The Utility uses a SCADA system to monitor and operate, as necessary, the sewer and storm pump stations from a centralized location. SCADA information from all sewer, storm, and water facilities is routed via radio signals to the M&O control center located at 1305 C Street SW. The control center monitors wet well levels at all of the sewer pump stations together with pump run times and cycles.

Logic programming automates the sewer pump station operation via ultrasonic level detectors with backup high float switches. The control center is configured to sound an alarm in the M&O building if a recognized anomaly is detected. The alarm system is contacts Utility staff to investigate the anomaly in the event that the problem occurs during non-working hours. All alarm and pump information is recorded within the computer that functions as the control center.

6.5.2 Data Collection and Record-Keeping

Data collection and record-keeping functions for the Utility are performed using a Web-based CMMS software package provided by Cartegraph Inc. The CMMS integrates GIS data with Utility records, providing managers with overview information about system and operational performance, and field crews with information related to the condition and failure history of specific wastewater facilities. The City currently uses the CMMS to plan field staff activities (tasks), record results of both routine and non-routine maintenance, and compare actual maintenance efforts to City goals. The City is also using the CMMS as an asset management tool, through which the City optimizes staffing and capital resource planning.

In recent years, the City has made considerable progress in adding asset information to the CMMS, specifically GIS data, physical information related to size and material, and installation date. However, significant inventory work, which is underway, is still required to fully utilize the asset management function of the CMMS, and the addition of information related to risk, asset criticality, and condition is also necessary. To assist the City's transition to an asset management program, the attributes listed below should be used within the CMMS to define each of the City sewer assets (manhole, pipe segment, pump, etc.).

6.5.2.1 Asset-Specific Attributes

The following asset-specific attributes are related to the asset and, besides replacement cost, remain relatively unchanged over time:

- **Asset ID:** The unique asset number that is used by all business systems to identify an asset.
- **Location:** Where the asset is located (GIS).
- **In-service date:** The date the asset was placed into service.

- **Replacement cost:** The cost to replace the asset and the year that the cost data were calculated.
- **Useful life:** The average life expectancy of the asset.
- **Asset criticality:** A value assigned to each asset that indicates how essential it is to maintain service. Typically, it is defined as a combined score based on the consequence of failure and the likelihood of failure, as defined below:
  - **Consequence of failure:** The social and economic cost if the asset fails.
  - **Likelihood of failure (condition):** The estimated time until the asset fails, usually based on condition.
- **Asset class:** A group of assets that share the same characteristics (e.g., manholes, pipe segments). Asset class is used to estimate replacement costs and useful life of groups of assets.
- **Nameplate information and asset specifications:** Important information that is used to uniquely describe an asset such as the manufacturer name, type of asset, serial number, size, material, etc. This information is used for asset identification, replacement, and repair.

6.5.2.2 Maintenance and Operation Attributes

The following M&O attributes are captured as part of the operations, maintenance, and repair history associated with each asset.

- **Asset ID:** Most work orders should be associated with one or more assets. The asset ID is used to uniquely associate work with individual assets.
- **Issue, cause, action:** These codes are used to classify historical M&O activities associated with corrective actions or unplanned maintenance.
  - **Issue:** What is the problem observed in the field?
  - **Cause:** What is the underlying cause of the problem?
  - **Action:** What was done to address the cause?
- **Target start/stop date and actual dates:** Recording the estimated and actual start and stop dates for a work order can help in determining efficiency, planning workloads, and assessing repair costs.
- **Task costs:** Task order costs include labor, parts, materials, and equipment, and should be accurately recorded for each work order.
- **Task type:** Task order types are used to group and compare different types of work activities. Typical work order types include:
  - **Capital improvement:** Work associated with a capital improvement project.
  - **Corrective maintenance:** Work associated with an unplanned repair.
  - **Preventive maintenance:** Work associated with a planned preventive maintenance activity.
  - **Predictive maintenance:** Work associated with predictive measures (usually for critical assets).
- **Warranty information:** Helps to determine assets that are under warranty and the warranty maintenance requirements.

6.6 Existing Staffing Requirements

Existing staffing requirements for M&O activities as discussed in this chapter were compiled and evaluated to determine staffing requirements needed to efficiently operate, maintain, repair, and collect and report the information necessary to properly operate the sewer system. Table 6.2 evaluates the estimated time to conduct sewer system M&O tasks in the manner currently performed. Calculated days for each M&O activity are for a single person performed over an eight-hour "day." Therefore, an activity that is performed quarterly and that requires four hours and two M&O staff to complete would result in an annual requirement of four days.

Table 6.2 Sewer System Maintenance and Operation Task Summary

Work Activity	FTE Days Required Annually	Assumptions/City Goal
Collection System Maintenance		
Manhole inspection	35	Inspect once every 5 years, total of 5,500 manholes. Perform 32 inspections per day with one-person crew.
Manhole cleaning	28	One cleaning is required for every 20 inspections. Two-person crew, 2 hours each.
Manhole repair	40	40 repairs per year. Two-person crew, 4 hours each.
Pipeline cleaning	238	City goal is 220,000 feet per year (entire system in 7 years). A three-person crew cleans approximately 3,000 feet of pipe per day.
CCTV inspection	370	City goal is 220,000 feet per year (entire system in 7 years). A two-person crew inspects approximately 1,200 feet of pipe per day.
Pump Station Maintenance		
Weekly routine maintenance	377	29 pump stations weekly (52 per year). Two-person crew, 1 hour each.
Monthly routine maintenance	174	29 pump stations monthly (12 per year). Two-person crew, 2 hours each.
Wet well cleaning	29	29 pump stations, 2 per year. Two-person crew, 2 hours each.
Other Sewer M&O Activities		
Field operations	375	Two-person field crew for 0.75 of working days (1.5 FTE).
Customer service requests/complaints	50	50 requests per year. Two-person crew, 4 hours each.
Data entry	130	20 hours per week total.
Subtotal	1,846	
Total	2,172	Assumes 15% unquantified work
Total number of working days available at current staffing level	2,140	Based on 5-year average
Current FTEs	10	2,045 days required divided by 200 days per FTE year.
Number of FTEs required	10.1	

Table 6.2 shows that the Utility is appropriately staffed with respect to meeting current City goals for M&O activities. The analysis confirms the qualitative assessment of staffing adequacy provided by City Maintenance staff. The City has consistently approached assessment and maintenance goals, but has little room for deviation from normal procedure due to equipment failure, employee turnover, sickness, additional training, etc. To mitigate shortfalls, areas of the collection system have received higher priority due to frequent need for maintenance (older pipe in poor condition), relatively flat slopes, or high concentrations of FOG. As the system grows and ages, there will likely be a need for additional staff to perform more frequent cleaning and CCTV inspection of the entire system and to account for sewer system expansion with overall city growth.

6.7 Potential Improvement Opportunities and Capital Needs

Based upon discussions with City staff and analysis of M&O activities discussed in this chapter, the following improvement opportunities are available to the Utility. These opportunities are based on improving existing services and improving work productivity:

- Continue to integrate asset management with existing Utility management software (CMMS and GIS):
  - » Continue to add GIS attributes to known Utility assets.
  - » Perform and document condition assessments. Use defined criteria (such as leaks/cracks observed, cleanliness, and other specific measures) and provide staff training to ensure assessment consistency. Use NASSCO PACP-certified inspection programs to integrate inspection results with CMMS.
  - » Use the results of condition assessments to move toward risk-based maintenance to best utilize staff resources. For example, consistently high assessment scores would result in a lower risk or need for maintenance/inspection, allowing M&O staff to be diverted to more essential activities.
  - » Use the compiled results of condition-based assessments to more systematically program repair, rehabilitation and replacement of aging sewer pipes.
- Complete CCTV inspection of inverted siphons that cross the Green River. The City does not have the equipment to inspect these facilities; therefore, contract services will be required.
- Hire a contractor to perform follow-up inspections of the City's large diameter pipes (with a greater than 18-inch diameter) to assess degradation since the previous inspections in 2020.
- Initiate a program to inspect and correct deficiencies in portions of side sewers that are the City's responsibility, meaning the portions located within City rights-of-way. Such a program could include adding additional "side launch" inspection capabilities to the City's current CCTV equipment, hiring a contractor to conduct inspections, or some combination of the two. The compiled results of those inspections would be used to initiate repairs, whether they be done by current staff, or by one of various methods of delivering a capital project.
- Utilize new engineering staff to oversee the cleaning programs more proactively for grease traps and interceptors by food service establishments, and more frequently educate the public about the harmful effects of discharging FOG and other prohibited substances to the public sewer system.

CHAPTER 7 CAPITAL IMPROVEMENT PLAN

This chapter discusses recommended capital projects for the City's sewer system service area (SSSA). The capital projects necessary to meet and maintain the City's level of service (LOS), as described by the goals and policies in Chapter 2 of this Plan, through the 20-year planning period (2025–2044) are presented as a Capital Improvement Plan (CIP).

This Plan includes time frames, which represent the intended framework for future funding decisions and within which future actions and decisions are intended to occur. However, these time frames are estimates, and depending on factors involved in the processing of applications and project work, and availability of funding, the timing may change. The framework does not represent actual commitments by the City. Project identification is an ongoing effort requiring periodic evaluation. This CIP list was developed based on incorporating the City's Capital Facilities Plan (CFP), identification of equipment limitations within the M&O group, and identification of areas of improvement.

7.1 Capital Improvement Plan

The CIP focuses on addressing known problems in a manner identifying cost-effective solutions that incorporate the risks associated with substandard facilities and the uncertainty inherent in engineering calculations/model simulations. A flow chart depicting the process of CIP development is shown in Figure 7.1.

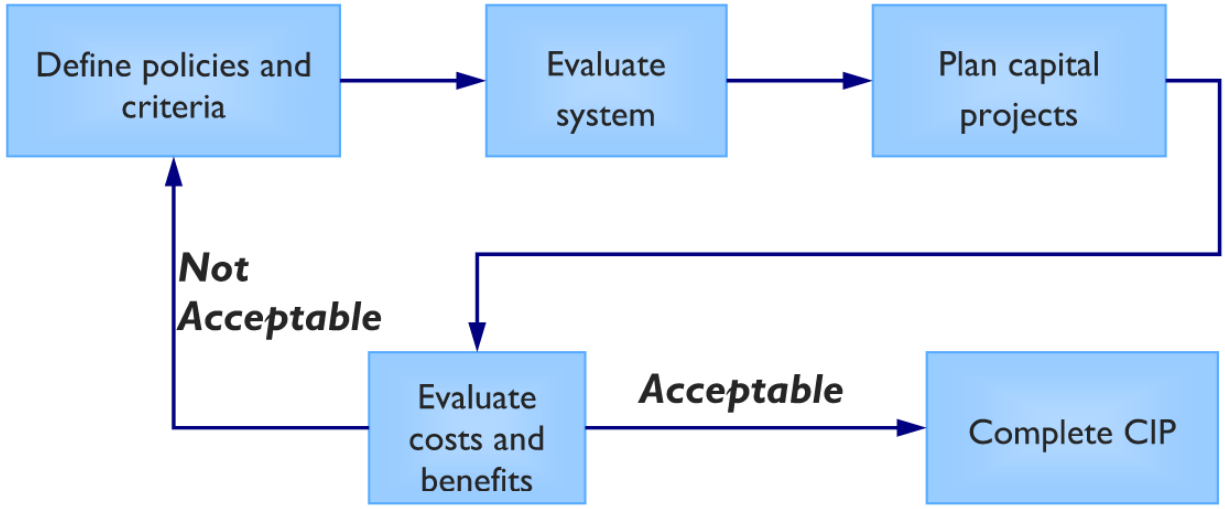

Figure 7.1 CIP Development Flow Chart

The CIP places emphasis on projects identified for implementation between 2025 and 2030, which constitutes the 6-year planning period for utility capital funding requirements and staffing needs. This period provides a realistic outer limit for accurately forecasting the annual cycle of utility projects and priorities. This Plan also includes a 20-year CIP that examines long-term capital requirements, such as the replacement of infrastructure as it exceeds its useful life. All projects in the CIP are consistent with the LOS.

7.1.1 Project Priority

All projects in the CIP have been prioritized for implementation. Priority was assigned as one of three designations. Projects in the top tier, or highest priority, are designated Priority 1; projects in the middle tier are designated Priority 2; and projects with the lowest priority relative to the other projects are considered Priority 3. The priority levels are based on how the proposed project impacts LOS. The project descriptions below include the designated priority.

7.1.2 Project Cost

Estimated costs for each project are included in the CIP descriptions below. The costs are planning-level estimates. Actual costs will depend on various factors at the time of design and construction including labor and material costs. Estimated costs include an allowance for engineering, legal, and administration fees, construction contingencies, contractor overhead, and general conditions. Permitting and land, easement, and/or right-of-way acquisitions are not included in the cost estimate. The costs estimates are in 2024 dollars. CIP Projects 1 and 2 are part of the City's Capital Facilities Plan, where the City developed the costs for these projects.

7.1.3 Project Summary

The CIP projects mainly consist of ongoing and programmatic capital improvements. Ongoing projects include projects identified through previous studies. The City has previously allocated funding to each of these projects, which are currently in various stages of execution. These projects must continue to receive funding under the CIP until completion and have been included in this document to provide a complete picture of the program. Programmatic projects are included in the CIP to provide funding for maintaining and/or improving the LOS. These projects do not address a problem at a specific location but allocate budget for addressing LOS goals citywide. As discussed in Chapter 5, the system hydraulic analysis outlined six areas with future capacity deficiencies. Capacity-related capital projects have been included in the six-year or 20-year planning period, specifically Projects 1 and 4, which are described below in Section 7.2.2. The next Plan update, scheduled for 2032 and repeating every 10 years, has been included as a cost in Table 7.1.

7.2 Capital Improvement Projects

7.2.1 Summary Table

Table 7.1 presents Annual Project Cost Summary for 6-Year and 20-Year CIP.

Table 7.1 Annual Project Cost Summary for 6-Year and 20-Year CIP

Project Number	Project Name	Priority	2025	2026	2027	2028	2029	2030	2025-2030	2031-44	20-Year Project Cost	CIP Allocation (Growth/ Expansion)	CIP Allocation (Repair/ Replacement)
1	Sanitary Sewer Repair and Replacement/System Improvements (Includes Areas 2, 3, 5 and 6 identified in Figure 5.10)	1	$350,000	$1,800,000	$350,000	$1,800,000	$350,000	$1,800,000	$6,450,000	$15,050,000	$21,500,000	5%	95%
2	Street Utility Improvements	1	$300,000	$300,000	$300,000	$300,000	$300,000	$300,000	$1,800,000	$4,200,000	$6,000,000		100%
3	Side Sewer Inspections	1	$370,000	$370,000	$370,000	$370,000	$370,000	$370,000	$2,220,000	$1,480,000	$3,700,000		100%
4	Sewer Pump Station Replacement/Improvement	2	$0	$0	$400,000	$800,000	$1,000,000	$2,000,000	$4,200,000	$10,950,000	$15,150,000	25%	75%
5	Siphon Assessment and Cleaning	1	$0	$0	$580,000	$0	$0	$0	$580,000	$580,000	$1,160,000		100%
6	Pump Station Condition Assessment	1	$0	$105,000	$0	$0	$0	$0	$105,000	$105,000	$210,000		100%
7	Manhole Ring and Cover Replacement	2	$90,000	$90,000	$90,000	$90,000	$90,000	$90,000	$540,000	$1,260,000	$1,800,000		100%
8	Cleaning and Inspection of Large-Diameter Pipe (21-inches and larger)	2	$0	$0	$0	$950,000	$0	$0	$950,000	$1,900,000	$2,850,000		100%
9	Inflow and Infiltration Monitoring (Area 1, Figure 5.10)	3	$0	$0	$0	$0	$0	$530,000	$530,000	$1,590,000	$2,120,000		100%
10	Roegner Park Sewer Capacity Improvements (Area 4, Figure 5.10)	1	$0	$0	$120,000	$0	$0	$1,080,000	$1,200,000	$0	$1,200,000	60%	40%
11	Rainier Ridge Pump Station Replacement	1	$4,000,000	$0	$0	$0	$0	$0	$4,000,000	$0	$4,000,000	50%	50%
12	1st and R Sewer Replacement	2	$400,000	$0	$0	$0	$0	$0	$400,000	$0	$400,000		100%
13	Plan Update	1	$0	$0	$0	$0	$0	$0	$0	$800,000	$800,000		100%
	Total Cost of Priority 1 Projects		**$5,020,000**	**$2,575,000**	**$1,720,000**	**$2,470,000**	**$1,020,000**	**$3,550,000**	**$16,355,000**	**$20,735,000**	**$37,090,000**		
	Total Cost of Priority 2 Projects		**$490,000**	**$90,000**	**$ 490,000**	**$1,840,000**	**$1,090,000**	**$2,090,000**	**$6,090,000**	**$14,110,000**	**$20,200,000**		
	Total Cost of Priority 3 Projects		**$0**	**$0**	**$0**	**$0**	**$0**	**$530,000**	**$530,000**	**$1,590,000**	**$2,120,000**		
	Total CIP Cost		**$5,510,000**	**$2,665,000**	**$2,210,000**	**$4,310,000**	**$2,110,000**	**$6,170,00**	**$22,975,000**	**$36,435,000**	**$59,410,000**		

7.2.2 Project Descriptions

Table 7.2 Project Descriptions

Project Number	1
Project Name	**Sanitary Sewer Repair and Replacement/System Improvements (Includes Areas 2, 3, 5 and 6 identified in Figure 5.10)**
Location	Throughout the SSSA
Priority	1
Schedule	Ongoing, alternating a large project every other year
Problem Summary	As infrastructure ages, failures begin to appear, causing LOS issues
Description	This project is R&R of existing sewer lines, manholes, public side sewers, and other facilities. These assets will be identified through modeled capacity evaluation, areas identified with elevated inflow and infiltration, CCTV inspection and routine cleaning and monitoring. This particular program includes proposed projects that do not have an approved Project Management Plan, or are not associated primarily with the Save Our Streets (SOS) or other transportation improvements. Anticipated projects include biannual, standalone, R&R projects for sewer lines that are broken, misaligned, "bellied," or otherwise require an inordinate amount of maintenance effort or present a risk of backup or trench failure, and facilities that generate consistent odor complaints. Improvements identified through this program may be completed as components of larger projects to gain efficiency in project costs. Additionally, system improvements that enhance the ability to maintain service are included here. It is anticipated, as data such as pipe age, pipe material, condition rating (based on CCTV inspection), and consequence of failure are consolidated in Cartegraph, that planning for the R&R program will be based on a systematic analysis of that data. This project is planned to occur during both the 6- and 20-year CIPs.
Recommended Predesign Refinements	As sewer mains are prioritized for replacement based on age, criticality and condition assessments, continual coordination with other utility and street improvements should be made to increase efficiency.
Cost Estimate	Costs developed by the City and carried over from the Capital Facilities Plan: ▪ 2025 - $350,000 ▪ 2026 - $1,800,000 ▪ 2027 - $350,000 ▪ 2028 - $1,800,000 ▪ 2029 - $350,000 ▪ 2030 - $1,800,000 ▪ 2031–44 - $15,050,000
20 Year Project Cost	$21,500,000

Project Number	2
Project Name	**Street Utility Improvements**
Location	Throughout the SSSA
Priority	1
Schedule	Ongoing
Problem Summary	As infrastructure ages, failures begin to appear, causing LOS issues.
Description	This project is R&R of existing sewer lines, manholes, and public side sewers located within the project limits of City arterial transportation projects and within the SOS program. Coordinating sanitary sewer utility projects with local street and arterial transportation projects can lower the unit cost of pipe replacement by eliminating the pavement restoration component of the sewer project's costs. This project is planned to occur during both the 6- and 20-year CIPs.
Recommended Predesign Refinements	Refine list as additional information becomes available.
Cost Estimate	Costs developed by the City and carried over from the Capital Facilities Plan: ▪ 2025 - $300,000 ▪ 2026 - $300,000 ▪ 2027 - $300,000 ▪ 2028 - $300,000 ▪ 2029 - $300,000 ▪ 2030 - $300,000 ▪ 2031–44 - $4,200,000
20 Year Project Cost	$6,000,000

Project Number	3
Project Name	**Side Sewer Inspections**
Location	Throughout the SSSA
Priority	1
Schedule	2025-2034
Problem Summary	The most common cause for sewer backups in the City in recent years has been the failure of side sewers. Throughout the City the condition of lateral sewers on City property is generally unknown.
Description	Use the services of a contractor to systematically inspect, via CCTV, lateral sewers within City rights-of-way and identify needed repairs. Anticipate conducting approximately 1,600 inspections per year, for 10 years to capture information on 100% of these facilities. Initial inspections will concentrate on areas known to primarily have concrete or clay side sewers.
Recommended Predesign Refinements	Review existing CCTV and GIS information to identify gaps in material type and age that should also be collected during the program.
Cost Estimate	$370,000 per year for 10 years
10 Year Project Cost	$3,700,000

Project Number	4
Project Name	**Sewer Pump Station Replacement/Improvements**
Location	Throughout the SSSA
Priority	1
Schedule	2025-30
Problem Summary	The 2016 Pump Station Condition Assessment identified Rainier Ridge and 22nd Street pump stations as the highest priority stations, followed by R Street and 8th Street pump stations for needing to be renovated, replaced, and/or relocated based on condition, safety concerns, and to accommodate growth. The Rainer Ridge pump station project is ongoing and expected to be mostly complete under the prior CIP. This CIP provides for a programmatic program to renovate or replace the next pump stations on a bi-annual basis following completion of Rainer Ridge. The preliminary anticipated order for modification/replacement is: 1. 22nd Street Pump Station. 2. Riverside Pump Station. 3. Dogwood Pump Station Capacity Improvements. 4. R Street Pump Station. 5. 8th Street Pump Station. It is anticipated that additional stations will require significant improvements and/or replacement within the 6 – 20 year planning horizon as well. The estimated cost for 22nd Street is distributed between 2027 and 2030. The estimated costs for the next identified pump stations are used as a placeholder for project value and distributed from 2031 to 2044. Following the results of the systematic pump station evaluation study updated scheduled for 2026 (CIP project 6, Pump Station Inspections), the sequence or identification of pump stations requiring R&R, and detailed scope of improvements for each of these stations will be developed.
Description	This project will renovate or replace one pump station within the 6-year CIP and allocates money for R&R of unknown pump stations in the 6- to 20-year CIP.
Recommended Predesign Refinements	The costs below for all pump stations do not include provisions for new gravity or force main piping. The costs also assume that the existing generators on site will be reused and that no additional land or site improvements are required.

Project Number	4	
Project Name	**Sewer Pump Station Replacement/Improvements**	
Cost Estimate	1. **22th Street Pump Station (2027-2030)**	
	Based on 2016 Condition Assessment	$4,200,000
	Subtotal	**$4,200,000**
	2. **Riverside Pump Station (2031-2033)**	
	Package pump station	$2,724,000
	Project contingency (50% of all above costs)	$1,362,000
	Washington State and King County taxes (10.2% of construction costs)	$417,000
	Subtotal construction costs	**$4,503,000**
	Administration, engineering design, and permitting (30% of costs)	$1,347,000
	Subtotal	**$5,850,000**
	3. **Dogwood Pump Station (2034-2035)**	
	Package pump station	$256,000
	Project contingency (50% of all above costs)	$128,000
	Washington State and King County taxes (10.2% of construction costs)	$39,000
	Subtotal construction costs	**$423,000**
	Administration, engineering design, and permitting (30% of costs)	$127,000
	Subtotal	**$550,000**
	4. **R Street Pump Station (2037-2039)**	
	Package pump station	$605,000
	Project contingency (50% of all above costs)	$302,500
	Washington State and King County taxes (10.2% of construction costs)	$93,000
	Subtotal construction costs	**$1,000,500**
	Administration, engineering design, and permitting (30% of costs)	$299,500
	Subtotal	**$1,300,000**
	5. **8th Street Pump Station (2041-2043)**	
	Package pump station	$1,513,000
	Project contingency (50% of all above costs)	$756,500
	Washington State and King County taxes (10.2% of construction costs)	$231,000
	Subtotal construction costs	**$2,500,500**
	Administration, engineering design, and permitting (30% of costs)	$749,500
	Subtotal	**$3,250,000**
20 Year Project Cost	$15,150,000	

Project Number	5	
Project Name	**Siphon Assessment and Cleaning**	
Location	Green River crossing near 26th Street NE; Green River crossing over 8th Street NE Bridge	
Priority	1	
Schedule	2027, repeated in 10 years, 2037 or as inspection results warrant	
Problem Summary	Currently, the City does not have the required equipment to complete inspections of the three siphons located within its collection system, and little is known about their condition.	
Description	This project would inspect each siphon to determine and or update its condition and help set future inspection/cleaning protocols. The siphons would be inspected prior to cleaning to determine what their in-situ condition is, then if required the lines would be cleaned and re-inspected. Based on the debris level and condition of the pipes, future activities can be planned. Repeat in 10 years. For cost efficiencies, it is assumed that all three sites would be completed under one contract. This project is planned to occur during both the 6- and 20-year CIPs.	
Recommended predesign refinements	Determine flow rates required for bypass pumping/trucking. Verify the assumption that the Green River crossing at 26th Street NE can be diverted to each barrel without the need for additional bypass pumping.	
Cost Estimate	**Green River crossing via Inverted Siphon at 26th Street NE: 488 feet of 8-inch and 12-inch HDPE**	
	Initial CCTV	$6,600
	Cleaning	$15,600
	Post-cleaning CCTV	$6,600
	Subtotal	**$28,800**
	Green River Crossing via 8th Street NE Bridge: 1,191 feet of 14-inch CIP	
	Traffic control	$117,000
	Bypass pumping	$124,000
	Initial CCTV	$8,000
	Cleaning	$23,000
	Post-cleaning CCTV	$8,000
	Subtotal	**$280,000**
	Subtotal line-item costs	**$308,800**
	Project contingency (30% of all above costs)	$92,600
	Washington State and King County taxes (10.2% of construction costs)	$40,900
	Subtotal construction costs	$**442,300**
	Administration, engineering design, and permitting (30% of costs)	$132,700
20 Year Project Cost	$1,160,000	

Project Number	6	
Project Name	**Pump Station Condition Assessment**	
Location	Throughout the SSSA	
Priority	1	
Schedule	2026 and 2036	
Problem Summary	The City last completed a pump station condition assessment in 2016. Since that time, improvements/ upgrades to the stations have been made, and the pump stations have continued to age. To adequately plan for future pump station investments, re-inspection is required.	
Description	The assessment will evaluate the apparent physical condition of existing stations and equipment. The purpose of the assessment is to predict future serviceability and anticipated longevity for development of future CIPs. Pump stations must meet the adopted system performance and reliability goals, and current code conditions, which may differ from those that existed when the stations were originally built. The assessment would identify requirements necessary to meet the City's goals, requirements necessary for the health and safety of staff and the public, and suggestions that might increase reliability or reduce cost of operations or maintenance. Similar to the 2016 assessment, equipment checklists will be prepared for mechanical/hydraulic and electrical/control systems, site visits to all stations will be made, as-built information and M&O manuals will be reviewed, and M&O personnel will be asked about known issues at each location. Station operation will be observed, but no detailed physical testing of equipment, wiring, controls, or structures will be included. The results of this assessment will compared to the previous inspection to identify observable degradation of especially the older stations. To continue to stay up to date on pump station needs, it is recommended to repeat the inspection within the 20-year CIP.	
Recommended Predesign Refinements	None	
Cost Estimate	Engineering services for condition assessment	$70,200
	Subtotal line-item costs	**$70,200**
	Project contingency (30% of all above costs)	$21,100
	Subtotal inspection costs	**$91,300**
	Administration (15% of costs)	$13,700
20 Year Project Cost	$210,000	

