reasons related to public health, safety or welfare, Landlord determines that this Lease must be terminated, then Landlord reserves rights of unilateral termination and will do so by providing Tenant with a six (6) month written notice.

(h) Tenant shall be entitled to a pro rata refund of its prepaid Rent for any termination of this Lease by Landlord pursuant to Subsection 8(f) or 8(g).

9. Default and Right to Cure. Notwithstanding anything contained herein to the contrary and without waiving any other rights granted to it at law or in equity, each party shall have the right, but not the obligation, to terminate this Lease on written notice pursuant to Section 12 hereof, to take effect immediately, if the other party (i) fails to perform any covenant for a period of thirty (30) days after receipt of written notice thereof to cure or (ii) commits a material breach of this Lease and fails to diligently pursue such cure to its completion after sixty (60) days' written notice to the defaulting party.

10. Taxes. Landlord shall pay when due all real property taxes or other fees and assessments for the Property, including the Lease Area. In the event that Landlord fails to pay

any such real property taxes or other fees and assessments, Tenant shall have the right, but not the obligation, to pay such owed amounts and deduct them from Rent amounts due under this Lease. Notwithstanding the foregoing, Tenant shall pay any personal property tax, State leasehold tax, excise tax, real property tax or any other tax or fee which are directly attributable to the presence or installation of Tenant's Antenna Facilities, only for so long as this Lease has not expired of its own terms or is not terminated by either party. Landlord hereby grants to Tenant the right to challenge, whether in a Court, Administrative Proceeding, or other venue, on behalf of Landlord and/or Tenant, any personal property or real property tax assessments, State leasehold tax or excise tax that may affect Tenant. If Landlord receives notice of any personal property or real property tax assessment, State leasehold tax or excise tax against the Landlord, which may affect Tenant and is directly attributable to Tenant's installation, Landlord shall provide timely notice of the assessment to Tenant sufficient to allow Tenant to consent to or challenge such assessment. Further, Landlord shall provide to Tenant any and all documentation associated with the assessment and shall execute any and all documents reasonably necessary to effectuate the intent of this Section 10.

11. Insurance and Subrogation and Indemnification.

(a) Tenant shall provide Commercial General Liability Insurance naming Landlord (the City of Auburn) as additional insured in an aggregate amount of Two Million and no/100 dollars ($2,000,000.00). Tenant may satisfy this requirement by obtaining the appropriate endorsement to any master policy of liability insurance Tenant may maintain.

(b) Tenant shall indemnify, protect, defend and hold Landlord and its employees and agents harmless from and against any and all claims, liabilities, judgments, costs, damages, and expenses, including reasonable attorney's fees, arising out of or in any way related to Tenant's operation of the Antenna Facilities, including, but not limited to, the installation, maintenance, operation or removal thereof, except to the extent that such claim, liability, judgment, cost, damage or expense arises out of the negligent act or omission, or willful misconduct of Landlord or its employees or agents. Landlord shall not be liable to Tenant, its agents, employees and contractors for damage to the Antenna Facilities or any other property belonging to Tenant from any cause, except for any damage caused by the negligent act or omission or willful misconduct of Landlord or its employees or agents. Tenant waives all claims against Landlord and its employees and agents for damage to persons or Antenna Facilities or property arising for any reason other than a claim based on the negligent act or omission or willful misconduct of Landlord or its employees or agents. Landlord and its employees and agents shall have no liability to Tenant for any interruption of any utility service unless caused by the negligent act or omission or willful misconduct of Landlord or its employees or agents.

Should a court of competent jurisdiction determine that this Lease is subject to RCW 4.24.115, then, in the event of liability for damages arising out of bodily injury to persons or damages to property caused by or resulting from the concurrent negligence of the Tenant and the Landlord, its officers, officials, employees and volunteers, the Landlord's liability hereunder shall be only to the extent of the Landlord's negligence. It is further specifically and expressly understood that the indemnification provided herein constitutes the Tenant's waiver of immunity under Industrial Insurance, Title 51 RCW, solely for the purposes of this indemnification. This waiver has been mutually negotiated by the parties. The provisions of this section shall survive the expiration or termination of this Lease.

12. Notices. All notices, requests, demands and other communications shall be in writing and are effective three (3) days after deposit in the U.S. mail, certified and postage paid, or upon receipt if personally delivered or sent by next-business-day delivery via a nationally recognized overnight courier to the addresses set forth below. Landlord or Tenant may from time to time designate any other address for this purpose by providing written notice to the other party.

If to Tenant, to:

13. Quiet Enjoyment, Title and Authority. Landlord covenants and warrants to Tenant that (i) Landlord has full right, power and authority to execute this Lease; (ii) it has good and unencumbered title to the Property free and clear of any liens or mortgages, except those disclosed to Tenant and which will not interfere with Tenant's rights to or use of the Lease Area; and (iii) execution and performance of this Lease will not violate any laws, ordinances, covenants, or the provisions of any mortgage, lease, or other agreement binding on Landlord.

14. Environmental Laws. Landlord represents that it has no knowledge of any substance, chemical or waste (collectively, "Hazardous Substance") on the Property that is identified as hazardous, toxic or dangerous in any applicable federal, state or local law or regulation. Landlord and Tenant shall not introduce or use any Hazardous Substance on the Property in violation of any applicable law. Landlord shall be responsible for, and shall promptly conduct any investigation and remediation as required by any applicable environmental laws, for all spills or other releases of any Hazardous Substance not caused in whole or in part by Tenant, that have occurred or which may occur on the Property. Each party agrees to defend, indemnify and hold harmless the other from and against any and all administrative and judicial actions and rulings, claims, causes of action, demands and liability (collectively, "Claims") including, but not limited to, damages, costs, expenses, assessments, penalties, fines, losses, judgments and reasonable attorney fees that the indemnitee may suffer or incur due to the existence or discovery of any Hazardous Substances on the Property or the migration of any Hazardous Substance to other properties or the release of any Hazardous Substance into the environment (collectively, "Actions"), that relate to or arise from the indemnitor's activities on the Property. Landlord agrees to defend, indemnify and hold Tenant harmless from Claims resulting from Actions on the Property not caused by Landlord or Tenant prior to and during the Initial Term and any Renewal Term of this Lease. The indemnifications in this section specifically include, without limitation, costs incurred in connection with any investigation of site conditions or any cleanup, remedial, removal or restoration work required by any governmental authority. This Section 14 shall survive the termination or expiration of this Lease.

15. Assignment and Subleasing. All of the terms and provisions contained herein shall inure to the benefit of and shall be binding upon the parties hereto and their respective heirs, legal representatives, successors and assigns. This Lease shall not be assigned by Tenant without the express written consent of Landlord, which consent shall not be unreasonably withheld, delayed or conditioned. Any attempted assignment in violation of this Section shall be void. The transfer of the rights and obligations of Tenant to a parent, subsidiary, or other affiliate of Tenant, or to any successor-in-interest or entity acquiring fifty-one percent (51%) or more of Tenant's stock or assets, shall not be deemed an assignment. Tenant shall give to Landlord thirty (30) days' prior written notice of any such transfer.

Additionally, Tenant may, upon notice to Landlord, mortgage or grant a security interest in this Lease and the Antenna Facilities, and may assign this Lease and the Antenna Facilities to any mortgagees or holders of security interests, including their successors or assigns (collectively "Mortgagees"), provided such Mortgagees agree to be bound by the terms and provisions of this Lease. In such event, Landlord shall execute such consent to leasehold financing as may reasonably be required by Mortgagees. Landlord agrees to notify Tenant and Tenant's Mortgagees simultaneously of any default by Tenant and to give Mortgagees the same right to cure any default as Tenant or to remove any property of Tenant or Mortgagees located on the Lease Area, except that the cure period for any Mortgagees shall not be less than thirty (30) days after receipt of the default notice, as provided in Section 9 of this Lease. All such notices to Mortgagees shall be sent to Mortgagees at the address specified by Tenant. Failure by Landlord to give Mortgagees such notice shall not diminish Landlord's rights against Tenant, but shall preserve all rights of Mortgagees to cure any default and to remove any property of Tenant or Mortgagees located on the Lease Area.

The Lease Area shall be used exclusively as a site for a wireless telecommunications facility. The Tenant may allow use of all or a portion of the Lease Area or their Antenna Facilities by others, with prior written approval of the Landlord.

16. Removal of Antenna Facilities. The Antenna Facilities are and shall remain the property of the Tenant and upon the expiration or earlier termination of this Lease, Tenant shall, at Tenant's sole cost and expense, remove the Antenna Facilities and restore the Lease Area to its original condition, normal wear and tear and loss due to casualty or other causes beyond Tenant's control excluded.

17. Miscellaneous.

(a) The substantially prevailing party in any litigation, including any arbitration to which the parties shall submit, arising hereunder shall be entitled to its reasonable attorneys' fees and court costs, including appeals, if any.

(b) This Lease constitutes the entire agreement and understanding of the parties, and supersedes all offers, negotiations and other agreements. There are no representations or understandings of any kind not set forth herein. Any amendments to this Lease must be in writing and executed by both parties. At such time as the Auburn City Council approves any regulation affecting telecommunications, Tenant agrees to amend this Lease, as determined by the Landlord in order to comply with any future ordinance related to telecommunications provided, however, that in no event shall such regulation (i) materially interfere with or affect Tenant's operation of its Antenna Facilities; or (ii) increase Tenant's financial obligations under the terms of this Lease, except as provided herein, or impose some new financial obligations not already contemplated by this Lease. No amendment, change or modification of this Lease shall be valid, unless in writing and signed by all parties hereto.

(c) Each party agrees to cooperate with the other in executing any documents (including a Memorandum of Lease in substantially the form attached hereto as Exhibit A) necessary to protect its rights or use of the Lease Area. The Memorandum of Lease may be recorded in place of this Lease by either party. In the event the Property is encumbered by a mortgage or deed of trust, Landlord agrees, upon request of Tenant, to obtain and furnish to Tenant a non-disturbance and attornment agreement for each such mortgage or deed of trust, in a form reasonably acceptable to Tenant. Tenant may obtain title insurance on its interest in the Lease Area.

(d) This Lease shall be construed in accordance with the laws of the state in which the Property is located.

(e) If any term of this Lease is found to be void or invalid, such finding shall not affect the remaining terms of this Lease, which shall continue in full force and effect. The parties agree that if any provisions are deemed not enforceable, they shall be deemed modified to the extent necessary to make them enforceable. No provision of this Lease will be deemed waived by either party unless expressly waived in writing signed by the waiving party. No waiver shall be implied by delay or any other act or omission of either party. No waiver by either party of any provision of this Lease shall be deemed a waiver of such provision with respect to any subsequent matter relating to such provision.

(f) The persons who have executed this Lease represent and warrant that they are duly authorized to execute this Lease in their individual or representative capacity as indicated.

(g) This Lease may be executed in any number of counterpart copies, each of which shall be deemed an original, but all of which together shall constitute a single instrument.

(h) All Exhibits referred to herein and any Addenda are incorporated herein for all purposes. The parties understand and acknowledge that Exhibit A (Memorandum of Lease) is attached to this Site Lease Agreement. The terms of all Exhibits are incorporated herein for all purposes.

(i) If Landlord is represented by any broker or any other leasing agent, Landlord is responsible for all commission fees or other payment to such agent, and agrees to indemnify and hold Tenant harmless from all claims by such broker or anyone claiming through such broker. If Tenant is represented by any broker or any other leasing agent, Tenant is responsible for all commission fee or other payment to such agent, and agrees to indemnify and hold Landlord harmless from all claims by such broker or anyone claiming through such broker.

18. Headings. The caption and paragraph headings used in this Lease are inserted for convenience of reference only and are not intended to define, limit or affect the interpretation or construction of any term or provision hereof.

19. Liens. Except with respect to activities for which Landlord is responsible, Tenant shall pay as due all claims for work done on, and for services rendered or material furnished to, the Antenna Facility, and shall keep the Antenna Facility free from all liens.

MEMORANDUM
OF
LEASE

THIS MEMORANDUM OF LEASE is by and between the City of Auburn, a municipal corporation under the existing laws of the State of Washington, having a mailing address of 25 West Main, Auburn, WA 98001 ("Landlord") and New Cingular Wireless PCS, LLC, a Delaware limited liability company, having a mailing address of 6100 Atlantic Boulevard, Norcross, GA 30071 ("Tenant").

1. Landlord and Tenant entered into a certain Site Lease Agreement ("Lease") on the 19th day of Sept, 2005, for the purpose of installing, operating and maintaining a communications facility and other improvements. All of the foregoing are set forth in the Lease.

2. Landlord is leasing to Tenant a portion of the Property described in Exhibit A annexed hereto.

3. The initial term of the five (5) years commences on September 1, 2005. The Lease will automatically renew for five (5) separate consecutive periods of five (5) years each upon the same terms and conditions of the Lease, unless Tenant notifies Landlord in writing of Tenant's intention not to renew the Lease at least ninety (90) days prior to the expiration of the existing term. Unless earlier terminated, the Lease will expire on August 31, 2035.

4. This Memorandum of Lease is not intended to amend or modify, and shall not be deemed or construed as amending or modifying, any of the terms, conditions or provisions of the Lease, all of which are hereby ratified and affirmed. In the event of a conflict between the provisions of this Memorandum of Lease and the provisions of the Lease, the provisions of the Lease shall control.

5. The Lease shall be binding upon and inure to the benefit of the parties and their respective heirs, successors, and assigns, subject to the provisions of the Lease.

IN WITNESS WHEREOF, the parties have executed this Memorandum of Lease as of the day and year first above written.

This Agreement for the Sale of Wholesale Water ("Agreement") between the City of Tacoma, Department of Public Utilities, Water Division (Tacoma) and Cascade Water Alliance ("Cascade"), is made and entered into effective this 13th day of October, 2005 (Effective Date). Tacoma and Cascade are sometimes referred to herein in the singular as "Party" and in the plural as "Parties".

WHEREAS, Tacoma is a municipality organized and operating under the laws of the State of Washington; and

WHEREAS, Cascade is a public nonprofit corporation established by Interlocal Contract under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act, and incorporated under Chapter 24.03 to further the interests of its members with respect to water supply and to work cooperatively with other water supply entities; and

WHEREAS, Tacoma and Cascade have the responsibility to plan, design, construct and operate water supply facilities to meet the municipal, commercial and industrial water supply needs of their respective customers and member organizations; and

WHEREAS, Tacoma, which has nearly completed the construction of its Second Supply Project, expects to have the supply capacity, together with Tacoma's other water resources, to meet Tacoma's projected water supply needs for the next fifty years, in addition to meeting a portion of the water needs of Tacoma's project partners, Lakehaven Utility District, Covington Water District and the City of Kent; and

WHEREAS, Cascade is contracting for, and has plans to construct additional water supplies to supplement its existing water supplies to meet its immediate and long-term water supply needs; and

WHEREAS, Tacoma and Cascade are each seeking cost effective ways to utilize available regional capacity, and to plan for water resources to meet the full future water supply needs of their respective customers; and

WHEREAS, Cascade could make beneficial use of available supply in Tacoma's Second Supply Project both permanently and in the near term until such time as other water resources are available to meet the needs of Cascade and its member utilities; and

WHEREAS, Cascade wishes to purchase from Tacoma, and Tacoma wishes to sell to Cascade a supply of water both permanently and for a finite period of years.

NOW, THEREFORE, the Parties agree as follows.

1. DEFINITIONS

1.1 When used with initial capitalization in this Agreement, the following terms shall have the meanings set forth below.

1.1.1 "Due Date" means the date by which payment of any invoice issued pursuant to section 10 of this Agreement is due to Tacoma, which date shall be the close of business on the thirtieth (30th) day after an invoice is issued, provided, however, that if such thirtieth day falls on a Saturday, Sunday or legal holiday observed by Tacoma, the Due Date shall be extended until the close of business of the next regular business day of Tacoma.

1.1.2 "Effective Date" shall have the meaning given such term in section 3.

1.1.3 "Flow Control Valve" means the valve located in the vicinity of the Point(s) of Delivery for Cascade that controls the volume of water that is delivered to Cascade.

1.1.4 "Howard Hanson Dam Additional Storage Project" or "Storage Project" shall have the meaning given such term in the Project Agreement.

1.1.5 "Implementation Agreement" means a written agreement executed by the Superintendent of Tacoma Water and the General Manager of Cascade setting out the understandings of the Parties regarding the implementation and administration of this Agreement as set forth in section 2.

1.1.6 "Initial Delivery Date" means the date on which Tacoma actually commences delivery of wholesale water pursuant to the terms of this Agreement.

1.1.7 "Interest Rate" means for each day that it is applied a rate equal to one-three hundred and sixty-fifth (1/365) of the prime interest rate for preferred customers established from time to time by the Bank of America, or such other bank as may be designated by the Parties, plus three (3) percentage points.

1.1.8 "Interconnection Facilities" mean the facilities, other than the Wholesale Service Connection, that need to be constructed by Cascade to take delivery of wholesale water through the Wholesale Service Connection and convey such water to Cascade's transmission main.

1.1.9 "Isolation Valve" means a positive shut off valve that shall be

installed at the location in each water system that is used to accept or deliver water through the Wholesale Service Connection.

1.1.10 "Minimum Monthly Bill" shall have the meaning given such term in section 9.2.

1.1.11 "Operating Year" means any consecutive twelve (12) month period commencing on each July 1st, and ending on the following June 30th.

1.1.12 "Pea k Season" means the period starting June 1 and ending September 31 during each year during the Term.

1.1.13 "Peaking Factor" means the factor set forth in section 6.3.

1.1.14 "Project Agreement" means the Second Supply Project Agreement between the City of Tacoma and the City of Kent, Covington Water District and Lakehaven Utility District.

1.1.15 "Project Operator" means Tacoma in its role as the party responsible for the operation and maintenance of the Tacoma Second Supply Project.

1.1.16 "Requested Initial Delivery Date" means the date designated by Cascade pursuant to section 5.2 for Tacoma to commence delivery of wholesale water pursuant to section 6 of this Agreement.

1.1.17 "Second Diversion Right or Permit and First Diversion Claim" means those water rights that authorize Tacoma to divert and use water from the Green River (together, the Diversion Rights).

1.1.18 "Surcharge Rate" means a rate equal to four times the highest wholesale water rate for sales to Cascade for the period of excess use.

1.1.19 "TMC" means the City of Tacoma 's Municipal Code.

1.1.20 "Uncontrollable Force" means any event or occurrence that is beyond the reasonable control of a Party and which by the exercise of due diligence and reasonable foresight such Party could not have reasonably been expected to avoid or remove, and includes but is not limited to flood, earthquake, storm, accident, fire, lightning and other natural catastrophes, epidemic, war, labor or material shortage, strike or labor dispute, acts of terrorism or sabotage, and also includes restraint by an order of a court of competent jurisdiction or by regulatory authorities against any action taken or not taken by a Party, after a good faith effort by such Party to obtain: (a)

relief from such order; or (b) any necessary authorizations or approvals from any governmental agency or regulatory authority.

1.1.21 "Wholesale Service Connection" means a physical connection between water mains of the Parties to this Agreement, at a specifically identified point or points, where water will be transferred from one Party's system to the facilities of the other Party.

1.1.22 "Wholesale Water Sales" means sales of water by Tacoma to entities that are not retail customers of Tacoma and which resell to end users the water that they purchase from Tacoma.

2. IMPLEMENTATION AGREEMENTS AND EXHIBITS TO THE AGREEMENT

2.1 The Superintendent of Tacoma Water and the General Manager of Cascade may, at their discretion, execute Implementation Agreements regarding the implementation or administration of this Agreement in a manner that does not affect the substantive rights of the parties under this Agreement.

2.2 The following exhibits, which are attached to this Agreement, are hereby made a part of and incorporated into this Agreement as if fully set forth herein:

Exhibit A - Map locating the Wholesale Service Connection, delivery meter and related facilities.
Exhibit B - Sample Weekly Operations Report
Exhibit C - Arbitration Procedures

The Superintendent of Tacoma Water and the General Manager of the Cascade are authorized to prepare Exhibits showing the Wholesale Service Connection and the location of the delivery meter upon the installation of those facilities and to adopt such Exhibits for purposes of this Agreement.

2.3 If and to the extent that there is a conflict between the terms set forth in an Implementation Agreement or in any of the foregoing Exhibits and those set forth in the body of this Agreement, the terms set forth in the body of this Agreement shall prevail.

3. EFFECTIVE DATE AND TERM OF THE AGREEMENT

3.1 This Agreement shall take effect when executed by the Parties, and shall remain in full force and effect until the date that Tacoma ceases making Wholesale Water Sales, unless terminated (in whole or in part) earlier in accordance with sections 11, 12 or 24 ("Term"). The Term of this Agreement may be extended by written agreement of the Parties.

3.2 All obligations incurred during the Term shall survive the termination or expiration of this Agreement.

4. SALE AND PURCHASE OF WHOLESALE WATER

4.1 For the Term of this Agreement, Tacoma agrees to sell and make available to Cascade, and Cascade agrees to accept delivery of and pay for quantities of wholesale water, all pursuant to the provisions of this Agreement.

4.2 The water sold by Tacoma to Cascade pursuant to this Agreement shall be water available from the Diversion Rights. The use made of such wholesale water shall be subject to the restrictions on the place of use applicable to the Diversion Rights, copies of which have been provided to Cascade by Tacoma.

5. COMMENCEMENT OF WHOLESALE WATER DELIVERIES

5.1 Tacoma shall stand ready to commence deliveries of the amounts of wholesale water set forth in section 6 not later than October 1, 2008. If the Howard Hanson Storage Project is not operational by October 1, 2012, then Tacoma may, based on Tacoma's forecast of its water supplies without the Howard Hanson Storage Project, reduce its obligation to sell water to Cascade under section 6.2 (including a reduction to zero deliveries) by providing written notice to Cascade of such reduction to its water deliveries not less than ninety (90) days prior to the date the adjusted deliveries will commence.

5.2 Except as provided in section 5.1 deliveries of wholesale water by Tacoma to Cascade pursuant to section 6 shall commence on the Requested Initial Delivery Date designated by Cascade by written notice provided to Tacoma not less than ninety (90) days prior to the Requested Initial Delivery Date, which date cannot occur prior to October 1, 2008.

6. WHOLESALE WATER SUPPLY

6.1 From the Initial Delivery Date until the date that Tacoma ceases making Wholesale Water Sales, Tacoma shall make available to Cascade at the Wholesale Service Connection wholesale water in the amount of four million gallons per day (4 MGD) at a uniform hourly delivery rate.

6.2 In addition to the wholesale water deliveries set forth in section 6.1, on and after the Initial Delivery Date, Tacoma shall make available to Cascade at the Wholesale Service Connection wholesale water in the following amounts:

6.2.1 From the Initial Delivery Date through December 31, 2026, six million gallons per day (6 MGD) at a uniform hourly delivery rate.

6.2.2 From January 1, 2027 through December 31, 2027, 4 million gallons per day (4 MGD) at a uniform hourly delivery rate.

6.2.3 From January 1, 2028 through December 31, 2028, three million gallons per day (3 MGD) at a uniform hourly delivery rate.

6.2.4 From January 1, 2029 through December 31, 2029, two million gallons per day (2 MGD) at a uniform hourly delivery rate.

6.2.5 From January 1, 2030 through December 31, 2030, one million gallons per day (1 MGD) at a uniform hourly delivery rate.

6.2.6 On and after January 1, 2031, Tacoma shall have no obligation to provide to Cascade and Cascade shall have no right to receive from Tacoma wholesale water deliveries pursuant to this section 6.2.

6.3 The wholesale water deliveries set forth in sections 6.1 and 6.2 may, as requested by Cascade, be increased during the Peak Season by a Peaking Factor of 1.33. For example, application of the Peaking Factor to the wholesale water deliveries set forth in section 6.1 would result in deliveries of 5.32 million gallons per day.

6.4 Cascade may request in writing that Tacoma investigate the feasibility of providing to Cascade wholesale water on a temporary basis in addition to the amounts set forth in sections 6.1 and 6.2. The written request from Cascade to Tacoma shall state with specificity the wholesale water amounts requested (including Peak Season deliveries), the requested commencement date and termination date of such deliveries. Upon receipt of such written request, Tacoma will review its water demand and supply forecasts expeditiously to determine if, in the sole judgment of Tacoma, it will have sufficient water supplies to fulfill the request for additional deliveries of wholesale water in whole or in part. In the event that Tacoma determines that it can fulfill, in whole or in part, the request of Cascade for additional deliveries of wholesale water, such additional deliveries shall be priced according to Tacoma's wholesale water rate, which additional supply shall be subject to the Surcharge Rate only if Cascade takes such temporary water in excess of the amounts which Tacoma has agreed to supply. Tacoma and Cascade shall, prior to the commencement of such additional deliveries, execute an agreement setting forth all of the terms and conditions applicable to such additional temporary deliveries.

7. WHOLESALE WATER QUALITY, DELIVERY PRESSURE AND METERING

7.1 The quality of wholesale water made available to Cascade pursuant to section 6 shall be in compliance with all applicable state and federal drinking water laws, regulations and standards, and at the pressures agreed to by the Parties.

7.2 The amounts of wholesale water made available to Cascade will be measured by a delivery meter located at or in the vicinity of the Wholesale Service Connection, as agreed to by the Parties.

8. WHOLESALE SERVICE CONNECTION AND INTERCONNECTION FACILITIES

8.1 All costs associated with the design and construction of the Wholesale Service Connection, including the water main, service pipe, automated remote valve shut off, meter(s), appurtenances and vaults, shall be the responsibility of Cascade. Tacoma shall be responsible for preparation of the design of the Wholesale Service Connection and for the cost of repair and maintenance of the Wholesale Service Connection up to and including the outlet of the meter. The meter(s) shall be located as close to the Wholesale Service Connection as possible. Tacoma will coordinate the design and construction of the Wholesale Service Connection with Cascade. All Wholesale Service Connections with Tacoma are required to have automated meter reading (AMR) installed on them. Cascade will be responsible for the costs of installing the phone connection for the AMR and the costs to install the equipment with the meter.

8.2 Cascade shall be responsible for designing, engineering, permitting, constructing and financing any and all Interconnection Facilities necessary for Cascade to accept delivery of the wholesale water made available by Tacoma pursuant to section 6.

8.3 Cascade will submit to Tacoma for review, revision and approval the designs, specifications and construction schedule for the Interconnection Facilities. Tacoma will not unreasonably delay its review of designs, specifications and construction schedules submitted to it by Cascade, and will not unreasonably withhold its approval of such designs, specifications and construction schedule.

8.4 Cascade will not commence construction of the Interconnection Facilities unless and until Cascade has received from Tacoma approved designs, specifications, and construction schedule (as such documents may be revised by Tacoma).

8.5 Cascade will construct and operate the Interconnection Facilities in a manner that is consistent with the provisions of all permits, regulatory approvals and agreements governing the construction and operation of the Second Supply Project.

8.6 Prior to the submission to Tacoma of designs, specifications and construction schedule for the Interconnection Facilities, Cascade and Tacoma will negotiate a mutually agreeable amount of compensation payable by Cascade to Tacoma for the use of any property, rights of way and for work performed by Tacoma staff and consultants in facilitating the construction of Interconnection Facilities, exclusive of the activities undertaken by Tacoma pursuant to section 8.3.

8.7 Cascade agrees that Tacoma owns the Isolation Valve directly off of the Tacoma system, piping from the Tacoma Isolation Valve to the meter, the meter vault and the meter and telemetry equipment, all as will be set forth on Exhibit A. Maintenance and operation costs for this equipment are the responsibility of Tacoma. Any capital costs related to this equipment, including upgrades or replacement and renewal are the responsibility of Cascade.

8.8 The Wholesale Service Connection shall be governed by the terms of this Agreement. No future Wholesale Service Connections shall be permissible without a subsequent and separate written agreement between the Parties. Neither Party shall be obligated to agree to or execute any agreement or permit with the other Party to construct additional Wholesale Service Connection(s).

9. PRICING OF WHOLESALE WATER

9.1 Commencing with the month in which deliveries of wholesale water to Cascade pursuant to section 6 begin, and for each month thereafter during the Term, Cascade will pay to Tacoma a monthly payment equal to the amount of wholesale water delivered in such month, as measured at the delivery meter, times the wholesale water service rate plus the readiness to serve charge as set forth in TMC Section 12.10.400 of the City of Tacoma Water Rates and Regulations (or the successor TMC Section), subject to Cascade's obligation to pay the Minimum Monthly Bill in accordance with section 9.2

9.2 Regardless of whether Cascade has or has not established a Requested Initial Delivery Date, Cascade shall for the period 2009 through 2026 pay not less than the Minimum Monthly Bill. The Minimum Monthly Bill shall be determined by multiplying the Minimum Daily Purchase Amount ("P") set forth below, times the number of days in each month ("D"), times the wholesale water service rate ("R"), (P x D x R = monthly minimum payment).

Calendar Year	Minimum Daily Purchase Amount (in MGD)
2009	2.0
2010	2.0
2011	2.0
2012	3.0
2013	3.0

2014	3.0
2015	4.0
2016	4.0
2017	4.0
2018	5.0
2019	5.0
2020	6.0
2021	6.0
2022	7.0
2023	7.0
2024	8.0
2025	8.0

Provided, however, after the Initial Delivery Date, whenever Tacoma declares a supply curtailment or cannot otherwise deliver the minimum water supply Cascade shall be billed only for the water actually delivered.

9.3 In the event that the sum of the Minimum Monthly Bills for a calendar year exceeds the sum of the payments made by Cascade during such calendar year pursuant to Section 9.1, then Tacoma will bill Cascade in February of the immediately following calendar year during the period of 2010 through 2026 the amount by which the sum of the Minimum Monthly Bills for such calendar year exceeded the payments made pursuant to Section 9.1 during such calendar year.

9.4 The water service rate and the readiness to serve charge may be periodically adjusted and shall be applicable as set forth in the rate schedule as adopted by the Public Utility Board and Tacoma City Council.

9.5 Cascade shall pay Tacoma System Development Charges ("SDCs") of $16,484,000 for water supplied pursuant to section 6.1 as follows:

9.5.1 Within one-hundred and twenty (120) days of the Effective Date, Cascade will pay Tacoma an initial payment of twenty percent (20%) of the SDCs or $3,296,800.

9.5.2 After such initial payment, the remaining balance of the SDCs will be paid in not more than ten (10) equal annual payments, with the first such payment due on the first anniversary of the Effective Date and thereafter on each successive anniversary until the SDCs are paid in full.

9.6. Cascade shall pay Tacoma a Capacity Reservation Fees ("CRFs") of $9,420,442 for water supplied pursuant to section 6.2 as follows:

9.6.1 Within one-hundred and twenty (120) days of the Effective Date, Cascade will pay Tacoma an initial payment of twenty percent (20%) of

the CRFs or $1,884,088.

9.6.2 After such initial payment, the remaining balance of the CRFs will be paid in not more than ten (10) equal annual payments, with the first such payment due on the first anniversary of the Effective Date and thereafter on each successive anniversary until paid in full.

9.7 In addition to the annual payments pursuant to sections 9.5 and 9.6, Cascade will on the same date pay Tacoma interest calculated on a monthly basis (the first day of every month) on the outstanding unpaid balance of the SDCs and CRFs calculated using the prime interest rate, as reported by the Wall Street Journal ten days before the date that the monthly interest calculation is made, minus two percent (2%). Cascade may, at its election, prepay all or any portion of the SDCs and/or CRFs outstanding balance, in which case the interest accrued to the date of such prepayment shall also be paid to Tacoma, and the remaining unpaid balance shall be paid in equal installments.

9.8 If Tacoma exercises its option pursuant to section 5.1 to reduce water deliveries under section 6.2, then the CRFs payable under section 9.6 will be reduced proportionately. For example, if the total deliveries under section 6.2 are reduced by Tacoma by twenty percent (20%), then the total amount of CRFs payable under section 9.5 will be reduced by twenty percent (20%). Such reduction will be accomplished by first eliminating any CRFs not yet paid by CWA, and then by Tacoma refunding to Cascade any CRFs (or portions thereof) already paid starting with the most recent CRFs payment made by Cascade until such proportionate reduction is achieved. Any such refunds shall include interest calculated from the date of payment to the date of the refund, at the interest rate described in section 9.7. Any such refund shall be paid by Tacoma to Cascade within ninety (90) days of the notice issued pursuant to section 5.1.

9.9 An interest component will be paid by Tacoma to Cascade on the CRF payments eliminated or refunded pursuant to section 9.8. For the CRFs (or portions thereof) that are eliminated or refunded pursuant to section 9.8, the interest component will be calculated from the Effective Date to the date the payment of any refund is due pursuant to section 9.8. Such interest component will be the sum of the annual interest calculated for each of the years that the amount refunded or eliminated was outstanding, using the interest rate for each such year charged Cascade by Tacoma pursuant to section 9.7.

10. PAYMENTS

10.1 Tacoma shall prepare and forward to Cascade in the first week of each month during the Term an invoice for the payment of amounts due pursuant to this Agreement for the preceding month. Each such invoice shall set forth the payment due from Cascade to Tacoma. In addition, during the first week of each February during the

2010 through 2026 period, when required pursuant to section 9.3, Tacoma shall prepare and forward to Cascade an invoice for any amounts due to Tacoma under section 9.3.

10.2 Cascade may request from Tacoma, and Tacoma shall promptly provide to Cascade, any documentation or other information that Cascade may reasonably require to understand the nature of the costs contained in any invoice issued pursuant to this section 10.

10.3 Payment of any and all invoices forwarded to Cascade by Tacoma pursuant to this section 10 shall be due and payable by Cascade on or before the Due Date, with payment to be made by wire transfer or such other means as agreed to by Tacoma and Cascade.

10.4 If full payment of any invoice is not received by Tacoma on or before the Due Date, such payment shall be considered past due, and the unpaid amount of such invoice shall accrue interest at the Interest Rate. Further, if an invoice or any portion thereof remains unpaid for a period of thirty (30) days after the Due Date, Tacoma may elect to suspend deliveries due to Cascade pursuant to section 6 until Cascade has paid all amounts due and owing, and any late payment charges due thereon.

10.5 If Cascade disputes all or any portion of an invoice issued by Tacoma pursuant to this section 10, Cascade shall pay such invoice in full, and shall indicate in writing to Tacoma the portions of the invoice that Cascade disputes and the reasons therefore. The Parties shall make a good faith effort to resolve such dispute. If such efforts are unsuccessful, either Cascade or Tacoma may seek resolution of the dispute pursuant to section 21.

10.6 If the resolution of any dispute over an invoice, whether by agreement of the Parties or by dispute resolution pursuant to section 21, results in the payment of money from Tacoma to Cascade, such payment shall include an interest payment for the period commencing with the date the disputed invoice was paid, and ending on the date the payment resolving the dispute is made to the Cascade, calculated using the Interest Rate.

10.7 Cascade hereby covenants and agrees that it shall establish, maintain and collect rates or charges for water and other services, facilities and commodities sold, furnished or supplied by it to its members which shall be adequate to provide revenues sufficient to enable Cascade to make the payments required to be made pursuant to the terms of this Agreement, and to pay all other charges and obligations payable from or constituting a charge or lien upon such revenues.

10.8 Payments by Cascade of SDCs, CRFs or of amounts under each invoice issued pursuant to this section 10 shall constitute an operating expense for water purchased by Cascade.

11. PLANNING AND COORDINATION

11.1 Cascade will develop a long-term supply plan and acquire additional water supplies to establish a firm supply for its members. Cascade shall provide to Tacoma a copy of such long-term supply plan, which plan shall also demonstrate that Cascade has planned for and has the ability to develop sufficient water supplies for its members to replace the wholesale water deliveries set forth in section 6.2 upon the expiration of such water delivery obligation under this Agreement. If Cascade cannot demonstrate by December 1, 2015 to the satisfaction of Tacoma that it will develop sufficient replacement water supplies to replace the water sale set forth in section 6.2, then the water delivery obligation set forth in section 6.2 may be terminated in whole or in part by Tacoma no sooner than January 1, 2016 by providing Cascade written notice of such termination six months prior to date of termination established by Tacoma in such written notice. In such event, the water delivery obligation of Tacoma to Cascade under this Agreement shall be limited to the delivery obligation set forth in sections 6.1 and 6.3.

11.2 In the event that Tacoma exercises it right to terminate its entire delivery obligation under section 6.2 pursuant to section 11.1, then Tacoma will make a payment to Cascade not later than sixty (60) days after the effective date of such termination. If such termination occurs in 2016, the payment from Tacoma to Cascade will be the sum of $4,148,111. If such termination occurs in any year subsequent to 2016, the payment due from Tacoma to Cascade shall be reduced by the amount of $415,000 for each year after 2016 that such termination occurs. If Tacoma only terminates its delivery obligation under section 6.2 in part, then the payment due from Tacoma to Cascade will be prorated to reflect the percentage of the total water deliveries under section 6.2 that were terminated pursuant to section 11.1. For example, if twenty percent (20%) of the total water delivery obligation under section 6.2 is terminated pursuant to section 11.1, then the payment due by Tacoma to Cascade will equal twenty percent (20%) of $4,146,111.

11.3 The Parties will seek to adopt conservation plans and to coordinate regional supply scheduling and other operational programs that promote efficient use of water supplies, facilities, financial and staff resources.

12. TERMINATION OF THE SECTION 6.2 WATER DELIVERIES

If after October 1, 2008 Tacoma has stood ready to serve water pursuant to Section 6 for a five year period, and during such period Cascade has not established a Requested Initial Delivery Date for the delivery amounts set out in section 6.2, then Tacoma may terminate its water delivery obligations under section 6.2 of this Agreement by providing Cascade written notice of such termination not less than one hundred eighty (180) days prior to the date of termination specified in such notice. In the event of such termination, Cascade shall not be obligated to make any further annual payments under section 9.6. The permanent supply purchased by Cascade under section 6.1 of this Agreement, and all payment obligations associated therewith, shall be unaffected by such termination.

13. WATER MANAGEMENT AND SCHEDULING

13.1 Not later than May 1 of each year during the Term prior to a year in which deliveries will be made pursuant to section 6, Cascade will submit to Tacoma a written draft operating plan for the next Operating Year. Each such draft operating plan will include, but not be limited to, the amount of Diversion Rights water that Cascade expects to receive pursuant to this Agreement in each week during the next Operating Year.

13.2 Scheduling Delivery of Wholesale Water within an Operating Year

13.2.1 Prior to 10:00 A.M. on any Thursday during each Operating Year, Cascade may submit to Tacoma, in the manner and in the form established by Tacoma, a schedule for wholesale water deliveries for the following seven (7) days. Such schedule shall contain at a minimum a uniform rate of water deliveries for each day of the schedule, and shall take effect on the day following the Thursday the schedule is submitted. Schedules so submitted shall remain in effect until replaced by a subsequent schedule submitted in accordance with this subsection 13.2.1. Tacoma shall take all reasonable actions required to ensure that the amount of wholesale water scheduled by Cascade is available to it.

13.2.2 Tacoma may revise schedules submitted pursuant to subsection 13.2.1, if and to the extent any such schedule calls for deliveries that are in excess of Cascade's rights under this Agreement or is inconsistent with Project operating constraints. Tacoma shall notify Cascade if its schedule is revised pursuant to this subsection 13.2.2. In the event that a change in circumstances necessitates a change to a schedule then in effect, Cascade may request a change to such schedule, and Tacoma shall take all reasonable actions to accommodate such schedule change.

13.3 As Project Operator, Tacoma reserves the right to revise schedules submitted by Cascade as Tacoma determines may be necessary to comply with permits, authorizations, regulations or orders applicable to the Project, or to deal with Uncontrollable Forces that affect the ability to fulfill such schedules. Tacoma will provide Cascade with as much notice as is practicable under the circumstances of any such revision, and Tacoma shall treat Cascade the same as other wholesale customers in making such revisions.

14. METER OWNERSHIP, CALIBRATION AND MAINTENANCE

14.1 The cost of installing the initial and any replacement delivery meter shall be borne by Cascade.

14.2 Tacoma shall be responsible for the calibration and testing of the delivery meter. No less frequently than once each year the delivery meter shall be tested for accuracy, and the results of such testing shall be made available to Cascade at no charge. The costs of the annual delivery meter test shall be billed to Cascade. In addition to the annual meter test, Cascade may test the delivery meter at any reasonable time and at Cascade's expense. The results of any additional delivery meter test shall be made available to Tacoma at no charge.

14.3 Tacoma shall establish the size and the flow range within which the delivery meter must operate. Should Tacoma determine that the delivery meter is operating outside the flow range so established, it shall notify Cascade in writing of such operation, and the size of the replacement meter needed to operate within the flow range. Tacoma shall provide Cascade an opportunity to discuss the problem with the existing delivery meter, and the need for the proposed replacement delivery meter. After providing such written notice, Tacoma may replace the faulty delivery meter and bill Cascade for the costs of procuring and installing such meter, and Cascade shall be obligated to pay such bill.

14.4 The Flow Control Valve for Cascade shall be owned by and shall be under the control of Cascade. Cascade shall be responsible for the operation and control of its Flow Control Valve. Upon reasonable notice to Cascade, Tacoma shall have the right to enter the meter and/or valve vault or vaults of Cascade for any reason related to this Agreement or the Project Agreement.

14.5 Tacoma shall have access to, but not control of, the control signals from each meter station, and access to the vault in which the delivery meter is located. The costs of equipment necessary to receive any such control signals shall be borne by Cascade.