Project Number	7	
Project Name	**Manhole Ring and Cover Replacement**	
Location	Throughout the SSSA	
Priority	2	
Schedule	Ongoing	
Problem Summary	Frame and covers on sewer manholes are continually subject to impact from vehicles. While other portions of the of the manhole structures generally remain in adequate condition, the frames and covers often to be replaced.	
Description	This project would establish an ongoing CIP to provide funds for continued replacement of frames and covers. These replacements may occur as part of other City capital projects or as a stand-alone ring and cover replacement project. The cost for this effort is based on historical, all-inclusive spending from previous City of Auburn work. This project is planned to occur during both the 6- and 20-year CIPs.	
Recommended Predesign Refinements	None.	
Cost Estimate for year 2025	Frame and cover replacement annual	$90,000
	Subtotal line-item costs	**$90,000**
	Project contingency (0% of all above costs)	$0
	Washington State and King County taxes (10.2% of construction costs)	Included
	Subtotal construction costs	**$90,000**
	Administration, engineering design, and permitting (0% of costs)	$0
20 Year Project Cost	$1,800,000	

Project Number	8	
Project Name	**Cleaning and Inspection of Large-Diameter Pipe**	
Location	Throughout the SSSA	
Priority	2	
Schedule	2028, positioned in an off year of CIP 1, repeated in 10 years, 2037 or as initial inspection warrants.	
Problem Summary	M&O staff are not currently equipped to efficiently clean and inspect pipe larger than 18 inches in diameter and meet other goals for cleaning and inspection.	
Description	This project would clean and internally inspect approximately half of the pipe owned by the City that is 21 inches and larger in diameter per effort. This is approximately 39,000 feet, ranging in diameter from 21 inches up to 36 inches. This project is planned to occur during both the 6- and 20-year CIPs.	
Recommended Predesign Refinements	Review existing CCTV inspection information to see if any of the large-diameter pipe has been inspected and determine if it needs cleaning.	
Cost Estimate	Cleaning	$318,000
	CCTV	$106,000
	Disposal	$6,000
	Traffic control	$12,000
	Subtotal line-item costs	**$442,000**
	Project contingency (50% of all above costs)	$221,000
	Washington State & King County taxes (10.2% of construction costs)	$67,600
	Subtotal construction costs	**$730,600**
	Administration, engineering design, and permitting (30% of costs)	$219,000
20 Year Project Cost	$2,850,000	

Project Number	9	
Project Name	**Long Term Inflow and Infiltration Monitoring**	
Location	Throughout the SSSA	
Priority	3	
Schedule	Collect additional data during plan updates to monitor system conditions	
Problem Summary	Based on previous flow monitoring, I/I does not appear to be causing any large scale capacity issues within the city system, and limited areas of elevated I/I have been identified. As part of future plan updates, the I/I should be evaluated and compared with past results to understand if conditions are stable or changed. Excessive localized I/I can also be an indicator of poor sewer main and side sewer condition, and could help prioritize ongoing sewer cleaning and replacement programs.	
Description	This project would monitor flow at key points in the collection system during plan updates. This data will then be used in for Comprehensive Sewer Plan for modeling purposes and I/I assessment. Effort should be made to coordinate flow monitoring with the King County's Decennial Flow Monitoring.	
Recommended Predesign Refinements	Analyze prior flow metering data and hydraulic model results to develop a flow monitoring plan.	
Cost Estimate	Flow monitoring (four flow meters and two rain gauges for 6 months per year)	$284,500
	Subtotal line-item costs	**$284,500**
	Project contingency (30% of all above costs)	$85,400
	Washington State & King County taxes (10.2% of construction costs	$37,700
	Subtotal construction costs	**$407,600**
	Administration, engineering design, and permitting (30% of costs)	$122,300
20 Year Project Cost	$2,120,000	

Project Number	10
Project Name	**Roegner Park Sewer Capacity Improvements (Area 4, Figure 5.10)**
Location	Roegner Park between Oravetz Place to just north of the Lakeland Hills Pump Station.
Priority	1
Schedule	Anticipated design to begin in 2027, with construction anticipated 2030. As King County proceeds with plans to replace the Lakeland Hills Pump Station, staff will determine the optimal time to replace the lines depending on the siting and construction schedule of the County project.
Problem Summary	Hydraulic modelling indicated that the sewer mains just upstream of the Lakeland Hills Pump Station will be surcharged during the design storm event by the year 2044.
Description	This project will replace the potentially surcharging sewer mains will larger pipes or pipes with a modified slope to increase their capacity. The Lakeland Hill Pump Station is being replaced by King County and that project is expected to be complete in 2031. The City will work with County staff during the design phase of each project to identify the most efficient time to construct both projects.
Recommended Predesign Refinements	Coordinate final location and discharge elevations for the pump station wet well prior to design. Some of the surcharged pipes lie within an easement across Auburn School District Athletic Fields. Construction should be scheduled to be least impactful to their operations.
Cost Estimate	2027 - $120,000 2030 - $1,080,000
6 Year Project Cost	$1,200,000
Project Number	**11**
Project Name	**Rainier Ridge Pump Station Replacement**
Location	126th Avenue SE within the Rainier Ridge Development
Priority	1
Schedule	Design will be complete and preliminary construction will begin in 2024. The remainder of the construction will be completed in 2025.
Problem Summary	The existing station is currently under capacity and has little room to expand, and the force main has needed repair several times over the past 20 years.
Description	The project is replacing the existing Rainier Ridge Pump Station located by the edge of a cul-de-sac with a new station located on a City owned parcel that includes a storm pond. The project involves installing gravity lines to accommodate the station relocation and a new force main to be located within an easement on the Green River College property.
Recommended Predesign Refinements	Project is underway
Cost Estimate	2025 - $4,000,000
Current Planning Period Project Cost	$4,000,000

Project Number	12
Project Name	**1st and R Sewer Replacement**
Location	Between 1st Street NE and 2nd Street NE, east of 'R' Street NW.
Priority	2
Schedule	Design work will begin 2024. Construction is anticipated to be completed in 2025.
Problem Summary	There is an existing clay pipe that has significant sags which allow sediment and debris to collect and has caused periodic backups in homes served by the line.
Description	The project will replace the line with a new PVC pipe and reconnect all side sewers. The project requires significant coordination between the City and residents, as the sewer main lies along abutting back property lines of the homes served by the line. The City does not have explicit easements for the sewer main.
Recommended Predesign Refinements	During design, contact will be made with each property owner to discuss rights-of-entry, permanent easements, etc.
Cost Estimate	2025 - $400,000
6 Year Project Cost	$400,000
Project Number	**13**
Project Name	**Plan Update**
Location	Throughout the SSSA
Priority	1
Schedule	Every 10 years
Problem Summary	The City maintains a current Comprehensive Sewer Plan to meet Washington Administrative Code (WAC) Section 173-240-050.
Description	The plan update is a combination of City and Consultant work. The update typically includes review of the existing system and practices, hydraulic modeling, evaluation of system capacity, development of a 6 and 20 year capital improvement program, planning for enhancement of the utility's maintenance and operations, and final plan preparation and assembly
Recommended Predesign Refinements	N/A
Cost Estimate	$400,000
20 Year Project Cost	$800,000

CHAPTER 8 FINANCIAL PLAN

8.1 Introduction

This chapter was prepared by FCS GROUP to provide a financial program that allows the City sewer utility to remain financially viable during the planning period. This financial viability analysis considers the historical financial condition, current and identified future financial and policy obligations, M&O needs, and the financial impacts of the capital projects identified in this Plan. Furthermore, this chapter provides a review of the sewer utility's current rate structure with respect to rate adequacy and customer affordability.

8.2 Past Financial Performance

This section includes a historical summary of financial performance as reported by the City, including fund resources and uses arising from cash transactions.

8.2.1 Comparative Financial Statements

The City legally owns and operates a sewer utility. Table 8.1 shows a summary of sewer fund resources and uses arising from cash transactions for the previous six years (2017 through 2022). 2023 financial statements were not available at the time the chapter was developed. Table 8.2 shows a summary of assets and liabilities, with the difference between the two reported as "net position". Increases and decreases in net position are useful indicators of the financial position of the City's utility. Noteworthy findings and trends for the historical performance and condition of the City's sewer utility are then discussed.

Table 8.1 Summary of Historical Fund Resources and Uses Arising from Cash Transactions

	2017	2018	2019	2020	2021	2022
Operating Revenues						
Charges for Service	$26,369,496	$26,582,233	$26,559,461	$25,357,477	$27,402,561	$28,925,941
Other Operating Revenue	$-	$-	$-	$-	$-	$-
Total Operating Revenues	**$26,369,496**	**$26,582,233**	**$26,559,461**	**$25,357,477**	**$27,402,561**	**$28,925,941**

Change in Net Position	$1,334,052	$2,998,488	$3,063,945	$2,163,632	$2,832,222	$2,340,049
Net Position, January 1	**$84,591,243**	**$85,925,295**	**$88,923,783**	**$91,987,728**	**$94,151,360**	**$96,983,582**
Net Position, December 31	**$85,925,295**	**$88,923,783**	**$91,987,728**	**$94,151,360**	**$96,983,582**	**$99,323,631**
M&O Coverage Ratio	102.5%	102.4%	100.8%	97.5%	101.2%	106.1%
Net Operating Income as a % of Operating Revenue	2.4%	2.3%	0.8%	-2.6%	1.2%	5.8%
Debt Service Coverage Ratio	5.41	5.40	4.70	5.59	6.94	10.68

8.2.1.1 Findings and Trends

- The City's sewer charges for services increased from $26.4 million (M) in 2017 to $28.9M in 2022. The average annual increase was approximately 1.9 percent per year, with a total increase of 9.7 percent from 2017 to 2022. Charges for service increased each year, except for 2020 where revenues fell by 4.5 percent. Operating expenditures increased by $1.5M across the six years with an average annual increase of 1.2 percent. Similar to revenues, expenditures dropped in 2020, but to a lesser extent, decreasing by 1.3 percent. With growth in total operating revenues slightly outpacing growth in operating expenses, operating income has been positive in five of the last six years, with 2020 being the exception, where the utility posted an operating loss of $662,000. As many will note, 2020 was not a typical year and likely affected by the global pandemic restrictions in place at the time.
- The M&O coverage ratio (total operating revenues divided by total operating expenses) was 102.5 percent in 2017. With relatively stable revenues and expenses, this metric has maintained its stability, ending 2022 at 106.1 percent. A ratio of 100.0 percent or greater shows that operating revenue will successfully cover operating expenses, and the utility has remained above this ratio for five of the last six years. Again, 2020 was the exception when the ratio decreased to 97.5 percent.
- Net operating income as a percentage of operating revenue was 2.4 percent in 2017, decreasing to negative 2.6 percent in 2020, before recovering back to 5.8 percent by 2022. Similar to the M&O coverage ratio, these trends show how successfully operating revenue actually covered operating expenses, with higher positive numbers being the best and negative numbers showing a need for improvement. In addition, these trends demonstrate the ability of the utility to invest in capital, whether through direct cash transfers or the issuance and servicing of debt.
- The debt service coverage ratio measures the amount of cash flow available to meet principal and interest payments. Typically, revenue bond debt service coverage requires a minimum factor of 1.25 during the life of the loans. This ratio is calculated by dividing cash or net operating income (operating revenues less operating expenses) by annual revenue bond debt service. The debt service coverage ratio for all outstanding revenue bond debt ended 2017 at 5.4, decreasing to 4.7 in 2020, when revenues decreased, before rebounding to 10.7 by 2022. The fact that this ratio has sustained levels higher than the minimum target of 1.25 indicates a stable capacity for new debt and will likely result in favorable terms when entering the bond market.

Table 8.2 Summary of Historical Comparative Statements of Net Position

Debt to Noncurrent Capital Assets Ratio	0.10	0.09	0.08	0.07	0.06	0.05

8.2.1.2 Findings and Trends

- The Current Ratio is calculated by dividing unrestricted current assets by current liabilities and measures an entity's ability to pay short-term obligations. This ratio ranges from a low of 14.4 in 2017, ending at a high of 20.1 in 2022. Anything above 2.0 for this liquidity ratio is good.
- The Debt to Net Position Ratio compares total debt to total net position, which is the difference between current assets and liabilities. This ratio begins at 0.08 or 8 percent debt in 2017 and decreases to 0.04 by 2022. For utilities, a ratio of 40 to 60 percent helps to moderate rate impacts by spreading costs over a longer period of time. Based on these results, the City may consider utilizing debt service for future capital investments, especially if it benefits system expansion.
- The Debt to Noncurrent Capital Asset Ratio compares total debt to noncurrent capital assets, which are also known as property, plant, and equipment. This ratio begins at 0.10 or 10 percent debt to 90 percent noncurrent assets in 2017. Noncurrent capital assets increase by $1.7M throughout the six-year history while debt decreases $2.9M, and the ratio decreases to 5 percent by 2022. Similar to the debt to net position ratio, these results indicate the utility has ample borrowing capacity and may consider utilizing debt service for future capital investments, especially if it benefits system expansion. A ratio of 40 percent debt to 60 percent equity or below is a general industry target

8.3 Financial Plan

The sewer utility is responsible for generating sufficient revenue to meet all of its costs. The primary source of funding is derived from ongoing monthly service charges, with additional revenue coming from late penalties and interest earnings. The City controls the level of user charges and, with City Council approval, can adjust user charges as needed to meet financial objectives.

The financial plan can only confirm financial feasibility if it considers the total system costs of providing sewer services, both operating and capital. To meet these objectives, the following elements have been completed.

1. **Capital Funding Plan** - Identifies the total CIP obligations of the planning period. The plan defines a strategy for funding the CIP, including an analysis of available resources from rate revenues, existing reserves, connection charge revenues, debt financing, and any special resources that may be readily available (e.g., grants, developer contributions, etc.). The capital funding plan impacts the financial plan through the use of debt financing (resulting in annual debt service) and the assumed rate revenue made available for capital funding.
2. **Financial Forecast** - Identifies future annual non-capital costs associated with the operation, maintenance, and administration of the sewer system. Included in the financial plan is a reserve analysis that forecasts cash flow and fund balance activity, along with testing for satisfaction of actual or recommended minimum fund balance policies. The financial plan ultimately evaluates the sufficiency of utility revenues in meeting all obligations, including cash uses such as operating expenses, debt service, capital outlays, and reserve contributions, as well as any coverage requirements associated with long-term debt. The plan also identifies the future adjustments required to fully fund all utility obligations in the planning period.

8.3.1 Capital Funding Plan

To properly evaluate future capital funding needs, capital costs were escalated by 3.00 percent annually to the year of planned spending. The CIP developed for this Plan identifies $45.7M in escalated project costs over the 10-year planning horizon from 2024-2033. The 20-year period, through 2043, includes $81.3M in total escalated project costs.

A summary of the 10-year and 20-year CIPs are shown in Table 8.3. As shown, each year has varied capital cost obligations depending on construction schedules and infrastructure planning needs.

Table 8.3 10-Year and 20-Year CIPs

Year	Unescalated $	Escalated $
2024	$6,725,000	$6,725,000
2025	$5,510,000	$5,675,300
2026	$2,665,000	$2,827,299
2027	$2,210,000	$2,414,927
2028	$4,310,000	$4,850,943
2029	$2,110,000	$2,446,068
2030	$6,170,000	$7,367,303
2031	$1,720,000	$2,115,383
2032	$3,490,000	$4,421,028
2033	$5,240,000	$6,837,011
10-Year Total	**$40,150,000**	**$45,680,261**
2034 - 2043	$22,845,000	$35,581,679
20-Year Total	**$62,995,000**	**$81,261,940**

Table 8.4 provides more detail for the 10-year CIP.

8.4 Available Funding Assistance and Financing Resources

Feasible long-term capital funding strategies must be defined to ensure that adequate resources are available to fund the CIP identified in this Plan. In addition to the City's resources, such as accumulated cash reserves, capital revenues, and rate revenues designated for capital purposes, capital needs can be met from outside sources, such as grants, low-interest loans, and bond financing. The following is a summary of the City's internal and external resources.

8.4.1 City Resources

Resources appropriate for funding capital needs include accumulated cash in the capital fund, rate revenues designated for capital spending purposes, developer contributions, and capital-related charges such as system development charges. The first two resources will be discussed in the **Fiscal Policies** section of the **Financial Forecast**. Capital-related charges are discussed below.

8.4.1.1 System Development Charges

A connection charge such as the City's system development charge (SDC) refers to a one-time charge imposed on new customers as a condition of connecting to the sewer system. The purpose of the SDC is two-fold: 1) to promote equity between new and existing customers; and 2) to provide a source of revenue to fund capital projects. Revenue can only be used to fund utility capital projects or to pay debt service incurred to finance those projects. In the absence of a connection charge, growth-related capital costs would be borne in large part by existing customers. In 2024, the City charged all new customers an SDC of $3,544 per residential customer equivalent.

8.4.1.2 Local Facilities Charges

While a connection charge is the manner in which new customers pay their share of system investment costs, local facilities charge funding is used to pay the costs of local facilities that connect each property to the system's infrastructure. Local facilities funding is often overlooked in rate forecasting because it is funded upfront by either connecting customers and developers, or through an assessment to properties, but never from rates.

A number of mechanisms can be considered toward funding local facilities. One of the following scenarios typically occurs: (a) the utility charges a connection fee based on the cost of the local facilities (under the same authority as the facilities assessment fee); (b) a developer funds an extension of the system to its development and turns those facilities over to the utility (contributed capital); or (c) a local assessment is set up called a Utility Local Improvement District (ULID/LID) or a Local Utility District, which collects tax revenue from benefited properties.

A local facilities charge is a variation of the connection charge. It is a city-imposed charge to recover the cost related to service extension to local properties. Often called a front-footage charge and imposed on the basis of footage of the main "fronting" a particular property, it is usually implemented as a reimbursement mechanism to a city for the cost of a local facility that directly serves a property. It is a form of a connection charge and thus can accumulate up to 10 years of interest. It typically applies in instances when no developer-installed facilities are needed through developer extension due to the prior existence of available mains already serving the developing property.

The developer extension is a requirement that a developer install on-site and sometimes off-site improvements as a condition of extending service. These are in addition to the connection charge required and must be built to City standards. Part of the agreement between the City and the developer planning to extend service might include a latecomer agreement, resulting in a latecomer charge to new connections for the developer extension.

Latecomer charges are a variation of developer extensions, whereby new customers connecting to a developer-installed improvement make a payment to the City based on their share of the developer's cost. The City passes this charge on to the developer who installed the facilities. As part of the developer extension process, this defines the allocation of costs and records latecomer obligations on the title of affected properties. No interest is allowed, and the reimbursement agreement cannot exceed 20 years in duration.

ULID/LID is another mechanism for funding infrastructure that assesses benefited properties based on the special benefit received by the construction of specific facilities. Most often used for local facilities, some ULIDs also recover related general facilities costs. Substantial legal and procedural requirements can make this a relatively expensive process, and there are mechanisms by which a ULID can be rejected.

8.4.2 Outside Resources

This section outlines various grant, loan, and bond opportunities available to the City through federal and state agencies to fund the CIP identified in the Plan.

8.4.2.1 Grants and Low-Cost Loans

Historically, federal and state grant programs were available to local utilities for capital funding assistance. However, these assistance programs have been mostly eliminated, substantially reduced in scope and amount, or replaced by loan programs. Remaining grant programs are generally lightly funded and heavily subscribed. Nonetheless, the benefit of low-interest loans makes the effort of applying worthwhile.

8.4.2.2 Bond Financing

General Obligation Bonds - General obligation (G.O.) bonds are bonds secured by the full faith and credit of the issuing agency, committing all available tax and revenue resources to debt repayment. With this high level of commitment, G.O. bonds have relatively low interest rates and few financial restrictions. However, the authority to issue G.O. bonds is restricted in terms of the amount and use of the funds, as defined by the Washington constitution and statute. Specifically, the amount of debt that can be issued is linked to assessed valuation.

Revised Code of Washington 39.36.020 states:

> *(2)(a)(ii) Counties, cities, and towns are limited to an indebtedness amount not exceeding one and one-half percent of the value of the taxable property in such counties, cities, or towns without the assent of three-fifths of the voters therein voting at an election held for that purpose.*
>
> *(b) In cases requiring such assent counties, cities, towns, and public hospital districts are limited to a total indebtedness of two and one-half percent of the value of the taxable property therein.*

While bonding capacity can limit the availability of G.O. bonds for utility purposes, these can sometimes play a valuable role in project financing. A utility rate savings may be realized through two avenues: the lower interest rate and related bond costs, and the extension of repayment obligation to all tax-paying properties (not just developed properties) through the authorization of an ad valorem property tax levy.

Revenue Bonds – Revenue bonds are commonly used to fund utility capital improvements. The debt is secured by the revenues of the issuing utility. With this limited commitment, revenue bonds typically bear higher interest rates than G.O. bonds and require security conditions related to the maintenance of dedicated reserves (a bond reserve) and financial performance (added bond debt service coverage). The City agrees to satisfy these requirements by resolution as a condition of bond sale.

Revenue bonds can be issued in Washington without a public vote. There is no bonding limit, except perhaps the practical limit of the utility's ability to generate sufficient revenue to repay the debt and provide coverage. In some cases, poor credit might make issuing revenue bonds problematic.

8.4.3 Capital Financing Strategy

An ideal capital financing strategy would include the use of grants and low-cost loans when debt issuance is required. However, these resources are very limited and competitive in nature and do not provide a reliable source of funding for planning purposes. It is recommended that the City pursue these funding avenues but assume revenue bond financing to meet the needs which can't be met by available cash resources. The capital financing strategy developed to fund the CIP identified in this Plan assumes the following funding resources:

- Accumulated cash reserves,
- Transfers of excess cash (over minimum balance targets) from the Operating Fund,
- System development charge revenue, and
- Interest earned on Capital Fund balances.

The cash resources described above are anticipated to fund 100.0 percent of the 10-year CIP and 20-year CIP. No new debt is anticipated in the next 10-year or 20-year planning periods. Table 8.5 presents the 10-year and 20-year capital financing strategy.

Table 8.5 10-Year and 20-Year Capital Financing Strategy

Year	Capital Expenditures	System Development Charge Revenue	Cash/Reserve Funding	Total Financial Resources
2024	$6,725,000	$325,000	$6,400,000	$6,725,000
2025	$5,675,300	$468,144	$5,207,156	$5,675,300
2026	$2,827,299	$484,117	$2,343,181	$2,827,299
2027	$2,414,927	$500,635	$1,914,291	$2,414,927
2028	$4,850,943	$517,717	$4,333,226	$4,850,943
2029	$2,446,068	$535,382	$1,910,687	$2,446,068
2030	$7,367,303	$553,649	$6,813,654	$7,367,303
2031	$2,115,383	$572,539	$1,542,844	$2,115,383
2032	$4,421,028	$592,074	$3,828,953	$4,421,028
2033	$6,837,011	$612,276	$6,224,736	$6,837,011
Subtotal	**$45,680,261**	**$5,161,534**	**$40,518,727**	**$45,680,261**
2034-2043	$35,581,679	$7,397,790	$28,183,889	$35,581,679
Total	**$81,261,940**	**$12,559,324**	**$68,702,617**	**$81,261,940**

8.5 Financial Forecast

The financial forecast, or revenue requirement analysis, forecasts the amount of annual revenue that needs to be generated by user rates. The analysis incorporates operating revenues, M&O expenses, debt service payments, rate-funded capital needs, and any other identified revenues or expenses related to operations. The objective of the financial forecast is to evaluate the sufficiency of the current level of rates. In addition to annual operating costs, the revenue needs also include debt covenant requirements and specific fiscal policies and financial goals of the City.

For this analysis, two revenue sufficiency tests have been developed to reflect the financial goals and constraints of the City: cash needs must be met; and debt coverage requirements must be realized. In order to operate successfully with respect to these goals, both tests of revenue sufficiency must be met.

Cash Test - The cash flow test identifies all known cash requirements for the City in each year of the planning period. Typically, these include M&O expenses, debt service payments, rate-funded system reinvestment funding or directly funded capital outlays, and any additions to specified reserve balances. The total annual cash needs of the City are then compared to projected cash revenues using the current rate structure. Any projected revenue shortfalls are identified, and the rate increases necessary to make up the shortfalls are established.

Coverage Test - The coverage test is based on a commitment made by the City when issuing revenue bonds and some other forms of long-term debt. For the purposes of this analysis, revenue bond debt is assumed for any needed debt issuance. As a security condition of issuance, the City would be required per covenant to agree that the revenue bond debt would have a higher priority for payment (a senior lien) compared to most other expenditures; the only outlays with a higher lien are M&O expenses. Debt service coverage is expressed as a multiplier of the annual revenue bond debt service payment. For example, a 1.00 coverage factor would imply that no additional cushion is required. A 1.25 coverage factor means revenue must be sufficient to pay M&O expenses, annual revenue bond debt service payments, and an additional 25.0 percent of annual revenue bond debt service payments. The excess cash flow derived from the added coverage, if any, can be used for any purpose, including funding capital projects. Targeting a higher coverage factor can help the City achieve a better credit rating and provide lower interest rates for future debt issues.

In determining the annual revenue requirement, both the cash and coverage sufficiency tests must be met, and the test with the greatest deficiency drives the level of needed rate increase in any given year.

8.5.1 Current Financial Structure

The City maintains a fund structure and implements financial policies that target management of a financially viable and fiscally responsible sewer system.

8.5.1.1 Fiscal Policies

A summary of the key financial policies employed by the City, as well as those recommended and incorporated in the financial program, are discussed below.

Operating Fund - Operating reserves are designed to provide a liquidity cushion to ensure that adequate cash working capital will be maintained to deal with significant cash balance fluctuations, such as seasonal fluctuations in billings and receipts, unanticipated cash expenses, or lower than expected revenue

collections. Like other types of reserves, operating reserves also serve another purpose: they help smooth rate increases over time. Target funding levels for an operating reserve are generally expressed as a certain number of days of M&O expenses, with the minimum requirement varying with the expected revenue volatility. Industry practice for utility operating reserves ranges from 30 days (8.0 percent) to 120 days (33.0 percent) of M&O expenses, with the lower end more appropriate for utilities with stable revenue streams and the higher end more appropriate for utilities with significant seasonal or consumption-based fluctuations.

This financial plan targets a minimum balance in the sewer utility Operating Fund equal to 60 days of M&O expenses.

Capital Fund - A utility capital contingency reserve is an amount of cash set aside in case of an emergency should a piece of equipment or a portion of the utility's infrastructure fail unexpectedly. The reserve also could be used for other unanticipated capital needs, including capital project cost overruns. Industry practices range from maintaining a balance equal to 1.0 to 2.0 percent of fixed assets, an amount equal to a 5-year rolling average of CIP costs, or an amount determined sufficient to fund equipment failure (other than catastrophic failure). The final target level should balance industry practices with the risk level of the City.

This financial plan targets a minimum balance in the sewer utility capital fund equal to 1.0 percent of fixed assets.

Metro Sub Fund - The City's sewer utility collects rate revenue for treatment expenses provided by King County's Sewer Treatment Division. Rates are collected to offset regional treatment expenses and are treated as a pass-through for forecasting purposes. Similar to the operating and capital reserves, the metro sub-fund reserve is meant to provide a liquidity cushion as well as provide for unexpected contingencies.

The current metro sub-fund reserve target is set at $625,000, or approximately 3.0 percent of total operating expenses.

System Reinvestment - System reinvestment funding promotes system integrity through ongoing repair and replacement of system infrastructure. Ideally, a detailed asset management plan would guide the level of rate funded system reinvestment, however, in absence of this level of effort, annual depreciation expense is commonly used as a measure of the decline in asset value associated with routine use of the system. Particularly for utilities that do not already have an explicit system reinvestment policy in place, implementing a funding level based on full depreciation expense could significantly impact rates. An alternative benchmark is annual depreciation expense net of debt principal payments on outstanding debt. This approach recognizes that customers are still paying for certain assets through the debt component of their rate and intends to avoid simultaneously charging customers for an asset and its future replacement. The specific benchmark used to set system reinvestment funding targets is a matter of policy that must balance various objectives, including managing rate impacts, keeping long-term costs down, and promoting "generational equity" (i.e., not excessively burdening current customers with paying for facilities that will serve a larger group of customers in the future).

The City is currently phasing in system reinvestment funding, aiming to reach 75.0 percent of annual depreciation levels by 2029. With this phase-in strategy in place, the City is forecast to fund an average of $1.7M in capital costs annually through rate revenues within the 10-year forecast period.

Debt Management - It is prudent to consider policies related to debt management as part of a broader utility financial policy structure. Debt management policies should be evaluated and formalized, including the level of acceptable outstanding debt, debt repayment, bond coverage, and total debt coverage targets. The City has one outstanding sewer revenue bond, as well as two Public Works Trust Fund loans, which will both be repaid between 2024-2026. This forecast meets or exceeds the required revenue bond debt service coverage of 1.25.

8.5.1.2 Financial Forecast

The financial forecast is primarily based upon the City's budget through 2024 and takes into consideration other key factors and assumptions needed to develop a complete portrait of the City's annual sewer utility financial obligations. The following is a list of the key revenue and expense factors and assumptions used to develop the financial forecast.

- **Growth** - Rate revenue escalation is based on a 0.40 percent growth rate developed based on actual historical trends at the City. While the Plan assumes an annual growth rate of 1.33 percent for units and 1.51 percent for flow, the City preferred a more conservative growth rate for the financial planning purpose.
- **Revenue** - The City has two general revenue sources: 1) sewer service charges (rate revenue); and 2) miscellaneous (non-rate) revenue. In the event of a forecasted annual shortfall, rate revenue can be increased to meet the annual revenue requirement. For the purpose of this financial forecast, rate revenues are forecasted to increase with customer growth. Non-rate revenues are held constant throughout the forecast period, with the exception of interest earnings which are calculated based on projected balances and assumed investment rates.
  - **King County Metro Service Charges** - The City collects rate revenue for treatment expenses provided by King County's Sewer Treatment Division. Rates are collected to offset regional treatment expenses and are treated as a pass-through for forecasting purposes.
- **System Development Charge Revenue** - The existing system development charges are applied to the projected new connections to forecast revenue. Based on the growth assumptions described above, the connection charge will generate an average of $516,000 annually from 2024-2033. This equates to an average of 126 new connections per year. Connection charge revenue is directed towards annual capital needs.
- **Expenses** - M&O expense projections are based on the City's budget through 2024 with general cost inflation increases of 3.0 percent, labor cost inflation of 5.0 percent for 2025 and 2026, decreasing to 3.0 percent thereafter and benefit cost inflation increases of 12.50 percent for 2025 and 2026, decreasing to 5.5 percent per year thereafter. Budget figures were used for taxes through 2024. Future taxes are calculated based on forecasted revenues and prevailing tax rates.
  - **King County Metro Service Charges** - Rates are expected to increase by approximately 5.75 percent in 2025, followed by 7.00 percent annually from 2026-2028, increasing to 8.25 percent annually from 2029-2031 and finally 9.26 percent annually from 2032-2034 (Based on the recent King County Sewer Treatment Division Financial Plan).
  - **Facilities G.O. Bond** - In order to construct a new facility for the City, the sewer utility will fund part of a General Obligation Bond totaling $38M. Beginning in 2025, the sewer utility's proportionate share of the bond is forecasted at $333,000 annually for the remainder of the twenty-year forecast.

- **Existing Debt** - The sewer utility has three outstanding debt issues: one revenue bond, and two Public Works Trust Fund (PWTF) loans. The 2020 refunding revenue bond has annual payments averaging $375,000 that end after 2030 when the loan is repaid. The PWTF loans combined annual payment is $292,000 in 2024 before the first PWTF loan is repaid, dropping the annual payment to $182,000 for 2025 and 2026, when the second PWTF loan is repaid. The total annual existing debt service obligations begin 2024 at $669,000, decreasing to $376,000 with the repayment of the PWTF loans and will be completely repaid by 2030.
- **Future Debt** - No new debt is anticipated in the 10-year and 20-year forecast periods.
- **Transfers to Capital** - Operating fund balance above the minimum requirement is assumed to be available to fund capital projects and projected to be transferred to the Capital Fund each year, if needed. In total, the utility is forecast to fund $23.5M in capital projects from excess operating fund cash.

Although the financial plan is completed through 2043, the rate strategy focuses on the shorter-term planning period of 2024 through 2033. It is recommended that the City revisit the proposed rates every two to three years to ensure that the rate projections developed remain adequate. Any significant changes should be incorporated into the financial plan and future rates should be adjusted as needed.

Table 8.6, following, summarizes the annual revenue requirements based on the forecast of revenues, expenditures, fund balances, and fiscal policies.

The financial forecast indicates that at existing rate levels the utility will become deficient in 2028 as growth in expenses outpaces growth in revenues and the utility phases in rate funded system reinvestment levels towards their fiscal policy goal of full annual depreciation funding.

8.5.1.3 City Funds and Reserves

Table 8.7 shows a summary of the projected Operating Fund and Capital Fund ending balances through 2033 based on the rate forecasts presented above. The Operating Fund is maintained at a minimum of 60 days of M&O expenses, and the Capital Fund balance continues to meet or exceed the minimum target of 1.00 percent of fixed assets in every year of the forecast.

Table 8.6 10-Year Financial Forecast

Revenue Requirement	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033
Revenues										
Rate Revenues Under Existing Rates	$10,794,348	$10,837,525	$10,880,876	$10,924,399	$10,968,097	$11,011,969	$11,056,017	$11,100,241	$11,144,642	$11,189,220

8.6 Current and Projected Rates

8.6.1 Current Rates

The existing sewer rates consist of a monthly fixed rate for the single family class. The non single family class pays a monthly fixed rate plus a volume rate per hundred cubic feet (CCF) of flow over the monthly usage allowance of 7.5 CCF per unit. In addition to the monthly rates charged by the City, separate rates are applied to each account for treatment expenses provided by King County. Rates for treatment expenses are set by the King County Sewer Division and are treated as a path-through. The exhibits below summarize the existing and proposed City of Auburn rates, as well as the existing and proposed King County Sewer Division rates. Total bills for customers will include both a City of Auburn and a King County Treatment component.

Table 8.8 shows the existing City of Auburn and King County Sewer Division rate schedule.

Table 8.8 Existing Schedule of Rates

Description	2024 Existing
Monthly Fixed Charges	
Single Family	$30.04
Non Single Family	$32.95
King County Treatment	$55.11
Volume Charge per CCF (Over 7.5 CCF/unit)	
Non Single Family	$3.34
Non Single Family - King County	$7.35

8.6.2 Projected Rates

The financial forecast discussed above indicates the need for annual rate adjustments in order to satisfy all forecasted financial obligations. The City has adopted a 7.50 percent rate increase for 2025, with annual 2.25 percent increases forecasted from 2026 through 2033. Table 8.9 shows the projected rates with increases applied uniformly to the sewer fixed and flow components of all classes, where applicable.

Table 8.9 Proposed Schedule of Rates

Description	Existing	Proposed								
		2025	2026	2027	2028	2029	2030	2031	2032	2033
Monthly Fixed Charges										
Single Family	$30.04	$32.29	$33.02	$33.76	$34.52	$35.30	$36.09	$36.90	$37.73	$38.58
Non Single Family	$32.95	$35.42	$36.22	$37.03	$37.86	$38.71	$39.58	$40.47	$41.38	$42.31
King County Treatment	$55.11	$58.28	$62.36	$66.73	$71.41	$77.31	$83.69	$90.60	$98.99	$108.15
Volume Charge per CCF (over 7.5 CCF/unit)										
Non Single Family	$3.34	$3.59	$3.67	$3.75	$3.83	$3.92	$4.01	$4.10	$4.19	$4.28
Non Single Family - King County	$7.35	$7.77	$8.32	$8.90	$9.52	$10.31	$11.16	$12.08	$13.20	$14.42

8.7 Affordability

A common affordability metric used by the Environmental Protection Agency to measure the relative financial impact sewer rates have on a community as a whole considers whether rates exceed 2.50 percent of a community's median household income. The average median household income for the City was $87,406 between 2018 and 2022, expressed in 2022 dollars, according to the U.S. Census Bureau. The 2022 value is escalated based on the actual rate of inflation in 2023 of 4.31 percent and the 3.00 percent inflation rate used in the financial forecast to project the median household income in future years. Table 8.10 presents the City's monthly sewer bill, inclusive of the King County Sewer Division's component, projected to 2033 and tested against the 2.50 percent monthly affordability threshold.

Table 8.10 Community Affordability Test

Year	Inflation	Median HH Income	2.5% Monthly Threshold	Projected Monthly Bill	% of Median HH Income
2022	-	$87,406	$-	$-	-
2023	4.31%	$91,173	$-	$-	-
2024	3.00%	$93,908	$195.64	$85.15	1.09%
2025	3.00%	$96,726	$201.51	$90.57	1.12%
2026	3.00%	$99,627	$207.56	$95.38	1.15%
2027	3.00%	$102,616	$213.78	$100.49	1.18%
2028	3.00%	$105,695	$220.20	$105.93	1.20%
2029	3.00%	$108,866	$226.80	$112.61	1.24%
2030	3.00%	$112,132	$233.61	$119.78	1.28%
2031	3.00%	$115,495	$240.62	$127.50	1.32%
2032	3.00%	$118,960	$247.83	$136.72	1.38%
2033	3.00%	$122,529	$255.27	$146.73	1.44%

Applying the 2.50 percent monthly affordability test, the City's rates are forecasted to remain within the indicated affordability range through 2033.

8.8 Conclusion

The results of this analysis indicate that at existing rate levels the utility will be deficient beginning in 2028. To keep pace with expenses and continue to uphase in rate funded system reinvestment towards depreciation levels, the City has adopted a 7.50 percent rate increase in 2025. Forecasting into the future a 2.25 percent annual rate increase will be required from 2026 through 2033. It is recommended that the City regularly review and update the key underlying assumptions that compose the multi-year financial plan to ensure that adequate revenues are collected to meet the City's total financial obligations.

CITY OF AUBURN, WASHINGTON

ORDINANCE NO. 2774

AN ORDINANCE authorizing the Mayor and City Clerk to sign an agreement for sewage disposal between the City of Auburn and the Municipality of Metropolitan Seattle.

WHEREAS, the City of Auburn and the Municipality of Metropolitan Seattle (Metro) have engaged in extensive negotiations relating to the provision by Metro of sewage disposal service to the City; and

WHEREAS, the City Council now believes that the negotiators for the City and Metro have agreed to and have submitted to the City Council an agreement which serves the best interest of the City; NOW, THEREFORE,

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, DO ORDAIN, as follows:

Section 1. The Mayor and City Clerk of the City are hereby authorized to execute on behalf of the City the agreement for sewage disposal between the City and the Municipality of Metropolitan Seattle, and to cause that agreement to be transmitted to the Municipality of Metropolitan Seattle.

PASSED at a regular open public meeting of the Auburn City Council, Auburn, Washington, this 5th day of November, 1973.

Stanley P Kinsey
Mayor

ATTEST:

Lorna L Byerley
City Clerk

APPROVED AS TO FORM:

PUBLISHED: 3-1-74

Executed in 6 counterparts of which this is counterpart No. 6

MUNICIPALITY OF METROPOLITAN SEATTLE

CITY OF AUBURN

AGREEMENT FOR SEWAGE DISPOSAL

THIS AGREEMENT is made as of this 1st day of March, 1974, between the CITY OF AUBURN, a municipal corporation of the State of Washington (hereinafter referred to as the "City"), and the MUNICIPALITY OF METROPOLITAN SEATTLE, a municipal corporation of the State of Washington (hereinafter referred to as "Metro").

W I T N E S S E T H:

WHEREAS, the public health, welfare and safety of the residents of the City and the residents of the metropolitan area require the elimination of potential sources of water pollution and the preservation of the fresh and salt water resources of the area; and

WHEREAS, the State of Washington Department of Ecology has adopted water quality standards and a plan of implementation thereof which requires that certain major sewage disposal works be constructed and operated and that the cities and special districts within the metropolitan area dispose of their sewage in accordance with a comprehensive plan for the metropolitan area; and

WHEREAS, Metro is engaged in developing and operating a metropolitan sewage disposal system and the City is engaged in developing and operating a sewage collection system; and

WHEREAS, to provide for the disposal by Metro of sewage collected by the City, it is necessary that a contract be now entered into establishing the rights and duties of the parties;

NOW, THEREFORE, in consideration of the mutual covenants contained herein, IT IS HEREBY AGREED AS FOLLOWS:

Section 1. Definition of Terms. The following words and phrases used in this contract shall have the meanings hereinafter set forth in this section:

a) The words "Comprehensive Plan" shall mean the Comprehensive Sewage Disposal Plan adopted in Resolution No. 23 of the Municipality of Metropolitan Seattle and all amendments thereof heretofore or hereafter adopted.

b) The words "Metropolitan Sewerage System" shall mean all of the facilities to be constructed, acquired or used by Metro as a part of the Comprehensive Plan. The Metropolitan Sewerage System shall generally include sewage disposal facilities with capacity to receive sewage from natural drainage areas of approximately one thousand acres or more. The Metropolitan Sewerage System shall thus include trunk or interceptor sewer facilities extending to a point within each tributary and natural drainage area where not more than one thousand acres remain to be served beyond the upper terminus of such trunk or interceptor sewer.

c) The words "Local Sewerage Facilities" shall mean all facilities owned or operated by a Participant for the local collection of sewage to be delivered to the Metropolitan Sewerage System and all side sewers and connection fittings connected directly to such System which serve customers of the Participant.

d) The words "Metropolitan Area" shall mean the area contained within the boundaries of the

Municipality of Metropolitan Seattle as now or hereafter constituted.

e) The word "Participant" shall mean each city, town, county, sewer district, municipal corporation, person, firm or private corporation which shall dispose of any portion of its sanitary sewage into the Metropolitan Sewerage System and shall have entered into a contract with Metro providing for such disposal.

f) The words "Residential Customer" shall mean a single family residence billed by a Participant for sewerage charges.

Section 2. Delivery and Acceptance of Sewage. On the first day of the month next following the execution of this contract or the acceptance by Metro of a federal grant by the United States Environmental Protection Agency for construction of the "Auburn Interceptor" as hereinafter defined, whichever is the later, the City shall deliver to the Metropolitan Sewerage System all of the sewage and industrial wastes collected or received by the City, and Metro shall accept the sewage and industrial wastes delivered for treatment subject to such reasonable rules and regulations as may be adopted from time to time by the Metropolitan Council. Metro shall not directly accept sewage or wastes from any person, firm or corporation which is located within the boundaries of or is delivering its sewage into the Local Sewerage Facilities of the City without the written consent of the City. The City shall not deliver sewage to any other agency for disposal without the written consent of Metro.

The treatment and disposal by Metro of the sewage and industrial waste delivered by the City to Metro shall comply with all applicable federal and state standards and requirements.

Section 3. Construction of Metro Facilities. Metro shall construct, acquire or otherwise secure the right to use all facilities within King County required for the disposal of sewage delivered to Metro pursuant to this Agreement and shall perform all services required for the maintenance, operation, repair, replacement or improvement of the Metropolitan Sewerage System, including any additions and betterments thereto. Except as otherwise provided in Sections 9 and 10 of this Agreement, Metro shall in its sole discretion determine the nature, location and the time of construction of facilities of the Metropolitan Sewerage System.

Section 4. Connection of Local Sewerage Facilities to Permanent Facilities of the Metropolitan Sewerage System. Local Sewerage Facilities of the City shall be connected to the Metropolitan Sewerage System at such time as any of the permanent facilities of such Metropolitan Sewerage System shall be available to receive sewage collected by such local facilities. The initial connection of all such local facilities existing at the time of this Agreement shall be accomplished at the expense of Metro. Subsequent connections shall be accomplished at the expense of the City in accordance with the rules and regulations of Metro and at such point or points of connection as shall be determined by Metro, except that the City shall have the right to connect any of its local facilities into any manhole of the Metropolitan Sewerage System, and such right may be exercised whether or not the same has been approved by any agency other than the parties. The City shall secure and pay for the right to use all Local Sewerage Facilities of another Participant which may be required to deliver the City's sewage to the Metropolitan Sewerage System.

Section 5. Payment for Sewage Disposal. For the disposal of sewage hereafter collected by the City and delivered to Metro the City shall pay to Metro, on or before the last day of each month during the term of this Agreement, commencing on the first day of the month next following the date of execution of this contract or the acceptance by Metro of a federal grant by the United States Environmental Protection Agency for the construction of the "Auburn Interceptor," as hereinafter defined, whichever is the later, a sewage disposal charge determined as provided in this Section 5.

1. For the quarterly periods ending March 31, June 30, September 30 and December 31 of each year, every Participant shall submit a written report to Metro setting forth (a) the number of Residential Customers billed by such Participant for local sewerage charges as of the last day of the quarter, (b) the total number of all customers billed by such Participant as of such day and (c) the total water consumption during such quarter for all customers billed by such Participant other than Residential Customers. The quarterly water consumption report of the City shall be taken from water meter records and may be adjusted to exclude water which, under the rules and regulations of Metro, needs not and in fact does not enter the sanitary facilities of a customer. Where actual sewage flow from an individual customer is metered, the metered sewage flow shall be reported in lieu of adjusted water consumption. The total quarterly water consumption report in cubic feet shall be divided by 2,700 to determine the number of Residential Customer equivalents represented by each Participant's customers other than single family residences. Metro shall maintain a permanent record of the quarterly customer reports from each Participant.

The City's first quarterly report shall cover the period from the date when sewage is first delivered to Metro to the end of the quarter in which such delivery occurs and shall be submitted within thirty days thereafter. Succeeding reports

shall be made for each quarterly period thereafter and shall be submitted within thirty (30) days following the end of the quarter.

2. a) To form a basis for determining the monthly sewage disposal charge to be paid by each Participant during any particular quarterly period, Metro shall ascertain the number of Residential Customers and Residential Customer equivalents of each Participant. This determination shall be made by taking the sum of the actual number of Residential Customers reported as of the last day of the next to the last preceding quarter and the average number of Residential Customer equivalents per quarter reported for the four quarters ending with said next to the last preceding quarter, adjusted for each Participant to eliminate any Residential Customers or Residential Customer equivalents whose sewage is delivered to a governmental agency other than Metro or other than a Participant for disposal outside of the Metropolitan Area. The number thus determined is hereinafter called the "basic reported number".

b) For the initial period until the City shall have submitted six consecutive quarterly reports, the basic reported number of Residential Customers and Residential Customer equivalents of the City shall be determined as provided in this subparagraph (b). On or before the tenth day of each month beginning with the month prior to the month in which sewage from the City is first delivered to Metro, the City shall submit a written statement of the number of Residential Customers and Residential Customer equivalents estimated to be billed by the City during the next succeeding month. For the purpose of

determining the basic reported number of Residential Customers or Residential Customer equivalents of the City for such next succeeding month, Metro may at its discretion adopt either such estimate or the actual number of Residential Customers and Residential Customer equivalents reported by the City as of the last day of the next to the last preceding reported quarter. After the City shall have furnished six consecutive quarterly reports, the basic reported number of Residential Customers and Residential Customer equivalents of the City shall be determined as provided in the immediately preceding subparagraph (a).

c) If the City shall fail to submit the required monthly and/or quarterly reports when due, Metro may make its own estimate of the number of Residential Customers and Residential Customer equivalents of the City and such estimate shall constitute the basic reported number for the purpose of determining sewage disposal charges.

d) The basic reported number of Residential Customers and Residential Customer equivalents of the City shall be further adjusted by adding thereto twenty-five percent (25%) of the number of Residential Customers or Residential Customer equivalents of the City located outside the boundaries of Metro. The sum thus determined is hereinafter called the "adjusted reported number". If all of the area located within the City or any area located outside the City and served into its Local Sewerage Facilities shall be annexed to Metro at any time after the date of this agreement or if the twenty-five percent additive adjustment shall have been paid by the City for a period of ten years, said additive adjustment shall be eliminated effective as of the first day of the month following such annexation as to the number of

Residential Customers or Residential Customer equivalents located within such annexed area and in any event shall be eliminated entirely upon the tenth anniversary of the date when sewage disposal charges shall have first been paid to Metro by the City. If the additive adjustment described above shall not be applied to the Residential Customers or Residential Customer equivalents of any other Participant located outside of the present boundaries of Metro under any future agreement between Metro and such Participant or shall be applied in a lesser amount, then the additive adjustment described in this paragraph (d) shall be correspondingly reduced or deleted. The adjusted reported number of Residential Customers and Residential Customer equivalents of the City shall be the number of Residential Customers and Residential Customer equivalents reported by the City for the purpose of determining sewage disposal charges pursuant to Paragraph 3 of this section.

3. The monthly sewage disposal charge payable to Metro shall be determined as follows:

a) Prior to July 1st of each year, Metro shall determine its total monetary requirements for the disposal of sewage during the next succeeding calendar year. Such requirements shall include the cost of administration, operation, maintenance, repair and replacement of the Metropolitan Sewerage System, establishment and maintenance of necessary working capital and reserves, the requirements of any resolution providing for the issuance of revenue bonds of Metro to finance the acquisition, construction or use of sewerage facilities, plus not to exceed 1% of the foregoing requirements for general administrative overhead costs.

b) To determine the monthly rate per Residential Customer or Residential Customer equivalent to be used during

the next succeeding calendar year, the total monetary requirements for disposal of sewage as determined in subparagraph 3(a) of this section shall be divided by twelve and the resulting quotient shall be divided by the total number of Residential Customers and Residential Customer equivalents of all Participants for the October-December quarter preceding said July 1st.

c) The monthly sewage disposal charges paid by each Participant to Metro shall be obtained by multiplying the monthly rate by the number of Residential Customers and Residential Customer equivalents of the Participant. An additional charge may be made for sewage or wastes of unusual quality or composition requiring special treatment, or Metro may require pretreatment of such sewage or wastes. An additional charge may be made for quantities of storm or ground waters entering those Local Sewerage Facilities which are constructed after January 1, 1961, in excess of the minimum standard established by the general rules and regulations of Metro, except that any such additional charges shall be offset by any expenditures made by the City on the planning and development of facilities for the correction of inflow and infiltration into the existing sewerage system of the City. If the City shall expend more than $50,000.00 in any one year on such planning and development from any source other than categorical grants, the amount expended over $50,000.00 in that year may be credited once to any future years in which the actual expenditure was less than $50,000.00 so as to avoid the collection in those years of the additional charge provided in the immediately preceding sentence.

4. A statement of the amount of the monthly sewage disposal charge shall be submitted by Metro to each Participant on or before the first day of each month and payment of such charge shall be due on the last day of such month. If any charge or portion thereof due to Metro shall remain unpaid for fifteen days following its due date, the Participant shall be charged with and pay to Metro interest on the amount unpaid from its due date until paid at the rate of 6% per annum, and Metro may, upon the failure of any Participant to pay such amount, enforce payment by any remedy available at law or equity.

5. The City irrevocably obligates and binds itself to pay its sewage disposal charge out of the gross revenues from sewage collected or received by the City. City further binds itself to establish, maintain and collect charges for sewer service which will at all times be sufficient to pay all costs of maintenance and operation of the sewer system of the City, including the sewage disposal charge payable to Metro hereunder and sufficient to pay the principal of and interest on any revenue bonds of the City which shall constitute a charge upon such gross revenues. It is recognized by Metro and the City that the sewage disposal charge paid by the City to Metro shall constitute an expense of maintenance and operation of the sewer system of the City. The City shall provide in the issuance of future sewer revenue bonds of the City that expenses of maintenance and operation of the sewer system of the City shall be paid before payment of principal and interest of such bonds. The City shall have the right to fix its own schedule of rates and charges for sewer service provided that same shall produce revenue sufficient to meet the covenants contained in this Agreement.

Section 6. Responsibility of City. The City shall be responsible for the delivery to the Metropolitan Sewerage System of sewage collected by the City, for the construction, maintenance, and operation of Local Sewerage Facilities, for the prompt connection of all premises served by such facilities, and for the payment of all costs incident to the collection of such sewage and its delivery to the Metropolitan Sewerage System.

Section 7. Records. Permanent books and records shall be kept by Metro and the City of the respective rates established, the volumes of sewage delivered and discharged into the Metropolitan Sewerage System wherever such volumes are measured and the number of Residential Customers and Residential Customer equivalents reported. In addition, Metro shall keep complete books of account showing all costs incurred in connection with the Metropolitan Sewerage System, and the City shall

keep complete records showing the amount billed to each of its customers for sewer service and the basis used for such billing including sewage flow and water consumption for each customer where applicable. The records required by this paragraph shall be available for examination by either party at any reasonable time.

Section 8. Development of Metropolitan Sewerage System It is contemplated that the Metropolitan Sewerage System will be developed in stages and, except as provided in Section 9 hereof, the nature of all facilities of the Metropolitan Sewerage System to be constructed, acquired or used and the time of such construction, acquisition or use shall be determined in the sole discretion of Metro, it being contemplated that Metro shall ultimately provide sewage disposal for the entire Metropolitan Area and such adjacent areas as may feasibly be served into the Metropolitan Sewerage System.

Section 9. Construction of Certain Metropolitan Trunk Sewers by Metro. Metro agrees that it will design, construct and inspect facilities of the Metropolitan Sewerage System generally described on Exhibit "A" attached hereto (the "Auburn Interceptor") upon the execution of this contract and the acceptance by Metro of a federal grant by the United States Environmental Protection Agency for construction of said Auburn Interceptor. The facilities shall be connected and ready for service within twenty-four calendar months next after the execution of this contract and the acceptance by Metro of a federal grant by the United States Environmental Protection Agency for the construction of the Auburn Interceptor. The date of connection may be extended by the time consumed by acts of God, strikes, material shortages or other delays beyond the control of Metro or its contractors. In the event of a dispute

over the existence of any of the delays permitting such date to be extended or over the amount of time of such extension, either party may submit such dispute to the Superior Court of King County for arbitration. If such facilities are not completed by such date or extension thereof, the amount of Metro charges paid by the City from such date to the actual date of completion thereof may be used by the City as a credit in determining the feasibility of construction of future Metropolitan Sewerage System facilities which the City may request Metro to build. Such credit shall be applied directly against that portion of the cost of such future facilities which is borne by Metro, other than by grants, and the test of feasibility used by Metro shall be one which is then generally applied by Metro to all extensions of the Metropolitan Sewerage System.

In addition, Metro shall place in every construction contract relating to the Interceptor sewers described in Exhibit "A" a provision for the payment of each such contractor of liquidated damages to the City of $300.00 per day for each day such construction has not been completed after such date or extension thereof, and such liquidated damage provision shall provide for the enforcement thereof by the City. Metro shall not approve any such time extension without prior approval of the City, which shall not be unreasonably withheld.

Metro shall construct that portion of the West Valley Interceptor from 11th Avenue North (in Algona) to Main Street (in Auburn) within a reasonable time after the Auburn Interceptor shall have been completed and the City shall have requested such construction, and the City shall provide a pump station and force main connection from the West Valley Highway along Main Street to

the existing Boeing Trunk sewer. Metro shall approve the design of and shall operate and maintain the pump station. At such time as the pump station is no longer required by Metro, the possession of such facility and responsibility for operation and maintenance therefor shall revert to the City.

At such time as the City shall request Metro to construct additional Metropolitan Sewerage System facilities within King County and within the drainage area of the City's Local Sewerage Facilities and such construction is feasible under the test of feasibility then generally applied by Metro to all extensions of the Metropolitan Sewerage System, Metro shall construct such additional facilities within a reasonable time after such request.