15. WHOLESALE WATER DELIVERIES IN EXCESS OF SCHEDULES

15.1 Nothing in this Agreement shall prohibit Cascade from requesting, or Tacoma from agreeing to deliver, permanent wholesale water in excess of the limits set forth in section 6.

15.1.1 Such agreed upon deliveries will not be subject to the Surcharge Rate.

15.1.2 Unless otherwise agreed to by the Parties, such deliveries shall be priced in accordance with section 9.1; provided that additional permanent water shall be subject to a full SDC offset by a credit in the amount of any Capacity Reservation Fee paid for water supplied pursuant to section 6.2 converted to permanent supply.

15.2 Should Tacoma determine that Cascade is receiving deliveries of wholesale water at the Wholesale Service Connection in excess of its scheduled amounts, Tacoma shall notify Cascade of the excess deliveries, and Cascade shall promptly take the steps necessary to reduce its deliveries to amounts equal to its scheduled amounts, or to revise its schedules to reflect the level of deliveries it is receiving.

15.3 If Cascade has not taken action to revise its schedules or to reduce its deliveries to a level equal to its scheduled amounts within twenty-four hours of receiving notice from Tacoma pursuant to subsection 15.2, Tacoma may take any action it deems necessary to reduce the deliveries to a level equal to Cascade's scheduled amounts, and charge Cascade the Surcharge Rate for any excess deliveries made after the expiration of the twenty-four hour notice period.

16. SHARING WATER SHORTAGES

In the event there is a water shortage or drought that requires Tacoma to institute a water rationing or water use restriction program for Tacoma's retail customers, Tacoma will institute reductions to deliveries of wholesale water made pursuant to this Agreement that are comparable in magnitude and duration to those Tacoma imposes on its retail customers.

17. TITLE AND RISK OF LOSS

Title and risk of loss to wholesale water delivered by Tacoma to Cascade pursuant to section 6 of this Agreement will pass from Tacoma to Cascade when such wholesale water reaches that portion of the Interconnection Facilities owned by Cascade.

18. REGULATORY COMPLIANCE

Cascade understands and agrees that the operation of the Project, and the water available from the Diversion Rights is subject to permits, authorization, and the jurisdiction of regulatory agencies and courts with the authority to issue orders and regulations regarding the Project and the Diversion Rights water. Cascade understands and agrees that Tacoma as Project Operator must comply with all such valid permits, authorizations, orders and regulations, and that such valid permits, authorizations, orders and regulations may affect the ability of Tacoma to fulfill its wholesale water deliveries under this Agreement.

19. NO RIGHT OR CLAIM TO WATER

Cascade and each of its members agrees that they have only a contract right to wholesale water as set forth in section 6 of this Agreement, and further agrees they have no claim or right to a supply of water from Tacoma upon the expiration or termination of this Agreement on any basis whatsoever.

20. AUDITS AND ACCESS TO RECORDS

Upon reasonable prior notice to Tacoma, Cascade, or any consultant of Cascade, shall be given access during normal business hours to the books, records and accounts related to this Agreement in the possession of Tacoma at the location where such books, records and accounts are located. Tacoma shall not be obligated to collate, organize or analyze the information sought by Cascade or by Cascade's consultant. Cascade shall pay Tacoma its established rate for any documents reproduced for Cascade or its consultant.

21. DISPUTE RESOLUTION

21.1 Any and all disputes arising under this Agreement shall be resolved pursuant to this section 21.

21.2 The Parties shall make good faith efforts to resolve by informal discussion any dispute arising under this Agreement.

21.3 If at any time during the good faith efforts to resolve any dispute arising under this Agreement either of the Parties determines that such informal discussions will not result in a resolution of the issue(s) in dispute, such Party may initiate the dispute resolution process in accordance with Exhibit C. Any such dispute resolution process shall be conducted pursuant to the provisions of Exhibit C.

21.4 In the event that a Party moves to set aside or modify the final report of the referee in court, and that Party is not the prevailing party in the final disposition of the dispute through the judicial proceedings (including any appeals), then the moving Party will be obligated to pay all of the costs incurred by the other Party in the dispute resolution process (including any judicial proceedings), which costs shall include, but not be limited, to attorneys fees.

21.5 Pending resolution of any dispute, the Parties shall continue to fulfill their respective duties under this Agreement.

22. UNCONTROLLABLE FORCES

22.1 A Party shall not be in breach of this Agreement as a result of such Party's failure to perform its obligations under this Agreement, other than the obligation to pay money when due and owing, when such failure is due to an Uncontrollable Force, to the extent that such Party, despite the exercise of due diligence, is unable to remove such Uncontrollable Force. Nothing in this Agreement shall be construed to require any Party to prevent or settle any strike or labor dispute in order to obtain relief under this section 22.

22.2 Any Party subject to an Uncontrollable Force that may impair its performance under this Agreement shall notify the other Party as soon as practicable. Any

Party subject to an Uncontrollable Force shall be excused from performance under this Agreement only for the duration of and to the extent of the Uncontrollable Force. Any Party subject to an Uncontrollable Force shall take all reasonable actions to remove the Uncontrollable Force. Neither the occurrence of an Uncontrollable Force nor the provisions of this section 22 shall relieve any Party of its obligation to pay money when due under the terms of this Agreement.

22.3 Uncontrollable Force shall not relieve Cascade of its payment obligations hereunder, except that Cascade shall not be required to make payments pursuant to section 9.1 for more than 6 months after water deliveries from Tacoma cease, and Cascade's obligation to make payment under section 9.1 shall not be reinstated until monthly water deliveries from Tacoma re-commence.

23. NOTICES

23.1 All notices, requests, demands, waivers, consents and other communications required hereunder shall be in writing, and shall be delivered by one or more of the following means: (i) in person, (ii) by overnight delivery service, (iii) by first class mail with postage prepaid, (iv) by facsimile providing confirmation of completed transmission, or (v) by such other means as may be approved by the Parties. Service of any such notice, request, demand, waiver, consent or other communication shall be deemed to have been duly given and to have become effective upon receipt.

23.2 Any and all notices, demands, waivers, consents and other communications shall be forwarded to each of the Parties at the following addresses:

To Tacoma:
Water Superintendent
Tacoma Water
P. O. Box 11007
Tacoma, WA 98411

To Cascade:
Manager
Cascade Water Alliance
1400 112th Avenue S.E. – Suite 220
Bellevue, WA 98004

23.3 Either Party may change the address to which notices shall be sent by giving notice of such change in accordance with subsection 23.1.

24. DEFAULT OF OBLIGATION

24.1 If Cascade fails to make any payment in full when due under this Agreement for a period of ninety (90) days or more after the Due Date, Tacoma shall make written demand upon Cascade to make payment in full within ten (10) days of the

date of such written demand. If the failure to pay is not cured with the ten (10) day time period, Cascade shall be deemed to be in default.

24.2 In addition to the remedies provided in section 10, if Cascade has been in default of payment for a period of sixty (60) days or more, then Tacoma may terminate this Agreement by providing Cascade with written notice not less than six (6) months prior to the date of termination set forth in such written notice.

25. REPRESENTATIONS AND WARRANTIES

25.1 The Parties hereby represent and warrant to one another the following:

25.1.1 Each Party is duly authorized and validly existing under the laws of, and is authorized to exercise it powers, rights and privileges and is in good standing in, the State of Washington, and has full power and authority to carry on its business as presently conducted and execute this Agreement and perform the transactions on its part contemplated by this Agreement.

25.1.2 The execution, delivery and performance of this Agreement, and the consummation of the transactions contemplated hereby have been duly authorized by the appropriate board or council, and no other act or proceeding on the part of any Party is necessary to authorize this Agreement, or the transactions contemplated hereby.

25.1.3 The execution, delivery and performance by each of the Parties of this Agreement does not: (a) contravene any law; or (b) conflict with or result in a breach of or default under any material agreement or instrument to which any Party is a party or by which it is bound.

25.1.4 There are no actions, suits, claims or proceedings pending or, to the best of each Party's knowledge, threatened against either Party that is likely to impair the consummation or the transactions contemplated hereby.

25.1.5 This Agreement, when executed and delivered, will constitute a valid and binding obligation of each Party, and will be enforceable against each such Party in accordance with its terms.

26. ASSIGNMENT AND OTHER ARRANGEMENTS

The rights and obligations of this Agreement may not be sold, assigned or otherwise transferred in whole or in part by Cascade or Tacoma without the prior written consent of the other, which consent shall not be unreasonably withheld; provided that should Cascade dissolve, then Tacoma will extend to any individual member of Cascade,

or any combination thereof, the right to assume Cascade's rights and obligations under this Agreement.

27. WAIVERS

Except as otherwise provided herein or as agreed to by the Parties, no provision of this Agreement may be waived except as documented or confirmed in writing. Any waiver at any time by a Party of its rights with respect to a default under this Agreement or with any other matter arising in connection therewith, shall not be deemed a waiver with respect to any subsequent default or matter. Either Party may waive any notice or agree to accept a shorter notice than specified in this Agreement. Such waiver of notice or acceptance of shorter notice by a Party at any time regarding a notice shall not be considered a waiver with respect to any subsequent notice required by this Agreement.

28. AMENDMENTS

No change, amendment or modification of any provision of this Agreement shall be valid unless set forth in a written amendment to this Agreement signed by the Parties.

29. ENTIRE AGREEMENT

This Agreement sets forth the entire agreement of the Parties, and supersedes any and all prior agreements with respect to the subject matter of this Agreement. The rights and obligations of the Parties hereunder shall be subject to and shall be governed by this Agreement.

30. INTERPRETATION OF THE AGREEMENT

The Parties participated in the drafting of this Agreement. In interpreting this Agreement, no inference shall be drawn against either Party as the drafter of this Agreement. The headings used herein are for convenience of reference only, and shall not affect the meaning or interpretation of this Agreement.

31. GOVERNING LAW AND VENUE

This Agreement shall be governed by and construed in accordance with the laws of the State of Washington (regardless of the laws that might otherwise govern under applicable principles of conflicts of law of such state). Except in respect of a lawsuit or judicial action or proceeding commenced by a third party in another jurisdiction, the Parties (i) agree that any lawsuit, judicial action or proceeding arising out of or relating to this Agreement must be heard in the Superior Court of the State of Washington, in and for the County of Snohomish or Thurston, or the United States District Court for the Western District of Washington, (ii) waive any objection to the laying of venue of any such suit, action or proceeding, (iii) irrevocably submit to the jurisdiction of any such

court in any such lawsuit or judicial action or proceeding, and (iv) consent to service of process by mail in respect to any such lawsuit or judicial action or proceeding.

32. DUTY OF GOOD FAITH

The Parties agree that in taking actions or making determinations required or provided for under this Agreement, each Party shall act in fairness and in good faith.

33. COUNTERPARTS

This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties have duly executed this Agreement on the date first above written.

Exhibit C – Dispute Resolution Procedures

The following procedures shall govern the resolution of any dispute arising under the Agreement between the Parties that cannot be resolved by good-faith negotiations between the Parties, unless the Parties mutually agree to use different procedures to resolve a specific dispute by executing a document setting forth such different procedures. The Parties agree that these dispute resolution procedures are intended to be used in conjunction with and governed by R.C.W 4.48, and both Parties hereby waive their right to a trial by jury for any dispute arising under this Agreement.

1. The Party that believes that continued good-faith negotiations will not produce a resolution of the issue(s) that is the subject of such negotiations will notify the other Party in writing that they are invoking the dispute resolution procedures of this Exhibit C.

2. Within twenty (20) days of the date of such notice invoking the dispute resolution procedures of this Exhibit C, the Parties shall meet and select an individual to recommend to the court as referee of the dispute resolution process in accordance with R.C.W. 4.48.020. The Parties shall select an individual who is qualified as a juror as provided by statute, competent as a juror between the Parties, a duly admitted and practicing attorney, and has experience presiding over civil litigation of contract disputes. The Parties will use the following procedure to select the recommended referee:

    2.1 Each Party will make a list of three individuals that are qualified pursuant to section 2 to serve as referee and exchange such list with the other Party. If the Parties agree upon a person from either list, or if both Parties list the same person, that person will be the recommended referee.

    2.2 If the Parties are unable to agree upon a referee after exchanging their respective lists, they will make a joint list setting forth all six candidates from the two lists.

3. Upon the selection of the recommended referee, or the creation of the joint list pursuant subsection 2.2, the Party that invoked the dispute resolution procedures shall file a complaint in the superior court of the appropriate county as set forth in section 31 of the Agreement, setting forth the issues(s) in dispute, and the other Party shall file an answer to such complaint. Not later than twenty (20) days after the filing of the answer, the Parties shall jointly file a motion, with the Agreement (including Exhibit C) attached, with the court requesting an order of reference that:

    3.1 Directs that the issue(s) raised by the complaint and answer be resolved pursuant to R.C.W. 4.48 by reference to a referee;

3.2 Appoints pursuant to R.C.W. 4.48.020 either the recommended referee selected by the Parties pursuant to 2.1, or a single referee from the joint list prepared pursuant to subsection 2.2; and

3.3 Directs the referee conduct the proceeding in accordance with the procedures set out in sections 4-10 of this Exhibit C.

4. In accordance with R.C.W 4.48.060, the Parties hereby waive their rights to discovery and cross-examination, and direct that the proceeding be conducted in the same manner as a motion for summary judgment as follows:

4.1 The Parties shall present their respective positions by written briefs and affidavits, and without testimonial evidence or cross-examination;

4.2 Oral argument will be conducted before the referee; and

4.3 The burdens of proof and persuasion that pertain in a civil trial shall apply, rather than those that apply to motions for summary judgment.

5. After appointment of the referee, the Parties shall endeavor in good faith to prepare for the referee a joint statement of facts and the questions to be decided in the proceeding. In the absence of an agreed to joint statement of facts and questions to be decided, each Party may include its own statement of facts and questions to be decided in its initial brief.

6. Within ninety (90) days after the submission of the joint statement of facts and questions to be decided, or within ninety (90) days after the appointment of the referee if the Parties cannot agree to a joint submission of facts and questions to be decided, each Party shall submit to the referee a one page statement of the proposed resolution and/or award it seeks for each of the issues in dispute, and its initial brief. The statement and initial brief (excluding any attached affidavits or evidentiary documents) shall not exceed fifty (50) 8 ½ x 11" double spaced pages with 1 ½ inch margins, number 12 point type face. The statement and initial brief shall be filed simultaneously by e-mail and regular mail with the referee and opposing Party.

7. Within thirty (30) days after the date the Parties filed their initial briefs, the Parties shall file their respective reply briefs with the referee and the opposing Party. The reply briefs (excluding any attached affidavits or evidentiary documents) shall not exceed twenty-five (25) 8 ½ x 11" double spaced pages with 1 ½ inch margins, number 12 point type face. The reply briefs shall be filed simultaneously by e-mail and regular mail with the referee and opposing Party.

8. After the reply briefs have been filed, if the referee deems that additional responses are needed, then the referee may request the Parties file a

supplemental brief only as to those specific matters or questions raised by the referee. Such supplemental briefs shall be limited to fifteen (15) 8 ½ x 11" double spaced pages with 1 ½ inch margins, number 12 point type face, and filed at such time as requested by the referee. Any such supplemental briefs shall be filed simultaneously by e-mail and regular mail upon the referee and opposing Party.

9. When all briefs have been filed, the referee will schedule oral argument on the issue(s) in dispute.

10. After the completion of oral argument, the referee will prepare his/her proposed report in accordance with R.C.W. 4.48.70 and shall provide a copy of the proposed report to the Parties, who shall have the right to suggest changes and modifications to the proposed report, all in accordance with R.C.W. 4.48.110. The referee will file the final report with the court within twenty (20) days of the completion of the process under R.C.W.4.48.110.

11. Either Party may move the court to modify or set aside, in whole or in part, the final report of the referee. If the court modifies or sets aside, in whole or in part, the final report of the referee and makes another reference, then this Exhibit C shall also apply to such reference.

12. Except as provided in section 21 of the Agreement, each Party shall be responsible for its own costs of the dispute resolution process (including any judicial proceedings), and the Parties shall each pay one-half of the other costs of the dispute resolution proceeding, including the fees of the referee. The fees of the referee shall be established in accordance with R.C.W. 4.48.100.

RESOLUTION NO. 4008

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO TERMINATE EMERGENCY WATER SUPPLY INTERTIE AGREEMENT NO. 2 BETWEEN THE CITY OF AUBURN AND LAKEHAVEN UTILITY DISTRICT

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, the City of Auburn and Lakehaven Utility District entered into Emergency Water Supply Intertie Agreement #2 in 1998; and

WHEREAS, Lakehaven Utility District and City of Auburn Interlocal Agreement (Resolution No. 3652) establishing water service boundaries has been executed; and

WHEREAS, portions of the Lakehaven water system have been constructed to supply water to apportion of Auburn's PAA; and

WHEREAS, Auburn has evaluated water service issues and determined that it is not cost feasible to provide direct water service within its PAA above the 160-foot elevation adjacent to Lakehaven's water infrastructure; and

WHEREAS, Lakehaven's delivery of water service to these areas will provide the maximum efficiency in the use of existing and future facilities and water planning; and

WHEREAS, the constructed intertie facility is within the Lakehaven Utility District water service area and would need to be relocated to serve as an emergency connection; and

WHEREAS, if an emergency intertie is required one would be constructed at the location covered under emergency water supply agreement no.1.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

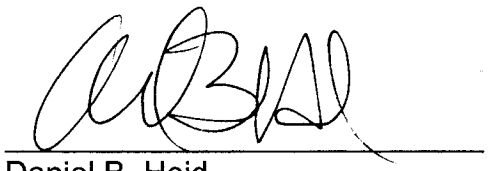
Section 1. The Mayor of the City of Auburn is herewith authorized to terminate the Emergency Water Supply Intertie Agreement No. 2 between the City and Lakehaven Utility District attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 17th day of April, 2006.

CITY OF AUBURN



PETER B. LEWIS
MAYOR

ATTEST:

Daniel B. Heid,
City Attorney

EMERGENCY WATER SUPPLY AGREEMENT
Lakehaven/Auburn Intertie No. 2

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as City, and Lakehaven Utility District, hereinafter referred to as "District".

WITNESSETH:

WHEREAS, the City has water facilities in the vicinity of a water main of the District, and

WHEREAS, the City can increase fire protection reliability for its customers if water is available from the District, and

WHEREAS, the District is willing to provide to the City service necessary to increase fire fighting reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The District hereby grants to the City the right to connect a water meter and appurtenances to the end of the 8-inch water main located in a vault at the intersection of "R" Street NW on Abby Drive in King County, Washington.

2. The meter described in Paragraph No. 1 herein is installed to increase fire fighting reliability or emergency water supply. Water shall not be withdrawn from the supply without the prior written approval of the District. At such time the City shall state the requested time of commencement, duration of use and quantity of water to be so used.

3. The City shall comply with all District resolutions and rules relating to connection to the District's water system including, but not limited to, the District's written approval of plans and specifications for the connection prior to construction.

4. The City shall pay to the District the same connection fee, rates and charges and monthly service charges, except for capital facilities charge, as are established from time to time by District resolution and as are applicable to the use of a six (6)-inch meter. The current monthly service charge for a six (6)-inch meter is $238.20 per month. The current rate for water use is $ 0.48/ccf for winter usage (November - June) and $ 0.96/ccf for summer usage (July - October) and these rates shall be in effect until such time as the District amends its rate resolution or until a meter of different size is utilized.

5. This Agreement shall not authorize or permit the City to take water from the connection described herein beyond what is described in paragraph 2.

ORIGINAL

Exhibit "A", Resolution No. 2954

6. The cost of the meter installation pursuant to this Agreement shall be fully reimbursed by the City and shall become the property of the District upon completion of installation.

7. (a.) In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the District may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; (b.) Water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and (c.) The District shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the City shall save and hold harmless the District from any loss, damages or suites to or by customers of the City resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the District's negligence. Prior to a planned interruption or limiting of service, the District will notify the City of such not less than three days prior to the service disruption. The District agrees to use best efforts and reasonable diligence to notify City as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruptions to daylight hours.

8. In the event of non-performance of any provision herein by the City, District may shut off water supplied pursuant to this Agreement.

9. This Agreement may be terminated by either party hereto upon 60-days written notice to the other party.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

RESOLUTION NO. 4018

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE A LEASE AGREEMENT BETWEEN THE CITY AND CLEARWIRE LLC, FOR THE PURPOSE OF LEASING PROPERTY FOR COMMUNICATION EQUIPMENT

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREBY RESOLVES as follows:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute a Lease Agreement between the City and Clearwire LLC, for the purpose of leasing space on the Lakeland Hills water reservoir, for communication equipment. A copy of said Agreement is attached hereto and denominated Exhibit "A" and incorporated herein.by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 1st day of May, 2006.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

ATTEST:

Danielle E. Daskam,
City Clerk

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

SITE LEASE AGREEMENT

THIS SITE LEASE AGREEMENT ("Lease") is by and between the City of Auburn, a municipal corporation under the existing laws of the State of Washington, having a mailing address of 25 West Main, Auburn, WA 98001 ("Landlord") and, Clearwire LLC, a Nevada limited liability company, ("Tenant").

1. Lease Agreement. Landlord hereby leases to Tenant the property generally described and depicted in Exhibit A, Memorandum of Lease, attached hereto and incorporated by reference ("Lease Area"), including space on Landlord's water tank located on the Property ("Water Tank Area"), said lease area being a portion of the real property legally described in Exhibit A ("Property"). The Lease shall be nonexclusive and shall not preclude Landlord from granting a similar lease, right, license, franchise, etc., to other carriers or other persons for telecommunications or any other purpose, so long as the subsequent agreement protects Tenant's rights granted by this Lease.

2. Term. This Lease shall commence on the date of full execution hereof ("Commencement Date"), and run for a period of five (5) years terminating at midnight on the fifth anniversary of the Commencement Date ("Initial Term").

3. Tenant's Use of the Lease Area - Antenna Facilities.

(a) Tenant's use of the Lease Area and Property shall be strictly limited to those uses set forth in this Section 3. Tenant may use the Lease Area for the transmission and reception of radio communication signals and for the construction, installation, operation, maintenance, repair, removal or replacement of related facilities necessary for the operation of a telecommunications facility as well as for access and utilities. Tenant may place its ground based telecommunications equipment only within the portion of the Lease Area identified as the "Compound" on Exhibit A. Tenant may install antennas within the Water Tank Area.

(b) Tenant shall have the right, at its expense, to erect and maintain on the Lease Area, improvements, personal property and facilities necessary to operate its communications system, including, radio transmitting and receiving antennas, and related cables and conduits, equipment shelters and/or cabinets and related cables and utility lines and a location based system, including coaxial cable, base units and other associated equipment as such location based system may be permitted by any county, state or federal agency/department. Tenant shall have the right to alter, replace, and expand within the confines of the Lease Area as defined in Section 1 and without interference to other providers / tenants, enhance and upgrade the Antenna Facilities at any time during the term of this Lease. Tenant shall cause all construction and operation to occur lien-free and in compliance with all applicable laws and ordinances. Landlord acknowledges that it shall not interfere with any aspects of construction, including, attempting to direct construction personnel as to the location of or method of installation of the Antenna Facilities. The Antenna Facilities shall remain the exclusive property of Tenant. Tenant shall have the right to remove the Antenna Facilities at any time during and upon the expiration or termination of this Lease.

(c) Tenant shall, at Tenant's expense, keep and maintain the Lease Area and Antenna Facilities now or hereafter located on the Property in commercially reasonable condition and repair during the term of this Lease, normal wear and tear and loss due to casualty or other causes beyond Tenant's control excepted. Tenant may install and maintain landscape plantings within the Lease Area. Tenant shall replace any existing landscape plantings damaged during the installation or operation of Tenant's Antenna Facilities. Upon termination or expiration of this Lease, the Lease Area shall be returned to Landlord in good, usable condition, normal wear and

tear and loss due to casualty or other causes beyond Tenant's control excepted, within ninety (90) days.

(d) Tenant shall remove any and all telecommunications equipment and appurtenances installed by Metricom, Inc. on the Water Tank or Property. Rather than removing Metricom, Inc. equipment and appurtenances, Tenant may choose to utilize all or a portion of the equipment and appurtenances if it is in good and safe working order. Any Metricom, Inc. equipment removed by Tenant is to be disposed of legally at Tenant's expense.

(e) In addition to using the Lease Area, Tenant may utilize the Property to install and use underground conduits running from the Compound in a generally straight line to the base of the Water Tank and then extend up the side of the Water Tank to the Antenna Facilities.

(f) Tenant shall have the right to install utilities, power and telephone, at Tenant's expense, and to improve the present utilities on the Property (including, but not limited to, the installation of emergency power generators). Landlord agrees to cooperate with Tenant in its reasonable efforts to acquire necessary utility service. Tenant shall, wherever practicable, install separate meters for utilities used on the Property by Tenant. Landlord shall diligently correct any variation, interruption or failure of utility service within Landlord's control.

(g) Prior to installation of equipment, Tenant shall submit for Landlord review and approval, which approval shall not be unreasonably withheld or delayed, an electrical and grounding connection plan that assures no interference with the Water Tank cathodic protection system. The plan shall include a 3" minimum diameter common use conduit enclosure for cables from the ground level to top of tank. This conduit may be utilized by other telecommunication providers until such time as it is filled to capacity, at which time new providers will need to pay for upsizing. Upon Landlord approval of the plans, Tenant may proceed to install and operate the Antenna Facilities.

4. Rent.

(a) Tenant shall pay Landlord, as rent, $12,000 Thousand and no/100 dollars ($12,000.00) per year ("Rent"). Rent shall be payable within twenty (20) days following the Commencement Date and thereafter the Rent will be payable yearly, no later than the anniversary of the Commencement Date to City of Auburn Water Utility Fund, Account Number 430.369.900, at Landlord's address specified in Section 13 below. The Rent shall increase annually over the Rent payable the preceding year in proportion to the increase of the "All Items" category of the Consumer Price Index for Urban Wage Earners and Clerical Workers published by the Bureau of Labor Statistics of the U.S. Department of Labor for Seattle-Everett Metropolitan Area (the "Index"). The first adjustment shall be based on the amount, if any, by which the Index for the 12th month of the Lease term has increased over the Index for the month preceding the commencement of the lease term. Subsequent adjustments will be based on the amount, if any, by which the Index for each subsequent 12th month of the Lease term has increased over the Index for the 12th month of the preceding 12-month period. It shall be the responsibility of the Landlord to track the CPI and notify the Tenant of increases or reductions in the Rent. Landlord shall notify Tenant within 90 days of the commencement of the Renewal Term as to the revised rate at which the Rent shall be increased annually thereafter. Landlord will invoice Tenant for back Rent due or refund over payment as necessary to correct the payment received for the first year of the Renewal Term. If at any time the CPI ceases to incorporate a significant number of items, if a substantial change is made in the method of establishing the CPI, or if issuance of the CPI shall be discontinued, then the Landlord and Tenant shall mutually agree upon another standard recognized cost of living index issued by the United States Government, provided that if the parties cannot reach agreement on such other standard cost of living index, then the Landlord shall select the index closest to the CPI. In either case, the substitute index chosen shall result in increases in the Rent similar to those that had been, or would have been, generated by the CPI. If this Lease is terminated for any reason (other than a default by Tenant) at a time other than on

the anniversary of the Commencement Date, Rent shall be prorated as of the date of termination and all prepaid Rent shall be refunded to Tenant within sixty (60) days.

(b) In addition to the monetary rent described in section 4 (a), Tenant shall provide Landlord with twenty-five (25) Clearwire base data service accounts, or equivalent, for Landlord use. Tenant shall cover any service charges for the accounts provided to Landlord under this Agreement for the duration of the Initial Term and any Renewal Terms. Landlord may require additional service accounts, each additional account requested by Landlord and provided by Tenant, shall reduce the annual rent by Twenty-Five Dollars ($25.00) per month. Landlord agrees to purchase from Tenant, at Tenant's cost, any communication hardware required to utilize the accounts provided by Tenant under this Agreement.

5. Renewal. Tenant may extend this Lease for (5) additional, five-year terms (each a "Renewal Term"). Each Renewal Term shall be on the same terms and conditions as set forth herein, including the Rent increase set forth in Section 4, above. This Lease shall automatically renew for each successive Renewal Term unless Tenant notifies Landlord, in writing, of Tenant's intention not to renew this Lease, at least ninety (90) days prior to the expiration of the Initial Term or any Renewal Term. Landlord may, during any Renewal Term, notify Tenant, in writing, of Landlord's intention not to renew this Lease for an additional Renewal Term, which notice shall be provided to Tenant at least one hundred and eighty (180) days prior to the expiration of the then in effect Renewal Term. If Tenant shall remain in possession of the Lease Area at the expiration of this Lease or any Renewal Term without a written agreement, such tenancy shall be deemed a month-to-month tenancy under the same terms and conditions of this Lease.

6. Interference. Tenant and Landlord shall not operate in a manner which interferes with the other party's operations on the Property. Tenant's Antenna Facilities and the use thereof shall not interfere with the use of any other communication or similar equipment of any kind and nature owned or operated by Landlord or other lessee, licensees, franchisees, etc., existing and operating on the Property prior in time to the commencement of this Lease, and subsequent to the installation by Tenant of the Antenna Facilities, Landlord agrees to exercise reasonable care to assure equipment of subsequent providers leasing space on the Property does not interfere with Tenant's Antenna Facilities operations. The Landlord, however, is not in any way responsible or liable for any interference with Tenant's use of Landlords Property, which may be caused by the use and operation of any other tenant's equipment, even if caused by new technology, so long as such equipment continues to operate within its existing frequencies and in compliance with all applicable laws and FCC rules and regulations. In the event there is interference between Tenant and any third party, such interference will be resolved by and between the parties affected; however, if such interference cannot be resolved to Tenant's satisfaction within forty-eight (48) hours from commencement of such interference, then the parties acknowledge that Tenant will suffer irreparable injury, and therefore, Tenant will have the right, in addition to any other rights that it may have at law or in equity, to terminate this Lease upon 30 days notice to Landlord and restore the Landlord's Property to its original condition, reasonable wear and tear and loss due to casualty or other causes beyond Tenant's control excepted.

7. Access.

(a) Tenant shall have the right during the Initial Term and of this Lease and any Renewal Term for ingress and egress to the Property over the south fifteen (15) feet of Lot 6, Lakeland Hills Division Number 3, Extension, according to the plat thereof recorded in Volume 145 of Plats, pages 72 and 73, in King County Washington.

(b) Tenant shall have 24-hours-a-day, 7-days-a-week access to the Lease Area ("Access") at all times during the Initial Term of this Lease and any Renewal Term. In the event Landlord, its employees or agents unreasonably deny Access to Tenant, its employees or agents, Tenant shall, without waiving any other rights that it may have at law or in equity, deduct from Rent

amounts due under this Lease an amount equal to fifty and no/100 dollars per day for each day that Access is impeded or denied. Access to Landlord facilities beyond the Lease Area, including but not limited to the water reservoir site and the water reservoir, require 48 hours notice to the Water Division Supervisor of the City of Auburn Water Utility (phone: 253-931-3066). Access to Landlord facilities will only occur with Landlord supervision. Tenant agrees to reimburse Landlord for Landlord expenses attributed to supervising Tenant while accessing Landlord facilities. The hourly rate for Landlord supervision during City standard office hours will be $32.50 per hour in calendar year 2006. The hourly rate shall increase annually on January 1st over the hourly rate payable the preceding year by not less than three and one half percent (3.5%) or the CPI – Urban for the Seattle / Tacoma area whichever is the greater, unless a different hourly rate amount is negotiated.

8. Termination. Except as otherwise provided herein, this Lease may be terminated, without any penalty or further liability as follows:

(a) upon thirty (30) days' written notice by Landlord if Tenant fails to cure a default for payment of amounts due under this Lease within that thirty (30) day period;

(b) immediately if Tenant is unable to obtain, maintain, or otherwise forfeits or cancels any license (including, without limitation, an FCC license), permit or any Governmental Approval necessary to the installation and/or operation of the Antenna Facilities or Tenant's business;

(c) upon ninety (90) days' written notice by Tenant if the Lease Area or the Antenna Facilities are, or become unacceptable under Tenant's design or engineering specifications for its Antenna Facilities or the communications system to which the Antenna Facilities belong;

(d) immediately upon written notice by Tenant if the Lease Area or the Antenna Facilities are destroyed or damaged so as in Tenant's reasonable judgment to substantially and adversely affect the effective use of the Antenna Facilities. In such event, all rights and obligations of the parties shall cease as of the date of the damage or destruction, and Tenant shall be entitled to the reimbursement on a prorated basis of any Rent prepaid by Tenant. If Tenant elects to continue this Lease, then all Rent shall abate until the Lease Area and/or the Antenna Facilities are restored to the condition existing immediately prior to such damage or destruction; or

(e) at the time title to the Property transfers to a condemning authority, pursuant to a taking of all or a portion of the Property sufficient in Tenant's determination to render the Lease Area unsuitable for Tenant's use. Landlord and Tenant shall each be entitled to pursue their own separate awards with respect to such taking.

(f) Landlord may terminate this Lease if Landlord needs the Lease Area for expansion of Landlord's responsibility to provide its services, and Landlord has no reasonable or economical alternative site available, provided Landlord provides Tenant written notice twelve (12) months in advance of Landlord's need to re-establish Landlord's sole use of the Lease Area. Upon Tenant's receipt of written notice, Tenant shall have six (6) months to submit to Landlord alternative locations for its Antenna Facilities. Such alternative locations may be on the Property or other properties owned or managed by Landlord. Landlord shall evaluate such alternatives and advise Tenant in writing if one or more of the alternatives is suitable to accommodate Tenant's Antenna Facilities. To be a suitable alternative location, such location will not unreasonably result in any interruption of the communications service of Tenant on Landlord's Property; nor will it impair, or in any manner alter, the quality of communications service provided by Tenant on and from Landlord's owned or managed properties. Tenant shall submit additional relevant information to assist the Landlord in making such evaluation. Landlord shall give each alternative location proposed by Tenant full and fair consideration, within a reasonable time so as to allow for the relocation work to be performed in a timely manner. If, in Tenant's reasonable judgment, no suitable alternative location can be found, Tenant shall remove its Antenna Facilities as otherwise provided in this Section 3 (c) of this Lease. If an alternative location for Tenant's Antenna Facilities is found,

Landlord and Tenant agree to enter into a new Lease Agreement with the same terms and conditions of this Lease.

(g) If, during the term of this Lease there is a determination made pursuant to an official unappealable order of the Federal Communications Commission or any other applicable law, order, ordinance, regulation, directive, or standard as stated above that use of the Antenna Facilities by the Tenant poses a human health hazard which cannot be remediated, then (a) Tenant shall immediately cease all operations of the Antenna Facilities, and (b) the Lease shall terminate as of the date of such order without further liability. If for reasons related to public health, safety or welfare, Landlord determines that this Lease must be terminated, then Landlord reserves rights of unilateral termination and will do so by providing Tenant with a six (6) month written notice.

9. Default and Right to Cure. Notwithstanding anything contained herein to the contrary and without waiving any other rights granted to it at law or in equity, each party shall have the right, but not the obligation, to terminate this Lease on written notice pursuant to Section 13 hereof, to take effect immediately, if the other party (i) fails to perform any covenant for a period of thirty (30) days after receipt of written notice thereof to cure or (ii) commits a material breach of this Lease and fails to diligently pursue such cure to its completion after sixty (60) days' written notice to the defaulting party.

10. Taxes. Landlord shall pay when due all real property taxes or other fees and assessments for the Property, including the Lease Area. In the event that Landlord fails to pay any such real property taxes or other fees and assessments, Tenant shall have the right, but not the obligation, to pay such owed amounts and deduct them from Rent amounts due under this Lease. Notwithstanding the foregoing, Tenant shall pay any personal property tax, State leasehold tax, excise tax, real property tax or any other tax or fee which are directly attributable to the presence or installation of Tenant's Antenna Facilities, only for so long as this Lease has not expired of its own terms or is not terminated by either party. Landlord hereby grants to Tenant the right to challenge, whether in a Court, Administrative Proceeding, or other venue, on behalf of Landlord and/or Tenant, any personal property or real property tax assessments, State leasehold tax or excise tax that may affect Tenant. If Landlord receives notice of any personal property or real property tax assessment, State leasehold tax or excise tax against the Landlord, which may affect Tenant and is directly attributable to Tenant's installation, Landlord shall provide timely notice of the assessment to Tenant sufficient to allow Tenant to consent to or challenge such assessment. Further, Landlord shall provide to Tenant any and all documentation associated with the assessment and shall execute any and all documents reasonably necessary to effectuate the intent of this Section.

11. Indemnification.

(a) Tenant shall defend, indemnify, and hold harmless the Landlord, its officers, officials, employees and volunteers from and against any and all claims, suits, actions, or liabilities for injury or death of any person, or for loss or damage to property, which arises out of Tenant's use of Premises, or from the conduct of Tenant's business, or from any activity, work or thing done, permitted, or suffered by Tenant in or about the Premises, except only such injury or damage as shall have been occasioned by the sole negligence of the Landlord.

(b) Should a court of competent jurisdiction determine that this Lease is subject to RCW 4.24.115, then, in the event of liability for damages arising out of bodily injury to persons or damages to property caused by or resulting from the concurrent negligence of the Tenant and the Landlord, its officers, officials, employees and volunteers, the Landlord's liability hereunder shall be only to the extent of the Landlord's negligence. It is further specifically and expressly understood that the indemnification provided herein constitutes the Tenant's waiver of immunity under Industrial Insurance, Title 51 RCW, solely for the purposes of this indemnification. This

waiver has been mutually negotiated by the parties. The provisions of this section shall survive the expiration or termination of this Lease.

(c) The Tenant and the City waive all rights against each other, any of their Subcontractors, Sub-subcontractors, agents and employees, each of the other, for damages caused by fire or other perils to the extend covered by Builders Risk insurance or other property insurance obtained pursuant to the Insurance Requirements Section of this Lease or other property insurance applicable to the work. The policies shall provide such waivers by endorsement or otherwise.

12. Insurance.

The Tenant shall procure and maintain for the duration of the Lease, insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Tenant, its agents, representatives, or employees.

(a) Minimum Scope of Insurance. Tenant shall obtain insurance of the types described below:

(1) Automobile Liability insurance covering all owned, non-owned, hired, and leased vehicles. Coverage shall be written on Insurance Services Office (ISO) form CA 00 01 or a substitute form providing equivalent liability coverage. If necessary, the policy shall be endorsed to provide contractual liability coverage.

(2) Commercial General Liability insurance shall be written on ISO occurrence form CG 00 01 and shall cover liability arising from premises, operations, independent tenants, products-completed operations, stop gap liability, and personal injury and advertising injury and liability assumed under an insured contract. The Commercial General Liability insurance shall be endorsed to provide the Aggregate Per Project Endorsement ISO form CG 25 03 11 85. There shall be no endorsement or modification of the Commercial General Liability insurance for liability arising from explosion, collapse, or underground property damage. The Landlord shall be named as an additional insured under the Tenant's Commercial General Liability insurance policy with respect to the work performed for the Landlord using ISO Additional Insured Endorsement CG 20 10 10 01 and Additional Insured-Completed Operations endorsement CG 20 37 10 01 or substitute endorsements providing equivalent coverage.

(3) Workers' Compensation coverage as required by the Industrial Insurance laws of the State of Washington.

(b) Minimum Amounts of Insurance. Tenant shall maintain the following insurance limits:

(1) Automobile Liability insurance with a minimum combined single limit for bodily injury and property damage of $1,000,000 per accident.

(2) Commercial General Liability insurance shall be written with limits no less than $1,000,000 each occurrence, $2,000,000 general aggregate and a $2,000,000 products-completed operations aggregate limit.

(c) Other Insurance Provisions. The insurance policies are to contain, or be endorsed to contain, the following provisions for Automobile Liability, Professional Liability, and Commercial General Liability insurance:

(1) The Tenant's insurance coverage shall be primary insurance as respects the Landlord. Any insurance, self-insurance, or insurance pool coverage maintained by the Landlord shall be in excess of the Tenant's insurance and shall not contribute with it.

(2) The Tenant's insurance shall be endorsed to state that coverage shall not be cancelled by either party except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the Landlord.

(d) Acceptability of Insurers. Insurance is to be placed with insurers with a current A.M. Best rating of not less than A:VII.

(e) Verification of Coverage. The Tenant shall furnish the Landlord with documentation of insurer's A.M. Best rating and with original certificates and a copy of amendatory endorsements, including but not necessarily limited to the additional insured endorsement, evidencing the insurance requirements of the Consultant before commencement of the work.

(f) Subcontractors. The Tenant shall include all subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each subcontractors. All coverages for subcontractors shall be subject to all of the same insurance requirements as stated herein for the Tenant.

(g) No Limitation. Tenant's maintenance of insurance as required by the Lease shall not be construed to limit the liability of the Tenant to the coverage provided by such insurance, or otherwise limit the Landlord's recourse to any remedy available at law or in equity.

13. Notices. All notices, requests, demands and other communications shall be in writing and are effective three (3) days after deposit in the U.S. mail, certified and postage paid, or upon receipt if personally delivered or sent by next-business-day delivery via a nationally recognized overnight courier to the addresses set forth below. Landlord or Tenant may from time to time designate any other address for this purpose by providing written notice to the other party.