The City shall grant to Metro without cost a fifteen-foot permanent easement and an adequate construction easement on City property for the construction of a portion of the Auburn Interceptor. The location of such easement shall commence at the influent structure of the existing City Sewage Lagoon, thence northerly and generally parallel to the existing City Sewage Lagoon to 30th Street Northeast, the exact location to be agreed upon by Metro and the City.

Section 10. Use by Metro of City Sewerage Facilities. Certain existing sewerage facilities of the City can serve as "temporary" Metropolitan Sewerage System facilities and certain existing sewerage facilities can serve as "permanent" Metropolitan Sewerage System facilities. Effective on the date sewage disposal charges shall first be chargeable hereunder, or such earlier date as may be mutually agreed upon (hereinafter called "takeover date"), Metro shall have the right to use and the duty to maintain, operate, repair and replace the facilities owned by the City which are described on Exhibit "B" attached hereto and by this reference made a part hereof. The City shall have the right to jointly use the interceptor sewers described on Exhibit "B" as

City trunk sewers for the delivery of any sewage collected by the City, but the making of any additional lateral and side sewer connections shall be subject to approval by Metro of the manner such connections are to be made, based on adopted Metro standards.

If sewage disposal charges are chargeable to the City and if the City shall construct an additional freeway crossing with the approval by Metro of the design and location of such facility or crossing, the City shall be reimbursed for the City's actual cost thereof (less any grants received) in addition to the amount of reimbursement set forth below. The freeway reimbursement shall be made in cash within thirty-five (35) days following completion and billing by the City, but no sooner than the takeover date. The City shall continue to own the facilities described in this Section 10 and shall continue to pay the principal of and interest on any bonds issued to pay in whole or in part the cost of acquisition and construction of such facilities, provided that facilities which are designated as "permanent" shall be conveyed by the City to Metro by quit claim deed upon payment of all presently outstanding revenue bonds or general obligation bonds of the City secured by or issued to acquire or construct said facilities.

The right of Metro to use any of the facilities which are designated as "temporary" shall expire at such time as Metro shall no longer require the use of such portion. Upon thirty (30) days' notice by Metro to the City, such temporary facilities shall be returned to the City and Metro's obligation to maintain, operate, repair and replace these temporary facilities shall cease. It is contemplated by this Agreement that the City shall, at the earliest practicable date and at its expense, separate the storm and sanitary sewage in areas of the City where storm and sanitary sewage are now combined. The right of Metro to use the

City Sewage Treatment Lagoon after interception shall terminate when the City shall have applied after the date of this contract at least $207,000 of City funds, from any source other than categorical grants, to the construction of storm sewer separation facilities. Metro shall have the right to salvage any equipment which it has installed or purchased from the City in the "temporary" facilities after the period of Metro's use, otherwise such facilities shall be returned to the City in "as then is" condition upon expiration of use by Metro.

For the privilege of using the facilities described in Exhibit "B" Metro shall pay to the City the total amount of $713,713 (hereinafter called "amount of reimbursement"). Said amount of reimbursement shall be subject to reduction and reimbursement to Metro for any grant hereafter received by the City applicable to such facilities. Metro shall also reimburse the City for the package lift station located at 41st and A Street S.E. as shown on Exhibit "B" within thirty (30) days after the City transfers title to the lift station facility and underlying property to Metro. The Metro reimubrsement shall include the actual cost of acquisition of the property plus the current depreciated value of the lift station facility which is agreed to be $37,445.00..

Metro further agrees that prior to advertisement for bids for the construction of the facilities generally described on Exhibit "A" attached hereto, or any future construction of Metropolitan Sewerage System facilities to which Local Sewerage Facilities of the City could directly connect, it will submit plans and specifications for those facilities to the City for its review and upon timely notice to the City may indicate to Metro where manhole stub connections should be installed and Metro shall thereafter install same, in anticipation of further future connections by the City at those points. The installation of such stubs will be at no cost or expense to the City. The City shall have the right to connect any Local Sewerage Facilities to those stubs. The City shall also have a right to approve the location of Metropolitan Sewerage System facilities on City-owned property or right of ways, which approval shall not be unreasonably withheld.

The City shall give written notice to Metro prior to the takeover date, setting forth the manner in which the amount of reimbursement shall be paid. The City may elect to receive all or any portion of said amount in cash within thirty (30) days following the date when sewage disposal charges shall first be chargeable hereunder (hereinafter called "cash payment date") and may elect to receive any portion which is not paid on said cash payment date together with interest thereon at the rate of 4% per annum from said date, in the form of a credit against the City's monthly sewage disposal charge in equal monthly amounts sufficient to amortize such unpaid amount of reimbursement and interest thereon prior to July 1, 1980. The City may at any time after the cash payment date elect to receive any unpaid portion of the amount of reimbursement in cash with interest at the rate of 4% per annum to date of final payment by giving written notice to Metro at least one year prior to the date such final payment is to be made.

Section 11. Joint Use of Auburn Interceptor. The City and Metro agree that the Auburn Interceptor (hereinafter called "the Interceptor") shall serve as both a Metropolitan and a Local Sewerage Facility wherever the City has authority to provide local service. The City shall have the right to make direct local connections to said Interceptor for which the City shall pay to Metro, before making said connection, the sum of $8.00 per front foot of each parcel of property served on each side of the Interceptor or a total of $16.00 per front foot of each parcel of property served if local service is given on both sides of the Interceptor. Said amount represents the estimated cost of constructing an eight-inch (8") local sewer on the same alignment as the Interceptor throughout that portion where local connections are allowed. Upon payment of said amount, the City shall own an eight-inch (8") equivalent share of the Interceptor where local service is given on both sides of the Interceptor, and one-half thereof where service is given on only one side. Local connection to the Interceptor may be made by the City in such a manner as

shall be approved by Metro. The City shall hold Metro harmless from any loss, cost, charge, liability or expense resulting from or arising out of damage to the Interceptor or to the persons or property of others caused by the making of such connections or the City's failure to observe any covenant of this Agreement relating to such connections.

Section 12. Construction and Maintenance of Local Sewerage Facilities. The City shall either construct, operate and maintain at its expense or cause others to construct, operate and maintain at their expense in a proper fashion, any Local Sewerage Facilities other than joint use facilities connected to the Interceptor up to and including the tee connection. Metro shall have no responsibility for either construction, operation or maintenance of such Local Sewerage Facilities.

Section 13. Infiltration and Inflow in Auburn System. The City shall prepare and deliver to Metro on or before April 15, 1974, an inflow and infiltration analysis and survey of the existing Auburn Sewer System which shall comply with applicable regulations of the United States Environmental Protection Agency. Metro shall include in the Auburn Interceptor grant application the grant eligible portions of the cost of such evaluation studies and the grant eligible portions of the cost of any improvements or corrections to Auburn Sewer System facilities which are tributary to such Interceptor, which are recommended by the evaluation studies and which comply with applicable United States Environmental Protection Agency regulations.

Metro shall reimburse the City for the eligible portions of the evaluation studies and improvements or corrections as grant funds are received by Metro for such purposes.

Section 14. Insurance and Liability for Damages. The City and Metro shall respectively secure and maintain with responsible insurers all such insurance as is customarily maintained with respect to sewage systems of like character against loss of or damage to the

sewerage facilities of the City and Metro respectively and against public and other liability to the extent that such insurance can be secured and maintained at reasonable cost. Any loss or damage occurring as a result of the operation by Metro of the Metropolitan Sewerage System, the temporary facilities described in Exhibit "B" and the joint use sewers referred to in Section 10, shall be the sole liability of Metro and any loss or damage occurring as a result of the operation by the City of the Local Sewerage Facilities shall be the sole liability of the City.

Section 15. Assignment. The City shall not have the right to assign this Agreement or any of its rights and obligations hereunder either by operation of law or by voluntary agreement without the written consent of Metro, acting reasonably, and neither party may terminate its obligations hereunder by dissolution or otherwise without first securing the written consent of the other party, acting reasonably, and this Agreement shall be binding upon and inure to the benefit of the respective successors and assigns of the parties hereto. In the event that the City should be dissolved or should no longer be authorized to operate sewer facilities, the Local Sewerage Facilities owned and operated by the City shall be assigned and transferred to Metro or such other public agency authorized by law to operate sewer facilities which agrees to carry out the terms of this Agreement, subject to any outstanding debts of the City which have been incurred for the specific purpose of constructing or acquiring such facilities and subject to the acceptance by Metro or that other agency of the obligation to continue to provide sewer service to the residents served by such local facilities upon payment by such residents of sewage disposal charges determined as herein provided and the reasonable costs of local sewer service.

Section 16. Effective Date and Term of Contract. This Agreement shall be in full force and effect and binding upon the

parties hereto upon the execution of the Agreement and shall continue in full force and effect until July 1, 2016.

Section 17. Termination of Auburn-Algona Pacific Agreement. Upon execution of this Agreement and the execution of sewage disposal agreements between Metro and the Cities of Algona and Pacific, that certain sewage disposal contract dated August 18, 1970 between the Cities of Auburn, Algona and Pacific shall be terminated by the City. This same paragraph shall be included in any subsequent contract for sewage disposal entered into between Metro and the Cities of Algona and Pacific.

Section 18. Notice. Whenever by this Agreement notice is required to be given, the same shall be given by registered mail addressed to the respective parties at the following addresses:

Municipality of Metropolitan Seattle
410 West Harrison Street
Seattle, Washington 98119

City of Auburn
20 "A" Street Northwest
Auburn, Washington 98002

unless a different address shall be hereafter designated in writing by either of the parties. The date of giving such notice shall be deemed to be the date of mailing thereof. Billings for and payments of sewage disposal costs may be made by regular mail.

Section 19. Execution of Documents. This Agreement shall be executed in six counterparts, any of which shall be regarded for all purposes as one original. Each party agrees that it will execute any and all deeds, instruments, documents and resolutions or ordinances necessary to give effect to the terms of this Agreement.

Section 20. Waiver. No waiver by either party of any term or condition of this Agreement shall be deemed or construed as a waiver of any other term or condition, nor shall a waiver of any breach be deemed to constitute a waiver of any subsequent breach whether of the same or a different provision of this Agreement.

Section 21. Remedies. In addition to the remedies provided by law, this Agreement shall be specifically enforceable by either party.

Section 22. Entirety. This Agreement merges and supersedes all prior negotiations, representations and agreements between the parties hereto relating to the subject matter hereof and constitutes the entire contract between the parties.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the day and year first above written.

RESOLUTION NO. 1727

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK OF THE CITY OF AUBURN, TO EXECUTE AN EXTENSION OF AGREEMENT FOR SEWAGE DISPOSAL BETWEEN THE CITY OF AUBURN AND THE MUNICIPALITY OF METROPOLITAN SEATTLE (METRO), ORIGINAL AGREEMENT AUTHORIZED BY CITY OF AUBURN ORDINANCE NO. 2774 DATED NOVEMBER 5, 1973.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

THE Mayor and City Clerk of the City of Auburn, Washington, are hereby authorized to execute an Extension of Agreement for Sewage Disposal between the City of Auburn and the Municipality of Metropolitan Seattle (METRO). (The original Agreement was authorized by City of Auburn Ordinance No. 2774, dated November 5, 1973.) A copy of said Extension of Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directions of this legislation.

DATED and SIGNED this 2nd day of February, 1987.

CITY OF AUBURN

RESOLUTION NO. 1727 EXHIBIT "A"

CITY OF AUBURN

MUNICIPALITY OF METROPOLITAN SEATTLE

EXTENSION OF AGREEMENT FOR SEWAGE DISPOSAL

WHEREAS, the City of Auburn, (the "City") and the Municipality of Metropolitan Seattle (the "Municipality") are parties to a certain Agreement for Sewage Disposal (the Agreement") dated March 1, 1974, pursuant to which the City delivers to the Municipality for treatment and disposal all the sewage and industrial wastes it collects from its service area; and

WHEREAS, the Agreement expires by its terms on July 1, 2016; and

WHEREAS, it is in the best interests of the City and the Municipality that the expiration date of the Agreement be extended in order to allow the Municipality to sell and issue its sewer revenue bonds with maturities extending beyond 2016;

NOW, THEREFORE, in considreation of the mutual covenants contained herein and in the Agreement, it is hereby agreed as follows:

The Agreement for Sewage Disposal between the City of Auburn and the Municipality of Metropolitan Seattle dated March 1, 1974, is hereby extended for a period of twenty years and shall continue in full force and effect until July 1, 2036.

IT IS FURTHER AGREED that all other provisions of said Agreement shall remain unchanged, and the Agreement dated March 1, 1974, as extended herein shall constitute the entire Agreement for Sewage Disposal between the parties.

RESOLUTION NO. 2090

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERAGENCY AGREEMENT BETWEEN THE CITY OF AUBURN AND METRO TO PROVIDE AN AMENDMENT TO THE SEWAGE DISPOSAL AGREEMENT.

THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Interagency Agreement between the City of Auburn and METRO to provide an amendment to the sewage disposal agreement in order to implement the recommendations of the Rate Structure Advisory Committee adopted by the Metro Council July 6, 1989. A copy of said Agreement is attached hereto and denominated Exhibit "A".

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED and SIGNED this 4th day of June, 1990.

CITY OF AUBURN

MUNICIPALITY OF METROPOLITAN SEATTLE

AMENDMENT TO AGREEMENT
FOR SEWAGE DISPOSAL

THIS AMENDMENT made as of the 14th day of June, 1990 between the City of Auburn, a municipal corporation of the State of Washington (hereinafter referred to as the "City") and the Municipality of Metropolitan Seattle, a metropolitan municipal corporation of the State of Washington (hereinafter referred to as "Metro");

WITNESSETH:

WHEREAS, the parties have entered into a long term Agreement for Sewage Disposal dated March 1, 1974 (hereinafter referred to as the "Basic Agreement"); and

WHEREAS, an advisory committee composed of elected and appointed officials in the metropolitan area was appointed by the Metropolitan Council to examine the structure of Metro's charges to its participants; and

WHEREAS, said advisory committee, following extensive research, study and deliberations, has recommended certain changes in the structure of Metro's charges to its participants and implementation of said changes requires amendment of the Basic Agreement; and

WHEREAS, the parties have determined that the recommendations are in the best public interest and therefore desire to amend said Basic Agreement to implement said recommendations;

NOW, THEREFORE, it is hereby agreed as follows:

Copy filed Pro

Pro 2091

Section 1. Amendment of Section 5 of the Basic Agreement. Section 5 of the Basic Agreement is hereby amended to read as follows:

"Section 5. Payment for Sewage Disposal. For the disposal of sewage hereafter collected by the City and delivered to Metro the City shall pay to Metro on or before the last day of each month during the term of this Agreement, a sewage disposal charge determined as provided in this Section 5.

1. For the quarterly periods ending March 31, June 30, September 30 and December 31 of each year every Participant shall submit a written report to Metro setting forth:

(a) the number of Residential Customers billed by such Participant for local sewerage charges as of the last day of the quarter,

(b) the total number of all customers billed for local sewerage charges by such Participant as of such day, and

(c) the total water consumption during such quarter for all customers billed for local sewerage charges by such Participant other than Residential Customers.

The quarterly water consumption report shall be taken from water meter records and may be adjusted to exclude water which does not enter the sanitary facilities of the customer. Where actual sewage flow from an individual customer is metered, the metered sewage flows shall be reported in lieu of adjusted water consumption. The total quarterly water consumption report in cubic feet shall be divided by 2,250 to determine the number of Residential Customer equivalents represented by each Participant's customers other than single family residences. Metro shall maintain a permanent record of the quarterly customer reports from each Participant.

Pg. 2 of 90

The City's first quarterly report shall cover the first quarterly period following the date when sewage is first delivered to Metro and shall be submitted within thirty days following the end of the quarter. Succeeding reports shall be made for each quarterly period thereafter and shall be submitted within thirty (30) days following the end of the quarter.

2. (a) To form a basis for determining the monthly sewage disposal charge to be paid by each Participant during any particular quarterly period, Metro shall ascertain the number of Residential Customers and Residential Customer equivalents of each Participant. This determination shall be made by taking the sum of the actual number of Residential customers reported as of the last day of the next to the last preceding quarter and the average number of Residential Customer Equivalents per quarter reported for the four quarters ending with said next to the last preceding quarter, adjusted for each Participant to eliminate any Residential Customers or Residential Customer equivalents whose sewage is delivered to a governmental agency other than Metro or other than a Participant for disposal outside of the Metropolitan Area.

(b) For the initial period until the City shall have submitted six consecutive quarterly reports, the reported number of Residential Customers and Residential Customer equivalents of the City shall be determined as provided in this subparagraph (b). On or before the tenth day of each month beginning with the month prior to the month in which sewage from the City is first delivered to Metro, the City shall submit a written statement of the number of Residential Customers and Residential Customer equivalents estimated to be billed by the City during the next succeeding month. For the purpose of determining the basic reported number of Residential Customers and

Residential Customer equivalents of the City for such next succeeding month, Metro may at its discretion adopt either such estimate or the actual number of Residential Customers and Residential Customer equivalents reported by the City as of the last day of the next to the last preceding reported quarter. After the City shall have furnished six consecutive quarterly reports the reported number of Residential Customers and Residential Customer equivalents of the City shall be determined as provided in the immediately preceding subparagraph (a).

(c) If the City shall fail to submit the required monthly and/or quarterly reports when due, Metro may make its own estimate of the number of Residential Customers and Residential Customer equivalents of the City and such estimate shall constitute the reported number for the purpose of determining sewage disposal charges.

3. The monthly sewage disposal charge payable to Metro shall be determined as follows:

(a) Prior to July 1st of each year Metro shall determine its total monetary requirements for the disposal of sewage during the next succeeding calendar year. Such requirements shall include the cost of administration, operation, maintenance, repair and replacement of the Metropolitan Sewerage System, establishment and maintenance of necessary working capital and reserves, the requirements of any resolution providing for the issuance of revenue bonds of Metro to finance the acquisition, construction or use of sewerage facilities, plus not to exceed 1% of the foregoing requirements for general administrative overhead costs.

(b) To determine the monthly rate per Residential Customer or Residential Customer equivalent to be used during said next succeeding calendar year, the total monetary requirements for disposal of sewage as determined

in subparagraph 3(a) of this section shall be divided by twelve and the resulting quotient shall be divided by the total number of Residential Customers and Residential Customer equivalents of all Participants for the October-December quarter preceding said July 1st; provided, however, that the monthly rate shall not be less than Two Dollars ($2.00) per month per Residential Customer or Residential Customer equivalent at any time during the period ending July 31, 1972.

(c) The monthly sewage disposal charge paid by each Participant to Metro shall be obtained by multiplying the monthly rate by the number of Residential Customers and Residential Customer equivalents of the Participant. An additional charge may be made for sewage or wastes of unusual quality or composition requiring special treatment, or Metro may require pretreatment of such sewage or wastes. An additional charge may be made for quantities of storm or ground waters entering those Local Sewerage Facilities which are constructed after January 1, 1961 in excess of the minimum standard established by the general rules and regulations of Metro.

4. The parties acknowledge that, by resolution of the Metropolitan Council, Metro may impose a charge or charges directly on the future customers of a Participant for purposes of paying for capacity in Metropolitan Sewage Facilities and that such charges shall not constitute a breach of this agreement or any part thereof. The proceeds of said charge or charges, if imposed, shall be used only for capital expenditures or defeasance of outstanding revenue bonds prior to maturity.

In the event such a charge or charges are imposed, the City shall, at Metro's request, provide such information regarding new residential customers and residential customer

P11/2097

equivalents as may be reasonable and appropriate for purposes of implementing such a charge or charges.

5. A statement of the amount of the monthly sewage disposal charge shall be submitted by Metro to each Participant on or before the first day of each month and payment of such charge shall be due on the last day of such month. If any charge or portion thereof due to Metro shall remain unpaid for fifteen days following its due date, the Participant shall be charged with and pay to Metro interest on the amount unpaid from its due date until paid at the rate of 6% per annum, and Metro may, upon failure to pay such amount, enforce payment by any remedy available at law or equity.

6. The City irrevocably obligates and binds itself to pay its sewage disposal charge out of the gross revenues of the sewer system of the City. The City further binds itself to establish, maintain and collect charges for sewer service which will at all times be sufficient to pay all costs of maintenance and operation of the sewer system of the City, including the sewage disposal charge payable to Metro hereunder and sufficient to pay the principal of and interest on any revenue bonds of the City which shall constitute a charge upon such gross revenues. It is recognized by Metro and the City that the sewage disposal charge paid by the City to Metro shall constitute an expense of the maintenance and operation of the sewer system of the City. The City shall provide in the issuance of future sewer revenue bonds of the City that expenses of maintenance and operations of the sewer system of the City shall be paid before payment of principal and interest of such bonds. The City shall have the right to fix its own schedule of rates and charges for sewer service provided that same shall produce revenue sufficient to meet the covenants contained in this Agreement.

Pen 2197

Section 2. Effective Date of Amendment. This amendment shall take effect at the beginning of the first quarter following the date first written above with quarters beginning January 1, April 1, July 1, and October 1.

Section 3. Basic Agreement Unchanged. Except as otherwise provided in this amendment, all provisions of the basic agreement shall remain in full force and effect as written therein.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the day and year first written above.

In the matter of the application for a franchise to operate, maintain, repair, and construct and sewer mains, service lines, and appurtenances in, over, along, and under County roads and rights-of-way in King County, Washington

---

The application of the City of Auburn for a franchise to operate, maintain, repair and construct sewer mains, service lines, and appurtenances in, over, along, and under County roads and rights-of-way located within the area described in attached Exhibit "A" has been heard on this 26th day of August, 2002 All of the property described in Exhibit "A" lies outside the limits of any incorporated Town or City.

Legal notice of the franchise application and of the hearing has been given as is required by law.

The King County Council, having considered the interests proposed and advanced, and finding that the granting of this franchise is in the public interest, ORDERS that a franchise be granted to the City of Auburn, the Grantee, subject to the conditions set forth in Exhibit "B" attached hereto, this franchise and Ordinance No 14458. This franchise grants the right, privilege, authority and franchise to operate, maintain, repair and construct mains and service lines and appurtenances as a part of its distribution system in, over, along, and under County roads and rights-of-way located within the area described in Exhibit "A"

2002 100 1031676

Res 3511

This franchise is granted subject to all of the terms and conditions contained herein, within Ordinance No 14458 and Exhibit "B", and shall expire in twenty-five years on 9/14, 2027.

Dated this 4 day of September, 20___.

KING COUNTY, WASHINGTON

BY _____

TITLE King County Executive

2002 100 1031676

The undersigned accepts all the rights, privileges, and duties of this franchise subject to all terms, conditions, stipulations, and obligations contained herein, within Ordinance 14458 and Exhibit "B"

EXHIBIT "B"

TERMS AND CONDITIONS APPLICABLE TO UTILITIES FRANCHISES GRANTED BY KING COUNTY

THIS FRANCHISE is subject to the following terms and conditions:

1 DEFINITIONS

References to any County official or office also refers to any office that succeeds to any or all of the responsibilities of the named office or official. References to laws or "applicable laws" include federal, state, and local laws and regulations adopted pursuant to those laws; unless otherwise stated, references to laws include laws now in effect, as the same may be amended from time to time during the operation of this franchise. In addition, the following definitions shall apply:

2002 100 10031676

Cable Services The term "Cable Services" is used as defined in 47 United States Code 522 (5), as amended

Cable System The term "Cable System" is used as defined in 47 United States Code 522 (6), and King County Code 6.a 010 (J) as amended

County Road Rights-of-Way. The term "County Road Rights-of-Way" includes any road, street, avenue, or alley located within the area described in the attached Exhibit "A", it does not include recreational or nature trails except where the trails intersect or are within roads, streets, avenues or alleys

Director. The term "Director" refers to the chief executive of the King County Department of Transportation.

Grantee. The term "Grantee" refers to the City of Auburn, its successors and those assignees approved pursuant to paragraph 16 herein

Utility. The term "utility" refers either to the Grantee or, depending on the context, to any other person, firm, or corporation, public or private, which may hold a franchise to maintain and operate similar facilities in, under, over, across, and along any of the County property described in Exhibit "A"

Council. The term "Council" refers to the King County Council, acting in its official capacity.

Other Governing Body The term "Other Governing Body" refers to any public official or other public board or body as may have the power and jurisdiction to permit or regulate the installation and maintenance of utilities and other facilities in, under, over, across, and along any of the county property described in Exhibit "A"

2 ACCEPTANCE BY GRANTEES OF TERMS AND CONDITIONS

The full acceptance of this franchise and all of its terms and conditions shall be filed with the Clerk of the Council within thirty (30) days from _____, 20____, by the Grantee. Full acceptance of this franchise is a condition precedent to its taking effect, and unless this franchise is accepted within the time specified, this grant will be null and void and have no force or effect.

3 NON-EXCLUSIVE FRANCHISE

This franchise is not exclusive. It does not prohibit King County from granting franchises for other public or private utilities, in, under, over, across, and along any County property, including County road rights-of-way.

This franchise does not prevent or prohibit King County from constructing, altering, maintaining or using any County road rights-of-way covered by this franchise. King County retains full power to make all changes, relocations, repair, maintenance, etc as it may deem fit.

4. JURISDICTION

This franchise is intended to convey limited rights and interest only as to those roads and rights-of-way in which King County has an actual interest It is not a warranty of title or of interest in County road rights-of-way.

Whenever any of the County road rights-of-way as designated in this franchise, by reason of the subsequent incorporation of any Town or City or extension of the limits of any Town or City, shall later fall within the City or Town limits, this franchise shall continue in force and effect until such time as the incorporation and/or annexation is complete according to applicable State law, after which time the County will no longer have any responsibility for maintenance of any County roads, rights-of-way or other County property within the area of annexation/incorporation.

None of the rights granted to the Grantee shall affect the jurisdiction of King County over County road rights-of-way or the County's power to perform work upon its roadways, rights-of-way or appurtenant drainage facilities including by constructing, altering, renewing, paving, widening, grading, blasting or excavating

All of the rights herein granted shall be subject to and governed by this franchise; provided, however, that nothing in this franchise may be construed in any way as limiting King County's rights to adopt ordinances which are necessary to protect the health, safety and welfare of the general public

2002 100 1031676

5. REGULATION OF USE AND CONTROL

This franchise does not deprive King County of any powers, rights, or privileges it now has or may later acquire in the future to regulate the use of and to control the County road rights-of-way covered by this franchise

This franchise authorizes the use of County rights-of-way solely for the delivery by the Grantee of sewer service to it customers. Additional uses of County rights-of-way by the Grantee, including for cable communication services, shall first require a separate franchise from King County, which conforms to the requirements of K.C.C 6.27 as amended, or K C C. 6.27A as amended, and other applicable law.

Any use of the Grantee's equipment of facilities in County rights-of-way by others, including for telecommunication or cable communication services, is prohibited unless separately authorized and approved in writing by King County The Grantee agrees that prior to authorizing any person to use the Grantee's equipment or facilities located in County rights-of-way, the Grantee will require the user to provide the Grantee with an affidavit that it has obtained the necessary franchise or other approval from the County to operate and provide the proposed service in County rights-of-way. At least thirty (30) days prior to executing any agreement with a potential user for the use of the Grantee's equipment or facilities, the Grantee shall fax the affidavit to the King County Office of Cable Communication at 206-296-0842.

2002 100 1031676

6 EMINENT DOMAIN

This franchise and the limited rights and interests for the operation, maintenance, repair, and construction of Grantee's transmission and service lines and appurtenances are subject to the exercise of eminent domain In the event of an exercise of eminent domain by King County, the value to be attributed to all the rights and interests granted under this franchise shall not exceed the actual amount the Grantee paid to King County in obtaining this franchise.