14. Quiet Enjoyment, Title and Authority. Landlord covenants and warrants to Tenant that (i) Landlord has full right, power and authority to execute this Lease; (ii) it has good and unencumbered title to the Property free and clear of any liens or mortgages, except those disclosed to Tenant and which will not interfere with Tenant's rights to or use of the Lease Area; and (iii) execution and performance of this Lease will not violate any laws, ordinances, covenants, or the provisions of any mortgage, lease, or other agreement binding on Landlord.

15. Environmental Laws. Landlord represents that it has no knowledge of any substance, chemical or waste (collectively, "Hazardous Substance") on the Property that is identified as hazardous, toxic or dangerous in any applicable federal, state or local law or regulation. Landlord and Tenant shall not introduce or use any Hazardous Substance on the Property in violation of any

applicable law. Landlord shall be responsible for, and shall promptly conduct any investigation and remediation as required by any applicable environmental laws, for all spills or other releases of any Hazardous Substance not caused in whole or in part by Tenant, that have occurred or which may occur on the Property. Each party agrees to defend, indemnify and hold harmless the other from and against any and all administrative and judicial actions and rulings, claims, causes of action, demands and liability (collectively, "Claims") including, but not limited to, damages, costs, expenses, assessments, penalties, fines, losses, judgments and reasonable attorney fees that the indemnitee may suffer or incur due to the existence or discovery of any Hazardous Substances on the Property or the migration of any Hazardous Substance to other properties or the release of any Hazardous Substance into the environment (collectively, "Actions"), that relate to or arise from the indemnitor's activities on the Property. Landlord agrees to defend, indemnify and hold Tenant harmless from Claims resulting from Actions on the Property not caused by Landlord or Tenant prior to and during the Initial Term and any Renewal Term of this Lease. The indemnifications in this section specifically include, without limitation, costs incurred in connection with any investigation of site conditions or any cleanup, remedial, removal or restoration work required by any governmental authority. This Section 15 shall survive the termination or expiration of this Lease.

16. Assignment and Subleasing.

(a) The Tenant may not sublease any portion of the Lease Area, or grant any rights to the Lease Area to any third parties except as specifically set for in this Lease.

(b) All of the terms and provisions contained herein shall inure to the benefit of and shall be binding upon the parties hereto and their respective heirs, legal representatives, successors and assigns. This Lease shall not be assigned by Tenant without the express written consent of Landlord, which consent shall not be unreasonably withheld, delayed or conditioned. Any attempted assignment in violation of this Section shall be void. The transfer of the rights and obligations of Tenant to a parent, subsidiary, or other affiliate of Tenant, or to any successor-in-interest or entity acquiring fifty-one percent (51%) or more of Tenant's stock or assets, shall not be deemed an assignment. Tenant shall give to Landlord thirty (30) days' prior written notice of any such transfer.

(c) Additionally, Tenant may, upon notice to Landlord, mortgage or grant a security interest in this Lease and the Antenna Facilities, and may assign this Lease and the Antenna Facilities to any mortgagees or holders of security interests, including their successors or assigns (collectively "Mortgagees"), provided such Mortgagees agree to be bound by the terms and provisions of this Lease. In such event, Landlord shall execute such consent to leasehold financing as may reasonably be required by Mortgagees. Landlord agrees to notify Tenant and Tenant's Mortgagees simultaneously of any default by Tenant and to give Mortgagees the same right to cure any default as Tenant or to remove any property of Tenant or Mortgagees located on the Lease Area, except that the cure period for any Mortgagees shall not be less than thirty (30) days after receipt of the default notice, as provided in Section 9 of this Lease. All such notices to Mortgagees shall be sent to Mortgagees at the address specified by Tenant. Failure by Landlord to give Mortgagees such notice shall not diminish Landlord's rights against Tenant, but shall preserve all rights of Mortgagees to cure any default and to remove any property of Tenant or Mortgagees located on the Lease Area.

17. Removal of Antenna Facilities. The Antenna Facilities are and shall remain the property of the Tenant and upon the expiration or earlier termination of this Lease, Tenant shall, at Tenant's sole cost and expense, remove the Antenna Facilities and restore the Lease Area to its original condition, normal wear and tear and loss due to casualty or other causes beyond Tenant's control excluded.

18. Miscellaneous.

(a) The substantially prevailing party in any litigation, including any arbitration to which the parties shall submit, arising hereunder shall be entitled to its reasonable attorneys' fees and court costs, including appeals, if any.

(b) This Lease constitutes the entire agreement and understanding of the parties, and supersedes all offers, negotiations and other agreements. There are no representations or understandings of any kind not set forth herein. Any amendments to this Lease must be in writing and executed by both parties. At such time as the Auburn City Council approves any regulation affecting telecommunications, Tenant agrees to amend this Lease, as determined by the Landlord in order to comply with any future ordinance related to telecommunications provided, however, that in no event shall such regulation (i) materially interfere with or affect Tenant's operation of its Antenna Facilities; or (ii) increase Tenant's financial obligations under the terms of this Lease, except as provided herein, or impose some new financial obligations not already contemplated by this Lease. No amendment, change or modification of this Lease shall be valid, unless in writing and signed by all parties hereto.

(c) Each party agrees to cooperate with the other in executing any documents (including a Memorandum of Lease in substantially the form attached hereto as Exhibit A) necessary to protect its rights or use of the Lease Area. The Memorandum of Lease may be recorded in place of this Lease by either party. In the event the Property is encumbered by a mortgage or deed of trust, Landlord agrees, upon request of Tenant, to obtain and furnish to Tenant a non-disturbance and attornment agreement for each such mortgage or deed of trust, in a form reasonably acceptable to Tenant. Tenant may obtain title insurance on its interest in the Lease Area.

(d) This Lease shall be construed in accordance with the laws of the state in which the Property is located.

(e) If any term of this Lease is found to be void or invalid, such finding shall not affect the remaining terms of this Lease, which shall continue in full force and effect. The parties agree that if any provisions are deemed not enforceable, they shall be deemed modified to the extent necessary to make them enforceable. No provision of this Lease will be deemed waived by either party unless expressly waived in writing signed by the waiving party. No waiver shall be implied by delay or any other act or omission of either party. No waiver by either party of any provision of this Lease shall be deemed a waiver of such provision with respect to any subsequent matter relating to such provision.

(f) The persons who have executed this Lease represent and warrant that they are duly authorized to execute this Lease in their individual or representative capacity as indicated.

(g) This Lease may be executed in any number of counterpart copies, each of which shall be deemed an original, but all of which together shall constitute a single instrument.

(h) All Exhibits referred to herein and any Addenda are incorporated herein for all purposes. The parties understand and acknowledge that Exhibit A (Memorandum of Lease) is attached to this Site Lease Agreement. The terms of all Exhibits are incorporated herein for all purposes.

(i) If Landlord is represented by any broker or any other leasing agent, Landlord is responsible for all commission fees or other payment to such agent, and agrees to indemnify and hold Tenant harmless from all claims by such broker or anyone claiming through such broker. If Tenant is represented by any broker or any other leasing agent, Tenant is responsible for all commission fee or other payment to such agent, and agrees to indemnify and hold Landlord harmless from all claims by such broker or anyone claiming through such broker.

19. Headings. The caption and paragraph headings used in this Lease are inserted for convenience of reference only and are not intended to define, limit or affect the interpretation or construction of any term or provision hereof.

20. Liens. Except with respect to activities for which Landlord is responsible, Tenant shall pay as due all claims for work done on, and for services rendered or material furnished to, the Antenna Facility, and shall keep the Antenna Facility free from all liens.

MEMORANDUM
OF
LEASE

THIS MEMORANDUM OF LEASE is by and between the City of Auburn, a municipal corporation under the existing laws of the State of Washington, having a mailing address of 25 West Main, Auburn, WA 98001 ("Landlord") and Clearwire LLC ("Tenant").

1. Landlord and Tenant entered into a certain Site Lease Agreement ("Lease") on the 1st day of May, 2006, for the purpose of installing, operating and maintaining a communications facility and other improvements. All of the foregoing are set forth in the Lease.

2. Landlord is leasing to Tenant a portion of the Property described in Exhibit 1 annexed hereto.

3. The initial term of the five (5) years commences on September 1, 2005. The Lease will automatically renew for five (5) separate consecutive periods of five (5) years each upon the same terms and conditions of the Lease, unless Tenant notifies Landlord in writing of Tenant's intention not to renew the Lease at least ninety (90) days prior to the expiration of the existing term. Unless earlier terminated, the Lease will expire on August 31, 2035.

4. This Memorandum of Lease is not intended to amend or modify, and shall not be deemed or construed as amending or modifying, any of the terms, conditions or provisions of the Lease, all of which are hereby ratified and affirmed. In the event of a conflict between the provisions of this Memorandum of Lease and the provisions of the Lease, the provisions of the Lease shall control.

5. The Lease shall be binding upon and inure to the benefit of the parties and their respective heirs, successors, and assigns, subject to the provisions of the Lease.

IN WITNESS WHEREOF, the parties have executed this Memorandum of Lease as of the day and year first above written.

RESOLUTION NO. 4039

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN AGREEMENT BETWEEN THE CITY OF AUBURN AND THE WASHINGTON STATE DEPARTMENT OF ECOLOGY FOR COST REIMBURSEMENTS RELATING TO THE CITY'S WATER RIGHTS APPLICATION

WHEREAS, The City of Auburn has applied to the Department of Ecology for an additional water right for municipal water supply use; and

WHEREAS, the Department of Ecology will incur costs in processing the City's application, including fees paid to consultants to review certain aspects of the City's application; and

WHEREAS, the costs of processing such applications are born by the applicant; and

WHEREAS, it is in the public interest for the parties to enter into an agreement for the City to reimburse the Department of Ecology for its costs in processing the City's water rights application,

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, KING COUNTY, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn and the Auburn City Clerk are hereby authorized to execute an Agreement between the City of Auburn and the Washington State Department of Ecology for cost reimbursements

relating to the city's water rights application, which agreement shall be in substantial conformity with the Agreement a copy of which is attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and affect upon passage and signatures hereon.

DATED and SIGNED this 5th day of June 2006.

Performance Security Option Selected, Dollar Amount, And, If Applicable, Holding Institution (Pursuant To Section II.B.6. Of Part B – General Terms And Conditions):

Performance Security Option of $10,000 in an interest bearing account.

IV. Scope Of Work - *Tasks, Budget Detail, Schedule*

The City of Auburn is applying for an additional water right for municipal water supply use. The City of Auburn has submitted one application for a new groundwater right, G1-28404, requesting 12,500 gallons per minute (gpm) of instantaneous use, with an annual requested quantity of 13,443 acre-feet per year.

Ecology's consultant, Geomatrix, will be tasked to complete the water-right processing Phase I work establishing senior water right applications that would be considered in the 'same source of supply' as the City's application, thus requiring processing in accordance with RCW 90.03.265. In conducting this determination, Geomatrix will define the source of water that the City of Auburn proposes using for municipal water supply and the universe of applications requiring processing based on the following considerations:

- Hydraulic continuity between points of withdrawal;
- Sharing of a common recharge (catchment) area;
- Sharing of a common flow regime; and
- Isolation from other sources by the presence of effective barriers to hydraulic flow.

Sources of information for the 'same source of supply' determination will include area topography, geologic structures, well log review, area water level measurements, aquifer characteristics, and other information such as available groundwater modeling studies (see Task 1 below).

Consistent with the provisions of Part B — General Terms and Conditions as well as the provisions of RCW 43.21A.690 and RCW 90.03.265, the following describes the specific tasks, budget detail, and schedule for the scope of work to be performed by Ecology and its consultant, Geomatrix, to be subsequently reimbursed by the City of Auburn pursuant to this CRA.

Accordingly, the Parties signatory to this Agreement agree:

Phase I
Reimbursable Tasks with Associated Budget Detail and Schedule

Task 1: Water Right Application Review and Data Gap Summary. This task will include:

- Review of hydrologic and hydrogeologic data from the files available through Ecology, the City of Auburn, the City's consultant, and other sources;
- Determination of senior applicants in the same source of water supply, preparation of a technical memorandum summarizing the same source determination, and assembly of a final list of senior applications requiring processing;
- Review of City of Auburn's and senior water right application files to identify intent, available supporting information, and potential data gaps;
- Review conceptual mitigation options proposed by the City of Auburn, and meet with applicant and Ecology to discuss comments. It is assumed that final mitigation plans will not be submitted by the applicant until Phase II processing;
- Initial contact with senior applicants, including confirming the applicants' intent to pursue the water rights in question, and preparation of letters requesting any additional supporting information, including mitigation proposals;
- Attendance at meetings and participation in conference calls with Ecology staff in Bellevue and with the City and its consultant in Auburn, as requested; and
- Preparation of a memorandum Phase I report summarizing data gaps and issues to be resolved prior to completing ROEs for the set of applications requiring processing.

Task 2: Preparation of Scope of Work, Schedule, and Budget for Phase II. This task will include:

- Development of a scope of work to complete processing and preparation of ROEs water right applications submitted by the City of Auburn, as well as senior applicants within the same source of water.
- Development of the estimated schedule and budget for completion of the scope of work for Phase II.

Consultant Phase I Costs-

Phase 1 – Information Review and Associated Tasks:
Estimated Number of Consultant Hours = 363 Hours

- Estimated Consultant Cost = $ 49,843.00
- Estimated Phase I Completion Date = 12 Weeks From Effective Date
-

Ecology Direct and Backfill Cost–

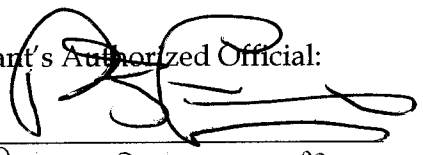
- Estimated Number of Ecology Hours to be Billed to Applicant for Direct Work on Project = 50 Hours
- Estimated Ecology Costs to be Billed to Applicant for Direct Work on Project = $ 2,750
- Estimated Backfill Dollars Available for Backfill Consultant Cost = $4,000 (50 hours x $135/hr average consultant rate = [$6,750- $2,750 (Ecology direct cost)] = $4,000.

Phase 1 Informational Task, Budget, and Schedule Summary

Tasks	Budget	Schedule
A. Phase I	$ 49,843	12 weeks from Ecology Signature of Geomatrix Work Assignment
B. Ecology Direct Costs	$ 2,750	
C. Ecology Backfill Costs	$ 4,000	
TOTAL	$ 56,593	

Notes:

1. Total Budget Phase I $ 56,593
2. Cost Reimbursement End Date = June 30, 2007
3. Informational task, budget, and schedule summary presented here is for informational purposes only. Ecology tracks and manages task, budget, and schedule.
4. A formal written and signed amendment to this CRA is required to extend the total project budget amount or final completion date stated herein.



V. Effective Date

The effective date of this CRA, as well as any formal written and signed amendment, is the date of signature by the Washington State Department of Ecology.

VI. Entire Agreement And Signatures

The Parties hereto have agreed to the tasks, budget detail, and schedule described herein Part A. This entire agreement, consisting of Part A — Special Terms and Conditions and Scope of Work, Part B — General Terms and Conditions, and any formal written and signed amendment, can only be modified by a subsequent formal written and signed amendment as described in Section II.E.3. of Part B — General Terms and Conditions.

RESOLUTION NO. 3920

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES BETWEEN THE CITY OF KENT, KING COUNTY WATER DISTRICT NO. 111, AND THE CITY OF AUBURN

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, Kent has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, WD #111 has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, the parties recognize the responsibility of public water utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Kent owns, and desires to be the water service provider for a property currently within the corporate limits of Kent, and within the service areas of Auburn and WD #111; and

WHEREAS, pursuant to Chapter 70.116 RCW, Public Water System Coordination Act, the Parties determined and agreed upon the water service areas between the Parties as set forth in the South King County Coordinated Water System Plan ("Plan") and the Parties now desire to modify their water service area boundaries as agreed in this Agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn is herewith authorized to execute a Water Service Boundary Agreement between the City of Kent, King County Water District No. 111, and the City of Auburn in substantial conformity with the agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 5th day of September, 2006.

EXHIBIT "A"

CITY OF KENT, KING COUNTY WATER DISTRICT NO. 111 and CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING WATER SERVICE BOUNDARIES

THIS AGREEMENT ("Agreement"), made and entered into this 5th day of September, 2006, by and between the **City of Kent**, a Washington municipal corporation ("Kent"), **King County Water District No. 111**, a Washington municipal corporation ("WD #111"), and the **CITY OF AUBURN**, a Washington municipal corporation, ("Auburn"), all being duly organized and existing under and by virtue of the laws of the State of Washington (individually a "Party" and collectively the "Parties).

WITNESSETH:

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, Kent has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to Chapter 39.34 RCW, the Interlocal Cooperation Act, WD #111 has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, the parties recognize the responsibility of public water utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Kent owns, and desires to be the water service provider for a property currently within the corporate limits of Kent, and within the service areas of Auburn and WD #111; and

WHEREAS, pursuant to Chapter 70.116 RCW, Public Water System Coordination Act, the Parties determined and agreed upon the water service areas between the Parties as set forth in the South King County Coordinated Water System

Plan ("Plan") and the Parties now desire to modify their water service area boundaries as agreed in this Agreement.

NOW, THEREFORE, in consideration of the terms and conditions set forth herein, the Parties agree as follows:

1. Water Service Area. WD #111 and Auburn agree to relinquish to Kent the water service area depicted on the map attached hereto as Attachment 1 and legally described in Attachment 2, which are by this reference incorporated herein. The Parties agree that the South King County Coordinated Water System Plan and the water service area boundaries as set forth in the Plan shall be modified to be in accordance with the Parties' water service area boundaries as set forth in Attachment 1.

2. Management, Regulation and Control of Water System. Kent, WD #111 and Auburn shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate their water systems within their designated water service areas as depicted in Attachment 1, together with any additions, extensions and betterments thereto.

3. Future Annexations. The Parties agree that Kent shall provide water service to the area depicted in Attachment 1 without regard to the present corporate boundaries of the Parties and without regard to future corporate boundaries as they may be periodically altered through annexation.

4. Kent Comprehensive Water Planning. The terms of this Agreement will be included as an amendment to Kent's Comprehensive Water System Plan. Kent will submit to Auburn and WD #111 its Comprehensive Water System Plans and amendments thereto.

5. WD #111 Comprehensive Water Planning. The terms of this Agreement will be included as an amendment to WD #111's Comprehensive Water Plan. WD #111 will submit to Kent and Auburn its Comprehensive Water System Plans and amendments thereto.

6. Auburn Comprehensive Water Planning. The terms of this Agreement will be included as an amendment to Auburn's Comprehensive Water Plan. Auburn will submit to Kent and WD #111 its Comprehensive Water System Plans and amendments thereto.

7. Reliance. Each Party hereto acknowledges that the terms hereof will be relied upon by the other in its comprehensive planning to meet the needs of the service area designated herein.

8. Liability. Except as set forth in Section 12 regarding default, failure to perform or negligent conduct, the Parties agree that this Agreement shall not be a source of liability between the Parties for any failure or interruption of service in the service area of any Party as designated in this Agreement.

9. Government Notifications. Auburn will give notice of the adoption of this Agreement to Metropolitan/King County, to the Washington State Department of Health, to the South King County Regional Water Association, to the Water Utility Coordinating Committee, and to any other agency with jurisdiction over, or interest in, the terms hereof, and the Parties shall cooperate and assist each other in all reasonable manner in procuring any necessary approvals hereof by those agencies.

10. Boundary Review Board. In the event that implementation of the terms herein result in permanent water service to areas that will be outside the respective service boundaries of Kent, WD #111 or Auburn, the Parties will, at the time of such service, jointly file a notice of intention with the King County Boundary Review Board in accordance with Chapter 36.93.090 RCW and Chapter 57.08.047 RCW.

11. Alteration, Amendment or Modification. Kent, WD #111 and Auburn hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement only upon written agreement of the Parties to such alteration, amendment or modification.

12. Indemnification and Hold Harmless. Each Party hereto agrees to protect, defend, and indemnify the other Parties, their officers, officials, employees and agents from any and all cost, claims, judgments and/or awards of damages, arising out of or in any way resulting from the indemnifying Party's, its employees, subcontractors or agents default, failure of performance, or negligent conduct associated with this agreement. Each Party agrees that its obligations under this provision extend to any claim, demand, and/or cause of action brought by or on behalf of any of its employees, or agents. The foregoing indemnity is specifically and expressly intended to constitute a waiver of each Party's immunity under Washington's Industrial Insurance Act, RCW Title 51, as respects the other Parties only, and only to the extent necessary to provide each Party with a full and complete indemnity of claims made by the other Party's employees. The Parties acknowledge that these provisions were specifically negotiated and agreed upon by them.

13. Integration. This Agreement constitutes the entire agreement of the Parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this Agreement. Future agreements may occur between the Parties to transfer additional or future service areas by mutual agreement.

14. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of Kent, WD #111 or Auburn regarding provision of water service, except as specifically set forth herein.

15. Duration. This Agreement shall take effect on the last day approved by all of the Parties and shall remain in effect until modified by written agreement of the Parties.

16. Recording. Pursuant to RCW 39.34.040, following the approval and execution of this Agreement by the Parties, this Agreement shall be filed with the King County Auditor.

THENCE EAST ALONG THE NORTH LINE OF SAID GOVERNMENT LOT 3 TO THE TRUE POINT OF BEGINNING.

RESOLUTION NO. 4563

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO SIGN THE 2010 LAKE TAPPS AREA WATER RESOURCES AGREEMENT

WHEREAS, Cascade Water Alliance ("Cascade") has entered into an agreement with Puget Sound Energy "PSE" to purchase PSE's interest in Lake Tapps, and associated equipment related to PSE's former power generation operations at Lake Tapps; and

WHEREAS, Cascade has applied to the Washington State Department of Ecology ("Ecology") for a permit to utilize Lake Tapps as a municipal water supply, although said permit has not yet been granted. This application will convert the water right from its current hydropower production purpose, which is a non-consumptive use that keeps water in the basin, to a recreation and municipal water supply purpose, which is a consumptive use that will result in water being taken out of the basin. The cities of Auburn, Bonney Lake, Buckley, and Sumner ("Four Cities") believe that this conversion and removal of water from the watershed of origin, without addressing the needs of communities in the watershed, is inconsistent with the goals and intent of state laws including laws relating to growth management, watershed planning, water resource management and environmental policy; and the Cities intend for this Agreement to, at least partially, address the Cities' concerns about removal of substantial amounts of water from the basin; and

WHEREAS, each of the Four Cities is located in close proximity to Lake Tapps, and Bonney Lake borders on the Lake; and,

WHEREAS, Lake Tapps is an important resource for the Four Cities and the East Pierce County region, for both recreation and municipal water supply purposes; and

WHEREAS, each of the Four Cities is located in close proximity to the White River, and three of the cities (Auburn, Buckley and Sumner) border on the River; and

WHEREAS, the White River is an important resource for the Four Cities and the watershed for fisheries, recreation and municipal water supply purposes; and

WHEREAS, the Four Cities each have a duty and responsibility to provide water to serve their growing communities, and face significant challenges securing future water supplies in a basin that is closed to new withdrawals; and

WHEREAS, Cascade also has purchased significant amounts of water from, and paid system development charges to, Tacoma Public Utilities ("TPU") for municipal water; and

WHEREAS, the Four Cities each have a present need for additional water, but Cascade's ownership of the Lake Tapps water right and its operation and utilization of the Lake as a municipal water supply may impair the Four Cities' ability to secure future water supplies for their citizens; and

WHEREAS, ensuring that the Four Cities can meet the future water demands of their growing communities is in the public interest; and

WHEREAS, in recognition of the need to maintain Lake Tapps as a recreation resource, Cascade has entered into a Definitive Agreement with the

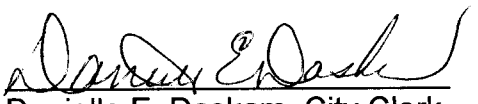
Lake Tapps Community Council ("LTCC") that obligates Cascade to maintain water levels in the Lake at "normal full pool" during the summer months; and

WHEREAS, the Four Cities seek to mitigate the possible adverse effects of Cascade's operation of Lake Tapps on the Four Cities while cooperating with Cascade's efforts to develop Lake Tapps as a water supply source.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn and the Auburn City Clerk are hereby authorized to execute the 2010 Lake Tapps Area Water Resources Agreement which agreement shall be in substantial conformity with the Agreement a copy of which is attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.



Section 3. This resolution shall be in full force and effect upon passage and

Dated and Signed this 19th day of January, 2010.

2010 LAKE TAPPS AREA WATER RESOURCES AGREEMENT AMONG THE CITIES OF AUBURN, BONNEY LAKE, BUCKLEY AND SUMNER, AND CASCADE WATER ALLIANCE

THIS LAKE TAPPS AREA WATER RESOURCES AGREEMENT ("Agreement") made and entered into on the 5th day of February, 2010, by and among the CITY OF AUBURN, ("Auburn"), the CITY OF BONNEY LAKE, ("Bonney Lake") the CITY OF BUCKLEY, ("Buckley") the CITY OF SUMNER, ("Sumner") (all municipal corporations of the State of Washington, collectively, the "Four Cities") and the CASCADE WATER ALLIANCE, a Washington non-profit corporation ("Cascade"). The Four Cities and Cascade together are sometimes collectively referred to as the "Parties."

DEFINITIONS:

"**Water Right**" shall mean the water right applications submitted to the Department of Ecology ("Ecology") S2-29920, R2-29935, and S2-29934 in their current form or as may be modified and as approved by Ecology .

"**Cascade's Tacoma Wholesale Agreement**" means *the Agreement For The Sale of Wholesale Water Between The City of Tacoma, Department of Public Utilities, Water Division and Cascade Water Alliance*, dated October 13, 2005. The terms "**Capacity Reservation Fee**," "**Peaking Factor,**" and "**System Development Charges**" are used in this Agreement as defined in Cascade's Tacoma Wholesale Agreement.

"**City**" means one of the Four Cities individually.

"**Other Agreements**" means the *Agreement Regarding Reservoir Management Between PSE and the Lake Tapps Community*, dated March 31, 2004*; the White River Management Agreement Between the Puyallup Tribe of Indians, the Muckleshoot Indian Tribe, and Cascade Water Alliance*, dated August 6, 2008; the *Lake Tapps Water Rights Settlement Agreement,* dated August 6, 2008*;* the *Natural Resources Enhancement Agreement with the Puyallup Tribe of Indians,* dated August 6, 2008; and the *2009 Agreement Regarding Lake Tapps between Cascade Water Alliance and the Lake Tapps Community*, dated May 13, 2009.

TERMS OF AGREEMENT

In consideration of their mutual covenants, conditions and promises, **THE PARTIES HERETO AGREE** as follows:

EFFECTIVE DATE AND TERM: This Agreement shall take effect when executed by the Parties and shall remain in full force and effect for fifty (50) years, unless terminated (in whole or in part) earlier in accordance with Sections 4 and 10. Provided, that any actions taken to enforce this Agreement before it expires, any conditions contained in permits issued pursuant to or implementing the terms of this Agreement, and any contracts to purchase water shall survive this Agreement. The Term of this Agreement may be extended by written agreement of the Parties.

CASCADE'S RESPONSIBILITIES:

1. **Lake Tapps Municipal Advisory Group.** Cascade agrees to the establishment of the Lake Tapps Municipal Advisory Group as follows:

   a. The Lake Tapps Municipal Advisory Group shall consist of the elected Mayors of each of the Four Cities and three (3) members of the Cascade Board of Directors (the Cascade Board). If any of the Four Cities becomes a Member of Cascade, the Mayor of that City will not be considered a member of the Lake Tapps Municipal Advisory Group unless appointed as a representative of the Cascade Board.

   b. The Lake Tapps Municipal Advisory Group will be a non-voting entity with the purpose of: (1) advising the Four Cities of proposed or pending Cascade decisions or actions related to the management of Lake Tapps that may affect the Four Cities; (2) advising Cascade of any issue that the Four Cities may have related to Cascade's management of Lake Tapps; (3) seeking cooperative resolution of any issues raised by Cascade or the Four Cities; and (4) any other matters related to the implementation of provisions of this Agreement.

   c. The Lake Tapps Municipal Advisory Group will meet at least twice annually, with such meetings to be generally held in early/mid October and early/mid April, or as otherwise agreed by the members. Meetings may include staff of Cascade and the Four Cities as determined by the group. At the regular meeting of the Cascade Board immediately following a meeting of the Lake Tapps Municipal Advisory Group, a representative of the group will report on the issues discussed and present any recommendations for cooperative resolution of any issues discussed.

2. **Remedies for Negative Impact on Water Supply**. In accordance with the terms of this Agreement, if Cascade's Lake Tapps water supply operations result in a negative impact to the water supplies of one of the Four Cities that is not a Cascade member, the City claiming a negative impact must notify Cascade of their claim and give Cascade at least sixty days to resolve the claimed impact. If Cascade fails to resolve the claimed negative impact or disputes that the negative impact exists, the City claiming the negative impact may pursue existing legal remedies in accordance with state and federal law. If a court

determines that a negative impact has occurred, Cascade shall implement a remedy acceptable to the claiming City or, if the affected City or Cities and Cascade can not agree on a remedy, the court shall establish the terms for the remedy.

3. **Water Supply Assistance.** Cascade agrees to assist the Four Cities in their efforts to meet their respective projected 50-year water needs by implementing one or more of the following measures:

   a. **Tacoma Wholesale Water.** Through December 31, 2026, Cascade shall make available the following water supply that may be purchased by the Four Cities either individually or jointly: up to six (6) million gallons per day (MGD) under section 6.2 of Cascade's Tacoma Wholesale Agreement (hereinafter referred to as "Cascade's Guaranteed Reserve Capacity") and up to four (4) MGD under section 6.1 of Cascade's Tacoma Wholesale Agreement (hereinafter referred to as "Cascade's Permanent Capacity") under the following conditions:

      1) For water supply from Cascade's Guaranteed Reserve Capacity to be available throughout the year, the City agrees to pay to Cascade an amount equal to the Capacity Reservation Fee (CRF) paid to Tacoma multiplied by the amount to be purchased in MGD ($1,570,074.00 per MGD). It is understood that this Guaranteed Reserve Capacity water includes a peaking factor of 1.33 for the months of June through September and the City agrees to pay this fee.

      2) For water supply from Cascade's Guaranteed Reserve Capacity to be available only during the peak season (June through September), the City agrees to pay to Cascade an amount equal to a pro-rated portion of the Capacity Reservation Fee paid to Tacoma multiplied by the amount to be purchased in MGD (1/3 of the CRF or $523,358.00 per MGD). It is understood that this Guaranteed Reserve Capacity water includes a peaking factor of 1.33 for the months of June through September and the City agrees to pay this fee.

      3) For water supply from Cascade's Permanent Capacity to be available either during peak period only or throughout the year, the City agrees to pay to Cascade an amount equal to the System Development Charge (SDC) paid by Cascade to Tacoma multiplied by the amount to be purchased in MGD ($4,121,000 per MGD) prorated by the number of months the water will be used each year. (For example, if a City purchases 1 MGD only from June through September, it would pay 1/3 of the SDC, or $1,373,667 per MGD.) It is understood that this Permanent Capacity water includes a peaking factor of 1.33 for the months of June through September and the City agrees to pay this fee.

4) Each City that purchases water under this Section 3 of this Agreement will designate a delivery point and either pay Tacoma directly or reimburse Cascade for costs incurred to install necessary service taps, meters or vaults. Any infrastructure beyond the designated delivery point that may be required to deliver the purchased water to retail customers will be solely the responsibility of the City.

5) Each City that purchases water under this Section 3 of this Agreement will provide Cascade with the necessary delivery scheduling information required under Cascade's Tacoma Wholesale Agreement, and will reimburse Cascade for all wholesale charges from Tacoma associated with deliveries at the City's delivery point, in accordance with the provisions of Section 9.1 of Cascade's Tacoma Wholesale Agreement, except for Cascade's obligation to pay the Minimum Monthly Bill.

6) At any time prior to December 31, 2026, any of the Four Cities that have entered into wholesale water purchase agreements with Cascade under this Section 3 of this Agreement may ask Cascade to request that Tacoma make permanent the amount of water being purchased from Cascade under this Section 3 in accordance with section 15.1 of Cascade's Tacoma Wholesale Agreement. If approved by Tacoma, the requesting City agrees to pay to Cascade any amounts due from Cascade to Tacoma pursuant to section 15.1.2 of Cascade's Tacoma Wholesale Agreement for the duration of Cascade's obligation to Tacoma.

7) Cascade shall not terminate, relinquish or amend Cascade's Tacoma Wholesale Agreement in any way that adversely impacts the Four Cities' ability to purchase water as set forth in this Agreement without the prior express written consent of the Four Cities.

b. **Regional Reserved Water.** Through December 31, 2030, Cascade will provide Lake Tapps Region Reserved Water ("Regional Reserved Water") to assist the Four Cities to secure or apply for alternative water supplies or water rights under the following conditions:

1) Cascade will include Regional Reserved Water, consistent with this Agreement, in its State Environmental Policy Act (SEPA) Draft Environmental Impact Statement (DEIS) regarding the Lake Tapps Water Rights and Supply Project.

2) Subject to the SEPA DEIS process, Cascade will request approval by Ecology of the Lake Tapps municipal water right application as follows:

(a) Regional Reserved Water in an amount of seven (7) cubic feet per second (cfs) annual average (Qa) and ten (10) cfs maximum instantaneous (Qi) would be reserved for the use by any or all of the Four Cities to mitigate impacts on the White River of new water rights or changes to existing water rights.

(b) Regional Reserved Water would not be diverted into Lake Tapps, but instead be allowed to flow down the White River for potential use by any of the Four Cities.

3) If such Regional Reserved Water is approved by the Department of Ecology as provide in this Agreement, use of such Regional Reserved Water may be included as part of a water right application submitted individually by any of the Four Cities. Ecology approval of water rights utilizing Regional Reserved Water must be secured by the City on or before December 31, 2030. Beneficial use of such Regional Reserved Water will take place consistent with approved development schedules included in those water right approvals. Any Regional Reserved Water not authorized for use in a water right approved by December 31, 2030, shall revert to Cascade.

4) Cascade shall have no other obligation or involvement in any water right applications submitted by the Four Cities utilizing the Regional Reserved Water. Any concerns Cascade may have regarding a City's application shall be raised pursuant to the dispute resolution provisions of Section 18 of this Agreement, prior to pursuing any legal action, including administrative appeals.

5) Within 90 days of any of the Four Cities receiving final approval of new or changed water rights incorporating use of Regional Reserved Water, that City shall pay Cascade a one-time Regional Water Charge equal to $743,950.00 per cfs. If the water right includes seasonal limitations on use of Regional Reserved Water, the Regional Water Charge shall be pro-rated to reflect the seasonal availability of such water.

c. **Water from Tailrace.** Subject to availability and to supporting findings in a report of examination for one of the Four Cities' new or changed water right applications, Cascade would provide water by releasing water from the Lake Tapps Project tailrace to the White River, on terms to be negotiated by Cascade and the requesting City.

d. **Support.** In order to support the efforts made by any of the Four Cities to acquire new water rights or transfer existing water rights, and upon request by any of the Four Cities, Cascade shall provide technical support, in the form of access to existing modeling and any other technical documentation available to Cascade. Upon request of the Four

Cities and so long as consistent with Other Agreements and approvals related to the Lake Tapps Project, Cascade shall also provide letters or other documentation in support of actions taken by the Four Cities to secure new water rights or transfers of water rights, including but not limited to letters of support in establishing a finding of overriding considerations of the public interest by the Department of Ecology pursuant to RCW 90.54.020(3)(a).

4. Termination. Cascade's obligations under Sections 1 through 3 of this Agreement are in force and effect as to each City only so long as that City fulfills its obligations under this Agreement and has not appealed the Water Right.

5. Local Franchise and Permit Requirements. When operating in any of the Four Cities' municipal boundaries, Cascade will comply with all of that City's franchise and permitting requirements.

CITIES' RESPONSIBILITIES:

6. Purchase of Tacoma Wholesale Water. The Four Cities, collectively or individually, at each City's sole discretion, agree to buy water under Cascade's Tacoma Wholesale Agreement at the rates, including connection and wholesale charges as set forth in this Agreement. The Four Cities shall be responsible for dividing the purchased capacity among themselves, and shall negotiate wheeling or other applicable agreements either with Cascade or directly with Tacoma Water. Except as expressly provided otherwise in this Agreement, the Four Cities agree to be bound by the terms of the Cascade's Tacoma Wholesale Agreement.

7. Dismissal of Litigation. Within fifteen (15) business days after filing and/or recording of this Agreement, Auburn will withdraw and dismiss its pending lawsuit, with prejudice, against Cascade (King County Case Number 05-2-35788-6).

8. Four Cities Support of the Water Right. So long as the EISs are issued by Cascade and the Water Right is approved by Ecology consistent with this Agreement, the Four Cities will support the EISs and the Water Right.

9. Municipal Advisory Group. The Four Cities, represented by their duly elected Mayors, will participate in the Lake Tapps Municipal Advisory Group as described in this Agreement.

10. Amending Legislation. Within thirty (30) days of issuance of the Water Right consistent with this Agreement, the Four Cities will support legislation amending RCW 39.34.215 by deleting subsections (4) (c) and (5).

11. Termination. The Four Cities' obligations under Sections 6 through 10 of this Agreement

are in force and effect only so long as Cascade fulfills its obligations under this Agreement and the ROEs issued by Ecology for the Water Right are consistent with this Agreement regarding the Regional Reserved Water.

GENERAL

12. Indemnification. Each Party shall indemnify and hold the other Parties and their agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, losses, damages, or costs, of whatsoever kind or nature, brought against that Party arising out of, in connection with, or incident to the execution of this Agreement and/or the Indemnifying Party's performance or failure to perform any aspect of this Agreement; provided, that nothing herein shall require an Indemnifying Party to hold harmless or defend any other Party, its agents, employees and/or officers from any claims arising from the sole negligence of that other Party, its agents, employees, and/or officers. No liability shall attach to any Party by reason of entering into this Agreement except as expressly provided herein.

13. Compliance with regulations and laws. The parties shall comply with all applicable rules and regulations pertaining to them in connection with the matters covered herein.

14. Assignment. No Party shall assign this Agreement or any interest, obligation or duty therein without the express written consent of all other parties.

15. Attorneys' Fees. If any party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in the trial court and in any appellate courts.

16. Notices. All notices and payments hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Auburn

Fax: (206) 625-0675

or to such other respective addresses as any party hereto may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the next business day following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

17. Enforceability: The Parties intend this Agreement to be certain and enforceable, as well as a mechanism for ongoing collaboration as to any issues that may arise in connection with implementation of the Agreement. Except as necessary for compliance with and enforcement of this Agreement, the parties do not intend this Agreement to modify their respective rights or authorities.

18. Dispute Resolution. In the event that any dispute arises between Cascade and the Four Cities, the aggrieved Party shall give a notice of the dispute to the other Party as provided in Section 16. Cascade and the Four Cities shall, within five (5) days of such notice, each nominate a senior officer of its management to meet at a mutually agreed location, to attempt to resolve such dispute. The Parties shall each designate a representative(s) to confer on the best and most cost effective way to resolve the dispute. By mutual agreement, they may choose direct negotiations or mediation. If there is no agreement between the Parties on how to proceed within thirty (30) days, either Party may pursue legal action; provided however, no Party shall be precluded from filing an appeal or action to prevent the expiration of a time period for filing or any statute of limitations.

19. Non-Waiver. No delay or failure by a Party to exercise any of its rights, powers or remedies under this Agreement following any breach by another Party shall be construed to be a waiver of any such breach, or any acquiescence therein, or of or in any similar breach thereafter occurring, nor shall any waiver of any single breach be deemed a waiver of any other breach theretofore or thereafter occurring.

20. Severability. In the event that any of the terms of this Agreement are in conflict with any rule of law or statutory provision or otherwise unenforceable, such terms will be deemed stricken from this Agreement, but such invalidity or unenforceability will not invalidate any of the other terms of this Agreement, and this Agreement will continue in force, unless the invalidity or unenforceability of any such provisions hereof does substantial violence to, or where the invalid or unenforceable provisions comprise an integral part of, or are otherwise inseparable from, the remainder of this Agreement.

21. No Third Party Beneficiary. This Agreement is for the sole and exclusive benefit of the Parties and is not intended to and shall not confer any rights or benefits on any third party not a signatory hereto.

22. Amendment. This Agreement only may be amended or supplemented in a writing signed by the Parties.

23. Survival of Claims. Any claim that a Party has asserted by raising it under the Dispute Resolution provisions of this Agreement prior to the termination of this Agreement and that may reasonably be interpreted or construed to survive the termination of this Agreement shall survive the termination of this Agreement.

24. Signature in Counterpart. This Agreement may be executed in any number of counterparts and all of those counterparts taken together shall constitute one and the same instrument.

25. Further Assurances. Each Party covenants and agrees to do all things necessary or advisable in order to confirm and better assure the intent and purposes of this Agreement.

26. Authority. Each party, by executing this Agreement warrants that it has duly approved this Agreement and has the power to enter into this Agreement and to enforce its terms.

27. Good Faith Commitment to Support Agreement. The Parties covenant and agree to act in good faith and to support the terms and validity of this Agreement. Cascade shall, during the term of this Agreement, support and defend the validity of the Agreement and shall not seek, either directly or indirectly, to invalidate the Agreement or undermine or modify its terms and conditions through administrative, legislative, judicial or other means.

28. Nondiscrimination. Each of the parties, for itself, its heirs, personal representatives, successors in interest, and assigns, as a part of the consideration hereof, does hereby covenant and agree that it will comply with pertinent statutes, Executive Orders and such rules as are promulgated to assure that no person shall, on the grounds of race, creed, color, national origin, sex, age, or the presence of any sensory, mental or physical handicap be discriminated against or receive discriminatory treatment by reason thereof.

29. Applicable Law. This Agreement shall be deemed to be made and construed in accordance with the laws of the State of Washington jurisdiction and venue for any action arising out of this Agreement shall be in Pierce County, Washington.

30. Captions. The captions in this Agreement are for convenience only and do not in any way limit or amplify the provisions of this Agreement.

31. No Additional Entities Created. Unless otherwise specifically provided herein, no separate legal entity is created hereby, as each of the parties is contracting in its capacity as a municipal corporation of the State of Washington; or as a Washington non-profit Corporation. The identity of the parties hereto is as set forth hereinabove.

32. Integrated Agreement. This Agreement constitutes the entire agreement between the parties. There are no terms, obligations, covenants or conditions other than those contained herein. No modifications or amendments of this Agreement shall be valid or effective unless evidenced by an agreement in writing signed by all parties.

33. Filing. Copies of this Agreement shall be filed with the King County Auditor's Office; the Pierce County Auditor's Office; the Secretary of State of the State of Washington; and the respective Clerks of the parties hereto.

IN WITNESS WHEREOF the parties hereto have executed this Agreement as of the day and year first above written.

STATE OF WASHINGTON)
)ss.
COUNTIES OF KING AND PIERCE)

I, Danielle Daskam, the duly appointed, qualified City Clerk of the City of Auburn, a Municipal Corporation and Code City, situate in the counties of King and Pierce, State of Washington, do hereby certify that the foregoing is a full, true and correct copy of the agreement entitled 2010 Lake Tapps Area Water Resources Agreement Among the Cities of Auburn, Bonney Lake, Buckley and Sumner and Cascade Water Alliance on file with the City Clerk of the City of Auburn.

I certify that said agreement was duly approved by the Council by Resolution No. 4563 on January 19, 2010 and the agreement signed by the Mayor of the said City of Auburn on the 5th day of February, 2010.

Witness my hand and the seal of the City of Auburn this 16th day of February, 2010.

Danielle Daskam, City Clerk
City of Auburn

February 5, 2010

Mr. Chuck Clarke
CEO, Cascade Water Alliance
11400 SE 8th Street, Suite 440
Bellevue, WA 98004

Dear Mr. Clarke,

The Cities of Auburn, Bonney Lake, Buckley, and Sumner have completed negotiations with Cascade Water Alliance on the 2010 Lake Tapps Area Water Resources Agreement (Agreement), whereby Cascade agreed to assist the cities in meeting their respective future water supply needs. As the four Mayors representing the Cities of Auburn, Bonney Lake, Buckley, and Sumner we have found it prudent to submit this letter to you on behalf of our cities detailing the projected timing and quantity of our respective water supply needs for the resources being made available to our cities by Cascade. The projected amounts needed and the times at which water will be needed are based on current planning data. We understand that the quantities listed below are subject to the following combined limits in the Agreement: (1) with respect to Regional Reserved Water for mitigation purposes, 7 cfs for average daily demand and 10 cfs for peak demand; and (2) with respect to Tacoma Wholesale Water, 6 million gallons per day (MGD) of Cascade's Guaranteed Reserve Capacity and four 4 MGD of Cascade's Permanent Capacity, plus a peaking factor of 1.33.

The Cities agree among themselves that the sources of supply provided by Cascade Water Alliance will be allocated as outlined below for each source provided, and that these allocations will be needed by approximately the years listed below. Any changes of allocation between the cities from the amounts reflected below will be subject to mutual written agreement of all four cities and a revised notice to Cascade.

City of Auburn Schedule and Allocation:

Mitigation Flows (Regional Reserved Water):

MGD ADD	MGD Peak	CFS Peak
1.3	2.5	3.88

Temporary Block Water (Guaranteed Reserve Capacity):
Auburn plans to take delivery of not to exceed 5 MGD of this water supply in three (3) increments by year-end 2018.

Permanent Block Water (Cascade's Permanent Capacity):
Auburn plans to take delivery of not to exceed 2MGD ADD, 3.32 MGD Peak of this water supply in two increments by year-end 2018.

City of Bonney Lake Schedule and Allocation:

Mitigation Flows (Regional Reserved Water):

MGD ADD	MGD Peak	CFS Peak
1.0	2.0	3.1

Temporary Block Water (Guaranteed Reserve Capacity):
Bonney Lake declines to purchase any temporary block water.

Permanent Block Water (Cascade's Permanent Capacity):
Bonney Lake plans to take delivery by year-end 2018 of not to exceed 1.54 MGD ADD, 2 MGD Peak of this supply for the months of June through September only.

City of Buckley Schedule and Allocation:

Mitigation Flows (Regional Reserved Water):

MGD ADD	MGD Peak	CFS Peak
0.71	1.3	2.0

Temporary Block Water (Guaranteed Reserve Capacity):
Buckley reserves the right to purchase up to one MGD of temporary block water.

Permanent Block Water (Cascade's Permanent Capacity):
Buckley would purchase permanent block water if Regional Reserved Water cannot be utilized.

City of Sumner Schedule and Allocation:

Mitigation Flows (Regional Reserved Water):

MGD ADD	MGD Peak	CFS Peak
0.42	0.65	1.0

Subject to permitting decisions to be made by Department of Ecology, Sumner may not need peak flows above the average of 0.42 MGD (0.65 cfs).

Temporary Block Water (Guaranteed Reserve Capacity):
Sumner would not purchase temporary block water.

Permanent Block Water (Cascade's Permanent Capacity):
Sumner would not purchase permanent block water.

RESOLUTION NO. 4596

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Bonney Lake have legal authority to cooperate with other localities on the basis of mutual advantage and provision or services; and

WHEREAS, the Cities have previously entered into an Emergency Water System Intertie Agreement in order to increase fire protection and emergency water supply reliability for their customers; and

WHEREAS, the Cities are willing to continue to provide these necessary services to increase fire fighting and emergency supply reliability; and

WHEREAS, the Cities wish to enter into a new Intertie Agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor and City Clerk of the City of Auburn are hereby authorized to execute an Emergency Water System Intertie Agreement with the City of Bonney Lake in substantially the same form as attached hereto as Exhibit "A," which is made a part hereof as though set forth in full herein.

Section 2. Implementation. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this resolution.

Section 3. Effective Date. This Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 3rd day of May, 2010.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

ATTEST:

Danielle E. Daskam,
City Clerk

APPROVED AS TO FORM:

Daniel B. Heid,
City Attorney

EMERGENCY WATER SYSTEM INTERTIE AGREEMENT
Bonney Lake/Auburn

THIS AGREEMENT made and entered into by and between the City of Auburn, ("Auburn"), and, the City of Bonney Lake, ("Bonney Lake"), for the purposes of planning, designing, constructing, maintaining, and operating an emergency system intertie between the respective parties,

WITNESSETH:

WHEREAS, both Cities have water facilities in the vicinity, and

WHEREAS, both Cities can increase fire protection and emergency water supply reliability for their customers, and

WHEREAS, the Cities are willing to provide the necessary services to increase fire fighting and emergency supply reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The emergency water system intertie is designed to be operated manually as a two way emergency supply between the Auburn and Bonney Lake Systems. The facility is located in Evergreen Way SE at the Water Service Area Boundaries between the two cities. The primary purpose of the intertie is to provide water during an emergency. For purposes of this agreement, an emergency shall be defined as resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other agreed upon emergency within the water supply system. The maximum duration of an emergency is seven (7) days.

   However, in certain situations such as prolonged equipment repair, the intertie may need to be open for longer than seven (7) days. The party requesting the extended use of the intertie shall notify the other party of this need forty eight (48) hours before the end of the emergency period, and shall provide the other party a written estimate of how long it intends to take water as soon as practicable.

   Tacoma Intertie Operation: At times, in order to meet its own water supply demands as well as Auburn's, Bonney Lake may need to activate its emergency intertie agreement with Tacoma Public Utilities ("TPU"). Auburn agrees that while the TPU Intertie is open that water flowing

through the Auburn/Bonney Lake intertie shall be assumed to be TPU water.

Auburn shall be held to the same conditions as Bonney Lake in its Wholesale Water Agreement with TPU. Water supplied to Bonney Lake by TPU during peak demand periods requires a matching amount of use during the last quarter of the year in order to qualify for wholesale consumption rates versus higher rates used during peak demand periods.

Auburn shall purchase water during the last quarter of the year from Bonney Lake and TPU until this consumption formula is satisfied. For purposes of satisfying the consumption formula, the water supplied to Auburn during the last quarter of the year is not to be used solely for peak demand periods; rather it is to be used for non-recurring maintenance and repair purposes, preferably not during peak demand periods.

2. Auburn will own and maintain the piping, interior equipment, meter and interior appurtenances, and all piping up to the Bonney Lake side of the vault for the metering station.

3. Bonney Lake will own and maintain the exterior appurtenances and all piping on Bonney Lake's side of the vault.

4. Each City will each have unlimited access to the vault via a dual padlock or ownership of keys to the vault.

5. Each City will operate its respective normally-locked valve inside of the vault. Auburn will solely unlock and operate the locked valve on Auburn's side of the meter and Bonney Lake will solely unlock and operate the locked valve on Bonney Lake's side of the meter.

6. The procedure for operating the intertie in the event of such emergency shall be as follows:

   A. Each City shall determine that an emergency as defined in this Agreement has occurred which warrants the need to request that the intertie be activated.

   B. The Public Works Director or designee of the requesting party shall provide a verbal request to the other City's Public Works Director or designee. Upon agreement that an emergency exists which shall allow for the intertie to be opened, the intertie will be activated as soon as reasonably possible. Both Cities' personnel shall be present at the vault to open the valves to activate the facility.

C. The City requesting the activation shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

7. The intertie shall remain activated until the City requesting activation determines that the need for activation of the emergency intertie has ceased and shall request in writing to close the intertie.

8. In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the City supplying the water may change, reduce or limit the time for or temporarily discontinue the supply of water without notice; water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work. The City supplying the water shall not be responsible for any damage resulting from interruption, change or failure of the water supply, and the City receiving the water (City requesting activation) shall save and hold harmless the City supplying the water from any loss, damages or suits to or by customers of the City receiving the water resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the City supplying the water's negligence. Prior to a planned interruption or limiting of service, the City supplying the water will notify the City receiving the water of such not less than three days prior to the service disruption. The City supplying the water agrees to use best efforts and reasonable diligence to notify the City receiving the water as soon after it becomes aware of the need for service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

9. Auburn and Bonney Lake staff shall read the meter upon activation and upon deactivation of the intertie. The city supplying the water shall verify the information and shall then calculate and invoice the other city for the water used during the request. The invoice shall be calculated by the total water used during the event.

10. The rate paid for water shall be determined by one of three scenarios under which water is taken through the intertie. The scenarios are described as follows:

A. Emergency Water. This is short term water taken over a period not to exceed seven (7) days. This rate relies on locally produced water and does not include TPU intertie water. The rate for this scenario shall be at the lowest current Auburn or Bonney Lake Residential Rate for service outside City boundaries depending on which city is supplying the water. This shall be complete payment for the water, labor, and administration of activating the intertie.

B. Prolonged Equipment Repair Water. This water is taken over a period exceeding seven (7) days as needed to complete lengthy repairs. The rate for this scenario shall be at the Auburn or Bonney Lake Residential Rate actually charged for service outside City boundaries depending on which city is selling the water plus 10%. This shall be complete payment for the water, labor, and administration of activating the intertie.

C. TPU Intertie Water. If Bonney Lake needs to open the TPU intertie to meet system demands while Auburn is taking water from Bonney Lake then all water flowing to Auburn as measured by the Auburn/Bonney Lake intertie meter shall be considered TPU water. The rate for TPU water shall be the wholesale rate set forth in Tacoma Municipal Code 12.10.400, as currently adopted by the Tacoma Public Utility (TPU) Board and Tacoma City Council. In this scenario only the TPU rate with an additive wheeling fee shall apply regardless of the time the intertie is activated. When the TPU Intertie is opened or closed to support Auburn, Bonney Lake shall notify Auburn that same day.

Auburn understands that Bonney Lake will incur additional costs when they activate the TPU intertie. The costs include but are not limited to increased system operation costs i.e. pumping treatment and sampling; and administrative costs such as meter reads, and Tacoma and Auburn accounting and billing. Since these costs are not easily separated from normal water system operation costs, Bonney Lake and Auburn agree that these costs be compensated using a "Wheeling" fee. The Wheeling fee shall be calculated as percentage of the total cost of the water taken through the Auburn/Bonney Lake intertie meter. The Wheeling fee rate shall be 15% of the total cost of TPU water taken by Auburn.

Not later than 30 days after the Bonney Lake/TPU intertie is deactivated, Bonney Lake will submit a reconciliation bill for the quantity of water supplied to Auburn during the period the Bonney Lake/Auburn intertie is activated. In addition, Bonney Lake reserves the right to request monthly reimbursement if the intertie remains open for a prolonged period.

11. Each City is responsible for associated staff, administration and legal costs associated with the implementation of the agreement.

12. To the extent allowed by law, each party shall defend, indemnify, and hold harmless the other party, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or

nature arising out of or in connection with or incident to an act or omission of the indemnifying party, its employees, agents, and contractors in the performance of the indemnifying party's obligations under the Agreement and this Amendment. This indemnification provision shall include, but is not limited to, all claims against each party by an employee or former employee of the indemnifying party or its contractors and, as to such claims, each party expressly waives all immunity and limitation of liability under Title 51 RCW.

13. This Agreement shall remain in force until terminated by either party hereto upon 60-days written notice to the other party. .

14. This Agreement contains the entire agreement of the parties with respect to the subject matter of this Agreement, and supersedes all prior negotiations, agreements and understandings with respect thereto. This Agreement may only be amended by a written document duly executed by all parties.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

Bonneville Power Administration (BPA) hereby agrees to the City of Auburn's use of BPA's easement area for construction/installation, use, and maintenance of a Tacoma waterline - B Street NW Intertie Project CP1011. The vaults and pumping facilities are approved in the proposed location.

The location of the City of Auburn's use is partially within the NE1/4 SE1/4 of Section 1, Township 21N, Range 4E, Willamette Meridian, King County, State of Washington, as shown on the attached segment of BPA Drawing No. 106910, marked as Exhibit A.

This Agreement is revocable at will by BPA and does not modify, change or otherwise alter the rights BPA acquired by Deed. BPA may terminate this agreement upon 30 days written notice.

CITY OF AUBURN AGREES THAT FOLLOWING ITEMS ARE MANDATORY.

1. **A copy of this permit shall be physically located at the project during construction activities.**
2. Inform BPA once the construction of the approved use is complete.
3. Construction equipment shall maintain a minimum distance of 20 feet between the equipment and transmission line conductors at all times. Do not measure this with measuring tape, pole, or other physical means.
4. To ensure the safety of workers and the uninterrupted operation of the BPA transmission facilities, the City of Auburn shall employ a BPA approved safety watcher during any construction activities occurring under the conductors (wires) when operating any equipment that has the potential to reach or come within 20 feet of the conductors (wires). Please contact this office for a current list of BPA approved Safety Watchers.

5. It has been determined that the 17'x 8' vault is HS-20 rated and the surface will be at grade. The lid however is not HS-20 rated and therefore requires placement of bollards and the approval of BPA Transmission Line Maintenance to drive around this portion of the right-of-way.
6. The pipeline shall be buried with a minimum cover of 36 inches.
7. All uses of the right-of-way shall meet local/state/federal/national codes.
8. Mark the location of underground water lines with permanent signs , and maintain such signs, where they enter and leave BPA's right-of-way, and at any angle points with the right-of-way. BPA will not be responsible for damage to facilities not visibly marked.
9. No grade changes to facilitate construction or disposal of overburden shall be allowed. Any damage to BPA property resulting from the proposed right-of-way or access road use shall be repaired at the applicant's expense.
10. Access to BPA transmission line system by BPA and/or its contractors shall not be obstructed at any time.
11. No storage of flammable materials or refueling of vehicles or equipment within the easement area.
12. No refueling of vehicles or equipment is allowed on the right-of-way.
13. Restore BPA's right-of-way to its original condition, or better following construction.

No changes or additions to the use of the right-of-way is allowed without BPA's review and written approval. Any other uses and utilities on the right-of-way must be applied for separately.

The subject use of this easement area has been determined not to be a hazard to, or an interference with, BPA's present use of this easement for electric transmission line purposes. Accordingly, there is no present objection to such use. However, if such use should, at any time, become a hazard to the presently installed electrical facilities of BPA, or any facilities added or constructed in the future, or if such use should interfere with the inspection, maintenance, or repair of the same, or with the access along such easement, the City of Auburn will be required to stop the use or remove such hazard or interference from the right-of-way at no expense to BPA.

The City of Auburn agrees to assume risk of loss, damage, or injury which may result from the use of the easement area, except for such loss, damage, or injury for which BPA may be responsible under the provisions of the Federal Tort Claims Act, 62 Stat. 982, as amended. It is understood that any damage to BPA's property caused by or resulting from use of the easement area may be repaired by BPA, and the actual cost of such repair shall be charged against and be paid by the City of Auburn.

The following items are advisory in nature, but should be given due consideration.

- Nuisance shocks may occur within the right-of-way. Grounding metal objects helps to reduce the level of shock. It is suggested that road building / construction equipment be grounded with a drag chain.
- Construction/installation, use, and maintenance of the waterline intertie shall be at no cost to BPA.
- BPA shall not be liable for damage to City of Auburn's or Stobie & Trussler's property, facilities, or injury to persons that might occur during maintenance, reconstruction, or future construction of BPA facilities as a result of the City of Auburn's facilities being within the right-of-way.
- BPA seeks help maintaining the integrity of the electrical transmission system. Please report any Vandalism or Theft to the BPA Crime Witness program at 1-800-437-2744. Cash rewards of up to

- $ 25,000 will be paid should information lead to the arrest and conviction of persons committing a crime.

Official communication should be directed to, Bonneville Power Administration, Real Estate Field Services-TERR, 28401 Covington Way SE, Kent, WA or by telephoning 1-800-836-6619 with questions or concerns.

Please note that BPA is not the owner of this property. If the City of Auburn is not the owner, permission to use this property must also be obtained from the owner(s). There may also be other uses of the property that might be located within the same area as this project. This agreement is subject to those other rights.

This Land Use Agreement becomes effective upon the signature of all parties. This agreement is entered into with the express understanding that it is not assignable or transferable to other parties without the prior written consent of BPA.

RESOLUTION NO. 4649

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND THE CITY CLERK TO EXECUTE AN EMERGENCY WATER SYSTEM INTERTIE AGREEMENT BETWEEN THE CITY OF AUBURN AND THE LAKEHAVEN UTILITY DISTRICT

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Lakehaven have legal authority to cooperate with other localities on the basis of mutual advantage and provision or services; and

WHEREAS, the parties wish to enter into an Emergency Water System Intertie Agreement in order to increase fire protection and emergency water supply reliability for their customers;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, HEREBY RESOLVES as follows:

Section 1. That the Mayor and City Clerk are hereby authorized to execute an Emergency Water System Intertie Agreement with the Lakehaven Utility District in substantially the same form as attached hereto as Exhibit "A," which is made a part hereof as though set forth in full herein.

Section 2. That the Mayor is authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 18th day of October, 2009.

Daniel B. Heid, City Attorney

EMERGENCY WATER AGREEMENT
Lakehaven/Auburn Intertie No. 2

THIS AGREEMENT made and entered into by and between the City of Auburn, hereinafter referred to as City, and Lakehaven Utility District, hereinafter referred to as "District".

WITNESSETH:

WHEREAS, the City has water facilities in the vicinity of a water main of the District, and

WHEREAS, the City can increase water system reliability in emergencies for its customers if water is available from the District, and

WHEREAS, the District is willing to provide to the City water service necessary to increase the water system's reliability upon the terms and conditions set forth herein,

NOW, THEREFORE, IT IS MUTUALLY AGREED as follows:

1. The District hereby grants to the City the right to connect a water meter and flow control valve, and appurtenances to the end of the 6-inch water main located in a vault near the intersection of Knickerbocker Road and Abby Drive in King County, Washington.

2. The meter and flow control valve described in Paragraph No. 1 is installed to increase the reliability of the City water system to meet demand during emergencies.

3. For purposes of this agreement, "emergency " shall mean a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other event agreed upon between the Parties..

4. The procedure for operating the intertie in the event of such an emergency shall be as follows:

   a. The City and District shall each determine that an emergency has occurred that warrants the need to request that the intertie be activated.

   b. The Public Works Director or designee of the City shall provide a verbal request to the District General Manager or designee stating the requested time of commencement, and estimated duration and quantity of water to be so used. Upon verbal agreement by the District that an emergency exists, the intertie will be

activated as soon as reasonably possible. District and City personnel shall be present at the vault to activate the facility.

c. The City shall provide a written confirmation of the request not less than 24 hours after the verbal request, or on the first day of normal business after the verbal request.

d. Subject to condition in paragraph 10, the intertie shall remain activated until the City determines that the need for activation of the emergency intertie has ceased. The Public Works Director or designee of the City shall provide a verbal request to the District General Manager or designee that the intertie be closed. The City shall provide written confirmation within 24 hours after the verbal request, or on the first day of normal business after the verbal request.

e. This emergency intertie facility is limited to a maximum flow-rate of 800-GPM (gallons-per-minute).

5. The City and District staff shall read the meter upon activation and deactivation of the intertie. The District shall then calculate and invoice the City for the water used during the request. The invoice shall be calculated based on the total water used during the event.

6. The City shall comply with all District resolutions and rules relating to connection to the District's water system, unless modified by this agreement.

7. The City shall pay to the District the same connection fee, rates and charges and monthly service charges, except for capital facilities charge, as are established from time to time by District resolution and as are applicable to the use of a six (6)-inch meter. The current monthly service charge for a six (6)-inch meter is $287.04 per month. The current rate for water use is $ 1.24/ccf for winter usage (November - June) and $ 2.56/ccf for summer usage (July - October) and these rates shall be in effect until such time as the District amends its rate resolution or until a meter of different size is utilized.

8. This Agreement shall not authorize or permit the City to take water from the connection described herein beyond what is described in Paragraph No. 4.

9. All costs of the meter and flow control installation including, but not limited to, time and materials expended on improvements pursuant to this Agreement, shall be fully reimbursed by the City. Any materials provided shall become the property of the District upon completion of installation.

10. (a.) In case of emergency or whenever the public health, safety, or the equitable distribution of water so demands, the District may change, reduce or limit the delivery rate or time, or temporarily discontinue the emergency water connection to the City

without notice; (b.) Water service may be temporarily interrupted, limited for purposes of making repairs, extensions or doing other necessary work; and (c.) The District shall not be responsible for any damage resulting from interruption, change or failure of the emergency water connection, and the City shall save and hold harmless the District from any loss, damages or suits to or by customers of the City resulting from interruption, change or failure of water supply provided by this Agreement, except damages arising out of the District's negligence. Prior to a planned interruption or limiting of service, the District will notify the City of such not less than three days prior to the service disruption. The District agrees to use best efforts and reasonable diligence to notify City as soon after it becomes aware of the need for service disruption.

11. To the extent allowed by law, each party shall defend, indemnify, and hold harmless the other party, its elected officials, employees and agents from and against any and all suits, claims, actions, losses, costs, expenses of litigation, attorney's fees, penalties and damages of whatsoever kind or nature arising out of or in connection with or incident to an act or omission of the indemnifying party, its employees, agents, and contractors in the performance of the indemnifying party's obligations under the Agreement. This indemnification provision shall include, but is not limited to, all claims against each party by an employee or former employee of the indemnifying party or its contractors and, as to such claims, each party expressly waives all immunity and limitation of liability under Title 51 RCW.

12. In the event of non-performance of any provision herein by the City, District may shut off water supplied pursuant to this Agreement.

13. This Agreement may be terminated by either party hereto upon 60-days written notice to the other party.

IN WITNESS WHEREOF, we have hereunto set our hands and seals.

EMERGENCY INTERTIE AGREEMENT

BETWEEN

CITY OF TACOMA AND CITY OF AUBURN

This emergency intertie agreement ("Agreement") is made by and between the City of Tacoma, Department of Public Utilities, Water Division d/b/a Tacoma Water, a municipal corporation (hereafter "Tacoma"), and the City of Auburn, a municipal corporation (hereafter "Auburn"). Tacoma and Auburn collectively shall be referred to as the "Parties" or either Tacoma or Auburn may be referred to as "Party" when appropriate.

A. RECITALS:

WHEREAS, Auburn and Tacoma are responsible for operating and maintaining their public water systems in accordance with federal, state and local laws and regulations, and

WHEREAS, the Parties recognize the responsibility of public water utilities to provide for the highest quality of water and reliability of service to their customers at reasonable cost, and

WHEREAS, the Parties further recognize that water resources are finite and vulnerable, and the prudent use and management of these resources requires cooperation among water utilities, and

WHEREAS, Auburn has requested that an intertie be established with Tacoma, to be available in case of emergency need, and Auburn does have water system facilities nearby that can be interconnected so as to be mutually beneficial to both utilities during periods of system emergency, and

WHEREAS, the Parties recognize that Auburn intends to use this intertie for wholesale service in the future,

NOW THEREFORE, it is agreed that Auburn and Tacoma may provide for interties of water mains and the terms and conditions contained herein shall apply.

B. DEFINITIONS:

The definition of certain terms, as used later in this Agreement, are as follows:

INTERTIE: A physical connection between water mains of the two Parties to this Agreement, at specifically identified points, where water may be transferred from the supplies of one system to the transmission or distribution facilities of the other.

SURPLUS PRODUCTION CAPACITY: Volumetric rate of available water supply, from the sources of the supplying water system, which can be transferred through an

intertie after all service requirements to the customers of the supplying system have been met.

ISOLATION VALVE: A positive shut off valve which shall be installed at the point in each water system which is used to accept or deliver water through the intertie. Each connected system has sole responsibility for providing and operating their isolation valve.

INTERTIE CAPACITY: The flow capacity for water to be delivered through an intertie as agreed upon by the Parties to this Agreement. Intertie facilities shall be designed so as to be capable of conveying no less than the agreed upon flow.

EMERGENCY: Defined as resulting from a water shortage, a major water line break, fire demand, contamination of the water supply system, mechanical equipment failure, electrical equipment failure, or any other agreed upon emergency affecting the water supply system.

C. CONDITIONS

1. GENERAL: The intertie described in exhibits A and B attached to this document shall be governed by the terms of this agreement. No future interties shall be permissible without a subsequent and separate written agreement between the Parties, which agreement may supplement this agreement. Neither Party shall be obligated to agree to or execute any such agreement or permit the other Party to construct additional connections.

2. PURPOSE: The intertie described in exhibits A and B attached to this document shall be utilized only in emergency situations unless converted by mutual Agreement to a regular wholesale service. Tacoma will first determine that surplus production capacity is available before providing water for an emergency situation.

3. CAPITAL COSTS: The cost of construction of the proposed intertie, to include all facilities and equipment necessary to deliver water, installation of the meter and vault and connection to Tacoma Water's Pipeline 5 (STA 765+05) at "B" Street NW shall be the responsibility of Auburn. As used in this paragraph, "cost of construction" shall include, but not be limited to, all actual costs of labor, materials, permitting, equipment, engineering, legal, publication, SEPA compliance, and any costs customarily incurred in such projects. The meter and vault will be designed, constructed and owned by Tacoma. Auburn has deposited $ 61,700.00 with Tacoma to cover the estimated costs. If Tacoma determines that the initial deposit is not sufficient to pay for all costs of construction, Auburn shall deposit such additional amounts with Tacoma as Tacoma requires to complete design and construction of the project. If the cost of construction is less than the deposit, Tacoma shall refund the remaining balance.

4. MAINTENANCE COSTS: Each utility shall be responsible for operating and maintaining their facilities including isolation and flow control valves as applicable (see Exhibit A). Vault and meter maintenance costs shall be the responsibility of Tacoma.

Should Tacoma ever need Auburn to relocate their infrastructure to accommodate a Tacoma Water project, Auburn will do so at their own cost.

5. OPERATING PROTOCOL: The Party requesting water shall submit a written request to the supplying Party and the supplying Party must give written permission prior to the transference of any water to the requesting Party. Should a situation arise necessitating the supply of water immediately a verbal request shall initially be sufficient followed by a written request. Verbal authorization, however, must be obtained from the supplying Party before obtaining any water. Each Party shall designate, in writing, a person or persons who have authority to evaluate such a verbal request and determine whether such a request should be granted.

6. NOTICE: All notices, requests, demands and other communications hereunder shall be in writing and shall be deemed given if personally delivered or mailed, certified mail, return receipt requested, or sent by overnight carrier to the following addresses:

If to Tacoma:
Ms. Linda McCrea
Water Superintendent
PO Box 11007
Tacoma, WA 98411
Phone: (253) 502-8245
Fax: (253) 502-8694

If to City of Auburn:
Mr. Dan Repp
Utilities Engineer
1 East Main Street
Auburn, WA 98001
Phone: (253) 804-5062
Fax: (253) 931-3053

7. COMMODITY COST: Tacoma will supply Auburn with water at the wholesale water service rate as identified in TMC Section 12.10.400, City of Tacoma Water Rates and Regulations. Invoices will include a monthly ready to serve charge based on meter size and consumption charges based on water used. Consumption charges will be at the constant use rate for the first 30 days of use. If use exceeds 30 days the Superintendent will have the discretion to reclassify the consumption charge to the summer season peaking rate. These water rates are periodically adjusted and shall be applicable as set forth in the rate schedule as adopted by the Public Utility Board and Tacoma City Council.

8. CONVERSION OF SERVICE: Establishment of an emergency intertie and providing emergency water shall not be considered a commitment of water availability for future retail or wholesale service. Conversion of an emergency intertie to retail or wholesale service will require an assessment of water availability, a decision to serve by the appropriate body, payment of a system development charge, and a commitment to comply with applicable rate and service policies.

9. INDEMNITY: Neither Party shall be liable for failure to deliver water to the other Party at any time. If water is provided, it shall be provided only from surplus production and/or storage capacity of the supplying utility as determined at the time of intertie operation. Each Party understands and acknowledges that the other Party makes no warranties or

assurances as to water availability, pressure or volume at any given time relating to the intertie.

10. TERMINATION OF SERVICE: Termination of this intertie agreement by either Party shall be preceded by not less than one (12) calendar months written notice to the other Party.

Dated this 18th day of October, 2010.

RESOLUTION NO. 4660

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERIM WATER SALES AGREEMENT BETWEEN THE CITY OF AUBURN AND KING COUNTY WATER DISTRICT NO. 111

WHEREAS, the City adopted Resolution No 2721 executing an Interlocal Agreement No. 2 for the Lea Hill Intertie Project between the Covington Water District, King County Water District No. 111 and the City of Auburn; and

WHEREAS, to avoid unpredictable water sales and to create a predictable and reliable cost for wholesale water to be sold by the City to the Covington and King County Water District, on June 17, 2002, the City adopted Resolution No. 3482, which authorized the execution of an Interim Water Sales Agreement between the parties; and

WHEREAS, on February 22, 2005, the prior Interim Water Sales Agreement was superseded and replaced with a new agreement per Resolution No. 3817; and

WHEREAS, Covington has opted out of the original agreement; and

WHEREAS, The City and the King County Water District No. 111 wish to continue their prior arrangement;

WHEREAS, in keeping with the original intent of the parties to create a predictable and reliable cost for wholesale water, it is appropriate for the City to

enter into a new Interim Water Sales Agreement with King County Water District No. 111 which would supersede and replace the prior agreement.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, KING COUNTY, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor of the City of Auburn and the Auburn City Clerk are hereby authorized to execute an Interim Water Sales Agreement between the City of Auburn and King County Water District No. 111, in substantial conformity with the Agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

Dated and Signed this 6th day of December, 2010.

Danielle E. Daskam, City Clerk

APPROVED AS TO FORM:

Daniel B. Heid, City Attorney

INTERIM WATER SALES AGREEMENT
between
KING COUNTY WATER DISTRICT NO. 111
and the
CITY of AUBURN

This Agreement ("Agreement") is made and entered into this 6th day of December, 2010 by and between King County Water District No. 111, a Municipal Corporation ("District") and the City of Auburn, a Municipal Corporation ("Auburn") (individually a "Party" and collectively the "Parties").

Recitals:

A. The Parties are also parties to "Interlocal Agreement 2 for the Lea Hill Intertie Project between King County Water District #111, and the City of Auburn" ("IA2").

B. The Parties desire to avoid unpredictable water sales and create a predictable and reliable cost for wholesale water to be sold by Auburn to the District.

C. By guaranteeing a minimum purchase of water for a given period of time, the cost of water, which to a significant extent is based on peaking factors, can be minimized for all of Auburn's customers.

D. This Agreement is intended to establish a rate for a fixed block of water for the mutual benefit of the Parties.

E. It is in the interest of the District to have a predictable supply of water available, and in Auburn's interest to have a predictable and consistent source of revenue from the sale of such water.

F. The Parties are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act.

G. The Parties intend that the take or pay water provided for in this Agreement is a portion of and not in addition to the 2.5 MGD allocated to the District as addressed in IA2.

Now, therefore, in consideration of the mutual covenants and promises contained herein, and for other good and valuable consideration, the adequacy of which is hereby acknowledged, the Parties hereby agree as follows:

1) **TAKE OR PAY:** The District agrees to purchase a minimum block of water as identified in this Agreement from Auburn on a "take or pay" basis. For purposes of this Agreement, a "Block" shall mean either an average of 0.75 MGD of water between the time period of October 1 and May 31, or an average of 1.0 MGD of water between the time period of June 1 and September 30. "Take or pay" shall mean that, in the absence of an emergency as set forth in Section 7 of this Agreement, the District shall pay for the Block of

water whether or not the water is actually taken by the District, subject to the provisions of Section 2 herein.

2) **CHARGES FOR WATER:** On a monthly basis, the District will pay, as shown on Exhibit 1 attached hereto and incorporated herein by this reference, the Base Charge, plus the Block Rate. In addition to the Base Charge and the Block Rate, any water taken in excess of the Block amount ("Excess Water") during any month shall be billed at the appropriate overage rate shown in Exhibit 1; provided, that: 1) any water taken during an emergency, as defined in Paragraph 7, shall be billed at the Block Rate, and 2) if Auburn is unable to deliver up to the Block quantity of water requested by the District, then Auburn shall only bill the District for the amount of water actually delivered at the Block Rate. Auburn shall send a monthly bill to WD 111 for all water purchased by the District.

3) **QUANTITY AVAILABLE / DELIVERED:** The Block quantity shall be calculated as the amount of water to be delivered at an average rate of either 0.75 MGD or 1.0 MGD (depending on the season) measured over a rolling 3 day period, with total quantities delivered within any single day being within 10%, plus or minus, of the Block quantity in effect at the time as measured at the Auburn Intertie Pump Station meter ("Master Meter"). For the Block quantity, the District will be

served on the same basis and with the same reliability as service is provided to Auburn's retail customers, and any curtailment, restrictions or limitations on delivery shall be on same basis as curtailment, restrictions or limitations on delivery to Auburn's retail customers.

4) **ANNUAL RECONCILIATION:** The Master Meter is located at the Lea Hill Intertie Pump Station to measure the flow of water. The Master Meter will be read in January of each year to adjust for differences between the Master Meter and the water calculated to have been sold under this Agreement. If there is a difference between the Master Meter and the calculated quantities, Auburn will either charge or credit the District's account at the Block Rate.

5) **ANNUAL REVIEW AND ADJUSTMENT:** The initial Block of either 0.75 MGD or 1.0 MGD (depending on the season) shall remain in effect through December 31, 2015. Each year, the Block may be adjusted by mutual agreement. By September 1 of each year the District shall notify Auburn of its intent to continue without change or request an increase or decrease in writing of the Block quantity desired. Auburn will review its ability to approve the change and may approve any requested change in the Block quantity up to but not to exceed 1.5 MGD which would become effective January 1 of the year following the request. If Auburn determines it cannot approve the

request it will communicate this information to the District before October 1, and continue to provide the same amount as during the current year. In the event that neither Party communicates its intent to adjust the Block under this provision, the Block shall be deemed to continue unchanged.

6) **TERM:** This Agreement shall remain in full force and effect from the first day of the month following the execution of this Agreement through December 31, 2015. The Agreement shall automatically be renewed for an additional year at the conclusion of the term of this Agreement or any extension thereof unless either Party provides the other with notice of an intent not to extend this Agreement, which notice shall be received by the other Party not less than one year prior to the expiration of the term of this Agreement or any extension thereof. The termination of this Agreement shall not affect any rights or obligations under IA2.

7) **EMERGENCIES:** For purposes of this Agreement, an emergency shall be defined as a need for water resulting from a water shortage, a major water line break, fire demand, contamination to the water supply system, mechanical equipment failure, electrical equipment failure or Puget Sound Energy facility failure, or any other mutually agreed upon event within the water supply system. An emergency period shall be

for no more than five (5) working days without written request by the District and approval by Auburn in writing to extend the emergency period. The City may change, reduce or limit the time for or temporarily discontinue any water supplied for an emergency in excess of the Block quantity without notice. Prior to a planned interruption or limiting of emergency service, the City will notify the District of the interruption or limiting not less than three days prior to the service disruption. The City agrees to use best efforts and reasonable diligence to notify the District as soon after it becomes aware of the need for emergency service disruption and further will, to the extent practical, limit the service disruption to daylight hours.

8) **PRIOR AGREEMENT SUPERSEDED:** This Agreement supersedes and replaces the Interim Water Sales Agreement between Covington Water District, King County Water District No. 111 and the City of Auburn dated February 22, 2005.

In witness whereof the Parties have caused this Agreement to be executed by their duly authorized representatives on the 6th day of December, 2010.

Year	Base Charge (per month)	Block and Winter Overage Rate (per ccf)	Summer Overage (per ccf)	
2010	$175.00	$0.91	Block rate + $0.25	
2011	$175.00	0.91 X CPI*	Block rate + $0.25	
2012	$175.00	2011 Rate X CPI*	Block rate + $0.25	
2013	$175.00	2012 Rate X CPI*	Block rate + $0.25	
2014	$175.00	2013 Rate X CPI*	Block rate + $0.25	
2015	$175.00	2014 Rate X CPI*	Block rate + $0.25	

* CPI means the Consumer Price Index – Urban for the Seattle – Tacoma – Bremerton area for the month of October of the prior year, divided by the October value of the year prior to that (see example below).

Example:

CPI for 2011 equals the October 2010 CPI value divided by the October 2009 CPI value.

RESOLUTION NO. 4725

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO NEGOTIATE AND EXECUTE A PURCHASE AGREEMENT WITH COVINGTON WATER DISTRICT AND KING COUNTY WATER DISTRICT #111

WHEREAS, the Covington Water District and King County Water District #111 (the Districts) have surplus infrastructure in the form of a water main on 132nd Ave Southeast; and

WHEREAS, the City has a need for an additional water main on 132nd Ave SE as part of a programmed capital project; and

WHEREAS, the Districts are willing to sell the water main to the City; and

WHEREAS, purchase of the water main will avoid various environmental and traffic impacts and the risk associated with construction of a new main; and

WHEREAS, purchase of the water main will eliminate the additional burden on finite staff resources to design and construct a new water main.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. That the Mayor is authorized to negotiate an Agreement with Covington Water District and King County Water District #111, and the Mayor and the City Clerk are authorized to execute such agreement as negotiated within budgetary and scoping parameters.

Section 2. That the Mayor is authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 5th day of July, 2011.

CITY OF AUBURN

PETER B. LEWIS
MAYOR

ATTEST:

Danielle E. Daskam, City Clerk

APPROVED AS TO FORM:

Daniel B. Heid, City Attorney

PIPELINE TRANSFER AND ACQUISITION AGREEMENT

This Agreement ("Agreement") is by and between the City of Auburn, a Washington municipal corporation ("City"), Covington Water District, a Washington municipal corporation ("CWD"), and King County Water District No. 111, a Washington municipal corporation ("WD 111") (CWD and WD 111, collectively the "Districts") (the Districts and City, collectively the "Parties") for the purposes set forth below.

RECITALS

A. The City owns and operates a system of water supply within its corporate and water service area boundaries, and the Districts own and operate systems of water supply within their respective corporate and water service area boundaries.

B. The Parties previously entered into agreements providing for the construction of certain facilities to provide for the conveyance and sale by the City of wholesale water supply to the Districts. Specifically, the Parties entered into an agreement entitled "Interlocal Agreement No. 1" dated November 7, 1995 ("IA1") which provided for the construction of certain facilities to provide for the conveyance of wholesale water supply by the City to the Districts, the obligations to pay for such facilities, and the allocation of capacity rights among the Parties to such facilities; pursuant to IA1, a 16-inch waterline, among other facilities, was installed from SE 298th Street to SE 288th Street in 132nd Avenue SE and the Districts own such waterline and 95% of the capacity of such waterline in 132nd Avenue SE.

C. The Parties also entered into an agreement entitled "Interlocal Agreement No. 2" dated October 2, 1996 ("IA2") which also provided for the construction of certain additional facilities to provide for the conveyance of wholesale water supply by the City to the Districts, the obligations to pay for such facilities, and the allocation of capacity rights among the Parties to such facilities; and IA1 was terminated and superseded upon the completion of the construction of the water facilities described in IA2.