7 ENFORCEMENT

Failure of King County, on one or more occasions to exercise a right or to require compliance or performance under this franchise or any applicable law, shall not be deemed to constitute a waiver of such right or a waiver of compliance or performance, unless such right has been specifically waived in writing Failure of King County to enforce or exercise its rights under any provision of this franchise or applicable law does not constitute a waiver of its rights to enforce or exercise a right in any other provision of this franchise or applicable law.

8 INDEMNITY AND HOLD HARMLESS

The Grantee agrees to indemnify and hold harmless King County as provided herein to the maximum extent possible under law Accordingly, the Grantee agrees for itself, its successors, and assigns to defend, indemnify and hold harmless King County, its appointed and elected officials, and employees from and against liability for all claims, demands, suits, and judgments, including

costs of defense thereof, for injury to persons, death, or property damage which is caused by, arises out of, or is incidental to Grantee's exercise of rights and privileges granted by this franchise The Grantee's obligations under this section shall include:

(a) Indemnification for such claims whether or not they arise from the sole negligence of the Grantee, the concurrent negligence of both parties, or the negligence of one or more third parties.

(b) The duty to promptly accept tender of defense and provide defense to the County at the Grantee's own expense

(c) Indemnification of claims made by the Grantee's own employees or agents.

(d) Waiver of the Grantee's immunity under the industrial insurance provisions of Title 51 RCW, which waiver has been mutually negotiated by the parties.

2002 100 1031676

In the event it is necessary for the County to incur attorney's fees, legal expenses, or other costs to enforce the provisions of this section, all such fees, expenses and costs shall be recoverable from the Grantee.

In the event it is determined that RCW 4 24.115 applies to this franchise agreement, the Grantee agrees to defend, hold harmless and indemnify King County to the maximum extent permitted thereunder, and specifically for its negligence concurrent with that of King County to the full extent of Grantee's negligence Grantee agrees to defend, indemnify and hold harmless the County for claims by Grantee's employees and agrees to waiver of its immunity under Title 51 RCW, which waiver has been mutually negotiated by the parties.

King County shall give the Grantee timely written notice of the making of any claim or of the commencement of any such action, suit, or other proceeding covered by the indemnity in this section. In the event any such claim arises, the County or any other indemnified party shall tender the defense thereof to the Grantee and the Grantee shall have the duty to defend, settle, or compromise any claims arising hereunder and the County shall cooperate fully therein

Notwithstanding the above, the County shall have no obligation to tender a defense as a condition of the indemnity where there is a material conflict between the interests of the Grantee and King County.

9 VACATION

If at any time King County vacates any County road rights-of-way covered by this franchise, King County will not be held liable for any damages or loss to the Grantee by reason of such vacation King County may, after giving thirty (30) days written notice to the Grantee, terminate this franchise with respect to any County road rights-of-way vacated

10. REPAIR, REMOVAL OR RELOCATION

The Grantee hereby covenants, at its own expense, to repair, remove, or relocate existing facilities including all appurtenant facilities and service lines connecting its system to users, within King County road rights-of-way if such repair, removal, or relocation is required by King County for any County road purpose Such repair, removal, or relocation shall not be unreasonably required

The grantee shall, at no expense to the County, adjust, remove or relocate existing facilities within County road rights-of-way, including all appurtenant facilities and service lines connecting its system to users, if the County determines such adjustment, removal or relocation is reasonably necessary to allow for an improvement or alteration planned by the County in such road right-of-way The County shall give the Grantee written notice of such requirement as soon as practicable, at the beginning of the pre-design stage for projects that are part of the County's capital improvement program, including such available information as is reasonably necessary for the Grantee to plan for such adjustment, removal or relocation

For projects that are a part of the County's capital improvement program, in addition to any other notice given to the Grantee, the County shall provide a vertical and horizontal profile of the roadway and drainage facilities within it, both existing and as proposed by the County, and the proposed construction schedule; notwithstanding any permit conditions that may later be applied to the County project, this initial design information shall be given at least 180 days before construction is scheduled to begin, except in cases of urgent construction or emergencies The Grantee shall respond to this notice, and to any later notices of revised designs based on permit conditions, within no more than thirty (30) days by providing to the County the best available information as to the location of all of the Grantee's facilities, including all appurtenant facilities and service lines connecting its system to users and all facilities that it has abandoned, within the area proposed for the public works project

The County shall offer the Grantee the opportunity to participate in the preparation of bid documents for the selection of a contractor to perform the public works project as well as all required adjustments, removals or relocations of the Grantee's facilities Such bid documents shall provide for an appropriate cost allocation between the parties The County shall have sole authority to choose the contractor to perform such work The Grantee and the County may negotiate an agreement for the Grantee to pay the County for its allocation of costs, but neither party shall be bound to enter into such an agreement Under such an agreement, in addition to the Grantee's allocation of contractor costs, the Grantee shall reimburse the County for cost, such as for inspections or soils testing, related to the Grantee's work and reasonably incurred by the County in the administration of such joint construction contracts Such costs shall be calculated as the direct salary cost of the time of County professional and technical personnel spent productively engaged in such work, plus overhead costs at the standard rate charged by the County on other similar projects, including joint projects with other County agencies

2002 100 1001676

11. REQUIREMENT OF CONSTRUCTION PERMITS

The Grantee, its successors or assigns, has the right, privilege, and authority to enter the County road rights-of-way for the purpose of operating, maintaining, repairing or construction its transmission and service lines and appurtenances on the condition that it obtains permits approved by the Director and Property Services Division and, when applicable, by the Department of Development and Environmental Services. Applications for work permits shall be presented to the Property Services Division, which may require copies of plans, blueprints, cross-sections, or further detailing of work to be done In the event of an emergency, the Grantee may immediately commence the necessary work and shall apply the next business day for the work permit Any work done, whether by Grantee, its contractors, or third parties will include necessary paving, patching, grading and any other reasonably necessary repair or restoration to the County road rights-of-way. All work shall be done to the satisfaction of the Director.

2002 100 1031676

All equipment, lines and appurtenances which are used in the operation, maintenance, repair or construction of the Grantee's service and which are located within the County road rights-of-way shall be considered to be part of the Grantee's system and shall be the responsibility of the Grantee. All permits for the operation, maintenance, repair or construction of said system shall be applied for and given in the name of the Grantee, who will be responsible for all work done under the permit The Grantee remains responsible whether the work is done by the Grantee, its contractors, or by third parties

The Grantee shall post a bond to King County in the amount necessary for road restoration. The amount of the bond shall be set by the Department of Transportation, Roads Services Division and shall be filed with the Property Services Division before the issuance of any permit.

The Grantee shall, at no expense to the County, assume the following obligations with respect to the facilities connected to its system that are within County road rights-of-way and which it does not own, including appurtenant facilities and service lines connecting its system to users

(a) The Grantee shall apply for, upon request and on behalf of the owner of the facilities, a County right-of-way construction permit for any repairs required for such facilities; provided such owner agrees to reimburse the Grantee for all costs incurred by the Grantee and any other reasonable conditions the Grantee requires as a precondition to applying for the permit All work to be performed in the County right-of-way shall comply with all conditions of the County permit and all applicable County requirements. The Grantee may at its option perform any part of the repair with its own forces or require the owner to employ a contractor for that purpose, provided such contractor is approved by the County;

(b) In the event that the County determines emergency repair of such facilities is necessary to halt or prevent significant damage to County road rights-of-way or significant threats to the health, safety and welfare of parties other than the owner or the occupants of the building served by such facilities, the Grantee shall take prompt

remedial action to correct the emergency to the County's approval, which the County shall not unreasonably withhold,

(c) When the County or its contractor provides notice to the Grantee, pursuant to RCW 19.122, of its intent to excavate within County road rights-of-way, the Grantee shall provide to the County or its contractor the best information available from the Grantee's records or, where reasonable, from the use of locating equipment as to the location of such facilities, including surface markings where these would reasonably be of use in the excavation. If the Grantee fails to make good faith efforts to provide the above information within the deadlines provided by RCW 19 122, the Grantee shall hold the County harmless for all reasonable costs that result from damage to such facilities if such damage occurs as a result of the failure to provide such information. Nothing in this subsection is intended or shall be construed to create any rights in any third party or to form the basis for any obligation or liability on the part of the County or the Grantee toward any third party, nor is anything in this subsection intended to be construed to alter the rights and responsibilities of the parties under RCW 19.122, as amended

2002 100 1001676

12. RESTORATION OF COUNTY ROAD RIGHTS-OF-WAY

After work on, under or adjacent to County road rights-of-way, the Grantee is responsible for and will leave all County road rights-of-way in as good a condition as they were in before any work was done. In the event that the Grantee, its contractors, or third parties working under permit should fail to restore County road rights-of-way to the satisfaction of the Director, King County may make such repairs or restorations as are necessary to return the County road rights-of-way to its pre-work condition. Upon presentation of an itemized bill for repairs or restorations, including the costs of labor and equipment, the Grantee will pay the bill within thirty (30) days If suit is brought upon the Grantee's failure to pay for repair and restoration, and if judgment in such a suit is entered in favor of King County, then the Grantee shall pay all of the actual costs, including interest from the date the bill was presented, disbursements, and attorney's fees and litigation related costs incurred.

13 PERFORMANCE OF WORK

The Grantee covenants that in consideration for the rights and privileges granted by this franchise, all work performed by the Grantee on County road rights-of-way shall conform to all County requirements including, but not limited to, the requirements of the current edition of the County Road Standards in force when the work is performed and all traffic control shall also conform to the current edition of the Manual of Uniform Traffic Control Devices in force when the work is performed.

14 BLASTING REQUIREMENTS

The right to operate, maintain, repair and construct Grantee's distribution and service lines and appurtenances granted by this franchise does not preclude King County, its agents or contractors

Unofficial Document

from blasting, grading, or doing other road work to the Grantee's lines and appurtenances Except in the case of an emergency, the Grantee will be given ten (10) business days written notice of any blasting so that the Grantee may protect its lines and appurtenances If the Grantee notifies the County within ten (10) business days that the facilities will have to be relocated to protect them from blasting, the County will defer the blasting for up to ninety (90) days from the date of the original notice. In no event will the Grantee be given less than two (2) business days written notice of any blasting Notification of any excavation shall be provided through the One-Call System as provided by RCW 19.122, as hereinafter amended.

15 SURVEY MARKERS AND MONUMENTS

It shall be the responsibility of the Grantee performing any construction work in the County road rights-of-way to restore any survey markers or monuments disturbed by such construction in accordance with RCW 58.09.130, and as hereinafter amended

2002 100 1031676

16. ASSIGNMENT

The Grantee shall not have the right to assign this franchise without the consent of the Metropolitan King County Council given by Ordinance No assignment shall be effective unless an acceptance by the assignee of all rights, conditions, terms, provisions, and responsibilities contained within the franchise, as well as surety bonds, which the Council deems necessary to be posted, are received. Council approval of the assignment may be made subject to the assignee's acceptance of new or modified terms of the franchise

17. EXPIRATION AND RENEWAL

To the extent described in Exhibit "A", all rights granted by this franchise to County road rights-of-way outside incorporated Towns and Cities apply to all existing County road rights-of-Way improved and unimproved and to all County road rights-of-way acquired by King County during the term of this franchise

If the Grantee has initiated a renewal of this franchise before it expires, the County may, at its sole discretion, extend the term of the franchise on a month to month basis for up to one year. Should the County elect to extend the franchise, written notice shall be provided to the Grantee before the franchise expiration date

If the Grantee has not applied for a renewal of this franchise before it expires, King County has the right to remove or relocate any lines and appurtenances of the Grantee as is reasonably necessary for the public's health, welfare, safety, or convenience including, but not limited to, the safe operation of County roads, franchise holders, or for the construction, renewing, altering, or improving of any County road right-of-way, or for the installation of lines and/or facilities of other franchise holders Grantee shall be liable for the costs incurred in any removal or relocation of its lines and appurtenances under this section Costs include the expense of labor and equipment

Upon expiration of this franchise, the Grantee shall continue to be responsible for the operation and maintenance of existing facilities in the County road rights-of-way until removed, assigned to another franchised utility or abandoned; however, the Grantee shall not have the right to provide additional services or construct new facilities. King County will issue permits required for the repair and maintenance of the existing facilities in accordance with K.C.C. 14.44 055 as amended and Section 11 of this franchise. This section and sections 8, 10-13 and 15 of this franchise shall continue in force until such time as the lines are removed from County road rights-of-way, assigned to another franchised utility, or abandoned in place with the approval of the Manager of the Department of Transportation, Road Services Division.

18. RESERVATION OF RIGHTS

King County specifically reserves for itself the right to impose a utility tax on the Grantee if State of Washington grants such taxing authority and the local option is exercised by the King County Council

2602 100 1031676

King County also specifically reserves the right to exercise authority it has or may acquire in the future to secure and receive fair market compensation for the use of its property, pursuant to an ordinance. If King County elects to exercise such authority, the fair market compensation requirement for Grantee shall be imposed by ordinance not less than one hundred eighty (180) days after written notice ("Compensation Notice") is delivered to the Grantee, said Compensation Notice identifying with specificity the definition, terms and/or formula to be used in determining such fair market compensation. Acceptance of King County's definition terms and/or formula identified in the Compensation Notice will occur if the Grantee accepts in writing within thirty (30) days of receipt of the Compensation Notice, or, if Grantee takes no action in writing within thirty (30) days of receipt of the Compensation Notice, in which case the applicable ordinance that the King County Council passes will be determinative

Nothing in this section shall be construed as an agreement by the Grantee of King County's right to exercise authority it has or may acquire in the future to secure and receive fair market compensation for the use of property. Nothing in this section shall be construed to prohibit the Grantee from challenging, in King County Superior Court or a court of competent jurisdiction, the legality of such right

Grantee's rejection of the definition, terms, and/or formula identified in the Compensation Notice will only occur if such rejection is in written form, identifying with specificity the grounds for such rejection, and delivered to King County within thirty (30) days after receipt of the Compensation Notice, in which case the below identified arbitration terms will apply.

(a) The Grantee and King County will select one arbitrator each, and the two selected arbitrators will select a third arbitrator. If the two arbitrators have not selected a third arbitrator within thirty (30) days after the selection of the last selection of the two, either the Grantee or King County may apply to the presiding judge of the King County Superior Court for the appointment of a third arbitrator. The three

arbitrators will determine the method for determining the fair market compensation for the County property used by the Grantee The arbitration procedure employed shall be consistent with the rules and procedures of the American Arbitration Association The decision of a majority of the arbitrators will bind both the Grantee and King County. At the conclusion of the arbitration, the arbitrators will submit written reports to the Grantee and King County, which shall contain all pertinent evidence that, led to their conclusion together with an explanation of their reasoning for such conclusion.

(b) The fees of the arbitrators selected by each party shall be paid by that party and the fees of the third arbitrator shall be paid one-half by the County and the Grantee. The County and the Grantee shall share the other costs of the proceeding equally

(c) In event that the question of fair market compensation is not resolved prior to the effective date specified by the ordinance authorizing said compensation, the arbitration decision will be applied retroactively to the effective date in the ordinance The Grantee will pay the retroactive sum plus interest in the amount of twelve percent (12%) per annum

2002 100 1001676

Nothing in this franchise may be construed to limit the exercise of authority now or later possessed by the County or any other governing body having competent jurisdiction to fix just, reasonable and compensatory rates or other requirements for services under this franchise. Nothing in this section shall be construed to prohibit the Grantee from challenging, in King County Superior Court or a court of competent jurisdiction, the authority of the County or any other governing body to fix rates or other requirements for services.

19. COMPLIANCE WITH LAWS

Grantee shall conform to all applicable federal, state and local laws and regulations including, but not limited to, the State Environmental Policy Act and King County environmental standards and ordinances.

20 NON-DISCRIMINATION CLAUSE

In all hiring or employment made possible or resulting from this franchise agreement, there shall be no discrimination against any employee or applicant for employment because of sex, sexual orientation, age, race, color, creed, national origin, marital status or the presence of any sensory, mental, or physical handicap, unless based upon a bona fide occupational qualification, and this requirement shall apply to but not be limited to the following: employment, advertising, lay-off or termination, rates of pay or other forms of compensation, and selection for training, including apprenticeship

No person shall be denied, or subjected to discrimination in receipt of the benefit of any services or activities made possible by or resulting from this agreement on the grounds of sex, sexual

orientation, race, color, creed, national origin, age except minimum age and retirement provisions, marital status, or the presence of any sensory, mental or physical handicap

Any violation of this provision shall be considered a violation of a material provision of this agreement and shall be grounds for cancellation, termination or suspension in whole or in part, of the agreement by the County and may result in ineligibility for further County agreements.

The Grantee shall make the best efforts to make opportunities for employment and/or contracting services available to women and minority persons The Grantee recognizes that King County has a policy of promoting affirmative action, equal opportunity and has resources available to assist Grantee in these efforts.

2002 100 1031676

21. PENALTY FOR VIOLATION OF CONDITIONS

If the Grantee shall violate or fail to comply with any of the material terms, conditions, or responsibilities of this franchise through neglect or failure to obey or comply with any notice given the Grantee under the provisions of this franchise or if the Grantee abandons its franchise, the Council may revoke this franchise King County shall give written notice of its intent to revoke this franchise. A public hearing shall be scheduled within forty-five (45) days following the notification. The decision to revoke this franchise will become effective ninety (90) days following the public hearing if the County, by ordinance, finds·

A That the Grantee has not substantially cured the violation or failure to comply which was the basis of the notice; or

B. that the violation or failure to comply which was the basis of the notice is incapable of cure, or

C that the Grantee has repeatedly violated or failed to comply with any of the material terms, conditions, or responsibilities of the franchise, even though the individual violations have been cured, and

D. that the revocation of the franchise is in the public interest.

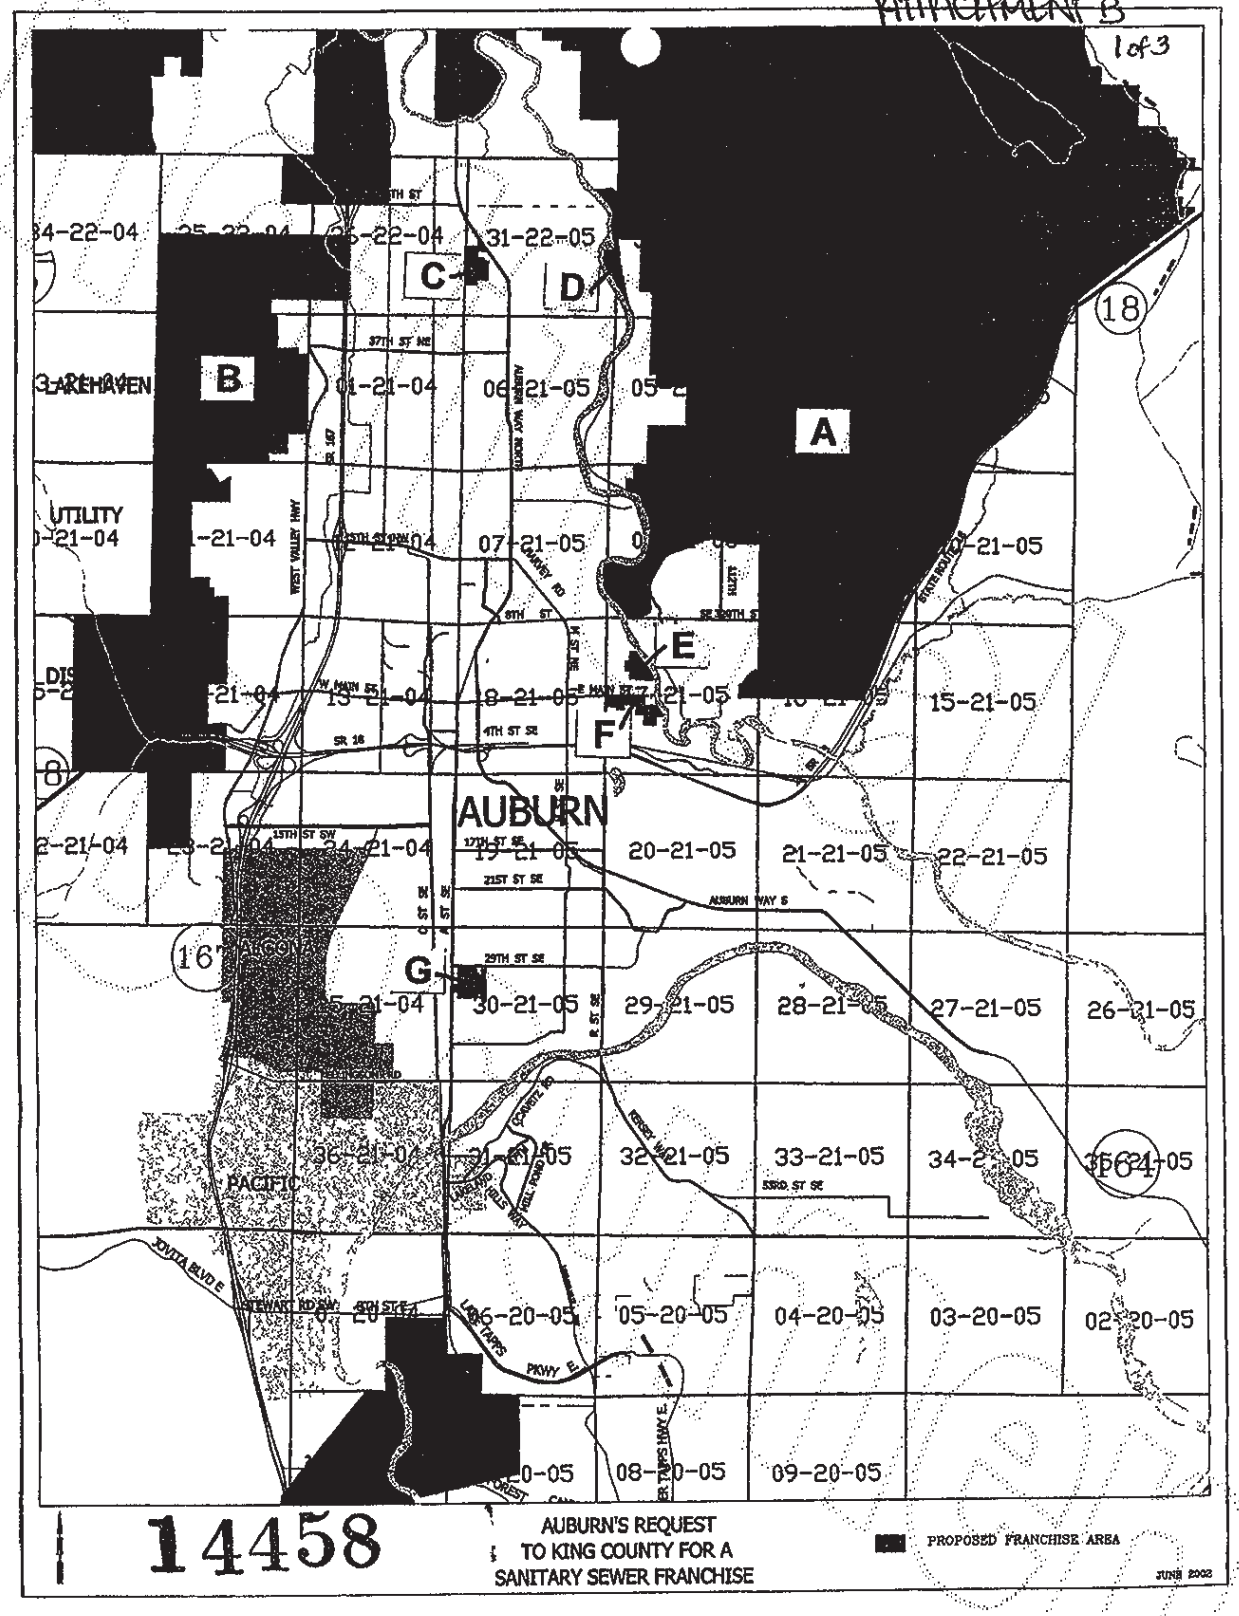
During the forty-five (45) days following the notification, the Grantee shall have the opportunity to remedy the failure to comply

22 RIGHT OF APPEAL

Decisions, requirements, or approvals of the Director are binding on the parties to this document Appeals from the Director's determinations will be made by filing a complaint with the King County Superior Court

Unofficial Document

23 SEVERANCE



This franchise gives effect to purposes and uses, which are consistent with economical and efficient services rendered in the public interest. If any provision of this franchise, or its application is determined to be invalid by a court of law, then the remaining provisions of this franchise shall continue and remain valid unless the dominant purpose of the franchise would be prevented or the public interest is no longer served

SOOS CREEK WATER AND SEWER DISTRICT

- Service Area Boundaries (Resolution 3321)

RESOLUTION NO. 3321

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES BETWEEN THE CITY OF AUBURN AND THE SOOS CREEK WATER AND SEWER DISTRICT.

WHEREAS, pursuant to RCW 35A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn has the legal authority to maintain a sewerage system; and

WHEREAS, pursuant to RCW 57.08.044, Soos Creek Water and Sewer District has the legal authority to provide sewer service to property owners in areas outside existing district boundaries; and

WHEREAS, pursuant to RCW 57.08.044, Soos Creek Water and Sewer District has the legal authority to enter into contracts with any municipal corporation for the purpose of providing sewer service to those property owners outside the existing district boundaries.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Interlocal Agreement establishing sanitary sewer service boundaries between the City of Auburn and Soos Creek Water and Sewer District District. A copy of said Agreement is attached hereto, denominated as Exhibit "1" and made a part hereof as though set forth in full herein.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

DATED this 20th day of February, 2001.

SOOS CREEK WATER AND SEWER DISTRICT and CITY OF AUBURN INTERLOCAL AGREEMENT FOR THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 21st day of March, 2001, by and between the **SOOS CREEK WATER AND SEWER DISTRICT**, a Washington municipal corporation (hereinafter referred to as "Soos Creek"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn has the legal authority to maintain a sewerage system; and

WHEREAS, pursuant to RCW 57.08.044, Soos Creek has the legal authority to provide sewer service to property owners in areas outside existing district boundaries; and

WHEREAS, pursuant to RCW 57.08.044, Soos Creek has the legal authority to enter into contracts with any municipal corporation for the purpose of providing sewer service to those property owners outside the existing district boundaries, and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Auburn desires new development within it's Potential Annexation Area to complete a Pre-annexation agreement with Auburn prior to receiving a certificate of sanitary sewer availability; and

WHEREAS, portions of the Soos Creek sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of Auburn's Potential Annexation Area; and

2001 040 6001622

WHEREAS, Auburn has evaluated and determined it is not cost feasible to provide sewer service to those properties located within Auburn's Potential Annexation Area adjacent to Soos Creek's sanitary sewer infrastructure; and

WHEREAS, the parties desire to allow Soos Creek to construct, reconstruct, repair and maintain sewer facilities as necessary, and to authorize connections for service to noted areas, or portions thereof; and

WHEREAS, Soos Creek's sewer service to these areas will provide for maximum efficient use of existing and future facilities together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. **Sewer Service Area.** The parties have agreed to a permanent sewer service area boundary between them. The boundary is graphically depicted on the map attached hereto as Exhibit "A", which is by this reference incorporated herein. Both parties further agree that Soos Creek in providing sewer service to the area shown on Exhibit "A", as "Area To Be Served By Soos Creek", shall be furnishing sewer service to properties within Auburn's Potential Annexation Area. Soos Creek shall provide service in accordance with and subject to the terms and conditions of this Agreement.

2. **Service Area Responsibility.** Auburn shall have responsibility to provide sanitary sewer service to the area(s) on Auburn's side of the respective service area boundaries as delineated by this agreement, whether or not annexed to Auburn, and subject to such reasonable conditions and terms of service as Auburn deems appropriate. Soos Creek shall have responsibility to provide sanitary sewer service to the area(s) on Soos Creek's side of the respective service area boundaries as delineated by this agreement, whether or not annexed to Auburn, and subject to such reasonable conditions and terms of service as Soos Creek deems appropriate. Auburn hereby gives consent to Soos Creek for such service within Soos Creek's corporate boundaries as they presently exist, or as they may be modified in the future by annexation. Soos Creek shall be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation of said sewerage system within their delineated boundary.