D. The City has been providing water supply to the Districts in accordance with the terms and conditions of IA2 through the water facilities constructed pursuant to IA1 and IA2. However, the City has proposed to the Districts that the City purchase a portion of the 16-inch waterline in 132nd Avenue SE owned by the Districts located between SE 299th Street north to the Regional Water Supply System pipeline managed by the City of Tacoma as depicted on **Exhibit A** attached hereto and incorporated herein by this reference (the "Pipeline").

E. The Districts have agreed to transfer ownership of the Pipeline and its capacity to the City, and the City has agreed to accept ownership of the Pipeline and its capacity according to the terms and conditions of this Agreement.

F. After title to the Pipeline is transferred to the City, the City shall have the responsibility to operate, maintain, repair and replace the Pipeline.

AGREEMENT

NOW, THEREFORE, in consideration of the following terms and conditions, the Parties agree as follows:

1. City Acquisition of Pipeline. The City shall acquire from the Districts exclusive title to the Pipeline, along with all appurtenances associated with the Pipeline as provided in this Agreement. The Pipeline consists of that portion of the 16-inch waterline in 132nd Avenue SE between SE 299th Street north to the Regional Water Supply System pipeline managed by the City of Tacoma of approximately one thousand two hundred thirty (1,230) lineal feet consisting of water pipeline, valves, fittings, and appurtenances as depicted on **Exhibit A**.

2. Transfer of Pipeline and Capacity. Districts shall convey the Pipeline and the Pipeline's capacity to the City as follows:

A. Districts shall transfer the Pipeline and its capacity to the City in consideration of the City's payment in the amount of Two Hundred Fifteen Thousand Two Hundred Fifty Dollars ($215,250.00) together with sales tax at the rate of 9.5% thereon to each District ($20,448.75).

B. In consideration of the Districts' transfer of the Pipeline and its capacity to the City, the City shall accept ownership of the Pipeline and operate, maintain, repair and replace the Pipeline and the City will continue to deliver water through the Pipeline to WD 111 in accordance with IA2 and any other agreements the Parties have or may have. The City shall provide WD 111 with water supply pursuant to IA2 and any other agreements the Parties have or may have at a point of delivery as depicted on Exhibit A such that WD 111 may continue to provide necessary supply to its customers served from the Pipeline.

3. Indemnification and Hold Harmless. The City shall indemnify, defend and hold harmless Districts, its elected and appointed officers, employees and agents from and against any and all claims, losses, damages, judgments or liability, including attorneys' fees, arising from injury or death to persons or damage to property occasioned by any act, omission or failure of City, its elected and appointed officers, agents or employees in the performance of this Agreement. This shall include, but is not limited to, any liabilities resulting from:

A. Construction of upgrades to the Pipeline undertaken by the City.

B. Leaks or breaks in the Pipeline after the execution of this Agreement.

C. Prior and future actions of City and its agents other than Districts.

4. Closing. The Parties shall not be obligated to close the City's acquisition of the Pipeline unless and until each Party has performed its covenants and obligations as follows.

A. Closing shall occur on or before the 21 day of September 2011 at the City's offices located at 25 West Main St., Auburn, Washington, or at such other time and place agreeable to the Parties.

B. At closing the Districts shall deliver to the City:

1. A Bill of Sale in the form attached hereto as **Exhibit B** and incorporated herein by this reference transferring to the City all of the Districts' right, title and interest in the Pipeline and its capacity and warranting that Districts have exclusive title to the Pipeline and its full capacity, excepting that portion owned by the City. Other than the above warranties, the Bill of Sale shall indicate that the sale is an "As Is, Where Is" sale, with no other warranties, express or implied.

2. "As Built" Pipeline documents in the possession of Districts.

C. At closing, the City shall deliver to the Districts:

1. Funds in the amount of Four Hundred Thirty Thousand Five Hundred Dollars ($430,500.00) in the form of payments of Two Hundred Fifteen Thousand Two Hundred Fifty Dollars ($215,250.00) to each District, together with sales tax at the rate of 9.5% thereon (totaling $40,897.50 or $20,448.75 to each District).

D. When the requirements of Sections 4(B) and 4(C) herein have been fulfilled, this transaction shall be closed without further instruction from the Parties.

E. To the extent that there are any taxes, special assessments or utility service fees relating to the Pipeline or its use that are the legal obligation of one Party but are attributable in part to a time period during which that Party did not have possession of the Pipeline, then the Parties will share in the obligation to pay such taxes, assessments or fees on the basis of a proration as of Closing. The City may record the Bill of Sale, assignments and other transfer documents as it desires and shall pay the cost thereof.

5. Transfer of Responsibility.

A. Effective 12:01 a.m. on the day immediately following Closing, the Districts relinquish responsibility for the Pipeline to the City, and the City assumes responsibility for the Pipeline on that date, including the obligation to operate, maintain, repair and replace the Pipeline.

B. Effective 12:01 a.m. on the day immediately following Closing, the City shall assume and be fully responsible for the Pipeline at the City's sole cost and expense. The Pipeline shall be operated by City to provide water supply to WD 111 and any other lawful purpose.

6. Severability. The invalidity or unenforceability of any provisions of this Agreement shall not affect the other provisions hereof, and this Agreement shall be construed in all respect as if such invalid or unenforceable provisions were omitted.

7. Amendment. No change, amendment or modification of any provisions of the Agreement shall be valid unless set forth in a written amendment to this Agreement signed by the Parties.

8. Authorization. By signing this Agreement, each Party certifies that it has the authority to bind its respective governing bodies to all of the terms and conditions of this Agreement.

9. Effective Date. This Agreement shall be effective upon the date of the last signature below.

BILL OF SALE

WATER PIPELINE

Covington Water District, a Washington municipal corporation, and King County Water District No. 111, a Washington municipal corporation (collectively the "Districts"), transfer and convey to the City of Auburn, a Washington municipal corporation ("City"), the following described personal property:

> a 16-inch waterline in 132nd Avenue SE between SE 299th Street north to the Regional Water Supply System pipeline managed by the City of Tacoma consisting of approximately one thousand two hundred thirty (1,230) lineal feet of water pipeline, valves, fittings, and appurtenances as depicted on **Exhibit A** attached hereto and incorporated herein by this reference (the "Pipeline").

This transfer and conveyance is made in consideration of the City's payment of Four Hundred Thirty Thousand Five Hundred Dollars ($430,500.00) in the form of payments of Two Hundred Fifteen Thousand Two Hundred Fifty Dollars ($215,250.00) to each District, together with sales tax at the rate of 9.5% thereon (totaling $40,897.50 or $20,448.75 to each District), and the City's agreement to own and operate the Pipeline as part of the City's water supply. Districts further transfer, convey and assign to the City any and all warranties related to the Pipeline, provided, the Districts make no representations or warranties regarding the existence or status of any warranties related to the Pipeline.

Districts warrants that they have exclusive title to the Pipeline and its full capacity, excepting that portion of the capacity presently owned by the City, and that the Pipeline was accepted for public use as facilities of the Districts. Other than the foregoing warranties, the transfer and conveyance of the Pipeline by the Districts to the City is "As Is", Where Is" with no other warranties, express or implied.

LAND USE AGREEMENT

Bonneville Power Administration (BPA) hereby agrees to your use of BPA's easement area for construction/installation, use, and maintenance of a water system intertie - pressure reducing/flow control station/telemetry shelter and improved access road with gate.

The location of your use is partially within the NW1/4 SW1/4 of Section 3, Township 21 North, Range 5 East, Willamette Meridian, King County, State of Washington, as shown on the attached segment of BPA Drawing No. 150023, marked as Exhibit A and City of Auburn drawing marked as Exhibits B, C, D, E and F.

You shall not make any changes or additions to your use of the right-of-way without BPA's review and written approval. Any other uses and utilities on the right-of-way must be applied for separately.

Please note that BPA is not the owner of this property. If you are not the owner, you must obtain the owner's permission to use this property. There may also be other uses of the property that might be located within the same area as your project. This agreement is subject to those other rights.

This agreement is entered into with the express understanding that it is not assignable or transferable to other parties without the prior written consent of BPA. This agreement is

revocable at will by BPA and does not modify, change, or otherwise alter the rights BPA acquired by Deed. BPA may terminate this agreement upon 30 days written notice. The subject use of this easement area has been determined not to be a hazard to, or an interference with, BPA's present use of this easement for electric transmission line purposes. Accordingly, there is no present objection to such use. However, if BPA should determine at any time, that your use has become a hazard to the presently installed electrical facilities of BPA, or any facilities added or constructed in the future, or if such use should interfere with the inspection, maintenance, or repair of the same, or with the access along such easement, you will be required to stop your use or remove such hazard or interference from the right-of-way at no expense to BPA.

BY ACCEPTING THIS LAND USE AGREEMENT YOU ARE AGREEING TO THE FOLLOWING CONDITIONS

1. Because of other potential uses in the area of your project, BPA requires that you have a utility locate done prior to construction commencing.
2. Maintain a minimum distance of at least 15 feet between your facilities and the transmission line conductors (wires).
3. Maintain a minimum distance of at least 50 feet between your facilities and the transmission line structures.
4. Construction equipment shall maintain a minimum of 15 feet between the equipment and transmission line conductors at all times. Do not measure this with measuring tape, pole or by other physical means.
5. To ensure safety of workers and uninterrupted operation of transmission lines, applicant shall employ a BPA approved safety watcher during construction activities occurring under the conductors (wires) or lifting of equipment that may come in contact with the conductors (wires). **Please contact BPA for a current list of BPA approved Safety Watchers.**
6. Equipment, machinery, and vehicles traveling on BPA's right-of-way shall come no closer than 25 feet to any BPA structure or guy anchor ground attachment point.
7. No storage of flammable materials or refueling of vehicles or equipment on BPA property.
8. Overburden grade changes to existing ground elevations while excavating on right-of-way is prohibited.
9. All use of the right of way shall meet local/state/federal/national codes.
10. Design and build the water main intertie, pressure reducing station and access road constructed within the BPA's property to withstand HS-20 loading for BPA's heavy vehicles.
11. Bury and maintain the water main, drainage lines, and conduits to a depth of 36 inches or comply with applicable NESC, national, state, and/or local standards, which ever is greater.

12. All underground cables/wires shall be placed in conduit.
13. Mark the location of the underground water main and conduits with permanent signs and maintain such signs where they enter and leave BPA's right-of-way, and at any angle points within the right-of-way.
14. Access to BPA transmission line system by BPA and/or its contractors shall not be obstructed at any time.
15. BPA shall have the right to use the access road for access to its structures, both to and along its transmission lie right of way.
16. The access road will only be used by the utilities.
17. Replace gate with an adequate gate in the fence of not less than 16 feet in width for the passage of BPA vehicles. The approved location of the gate is as shown on attached exhibit B. Gates may be locked provided a BPA lock is also included in the locking mechanism.

IN ADDITION, THE FOLLOWING IS BROUGHT TO YOUR ATTENTION

You agree to assume risk of loss, damage, or injury which may result from your use of the easement area, except for such loss, damage, or injury for which BPA may be responsible under the provisions of the Federal Tort Claims Act, 62 Stat. 982, as amended. It is understood that any damage to BPA's property caused by or resulting from your use of the easement area may be repaired by BPA, and the actual cost of such repair shall be charged against and be paid by you.

Construction/installation, use, and maintenance of the water system intertie - pressure reducing/flow control station/telemetry shelter and improved access road with gate shall be at no cost to BPA.

Nuisance shocks are common on high voltage transmission right of way. Plan your uses taking this into consideration.

BPA seeks your help maintaining the integrity of the electrical transmission system. Please report any Vandalism or Theft to the BPA Crime Witness program at 1-800-437-2744. Cash rewards of up to $25,000 will be paid should information lead to the arrest and conviction of persons committing a crime.

BPA shall not be liable for damage to your property, facilities, or injury to persons that might occur during maintenance, reconstruction, or future construction of BPA facilities as a result of your facilities being within the right-of-way.

If you have any questions or concerns, please notify this BPA Realty Office. You may direct any communication to Bonneville Power Administration, Real Property Field Services (TERR/Covington) 28401 Covington Way, Kent, WA 98042, or by telephoning Timothy C. Wicks at 253-631-9154.

A copy of this agreement shall be physically located at the project during construction activities.

THIS LAND USE AGREEMENT BECOMES EFFECTIVE UPON THE SIGNATURE OF ALL PARTIES.

RE: City of Auburn – Tacoma Water Wholesale Agreement

Dear Mr. Dowdy:

We are delighted to be transmitting your original copy of the fully executed Wholesale Water Agreement between our two agencies.

Also enclosed with this letter is an invoice for the System Development Charge outlined in the Section C.4 of the agreement. In accordance with your instructions, we have prepared a lump sum invoice.

I understand that the last details of each point of connection are being completed, and that supply is available currently at the B Street location, and will be soon at the 132nd Ave. location.

We look forward to a long-term relationship with the City as we work conjunctively on drinking water issues, and other matters of importance related to the Green River, and will include Auburn as we move forward with a broader initiative of communication and collaboration with all our Wholesale partners. If any question of quality or service arises, please feel free to contact me at (253) 502-8245 anytime or Chris McMeen at (253) 502-8210.

Sincerely,

Linda McCrea

TACOMA PUBLIC UTILITIES

WHOLESALE WATER AGREEMENT BETWEEN TACOMA WATER AND CITY OF AUBURN

This wholesale water agreement ("Agreement") is made by and between the City of Tacoma, Department of Public Utilities, Water Division d/b/a Tacoma Water, a municipal corporation (hereafter "Tacoma"), and the City of Auburn, a municipal corporation (hereafter "Auburn") pursuant to Tacoma Municipal Code 12.10.400 E. Tacoma and Auburn collectively shall be referred to as the "Parties" or either Tacoma or Auburn may be referred to as "Party" when appropriate.

A. RECITALS:

WHEREAS, Tacoma has evaluated its wholesale projections in its demand forecast and has determined that adequate water resources are available to serve those projected demands; and

WHEREAS, the Parties are responsible for operating and maintaining their respective water systems in accordance with federal, state and local laws and regulations; and

WHEREAS, the Parties further recognize that water resources are finite and valuable, and the prudent use and management of these resources requires cooperation among water utilities; and

WHEREAS, Auburn has requested and Tacoma has agreed to provide a wholesale water supply to Auburn, and Tacoma is able and willing to provide the requested quantity of water on the terms and conditions as herein provided, now therefore;

For and in consideration of the mutual covenants, conditions and payments to be made as set forth herein, the Parties hereto agree as follows:

B. DEFINITIONS:

The meaning of certain words or terms, when used in this Agreement, is as follows:

1. "Wholesale Service Connection" means a physical connection between water mains of the two Parties to this Agreement, at a specifically identified point or points, where water may be transferred from one Party's system to the transmission or distribution facilities of the other Party.

2. "Isolation Valve" means a positive shut off valve that shall be installed at the location in each water system that is used to accept or deliver water through the Wholesale Service Connection. Each Party has sole responsibility for operating their Isolation Valve.

3. "Wholesale Service Connection Capacity" means the maximum flow capacity for water to be delivered through a Wholesale Service Connection as agreed upon by the Parties to this Agreement. Wholesale service connection facilities shall be designed so as to be capable of conveying no less than the agreed upon Wholesale Service Connection Capacity.

4. "Tacoma Municipal Code (TMC") means the City of Tacoma's municipal code.

5. "Emergency" means an unforeseen event that causes damage or disrupts normal operations and requires immediate action to protect public health and safety including exclusively when water system repairs are necessary due to a water system failure or when there is a water supply shortfall.

6. "Wholesale Water Service" means water provided by Tacoma pursuant to TMC 12.10.400 E to community water systems that are in compliance with Washington State Department of Health regulations and who adopt a water conservation program substantially equivalent to Tacoma's program and agree to abide by Tacoma's Water Shortage Response Plan as a condition of service.

C. CONDITIONS:

The responsibilities of the parties to this contract are set forth below:

1. General. Tacoma agrees to furnish the Wholesale Service Connection Capacity to Auburn of a quality that will satisfy all requirements of the Federal Safe Drinking Water Act as amended, and shall be in accordance with the terms and conditions of this Agreement.

2. Wholesale Water Rates. Tacoma will supply Auburn with water at the Wholesale Water Service rate as identified in TMC Section 12.10.400, and the parties will be bound by the City of Tacoma Water Regulations-Rates as found in Chapter 12.10 TMC. Invoices will include a monthly ready to serve charge based on meter size and consumption charges based on water used. These water rates (and regulations) are periodically adjusted and shall be applicable as set forth in the rate schedule as adopted by the Public Utility Board and Tacoma City Council. The water supplied to Auburn must be used on a year-around basis where the average summer day use divided by the average winter day use results in a summer/winter ratio of 2.5 or less, as set forth in TMC 12.10.400.

3. Billing. Tacoma shall utilize regular meter reads secured from SCADA signals that Auburn shall deliver to the Tacoma Water Control Center to calculate a statement of charges for water service. In the event SCADA signals are unavailable, monthly manual reads will be used in lieu until such time that SCADA signals are restored. Tacoma shall strive to provide the statement of charges on a monthly basis, and payment shall be due to Tacoma pursuant to TMC 12.10.060. In accordance with TMC 12.01.030, no late charges shall be applied if payment of the balance due is received within 24 days of the date on the initial billing.

4. System Development Charge. Upon Auburn's payment of the full charge or the initial time installment payment to Tacoma for Tacoma's System Development Charge (SDC) of $5,196,600.00, Tacoma will commit and agrees to supply to Auburn Wholesale Water Service. Auburn agrees to pay the full balance of the SDC Charge within thirty (30) days of execution of this agreement. At its option, Auburn may pay at least 20 percent (20%) of the SDC amount within thirty (30) days of execution of this agreement, and then shall pay the SDC balance with interest over up to ten years as authorized by the Tacoma Municipal Code, as further set forth below.

   If paying in installments, Auburn agrees to pay the SDC balance in ten annual installments commencing on the first annual anniversary date of this agreement. In addition to the annual SDC installment, Auburn shall also pay interest, calculated on a monthly basis (the first day of every month) on the outstanding principal SDC balance amount at "prime" minus 2% interest rate, as reported by the Wall Street Journal ten days before the date that the monthly interest calculation is made. The interest amount paid by Auburn shall be paid to Tacoma along with the annual installment payment. Provided however, Auburn may prepay (without penalty) a portion or all of the outstanding SDC amount, in which case the accrued interest to date of such prepayment shall also be paid to Tacoma.

5. Water Rights. Tacoma certifies that it holds sufficient water rights to provide the quantities of Wholesale Water Service requirement by the Agreement to Auburn for the duration of the term of this Agreement as described in section 16.

6. Quantity of Wholesale Water Service. Tacoma will make available, and upon Auburn's request, supply Wholesale Water Service to Auburn in the quantity of up to 1,000,000 gallons per day (gpd) of water for average day use, up to 1,800,000 gpd for peak day use and up to 1,620,000 gpd for four-day peak use. Tacoma further agrees to supply at Auburn's Option to exercise no later than December 31, 2015, an additional quantity of 1,000,000 gallons per day (gpd) of water for average day use, 1,800,000 gpd for peak day use and 1,620,000 gpd for four-day peak use, under the same terms and SDC rates of this agreement.

7. Reliability . The Parties agree that Tacoma will supply Wholesale Water Service pursuant to this Agreement with the same degree of reliability and surety of supply as water provided by Tacoma to its existing customers and as allowed under TMC 12.10.150. In non-emergency situations Tacoma will provide 30 days notice to Auburn before temporarily requiring the changing, reducing, limiting or discontinuance of the use of water.

8. Additional Water. Auburn may purchase water for Emergency purposes in excess of the amount set forth in paragraph 6 above on a short term basis from Tacoma if in Tacoma's sole discretion sufficient surplus water is available. Auburn shall be entitled to purchase such water in accordance with the terms of this Agreement at the then current wholesale rate, and the applicable sections of Chapter 12, Tacoma Municipal Code.

9. Connections. The Wholesale Service Connections described in Exhibit "A" shall be governed by the terms of this Agreement. No future Wholesale Service Connections shall be permissible without a subsequent and separate written agreement between the Parties, which agreement may supplement this Agreement. Neither Party shall be obligated to agree to or execute any agreement or permit with the other Party to construct additional water Wholesale Service Connection(s).

10. Capital and Maintenance Costs. Auburn agrees that Tacoma Water owns the Isolation Valve directly off of the Tacoma Water system, piping from the Tacoma Water Isolation Valve to the meter, the meter vault and the meter, meter isolation valve, and certain telemetry equipment. Maintenance and operation costs for this equipment are Tacoma Water's responsibility. Any capital costs related to this equipment, including upgrades or replacement and renewal are Tacoma's responsibility. Tacoma agrees that Auburn owns the piping and other appurtenances, including certain telemetry components, downstream of the Tacoma Water Meter Vault. Maintenance and operation costs and any capital costs related to upgrades or replacements of this equipment are Auburn's responsibility. Exhibit "B" identifies the location of the two interties, and illustrates the responsible Party for physical infrastructure components (except telemetry components).

11. Transferability. The rights and obligations of this Agreement are transferable to heirs, successors and assignees of the Parties.

12. Resale. Wholesale water provided under this Agreement by Tacoma to Auburn may be resold by Auburn to another water purveyor.

13. Conservation. As a requirement of providing Wholesale Water Service to Auburn under this agreement and pursuant to Chapter 12.10 TMC Auburn shall implement a water conservation program substantially equivalent to Tacoma's program and shall abide by Tacoma's Water Shortage Response Plan ("Plan") as

provided under TMC 12.10.150. If requested Tacoma will invite Auburn to participate in the planning and implementation process for conservation programs as they are developed and will share available conservation resources where beneficial to both Parties. The Parties agree to meet every two years to review and evaluate operational experience with regards to water use and conservation.

14. Mutual Aid. Tacoma and Auburn agree to provide water service related mutual aid, to the extent possible, during times of extraordinary need and emergency operations experienced by either Party.

15. Indemnification. Neither Party shall be monetarily liable to the other Party or its respective customers for failure to supply and deliver water to the other at any time or for any reason. The Parties shall indemnify and hold each other harmless from any and all third party claims, lawsuits, or proceedings in arbitration resulting from any failure of either Party to supply and deliver water in accordance with the terms and conditions of this Agreement. However, each Party shall have the right to have this Agreement specifically enforced in equity.

16. Term. This Agreement shall remain in effect so long as Tacoma remains in the business of providing water, or its successors in interest to its water system remain in the business of providing water, and so long as Auburn meets the terms and conditions of this Agreement.

17. Dispute Resolution. In the event of a disagreement over any aspect of this Agreement, except as herein further provided, it is agreed that any dispute shall be submitted to binding arbitration pursuant to Chapter 7.04 RCW. The Parties shall agree upon who will arbitrate the dispute, and upon failure to reach agreement within a reasonable period of time, the presiding judge of the Pierce County Superior Court may be asked to appoint an arbitrator from one of the recognized dispute resolution services. The Party that substantially prevails in the arbitration proceeding shall be awarded its reasonable attorney fees and costs. If neither Party substantially prevails in the arbitration proceeding, the Parties shall each bear their respective costs and divide the mutual costs associated with the arbitration equally.

18. Notice. All notices, requests, demands and other communications hereunder shall be in writing and shall be deemed given if personally delivered or mailed, certified mail, return receipt requested, or sent by overnight carrier to the following addresses:

If to Tacoma:
Water Superintendent
PO Box 11007
Tacoma, WA 98411
Phone: (253) 502-8245

If to Auburn:
Public Works Director
1 East Main Street
Auburn, WA 98001
Phone: (253) 804-5062

Fax: (253) 502-8694 Fax: (253) 931-3053

Operational communication protocols shall be fully described in the jointly developed Operational Protocols required under item 22 below.

19. Invalidity. If any term of this Agreement is found to be void or invalid, such invalidity shall not affect the remaining terms of this Agreement, which shall continue in full force and effect. The parties shall agree that if any provisions are voided by a court or otherwise deemed not enforceable, the parties shall negotiate in good faith to develop replacement provisions that are as close as possible to the intent of the parties expressed in the invalid provisions.

20. Counterparts. This Agreement may be executed in any number of counterpart copies, each of which shall be deemed an original, but all of which together shall constitute a single instrument.

21. Authority to Bind. Each of the Parties to this Agreement certifies that the person signing this Agreement has authority to bind the respective governing bodies to all of the terms and conditions of the Agreement herein.

22. Operational Coordination. Water supply directly off the Tacoma Water transmission system affects flow, pressure, and treatment, and diurnal consistency of demand is critical. The two Parties agree to jointly develop and maintain Operating Protocols for items including the scheduling of water demand to assure consistent flow control and treatment, routine operational communication, emergency shutdown, emergency contacts, and other items the Parties determine appropriate.

23. This agreement replaces the EMERGENCY AGREEMENT BETWEEN CITY OF TACOMA AND CITY OF AUBURN dated October 18, 2010.

Dated this 16th day of July, 2012.

RESOLUTION NO. 4986

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AGREEMENTS BETWEEN THE CITY OF AUBURN AND CASCADE WATER ALLIANCE FOR THE PURCHASE AND SALE OF CREDITS RELATING TO PERMANENT AND RESERVE WHOLESALE WATER SUPPLY CAPACITY

WHEREAS, the City of Auburn has a duty and responsibility to provide water to its community; and

WHEREAS, in February 2010, the City of Auburn entered into the 2010 Lake Tapps Area Water Resources Agreement that provided, among other things, for Cascade Water Alliance (Cascade) to assist the City in meeting its projected 50-year water supply needs; and

WHEREAS, in February 2013, Cascade informed the City of the availability of a water supply opportunity; and

WHEREAS, the City confirmed its desire to purchase a System Development Charge Credit from Cascade for both 4 Million Gallon per Day ("MGD") Permanent, and 6 MGD Reserve Wholesale Water Supply.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. That the Mayor and City Clerk are hereby authorized to execute Agreements between the City and Cascade Water Alliance for the Purchase and Sale of Credits Relating to Permanent and Reserve Wholesale Water Supply Capacity, which agreements shall be in substantial conformity with the agreements attached hereto as Exhibits A and B and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 3rd day of September, 2013.

CITY OF AUBURN

PETER B. LEWIS, MAYOR

ATTEST:

Danielle E. Daskam, City Clerk

APPROVED AS TO FORM:

Daniel B. Heid, City Attorney

AGREEMENT FOR THE PURCHASE AND SALE OF CREDITS RELATING TO PERMANENT WHOLESALE WATER SUPPLY CAPACITY

THIS AGREEMENT ("Agreement") is made and entered into as of this 10th day of September 2013 ("Effective Date"), by and between the City of Auburn, Washington ("Auburn"), and Cascade Water Alliance, a joint municipal utilities services authority organized under Chapter 39.106 RCW ("Cascade"). The City and Cascade are sometimes referred to collectively as the "Parties" and individually as a "Party."

RECITALS

WHEREAS, in 2005, in order to meet Cascade's immediate and long-term water supply needs, Cascade purchased from Tacoma a supply of water both permanently and for a finite period of years pursuant to an "Agreement for the Sale of Wholesale Water";

WHEREAS, on February 5, 2010, Cascade and the Cities of Bonney Lake, Buckley, Sumner and Auburn entered the 2010 Lake Tapps Area Water Resources Agreement (the "Four Cities Agreement") that provided, among other things, for Cascade to assist the four cities in meeting their projected 50-year water supply needs;

WHEREAS, on December 31, 2012, Cascade and Tacoma entered the Amended and Restated Agreement for the Sale of Wholesale Water (the "Amended and Restated Agreement") that provided, among other things, for Tacoma to make available to the four cities a water supply to be purchased directly from Tacoma as a wholesale customer and to recognize credit for the System Development Charges that Cascade had previously paid to Tacoma;

WHEREAS, Cascade and Tacoma sent a letter, dated February 11, 2013, to inform Auburn of the availability of the "substitute" water supply opportunity and related time limitations and procedures for acting on the opportunity ("Joint Letter");

WHEREAS, Auburn timely approved, signed, and delivered the Confirmation Notice, dated May 21, 2013, to confirm Auburn's election of the substitute supply opportunity and its desire to purchase a System Development Charge Credit from Cascade as to the 4 MGD Wholesale Water Supply ("Confirmation Notice"); and

WHEREAS, the Joint Letter and Confirmation Notice are set forth in Exhibit A hereto and are incorporated by reference in this Agreement;

NOW, THEREFORE, IN CONSIDERATION of the recitals stated above, which are incorporated herein, and the mutual covenants and conditions herein contained, the Parties agree as follows:

AGREEMENT

1. Definitions.

"4 MGD Wholesale Water Supply" means an average annual 4 MGD wholesale water supply from Tacoma, with a Peaking Factor of 1.33, and a maximum peak day of 5.32 MGD, all as provided in the Amended and Restated Agreement.

"Amended and Restated Agreement" means the "Amended and Restated Agreement for the Sale of Wholesale Water" by and among Cascade and the City of Tacoma, Department of Public Utilities, Water Division, dated December 31, 2012.

"Confirmation Notice" means the document, dated May 21, 2013, in which Auburn confirmed its election of the substitute supply opportunity in fulfillment of Cascade's obligation in the Four Cities Agreement to assist with Auburn's projected 50-year water supply needs (attached in Exhibit A).

"Four Cities Agreement" means the "2010 Lake Tapps Area Water Resources Agreement among the Cities of Auburn, Bonney Lake, Buckley and Sumner, and Cascade Water Alliance," dated February 5, 2010.

"MGD" means million gallons per day.

"Joint Letter" means the letter, dated February 11, 2013, from Cascade and Tacoma to Cities of Auburn, Bonney Lake, Buckley and Sumner that is attached hereto in Exhibit A.

"Notice of Confirmation of System Development Charge Credit" means a notice, given by Cascade to Tacoma at the request of Auburn, confirming the amount of the System Development Charge Credit (if any) to be applied to the System Development Charge otherwise due and payable by Auburn to Tacoma in connection with a wholesale water supply agreement.

"System Development Charge" or "SDC" means the system development charge imposed upon wholesale customers by Tacoma in its wholesale water regulations.

"System Development Charge Credit" means a credit to be applied in a wholesale water supply agreement against the System Development Charge otherwise due and payable by Auburn to Tacoma. The System Development Charge Credit is expressed in million gallons per day (MGD) units and in dollars.

"Tacoma" means the City of Tacoma, Department of Public Utilities, Water Division.

2. Term of Agreement.

This Agreement takes effect on the first date that both Parties have duly approved, signed, and delivered the Agreement to the other Party. The term of the Agreement will commence on the effective date and will end on December 31, 2029 or the date that Auburn has fully paid Cascade for the price of the System Development Charge Credit consistent with Sections 3 and 4 of this Agreement.

3. Purchase of 4 MGD System Development Charge Credit & Price.

Auburn agrees to purchase and Cascade agrees to sell a System Development Charge Credit regarding the 4 MGD Wholesale Water Supply in the quantity of 2.5 MGD annual supply capacity (3.32 MGD peak supply capacity).

In consideration for said System Development Charge Credit, Auburn will pay to Cascade a total price of $7,893,300.00 as of the date that this Agreement takes effect. The parties agree that Auburn will pay interest at an annual rate of 3.2% on the balance due beginning in 2017 and continuing until the balance is fully paid and this Agreement terminates.

Auburn will pay the total price by making an annual payment in 2017-2029 according to the annual payment schedule set forth in Section 4 below. This schedule incorporates interest at a rate of 3.2% on the balance due, beginning in 2017. Under this schedule the total of annual payments including interest is $10,105,806.00.

4. Annual Payment Schedule.

Auburn will make annual installment payments to Cascade to pay for the System Development Charge Credit as to the 4 MGD Wholesale Water according to the following payment schedule:

Payment Schedule

Year	Amount
2014	0
2015	0
2016	0
2017	$252,586
2018	$252,586
2019	$252,586
2020	$934,805

Year	Amount
2022	$934,805
2023	$934,805
2024	$934,805
2025	$934,805
2026	$934,805
2027	$934,805
2028	$934,805

2021	$934,805

2029	$934,805
Total	$10,105,806

Each year the annual payment shall due and payable by Auburn to Cascade on or before June 30 of the year in which such payment is due. If full payment of any annual payment is not received by Cascade on or before the date due, such payment shall be considered past due, and the unpaid amount shall accrue additional interest, from the date due until the date paid, at a rate per day equal to 0.03 percent per day. Upon not less than fifteen (15) days' advance notice to Cascade, the City may in any given year prepay without penalty any one or more of the next successive annual payments. Upon such notice, Cascade will provide Auburn documentation of the amount due for such payment, and adjustments to any remaining payment schedule, net of related interest incorporated into the above payment schedule.

5. Notice of Confirmation of System Development Charge Credit.

Within 30 days after this Agreement takes effect, Cascade will send to the Tacoma Water Superintendent a Notice of Confirmation of System Development Charge Credit regarding the 4 MGD Wholesale Water Supply in the quantity of 2.5 MGD annual supply capacity. Cascade will provide a copy of the Notice to Auburn when it is sent to Tacoma.

6. Wholesale Water Supply Purchase Negotiations with Tacoma.

In order to use the System Development Charge Credit and secure a wholesale water supply from Tacoma, Auburn acknowledges that it must make an offer, complete negotiations, and enter a wholesale water supply agreement with Tacoma consistent with the Joint Letter and Confirmation Notice set forth in Exhibit A and with the Amended and Restated Agreement. Auburn acknowledges and agrees that Cascade makes no representations or warranties as to the outcome of such negotiations, the Tacoma wholesale water supply that Auburn may (or may not) be able to purchase, or otherwise.

7. Effect on Four Cities Agreement.

The Parties agree that this Agreement constitutes full performance by Cascade of its obligations under Section 3(a) of the Four Cities Agreement. Accordingly, Section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and Auburn. Other provisions of the Four Cities Agreement are unaffected by this Agreement and remain effective according to their terms.

8. Notices.

All notices and payments hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

Cascade Water Alliance:
520 112th Avenue NE, Suite 400
Bellevue, Washington 98004
Attn: Chief Executive Officer
Phone: (425) 453-0930
Fax: (425) 425-453-0953

City of Auburn:
Attn: Dennis Dowdy
25 W Main St
Auburn WA 98001
Phone: (253)931-3010
Fax: (253)931-3053

A Party may change its address from time to time by providing notice to the other Party. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the next business day following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

9. Dispute Resolution.

In the event that any dispute arises between Cascade and Auburn, the aggrieved Party shall give a notice of the dispute to the other Party. Cascade and Auburn shall, within five (5) days of such notice, each nominate a senior officer of its management to meet at a mutually agreed location, to attempt to resolve such dispute. The Parties shall each designate a representative(s) to confer on the best and most cost effective way to resolve the dispute. By mutual agreement, they may choose direct negotiations or mediation. If there is no agreement between the Parties on how to proceed within thirty (30) days, either Party may pursue legal action; provided, however, no Party shall be precluded from filing an appeal or action to prevent the expiration of a time period for filing or any statute of limitations.

If a Party fails to perform its obligations hereunder, then it shall be in default hereunder unless the defaulting Party cures an event of default, whether monetary or non-monetary, within thirty (30) days after receiving written notice from the other Party of such default.

Subject to the procedures set forth in Section 9 (Dispute Resolution), if a Party is in breach or default of its obligations arising under this Agreement, the other Party shall have and shall be entitled to exercise any and all remedies available to it at law or in equity (including the right to specifically enforce this Agreement), all of which remedies shall be cumulative.

11. Attorneys' Fees.

If any Party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other Party with respect to this Agreement, and in the further event that one Party shall substantially prevail in such action, the losing Party shall, in addition to all other payments required therein, pay all of the prevailing Party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in the trial court and in any appellate courts.

12. No Assignment.

This Agreement is specific to the Parties and may not be assigned in whole or in part.

13. Non-Waiver.

No delay or failure by a Party to exercise any of its rights, powers or remedies under this Agreement following any breach by another Party shall be construed to be a waiver of any such breach, or any acquiescence therein, or of or in any similar breach thereafter occurring, nor shall any waiver of any single breach be deemed a waiver of any other breach theretofore or thereafter occurring.

14. No Third Party Beneficiary.

This Agreement is for the sole and exclusive benefit of the Parties and is not intended to and shall not confer any rights or benefits on any third party not a signatory hereto.

15. Integrated Agreement.

This Agreement constitutes the entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior or contemporaneous understandings or agreements with respect thereto; provided, however, that this Agreement shall be interpreted or construed together with the Amended and Restated Agreement, the Joint Letter, and the Confirmation Notice. No modifications or amendments of this Agreement shall be valid or effective unless evidenced by an agreement in writing signed by the Parties.

16. Signature in Counterparts.

This Agreement may be executed in counterparts and all of those counterparts taken together shall constitute one and the same instrument.

17. Representations of the Parties.

Each Party represents and warrants that it has duly approved, executed, and delivered this Agreement and that it has all necessary authority to enter into this Agreement and to perform its terms and obligations. Each Party represents and warrants that the approval, execution, and delivery have been duly authorized by the appropriate board or council, and no other act or proceeding on the part of any Party is necessary to authorize entry into or performance of this Agreement.

IN WITNESS WHEREOF, the Parties have duly executed this Agreement as of the Effective Date.

Re: Cascade Water Alliance and Tacoma Water Substitute Wholesale Water Supply Availability – Time is of the Essence (*Sent by Email and US Mail*)

Dear Mayors:

As you may be aware, the Cascade Water Alliance and City of Tacoma have been in ongoing discussions about potential changes to the 2005 Water Supply Agreement. In late 2012 a new agreement was reached and signed which benefits not only Tacoma and Cascade but also the Four Cities of Auburn, Bonney Lake, Buckley and Sumner. This new agreement preserves the right of the four cities under the 2009 Cascade/Four Cities Agreement and allows a new time sensitive supply option to be jointly offered to the four cities from Cascade and Tacoma.

The Cascade Water Alliance (Cascade), in cooperation with Tacoma Water, is offering the availability of a substitute wholesale water supply ("Substitute Supply") and to provide this notice of a limited period of time for your Cities to take action on this unique opportunity. Cascade and Tacoma have entered into a Restated and Amended Agreement for the Sale of Wholesale Water, which replaces the 2005 agreement between the parties for purchase and sale of wholesale water. The 2005 agreement is included as one of the "water supply assistance" measures in the 2010 Lake Tapps Area Water Resources Agreement between Cascade and your cities (the "Four Cities Agreement").

In the Restated and Amended Agreement, Cascade has agreed to relinquish its right to take delivery of the Substitute Supply. This water is now available to the Cities to purchase directly from Tacoma as a wholesale customer. Cascade has, however, previously paid capacity charges for this wholesale water supply. If your City now desires to purchase the Substitute Supply directly from Tacoma and takes action described in this letter, Cascade is willing to sell your City a credit (reflecting the amounts that Cascade has previously paid to Tacoma) that can be

applied against System Development Charges that would otherwise be due to Tacoma ("SDC Credit"). The amount and availability of any SDC Credit will be determined by Cascade in accordance with the terms set forth in the Confirmation Notice that is attached to this letter. You must act promptly, however, in order to secure the opportunity to obtain an SDC Credit from Cascade.

This letter provides Cascade's formal notice of the limited window of time for your City to act, the Confirmation Notice that you must return to Cascade to apply for a SDC Credit, and general guidance as to how Cascade and Tacoma intend to cooperate to facilitate the implementation of the Restated and Amended Agreement.

Limited Time to Act

You must act within 120 days from the first meeting of Tacoma, Cascade and the Four Cities to confirm your interest in this opportunity by delivering a signed "Confirmation Notice" to Cascade in the form attached to this letter. This opportunity expires at the end of 120 days. During this 120-day period, the quantity allocation among and between the Four Cities as stated in the Four Cities letter to Cascade, dated February 5, 2010, shall be recognized by Cascade and shall determine the maximum allocation of the Substitute Supply (and the Residual Wholesale Water Supply) among the Cities (unless the Four Cities jointly agree to reallocation in accordance with the Four Cities Agreement). A City has until the expiration date to deliver an executed Confirmation Notice to Cascade. If you select this opportunity by acting within the 120 days, then you have until March 1, 2018 to purchase (or agree to purchase) an SDC Credit from Cascade. (In anticipation of the required steps with Tacoma described below, it is advisable for your City to complete the SDC purchase agreement with Cascade in advance of March 2018 to allow your City adequate time for the Tacoma steps.) If you select this opportunity by acting within the 120 days, then you will also have until March 1, 2018 to submit a Wholesale Water Agreement with Tacoma that is eligible for the SDC Credit.

If you do not confirm your selection by delivering a Confirmation Notice to Cascade by the deadline, then you decline the Substitute Supply opportunity stated in this letter. In that event, you will still be able to purchase wholesale water supply (if any water supply capacity remains available) from Tacoma on terms consistent with Section 3(a) of the Four Cities Agreement. However, you will not be eligible for an SDC Credit.

Next Steps with Cascade

If you deliver the Confirmation Notice within the 120-day deadline stated above and select this Substitute Supply opportunity, then you will need to complete the following steps with Cascade:

(a) Confirmation to Cascade that your City will proceed with the Substitute Supply opportunity stated herein, and that it fully substitutes for Section 3(a) of the Four Cities Agreement which will have no further force or effect.

(b) Agree with Cascade for payment terms to Cascade for the SDC credit.