3. **Sewer Availability Certificates.** Both parties acknowledge that Auburn may exercise planning jurisdiction over territory to which it will not provide sanitary sewer service in accordance with this agreement. Auburn hereby agrees that its planning shall be for sanitary sewer service to be provided by Soos Creek in those areas shown in Exhibit "A" as Soos Creek's service area; provided, however, that commencing on March 1, 2001, Soos Creek sewer availability certificates for all

2001 040 6001622

service areas to be served by Soos Creek within Auburn and/or Auburn's Potential Annexation Area (PAA) in accordance herewith, shall be issued to applicants for sewer service only through Auburn.

4. Soos Creek Comprehensive Sewer Planning Area. The terms of this agreement will be included as an element of Soos Creek's Comprehensive Sewerage Plan. Soos Creek will submit to Auburn all Comprehensive Sewerage Plans thereto involving area and/or system improvements within Auburn's planning area. The Comprehensive Sewerage Plans and amendments shall be in compliance with Auburn's Standards for sanitary sewer service within Auburn and/or Auburn's PAA, except where preexisting facilities may differ from Auburn's standards. As facilities are replaced or as new facilities are planned and constructed within Auburn and/or Auburn's PAA, they shall conform to Auburn's service and facility standards for sanitary sewer service then in effect.

5. Auburn Comprehensive Plan. The terms of this agreement will be included as an element of the sewerage portion of Auburn's Comprehensive Plan, and Soos Creek's Comprehensive Plan.

6. Future Annexations. Each of the parties agree that Soos Creek shall provide sanitary sewer service to the areas shown in Exhibit "A" without regard to the present corporate limits of the parties, and without regard to future corporate limits as they may be amended by annexation to either party.

2001 040 0001622

7. Reliance. Each party hereto acknowledges that the terms hereof will be relied upon by the other in its comprehensive planning to meet the needs of the service area designated herein.

8. Liability. Neither party to this agreement shall be liable for any failure or interruption of service in the service area of the other party, as designated herein, except as may be specifically caused by the other party.

9. Government Approvals. The parties will give notice of the adoption of this Agreement to Metropolitan/King County, to the Department of Ecology, to the Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

10. Boundary Review Board. In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Soos Creek or Auburn, the parties will at the time of such service jointly seek approval of the King County Boundary Review Board in accordance with R.C.W. 36.93.090.

11. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of Auburn's Director of Public Works and Soos Creek's District Manager.

12. Alteration, Amendment, Modification, or Termination. Soos Creek and Auburn hereby reserve the right to alter, amend modify or terminate the terms and conditions of this Agreement upon consent of both Parties given in writing.

13. Indemnification and Hold Harmless. Each Party hereto agrees to protect, defend, and indemnify the other Party, its officers, officials, employees and agents from any and all cost, claims judgements and/or awards of damages, arising out of or in any way resulting from the Party's default, failure of performance, or negligent conduct associated with this agreement, by the Party, its employees, subcontractors or agents. Each Party agrees that its obligations under this provision extend to any claim, demand, and/or cause of action brought by or on behalf of any of its employees, or agents. The foregoing indemnity is specifically and expressly intended to constitute a waiver of each Party's immunity under Washington's Industrial Insurance Act, RCW Title 51, as respects the other Party only, and only to the extent necessary to provide each Party with a full and complete indemnity of claims made by the other Party's employees. The Parties acknowledge that these provisions were specifically negotiated and agreed upon by them.

In the event either Party incurs any costs including attorney fees to enforce the provisions of this article and prevails in such enforcement action, all such costs and fees shall be recoverable from the losing Party.

The provisions of this section shall survive the expiration or earlier termination of this agreement with regard to any event that occurred prior to or on the date of such expiration or earlier termination.

14. Dispute Resolution. In the event that any dispute arises between the Parties, either Party may request in writing that the issue in dispute be resolved by Mediation and, if necessary, binding Arbitration. In the event the matter cannot be resolved by the mediation process then it shall go promptly to binding Arbitration with no right of appeal. Arbitration shall be by the American Arbitration Association, or by such other entity as the Parties agree.

15. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the

2001 040 0001622

terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

16. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Soos Creek or Auburn regarding provision of sewer service, except as specifically set forth herein.

CITY OF KENT and CITY OF AUBURN INTERLOCAL AGREEMENT FOR THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 5th day of March, 2001, by and between the **CITY OF KENT**, a Washington municipal corporation (hereinafter referred to as "Kent"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040 Auburn and Kent have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Kent have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn and Kent have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Auburn desires new developments within it's Potential Annexation Area to complete a Pre-annexation agreement with Auburn prior to receiving a certificate of sanitary sewer availability; and

WHEREAS, portions of the Kent sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of Auburn's Potential Annexation Area; and

WHEREAS, Auburn has evaluated and determined it is not cost feasible to provide direct sewer service to Auburn's Potential Annexation Area property existing adjacent to Kent's sanitary sewer infrastructure; and

2001 040 0001623

WHEREAS, the parties desire to allow Kent to construct, reconstruct, repair and maintain sewer facilities as necessary, and to authorize connections to Kent's sewer system for service to noted areas, or portions thereof; and

WHEREAS, Kent's sewer service to these areas will provide for maximum efficient use of existing and future facilities together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. Sewer Service Area. The parties have agreed to a sewer service area boundary between them. The boundary is graphically depicted on the map attached hereto as Exhibit "A", which is by this reference incorporated herein. Both parties further agree that Kent in providing sewer service to the area shown on Exhibit "A", as Area To Be Served By Kent, shall be furnishing sewer service to properties within Auburn's Potential Annexation Area. Kent shall provide service in accordance with and subject to the terms and conditions of this Agreement.

2. Management, Regulation and Control of Sewer System. Kent shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its sewerage system as installed within the area described in Exhibit "A", together with any additions, extensions and betterments thereto. Kent shall also be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation of said sewerage system as described above.

2001 040 6001623

3. Service Rates and Connection Charges.

a) **Permit Required.** No connection shall be made to Kent's sanitary sewer system unless the property owner first pays the associated fees and submits the proper information to obtain a Kent sanitary sewer connection permit. The connection shall be subject to inspection and approval for compliance with Kent's Sanitary Sewer Standards as adopted at the time the connection is made.

b) **Rates.** The rates charged to the sanitary sewer customer by Kent within the area described in Exhibit "A" shall be fixed, altered, regulated and controlled by Kent pursuant to all applicable laws or regulations promulgated on the subject of rates and charges for sewer service. No surcharge shall be charged to the customers served under this agreement on the sole basis that those customers are within Auburn's Potential Annexation Area.

4. Planning Areas. Kent hereby acknowledges the region to be within Auburn's Potential Annexation Area. Both parties acknowledge that Auburn desires a Pre-annexation Agreement from property seeking a sewer certificate of availability within Auburn's Potential Annexation Area.

5. Sewer Availability Certificates. Commencing on March 1, 2001, Kent shall issue sewer availability certificates for property within the area described in Exhibit "A". Kent agrees not to issue the availability certificate or any side sewer permit in the case of an existing development until Kent receives a copy of the City of Auburn Pre-Annexation Agreement in a form accepted and approved by the City of Auburn.

6. Future Annexations. Each of the parties agree that Kent shall provide sanitary sewer service to the areas shown in Exhibit "A" without regard to the present corporate limits of the parties, and without regard to future corporate limits as they may be amended by annexation to either party.

7. Kent Comprehensive Sewer Planning. The terms of this Agreement will be included as an element of Kent's Comprehensive Sewerage Plan. Kent will submit to Auburn all Comprehensive Sewerage Plans and amendments thereto involving area and/or system improvements within Auburn's planning area.

8. Auburn Comprehensive Planning. The terms of this Agreement will be included as an element of the sewerage portion of Auburn's Comprehensive Plan.

2001 040 6001623

9. Reliance. Each party hereto acknowledges that the terms hereof will be relied upon by the other in its comprehensive planning to meet the needs of the service area designated herein.

10. Liability. Neither party to this agreement shall be liable to the other party for any failure or interruption of service in the service area of the other party.

11. Government Approvals. The parties will give notice of the adoption of this Agreement to Metropolitan/King County, to the Department of Ecology, to the Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

12. Boundary Review Board. In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Kent or Auburn, the parties will at the time of such service jointly seek approval of the King County Boundary Review Board in accordance with R.C.W. 36.93.090.

13. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a

case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of the Director of Public Works from both jurisdictions.

14. Alteration, Amendment or Modification. Kent and Auburn hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement upon written agreement of both parties to such alteration, amendment or modification.

15. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

16. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Kent or Auburn regarding provision of sewer service, except as specifically set forth herein.

CITY OF PACIFIC

- Sewer Service Boundaries (Resolutions 4335 and 730)

RESOLUTION NO. 4335

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES BETWEEN THE CITY OF AUBURN AND THE CITY OF PACIFIC

WHEREAS, pursuant to RCW 35A.11.040 and RCW 35A.21.150 the City of Auburn ("Auburn") and the City of Pacific ("Pacific") have the authority to exercise a wide variety of municipal powers, including providing sewer service; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Pacific have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of municipal services; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized and are situated so as to be capable of affording public sanitary sewer service to a portion of Pacific; and

WHEREAS, Pacific has evaluated and determined it is in Pacific's best interest to allow Auburn to provide sanitary sewer service to property within

Pacific's municipal boundary that lies in the vicinity of Auburn's sanitary sewer infrastructure; and

WHEREAS, Auburn has sufficient wastewater conveyance capacity within their sanitary sewer facilities to support these adjustments to the existing sanitary sewer service areas; and

WHEREAS, Auburn's delivery of sanitary sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Interlocal Agreement establishing sanitary sewer service boundaries between the City of Auburn and the City of Pacific, which agreement shall be in substantial conformity with the Agreement a copy of which is attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 5th day of May, 2008.

INTERLOCAL AGREEMENT
between
CITY OF PACIFIC and CITY OF AUBURN
for the
THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into by and between the **CITY OF PACIFIC**, a Washington municipal corporation (hereinafter referred to as "Pacific"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040 Auburn and Pacific have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Pacific have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn and Pacific have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized and are situated so as to be capable of affording public sanitary sewer service to a portion of Pacific; and

WHEREAS, Pacific has evaluated and determined it is in Pacific's best interest to allow Auburn to provide sanitary sewer service to property within Pacific's municipal boundary that lies in the vicinity of Auburn's sanitary sewer infrastructure; and

WHEREAS, Auburn has sufficient wastewater conveyance capacity within their sanitary sewer facilities to support these adjustments to the existing sanitary sewer service areas; and

WHEREAS, the parties desire to allow Auburn to construct, reconstruct, repair and maintain sewer facilities, and to authorize connections to Pacific's sewer system for service to the areas noted in Attachment "A"; and

WHEREAS, Auburn's delivery of sanitary sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. **Sewer Service Area.** The parties have agreed that Auburn will provide sanitary sewer service to a portion of Pacific as graphically depicted on the map attached hereto as Attachment "A", which is by this reference incorporated herein. Both parties further agree that Auburn, in providing sewer service to the area as shown on Attachment "A", shall be furnishing sewer service to properties within Pacific's water service area and Pacific's municipal jurisdiction in accordance with and subject to the terms and conditions of this Agreement.

2. **Management, Regulation and Control of Sewer System.** Auburn shall have the sole responsibility and authority to construct, maintain, manage and operate its sewerage system as installed within the areas described in Attachment "A", together with any additions, extensions and betterments thereto. Auburn shall also be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation, maintenance, and operation of said sewerage systems as described above.

3. **Rates, Charges, Permits, and Billing Responsibilities.** Through this Agreement Auburn will be responsible to own, operate, and maintain the sanitary sewer system including private side sewers within the public right of way. Auburn shall issue certificates of sewer availability when requested by the property owners.

No connection or modification shall be made to Auburn's sanitary sewer system and or private side sewer services connected to Auburn's sewer system unless the property owner first pays the associated fees and submits the proper information to obtain an Auburn sanitary sewer permit. Sanitary sewer permits shall be subject to inspection and approval for compliance with Auburn's Sanitary Sewer Standards as adopted at the time the connection is made.

The rates charged to Auburn's sanitary sewer customers shall be fixed, altered, regulated and controlled by Auburn pursuant to all applicable laws or regulations promulgated on the subject of rates and charges for sewer service. No surcharge shall be charged to the customers served under this agreement on the sole basis that those customers are outside of Auburn's city limits.

To establish a quantitative usage, Pacific shall provide to Auburn the quantity of potable water used by those properties connected to Auburn's sanitary sewer system. Pacific shall provide water usage information every other month to Auburn and Auburn shall send a bill every other month for sewer service. Pacific shall give Auburn the right to read water meters described in Attachment "A" manually if desired by Auburn. Auburn shall also have the ability to annually request water usage data from Pacific for said properties.

4. Boundary Review Board. Pacific and Auburn will, at the time of service through this agreement provide a copy of to the King County Boundary Review Board in accordance with R.C.W. 36.93.090.

5. Comprehensive Sewer Planning. The terms of this Agreement will be included as an element of Auburn and Pacific's Comprehensive Sewerage Plans.

6. Reliance. Each party hereto acknowledges that the other will rely upon the terms of this agreement in its comprehensive planning to meet the needs of the service area designated herein.

7. Indemnification. Pacific agrees to indemnify and hold Auburn and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Auburn arising out of, in connection with, or incident to the execution of this agreement and/or Pacific's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Auburn, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Pacific; and provided further, that nothing herein shall require Pacific to hold harmless or defend Auburn, its agents, employees, and/or officers, from any claims arising from the sole negligence of Auburn, its agents, employees, and/or officers. No liability shall attach to Auburn by reason of entering this agreement except as expressly provided herein.

Auburn agrees to indemnify and hold Pacific and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever king or nature, brought against Pacific arising out of, in connection with, or incident to the execution of this agreement and/or Auburn's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Pacific, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Auburn; and provided further, that nothing herein shall require Auburn to hold harmless or defend Pacific, its agents, employees, and/or officers, from any claims arising from the sole negligence of

Pacific, its agents, employees, and/or officers. No liability shall attach to Pacific by reason of entering this agreement except as expressly provided herein.

8. Assignment. The parties shall not assign this agreement or any interest, obligation or duty therein without the express written consent of the other party.

9. Attorney's Fees. If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

10. Government Approvals. The parties will give notice of the adoption of this Agreement to King County's Department of Natural Resources – Wastewater Treatment Division, to the Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of Auburn's Director of Public Works and Pacific's Director of Public Works.

12. Notices. All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Pacific
Director of Public Works
PO Box 250
100 3rd Avenue SE
Pacific, WA 98047
253-833-2741

City of Auburn
Director of Public Works
25 west Main Street
Auburn, WA 98001
253-931-3010

or to such other representative as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next

following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

13. Alteration, Amendment or Modification. Pacific and Auburn hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement upon written agreement of both parties to such alteration, amendment or modification. Such written consent(s) shall be filed with this agreement for future reference.

14. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

15. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Pacific or Auburn regarding provision of sewer service, except as specifically set forth herein.

16. Miscellaneous.

A. The captions in this agreement are for convenience only and do not in any way limit or amplify the provisions of this agreement.

B. This agreement is established in perpetuity. Modifications can be established upon written agreement between both parties.

C. The purpose of this agreement is to clarify Pacific and Auburn's sanitary sewer responsibilities for providing service and maintaining public sewer facilities.

D. If any term, provision, condition or portion of this Agreement is held to be invalid, or unenforceable by a final decision of any court having jurisdiction on the matter, the remaining of this Agreement or the application of such term or provision to persons or circumstances other then those as to which it is held invalid or unenforceable shall not be affected thereby and shall continue in full force and effect, unless such court determines that invalidity or unenforceability materially interferes with or defeats the purposes hereof, at which time Auburn or Pacific shall have the right to terminate the Agreement.

E. No modifications or amendments of this agreement shall be valid or effective unless evidenced by an agreement in writing signed by both parties.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first above written.

RESOLUTION NO. 4902

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO ENTER INTO A MASTER AGREEMENT/PROVISIONS FOR MUNICIPAL UTILITY SERVICES ON TRUST LANDS, REPLACING AND SUPERSEDING THE AGREEMENT PREVIOUSLY APPROVED AND AUTHORIZED BY RESOLUTION NO 4883

WHEREAS, the City of Auburn has been approached by representatives of the Muckleshoot Indian Tribe with a request for an agreement whereby the City would provide municipal utilities to the Tribe for property being developed by the Tribe, and

WHEREAS, representatives of the City and the Tribe have negotiated an agreement that accommodates that request and that addresses the relationship of the City and the Tribe in connection with the provision of such utilities, the terms of which are beneficial to both parties, and

WHEREAS, in connection herewith, the Auburn City Council heretofore approved and authorized an agreement for municipal utility services on Tribal or Indian Trust lands through Resolution No 4883, and

WHEREAS, following the passage of said Resolution No 4883, representatives of the City of Auburn and the Muckleshoot Indian Tribe discussed some changes to the agreement authorized by resolution No 4883, which changes are acceptable to both the City and the Muckleshoot Indian Tribe

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows

Section 1. That the Mayor and City Clerk, or designees, are hereby authorized to execute the Master Agreement/Provisions for Municipal Utility Services on Trust

Lands in substantial conformity with the Agreement marked as Exhibit A attached hereto and incorporated herein by this reference, replacing the Agreement approved and authorized by Resolution No 4883

Section 2 That the Mayor is authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation

MASTER AGREEMENT FOR MUNICIPAL UTILITY SERVICES ON TRUST LANDS

The **CITY OF AUBURN** ("City"), and the **MUCKLESHOOT INDIAN TRIBE** ("Tribe" - also hereafter referred to in this agreement as "Developer") enter into this Municipal Utilities Service Agreement ("Agreement"), and make the following expressed mutual promises and covenants regarding the Developer's proposed Public Facility Extension ("Extension(s)")

The City agrees to accept the Extension(s) for operation and maintenance if the Developer, at the Developer's expense, designs, constructs, conveys and transfers said Extension(s) to the City pursuant to the terms and conditions of this Agreement. This Agreement is valid and binding for the Developer's Extension(s) serving Indian owned lands within the Muckleshoot Indian Reservation and the City of Auburn's municipal water and sewer service area.

I. DEFINITIONS

For the purposes of this agreement the terms in this Section shall have the following meanings

- **Public Facilities.** City sanitary sewer facilities (sewer mains, manholes, and appurtenances) and water facilities (water mains, service lines between mains and water meters, meter services including setter, meter and box, fire hydrants, and appurtenances)
- **Utility Right-of-Way Easement.** A nonexclusive perpetual right-of-way easement on the Property granting the City the right to operate, maintain, repair, replace, improve, remove, enlarge Public Facilities and the right to access the Property for providing Solid Waste services.
- **Indian Property.** For the purposes hereof, Indian Property refers to residential properties owned by the Tribe or held in Trust by the Bureau of Indian Affairs (BIA) for the benefit of the Tribe or individual Indians.
- **Utility Services.** City water, sanitary sewer, storm drainage, and solid waste services, pursuant to Chapters 13 06, 13.20, 13 48 and 8 08, respectively, of the Auburn City Code (ACC)

II. CITY RESPONSIBILITIES

Pursuant to the terms and conditions of this agreement the City agrees to·

A. Provide municipal Utility Services to the Property in conformance with City regulations governing Utility Services.

B Comply with the Utility Right-of-way provisions herein.

III. TRIBE RESPONSIBILITIES

Pursuant to the terms and conditions of this agreement the Tribe shall be responsible for the following:

A. Complying with the Utility Right-of-way provisions herein.

B Extending Public Facilities in compliance with terms herein.

IV. INDIAN PROPERTY RESIDENT RESPONSIBILITIES

Those people who reside on the residential properties of the Tribe and who receive utility services from the City pursuant to this Agreement shall comply with and be subject to, the ACC provisions and requirements for the construction, operation, maintenance, and payment for the above described Utility Services, and their receipt of and eligibility for City Utilities shall be conditioned on and subject to the following:

A. City Utility Customers who are residents of Indian Property shall, in advance of the City initiating new City Utility Services or re-initiating previously established City Utility Service that has been cancelled or suspended for nonpayment, deposit with the City the amounts of Utility Service Deposits required for City Utilities. The deposit for residents of Indian Property may be made in the form of cash, cash equivalent, or a bond or guarantee for the deposit amount in a form acceptable to the City, whereby the Tribe is guaranteeing the deposit amount._Residents of Indian property who cannot pay the deposit amount, or provide the City with a bond or guarantee of the deposit amount by the Tribe in a form acceptable to the City, may request that the City grant a full or partial waiver(s) to the Utility Customer from the deposit requirement because of special humanitarian or health circumstances. The City shall have the sole discretion to grant such waivers, and determine if they shall be full or partial waivers. If the waiver is granted by the City, no deposit or only a reduced deposit shall be required.

B City Utility Customers who are residents of Indian Property shall agree to pay, and shall execute documents evidencing such agreement to pay, the utility bills in accordance with the requirements of Chapter 8 08 [Solid Waste Utility], Chapter 13 06 [Water Utility], Chapter 13.20 [Sewer Utility] and Chapter 13.48 [Storm Drainage Utility] of the Auburn City Code (ACC).[1]

V. EXTENSION FEES

City of Auburn Ordinance No 5819 amended ACC13 40 050, Utility Extension Fees, so that fees for private streets or private drainage associated with Planned Unit Developments or Gated

[1] The form of the Agreement for Payment of Utilities shall be in a form devised by the City, such as the sample set forth herein as Exhibit "F" APPLICATION FOR UTILITY SERVICE & DEPOSIT AGREEMENT, Provided that the City reserves the right to modify or amend the Agreement as it deems advisable, to accomplish the purposes intended.

Communities can be included in the Facility Extension Fees. The Developer agrees to pay applicable City Utility Extension Fees as calculated by the City in accordance with applicable City Codes, generally as indicated herein below in Exhibit D hereto

The Developer shall also pay reasonable additional fees to the City in the event the City needs to obtain consulting support services to assist the City when the scope of the Extension is beyond the City's normal area of expertise or the City's ability to review within a reasonable time.

Furthermore, the Developer is responsible to pay fees associated with the Valley Regional Fire Authority's (VRFA) review of plans as requested by the City The City will allocate these fees, as established by the Auburn Fee Schedule; at the time the 40% Extension Fee is submitted. If extended review is required additional fees will be collected prior to Construction.

VI. CONSTRUCTION DRAWINGS

The Developer shall submit construction drawings ("plans") and supporting technical documents designed and developed by a professional engineer registered in the State of Washington to the City for review and approval at the time of application.

The plans and supporting materials shall comply with the City of Auburn's Design Standards and Construction Standards for water, sanitary sewer, and storm water drainage utilities. For all work conducted in City streets and rights-of-ways, and for work to be conducted in the portion of any tribal or private road or right of way immediately abutting City streets or rights-of-way, the plans shall also be in compliance with City design and construction standards for City streets and rights-of-way.

If design or construction activities on the extension(s) become inactive on the Developer's part for a period of six months, the City may require the plans be revised to conform to existing field conditions, or to meet current City design standards and regulations. The City may also require the execution of a new Agreement, in which case, this Agreement shall become null and void.

After all plan reviews have been completed and corrections made, and if all other requirements have been met, the City will request that the Developer/Engineer submit a full set of plans on mylar for City approval and signature. The Developer/Engineer shall also submit AutoCAD electronic files with the mylar. The signed mylar shall then be used to make all plan copies for use during the construction process.

VII. UTILITY RIGHTS-OF-WAY EASEMENT

At the Developer's expense, a nonexclusive perpetual right-of-way easement on the Property shall be granted to the City giving the City the right to operate, maintain, repair, replace, improve, remove, enlarge Public Facilities and the right to access the Property for providing Solid Waste services. The Utility Right-of-way or Easement shall be in a form acceptable to the

City Recording of the Utility Right of Way or Easement shall take place upon acceptance by the City of affected Public Utilities.

VIII. PAYBACK AGREEMENT

The City may enter into a Payback Agreement, if applicable, with the Developer pursuant to the requirements of RCW 35 91, RCW 35 72, and ACC 12.70 and 13 40.060. The Developer must submit a complete application to the City no later than 90 calendar days of the acceptance of the facility improvements. The City shall not consider an application for a payback agreement that is submitted later than 90 days after acceptance of the facility improvements. If the City has agreed to a warranty acceptance as provided for in Section XIII of this Agreement, the Developer must file an application for a payback agreement no later than 90 days after the warranty acceptance date for those improvements accepted under the warranty application, and no later than 90 days after final acceptance for the remaining improvements. After a complete application has been accepted the City will then work with the Developer to determine the appropriate cost allocation method and evaluate the eligibility of the submitted costs. A standard form of the agreement and an application handout outlining the payback process are available upon request.

IX. INSURANCE

Throughout the period of performance of this Agreement for all construction related activities, the Developer or Contractor shall carry and maintain commercial general liability insurance with limits of not less than one million dollars ($1,000,000 00) per occurrence for bodily injury, including death, and one million dollars ($1,000,000.00) per occurrence for property damage or, alternatively, one million dollars ($1,000,000.00) per occurrence combined single limit for bodily injury and property damage combined, and two million dollars ($2,000,000.00) general aggregate.

This insurance shall be in a form and with an insurer acceptable to the City, and shall contain coverage for all premises and operation, broad form property damage, contractual liability (including without limitation that specifically mentioned in the Agreement, and products and contemplated operations insurance.

This insurance shall provide coverage for explosion, collapse, underground excavation, and lateral support.

Any policy or policies that provide the insurance required in this Agreement shall name the City as an additional insured on a separate endorsement, to the extent of the contractual obligations set forth here. If the Contractor, as the Agent of the Developer, provides the required insurance, then such insurance shall name both the Developer and the City as additional insured.

Before the beginning of the period of performance under this Agreement, the Developer shall provide for City review and approval, a certificate of insurance reflecting full compliance with

the requirements set forth in this Agreement. The certificate shall be kept current and in compliance throughout the period of performance until final acceptance by the City (and for two years thereafter for products and contemplated operations liability), and shall provide for 30 days advance written notice to the City if cancellation or material change adversely affect the interests of the City

Throughout the period of performance of the Agreement, the Developer shall cover or maintain insurance in compliance with the applicable worker's compensation laws, with respect to all of its respective employees working on or about the facility site, regardless of whether such coverage or insurance is mandatory or merely elective under the law

For the purposes hereof, the period of performance of this Agreement includes and refers to the time during which any party hereto is obligated to perform tasks required herein.

X. INDEMNIFICATION

The Developer shall defend, indemnify and hold the City, its elected and appointed officials, employees, and agents harmless from any actions, causes of action, liabilities, claims, suits, judgments, liens, awards, demands, and damages of any kind including, property damage, personal injury, or death (including any claims brought by employees of the Contractor or any subcontractor) arising out of or in connection with the performance of this Agreement, to the extent that such claims arise out of the negligent act or omission or willful misconduct of the Developer, Contractor, any subcontractor, or their employees arising out of, or in any way related to, their performance of the Agreement, including without limitation the provision of services, personnel, facilities, equipment, support, supervision or review. The City shall be indemnified and held harmless for all expenses, costs of litigation, and reasonable attorney's fees, expert witness fees, and costs of services of engineering and other personnel related to any such action, or incident to establishing the right to indemnification, to the extent such claims arise from any negligent act or omission or willful misconduct of the Developer, Contractor, any subcontractor, or their employees arising out of, or in any way related to, their performance of the Agreement, including without limitation the provision of services, personnel, facilities, equipment, support, supervision, or reviews. The City's obligations herein are subject to judicial, legislative, and regulatory restrictions beyond the City's control (Including, but not limited to the Endangered Species Act) The applicant releases the City from any and all direct or indirect liability or damages related to actions beyond the City's control.

In the event of liability for damages arising out of bodily injury to persons or damages to property caused by or resulting from the concurrent negligence of the Developer and the City, its officers, officials, employees, and volunteers, the Developer's liability hereunder shall be only to the extent of the Developer's negligence. The Developer expressly waives any immunity under industrial insurance, whether arising from RCW Title 51 entitled "Industrial Insurance" or any other statute or source as provided in Article IX solely for the benefit of the City and solely to the extent of the indemnity set forth in this Agreement. This waiver has been mutually agreed by

the Parties. The provisions of this section shall survive the expiration or termination of this Agreement.

The Developer shall, at the City's request, furnish comprehensive evidence that all obligations of the nature designated in this agreement have been paid, discharged, or waived.

XI. CONSTRUCTION

All of the following applicable conditions shall be satisfied before a notice to start construction will be issued to the Contractor·

A. Approved Plans have been copied and distributed to all applicable parties and the signed original mylars returned to the City (see Article VI herein)

B Attend a Pre-construction Meeting between the City and the Developer's contractor

C Provide a Performance Bond or Assignment of Funds to the City in an amount and fashion that would adequately cover any work needed in any City right-of-way or on City utility lines.

D Provide Certificate of Insurance to the City naming the City (and Developer if Contractor supplies insurance) as an additional insured (see Article IX herein)

E. Non-Indian Contractors Possess an Active Contractor's Labor & Industry license; and Indian Contractors Possess an Active Contractor's Labor & Industry license if they are going to do any work in or on the City's right-of-way or City utility lines.

F Provide an Emergency Call List for Contractor and Subcontractors.

G Obtain a Business License with the City for all non-Indian contractors and subcontractors when working within the City limits, and for all contractors and subcontractors who will do any work in or on the City's right-of-way or City utility lines.

H. Obtain Authorized Construction Period for construction work to be completed within the existing public right-of-way (see additional information in Article VII herein), if applicable.

I. For work outside of Auburn's City limits, adequate County permits/approvals must be in place. The City will apply for the right-of-way permit(s) once plans are approved.

J If sewer extension, King County Waste Water Treatment Division approval is needed. The City will submit for approval, once plans are approved.

K. Provide Proof of Contract for Private Utility Relocates. The Developer acknowledges the obligation to enter into a separate contract, at the Developer's

expense, to relocate private utility facilities as necessary to comply with City Standards where applicable.

The City shall provide part-time inspection of the public and private Extension, to assist in determining that the work and materials meet the City's design standards and construction standards. The City shall also assist the Developer in complying with the present City rules, regulations, and resolutions and the terms of this Agreement. This assistance does not relieve the Developer of responsibility for complying with the plans, specifications, or terms of this Agreement, or any rules and regulations imposed by the City, County, or other agencies.

All construction performed by the Developer shall be in compliance with City design and construction standards for water, sanitary sewer and storm drainage utilities. For all work conducted in City streets and rights-of-ways, and for work to conducted in the portion of any tribal or private road or right of way immediately abutting City streets or rights-of-way, the work shall also be in compliance with City design and construction standards for City streets and rights-of-way

The Developer shall be responsible for acquiring the City's Construction Standards and having a copy on-site during construction.

The Developer agrees to comply with all Federal, State, County, and City regulations applicable to the Developer while construction is in progress in public rights-of-way

For public extensions that include construction within the existing public right-of-way or work on City utility lines, the City shall determine a reasonable time frame in which the Developer will complete all work within the existing right-of-way, including final clean up This time frame shall be the Authorized Construction Period for such work, and it shall be designated in calendar days and will be determined at the pre-construction conference. The Authorized Construction Period shall start when work first begins on this phase of the project or on a date specific set to minimize any public inconvenience. If the required work is not completed within the allotted time, the City will suspend all public and private Extension-related work other than those activities necessary to complete the required right of way improvements. If the restoration of the existing public right-of-way is not completed within the time period defined above, the Developer agrees that the City may hire an independent contractor to complete the necessary work and bill the Developer for the actual costs.

The City has the authority to decide all questions regarding the quality and acceptability of the materials furnished and of the work performed for the construction of the improvements. The City shall also have the authority to suspend construction work, in whole or part, for the failure of the Developer/Contractor to carry out the work in conformance with City development regulations, City construction standards, and approved plans.

The Developer's contractor shall make a written request to the City a minimum of 72 hours in advance when work is to be performed on Saturdays, Sundays, Holidays, or other than normal working hours. Written permission from the City shall be required before the contractor is allowed to work during any such requested hours. Approval of the contractor's request shall be dependent on the City's ability to provide adequate construction project monitoring during the requested time.

XII. ACCEPTANCE OF EXTENSION FOR OPERATION AND OWNERSHIP

The City agrees to accept the Extension for operation and ownership upon approval of the completion of all the facilities and the full compliance of the terms and conditions of this Agreement, including the following requirements

A. Approved Maintenance Guarantee (see Section XIII herein)

B. Executed Bill of Sale (see Section XIV herein)

C Certified and Approved Record Construction Drawings on Mylar & a copy of the Electronic CAD Drawing File(s) (see Section XV herein).

D. Executed Public Utility Right of Way or Easement (see Section XVII herein and Exhibit A).

E. Approved Developer Contribution Document provided for all facilities involving work in City right-of-way or on City utility lines (see Section XIV herein)

F Final Storm Water Site Plan (Report) and Cover Letter. This letter shall address any changes between the project's original storm water site plan (report) and the final construction of detention/retention and water quality facilities (see Section XVI herein).

Upon approval and acceptance, the City shall send a letter to the Developer accepting the system for ownership and operation.

If a Payback Agreement is applicable, the Developer will be required to provide the City with cost data within 90 calendar days of project acceptance. The City will provide sample cost data documentation for information.

The City shall release the Performance Guarantee, if applicable, to the Developer within 30 days of the letter of acceptance.

XIII. MAINTENANCE GUARANTEE

Before the City accepts the public portion of the Extension for operation and ownership, the Developer shall provide a one-year Maintenance Guarantee in the amount of two thousand dollars ($2,000.00) or ten percent (10%) of the City's estimated replacement costs of the

improvements, whichever is greater For some facilities, the City may require the Developer to provide a Maintenance Guarantee beyond the one-year period. If the City elects to so require, the City shall notify the Developer before the start of construction.

Two forms of Maintenance Guarantees are acceptable: 1) a Maintenance Bond or 2) an Assignment of Funds. Any request to use other forms of Maintenance Guarantee will be determined on a case by case basis by the City Engineer

The Developer may designate an Agent, such as a contractor or engineer, to provide the required Maintenance Guarantee to the City In such event, the Developer shall remain responsible for the contractual obligations set forth in this agreement. If the Agent defaults on the Maintenance Bond, this authorization for designation of an Agent does not preclude the City proceeding to foreclosure or demanding forfeiture of the bond against the Developer

The Developer shall bear the expense of the bond. If at any time a surety on any such bond is declared bankrupt, loses its right to do business in the State of Washington, or is removed from the list of Surety companies acceptable on Federal bonds, the Developer shall substitute an acceptable bond or bonds in such form and sum and signed by such other surety or sureties as may be satisfactory to the City. The Developer shall pay all premiums on these bonds.

The Assignment of Funds will be in a required amount held in a Financial Institution acceptable by the City and secured under the use of the City of Auburn Standard Assignment of Funds form. During this maintenance guarantee period, the Developer shall warrant that the materials and equipment furnished by the Developer for the Extension are in normal working order and condition except where abused or neglected by the City The Developer shall guarantee that it will repair or replace at its own expense any work or material that proves to be defective during such warranty period.

Two months prior to the end of the maintenance guarantee period (usually one year), the Developer will be required to have all public sanitary sewer and storm lines cleaned and then inspected with a remote television unit by an approved firm, **at Developer's expense**. The video will then be compared to the tape made prior to acceptance to ensure that no substantial change has occurred. The City shall then re-inspect the Extension for warranty compliance. If this re-inspection determines that the Extension functions as intended at the time of acceptance, the City shall release the Maintenance Bond. If the re-inspection determines that the Extension is not functioning as intended at the time of acceptance, the Developer shall replace or repair said Extension and the City, at its option, may extend the maintenance period for such replacement or repair for another one year. After an acceptable maintenance inspection, the City will release the Maintenance Bond and accept the facility for maintenance.

XIV. BILL OF SALE

Before the City accepts the public portion of the Extension for operation and ownership, the Developer agrees to execute an approved Bill of Sale (the City will prepare this document, once information is received, for Developer's signature) for the improvements that are to be dedicated to the City The Bill of Sale will provide for the transfer of title of the public portion of the Extension from the Developer to the City and will further include the following items.

A. The Developer is the lawful Owner of the public portion of the Extension and it is free from all encumbrances.

B The Developer has paid all bills for all labor and material used during construction of the Extension or has obtained lien wavers from all persons who have not been paid for their labor or material.

C. The Developer has the right to transfer the public portion of the Extension to the City for the consideration of incorporation into the City system.

D The Developer will warrant the public portion of the Extension and defend the same against lawful claims and demands of all persons for one year from the date the Bill of Sale is accepted by the City

XV. RECORD CONSTRUCTION DOCUMENTS

Before the City accepts the public portion of the Extension for operation and ownership, the Developer agrees to provide the City with certified record construction drawings and related electronic file information.

The Certified Record Construction Drawing comes in a **two-step process** as follows

Step 1: The certified paper (red-line) record drawings for all facilities shall be submitted for review and approval using the Engineer of Record as the point of contact. These drawings must accurately reflect all field design revisions made to the Extension during the construction process. The changes shall be in conformance with the City's record construction drawing requirements, available upon request from the City. The revisions shall be noted on the approved paper plan set.

Step 2: Once the City approves the certified paper (red-line) record drawings, then all required record drawing information shall be clearly shown on the original approved mylars. The electronic record drawing file shall also be provided at this time.

XVI. FINAL STORM WATER SITE PLAN (REPORT)

A certified and final storm (drainage) water site plan (report) and cover letter will also be required. Document the as-constructed changes to the storm improvements, not included in the original approved report. Record construction document requirements are available upon request from the Public Works Department.

It is provided, however, that insofar as the Developer provides Low Impact Development, as defined in the ACC, the Developer shall be entitled to the fee structure and adjustments included therewith.

The City and Tribe further agree that should the Tribe in the future desire to provide comparable municipal solid waste service to Indian property within Auburn's utility service area, the Tribe and the City will engage in good faith discussions on the discontinuance of City solid waste service to persons on Indian property eligible to receive tribal solid waste service.

XVII. PUBLIC UTILITY RIGHTS OF WAY OR EASEMENTS

The plan approval process may require providing utility rights of way or easements(s) for the facility extension. The Developer shall provide a legal description and an exhibit of the affected property, an updated title report, plat certificate (current to within 30 days), or other documentation acceptable to the City demonstrating its authority to convey a utility right of way or easement, and documentation of signatory authority (whether representative, individual, partnership or corporation) All legal descriptions must be signed and stamped by a professional Land Surveyor The City and Tribe will then draft the required legal documents and return them to the Developer for signatures and approval by the Bureau of Indian Affairs. The signed documents shall then be returned to the City where, concurrent with City acceptance of the utility improvements the documents will be sent to the Bureau of Indian Affairs and King County for recording. If during construction, changes are made that affect the right-of-way dedication and/or easement(s), corrections will be made and the documents will be re-recorded.

NOTE.

- King County or Pierce County Recorder's offices require a specific format on submittals. All attachments submitted shall be provided electronically in the following formats; Legal Descriptions in MS Word, and Exhibits in AutoCAD PDF is also acceptable provided the county specific format is followed. All attachments shall be formatted to 8 ½ x 11-inch and 8 ½ x 14-inch paper size and have a minimum margin of 1-inch top, bottom and sides. Use of 8 ½ x 14-inch paper size shall be limited to exhibit attachments.
- Any writing or markings, including the notary stamp, which intrudes into the document's margin area, may be cause for the document to be returned. Original documents used for recording **shall not** be stapled.

XVIII. SERVICE CONNECTIONS

There will be no water meter installation or usage of the public portion of the Extension before the City accepts the Extension for operation and ownership or the Developer has entered into the Warranty Acceptance of Partial Extension (Alternative Process), as described above.

The Developer shall notify the City in writing of any intent to make service connections to the public portion of the Extension or any existing City system. No connections to, nor utilization of, the public portion of the Extension or any existing City system shall be made without the express written consent of the City Note that certain other utility permit fees and system development charges may be required prior to service connection. In addition, the City shall supervise all service connections.

Connections to and utilization of the public portion of the Extension shall not relieve the Developer of the obligation to correct defects in labor or materials as provided in the Maintenance Bond section of this Agreement. All City-authorized connections shall be subject to the control, use, and operation of the City, which shall be subject to all regulations and conditions of service.

XIV. DEVELOPER CONTRIBUTION DOCUMENTATION

As per ACC 13 40 040, a written statement as to the actual cost of the public utility and street extension(s) shall be provided at the time the public utility extension(s) is turned over to the City This is to be turned in on the Developer Contribution Document at the time the Bill of Sale and/or Record Drawings are turned in.

XX. STATE LAW REQUIREMENTS

Nothing herein shall be construed as to limit the City of Auburn's ability to take such actions as it deems necessary to comply with the requirements of Washington state law in implementing this Agreement, provided that, nothing herein shall be deemed as granting or expanding the jurisdiction of the City of Auburn to regulate the use of Indian lands or Indian activity within the Muckleshoot Indian Reservation, or the City of Auburn's authority to tax Indian lands or activities.

XXI. AGREEMENT ALTERATIONS OR AMENDMENTS

No amendment, modification or waiver of any condition, provision or term of this Agreement shall be valid or of any effect unless made in writing, signed by the party or parties to be bound, or such party's or parties' duly authorized representative(s) and specifying with particularity the nature and extent of such amendment, modification or waiver Any waiver by any party of any default of the other party shall not effect or impair any right arising from any subsequent default.

Nothing herein shall limit the remedies or rights of the parties under this Agreement.

XXII. ASSIGNMENT BINDING ON SUCCESSORS AND ASSIGNS

Neither party to this Agreement shall assign any right or obligation hereunder in whole or in part, without the prior written consent of the other party hereto No assignment or transfer of any interest under this Agreement shall be deemed to release the assignor from any liability or obligation under this Agreement, or to cause any such liability or obligation to be reduced to a secondary liability or obligation.

This Agreement shall be binding upon, and the benefits and obligations provided for herein shall inure to and bind, the parties hereto and their respective successors and assigns, provided that this section shall not be deemed to permit any transfer or assignment otherwise prohibited by this Agreement. This Agreement is for the exclusive benefit of the parties hereto and it does not create a contractual relationship with or exist for the benefit of any third party, including contractors, sub-contractors and their sureties, except as provided in Article XXIII.

The tenants and occupants of the residences to be served by the Grantee's utilities shall execute an agreement agreeing to be bound by the terms hereof, including the provisions of Article XXV, Governing Law, and agreeing to comply with the utility payment obligations in accordance with City of Auburn City Codes.

XXIII. NO THIRD PARTY BENEFICIARIES

This Agreement is solely for the benefit of the Parties and the owners and occupants of residences served by City utilities who have executed an agreement to be bound by the terms of this Agreement. No third party other than an owner or occupant of a residence who has executed an agreement to be bound by this Agreement shall be entitled to claim or enforce any rights here under.

XXIV. WAIVER

A failure by either party to exercise its rights under this Agreement shall not preclude that party from subsequent exercise of such rights and shall not constitute a waiver of any other rights under this Agreement unless stated to be such in writing signed by an authorized representative of the party and attached to the original Agreement.

XXV. GOVERNING LAW

This Agreement and the rights of the parties hereunder , including actions to enforce the terms of this Agreement and actions to collect monies due as utility payments including utility deposits provided in connection herewith, shall be governed by the interpreted in accordance with applicable provisions of the Auburn City Code and the laws of the State of Washington and venue for any action hereunder shall be in the courts of King County State of Washington in which the project is located, provided, however, that it is agreed and understood that any applicable statute of limitation shall commence no later than the final acceptance date of the Extension or, if the City declines to accept the extension, the date of the letter from the City declining to accept the Extension.

The Developer (Muckleshoot Indian Tribe) does hereby expressly waive its right to sovereign immunity and its right to assert sovereign immunity defense in the courts of the State of Washington for the limited purpose of any legal claim or complaint for the interpretation and/or and/or enforcement of this Agreement, and/or for any complaints or counterclaims for monetary damages or equitable relief for any breach of this Agreement, and/or for the enforcement of any

final judgment by any court of the State of Washington regarding such matters. This limited waiver of immunity is solely for the benefit of the City of Auburn for the purposes stated herein, and the Tribe does not waive its sovereign immunity as to any party other than the City.

XXVI. SEVERABILITY AND SURVIVABILITY

If any provisions of this Agreement or any provision of any document incorporated by reference shall be held invalid, such invalidity shall not affect the other provisions of this agreement which can be given effect without the invalid provision, if such remainder conforms to the requirements of applicable law and the fundamental purpose of this Agreement. To this end, the provisions of this Agreement are declared to be severable.

In addition to the length of time elements of this agreement remain in force and effect, some provisions hereof shall remain in full force and effect indefinitely, for as long as utility services are provided by the City to the property owned by or under the influence or control of the Developer, including, but not limited to the obligations to pay City Utility Fees and Indemnify the City per Article X.

XXVII. ATTORNEY FEES

In the event of litigation or other legal action to enforce any rights, responsibilities or obligations under this Agreement, the prevailing parties shall be entitled to receive its reasonable costs and attorney's fees.

XXVIII. CAPTIONS, HEADINGS AND TITLES

All captions, headings or titles in the paragraphs or sections of this Agreement are inserted for convenience of reference only and shall not constitute a part of this Agreement or act as a limitation of the scope of the particular paragraph or sections to which they apply As used herein, where appropriate, the singular shall include the plural and vice versa and masculine, feminine and neuter expressions shall be interchangeable. Interpretation or construction of this Agreement shall not be affected by any determination as to who is the drafter of this Agreement, this Agreement having been drafted by mutual agreement of the parties.

EXHIBIT A

GRANT UTILITY SERVICES EASEMENT FOR RIGHT OF WAY ON TRUST LANDS

REFERENCE #·
GRANTOR. **THE MUCKLESHOOT INDIAN TRIBE**
GRANTEE **CITY OF AUBURN**
SHORT LEGAL. NE ¼ SE ¼ SEC 20, TWN 21N, R5E
ASSESSOR'S PROPERTY TAX PARCEL. 202105-9001
TRUST ALLOTMENT #· 109-2

For and in consideration of the CITY OF AUBURN'S Agreement to provide municipal water sanitary sewer, storm drainage and solid waste services to lots adjacent to this Right of Way, One Dollar ($1 00) and other valuable consideration in hand paid, **THE MUCKLESHOOT INDIAN TRIBE** ("Grantor" herein), hereby apportions, conveys and warrants to **THE CITY OF AUBURN,** a Washington Municipality ("Grantee" herein), for the purposes hereinafter set forth, a nonexclusive perpetual municipal utilities right-of-way easement over, under, along, across and through the following described real property (the "Property" herein) in King County, Washington.

SEE EXHIBIT "B" ATTACHED HERETO AND BY THIS REFERENCE MADE A PART HEREOF.

Except as may be otherwise set forth herein Grantee's rights shall be exercised upon that portion of the Property (the "Right-of-Way" herein) described as follows.

SEE EXHIBIT "C" ATTACHED HERETO AND BY THIS REFERENCE MADE A PART HEREOF.

Grantor also conveys to Grantee all of its right, title, and interest in the water service lines, meters, valves, and other portions of the water distribution system located within the Right of Way.

1. **PURPOSE.** In order for the City of Auburn to provide municipal utilities to properties that are held in Federal Trust status, the parties to this agreement hereby set forth the terms and conditions that are required for such services to be provided. Grantee shall have the right to operate, maintain, repair, replace, improve, remove, enlarge one or more water distribution or sanitary sewer utility facilities to include but are not limited to underground pipes,

lines, vaults, manholes, meters and valves within the easement defined in Exhibit D for the purposes of serving the properties described in this agreement.

The Utilities shall be designed and constructed in conformance with the City of Auburn Design and Construction Standards to secure the payment of all City utility fees & charges for existing and new developments on Federal trust lands within the city, the city will establish a security account that will be applicable to all new utility accounts effective with the date of approval of this agreement.

2. SPECIFIC PROVISIONS. The parties agree to the following terms

GRANTOR AGREES

A. The Grantor agrees to construct all Utilities and upon acceptance by the City, grant ownership to the Grantee.

B. The Grantor agrees all Utilities shall be designed and constructed in accordance to City of Auburn Design and Construction Standards.

C The Grantor agrees to obtain all permits and approvals from the Grantee for the extension of the Utilities including water connection permits, sanitary sewer connection permits and the execution and compliance with the Public Facility Extension Agreement.

D. Conservation. Grantor will be responsible for any and all soil and resource conservation and protection measures, including weed control, on the land covered by the Right-of-Way

GRANTEE AGREES:

A No Compensation; Damages. Grantee owes no compensation to Grantor or any third parties for the rights herein granted.

B Indemnification. Grantee agrees to indemnify the Grantor, against any liability, personal injury and property damage to the extent caused by the negligent acts or omissions of Grantee in the re-construction, maintenance, occupancy or use of the Right-of-Way by Grantee, its employees, contractors and their employees, or subcontractors and their employees. Provided, however, that nothing herein shall require Grantee to indemnify, defend, and hold the Grantor, harmless for any such liability attributable to the negligence of the Grantor

C. Restoration. Grantee agrees to restore the easement area as nearly as reasonably possible to their original condition upon the completion of construction or maintenance activities to the extent compatible with the purpose for which the

Right-of-Way was granted, however, Grantee has no obligation for preservation or repair beyond the area directly impacted by said activities

D Revocation/Abandonment/Termination. Grantee agrees that upon termination of the Right-of-Way by mutual consent Grantee shall, be responsible for abandoning the utility services in place.

3. USE. Grantor reserves the right to use the Right-of-Way for any purpose not inconsistent with the rights herein granted and Grantee agrees not to interfere with the use of the lands by or under the authority of the landowners for any purpose not inconsistent with the primary purpose for which the Right-of-Way is granted, provided, however, Grantor shall not construct or maintain any buildings, structures or other objects on the Right-of-Way. Grantor's use of the Right-of-Way may include, but is not limited to, use for an existing or future Tribal or Bureau of Indian Affairs roadway and for the installation, operation and transmission of utility services by third parties, including Tribal utilities once by mutual consent the parties agree to terminate City utility services.

4. ACCESS. Grantee shall have the right of access to the Right-of-Way over and across the Easement Property to enable Grantee to exercise its rights hereunder, provided that Grantee shall reasonably compensate Grantor for any damage to the property caused by the Grantee in exercise of such right of access. To the extent reasonably practicable, Grantee shall use Grantor's right of way for such access, and shall utilize portions of the Property outside Grantor's right of way only when and to the extent additional access is reasonably necessary or in the event of an emergency

5. CUTTING OF TREES. Grantee shall have the right to cut or trim any and all brush or trees or other vegetation standing or growing upon the Right-of-Way pursuant to section 2(e) above. However, any trees upon property outside of this Right-of-Way which, in falling, could in Grantee's reasonable judgment, be a hazard to Grantee's facilities may not be cut absent permission of the property owner, except in the case of any overhead facilities, if any, Grantee reasonably believes an emergency exists that requires the cutting of such trees.

6. SUCCESSORS AND ASSIGNS. Grantee shall have the right to assign, apportion or otherwise transfer any or all of its rights, benefits, privileges and interests arising in and under this easement. Without limiting the generality of the foregoing, the rights and obligations of the parties shall inure to the benefit of and be binding upon their respective successors and assigns.

7. TERMINATION AND ABANDONMENT. This Right of Way may be terminated or abandoned as follows:

A. The rights herein granted shall continue until such time as Grantee ceases to use the Right-of-Way for a period of two (2) successive years, in which event this agreement shall terminate and all rights hereunder, and any improvements remaining in the Right-of-Way shall revert to or otherwise become the property of Grantor

B The Right of Way may be terminated by mutual consent in a written agreement.

8. GRANTOR'S LIMITED WAIVER OF SOVEREIGN IMMUNITY. Grantor voluntarily grants Grantee a waiver of its sovereign immunity and its right to assert a sovereign immunity defense in the Courts of Washington for for the limited purpose of any legal claim or complaint for the interpretation and/or enforcement of this agreement, and/or for any complaints or counterclaims for monetary damages or equitable relief for any breach of this agreement, and/or for the enforcement of any final judgment entered by any court of the State of Washington regarding such matters. Grantor consents to jurisdiction of the courts of the State of Washington as having exclusive jurisdiction to hear, resolve and enter final judgment on any legal dispute by and between the parties to this agreement and/or their affected officers, officials, and employees concerning the interpretation of this agreement, enforcement of any of its provisions, and any complaints or counterclaims for monetary damages and/or equitable relief for any alleged or actual breach of any provision of this agreement and/or for the enforcement of any final judgment entered by any court of the State of Washington regarding such matters. The limited waiver of sovereign immunity set out in this paragraph is solely for the benefit of Grantee. This agreement is not intended to and shall not be interpreted or construed to create any rights, benefits or interests in any person or entity other than the parties hereto

PUBLIC FACILITIES EXTENSION FEES

The Public Facilities Extension Fees shall be generally calculated as follows:[2]
The extension fee shall be the greater of the sum of the categories (a+b+c+d) as shown below, for a total of $_____ (the amount of the extension fee shall be as calculated per the formulas below) This fee pays for the detailed plan review, field inspections and other City Administrative costs accrued during this project. The fee is based on the preliminary plan information provided by the Developer. The parties agree that the City may require an adjusted fee in addition to the fee calculated in this section based on the final improvement quantities at the time of approval of the construction drawings if the improvement quantities have changed from those indicated above.

The Developer shall pay forty percent (**40%**) of this extension fee $_____ (the amount of the extension fee shall be as calculated per the formulas below) before the City will begin detailed plan review

a) For water, sewer, & storm facilities the extension fee is based on the combined linear footage of all utilities and is determined by:

   The first 0 LF to 1000 LF will be charged at $5.50 per LF plus,

   The next 1001 LF to 2500 LF will be charged at $2.80 per LF plus,

   Any additional over 2500 LF will be charged at $1 65 per LF

b) For street facilities the extension fee is determined by:

   The first 0 LF to 500 LF will be charged at $6 90 per LF plus,

   The next 501 LF to 1000 LF will be charged at $4 10 per LF plus,

   Any additional over 1000 LF will be charged at $1 10 per LF

---

[2] It is provided, however, that in the event of any inconsistency or discrepancy between the above provisions and provisions of the Coty Code, the City Code shall control.

c) For non-linear extension such as pump stations and traffic signals the extension fee will be determined by the City Engineer based on an estimate of the City's labor cost associated with the plan review, inspection, and administration of the application.

d) For that portion of the water and sewer facility located outside City limits, but within existing County (King or Pierce) right-of-way, an additional fee is determined by:

$444 00 plus $5 00 per LF of the combined water and sewer extension located in existing County (King or Pierce) right-of-way

The remaining sixty percent **(60%)** of the extension fee $_____ (the amount of the extension fee shall be as calculated per the formulas above) and any fee adjustment, shall be paid upon approval of the construction drawings and prior to the start of construction.

EXHIBIT E

PERFORMANCE GUARANTEE

Before construction starts, the Developer will be required to furnish an approved Performance Guarantee based on one hundred twenty-five percent (125%) of the City-estimated installation costs for the public improvements constructed within the existing **City** right-of-way, easements, or when the City Engineer deems it to be in the City's best interest to secure a Performance Guarantee.