(c) Upon completion of the items in (a) and (b) above, Cascade will send Notice of Confirmation of System Development Charge Credit to Tacoma.

Next Steps with Tacoma Water

If you deliver the Confirmation Notice to Cascade within the deadline stated above and select this opportunity, then you would also need to complete the following steps with Tacoma in order to submit a timely offer to purchase all or a portion of the Substitute Supply. The procedures and requirements that must be followed to submit such an offer are set forth in Section 6 and Section 7 of the Restated and Amended Agreement (attached for reference). It is important to read these procedures and requirements carefully as any offer you make must be in strict compliance with these procedures and requirements. These procedures and requirements are briefly summarized as follows:

(a) In order to obtain a SDC Credit, Tacoma must be in receipt of a Notice of Confirmation of System Development Charge Credit from Cascade.

(b) Prior to submitting your offer to purchase water from Tacoma, you must obtain Tacoma's written review and approval of the Wholesale Water Supply Agreement (including any proposed modifications thereof) pursuant to which such offer is to be made to Tacoma.

(c) Your offer to Tacoma must be submitted in the form of duplicate executed originals of the Wholesale Water Supply Agreement, in strict conformity with the form of the Wholesale Water Supply Agreement approved by Tacoma.

(d) No later than March 1, 2018, you must deliver your offer to Tacoma, Attention: Water Superintendent, Tacoma Water, 3628 South 35th Street, Tacoma, WA 98409, and obtain Tacoma's acknowledgment of the time and date of Tacoma's receipt of such offer.

Clarifications

While we are pleased to present this opportunity to your City, we want to avoid any confusion as to what this opportunity is and is not. For avoidance of doubt, this letter does not constitute a modification or waiver of any of the procedures or requirements set forth in the Restated and Amended Agreement. This letter does not constitute an offer by Tacoma to sell a wholesale water supply to any person or entity. Any such sale by Tacoma is subject to and contingent upon the negotiation, execution and delivery of a mutually acceptable Wholesale Water Supply Agreement.

Conclusion

Cascade and Tacoma are pleased to provide the availability of Substitute Supply, and look forward to receiving your offer to purchase, should you desire to do so, in accordance with the

guidelines set forth above. We will be contacting your office within the next week to schedule a meeting to present and discuss this opportunity.

Sincerely,

Chuck Clarke

Tacoma Water

Confirmation Notice

To Be Delivered to Cascade Water Alliance 120 days From the First Meeting of Tacoma, Cascade and The Four Cities

The City of _____ ("City") confirms receipt of the letter, dated _____, from Cascade Water Alliance ("Cascade") and Tacoma Water presenting the availability of a substitute wholesale water supply ("Substitute Supply"). The City understands that the Substitute Supply is an alternative to the provisions of Section 3(a) of the 2010 Lake Tapps Area Water Resources Agreement between Cascade and the Cities of Auburn, Bonney Lake, Buckley, and Sumner (the "Four Cities Agreement"). The City understands that the Substitute Supply requires the City to enter a wholesale water supply agreement with Tacoma Water to be negotiated and offered to Tacoma Water by March 1, 2018 as described in the above-referenced letter. The City understands that Cascade Water Alliance is offering to sell a System Development Charge Credit to the City on the terms and conditions stated on Exhibit 1 attached hereto, provided that by March 1, 2018 Cascade and the City need to enter an agreement to confirm the purchase and sale and Cascade's provision of a Notice of Confirmation of System Development Charge ("SDC") Credit to Tacoma Water.

Now, therefore, the City of _____ hereby confirms and agrees as follows:

(a) The City the elects the "Substitute Supply" opportunity described herein as an alternative that fully substitutes for section 3(a) of the Four Cities Agreement.

(b) The City provides this Confirmation Notice with respect to the following portion of the Substitute Supply:
4 MGD wholesale supply: _____
6 MGD wholesale supply: _____

(c) By selecting the "Substitute Supply" alternative, the City agrees that Cascade has fully performed and satisfied all obligations to the City under 3(a) of the Four Cities agreement.

(d) The City agrees that section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and the City.

(e) The City and Cascade shall proceed with diligence to negotiate an agreement for purchase of an SDC Credit consistent with the terms outlined in Exhibit 1.

CONFIRMED, ACCEPTED AND AGREED TO BY THE CITY OF _____ on this _____ day of _____, 2013.

Re: Confirmation Notice – City of Auburn's Response to Cascade's Offer of Substitute Supply

Dear Mr. Clarke,

On May 6th, 2013 the Auburn City Council approved Resolution 4951 authorizing the City of Auburn to begin negotiations with Cascade Water Alliance in response to your February 11, 2013 offer.

Enclosed please find a signed original of the City's confirmation notice

Our Public Works Director will be in touch with you soon to begin discussion of the city's desires to make use of the Substitute Supply.

Sincerely,

Pete Lewis
Mayor

Confirmation Notice
To Be Delivered to Cascade Water Alliance 120 days From the First Meeting of Tacoma, Cascade and The Four Cities

The City of Auburn ("City") confirms receipt of the letter, dated February 11, 2013, from Cascade Water Alliance ("Cascade") and Tacoma Water presenting the availability of a substitute wholesale water supply ("Substitute Supply") The City understands that the Substitute Supply is an alternative to the provisions of Section 3(a) of the 2010 Lake Tapps Area Water Resources Agreement between Cascade and the Cities of Auburn, Bonney Lake, Buckley, and Sumner (the "Four Cities Agreement") The City understands that the Substitute Supply requires the City to enter a wholesale water supply agreement with Tacoma Water to be negotiated and offered to Tacoma Water by March 1, 2018 as described in the above-referenced letter. The City understands that Cascade Water Alliance is offering to sell a System Development Charge Credit to the City on the terms and conditions stated on Exhibit 1 attached hereto, provided that by March 1, 2018 Cascade and the City need to enter an agreement to confirm the purchase and sale and Cascade's provision of a Notice of Confirmation of System Development Charge ("SDC") Credit to Tacoma Water.

Now, there fore, the City of Auburn hereby confirms and agrees as follows:

(a) The City the elects the "Substitute Supply" opportunity described herein as an alternative that fully substitutes for section 3(a) of the Four Cities Agreement provided that the City can negotiate acceptable terms with Cascade to provide and finance the necessary water supply SDC credits.

(b) The City provides this Confirmation Notice with respect to the following portion of the Substitute Supply.
4 MGD wholesale supply: 4 MGD
6 MGD wholesale supply: Possible option of 3 MGD

(c) By selecting the "Substitute Supply" alternative, the City agrees that upon execution of a new Substitute Supply agreement with Cascade to provide SDC Credits for 4 MGD of supply, Cascade will have fully performed and satisfied all obligations to the City under 3(a) of the Four Cities agreement.

(d) The City agrees that section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and the City when a new substitute supply agreement with Cascade is executed.

(e) The City and Cascade shall proceed with diligence to negotiate an agreement for purchase of an SDC Credit consistent with the terms outlined in Exhibit 1 (Attached).

CONFIRMED, ACCEPTED AND AGREED TO BY THE CITY OF AUBURN on this 21st day of May, 2013:

By: _____
Pete Lewis, Mayor

Exhibit 1

TERMS FOR 4 CITIES SUBSTITUTE SUPPLY OFFER

I. This offer is structured to fulfill Cascade's obligations to make available Tacoma water as described in the existing "4 Cities Agreement ". Availability of the terms of this offer is contingent upon written acceptance of the substitution of this supply offer for the commitment defined in Section 3.a of that 4 Cities Agreement specifically:

a. Paragraph 3A, providing options for purchase of Cascade's contracted Tacoma supply capacity, is replaced by the substitute capacity offer defined in this proposal.

b. Paragraph 3A is confirmed in writing to be fully satisfied by acceptance of this substitute capacity offer.

c. Upon expiration of the substitute capacity offer on December 31, 2017, all Cascade obligations to make Tacoma water available are deemed fulfilled and terminated.

d. The substitute capacity offer must be accepted and executed no later than 120 days from the first meeting of Tacoma, Cascade and the Four Cities and the offer is withdrawn after expiration date. [Actual commitment to purchase water under those terms, once accepted, can occur anytime through 2017 as further delineated in section II.c below]

II. **Substitute Capacity Offer**

a. The following capacity is made available:

i. 9.3 mgd of average supply and a peak supply of 11.3 mgd. [This is the remaining available capacity of Cascade's purchases from Tacoma.]

ii. Cascade offers all capacity as firm and permanent. Cascade will be responsible for any transactions needed to convert reserve capacity to permanent capacity.

iii. All capacity will be offered as year-round capacity with the following structure: for each 1 mgd of year-round capacity, a peak season ratio of up to 1.33 will be available for purchase. The peak: annual ratio of 1.33:1.0 is based on the Tacoma capacity owned by Cascade, which originally totaled 10 mgd annual average and 13.3 mgd peak season. Cities may elect peak ratios ranging from 1.0 to 1.33, subject to total capacity limits defined in the attached table.

iv. Tacoma will provide wholesale service contingent on execution of a wholesale supply agreement defining terms for service and related charges. A sample agreement form is provided.

b. The following price and financial terms are offered:

i. Capacity will be offered at a price of 75% of the SDC ($3.17 per gallon * 75% = $2.3775 per gallon) originally paid by Cascade. This charge will apply to annual capacity and to incremental peak season capacity.

1. For example, for a purchase of 1 mgd annual / 1.3 mgd peak season, the cost will be 1 mgd * $2.3775 million + 0.3 mgd * $2.3775 million = $3,090,750. A purchase of 1 mgd annual with no peak season increment would cost $2,377,500.

ii. Payments for capacity purchase will be to Cascade; when the purchase involves conversion of reserve capacity, Cascade may opt to direct all or part of the payment to Tacoma.

iii. For each purchase, the following financing terms are available:

1. Full payment of purchase price upon execution of purchase; or
2. Payment of 20% of purchase price upon execution; remainder financed on a note over 5 years at 3.3% interest with level annual payments due upon each anniversary date. Purchaser would be free to pay off note at any time.

iv. Wholesale rates for service and delivery are as defined by agreement with Tacoma (see also below).

c. The following schedule applies to the substitute offer.

i. The substitute capacity offer must be accepted and executed no later than 120 days after the first meeting of Tacoma, Cascade and the Four Cities and the offer is withdrawn after expiration date. If not accepted during this period, then the existing terms of paragraph 3.a would remain in effect.

ii. During the period from execution of this substitute offer until December 31, 2015, each City may elect to purchase its related share of capacity at any time. Shares of capacity can also be re-assigned upon notice provided to Cascade by both parties of such intent.

iii. Beginning January 1, 2016 and extending through December 31, 2017, any City may offer to purchase any or all capacity remaining available on a first come, first serve basis. Cascade will notify the Cities of available capacity early in 2016.

iv. After December 31, 2017, no substitute supply capacity will be available.

v. Participants in this substitute capacity offer are free to transfer rights to purchase to other participants, but only to other participants, provided that Cascade receives clear and binding direction to this effect from both parties.

III. ***Special Situation***. Bonney Lake previously acquired 2 mgd of peak season (June-September) capacity, with no right of service in the off-peak period. This is equivalent in quantity to 2.0 mgd peak and 0.7 mgd average annual. This leaves related off-peak capacity with no corresponding right of service in the peak period.

1. Bonney Lake is offered revision of this capacity right to 2 mgd peak together with 1.50 mgd annual capacity.
2. This offer to revise the capacity structure is made available for 90 days after the effective date of Bonney Lake's acceptance of the substitute capacity offer.
3. Purchase Price for this revision is the extension of existing payments by one year (to include 2019), a net cost addition of $391,222.
4. If Bonney Lake does not approve this extension prior to the expiration date, then other parties are free to acquire the related off-peak capacity as a part of a year-round capacity purchase at an incremental price of $391,222.

IV. Integration of Cascade and Tacoma obligations under this substitute capacity offer:

a. As defined in the revised agreement between Cascade and Tacoma, it is the intent of Cascade and Tacoma that any purchases under this offer are subject to execution of an agreement for wholesale service with Tacoma. Cascade would have no ongoing role in delivering wholesale water after execution of such agreement with Tacoma.

b. Tacoma will commit to supply water purchased under this agreement, subject to execution of a wholesale water agreement acceptable to Tacoma and generally defined in a draft wholesale agreement.

i. Tacoma will work with the purchaser to establish a mutually acceptable delivery point or points, to be defined in the wholesale water agreement

ii. No SDCs will be due to Tacoma for water capacity purchased under this agreement.

iii. The purchaser will be subject to Tacoma wholesale rates.

Substitute Offer of Available Tacoma Supply Capacity

AGREEMENT FOR THE PURCHASE AND SALE OF CREDITS RELATING TO FINITE WHOLESALE WATER SUPPLY CAPACITY

THIS AGREEMENT ("Agreement") is made and entered into as of this 10th day of September 2013 ("Effective Date"), by and between the City of Auburn, Washington ("Auburn"), and Cascade Water Alliance, a joint municipal utilities services authority organized under Chapter 39.106 RCW ("Cascade"). The City and Cascade are sometimes referred to collectively as the "Parties" and individually as a "Party."

RECITALS

WHEREAS, in 2005, in order to meet Cascade's immediate and long-term water supply needs, Cascade purchased from Tacoma a supply of water both permanently and for a finite period of years pursuant to an "Agreement for the Sale of Wholesale Water";

WHEREAS, on February 5, 2010, Cascade and the Cities of Bonney Lake, Buckley, Sumner and Auburn entered the 2010 Lake Tapps Area Water Resources Agreement (the "Four Cities Agreement") that provided, among other things, for Cascade to assist the four cities in meeting their projected 50-year water supply needs;

WHEREAS, on December 31, 2012, Cascade and Tacoma entered the Amended and Restated Agreement for the Sale of Wholesale Water (the "Amended and Restated Agreement") that provided, among other things, for Tacoma to make available to the four cities a water supply to be purchased directly from Tacoma as a wholesale customer and to recognize credit for the System Development Charges that Cascade had previously paid to Tacoma;

WHEREAS, Cascade and Tacoma sent a letter, dated February 11, 2013, to inform Auburn of the availability of the "substitute" water supply opportunity and related time limitations and procedures for acting on the opportunity ("Joint Letter");

WHEREAS, Auburn timely approved, signed, and delivered the Confirmation Notice, dated May 21, 2013, to confirm Auburn's election of the substitute supply opportunity and its desire to purchase a System Development Charge Credit from Cascade as to the 6 MGD Wholesale Water Supply ("Confirmation Notice");

WHEREAS, Cascade paid a capacity reservation fee to Tacoma that covers a portion of the System Development Charge for 6 MGD Wholesale Water Supply and Auburn will owe Tacoma the remaining balance of any System Development Charges for Auburn's desired quantity, net of the credit purchased from Cascade under this Agreement;

WHEREAS, the Joint Letter and Confirmation Notice are set forth in Exhibit A hereto and are incorporated by reference in this Agreement; and

WHEREAS, the Parties have addressed the purchase of credits for the permanent, or 4 MGD Wholesale Water Supply, in a separate agreement, and the Parties set forth their agreement for purchase of credits for the 6 MGD Wholesale Water Supply in this Agreement.

NOW, THEREFORE, IN CONSIDERATION of the recitals stated above, which are incorporated herein, and the mutual covenants and conditions herein contained, the Parties agree as follows:

AGREEMENT

1. Definitions.

"6 MGD Wholesale Water Supply" means an average annual of 6 MGD wholesale water supply from Tacoma, with a Peaking Factor of 1.33, and a maximum peak day of 7.98 MGD, all as provided in the Amended and Restated Agreement. The 6 MGD Wholesale Water Supply is the Tacoma supply of water for a finite period of years.

"Amended and Restated Agreement" means the "Amended and Restated Agreement for the Sale of Wholesale Water" by and among Cascade and the City of Tacoma, Department of Public Utilities, Water Division, dated December 31, 2012.

"Confirmation Notice" means the document, dated May 21, 2013, in which Auburn confirmed its election of the substitute supply opportunity in fulfillment of Cascade's obligation in the Four Cities Agreement to assist with Auburn's projected 50-year water supply needs (attached in Exhibit A).

"Four Cities Agreement" means the "2010 Lake Tapps Area Water Resources Agreement among the Cities of Auburn, Bonney Lake, Buckley and Sumner, and Cascade Water Alliance," dated February 5, 2010.

"MGD" means million gallons per day.

"Joint Letter" means the letter, dated February 11, 2013, from Cascade and Tacoma to Cities of Auburn, Bonney Lake, Buckley and Sumner that is attached hereto in Exhibit A.

"Notice of Confirmation of System Development Charge Credit" means a notice, given by Cascade to Tacoma at the request of Auburn , confirming the amount of the System Development Charge Credit (if any) to be applied to the System Development Charge otherwise due and payable by Auburn to Tacoma in connection with a wholesale water supply agreement.

"System Development Charge" or "SDC" means the system development charge imposed upon wholesale customers by Tacoma in its wholesale water regulations.

"System Development Charge Credit" means a credit to be applied in a wholesale water supply agreement against the System Development Charge otherwise due and payable by Auburn to Tacoma. The System Development Charge Credit is expressed in million gallons per day (MGD) units and in dollars.

"Tacoma" means the City of Tacoma, Department of Public Utilities, Water Division.

2. Term of Agreement.

This Agreement takes effect on the first date that both Parties have duly approved, signed, and delivered the Agreement to the other Party. The term of the Agreement will commence on the effective date and will end on December 31, 2029 or the date that Auburn has fully paid Cascade for the price of the System Development Charge Credit consistent with Sections 3 and 4 of this Agreement. In the event that Auburn elects not to confirm a quantity consistent with the terms of this Agreement or by notice selects a quantity of zero (0.000 MGD), then this Agreement will terminate.

3. Purchase of 6 MGD System Development Charge Credit & Price.

Subject to Section 5 of this Agreement, Auburn agrees to purchase and Cascade agrees to sell a System Development Charge Credit regarding the 6 MGD Wholesale Water Supply in a maximum quantity of up to 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity). Auburn shall confirm the specific quantity of the 6 MGD Wholesale Water Supply it will purchase in accordance with the procedure set forth in Section 5 below.

Until Auburn confirms its System Development Charge Credit with Cascade consistent with Section 5 and enters a wholesale water supply agreement with Tacoma as set forth in the Joint Letter, Auburn will not have access to the 6 MGD Wholesale Water Supply. After Auburn has confirmed its System Development Charge Credit with Cascade consistent with Section 5 and entered a wholesale water supply agreement with Tacoma, then Auburn may begin to take delivery of wholesale water from Tacoma.

In consideration for said System Development Charge Credit, Auburn will pay to Cascade a total price of $1,427,864.00, as of the date that this Agreement takes effect, for the quantity of 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity). The parties agree that Auburn will pay interest at an annual rate of 3.2% on the balance due beginning in 2017 and continuing until the balance is fully paid and this Agreement terminates. Auburn will pay the total price by making an annual payment in 2017-2029 according to the annual payment schedule set forth in Section 4 below. This schedule incorporates interest at a rate of 3.2% on the balance due, beginning in 2017. Under this schedule the total of annual payments including interest is $1,977,128.00. In the event that Auburn confirms an amount less than the maximum quantity of 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity), the total applicable price and payment schedule will be adjusted downward on a pro rata basis. If Auburn elects not to confirm a quantity, or by notice selects a quantity of zero (0.000 MGD), then no payment shall be due.

4. Annual Payment Schedule.

Auburn will make annual installment payments to Cascade to pay for the System Development Charge Credit as to the 6 MGD Wholesale Water Supply. In the event that Auburn purchases a System Development Charge Credit in the quantity of 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity), then the following payment schedule shall apply:

Payment Schedule

Year	Amount
2014	0
2015	0
2016	0
2017	$45,692
2018	$45,692
2019	$45,692
2020	$45,692
2021	$45,692

Year	Amount
2022	$45,692
2023	$45,692
2024	$45,692
2025	$45,692
2026	$45,692
2027	$506,736
2028	$506,736
2029	$506,736
Total	$1,977,128

In the event that Auburn purchases a System Development Charge Credit in a quantity less than 2.763 MGD annual supply capacity, then the Parties shall calculate and determine the applicable total price and payment schedule and the Parties shall agree on an updated payment schedule that will be documented as Exhibit B to this Agreement.

Each year the annual payment shall due and payable by Auburn to Cascade on or before June 30 of the year in which such payment is due. If full payment of any annual payment is not received by Cascade on or before the date due, such payment shall be considered past due, and the unpaid amount shall accrue interest, from the date due until the date paid, at a rate per day equal to 0.03 percent per day. Upon not less than fifteen (15) days' advance notice to Cascade, the City may in any given year prepay without penalty any one or more of the next successive annual payments. Upon such notice, Cascade will provide Auburn documentation of the amount due for such payment, and adjustments to any remaining payment schedule, net of related interest incorporated into the above payment schedule.

5. Auburn Confirmation of Purchase Quantity & Termination Right

On or before June 30, 2017, Auburn shall give notice to Cascade as to the specific quantity of the System Development Charge Credit that it will purchase, up to a maximum of 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity). Auburn's notice must identify and confirm one of the following three courses of action:

a) Auburn confirms purchase of a System Development Charge Credit in the quantity of 2.763 MGD annual supply capacity (3.68 MGD peak supply capacity).

b) Auburn confirms purchase of a System Development Charge Credit in a specific quantity less than 2.763 MGD annual supply capacity (peak supply capacity to be determined by Cascade).

c) Auburn confirms that it will not purchase an SDC Credit as to the 6 MGD Wholesale Water Supply, in which event this Agreement shall terminate and, except for Section 9, be of no further force or effect.

If Auburn fails to give such notice to Cascade by June 30, 2017, or by notice selects a quantity of zero (0.000 MGD), then no payment shall be due and this Agreement will terminate.

.

In order to facilitate communications, the Parties agree to meet and confer during the month of March 2017, or before, about status of water supply planning and this Agreement.

6. Notice of Confirmation of System Development Charge Credit.

Within 30 days after Auburn gives its notice to Cascade under Section 5 of this Agreement, Cascade will send to the Tacoma Water Superintendent a Notice of Confirmation of System Development Charge Credit regarding the 6 MGD Wholesale Water Supply. Cascade will provide a copy of the Notice to Auburn when it is sent to Tacoma.

7. Terms and Conditions of 6 MGD System Development Charge Credit.

Auburn acknowledges that, as stated in the Amended and Restated Agreement, Cascade has paid to Tacoma a capacity reservation fee (*i.e.*, $1,570,074.00 per MGD) for the 6 MGD Wholesale Water Supply that Tacoma will recognize as an System Development Charge Credit if all requirements of the Amended and Restated Agreement and the Joint Letter are met. However, the capacity reservation fee paid to Tacoma by Cascade covers only a portion of the System Development Charge for the 6 MGD Wholesale Water Supply. Accordingly, Auburn specifically acknowledges and agrees that it will pay Tacoma the remaining balance of any System Development Charges owing for Auburn's desired quantity, net of the SDC Credit obtained from Cascade. Auburn specifically acknowledges and agrees that Tacoma's SDC could increase and that Auburn will bear any increase in Tacoma's SDCs that may take effect before Auburn and Tacoma enter a wholesale water supply agreement.

Auburn understands that additional SDC payments to Tacoma will be required to convert the 6 MGD Wholesale Water Supply to permanent supply, in the event Auburn elects to do so pursuant to a future Auburn-Tacoma agreement. As an example calculation of Auburn's combined costs based on Tacoma's current SDC, the Parties have included an illustrative example in Exhibit C attached hereto. Exhibit C is not binding on any Party or Tacoma, and Exhibit C contains assumptions about Tacoma's SDC and interest rates in the future that may or may not turn out to be accurate. Accordingly, Cascade makes no representations or warranties about the accuracy of Exhibit C.

8. Wholesale Water Supply Purchase Negotiations with Tacoma.

In order to use the System Development Charge Credit and secure a wholesale water supply from Tacoma, Auburn acknowledges that it must make an offer, complete negotiations, and enter a wholesale water supply agreement with Tacoma consistent with the Joint Letter and Confirmation Notice set forth in Exhibit A and with the Amended and Restated Agreement. Auburn acknowledges and agrees that Cascade makes no representations or warranties as to the outcome of such negotiations, the Tacoma wholesale water supply that Auburn may (or may not) be able to purchase, or otherwise.

9. Effect on Four Cities Agreement.

The Parties agree that this Agreement constitutes full performance by Cascade of its obligations under Section 3(a) of the Four Cities Agreement. Accordingly, Section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and Auburn. Other provisions of the Four Cities Agreement are unaffected by this Agreement and remain effective according to their terms. This section 9 shall survive termination of the Agreement in the event that Auburn elects not to purchase an SDC Credit.

10. Notices.

All notices and payments hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

Cascade Water Alliance:
520 112th Avenue NE, Suite 400
Bellevue, Washington 98004
Attn: Chief Executive Officer
Phone: (425) 453-0930
Fax: (425) 425-453-0953

City of Auburn:
Attn: Dennis Dowdy
25 W Main St
Auburn WA 98001
Phone: (253)931-3010
Fax: (253)931-3053

A Party may change its address from time to time by providing notice to the other Party. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the next business day following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

11. Dispute Resolution.

In the event that any dispute arises between Cascade and Auburn, the aggrieved Party shall give a notice of the dispute to the other Party. Cascade and Auburn shall, within five (5) days of such notice, each nominate a senior officer of its management to meet at a mutually agreed location, to attempt to resolve such dispute. The Parties shall each designate a representative(s) to confer on the best and most cost effective way to resolve the dispute. By

mutual agreement, they may choose direct negotiations or mediation. If there is no agreement between the Parties on how to proceed within thirty (30) days, either Party may pursue legal action; provided, however, no Party shall be precluded from filing an appeal or action to prevent the expiration of a time period for filing or any statute of limitations.

If a Party fails to perform its obligations hereunder, then it shall be in default hereunder unless the defaulting Party cures an event of default, whether monetary or non-monetary, within thirty (30) days after receiving written notice from the other Party of such default.

Subject to the procedures set forth in Section 9 (Dispute Resolution), if a Party is in breach or default of its obligations arising under this Agreement, the other Party shall have and shall be entitled to exercise any and all remedies available to it at law or in equity (including the right to specifically enforce this Agreement), all of which remedies shall be cumulative.

12. Attorneys' Fees.

If any Party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other Party with respect to this Agreement, and in the further event that one Party shall substantially prevail in such action, the losing Party shall, in addition to all other payments required therein, pay all of the prevailing Party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in the trial court and in any appellate courts.

13. No Assignment.

This Agreement is specific to the Parties and may not be assigned in whole or in part.

14. Non-Waiver.

No delay or failure by a Party to exercise any of its rights, powers or remedies under this Agreement following any breach by another Party shall be construed to be a waiver of any such breach, or any acquiescence therein, or of or in any similar breach thereafter occurring, nor shall any waiver of any single breach be deemed a waiver of any other breach theretofore or thereafter occurring.

15. No Third Party Beneficiary.

This Agreement is for the sole and exclusive benefit of the Parties and is not intended to and shall not confer any rights or benefits on any third party not a signatory hereto.

16. Integrated Agreement.

This Agreement constitutes the entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior or contemporaneous understandings or agreements with respect thereto; provided, however, that this Agreement shall be interpreted or construed together with the Amended and Restated Agreement, the Joint Letter, and the Confirmation Notice. No modifications or amendments of this Agreement shall be valid or effective unless evidenced by an agreement in writing signed by the Parties.

17. Signature in Counterparts.

This Agreement may be executed in counterparts and all of those counterparts taken together shall constitute one and the same instrument.

18. Representations of the Parties.

Each Party represents and warrants that it has duly approved, executed, and delivered this Agreement and that it has all necessary authority to enter into this Agreement and to perform its terms and obligations. Each Party represents and warrants that the approval, execution, and delivery have been duly authorized by the appropriate board or council, and no other act or proceeding on the part of any Party is necessary to authorize entry into or performance of this Agreement.

IN WITNESS WHEREOF, the Parties have duly executed this Agreement as of the Effective Date.

Re: Cascade Water Alliance and Tacoma Water Substitute Wholesale Water Supply Availability – Time is of the Essence (*Sent by Email and US Mail*)

Dear Mayors:

As you may be aware, the Cascade Water Alliance and City of Tacoma have been in ongoing discussions about potential changes to the 2005 Water Supply Agreement. In late 2012 a new agreement was reached and signed which benefits not only Tacoma and Cascade but also the Four Cities of Auburn, Bonney Lake, Buckley and Sumner. This new agreement preserves the right of the four cities under the 2009 Cascade/Four Cities Agreement and allows a new time sensitive supply option to be jointly offered to the four cities from Cascade and Tacoma.

The Cascade Water Alliance (Cascade), in cooperation with Tacoma Water, is offering the availability of a substitute wholesale water supply ("Substitute Supply") and to provide this notice of a limited period of time for your Cities to take action on this unique opportunity. Cascade and Tacoma have entered into a Restated and Amended Agreement for the Sale of Wholesale Water, which replaces the 2005 agreement between the parties for purchase and sale of wholesale water. The 2005 agreement is included as one of the "water supply assistance" measures in the 2010 Lake Tapps Area Water Resources Agreement between Cascade and your cities (the "Four Cities Agreement").

In the Restated and Amended Agreement, Cascade has agreed to relinquish its right to take delivery of the Substitute Supply. This water is now available to the Cities to purchase directly from Tacoma as a wholesale customer. Cascade has, however, previously paid capacity charges for this wholesale water supply. If your City now desires to purchase the Substitute Supply directly from Tacoma and takes action described in this letter, Cascade is willing to sell your City a credit (reflecting the amounts that Cascade has previously paid to Tacoma) that can be

applied against System Development Charges that would otherwise be due to Tacoma ("SDC Credit"). The amount and availability of any SDC Credit will be determined by Cascade in accordance with the terms set forth in the Confirmation Notice that is attached to this letter. You must act promptly, however, in order to secure the opportunity to obtain an SDC Credit from Cascade.

This letter provides Cascade's formal notice of the limited window of time for your City to act, the Confirmation Notice that you must return to Cascade to apply for a SDC Credit, and general guidance as to how Cascade and Tacoma intend to cooperate to facilitate the implementation of the Restated and Amended Agreement.

Limited Time to Act

You must act within 120 days from the first meeting of Tacoma, Cascade and the Four Cities to confirm your interest in this opportunity by delivering a signed "Confirmation Notice" to Cascade in the form attached to this letter. This opportunity expires at the end of 120 days. During this 120-day period, the quantity allocation among and between the Four Cities as stated in the Four Cities letter to Cascade, dated February 5, 2010, shall be recognized by Cascade and shall determine the maximum allocation of the Substitute Supply (and the Residual Wholesale Water Supply) among the Cities (unless the Four Cities jointly agree to reallocation in accordance with the Four Cities Agreement). A City has until the expiration date to deliver an executed Confirmation Notice to Cascade. If you select this opportunity by acting within the 120 days, then you have until March 1, 2018 to purchase (or agree to purchase) an SDC Credit from Cascade. (In anticipation of the required steps with Tacoma described below, it is advisable for your City to complete the SDC purchase agreement with Cascade in advance of March 2018 to allow your City adequate time for the Tacoma steps.) If you select this opportunity by acting within the 120 days, then you will also have until March 1, 2018 to submit a Wholesale Water Agreement with Tacoma that is eligible for the SDC Credit.

If you do not confirm your selection by delivering a Confirmation Notice to Cascade by the deadline, then you decline the Substitute Supply opportunity stated in this letter. In that event, you will still be able to purchase wholesale water supply (if any water supply capacity remains available) from Tacoma on terms consistent with Section 3(a) of the Four Cities Agreement. However, you will not be eligible for an SDC Credit.

Next Steps with Cascade

If you deliver the Confirmation Notice within the 120-day deadline stated above and select this Substitute Supply opportunity, then you will need to complete the following steps with Cascade:

(a) Confirmation to Cascade that your City will proceed with the Substitute Supply opportunity stated herein, and that it fully substitutes for Section 3(a) of the Four Cities Agreement which will have no further force or effect.

(b) Agree with Cascade for payment terms to Cascade for the SDC credit.

(c) Upon completion of the items in (a) and (b) above, Cascade will send Notice of Confirmation of System Development Charge Credit to Tacoma.

Next Steps with Tacoma Water

If you deliver the Confirmation Notice to Cascade within the deadline stated above and select this opportunity, then you would also need to complete the following steps with Tacoma in order to submit a timely offer to purchase all or a portion of the Substitute Supply. The procedures and requirements that must be followed to submit such an offer are set forth in Section 6 and Section 7 of the Restated and Amended Agreement (attached for reference). It is important to read these procedures and requirements carefully as any offer you make must be in strict compliance with these procedures and requirements. These procedures and requirements are briefly summarized as follows:

(a) In order to obtain a SDC Credit, Tacoma must be in receipt of a Notice of Confirmation of System Development Charge Credit from Cascade.

(b) Prior to submitting your offer to purchase water from Tacoma, you must obtain Tacoma's written review and approval of the Wholesale Water Supply Agreement (including any proposed modifications thereof) pursuant to which such offer is to be made to Tacoma.

(c) Your offer to Tacoma must be submitted in the form of duplicate executed originals of the Wholesale Water Supply Agreement, in strict conformity with the form of the Wholesale Water Supply Agreement approved by Tacoma.

(d) No later than March 1, 2018, you must deliver your offer to Tacoma, Attention: Water Superintendent, Tacoma Water, 3628 South 35th Street, Tacoma, WA 98409, and obtain Tacoma's acknowledgment of the time and date of Tacoma's receipt of such offer.

Clarifications

While we are pleased to present this opportunity to your City, we want to avoid any confusion as to what this opportunity is and is not. For avoidance of doubt, this letter does not constitute a modification or waiver of any of the procedures or requirements set forth in the Restated and Amended Agreement. This letter does not constitute an offer by Tacoma to sell a wholesale water supply to any person or entity. Any such sale by Tacoma is subject to and contingent upon the negotiation, execution and delivery of a mutually acceptable Wholesale Water Supply Agreement.

Conclusion

Cascade and Tacoma are pleased to provide the availability of Substitute Supply, and look forward to receiving your offer to purchase, should you desire to do so, in accordance with the

guidelines set forth above. We will be contacting your office within the next week to schedule a meeting to present and discuss this opportunity.

Sincerely,

Chuck Clarke
Chief Executive Officer

Tacoma Water

Confirmation Notice

To Be Delivered to Cascade Water Alliance 120 days From the First Meeting of Tacoma, Cascade and The Four Cities

The City of _____ ("City") confirms receipt of the letter, dated _____, from Cascade Water Alliance ("Cascade") and Tacoma Water presenting the availability of a substitute wholesale water supply ("Substitute Supply"). The City understands that the Substitute Supply is an alternative to the provisions of Section 3(a) of the 2010 Lake Tapps Area Water Resources Agreement between Cascade and the Cities of Auburn, Bonney Lake, Buckley, and Sumner (the "Four Cities Agreement"). The City understands that the Substitute Supply requires the City to enter a wholesale water supply agreement with Tacoma Water to be negotiated and offered to Tacoma Water by March 1, 2018 as described in the above-referenced letter. The City understands that Cascade Water Alliance is offering to sell a System Development Charge Credit to the City on the terms and conditions stated on Exhibit 1 attached hereto, provided that by March 1, 2018 Cascade and the City need to enter an agreement to confirm the purchase and sale and Cascade's provision of a Notice of Confirmation of System Development Charge ("SDC") Credit to Tacoma Water.

Now, therefore, the City of _____ hereby confirms and agrees as follows:

(a) The City the elects the "Substitute Supply" opportunity described herein as an alternative that fully substitutes for section 3(a) of the Four Cities Agreement.

(b) The City provides this Confirmation Notice with respect to the following portion of the Substitute Supply

4 MGD wholesale supply: _____

6 MGD wholesale supply: _____

(c) By selecting the "Substitute Supply" alternative, the City agrees that Cascade has fully performed and satisfied all obligations to the City under 3(a) of the Four Cities agreement.

(d) The City agrees that section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and the City.

(e) The City and Cascade shall proceed with diligence to negotiate an agreement for purchase of an SDC Credit consistent with the terms outlined in Exhibit 1.

CONFIRMED, ACCEPTED AND AGREED TO BY THE CITY OF _____ on this _____ day of _____, 2013:

By _____

Re: Confirmation Notice – City of Auburn's Response to Cascade's Offer of Substitute Supply

Dear Mr. Clarke,

On May 6th, 2013 the Auburn City Council approved Resolution 4951 authorizing the City of Auburn to begin negotiations with Cascade Water Alliance in response to your February 11, 2013 offer.

Enclosed please find a signed original of the City's confirmation notice.

Our Public Works Director will be in touch with you soon to begin discussion of the city's desires to make use of the Substitute Supply.

Sincerely,

Pete Lewis
Mayor

Confirmation Notice
To Be Delivered to Cascade Water Alliance 120 days From the First Meeting of
Tacoma, Cascade and The Four Cities

The City of Auburn ("City") confirms receipt of the letter, dated February 11, 2013, from Cascade Water Alliance ("Cascade") and Tacoma Water presenting the availability of a substitute wholesale water supply ("Substitute Supply") The City understands that the Substitute Supply is an alternative to the provisions of Section 3(a) of the 2010 Lake Tapps Area Water Resources Agreement between Cascade and the Cities of Auburn, Bonney Lake, Buckley, and Sumner (the "Four Cities Agreement"). The City understands that the Substitute Supply requires the City to enter a wholesale water supply agreement with Tacoma Water to be negotiated and offered to Tacoma Water by March 1, 2018 as described in the above-referenced letter. The City understands that Cascade Water Alliance is offering to sell a System Development Charge Credit to the City on the terms and conditions stated on Exhibit 1 attached hereto, provided that by March 1, 2018 Cascade and the City need to enter an agreement to confirm the purchase and sale and Cascade's provision of a Notice of Confirmation of System Development Charge ("SDC") Credit to Tacoma Water.

Now, there fore, the City of Auburn hereby confirms and agrees as follows.

(a) The City the elects the "Substitute Supply" opportunity described herein as an alternative that fully substitutes for section 3(a) of the Four Cities Agreement provided that the City can negotiate acceptable terms with Cascade to provide and finance the necessary water supply SDC credits.

(b) The City provides this Confirmation Notice with respect to the following portion of the Substitute Supply:
4 MGD wholesale supply: 4 MGD
6 MGD wholesale supply: Possible option of 3 MGD

(c) By selecting the "Substitute Supply" alternative, the City agrees that upon execution of a new Substitute Supply agreement with Cascade to provide SDC Credits for 4 MGD of supply, Cascade will have fully performed and satisfied all obligations to the City under 3(a) of the Four Cities agreement.

(d) The City agrees that section 3(a) of the Four Cities Agreement shall be of no further force or effect as between Cascade and the City when a new substitute supply agreement with Cascade is executed.

(e) The City and Cascade shall proceed with diligence to negotiate an agreement for purchase of an SDC Credit consistent with the terms outlined in Exhibit 1 (Attached).

CONFIRMED, ACCEPTED AND AGREED TO BY THE CITY OF AUBURN on this 21st day of May, 2013:

By: _____
Pete Lewis, Mayor

Exhibit 1

TERMS FOR 4 CITIES SUBSTITUTE SUPPLY OFFER

I. This offer is structured to fulfill Cascade's obligations to make available Tacoma water as described in the existing "4 Cities Agreement ". Availability of the terms of this offer is contingent upon written acceptance of the substitution of this supply offer for the commitment defined in Section 3.a of that 4 Cities Agreement specifically:

a. Paragraph 3A, providing options for purchase of Cascade's contracted Tacoma supply capacity, is replaced by the substitute capacity offer defined in this proposal.

b. Paragraph 3A is confirmed in writing to be fully satisfied by acceptance of this substitute capacity offer.

c. Upon expiration of the substitute capacity offer on December 31, 2017, all Cascade obligations to make Tacoma water available are deemed fulfilled and terminated.

d. The substitute capacity offer must be accepted and executed no later than 120 days from the first meeting of Tacoma, Cascade and the Four Cities and the offer is withdrawn after expiration date. [Actual commitment to purchase water under those terms, once accepted, can occur anytime through 2017 as further delineated in section II.c below.]

II. **Substitute Capacity Offer**

a. The following capacity is made available:

i. 9.3 mgd of average supply and a peak supply of 11.3 mgd. [This is the remaining available capacity of Cascade's purchases from Tacoma]

ii. Cascade offers all capacity as firm and permanent. Cascade will be responsible for any transactions needed to convert reserve capacity to permanent capacity.

iii. All capacity will be offered as year-round capacity with the following structure: for each 1 mgd of year-round capacity, a peak season ratio of up to 1.33 will be available for purchase. The peak: annual ratio of 1.33:1.0 is based on the Tacoma capacity owned by Cascade, which originally totaled 10 mgd annual average and 13.3 mgd peak season. Cities may elect peak ratios ranging from 1.0 to 1 33, subject to total capacity limits defined in the attached table.

iv. Tacoma will provide wholesale service contingent on execution of a wholesale supply agreement defining terms for service and related charges. A sample agreement form is provided.

b. The following price and financial terms are offered:

i. Capacity will be offered at a price of 75% of the SDC ($3.17 per gallon * 75% = $2.3775 per gallon) originally paid by Cascade This charge will apply to annual capacity and to incremental peak season capacity.

1. For example, for a purchase of 1 mgd annual / 1.3 mgd peak season, the cost will be 1 mgd * $2 3775 million + 0 3 mgd * $2 3775 million = $3,090,750. A purchase of 1 mgd annual with no peak season increment would cost $2,377,500.

ii. Payments for capacity purchase will be to Cascade; when the purchase involves conversion of reserve capacity, Cascade may opt to direct all or part of the payment to Tacoma

iii For each purchase, the following financing terms are available.

1. Full payment of purchase price upon execution of purchase; or
2. Payment of 20% of purchase price upon execution; remainder financed on a note over 5 years at 3.3% interest with level annual payments due upon each anniversary date. Purchaser would be free to pay off note at any time.

iv. Wholesale rates for service and delivery are as defined by agreement with Tacoma (see also below).

c. The following schedule applies to the substitute offer:

i. The substitute capacity offer must be accepted and executed no later than 120 days after the first meeting of Tacoma, Cascade and the Four Cities and the offer is withdrawn after expiration date. If not accepted during this period, then the existing terms of paragraph 3.a would remain in effect.

ii. During the period from execution of this substitute offer until December 31, 2015, each City may elect to purchase its related share of capacity at any time. Shares of capacity can also be re-assigned upon notice provided to Cascade by both parties of such intent.

iii. Beginning January 1, 2016 and extending through December 31, 2017, any City may offer to purchase any or all capacity remaining available on a first come, first serve basis. Cascade will notify the Cities of available capacity early in 2016.

iv. After December 31, 2017, no substitute supply capacity will be available.

v. Participants in this substitute capacity offer are free to transfer rights to purchase to other participants, but only to other participants, provided that Cascade receives clear and binding direction to this effect from both parties.

III. ***Special Situation***. Bonney Lake previously acquired 2 mgd of peak season (June-September) capacity, with no right of service in the off-peak period. This is equivalent in quantity to 2.0 mgd peak and 0.7 mgd average annual. This leaves related off-peak capacity with no corresponding right of service in the peak period.

1. Bonney Lake is offered revision of this capacity right to 2 mgd peak together with 1.50 mgd annual capacity.
2. This offer to revise the capacity structure is made available for 90 days after the effective date of Bonney Lake's acceptance of the substitute capacity offer.
3. Purchase Price for this revision is the extension of existing payments by one year (to include 2019), a net cost addition of $391,222.
4. If Bonney Lake does not approve this extension prior to the expiration date, then other parties are free to acquire the related off-peak capacity as a part of a year-round capacity purchase at an incremental price of $391,222.

IV. Integration of Cascade and Tacoma obligations under this substitute capacity offer:

a. As defined in the revised agreement between Cascade and Tacoma, it is the intent of Cascade and Tacoma that any purchases under this offer are subject to execution of an agreement for wholesale service with Tacoma. Cascade would have no ongoing role in delivering wholesale water after execution of such agreement with Tacoma.

b. Tacoma will commit to supply water purchased under this agreement, subject to execution of a wholesale water agreement acceptable to Tacoma and generally defined in a draft wholesale agreement.

   i. Tacoma will work with the purchaser to establish a mutually acceptable delivery point or points, to be defined in the wholesale water agreement.

   ii. No SDCs will be due to Tacoma for water capacity purchased under this agreement.

   iii. The purchaser will be subject to Tacoma wholesale rates.

Substitute Offer of Available Tacoma Supply Capacity					
	Total	**Auburn**	**Bonney Lake**	**Buckley**	**Sumner**

2027	$506,736	*$0*	$506,736
2028	$506,736	*$0*	$506,736
2029	$506,736	*$0*	$506,736

Notes:

1) Estimated Payment to Tacoma is based on the following assumptions which are not assured: a) the current SDC; b) an interest rate of 3.2%, and c) a note term of 10 years structured with the first three years bearing only interest payments. Actual payments will be subject to Auburn's completion of a wholesale supply agreement with Tacoma and related terms
2) Does not include estimates of actual water rates for wholesale service from Tacoma.

RESOLUTION NO. 5033

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE A LEASE AGREEMENT BETWEEN THE CITY OF AUBURN AND VALLEY COMMUNICATIONS CENTER AND RATIFYING AND CONFIRMING PRIOR ACTS

WHEREAS, the City of Auburn owns real property commonly known as Water Reservoir 5 located in Auburn, Washington; and

WHEREAS, the Valley Communications Center ("ValleyCom") desires to lease a portion of the existing structures located on the property for an amount that is acceptable to the City; and,

WHEREAS, because of ValleyCom's operational requirements, the City administration granted them early access to the site in order to install and begin operating the communications equipment

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, KING COUNTY, WASHINGTON, HEREBY RESOLVES as follows

Section 1. The Mayor is hereby authorized to execute a Lease Agreement between the City of Auburn and Valley Communications Center, which lease shall be in substantial conformity with the Lease Agreement attached hereto as Exhibit "1" and incorporated herein by this reference

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. All prior acts consistent with the intent of this resolution are hereby ratified and confirmed

Section 4. This resolution shall be in full force and effect upon passage and signatures hereon.

Dated and Signed this 18th day of February, 2014

APPROVED AS TO FORM:

Daniel B Heid, City Attorney

EXHIBIT 1

LEASE AGREEMENT

This Lease is entered into the date fully executed by and between the City of Auburn, a Washington municipal corporation ("Landlord"), and VALLEY COMMUNICATIONS CENTER, a Washington interlocal government agency and instrumentality of its member governments ("Tenant").

RECITALS

A. Landlord is owner in fee simple or benefits from easements on parcels of land located in King County, Washington, legally described on the attached **Exhibit A**, and commonly known as Water Reservoir 5.

B. Tenant provides emergency communications and dispatch services for several municipalities and desires a nonexclusive lease for the portion of the Property described on the attached **Exhibit B**, for equipment installation and maintenance of a paging transmitter, antenna system, generator, and associated electronics, as described on the attached **Exhibit C**.

C. Accordingly, the parties are entering into this Lease on the terms and conditions set forth below.

AGREEMENT

In consideration of their mutual covenants, the parties agree as follows:

1. PREMISES

Landlord leases to Tenant a portion of certain existing structures located at 1326 57th Drive SE, Auburn, WA and described in **Exhibit "A"** ("Property"). The portion of the Property to be leased by Landlord to Tenant is more particularly described in **Exhibit "B"** ("Premises") which is attached and incorporated into this Lease.

2. CONSIDERATION

As consideration for this Lease, Tenant shall pay to Landlord the sum of One Thousand and no Dollars ($1,000.00) per month. Leasehold Excise Tax does not apply.

3. USE

Tenant shall use the Premises for a paging transmitter, antenna system, and associated electronics. A general description of the plans and specifications for equipment installation is attached as **Exhibit "C"** ("Improvements"). No use shall be made of Premises, or act done in or about the Premises, that is illegal, unlawful, or violates zoning codes. Tenant shall not commit, or allow to be committed upon the Premises, any waste or any public or private nuisance. Tenant will comply, at Tenant's own cost and expense, with all reasonable orders, notices, regulations or

requirements of any municipality, state or other governmental authority respecting the use of the Premises.

Tenant's installation, operation and maintenance of the Improvements on the Premises may not damage or interfere in any way with Landlord's or Landlord's other Tenants' use of the Property. Tenant will immediately cease, upon written notice from Landlord, all such actions that materially interfere with Landlord's use of the Property, provided however, that Tenant may then terminate the Lease. Landlord reserves the right to take any action it deems necessary in its reasonable discretion to repair, maintain, alter or improve the Premises in connection with its public service operations.

Tenant requires access twenty-four (24) hours per day, seven (7) days per week, for three hundred and sixty-five (365) days per year to the leased cabinet space in order to maintain the Public Safety critical infrastructure equipment (radio transmitter and associated equipment). Tenant access to the equipment cabinet area and antenna system (water reservoir) shall be gained by contacting the Landlord on-call water operations at 253-876-1985 or 253-876-1953. Landlord water operations staff shall meet the Tenant on site (within sixty (60) minutes of receiving the call) and grant access to the water facility

4. TERM AND TERMINATION

A. The term of this Lease shall begin On the last date signed by the parties. This Lease shall continue for a period of five (5) years from the Effective Date, unless sooner terminated as hereinafter provided. The parties may mutually agree to exercise the option to extend this lease for two (2) additional five (5) year terms by written amendment pursuant to the terms and conditions herein.

B. This Lease may be terminated by either party after a minimum 150 days' written notice of an intention to do so. By the effective date of the termination, Tenant will remove all of its equipment from the Premises at its sole expense. If Tenant does not remove its equipment from the Premises by the effective date of the termination, Tenant may not enter the Premises except upon written authorization of the Landlord, and Landlord may remove the equipment and invoice Tenant for the cost, which Tenant shall pay within thirty (30) days of receipt.

5. UTILITIES

Tenant shall be responsible for obtaining all required utility services at no cost to the Landlord.

6. REGULAR MAINTENANCE

Tenant shall, at Tenant's sole expense, perform all reasonable maintenance of, and keep in good repair, the Improvements and equipment installed on the Premises. All RF equipment or related improvements installed shall meet or exceed manufacture specifications and FCC requirements.

7. INSURANCE

Tenant shall, at Tenant's expense, maintain commercial general liability insurance, written on an occurrence basis with limits no less than $1,000,000 combined single limit per occurrence, and not less than $2,000,000.00 general aggregate, for personal injury, bodily injury and property damage.

All such insurance shall be issued by carriers acceptable to Landlord and shall contain a provision whereby the carrier agrees not to cancel or materially modify the insurance without thirty (30) days' prior written notice to the Landlord. Tenant shall furnish Landlord with a Certificate of Insurance, including a copy of the endorsement naming the Landlord as an additional insured.

No use shall be made or permitted to be made of the Premises, which will increase the existing rate of insurance upon the Premises (without consent of Landlord and compensation for increased premiums), or cause the cancellation of any insurance policy covering the Premises, or any part thereof, nor shall Tenant sell, or permit to be kept, used or sold in or about the Premises, any article that may be prohibited by the standard form of property insurance policies.

8. CONSTRUCTION DEFECTS:

The Tenant has inspected and knows the condition of the Premises, and it is understood and agreed that the Premises are leased on an "as is" basis, without any obligation on the part of the Landlord to make any changes, improvements or to incur any expenses whatsoever for the maintenance or repair of the Premises, except as required by law. If a defective condition is caused directly or indirectly by the Tenant or Tenant's guest, licensee, or any other person(s) acting with permission of or under the control or direction of Tenant, the Landlord shall have no obligation to repair that defect, and the Tenant shall immediately repair the defect at Tenant's cost. The Tenant shall have no defense against the Landlord to remedy the defective condition. This applies also where Tenant unreasonably fails to notify the Landlord of the condition or to allow Landlord access to the Premises for the purpose of repair.

9. ALTERATIONS

With the exception of Improvements depicted in **Exhibit C**, Tenant shall not make any alterations to the Premises without obtaining the consent of Landlord in writing first, which shall not be unreasonably withheld. All alterations, additions and improvements that are made by Tenant shall be at the sole cost and expense of Tenant. If the Tenant performs work with the consent of the Landlord, Tenant agrees to comply with all laws, ordinances, rules, regulations of the appropriate governing authority. Radio system equipment installed by Tenant will not be considered an improvement or alteration.

10. INDEMNIFICATION/HOLD HARMLESS

Landlord and Tenant shall each defend, indemnify and hold the other, and their

respective officers, officials, employees and volunteers harmless from any and all claims, injuries, damages, losses or suits including attorney fees, arising out of or in connection with the performance of this Lease, except for injuries and damages caused by the negligence or willful misconduct of the other. Landlord will not be liable to Tenant for damage to its equipment or property from any cause except to the extent damage is caused by Landlord's negligence or willful misconduct. Landlord will not be liable to Tenant for any interruption of utility services or theft of equipment.

11. LIENS

Tenant shall keep the leased Premises free from any mechanic, labor or material man liens arising out of any work performed, materials furnished, or obligations incurred by Tenant or Tenant's agents, contractors, or subtenant, in connection with work of any character performed or claimed to have been performed on the Premises or Improvements by or at the direction of Tenant; provided, however, that Tenant shall have the right to contest the validity or amount of any such lien or claimed lien. In the event of such contest, Tenant shall give to Landlord reasonable security as may be demanded by Landlord to ensure payment thereof and prevent any sale, foreclosure or forfeiture of the Premises or Improvements by reason of non-payment. Tenant will immediately pay a judgment rendered with all proper costs and charges and shall have such liens released or judgment satisfied at Tenant's own expense.

12. ASSIGNMENT

Tenant shall not assign or transfer this Lease or any interest therein. without the prior written consent of Landlord. Tenant shall not sublet the whole or any part of the Premises without the prior written consent of Landlord. This Lease or any interest therein shall not be assignable by operation of law or by any process or proceeding of any court or otherwise, without the prior written consent of Landlord.

13. ACCESS

A. Right of Entry. Landlord will allow Tenant access to the Premises upon signature by the authorized officers of each Party, notwithstanding further ratification of this Lease by the governing bodies of each Party.

B. Tenant will allow Landlord or Landlord's agents free access at all reasonable times to the Premises for the purposes of inspection, provided that Landlord shall not interfere unduly with Tenant's operations. This right shall not be construed as an agreement on the part of the Landlord to inspect to ascertain the condition of the Premises, or to make repairs, additions, or alterations.

14. DAMAGE OR DESTRUCTION, REPAIR OR REPLACEMENT

In the event the Premises is damaged to such extent as to render the Premises untenable in whole or in a substantial part thereof, or is destroyed, the Tenant shall give Landlord or Landlord's agent immediate written notice thereof, and, it shall be optional with the Landlord to repair or rebuild the same. Landlord shall have not more than fifteen (15) days after date of such notification to notify the Tenant in

writing of Landlord's intentions to repair or rebuild the Premises, or the part damaged. If Landlord elects to repair or rebuild the Premises, Landlord shall prosecute the work of repairing or rebuilding without unnecessary delay. If Landlord elects not to repair or rebuild the Premises this Lease shall be terminated immediately and Landlord shall not be obligated to provide Tenant another facility to lease. Any unused portion of Rent paid by Tenant in advance shall be prorated and returned to Tenant within thirty (30) days of termination under section 16. In the event Landlord requires relocation of tenant equipment, tenant shall be given 60 days notice to relocate equipment at tenants expense.

15. CONDEMNATION.

A. Landlord and Tenant will give to the other immediate written notice of the receipt of notice of any proceedings with respect to a condemnation and of any intention of any authority to exercise the power of eminent domain.

B. If all of the Premises are taken by any lawful authority under the power of eminent domain for a period which will end on or extend beyond the expiration of the term of this Lease, this Lease terminates as of the date the condemning authority takes possession, and Tenant will have no claim or interest in or to any award of just compensation except that the Tenant will be entitled to any amount equal to the fair market value of the Tenant's leasehold interest in any improvement taken by the condemning authority made to the Premises by the Tenant, but not to exceed the amount of that part, if any, of the award attributable to the value of the improvements.

C. If part of the Premises are taken by any lawful authority under the power of eminent domain for a period which will end on or extend beyond the expiration of the term of this Lease, Landlord or Tenant may choose to terminate the Lease, the Rent will be reduced in the same proportion that the value of the portion of the Premises to be taken bears to the value of the entire Premises as of the date the condemning authority takes possession. Tenant will have no claims or interest in or to any award of just compensation or damages except that the Tenant will be entitled to an amount equal to the fair market value of the Tenant's leasehold interest in the part taken by the condemning authority of any improvements made to the Premises by the Tenant, but not exceed the amount of that part, if any, of the award attributable to the value of the improvements.

D. If temporary use of all or a portion of the Premises is taken by any lawful authority for a period, which would reduce the leasehold and consequently, would cause the Premises to be untenable for the Use by Tenant for the purposes set forth in Section 2 of this Lease titled "Use," at Tenant's determination, then Landlord or Tenant may choose to terminate this Lease. If Landlord or Tenant elect to terminate this Lease, the Lease will terminate the date the condemning authority takes possession and Tenant will have no claim or interest in or to any award of just compensation except that the Tenant will be entitled to an amount equal to the fair market value of the Tenant's leasehold interest in any improvements made to the Premises by the Tenant. Any unused portion of Rent paid by Tenant in advance shall be prorated and returned to Tenant within thirty (30) days of termination under section 17. If neither Landlord or Tenant elects to terminate this Lease, the Lease will

continue in full force and Tenant will be entitled to receive any award from the condemning authority for the use of all or part of the Premises, EXCEPT that Tenant may elect to have the Rent reduced by the amount proportionally attributable to any partial temporary taking, in which event the Tenant shall not be entitled to any portion of the award attributable to said use.

E. It is understood and agreed that Tenant shall not be party to any negotiation or proceedings at law wherein Landlord claims compensation other than that which is defined statutorily as constituting "just compensation."

16. NOTICES

All notices to be given by the parties hereto shall be in writing and may either be served personally or may be deposited in the United States Mail, postage prepaid, by either registered mail or by regular mail with certificate of mailing obtained. Notices shall be mailed to the addresses below, or a later changed addressed provided in writing to the party:

LANDLORD:

City of Auburn
Attn: Facilities Manager
25 West Main Street
Auburn, WA 98001-4998

TENANT:

Valley Communications Center
Attn: Technical Services Manager

Kent, WA 98030

17. DEFAULT

If Tenant shall violate, default or not comply with any of the material covenants, agreements or provisions of this Lease, Landlord will give Tenant sixty (60) days' written notice to cure such default. If Tenant does not cure the default within that sixty (60) day period, then Landlord may cancel this Lease by giving sixty (60) days' written notice of cancellation.

18. NON-WAIVER

The failure of the Landlord to insist upon strict performance of any of the covenants and agreements of this Lease, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenant or agreements, but the same shall be and remain in full force and effect.

19. SEVERABILITY

If any term or provision of this Lease or the application of any term or provision to any person or circumstance is invalid or unenforceable, the remainder of this Lease, or the application of the term or provision to persons or circumstances other than those as to which it is held invalid or unenforceable, shall not be affected and will continue in full force.

20. COSTS AND ATTORNEYS FEES

In any claim or lawsuit for damages arising from the parties' performance of this Lease, each party shall pay all its legal costs and attorney's fees incurred in defending or bringing such claim or lawsuit, including all appeals, in addition to any other recovery or award provided by law; provided, however, nothing in this paragraph shall be construed to limit either party's right to indemnification under Section 9 of this Lease.

21. VENUE AND JURISDICTION

This Lease shall be construed in accord with the Laws of the State of Washington. Venue and jurisdiction for the resolution of disputes shall be in the Superior Court for King County, Washington.

22. HEIRS AND SUCCESSORS

Subject to the provision pertaining to assignment and subletting, the covenants and agreements of this Lease shall be binding upon the heirs, legal representatives, successors and assigns of any or all of the parties.

23. HOLDOVER

If the Tenant shall, without the written consent of Landlord, holdover after the expiration of the term of this Lease, that tenancy shall be deemed a month to month tenancy, terminable as provided by the laws of the State of Washington. During any holdover tenancy, Landlord and Tenant will be bound by all of the terms, covenants, and conditions of this Lease.

24. CAPTIONS AND CONSTRUCTION

The captions in this Lease are for the convenience of the reader and are not to be considered in the interpretation of its terms.

25. ENTIRE AGREEMENT AND EFFECTIVE DATE

This Lease contains the entire agreement between the parties and, in executing it, Landlord and Tenant do not rely upon any statement, promise, or representation, whether oral or written, not expressed herein. No subsequent agreement may modify this Lease unless it is in writing and signed by the parties or their authorized agents. This Agreement shall be effective upon the last day executed ("Effective Date").

26. WARRANT OF AUTHORITY TO EXECUTE

Each person executing this Lease warrants that he/she has the requisite authority to bind the party for whom that person is executing.

IN WITNESS, this Lease is executed and shall become effective as of the last date signed below. The foregoing conditions are mutually agreed to by the Landlord and the Tenant.

VALLEY COMMUNICATIONS CENTER EQUIPMENT

VHF Paging Equipment:
The equipment will be installed in an outdoor cabinet secured to a 5' x 5' cement pad and located next to the existing radio equipment per Exhibit B. The outdoor cabinet measures 30"W x 30"D x 84"H. See Spec sheet below for more details.

VHF Antenna:
The Antenna will be of a similar style to a Sinclair SD212 and will be mounted on the outside tank railing per Exhibit B. 7/8" coaxial cable will be connected to the antenna and routed along the tank railing and down the side of the tank utilizing the existing cable tray and connected to the paging equipment. See antenna Spec sheet below for more details.

Generator and Tank:
The EATON EGENX17 17KW generator and tank will be mounted on a 5' x 10' cement pad with an auto transfer switch. The generator fuel source will be either Diesel or Propane. The generator type and configuration may change depending on permitting. See Generator Spec sheet below for more details.

Utilities:
T1 circuit will be installed in the existing outdoor enclosure that is mounted on the tank. The existing breaker panel in the same outdoor enclosure will be upgraded to accommodate two 120vac 20 amp circuits. Separate conduit will be installed between the enclosure and paging cabinet.

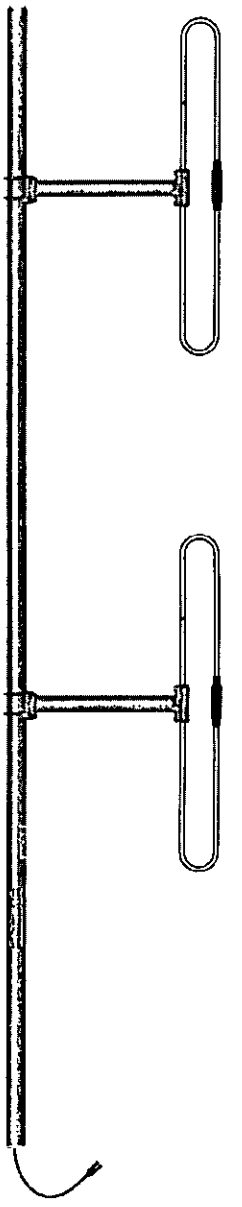
Antennas
Low Band, Aviation, and VHF Antennas
SD212 Series

SD212-SF2P4SNM(D00) 2 dipole, 5.5 dBd, offset, 138-174 MHz



- Covers the entire 138-174 MHz frequency range
- 5.5 dBd gain with offset pattern
- 300 Watt power handling
- Can be top or side mounted (Universal mount)

Recommend SMK-125-A3 or SMK-125-A7 for Offset Side Mount. Available from Sinclair separately.

The SD212 series is a 2-bay exposed dipole antenna designed for applications where moderate gain is required. These premium-quality antennas are well suited to public safety applications.

The design of these antennas provides for coverage from 118 to 225 MHz in 3 sub bands, 118-138 MHz for civil aviation applications, 138-174 MHz for private mobile networks, and public safety, and 220-225 MHz for transportation networks.

The standard connector offered is N male which is terminated on a 1 foot cable.

Standby Generators Air Cooled 17kW

Gas Engine Generator Sets

Continuous Standby Power Rating:

- EGEN17 (Steel) - 17 kW 60Hz
- EGEN17A (Aluminum) - 17 kW 60Hz

Features:

- True Power® Electrical Technology
- Two Line LCD Digital Controller
- Electronic Governor
- External Main Circuit Breaker, System Status & Maintenance Interval LED's and GFCI Duplex Outlet
- Flexible Fuel Line Connector
- Composite Mounting Pad
- Natural Gas or LP Gas Operation
- UL 2200 Listed

Benefits:

- Total commitment to component testing, reliability, environmental, destruction and life, plus testing to applicable CSA, NEMA, EGSA, and other standards
- True Power® Electrical Technology Superior harmonics and sine wave form produce less than 5% Total Harmonic Distortion for utility quality power This allows confident operation of sensitive electronic equipment and micro-chip based appliances, such as variable speed HVAC.
- Test Criteria:
  - Prototype Tested Nema Mg1-22 Evaluation
  - System Torsional Tested
  - Motor Starting Ability
- Solid-state, frequency compensated voltage regulation This state-of-the-art power maximizing regulation system is standard on all Eaton models. It provides optimized fast response to changing load conditions and maximum motor starting capability by electronically torque-matching the surge loads to the engine
- Single source service response from the industry's best dealer network provides parts and service know-how for the entire unit

E·T·N

Table 1. Features

	Features	Benefits
Engine	• OHVI Design • "Spiny-lok" cast iron cylinder walls Electronic ignition/spark advance • Full pressure lubrication system • Low oil pressure shutdown system • High temperature shutdown	• Maximizes engine "breathing' for increased fuel efficiency Plateau honed cylinder walls and plasma moly rings help engine run cooler, reducing oil consumption Because heat is the primary cause of engine wear, the OHVI has a significantly longer life than competitive engines • Rigid construction and added durability provide long engine life • These features combine to assure smooth, quick starting every time • Superior lubrication to all vital bearings means better performance, less maintenance and significantly longer engine life Now featuring a 2 year/200 hour oil change interval • Superior shutdown protection prevents catastrophic engine damage due to low oil • Prevents damage due to overheating
Generator	• Revolving field • Skewed stator • Displaced phase excitation • Automatic voltage regulation • UL 2200 Listed	• Allows for smaller, light weight unit that operates 25% more efficiently than a revolving armature generator • Produces a smooth output waveform for compatibility with electronic equipment • Maximizes motor starting capability • Regulates the output voltage to ±2% prevents damaging voltage spikes • For your safety
Transfer Switch	Sold Separately	
Controls	• Manual/Auto/Off switch • Utility voltage sensing • Utility interrupt delay • Engine warm-up • Engine cool-down • Seven day exerciser • Timed Trickle Battery charger • Main Line Circuit Breaker • Electronic governor	• Selects the operating mode • Constantly monitors utility voltage, setpoints 65% dropout, 75% pick-up, of standard voltage • Prevents nuisance start-ups of the engine, adjustable 10-30 seconds • Ensures engine is ready to assume the load, setpoint approximately 10 seconds • Allows engine to cool prior to shutdown, setpoint approximately 1 minute • Operates engine to prevent oil seal drying and damage between power outages • Maintains battery charge level to insure starting • Protects generator from overload • Maintains constant 60 Hz frequency
Unit	• Weather protective enclosure • Enclosed critical grade muffler • Small, compact, attractive	• Ensures protection against mother nature Hinged key locking roof panel for security Lift-out front for easy access to all routine maintenance items Electrostatically applied textured epoxy paint for added durability EGEN17A has aluminum enclosure • Quiet, critical grade muffler is mounted inside the unit to prevent injuries • Makes for an easy, eye appealing installation
Installation System	• 1' Flexible Fuel Line Connector • Composite Mounting Pad	• Easy Installation

Power and Equipment Enclosure Solutions

Purcell Systems' Flexible EncloSure (FlexSure®) solution architecture allows the rapid creation and growth of virtually any outdoor cabinet configuration by leveraging pre-engineered common interchangeable components. The FlexSure® series is available in 12, 16, 20, 25, and 36 RU equipment bay options.

FlexSure® enclosures are UL 508 Listed, and certified by independent third-party Nationally Recognized Testing Laboratories to Telcordia GR-487 A wide range of thermal management system technologies and capacities ensures that the equipment you deploy in the cabinet will operate within its design parameters with the highest reliability and lowest Total Cost of Ownership. Options include battery backup, AC/DC power termination and distribution, cross connect and line protection, equipment and enclosure mounting features.

Applications

Provides a secure, thermally-controlled environment for any electronic equipment supporting a wide-range of Cable/MSO, Energy/Utility, Land Mobile Radio, Transportation, U.S. Government/Military, and Wireless and Wireline Telecommunication applications.

Product Features:

- Telcordia GR-487 certified, UL508 Listed
- Highly flexible and scalable
- Energy efficient advanced thermal solutions
- Field upgradeable
- AC and DC power options
- Pad, pole, wall, H-frame mounting options

The Purcell Advantage

Purcell Systems designs and manufactures thermally-managed outdoor enclosures that meet the exact needs of the enclosed equipment for network operators and utilities. Our enclosures provide comparable solutions to prefabricated buildings, containers and shelters at a fraction of the cost. Both standard and custom enclosures are delivered with the following capabilities:

Choice of Options: Pre-engineered and interchangeable modules provide optimal configurations with minimal cost and lead time.

Thermal Management: The industry's widest selection of heating and cooling systems ensures the most efficient thermal management solution with the lowest energy consumption.

Lowest Total Cost of Ownership: Engineering analysis and modeling ensures your enclosure configuration minimizes installation, maintenance, repair, capital, and operational expenses

Equipment Integration and Staging: Electronic equipment can be staged and installed in our enclosures prior to final deployment and installation.

Fanatical Service®: A national service organization with 24/7/365 access means procurement, installation, support, and warranty requests are addressed immediately.

Specifications

EXTERIOR

Construction
- Frame: 0.090" Corrosion resistant aluminum, dual wall construction
- Finish: Ultra-light gray polyester powder coat
- Weight (Base Configuration) 375 lbs

Door/Side/Top Panels
- Doors: Front and rear doors, left or right open, front and rear hatches
- Door Handles. Pad-lockable
- Door Hinges. Hidden hinges
- Side Panels: Removable for field expandability for extra bays and side chambers

Cable Entry
- Ingress/Egress Knockouts on bottom/rear/side
- Protection Plastic/rubber glands

Battery Pedestal
- Ventilated compartment
- 14" or 16" Height: Supports up to 190 Ahr -48 Volt batteries
- Battery Heater Mat: Up to 280 Watts
- Compatible with pad, pole, or wall mount

Side Chamber
- Side chambers: One or two, 10", or 16" depth
- 19" or 23" Equipment rails

Mounting Options
- Anchor plate kit for concrete pad mounting
- Pole mount kit (up to 25 RU models)
- Plinth: 4" Height, standard footprint
- Corrosion inhibiting pad gasket

INTERIOR

Equipment Mounting
- 19" or 23" Equipment rails. Configurable locations front-to-back
- Second set of 19" or 23" rails optional

AC Power Termination and Distribution
- Load Center Locations: Internal to side chamber, or internal to equipment bay
- 8-12 Position internal load centers
- Up to 100 Amp main breaker
- Surge Protection Device (SPD)
- Generator Inlet: 30/60/100 Amp

DC Power Systems and Distribution
- Multiple suppliers and configurations available

Other Options
- Convenience Outlets: 15 or 20A, GFCI or standard
- Bonding and Grounding: Isolated or integrated, up to 10 positions
- Alarm Blocks. Up to 20 positions (includes intrusion and thermal alarms)
- Accessories: Document holder, service light, laptop tray

OTHER

Agency Compliance
- Telcordia GR-487 Issue 2
- UL Listed – UL508A
- NEMA 3R

Environmental
- IP Protection: IP 54
- Maximum earthquake risk Zone-4 (as per Telcordia GR-63)

Warranty
- 5 Years on enclosure, 1 year on thermal system

RESOLUTION NO. 5102

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE A WHOLESALE WATER AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF TACOMA

WHEREAS, the City of Auburn is obligated to provide an adequate water supply to meet customer demand; and

WHEREAS, the City has adopted a combined water supply strategy that includes improving City sources to fully utilize its water rights and purchasing water from adjacent purveyors; and

WHEREAS, on June 4, 2012, the City of Auburn City Council adopted Resolution No. 4822 authorizing the Mayor to execute a Wholesale Water Agreement with the City of Tacoma, which agreement allowed the City to purchase water in keeping with the City's supply strategy; and

WHEREAS, in July 2012, the City of Auburn entered into the Wholesale Water Agreement with the City of Tacoma, Department of Public Works, Water Division (Tacoma) to purchase 1.0 million gallons per day (MGD) (annual average daily use) water at a wholesale rate; and

WHEREAS, in September 2013, the City of Auburn entered into the Agreement for the Purchase and Sale of Credits Relating to Permanent Wholesale Water Supply Capacity with Cascade Water Alliance (Cascade) for 2.5 MGD (annual average daily use) of Tacoma water; and

WHEREAS, the City desires to enter into a Wholesale Agreement with the City of Tacoma to utilize the 2.5 MGD water purchased from Cascade along with the existing 1.0 MGD, for a total of 3.5 MGD annual average daily use.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, KING COUNTY, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute a Wholesale Water Agreement between the City of Auburn and the City of Tacoma, which agreement shall be in substantial conformity with agreement attached hereto as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This Resolution shall be in full force and effect upon passage and signatures hereon.

Dated and signed this 6th day of October, 2014.

CITY OF AUBURN

Nancy Backus
NANCY BACKUS, MAYOR

ATTEST:

Danielle E. Daskam, City Clerk

APPROVED AS TO FORM:

Daniel B. Heid, City Attorney

WHOLESALE WATER SUPPLY AGREEMENT

This WHOLESALE WATER SUPPLY AGREEMENT ("Agreement"), by and between the City of Tacoma, Department of Public Utilities, Water Division ("Tacoma"), and the City of Auburn ("City"), is made and entered into as of this 28th day of October (2014) ("Effective Date"). Tacoma and City are sometimes referred to collectively as the "Parties" and individually as a "Party." This Agreement is made with reference to the following facts:

RECITALS

WHEREAS, Tacoma is a municipality organized and operating under the laws of the State of Washington and operates a water utility pursuant to RCW 35.92.010;

WHEREAS, pursuant to RCW 35.92.170-.200, Tacoma is authorized to operate a water utility outside its geographical boundaries and to sell surplus water to customers outside of Tacoma's city limits;

WHEREAS, City is a noncharter code city organized and operating as a municipal corporation under the laws of the State of Washington;

WHEREAS, City and Tacoma have previously entered into a "Wholesale Water Agreement" dated July 6, 2012, pursuant to which Tacoma is required to provide, upon City's request, a wholesale water supply of up to 1 MGD (annual average daily use, subject to certain 2.0 MGD peak day and 1.8 MGD peak period limitations set forth therein), for use by City in connection with the prudent use and management of its water system (the "Existing Agreement");

WHEREAS, Tacoma and Cascade Water Alliance, a joint municipal utilities services authority ("Cascade"), have heretofore entered into an "Amended and Restated Agreement for the Sale of Wholesale Water" dated December 31, 2012 (the "Cascade/Tacoma Agreement");

WHEREAS, pursuant to Section 6 of the Cascade/Tacoma Agreement, Tacoma has available surplus water and is willing to sell to City a 2.5 MGD (annual average daily use) wholesale water supply, which is a portion of the 4 MGD (annual average daily use) wholesale water supply that is available as of the Effective Date to sell to City pursuant to the Cascade/Tacoma Agreement;

WHEREAS, the Parties desire, by this Agreement, to amend and restate the Existing Agreement;

WHEREAS, Tacoma is willing to make a 3.5 MGD (1.0 MGD + 2 5 MGD) (annual average daily use) wholesale water supply available to City as a direct wholesale customer of Tacoma in accordance with the terms and conditions of this Agreement, which is a combination of the 1 MGD wholesale water supply currently provided under the Existing

Agreement and the 2.5 MGD available pursuant to the Cascade/Tacoma Agreement, subject to certain peak-period limitations set forth below;

WHEREAS, pursuant to the requirements of RCW 35.92.010, the Parties specifically find that this Agreement will at a minimum generate revenues sufficient for Tacoma to cover the marginal cost of the available surplus water supplied to City; and

WHEREAS, City is willing to purchase and accept delivery of such wholesale water supply from Tacoma as a direct wholesale customer of Tacoma in accordance with the terms and conditions of this Agreement.

NOW, THEREFORE, IN CONSIDERATION of the mutual covenants and conditions herein contained, the Parties agree as follows:

AGREEMENT

1. DEFINITIONS

For purposes of this Agreement, the following terms defined herein shall have the following meanings, whether singular or plural:

"Applicable Law" means any applicable and binding statute, law, rule, regulation, code, ordinance, judgment, decree, writ, legal requirement or order, and the written interpretations thereof, of any national, federal, state or local Governmental Authority having jurisdiction over the Parties or the performance of this Agreement.

"Cascade" shall have the meaning set forth in the Recitals.

"Cascade/Tacoma Agreement" shall have the meaning set forth in the Recitals.

"City" shall have the meaning set forth in the preamble of this Agreement.

"City Hazardous Substances" means any Hazardous Substances generated, transported, kept, handled, stored, placed, discharged or released by City, or by anyone directly or indirectly retained or employed by City, in connection with the performance of this Agreement.

"City Isolation Valve" means a positive shut-off valve owned and operated by City as part of the Interconnection Facilities.

"Dispute" shall have the meaning set forth in Section 17.1.

"Draft Operating Plan" means a non-binding informational plan intended to advise Tacoma of the amount of the Wholesale Water Supply that City anticipates it will use during the period starting June 1 and ending September 31 each year during the Term.

"Effective Date" shall have the meaning set forth in the preamble of this Agreement.

"Existing Agreement" shall have the meaning set forth in the Recitals.

"Flow Control Valve" means the valve that controls the volume of water that is delivered to City and is more particularly described in Exhibit A.

"Governmental Authority" means (a) any federal, national, state, tribal, county, municipal or local government (whether domestic or foreign), or any political subdivision thereof; (b) any court or administrative tribunal; (c) any other governmental, quasi-governmental, judicial, public or statutory instrumentality, authority, body, agency, bureau or entity of competent jurisdiction; or (d) any nongovernmental agency, tribunal or entity that is vested by a governmental agency with applicable jurisdiction.

"Hazardous Substances" means any substance or material regulated or governed by Applicable Law; any substance, emission or material now or hereafter deemed by any Governmental Authority or Applicable Law to be a "regulated substance," "hazardous material," "hazardous waste," "hazardous constituent," "hazardous substance," "dangerous material," "dangerous waste," "dangerous substance," "toxic substance," "radioactive substance" or a "pesticide"; and any other substance with properties that are harmful or deleterious to human health or to the environment.

"Interconnection Facilities" means all facilities, other than the Wholesale Service Connections, that are necessary for City to access and take delivery of the Wholesale Water Supply at the Wholesale Service Connections and to convey such water to City's transmission and distribution systems. Interconnection Facilities include the City Isolation Valve and such other pressure-reducing valves, power service, storm drainage, vaults, telecommunications service, conduit, controllers, pedestals and boxes operated by City as part of the Interconnection Facilities. For avoidance of doubt, Interconnection Facilities do not include the Wholesale Service Connections or any other facilities owned and operated by Tacoma that are necessary to deliver the Wholesale Water Supply to the Wholesale Service Connections.

"Meter" means the delivery metering equipment determined by Tacoma to be necessary for the implementation of this Agreement.

"Operating Protocols" shall have the meaning set forth in Section 11.3.

"Party" or "Parties" shall have the meaning set forth in the preamble of this Agreement.

"Person" means any individual, corporation, municipal corporation, company, voluntary association, partnership, incorporated organization, trust or limited liability company, or any other entity or organization, including any Governmental Authority.

"Project" means that certain water supply project commonly referred to as the Second Supply Project, which is owned and operated by Tacoma in order to meet Tacoma's future water supply requirements and to increase regional supply, with the participation of its project partners the City of Kent, the Covington Water District and the Lakehaven Utility District in

accordance with the terms and conditions of the 2002 Second Supply Project Partnership Agreement.

"Prudent Utility Practices" means, at any particular time, any of the practices, methods, decisions and acts that (a) in the exercise of a Party's reasonable judgment in light of the facts known at the time, would have been expected to accomplish the desired result consistent with Applicable Law, reliability, efficiency, economy, safety and expedition commonly engaged in or approved by the water supply industry in the United States prior thereto; and (b) in the case of Tacoma, includes all practices and methods needed to comply with the Wholesale Water Regulations. It is recognized that the term "Prudent Utility Practices" is not intended to be limited to the optimum practices, methods or acts to the exclusion of all others, but rather refers to a spectrum of possible practices, methods or acts that could have been expected to accomplish the desired result consistent with Applicable Law, reliability, efficiency, economy, safety and expedition.

"Schedule" shall have the meaning set forth in Section 11.2.

"System Development Charge" means the system development charge imposed upon wholesale customers by the Wholesale Water Regulations.

"Tacoma" shall have the meaning set forth in the preamble of this Agreement.

"Tacoma Indemnitees" means Tacoma and Tacoma's directors, officers, employees, agents, servants, elected officials and representatives, and the respective successors and assigns of each and all of the foregoing.

"Tacoma Isolation Valve" means a positive shut-off valve installed at the Wholesale Service Connections and that is more particularly described in Exhibit A.

"Telemetry Equipment" means a data-acquisition system owned and operated by Tacoma that is used to send signals from the Meter in support of operations and all appurtenances thereto.

"Temporary Wholesale Water Supply" shall have the meaning set forth in Section 19.

"Term" shall have the meaning set forth in Section 21.

"Uncontrollable Force" means any event or circumstance (or combination thereof) and the continuing effects of any such event or circumstance (whether or not such event or circumstance was foreseeable or foreseen by the Parties) that delays or prevents performance by a Party of any of its obligations under this Agreement. An Uncontrollable Force shall include the following:

(i) flood, earthquake, drought, climate change, storm, fire, lightning and other natural catastrophes;

(ii) acts of public enemies, armed conflicts, acts of foreign enemies, acts of terrorism (whether domestic or foreign, state-sponsored or otherwise), war (whether declared or undeclared), blockade, insurrection, riot, civil disturbance, revolution or sabotage;

(iii) any form of compulsory government acquisition or condemnation or change in Applicable Law (other than such acquisition, condemnation or change by City) that affect the performance of the Parties' obligations under this Agreement;

(iv) accidents or other casualty, damage, loss or delay during transportation, explosions, fire, epidemics, quarantines or criminal acts that affect the performance of the Parties' obligations under this Agreement;

(v) labor disturbances, stoppages, strikes, lock-outs or other industrial actions affecting the Parties or any of their contractors, subcontractors (of any tier), agents or employees;

(vi) inability, after the use of commercially reasonable efforts, to obtain any consent or approval from any Governmental Authority (other than City) that affects the performance of the Parties' obligations under this Agreement;

(vii) inability, after the use of commercially reasonable efforts, to obtain any consent or approval from any Person required by a Party in connection with this Agreement; and

(viii) third-party litigation contesting all or any portion of the right, title and interest of a Party in any service, property or other item to be provided to the other Party in connection with this Agreement.

Notwithstanding the foregoing, the insufficiency of funds, the financial inability to perform or any changes in such Party's cost of performing its obligations hereunder shall not constitute an Uncontrollable Force, and neither Party may raise a claim for relief hereunder, in whole or in part, in connection with such event or circumstance.

"Wholesale Service Connections" means a physical connection(s) between water mains of the Parties and is the point of delivery of the Wholesale Water Supply. The Wholesale Service Connections are more particularly described in Exhibit A and include the Tacoma Isolation Valve and the Flow Control Valve.

"Wholesale Water Regulations" means all applicable terms and conditions of the Tacoma Municipal Code, including but not limited to Chapters 12.01 and 12.10 thereof, as such terms and conditions may now exist or may hereafter be changed, deleted, supplemented, modified or amended. The Wholesale Water Regulations include Tacoma's "Customer Service Policies" and such other rules, regulations, policies and guidelines as

Tacoma shall, from time to time, adopt and apply on a uniform basis to Tacoma's wholesale customers.

"Wholesale Water Service" shall have the meaning set forth in Section 4.2.

"Wholesale Water Supply" means a quantity of water of up to 3.5 MGD (annual average daily demand), subject to the following peak-period limitations:

(a) 5.12 MGD during any consecutive twenty-four (24) hour period, and

(b) 4.92 MGD during any consecutive ninety-six (96) hour period.

2. EXHIBITS TO THIS AGREEMENT

This Agreement includes the Exhibits listed below, and any reference in this Agreement to an "Exhibit" by letter designation or title shall mean one of the Exhibits identified below. If there is an express conflict between the provisions contained within the body of this Agreement and the provisions of any Exhibit hereto, then the body of this Agreement shall take precedence, except that with respect to technical specifications and requirements pertaining to the design, engineering, operation or testing of the Wholesale Service Connections, the conflicting Exhibit shall take precedence.

Exhibit A: Wholesale Service Connections
Exhibit B: Dispute Resolution Procedures

3. AMENDMENT AND RESTATEMENT OF EXISTING AGREEMENT

The rights and obligations of the Parties arising under the Existing Agreement shall remain in full force and effect and unchanged by this Agreement for the period beginning on July 6, 2012, and ending on the Effective Date. From and after the Effective Date, this Agreement fully restates, replaces and supersedes the Existing Agreement and shall govern and control the rights and obligations of the Parties with respect to the subject matter of the Existing Agreement, as amended and restated in its entirety by this Agreement. Except as otherwise provided by this Section 3, from and after the Effective date, the Existing Agreement is null, void and no longer of any force or effect.

4. WHOLESALE WATER SERVICE

4.1 Subject to the terms and conditions of this Agreement, during the Term, Tacoma agrees to sell and deliver the Wholesale Water Supply to City, and City agrees to purchase and take delivery of the Wholesale Water Supply from Tacoma. The Wholesale Water Supply may be resold by City to another water purveyor, subject to the terms and conditions of this Agreement.

4.2 The Wholesale Water Supply shall be provided to City as wholesale water service subject to and in compliance with the Wholesale Water Regulations, Applicable Law,

Prudent Utility Practices and the terms and conditions of this Agreement ("Wholesale Water Service"). Except as otherwise provided by this Agreement, City shall be subject to and governed by the Wholesale Water Regulations. If, however, there is an express conflict or inconsistency between the terms and conditions of this Agreement and the terms and conditions of the Wholesale Water Regulations, then the terms and conditions of this Agreement shall take precedence, govern and control.

4.3 The Wholesale Water Service shall be provided to City with the same degree of reliability and certainty of supply as water provided by Tacoma to its existing wholesale customers (including limitations thereof, such as provisions of the Wholesale Water Regulations pertaining to interruption of service). The Wholesale Water Service provided to City is not for the purpose of providing fire flows or for fire suppression purposes, and Tacoma does not warrant that the flow and pressure of the Wholesale Water Service provided to City will meet Wholesale Water Regulations or Applicable Law related to providing fire flows or for fire suppression purposes. City acknowledges it is solely responsible for compliance with Applicable Law related to fire flows and fire suppression. The Parties acknowledge that Wholesale Water Service is inherently subject to disruption, interruption, suspension, curtailment and fluctuation. Tacoma shall not have any liability to City or any other Person for any disruption, interruption, suspension, curtailment or fluctuation in the Wholesale Water Service.

5. WHOLESALE WATER SERVICE CHARGES AND FEES

City shall pay Tacoma all charges, fees and other amounts for the Wholesale Water Service as shall be due and payable, from time to time, pursuant to the Wholesale Water Regulations. All rates, charges, fees and other amounts due Tacoma for the Wholesale Water Service pursuant to the Wholesale Water Regulations are subject to periodic adjustment by the Public Utility Board and Tacoma City Council. At any time during the Term, the applicable rate, charge, fee or other amount due Tacoma from City for the Wholesale Water Service shall be the rate, charge, fee or amount as shall then be in effect.

6. SYSTEM DEVELOPMENT CHARGES

As of the Effective Date, the System Development Charge due and payable to Tacoma pursuant to the Existing Agreement has been fully paid by City to Tacoma pursuant to the terms and conditions of the Existing Agreement. A System Development Charge for a wholesale water supply of 2.5 MGD has been paid by Cascade to Tacoma pursuant to the terms and conditions of the Cascade/Tacoma Agreement. The remaining System Development Charge due Tacoma from City pursuant to the Wholesale Water Regulations has, as of the Effective Date, been fully paid to Tacoma by or on behalf of City.

7. PAYMENTS

Amounts due Tacoma from City for the Wholesale Water Service shall be determined, billed and collected by Tacoma and paid by City in accordance with the procedures for billings, collections and payments set forth in the Wholesale Water Regulations.

8. WHOLESALE WATER DELIVERIES

From and after the Effective Date, the Wholesale Water Supply shall be made available to City at the Wholesale Service Connections. The delivery and receipt of water, and the transfer of title to and custody and control of such water, shall occur at the Wholesale Service Connections. Upon City's acceptance of such water at the Wholesale Service Connections, City assumes full responsibility for such water, its quality, and the means, methods and facilities necessary to connect, receive, transport, deliver and use such water as a source of water for resale by City to City's retail customers.

9. WHOLESALE WATER CONNECTIONS AND INTERCONNECTION FACILITIES

9.1 From and after the Effective Date, Tacoma shall be responsible for the maintenance and operation of the Wholesale Service Connections in a manner that is consistent with Applicable Law and Prudent Utility Practices. If at any time during the Term Tacoma shall determine a need to upgrade, replace or modify any of the Wholesale Service Connections, in whole or in part, Tacoma shall so notify City, and cause such upgrade, replacement or modification to occur at such time, place and manner and with such labor, design, materials and equipment as Tacoma shall determine, in its sole discretion. No wholesale service connections other than the Wholesale Service Connections are authorized by this Agreement, and no other such connections shall be allowed without a subsequent and separate written agreement between the Parties. Neither Party shall be obligated to agree to or execute any agreement or permit with the other Party to construct or use any additional wholesale service connection.

9.2 From and after the Effective Date, City shall, at its expense, cause the Interconnection Facilities to be constructed, tested, maintained and available for normal and reliable commercial operations. City shall submit to Tacoma for review and approval the designs, specifications and construction schedule for any material repairs or replacements of the Interconnection Facilities, or for any expansions, improvements or upgrades of the Interconnection Facilities. Tacoma will not unreasonably delay its review of the designs, specifications and construction schedule submitted to it by City and will not unreasonably withhold its approval of such designs, specifications and construction schedule. City will not commence any such repairs, replacements, expansions, improvements or upgrades of the Interconnection Facilities unless and until City has received approved designs, specifications and construction schedule from Tacoma. City shall construct and operate the Interconnection Facilities in a manner that is consistent with Applicable Law; the approved designs, specifications and construction schedule; the provisions of all permits, regulatory approvals and agreements governing the construction and operation of the Interconnection Facilities; and Prudent Utility Practices. City shall own and operate the Interconnection Facilities and shall be responsible for the repair and maintenance thereof.

9.3 Without limiting the generality of the foregoing, City shall:

(a) be responsible for the operation and control of the City Isolation Valve and any pressure-reducing valves, controllers, pedestals and boxes operated by City as part of the Interconnection Facilities; and

(b) provide a sufficient permitted discharge location for sump pump discharge for the Wholesale Service Connections vault.

9.4 If, at any time or from time to time during the Term, Tacoma determines a need to repair, maintain, replace, renew, expand or improve any of Tacoma's infrastructure, facilities or systems and such work requires the relocation of all or any portion of the Interconnection Facilities, Tacoma shall, not less than one hundred twenty (120) days prior to the commencement of such work, request by written notice to City that City relocate such Interconnection Facilities so as to accommodate the time, place and manner of Tacoma's work. Upon receipt of such notice from Tacoma, City shall promptly so relocate such Interconnection Facilities at City's sole cost and expense.

10. METER AND TELEMETRY EQUIPMENT

10.1 Tacoma shall, at City's expense, provide for the procurement, installation, repair, replacement, calibration and testing of the Meter and the Telemetry Equipment. Such costs paid by City to Tacoma are considered funds provided in aid of construction. City shall provide, at its expense, a sufficient and reliable source of power and communications to the Meter and the Telemetry Equipment. Tacoma shall determine the size of the Meter and the flow range within which the Meter must operate.

10.2 Tacoma shall perform the calibration and testing of the Meter. During the Term, Tacoma shall periodically test the Meter for accuracy, and the results of such testing shall be made available to City. City may also test the Meter at any reasonable time and at City's expense. The results of any Meter test conducted by City shall be made available to Tacoma at no charge. A Meter accuracy measurement of two percent (2%) or better shall be considered within calibration tolerance.

10.3 If a Party shall require access to any area under the care, custody or control of the other Party for purposes of this Section 10, then such Party may request such access, subject to the other Party's prior approval, which such approval shall not be unreasonably withheld, conditioned or delayed.

11. WATER MANAGEMENT AND SCHEDULING

11.1 On or before May 1 of each year during the Term, City shall provide Tacoma with a Draft Operating Plan.

11.2 Prior to 10:00 a.m. on any Thursday during the Term, City may submit to Tacoma, in the manner and in the form established by Tacoma, a schedule for wholesale

water deliveries for the following seven (7) days ("Schedule"). The Schedule shall contain at a minimum a uniform rate of water deliveries for each day of the Schedule, and shall take effect on the day following the Thursday the Schedule is submitted. Schedules so submitted shall remain in effect until replaced by a subsequent Schedule submitted in accordance with this Section 11.2.

11.3 The Parties agree to jointly develop and maintain operating protocols for items including the scheduling of water demand to assure consistent flow control and treatment, routine operational communication, emergency shutdown, emergency contacts and other items the Parties determine appropriate ("Operating Protocols"). The Operating Protocols shall be subject to Tacoma's approval, which such approval shall not be unreasonably withheld, conditioned or delayed.

11.4 Tacoma reserves the right to modify, suspend, change or amend Schedules and Operating Protocols as necessary to comply or conform with this Agreement, the Wholesale Water Regulations, Applicable Law, or Prudent Utility Practices, or to respond to Uncontrollable Forces. Tacoma will provide City with thirty (30) days' advance notice of any modifications, suspensions, changes or amendments to the Operating Protocols; provided, however, if the need to modify, suspend, change or amend the Operating Protocols is attributable to Uncontrollable Forces, then Tacoma shall provide as much notice as is practicable under the circumstances.

12. CONSERVATION AND PLANNING

12.1 The Parties will seek to coordinate regional supply, planning, scheduling and operational programs that promote efficient use of water supplies, facilities, finances and staff resources. If requested by Tacoma, City shall participate in the planning and implementation process for conservation programs as they are developed and will share available conservation resources where beneficial to both Parties. In the event there is a water shortage or drought that requires Tacoma to institute water rationing or water use restrictions, Tacoma may institute reductions to deliveries of the Wholesale Water Supply consistent with the Wholesale Water Regulations and Prudent Utility Practices.

12.2 During the Term, City shall implement and maintain a water conservation and water curtailment program substantially equivalent to Tacoma's program. Tacoma reserves the right to reduce or discontinue Wholesale Water Service in the event City fails to adopt and conform its use of the Wholesale Water Supply to Tacoma's Water Shortage Response Plan.

13. RISK OF LOSS

13.1 Title to and risk of loss of water delivered by Tacoma to City pursuant to Section 8 shall pass from Tacoma to City at the Wholesale Service Connections.

13.2 Title to the Wholesale Service Connections, the Meter and the Telemetry Equipment shall be vested in Tacoma. Except as otherwise provided by Section 10.2, City shall have no right to operate, suspend, curtail, design, construct, test, maintain, repair,

improve, replace and use the Wholesale Service Connections, the Meter and the Telemetry Equipment. Title to the Interconnection Facilities shall be vested in City. Tacoma shall have no right or responsibility to operate, suspend, curtail, design, construct, test, maintain, repair, improve, replace or use the Interconnection Facilities.

14. INDEMNIFICATION

City shall defend, indemnify and hold each and all of the Tacoma Indemnitees harmless from and against any and all claims, liens, demands, actions, losses, damages, costs, expenses and liabilities (including attorneys' fees) arising directly or indirectly from or in connection with:

(a) the transportation, storage, sale, delivery and use of any water delivered to City in accordance with this Agreement;

(b) the negligent, reckless, or otherwise tortious acts or omissions of City, or of anyone directly or indirectly retained or employed by City, in performance of this Agreement;

(c) any material breach, failure, inconsistency, inaccuracy or default of any one or more representations made to Tacoma in Section 20;

(d) the use or resale of the Wholesale Water Supply for fire flows or fire suppression purposes, or

(e) City Hazardous Substances.

Nothing herein shall, however, require City to defend, indemnify and hold harmless the Tacoma Indemnitees for that portion (if any) of any such liability that is so proportionately and legally attributable to the negligent acts or omissions of any one or more of the Tacoma Indemnitees. As between the Parties and solely for the purpose of the indemnities contained in this Section 14, City expressly waives any immunity, defense or protection that may be granted to it under the Washington State Industrial Insurance Act, Title 51 RCW, or any other industrial insurance, workers' compensation or similar laws of the State of Washington to the fullest extent permitted by Applicable Law. This Section 14 shall not be interpreted or construed as a waiver of City's right to assert such immunity, defense or protection directly against any of its own employees or any such employee's estate or other representatives. This Section 14 has been mutually negotiated by the Parties and shall survive the expiration or termination of this Agreement.

NKB
City's Initials

15. REGULATORY COMPLIANCE

The Wholesale Water Service is provided subject to Applicable Law (including permits, authorization and the jurisdiction of a Governmental Authority to issue orders and

regulations regarding the Wholesale Water Service, the Wholesale Water Supply and the Project). City understands and agrees that Tacoma must comply with all such laws, permits, authorizations, orders and regulations, and that such laws, permits, authorizations, orders and regulations are an Uncontrollable Force to the extent that they affect the ability of Tacoma to fulfill its obligations under this Agreement.

16. NO RIGHT OR CLAIM TO WATER RIGHTS

By this Agreement, City secures a contractual right to receive Wholesale Water Service and to accept delivery from Tacoma of the Wholesale Water Supply as a wholesale customer. By this Agreement, City acquires no right, title or interest in or to (a) the Project, the Wholesale Service Connection, the Meter or the Telemetry Equipment; or (b) any water rights, water claims, water permits or water certificates.

17. DISPUTE RESOLUTION

17.1 Any and all claims, controversies or disputes arising out of, relating to or in connection with this Agreement (each, a "Dispute") as between the Parties shall be resolved in accordance with the Dispute resolution procedures set forth in this Section 17.

17.2 The Parties shall inform one another promptly following the occurrence or discovery of any item or event that would reasonably be expected to result in a Dispute required to be resolved in accordance with this Dispute resolution procedure. The initial mechanism to resolve Disputes will involve negotiations between the Parties' representatives, so designated by the Parties by notice given pursuant to Section 23.

17.3 If the Parties cannot resolve a Dispute satisfactorily within ten (10) days after receipt of the initial notice in accordance with Section 17.2, either Party may deliver to the other Party notice of the Dispute with a detailed description of the underlying circumstances of such Dispute. The Dispute notice shall include a schedule of the availability of the notifying Party's senior officers duly authorized to settle the Dispute during the thirty (30) day period following the delivery of the Dispute notice. The recipient Party shall, within three (3) business days following receipt of the Dispute notice, provide to the notifying Party a parallel schedule of availability of the recipient Party's senior officers duly authorized to settle the Dispute. Following delivery of the respective senior officers' schedules of availability, the senior officers of the notifying Party and the recipient Party shall meet and confer, as often as they deem reasonably necessary during the remainder of the thirty (30) day period, in good-faith negotiations to resolve the Dispute to the satisfaction of both Parties.

17.4 If at any time during the good-faith efforts to resolve any Dispute arising under this Agreement either of the Parties determines that such informal discussions will not result in a resolution of the issue or issues in Dispute, such Party may initiate the Dispute resolution process in accordance with the provisions of Exhibit B.

17.5 Pending resolution of any Dispute, the Parties shall continue to fulfill their respective duties under this Agreement.

18. DEFAULT AND REMEDIES

18.1 If a Party fails to perform its obligations hereunder, then it shall be in default hereunder unless the defaulting Party cures:

(a) a monetary event of default within thirty (30) days after receiving written notice from the other Party of such monetary default; and

(b) a non-monetary event of default within sixty (60) days after receiving a notice of default from the non-defaulting Party; provided, however, that if the nature or extent of the obligation or obligations is such that more than sixty (60) days are required, in the exercise of commercially reasonable diligence, to cure such non-monetary default, then the defaulting Party shall not be in default if it commences such performance within such sixty (60) day period and thereafter pursues the same to completion with commercially reasonable diligence.

18.2 Except as otherwise provided by the Wholesale Water Regulations, and subject to the procedures set forth in Section 17, if a Party is in breach or default of its obligations arising under this Agreement, the other Party shall have and shall be entitled to exercise any and all remedies available to it at law or in equity (including the right to specifically enforce this Agreement), all of which remedies shall be cumulative. If either Party elects to pursue singularly any remedy available to it under this Section 18, then such Party may at any time thereafter continue to pursue or cease pursuing that remedy and simultaneously elect to pursue any other remedy available to it under this Section 18.

19. ADDITIONAL WATER

During the Term, City may request that Tacoma supply City with wholesale water on a temporary basis in addition to the Wholesale Water Supply ("Temporary Wholesale Water Supply"). The availability of the Temporary Wholesale Water Supply for sale by Tacoma to City at any time or from time to time during the Term shall be determined by Tacoma in its sole discretion. If Tacoma shall determine that some or all of the Temporary Wholesale Water Supply is available for sale to City, it may be sold, scheduled, priced and delivered to City on such terms and conditions as may then be acceptable to the Parties upon approval of the Parties' applicable governing bodies. Without limiting the generality of the foregoing, any such sales shall be subject to the Wholesale Water Regulations (as applicable), the System Development Charge, the availability of resources, and the disruption, interruption, suspension and curtailment of the Temporary Wholesale Water Supply by Tacoma at any time.

20. REPRESENTATIONS OF THE PARTIES

20.1 Each Party is duly authorized and validly existing under the laws of, is authorized to exercise its powers, rights and privileges under the laws of, and is in good standing in the State of Washington, and has full power and authority to carry on its business

as presently conducted, to execute this Agreement and to perform the transactions on its part contemplated by this Agreement.

20.2 The execution, delivery and performance of this Agreement, and the consummation of the transactions contemplated hereby, have been duly authorized by the appropriate board or council, and no other act or proceeding on the part of a Party is necessary to authorize this Agreement, or the transactions contemplated hereby.

20.3 The execution, delivery and performance by each of the Parties of this Agreement does not (a) contravene Applicable Law; or (b) conflict with or result in a breach of or default under any material agreement or instrument to which any Party is a party or by which it is bound.

20.4 There are no actions, suits, claims or proceedings pending or, to the best of each Party's knowledge, threatened against either Party that is likely to impair the consummation or the transactions contemplated hereby.

21. TERM

The term of this Agreement (the "Term") shall commence as of the Effective Date and shall remain in full force and effect until the date that Tacoma ceases making wholesale water sales in accordance with the Wholesale Water Regulations.

22. UNCONTROLLABLE FORCES

If performance of this Agreement or of any obligation hereunder (other than the insufficiency of funds, the financial inability to perform or changes in a Party's cost of performing its obligations) is prevented or substantially restricted or interfered with by reason of an Uncontrollable Force, the affected Party, upon giving notice to the other Party, shall be excused from such performance to the extent of and for the duration of such prevention, restriction or interference. The affected Party shall use its reasonable efforts to avoid or remove such causes of nonperformance and shall continue performance hereunder whenever such causes are removed.

23. NOTICES

23.1 All notices or other communications required or permitted by this Agreement must be in writing and be personally delivered, delivered by recognized overnight courier service or given by mail or via facsimile. Any notice given by mail must be sent, postage prepaid, by certified or registered mail, return receipt requested. All notices must be addressed to the Parties at the following addresses or at such other addresses as the Parties may from time to time direct in writing:

Tacoma:	Water Superintendent P.O. Box 11007 Tacoma, WA 98411 Phone: (253) 502-8245 Fax: (253) 502-8694
City:	Assistant Director of Engineering/City Engineer 25 West Main Street Auburn, WA 98001 Phone: (253) 931-3010 Fax: (253) 931-3053

23.2 Any notice will be deemed to have been given (a) if personally delivered, when delivered, (b) if delivered by courier service, one (1) business day after deposit with the courier service, (c) if mailed, two (2) business days after deposit at any post office in the United States, and (d) if delivered via facsimile, the same day as verified; provided that any verification that occurs after 5:00 p.m. on a business day, or at any time on a Saturday, Sunday or holiday, will be deemed to have occurred as of 9:00 a.m. on the following business day.

24. MISCELLANEOUS

24.1 The rights and obligations of the Parties arising under this Agreement may not be sold, assigned or otherwise transferred in whole or in part by a Party without the prior written consent of the other Party, which consent shall not be unreasonably withheld or delayed. Subject to the foregoing, this Agreement shall be binding upon the Parties' respective successors and permitted assigns.

24.2 The Parties agree that in taking actions or making determinations required or provided for under this Agreement, each Party shall act in fairness and in good faith. The Parties will cooperate and use commercially reasonable efforts to facilitate the implementation of all aspects of this Agreement. During the Term, each Party, upon the request of the other Party, shall, without further consideration, execute, deliver and acknowledge all such further documents and do and perform all such other acts and things as either Party may reasonably request to effectively carry out the intent of this Agreement.

24.3 A Party shall not have the right to offset any amounts owed to the other Party pursuant to this Agreement against any amounts due from the other Party pursuant to this Agreement, nor may a Party offset any amounts due to the other Party pursuant to this Agreement against any amounts owed by the other Party pursuant to this Agreement. A Party may not withhold any payment due the other Party by reason of a Dispute; such payment shall be paid "under protest" and any and all Disputes with respect to such payment shall be resolved pursuant to Section 17.

24.4 Any of the terms or conditions of this Agreement may be waived at any time and from time to time, in a signed writing, by the Party or Parties entitled to the benefit of

such terms or conditions. Any waiver given by a Party shall be narrowly construed to specifically waive, in time and subject, only the express matter contained in such waiver. The failure of either Party to insist on or enforce strict performance of any provision of this Agreement or to exercise any right or remedy under this Agreement or Applicable Law will not be construed as a waiver or relinquishment to any extent of the right to assert or rely upon any such provision, right or remedy in that or any other instance; rather, the same will be and remain in full force and effect. Tacoma's review, revision or approval of or comment upon any matter arising under this Agreement, or Tacoma's failure to review, revise, approve or comment upon any matter arising under this Agreement, shall not in any way (a) relieve or release City from any of its obligations arising under this Agreement, or (b) subject Tacoma to any liability with respect to such matter.

24.5 This Agreement shall be governed by and construed in accordance with the laws of the State of Washington (regardless of the laws that might otherwise govern under applicable principles of conflict of laws of such state). Except with respect to a lawsuit or judicial action or proceeding commenced by a third party in another jurisdiction and subject to Exhibit B, the Parties will (a) agree that any lawsuit, judicial action or proceeding arising out of or relating to this Agreement must be heard in the Superior Court of the State of Washington, in and for the County of Pierce, or the United States District Court for the Western District of Washington in Tacoma; (b) waive any objection to the laying of venue of any such suit, action or proceeding; and (c) irrevocably submit to the jurisdiction of any such court in any such lawsuit, judicial action or proceeding.

24.6 Terms defined in a given number, tense or form shall have the corresponding meaning when used in this Agreement with initial capitals in another number, tense or form. References containing terms such as "hereof," "herein," "hereto," "hereinafter" and other terms of like import are not limited in applicability to the specific provision within which such references are set forth but instead refer to this Agreement taken as a whole. "Includes" or "including" shall not be deemed limited by the specific enumeration of items, but shall be deemed without limitation. The term "or" is not exclusive. The headings contained in this Agreement are included solely for the convenience of the Parties. Accounting terms used but not defined herein have the meanings given to them under generally accepted accounting principles in the United States consistently applied throughout the specified period and in the immediately prior comparable period. The term "day" means a calendar day unless otherwise specified as a "business day"; a business day means a day, other than a Saturday or Sunday or public holiday, on which banks are generally open for business in Pierce County, Washington.

24.7 Any provisions of this Agreement prohibited or rendered unenforceable by Applicable Law shall be ineffective only to the extent of such prohibition or unenforceability without invalidating the remaining provisions of this Agreement. In such event, the remainder of this Agreement will remain valid and enforceable. Upon such determination that any term or other provision is prohibited or rendered unenforceable, the Parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the Parties as closely as possible in an acceptable manner to the end that transactions contemplated under this Agreement are fulfilled to the greatest extent possible.

24.8 This Agreement may be amended only by an instrument in writing executed by the Parties that expressly refers to this Agreement and states that it is an amendment hereto. This Agreement constitutes the entire agreement between the Parties and supersedes all other prior agreements and understandings, oral and written, between the Parties with respect to the subject matter hereof. No amendment, modification or waiver of any provision of this Agreement will be valid unless set forth in a written instrument signed by both Parties. If a Party becomes aware of a conflict between this Agreement and any other agreement in place between such Party and any Person, it will promptly notify such other Party, and the Parties will work in good faith to resolve the conflict.

24.9 Nothing contained in this Agreement shall be deemed or construed by the Parties, or by any third party, as creating the relationship of principal and agent, or of partnership or of joint venture, between the Parties. Neither Party shall enter into any contract, agreement or other commitment, or incur any obligation or liability, in the name of or otherwise on behalf of the other Party. This Agreement shall create no rights, responsibilities and/or obligations in, to or from any Persons other than Tacoma and City.

24.10 Sections 13,14,16,17,18, 20, 24.5 and all other terms and conditions of this Agreement that must be reasonably construed to survive the expiration or termination of this Agreement in order to give full force and effect to the intent of the Parties as set forth herein shall survive the expiration or termination of this Agreement, regardless of whether such survival is expressly specified herein.

24.11 This Agreement may be executed in several counterparts, each of which shall be deemed to be an original and all of which together shall constitute one and the same instrument.

24.12 This Agreement has been negotiated on an arm's-length basis by the Parties and their respective counsel and shall be interpreted fairly in accordance with its terms and without any strict construction in favor of or against either Party.

IN WITNESS WHEREOF, the Parties have duly executed this Agreement as of the Effective Date.

Dated this 10th day of November, 2014.

Exhibit B

Dispute Resolution Procedures

The following procedures shall govern the resolution of any dispute arising under the Wholesale Water Supply Agreement dated [illegible] (the "Agreement") between the Parties that cannot be resolved by good-faith negotiations between the Parties, unless the Parties mutually agree to use different procedures to resolve a specific dispute by executing a document setting forth such different procedures. The Parties agree that these dispute resolution procedures are intended to be used in conjunction with and governed by Chapter 4.48 RCW, and both Parties hereby waive their right to a trial by jury for any dispute arising under the Agreement.

1. The Party that believes that continued good-faith negotiations will not produce a resolution of the issue or issues that are the subject of such negotiations will notify the other Party in writing that it is invoking the dispute resolution procedures of this Exhibit B.

2. Within twenty (20) days of the date of such notice invoking the dispute resolution procedures of this Exhibit B, the Parties shall meet and select an individual to recommend to the court as referee of the dispute resolution process in accordance with RCW 4.48.020. The Parties shall select an individual who is qualified as a juror as provided by statute, is competent as a juror between the Parties, is a duly admitted and practicing attorney, and has experience presiding over civil litigation of contract disputes. The Parties will use the following procedure to select the recommended referee:

   2.1 Each Party will make a list of three individuals that are qualified pursuant to Paragraph 2 to serve as referee and exchange such list with the other Party. If the Parties agree upon a person from either list, or if both Parties list the same person, that person will be the recommended referee.

   2.2 If the Parties are unable to agree upon a referee after exchanging their respective lists, they will make a joint list setting forth all six candidates from the two lists.

3. Upon the selection of the recommended referee, or the creation of the joint list pursuant to Subparagraph 2.2 of this Exhibit B, the Party that invoked the dispute resolution procedures shall file a complaint, in the superior court of the appropriate county as set forth in Section 24.5 of the Agreement, setting forth the issue or issues in dispute, and the other Party shall file an answer to such complaint. Not later than twenty (20) days after the filing of the answer, the Parties shall jointly file a motion, with the Agreement (including this Exhibit B) attached, with the court requesting an order of reference that:

3.1 Directs that the issue or issues raised by the complaint and answer be resolved pursuant to Chapter 4.48 RCW by reference to a referee;

3.2 Appoints, pursuant to RCW 4.48.020, either the recommended referee selected by the Parties pursuant to Subparagraph 2.1 of this Exhibit B, or a single referee from the joint list prepared pursuant to Subparagraph 2.2 of this Exhibit B; and

3.3 Directs the referee to conduct the proceeding in accordance with the procedures set out in Paragraphs 4-10 of this Exhibit B.

4. In accordance with RCW 4.48.060, the Parties hereby waive their rights to discovery and cross-examination, and direct that the proceeding be conducted in the same manner as a motion for summary judgment as follows:

4.1 The Parties shall present their respective positions by written briefs and affidavits, and without testimonial evidence or cross-examination;

4.2 Oral argument will be conducted before the referee; and

4.3 The burdens of proof and persuasion that pertain in a civil trial shall apply, rather than those that apply to motions for summary judgment.

5. After appointment of the referee, the Parties shall endeavor in good faith to prepare for the referee a joint statement of facts and the questions to be decided in the proceeding. In the absence of an agreed-to joint statement of facts and questions to be decided, each Party may include its own statement of facts and questions to be decided in its initial brief.

6. Within ninety (90) days after the submission of the joint statement of facts and questions to be decided, or within ninety (90) days after the appointment of the referee if the Parties cannot agree to a joint submission of facts and questions to be decided, each Party shall submit to the referee a one-page statement of the proposed resolution and/or award it seeks for each issue in dispute, and its initial brief. The statement and initial brief (excluding any attached affidavits or evidentiary documents) shall not exceed fifty (50) 8½" x 11" double-spaced pages with 1½-inch margins and 12-point typeface. The statement and initial brief shall be filed simultaneously by e-mail and regular mail with the referee and opposing Party.

7. Within thirty (30) days after the date the Parties filed their initial briefs, the Parties shall file their respective reply briefs with the referee and the opposing Party. The reply briefs (excluding any attached affidavits or evidentiary documents) shall not exceed twenty-five (25) 8½" x 11" double-spaced pages with 1½-inch margins and 12-point typeface. The reply briefs shall be filed simultaneously by e-mail and regular mail with the referee and opposing Party.

8. After the reply briefs have been filed, if the referee deems that additional responses are needed, then the referee may request that the Parties file a supplemental brief only as to those specific matters or questions raised by the referee. Such supplemental briefs shall be limited to fifteen (15) 8½" x 11" double-spaced pages with 1½-inch margins and 12-point typeface, and shall be filed at such time requested by the referee. Any such supplemental briefs shall be filed simultaneously by e-mail and regular mail upon the referee and opposing Party.

9. When all briefs have been filed, the referee will schedule oral argument on the issue or issues in dispute.

10. After the completion of oral argument, the referee will prepare his or her proposed report in accordance with RCW 4.48.70 and shall provide a copy of the proposed report to the Parties, who shall have the right to suggest changes and modifications to the proposed report, all in accordance with RCW 4.48.110. The referee will file the final report with the court within twenty (20) days of the completion of the process under RCW 4.48.110.

11. Either Party may move the court to modify or set aside, in whole or in part, the final report of the referee. If the court modifies or sets aside, in whole or in part, the final report of the referee and makes another reference, then this Exhibit B shall also apply to such reference.

12. Each Party shall be responsible for its own costs of the dispute resolution process (including any judicial proceedings), and the Parties shall each pay one-half of the other costs of the dispute resolution proceeding, including the fees of the referee. The fees of the referee shall be established in accordance with RCW 4.48.100.

RESOLUTION NO. 5153

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE THE INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE MUCKLESHOOT INDIAN TRIBE FOR THE ALLOTMENT M-TWO SUBDIVISION AND CASINO PREMISES UTILITY ISOLATION

WHEREAS, the City of Auburn and the Muckleshoot Indian tribe (MIT) have worked together to provide utility services for those portions of the Muckleshoot Reservation property located within the City, having heretofore entered into master development agreements and utility easement agreements; and

WHEREAS, MIT desires to develop a certain portion of its property for a residential subdivision and wishes to utilize a portion of City property for access and storm drainage utilities for the MIT Allotment M2 Subdivision; and

WHEREAS, the City of Auburn desires to complete premise isolation improvements at the MIT Casino Property for the protection of the City's potable water system; and

WHEREAS, the City of Auburn and MIT have negotiated terms and conditions of an interlocal agreement with respect to the exchange of property rights and the completion of improvements by both parties to the benefit of both the City and MIT, which terms and conditions are acceptable to both parties.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. That the Mayor is hereby authorized to execute an Interlocal Agreement between the City and the Muckleshoot Indian Tribe for the Allotment M-2

Subdivision and Casino Premises Utility Isolation which agreement shall be in substantial conformity with the agreement attached hereto as Exhibit 1 and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 6th day of July, 2015.

CITY OF AUBURN

Nancy Backus

NANCY BACKUS, MAYOR

ATTEST:

Danielle E. Daskam, City Clerk

APPROVED AS TO FORM:

Daniel B. Heid, City Attorney

CITY OF AUBURN – MUCKLESHOOT INDIAN TRIBE
INTERLOCAL AGREEMENT FOR THE ALLOTMENT M-2 SUBDIVISION AND CASINO PREMISES UTILITY ISOLATION

THIS INTERLOCAL AGREEMENT made and entered into, pursuant to the Interlocal Cooperation Act, Chapter 39.34 of the Revised Code of Washington, The Constitution of the Muckleshoot Tribe of Indians, and 25 U.S.C. § 81, on the 17th day of July, 2015, by and between the CITY OF AUBURN, a municipal corporation of the State of Washington (the "City"), and the Muckleshoot Indian Tribe, a sovereign jurisdiction located within the State of Washington ("MIT"), (together, the "Parties")

RECITALS:

1. MIT intends to develop a portion of parcel of property which is identified as King County Tax Parcel Number 2021059001, such Real Property as legally described on Exhibit A, located on the northeast corner of R Street SE and Old Howard Road (the "Parcel") within the boundaries of the MIT reservation boundary and known as the Parcel B Allotment M-2; and specifically, the MIT is developing the southwest corner of the Parcel B Allotment M-2 with a residential plat (known as "Allotment M-2 Subdivision"); and

2. The parties agree that the City shall transfer ownership of a triangular portion of an adjacent parcel of City-owned land which is identified as King County Tax Parcel No. 2021059019 ("Parcel 2021059019)" Real Property as legally described on Exhibit B and the triangular portion (approximately 5,165 square feet) which is necessary for access to be transferred as depicted on Exhibit "C", to MIT in exchange for MIT constructing for the City a storm drainage infiltration facility and storm line; and

3. The City requires premise isolation on large commercial water systems such as the MIT Casino Facility ("Casino"), which requires constructing two master meters and premise isolation (backflow prevention) systems on Casino Property; and

4. The Parties previously entered into a Water or Sanitary Sewer Service Line Agreement ("Service Line Agreement") dated May 14, 2004 (Recording No. 20040603002585), attached as Exhibit "D", for the Casino Property (which is legally described on Exhibit A of the Service Line Agreement), which provided the City with the right to access, inspect, construct, operate, maintain, repair, replace and enlarge water or sanitary sewer lines within Casino Property; and

5. The Parties agree that it is in their mutual interest to grant each other the necessary rights and responsibilities to do all other things agreed to be necessary to implement this Agreement.

NOW THEREFORE in consideration of their mutual covenants, conditions and promises, **THE PARTIES HERETO DO HEREBY AGREE** as follows:

The Parties shall consult with each other on a government-to-government basis in order to achieve their mutual goals and implement this Agreement.

A. CITY'S RESPONSIBILITIES

1. Short-plat the northwest portion of the adjacent City-owned parcel (Parcel No. 2021059019), the approximate location and extent of the triangular portion to be short-platted is depicted on Exhibit "C". The City shall record the short plat, then transfer ownership of the newly-created triangular parcel to MIT in exchange for MIT's construction of the storm drainage facilities described in Paragraphs A.4 and B.5 hereinafter.

2. Construct, at no cost to MIT, two (2) premise isolation facilities including master meters, backflow assemblies, piping, and disconnection of existing piping to adjacent parcels north and east of the Casino Property, as the City determines, is necessary to supply the Casino with domestic water and fire flows. The City will provide final design documents of the two (2) premise isolation facilities and a demo plan for disconnection of existing piping to MIT prior to construction. City understands that the revenues for MIT are contingent upon the access and service quality at the Casino. For that reason, City will agree to require their contractors to complete construction activities between the months of June and August, and between the hours of 5 a.m. and 2 p.m. for the work to occur within the Casino Property to provide the least disruptive customer access and water service interruption.. Contractors will be required to use equipment and implement a demo plan that does not interfere with ingress and egress of delivery trucks in the driveway located at the rear of the Casino. Upon completion of construction, the City shall convey all City-owned water system infrastructure behind the master meter vault (i.e., on the Casino side of the vault) to MIT. This shall include the new backflow prevention equipment, piping, hydrants, and other appurtenances. At the same time, the City shall convey all City-owned sewer system infrastructure that is located within the Casino property to MIT.

3. The City represents and warrants that the new premise isolation facilities once installed by or on behalf of the City shall not unreasonably adversely impact the Casino.

4. The City shall allow MIT access to construct a storm water infiltration facility, a storm drain line, and relocate the existing chain-link fence on City property (Parcel 2021059019) just south of the southern MIT property line separating the MIT (Parcel 2021059001) and City properties through a temporary construction and access easement. The system shall intercept storm water drainage located near the northeast corner of the City's property, be linked to a MIT storm infiltration system by means of a raised berm and connection pipe(s), and shall divert

overflow stormwater through a new pipe to an existing City storm line in Howard Road SE. City shall apply for, obtain and pay for any permits required to construct the storm drain system on City property if such permits are required beyond the development permit MIT is obtaining from the City for its Allotment M-2 Subdivision. City shall be entitled to inspect the work within City properties to insure it meets the City's requirements. MIT access to the City's properties shall be restricted to normal working hours on normal business days.

B. MIT RESPONSIBILITIES

1. Grant permits to the City of Auburn and right of entry agreements as necessary to allow the City to construct, operate and maintain two (2) Master Water Meter Assemblies (Master Meter Assemblies) and their associated piping from the Right-of-Way to the Master Meter Assemblies for the Casino on the Casino Property. MIT shall honor the Water or Sanitary Sewer Service Line Agreement, Reference Recording No. 20040603002585 and attached hereto as Exhibit "D", which provides access to the Master Meter Assemblies wherever located or relocated on the Casino Property for as long as the City provides water service to the Casino Property. The approximate location and extent of the Master Meter Assemblies is shown in Exhibit "E". Should MIT determine the need to relocate any part of the Master Meter Assemblies, MIT shall provide the City no less than 90 days' notice and the Parties shall meet to discuss and agree to the optimal new location. Should MIT's construction plan for the Casino Property include building or installing an obstruction or impediment including but not limited to fences, rockeries, or trees within ten (10) feet of the Master Meter Assemblies, the parties shall meet to determine whether relocation of the assemblies is necessary to maintain access to the meters. Any such reasonable relocation costs of the Master Meter Assemblies shall be paid by MIT.

2. MIT shall own and maintain the Casino Property water system infrastructure behind (downstream of) the City Master Meter Assemblies as described herein including required annual testing and reporting to the City for the two backflow assemblies required for premise isolation.

3. MIT shall own and maintain the Casino Property sewer system infrastructure located within the Casino Property.

4. Execute necessary utility access easement documents for the City-owned utilities serving the Allotment M-2 Subdivision by the MIT. The City shall record the approved easements.