Two forms of Performance Guarantees are acceptable· 1) a Performance Bond or 2) an Assignment of Funds. Any request to use other forms of Performance Guarantee will be determined on a case by case basis by the City Engineer

The Developer may designate an Agent such as a contractor or engineer to provide the required Performance Guarantee to the City. In such event, the Developer shall remain responsible for the contractual obligations set forth in this Agreement:

The Performance Bond in a penal sum equal to a minimum of the amount described above shall be conditioned upon the performance by the Developer of all undertakings, covenants, terms, and conditions of the Agreement relating to the Extension. The Developer or Agent shall execute such bond and a corporate bonding company licensed to transact such business in the State of Washington, and who are named on a current list of surety companies acceptable as published by the Insurance Commissioner's office, shall act as surety.

The Developer shall bear the expense of the bond. If at any time a surety on any such bond is declared bankrupt, loses its right to do business in the State of Washington, or is removed from the list of approved surety companies, the Developer shall substitute an acceptable bond or bonds in the form and sum and signed by another surety or sureties as may be satisfactory to the City. The Developer shall pay the premiums on such bonds.

The Assignment of Funds will be in a required amount held in a Financial Institution acceptable by the City and secured under the use of the City of Auburn Standard Assignment of Funds form.

I/we agree to pay all required utility deposits and to pay service fees for utilities provided to me by the City of Auburn, including water, sanitary sewer, storm drainage, and solid waste services, pursuant to Chapters 13.06, 13.20, 13 48 and 8 08, respectively, of the Auburn City Code (ACC). I/we further agree to comply with the requirements of said chapters of the ACC If I/we fail to pay bills on a timely basis, I/we understand that utility service may be discontinued. Should I/we leave the City of Auburn service area with an outstanding utility balance due, or should my service be disconnected/discontinued for non-payment, my deposit will be applied to said outstanding account, and the balance (if any) forwarded to me/us. In case of disconnection for non-payment, I/we understand that full payment of any outstanding balance up to and including the date of disconnection, and service charge(s) will be required in order to have utilities reconnected at the location or for me/us to get utility service at a new location in the service area. I/we understand that in the event that I/we are renting, our landlord may request information or be notified of the status of my/our account. I/we further agree that in the event that any action is taken to collect payments due for utility services or for enforcement of any other requirement or obligations of the City utility services, or my/our rights thereto, venue for such action shall be in the courts of King County, Washington.

RESOLUTION NO. 3660

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT WITH THE MUCKLESHOOT INDIAN TRIBE FOR THE COST SHARING IN THE REPLACEMENT AND MAINTENANCE OF A NEW WASTEWATER CONVEYANCE FACILITY CONVEYING WASTEWATER FROM MUCKLESHOOT INDIAN TRIBE PARCELS LOCATED OUTSIDE CITY LIMITS TO KING COUNTY CONVEYANCE AND TREATMENT FACILITIES

WHEREAS, both the City and the MIT are agencies qualified to engage in furnishing sanitary sewer service within their approved service areas; and

WHEREAS, the King County Department of Natural Resources, Water Pollution Control Division is engaged in developing and operating a regional sewage disposal system and the City and the MIT are engaged in developing and operating a sewage collection system; and

WHEREAS, the City and MIT intend to replace the Auburn Way South Sanitary Sewer Conveyance System (hereinafter AWSCS); and

WHEREAS, the replaced AWSCS is the subject of this Agreement, and is intended to be consistent with applicable law and comprehensive planning for sewage disposal; and

WHEREAS, the MIT desires to provide sewer service only to customers within the MIT's approved sewer service area; and

WHEREAS, Auburn's existing wastewater conveyance facility surcharges and requires improvements to allow for additional flow capacity and avoiding potential overflow of sewage and the damages associated with said overflows; and

WHEREAS, the MIT desires ownership of a portion of the capacity within a sanitary sewer conveyance facility extending from that portion of the MIT service area, outside of the City's service area, into King County's wastewater conveyance system; and

WHEREAS, this agreement shall supercede the existing Auburn – MIT sanitary sewer Agreement, executed in accordance with City Ordinance No. 4967; and

WHEREAS, to provide wastewater conveyance and ownership responsibilities of the public sanitary sewer facilities that extend from the boundary of the City's service area along Auburn Way South to King County's conveyance facilities at the corner of 17th Street SE and K Street SE, it is necessary that this agreement be entered into between the City and the MIT, establishing the rights and duties of the parties; and

WHEREAS, the Muckleshoot Indian Tribe, and the City of Auburn are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act; and

WHEREAS, the MIT received approval from the Bureau of Indian Affairs, hereinafter referred to as "BIA", for this agreement, pursuant to Title 25, Section 81, of the U.S. Code, or the BIA has determined and so informed the MIT that approval of this Agreement is not required under 25 USC 81.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an interlocal agreement with the Muckleshoot Indian Tribe, in substantial conformity with the

agreement attached hereto, marked as Exhibit 1and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this resolution shall take effect and be in full force upon passage and signatures hereon.

DATED and signed this 1st day of March 2004.

EXHIBIT 1

AUBURN - MUCKLESHOOT INDIAN TRIBE SANITARY SEWAGE AGREEMENT

(Auburn Way South Sanitary Sewer Conveyance System)

For the construction, ownership, and maintenance of the sanitary sewer conveyance facility that provides service to Muckleshoot tribal property located outside of Auburn's municipal limits to King County's wastewater conveyance and treatment facilities.

This Agreement is entered into in King County, Washington, between the City of Auburn, a municipal corporation under the laws of the State of Washington, hereinafter referred to as the "City" and the Muckleshoot Indian Tribe, a federally recognized Indian Tribe located on the Muckleshoot Indian Reservation, hereinafter referred to as the "MIT"

WHEREAS, both the City and the MIT are agencies qualified to engage in furnishing sanitary sewer service within their approved service areas; and

WHEREAS, the public health, welfare and safety of the residents of the City, the MIT and the residents of their service areas require the elimination of potential sources of water pollution and the preservation of the fresh water resources of the area; and

WHEREAS, the King County Department of Natural Resources, Water Pollution Control Division, hereinafter referred to as "King County", is engaged in developing and operating a regional sewage disposal system and the City and the MIT are engaged in developing and operating a sewage collection system; and

WHEREAS, consistent with the standards prescribed by the State of Washington, Department of Ecology, hereinafter referred to as "DOE", for the collection and disposal of sewage effluent within the State, the City and the MIT are improving a sanitary sewage conveyance system that conveys wastewater from the MIT and the City service areas to King County's facilities; and

WHEREAS, the City and MIT intend to replace the Auburn Way South Sanitary Sewer Conveyance System (hereinafter AWSCS); and

WHEREAS, the replaced AWSCS is the subject of this Agreement, and is intended to be consistent with applicable law and comprehensive planning for sewage disposal; and

WHEREAS, the MIT desires to provide sewer service only to customers within the MIT's approved sewer service area; and

WHEREAS, Auburn's existing wastewater conveyance facility surcharges and requires improvements to allow for additional flow capacity and avoiding potential overflow of sewage and the damages associated with said overflows; and

WHEREAS, the MIT desires ownership of a portion of the capacity within a sanitary sewer conveyance facility extending from that portion of the MIT service area, outside of the City's service area, into King County's wastewater conveyance system; and

WHEREAS, to provide for the conveyance and disposal of sewage conveyed to King County from properties located within City's service area and from that portion of the MIT service area located outside of the City's service area, the two parties are entering into contracts with King County; and

WHEREAS, this agreement shall supercede the existing Auburn – MIT sanitary sewer Agreement, hereinafter referred to as the "1997 Auburn MIT Agreement" executed in accordance with City Ordinance No. 4967; and

WHEREAS, the City and MIT are entering into this Agreement, on a government to government basis, with the intention of cooperatively and equitably designing, and constructing the AWSCS and thereafter assuring that its operation meets the needs of the parties, as more fully set out in this Agreement; and,

WHEREAS, to provide wastewater conveyance and ownership responsibilities of the public sanitary sewer facilities that extend from the boundary of the City's service area along Auburn Way South to King County's conveyance facilities at the corner of 17th Street SE and K Street SE (the King County M Street Trunk Line), it is necessary that this agreement be entered into between the City and the MIT, establishing the rights and duties of the parties; and

WHEREAS, the MIT has determined and so informed the City that approval of this Agreement is not required by the Bureau of Indian Affairs under Title 25, Section 81, of the U.S. Code.

NOW, THEREFORE, in consideration of the mutual covenants contained herein and in order to provide a connection between the City's, the MIT's and King County's wastewater conveyance facilities, IT IS HEREBY AGREED AS FOLLOWS:

I. SEWAGE FLOW CAPACITY

1.1 MIT's comprehensive planning has determined that the portion of MIT service area located outside of Auburn's municipal city limits (south of the south section line to Section 27, Township 21, Range 5) will require a maximum peak capacity of 7.85 CFS within the AWSCS.

1.2 The City's comprehensive planning has determined that the City's maximum peak capacities within the AWSCS are as set out in Exhibit "A". The AWSCS shall be sized to convey the MIT's and the City's combined maximum peak capacities consistent with this Agreement. A table listing the capacity requirements for the AWSCS is provided in Exhibit "A", a copy of which is attached hereto and is incorporated herein by this reference.

2. MIT/CITY RELATIONSHIP FOR WASTEWATER CAPACITY AND NATURE OF PARTICIPATION

2.1 Ownership and Participation: The MIT and the City shall each own a portion of the capacity of the AWSCS as shown in Exhibit "A". MIT affirms that the City shall have the administrative role for the implementation of the AWSCS and the City affirms that MIT may, in its discretion, maintain active participation in the implementation consistent with the terms of this Agreement and the equity provided by the MIT to the AWSCS project.

2.1.1 Nature of capacity ownership: The respective capacity ownership interests of the MIT and City in the AWSCS shall be determined by the maximum capacity contribution that each makes to the AWSCS, as noted in Exhibit "A". The MIT and City have agreed on wastewater conveyance capacity maximums at specific locations along the sections of AWSCS. Those maximum capacity estimates are set out in Exhibit "A". Until changed by mutual agreement of the parties the capacities set out in Exhibit "A" shall govern the capacity ownership under this Agreement. The parties will share equally in the project costs.

2.1.2 Additional Capacity: Should either party desire to increase its respective capacity in the AWSCS beyond the maximum capacities set out in Exhibit A, the party seeking the additional capacity shall be responsible for the costs associated with the facilities necessary to provide the additional capacity. Either party may rent, assign or convey to the other a portion of the capacity that a party has as set out in Exhibit A if a party has no need for the capacity. Any conveyance of capacity may be for an agreed period or may be a permanent transfer. If a party does convey a portion of its capacity to the other party the parties shall agree on fair compensation for the transferred capacity. In the absence of an agreement between the parties, no party may take any

action that would use, or appropriate to itself any of the unused capacity that the other party may have in the AWSCS; nor take any action that would limit, reduce or interfere with the ability or right of the other party to fully use the full capacity that the party owns under this Agreement. The right held by both parties to this Agreement to use its full ownership interests in the AWSCS shall not be subject to modification under Section 10.

2.1.3 Total Capacity: The City's maximum capacity and the MIT's maximum capacity shall be equal to 100% of the AWSCS capacity. Any remaining excess capacity within the AWSCS due to pipe sizing shall be owned by the parties based upon their respective percentage contributions determined from the maximum capacities as set out in Exhibit "A".

2.1.4 City and MIT Representation: The City and MIT will each designate a representative who may be assisted by other employees and/or project advisors, to assure that each may fully participate as provided under this Agreement. The representatives and advisors will work to minimize areas of dispute, and to resolve all implementation issues as they arise and, as far as possible, minimize the need for recourse to dispute resolution provisions of this Agreement.

2.2 Project Costs and Responsibilities: For purposes of this Agreement, the MIT and City have agreed upon a plan as outlined in Exhibit "A", for the upgrade of the AWSCS to meet the needs of both the City and MIT. Only costs directly attributable to the AWSCS shall be considered as Project Costs. Activities, responsibilities, and costs not directly attributable to the AWSCS are not to be considered Project Costs and shall not be included in the allocation of costs under this Agreement.

2.2.1 Allocation of Costs: The parties have agreed to share equally (50%-50%) in the costs required to upgrade the AWSCS. The capacity each party will have in the upgraded system is as noted in Exhibit "A". "Project Costs" subject to allocation include the following: design engineering, construction, permitting, inspection, contract administration services, and other cost items agreed to by the parties. Each party will be responsible for payment of its share of the actual agreed costs. An estimate of the agreed costs for each segment is set out in Exhibit "A". The following costs incurred by the City prior to the execution of this Agreement shall be included in the allocated costs between the parties, subject to the cost allocation formula set out in this section:

Consoer Townsend Envirodyne Engineers, Inc. for Section B design plans and a preliminary design for the entire AWSCS, $276,585.16.

Pentec Environmental, Inc. for a wetland assessment for Section B's proposed alignment, $3,499.75.

2.2.2 Invoicing and Fund Distribution: The City shall provide to the MIT an invoice for the design, construction and project management and inspection work of the AWSCS done pursuant to Section 2.3 of this Agreement. The MIT shall provide for a fund transfer of the MIT's share of the invoice amount to a financial institution of the City's choice within 5 calendar days of the date that the MIT receives the invoice. To the extent that the MIT disputes the amount of the invoice, or whether the contract or the work performed is in conformity with this Agreement and the approved contract documents, that dispute shall be resolved under Section 10 of this Agreement. Interest of 5% shall be added to any invoice that is 30 days past due and found to be properly owed.

2.2.3 Alternative Invoicing and Fund Distribution: At the option of the City, it may elect to receive the MIT share of the design, construction, project management work and inspection of the AWSCS done pursuant to Section 2.3 and this section, but not under Section 2.2.2. The City shall make its election in writing to the MIT at the same time that the design or construction contracts to design or build each segment of the AWSCS is executed by the City. Once the City makes election it may not change its decision during the design or construction of the segment awarded without the consent of the MIT.

(a) Prior to letting of the consultant contract or the request for bids and upon notification by the City that the City has committed funds to meet its payment obligations under this Agreement, the MIT shall deposit their share of the estimated project costs into a bank account that Auburn can draw from to pay for work related to the AWSCS segment being constructed or the consultant contract. The parties agree that costs incurred in design and construction of the AWSCS will be paid equally by the City and MIT as the costs are incurred, except as otherwise set out in this Agreement. Once funds are deposited into this account they will be unavailable for MIT until project completion or if the project is terminated early, upon termination. The account will earn interest for the MIT. Payment from this account does not guarantee MIT approval or waive the MIT's right to protest any expenditure by the City.

(b) MIT approved contract changes may require additional funds be deposited into this account to ensure sufficient funding to support MIT's portion of said change. Account adjustments shall occur within 10 calendar days of MIT approval for said change.

(c) To the extent that the MIT has provided construction funds that remain unexpended at the end of the construction of a segment of

the AWSCS, any remaining funds shall be carried forward and shall be used to fund a portion of the MIT's share of a subsequent section. When the entire AWSCS is completed or upon termination if terminated early with funds remaining in the MIT's account, those funds, with accrued interest, shall be refunded to the MIT. The City shall provide periodic reports, no less frequently than quarterly on the expenditure of funds for the project, as noted in Section 2.2.4 and at the completion or termination of each segment a final accounting of the funds expended will be provided.

(d) To the extent that the parties to this Agreement have a dispute with respect to invoices, the reasonableness of costs associated with a segment or other matters related as a party's duty to fund, that dispute shall be resolved under the procedures set out in Section 10 of this Agreement.

2.2.4 Final Accounting: The City shall provide periodic reports, no less frequently than quarterly on the expenditure of funds for the project, as noted in Sections 2.2.1 and 2.2.2. At the completion or termination of each segment the City will provide a final accounting of the funds expended.

2.3 Design and Construction Contract Development: The City shall be the contracting agent responsible for managing contracts with design and construction professionals consistent with the terms of this agreement and applicable laws. Direction to the consultant and contractor shall be through the City, which is the contracting party.

2.3.1 Reviews: The MIT shall have the opportunity to participate in the review and approval of: (1) the selection of any consultants, contractors, consistent with any bid documents and bid procedures, and the development of their corresponding contracts for work to be paid by allocated funds under this Agreement; and (2) design documents (including any intermediate designs that require approval) bid documents, construction plans, budgets, sequencing changes, schedules, project specifications, and similar documents. MIT review(s) and approval(s) shall take place prior to the time that such document(s) are considered final by the City and prior to the time that such documents are submitted by the City to the contracting party for signature. The parties shall work cooperatively to assure that all relevant comments are considered in the contract development process. MIT shall provide its approval, disapproval, comments, or notice of its intention to waive its rights to approve within 15 calendar days of the date that the documents are submitted for MIT review and approval. Failure to respond in the time set out in this section shall constitute approval of the document. Once MIT approval is granted, no further changes to the contract shall be allowed without further concurrence between both parties.

2.3.2 Correspondence and Meetings: The MIT shall receive pertinent copies of project correspondence and may, at its option, audit the City's project file and participate in any matter relating to the project including work schedules, project meetings, project reports, change orders, claims, pay estimates, billings, project close out, provision for continuation of services, and related matters. The City shall inform the MIT of all progress and design meetings with the consultant/contractor and MIT may, at its option, attend these meetings. The MIT may contest any billing as not being consistent with applicable contract documents or the terms of this Agreement and take any actions necessary to protect its interests if claims are filed. Progress meetings will be established regularly but no less frequently than monthly to confer on the construction project and any other aspect of the AWSCS project. To the extent that the MIT believes that the City is not complying with the terms of any construction contract or the terms of this Agreement and the dispute is not resolved, either party may seek to resolve the dispute under Section 10 of this Agreement.

2.3.3 Scheduling: The proposed construction sequencing for improvements to the AWSCS is as identified in Exhibit A. Approval of this Agreement confirms the parties' agreement with the sequencing and grants the City authority to begin processing bills for funds expended on the design of the AWSCS consistent with the provisions set out in Section 2 of this Agreement.

To the extent the parties are unable to reach agreement or any party believes the other is acting inconsistent with the terms of this section, the dispute shall be resolved under Section 10 of this Agreement.

2.4 Actual Construction: The City shall be responsible for the actual construction of the AWSCS, paying all construction related costs consistent with the construction/bid documents and assuring that construction of each segment is completed pursuant to the contract terms and consistent with the terms of this Agreement and Exhibit "A". The City shall be responsible for preparing record drawings and providing one full and complete copy to the MIT within 90 calendar days of final project acceptance by the City. The City shall follow normal contracting rules, procedures, and standards as commonly accepted by the public works industry, except as might be modified by this Agreement.

2.4.1 Project Monitoring: The City shall be responsible for monitoring construction, and shall assure that all contractors, subcontractors and material men are paid and any liens are discharged as required in the respective contracts, or by operation of law. MIT shall not be liable for any cost, expense or liability associated with the failure to pay any contractor, subcontractor or material man.

The MIT shall have access to the project site at all times that construction operations are underway for the purpose of monitoring the project progress and ensuring compliance with contract documents and the terms of this Agreement. The MIT shall follow appropriate safety requirements for construction zones and shall report any concerns to the City Project Manager or Project Inspector consistent with Section 2.3.

2.4.2 The City shall indemnify MIT against any loss, cost or expense arising out of any action brought against MIT seeking payment for work done on the AWSCS based on a contract that is not approved by MIT.

2.5 Contract Changes: The City may, without MIT prior concurrence, approve changes for consultant and construction contracts up to 5% of original contract costs. The 5% of an approved construction contract may be set out in any one segment as either,

(a) minor changes (individual changes under $5,000 each),
(b) line item quantity changes (changes to a line item quantity on the bid form), or as
(c) a change order (if the individual change exceeds $5,000).

Changes in bid quantities, minor changes, or change orders shall all be brought to the MIT's attention no later than the next scheduled progress meeting between the City and MIT. A description of the change along with an explanation for the change shall be supplied to the MIT for its concurrence. If MIT determines that the change was not proper it may refuse to pay that portion of the cost of the change that would otherwise be allocated to the MIT. If the parties do not agree on this issue then the issue or disagreement shall be resolved under the procedures set out in Section 10.

Contract changes exceeding 5% of the total contract estimate shall require City and MIT approval prior to implementation. All changes that require City council approval shall also require MIT approval without regard to the amount. City and MIT shall provide their approval, disapproval, comments, or notice of its intention to waive its rights to approve within 15 calendar days of the date that the change is submitted in writing to each of the agencies. Failure to respond in the time set out in this section shall constitute approval of the document.

2.6 Final Inspection: Every contract let to construct, modify, or repair the AWSCS shall provide for a final inspection of the work done prior to any final payment under the contract or the release of any funds held back. The City shall take the lead in providing a final inspection. The MIT shall be informed of any final inspection or testing events at the time of scheduling, or 5 calendar days prior to any scheduled inspection, whichever is the shorter. The MIT may provide input and options, on the methods and means to be used to

inspect the completion of each segment; the entire AWSCS; and during the life of this Agreement, any repairs or modifications done to the AWSCS. The MIT, in its discretion, may participate in or monitor the final inspection. If the parties cannot agree on the methods and means of any final inspection the dispute shall be resolved under the procedures set out in Section 10 of this Agreement.

3. OPERATIONS AND MAINTENANCE

3.1 Operation and Maintenance Duty: The City shall be responsible for undertaking all the routine operation and maintenance associated with the AWSCS. Routine operations and maintenance shall consist of inspection and cleaning of the trunk line together with the activities set out in Exhibit "B. The MIT's duty to contribute to operations and maintenance shall commence when the MIT and King County execute the Agreement set out in Section 4.

3.2 MIT Contribution: MIT's maximum obligation to contribute towards the operations and maintenance set out in Section 3.1 shall be $600.00 (six hundred dollars) per year. This fee shall be payable within the month of January of each year. The MIT shall have no other financial obligation to fund operation and maintenance set out in Section 3.1.The MIT shall begin making this contribution upon the establishment of the MIT as a King County Component Agency for the conveyance and treatment of wastewater flows to King County. This fee shall be reviewed after 15 years from the date of this Agreement. If an increase in the annual fee is determined justifiable then the City and the MIT shall negotiate the new fee.

3.2.1 In order to measure MIT wastewater volume and contribution, MIT shall install and maintain a flow meter to be located at the southern terminus of the AWSCS. The meter shall have a totalizer that records the volume of wastewater conveyed to the AWSCS. This meter shall be used in quantifying MIT wastewater flow into King County's system.

3.2.2 If requested by MIT, the City will install, at the City's expense and at a location designated by the MIT, a temporary flow monitor to sufficiently capture the cumulative City and MIT flows in the conveyance piping. The meter will be installed at a frequency not to exceed once every 20 months. The City shall have three months to establish the meter upon receipt of written request by the MIT. All information concerning the flows from said meter shall be provided to the MIT. Any information provided from King County to City concerning the flows from the AWSCS shall be forwarded to MIT for their records within 15 calendar days of receipt.

3.3 Extraordinary Repair: Should the AWSCS require additional repair or maintenance or upgrade over and above the routine maintenance

described in part 3.1, in order to meet the requirements of the MIT and City, and where the need for maintenance is not caused by the negligence of either party, the City and MIT shall meet together to agree on the nature and cost of the repair or upgrade. Upon reaching agreement on the nature and costs of the repair, each party shall contribute to the repair and/or upgrade in the same percentage as each contributed to the construction of the AWSCS. The City may complete repairs without concurrence from MIT where the failure to immediately complete the repairs would create a public health hazard caused by the release of wastewater outside of the sewer system. When the City acts without the concurrence of MIT, the City shall document the reasons for such repair and costs. MIT may contest the need for the emergency repair and or the amount expended. If the parties are unable to reach agreement on the nature of Extraordinary Repairs, the costs associated with such repairs, or any dispute than resolution will be sought under Section 10 of this Agreement.

3.4 Coordination of Operation and Maintenance: The parties shall each name one representative to coordinate operation and maintenance matters and to serve as a medium of communication on such matters. The representatives shall meet at least monthly to examine and agree on maintenance schedules, cost items and similar matters relating to the operation and maintenance of the AWSCS. Neither representative shall have the power to bind or commit a party to costs that exceed the operation and maintenance fund established in the Agreement. Disputes shall be resolved under the procedures set out in Section 10.

3.5 Effective Date: The duty of the MIT to contribute to Extraordinary Repairs under Section 3.3 shall apply only to those segments of the AWSCS that are replaced under this Agreement and only when the replacement is complete. The MIT shall not be responsible for the cost of ordinary repairs and maintenance under Section 3.1 on Segments of the AWSCS that have not been replaced under this Agreement where the cost of ordinary maintenance and repair is related to the age of the AWSCS extant as of the date of this Agreement.

4. SEPARATE AGREEMENT BETWEEN KING COUNTY AND TRIBE.

4.1 The MIT shall execute a separate interlocal agreement with King County for King County's conveyance and treatment of the MIT's wastewater.

4.2 The MIT shall be governed by the existing conditions of the 1997 Auburn MIT Agreement for wastewater conveyance established with the City as noted in Exhibit "C", a copy of which is attached hereto and is incorporated herein by this reference, until an agreement is established between the MIT and King County for the conveyance and treatment of

wastewater. Upon the establishment of said agreement with King County the MIT shall begin paying Operation and Maintenance fees as set out in Section 3.2 of this Agreement.

4.3 Upon the establishment of said agreement with King County the City shall provide the MIT with a final monthly sewer bill based upon all the facilities that have connected to the sanitary sewer pipe that drains into Auburn. The MIT shall supply documentation detailing all of the MIT connections to the wastewater conveyance facility.

4.4 Upon the execution of this Agreement, Section 5.1 of the 1997 Agreement shall not apply, and the MIT may continue to move wastewater through the existing and when completed new AWSCS without regard to the number of MIT hook-ups or the source of the wastewater so long as the wastewater meets the standards set out in the 1997 agreement and capacity within the AWSCS is not exceeded. Prior to the completion of the AWSCS, if capacity within the existing AWSCS is exceeded then the MIT shall be required to delay their peak flows until off-peak hours or until the problem lines are repaired. For the purpose of this Section 4.4 off-peak hours shall be defined as weekends and anytime except 6:30 AM to 6:30 PM.

4.5 The parties agree that upon establishment of the MIT as a King County wastewater agency, the MIT will no longer be subject to any City fees including but not limited to monthly service fees and new connection system development charges, unless otherwise noted in this Agreement. All fees associated with conveyance, treatment, and disposal of wastewater shall be billed from King County directly to the MIT except the maintenance and operational costs outlined in Section 3.2 above.

4.5.1 The King County capacity charge shall continue to be billed directly to the MIT from King County for new connections to the sanitary sewer system.

5. WASTEWATER COLLECTION LIMITATIONS

5.1 The MIT agrees to limit its local sanitary sewer service area for sewer connections to Indian lands located on or near the MIT Reservation located outside of the City's service area as defined as of the effective date of this Agreement. This region is consistent with the area used to define the peak flows noted in Exhibit "A".

5.2 The capacity required by the City for the AWSCS shall provide service to those properties within the City's approved service area based upon existing zoning, future growth projections, and topographical features.

5.2.1 Nothing in this Agreement is intended to apply City zoning to MIT owned lands within the City.

5.3 The MIT and City may agree in the future to add MIT land located within the City's service area to the MIT's service area. If the MIT and the City so agree, the respective Operation and Maintenance obligation of the parties set out in Section 3 shall be adjusted.

6. WASTEWATER OPERATIONAL LIMITATION

6.1 The MIT and City agree to maintain soluble hydrogen sulfide levels in the City's and MIT's wastewater below 0.5 ppm over a six-hour average. Each will provide chemical addition to its wastewater infrastructure if sulfide is determined to be creating a corrosive environment. In addition, the parties shall require pretreatment of industrial wastes to King County standards and shall require grease traps to be installed and maintained by all restaurants.

6.2 The MIT and City shall enforce all sewage collection and transmission system wastewater quality standards required by King County Department of Natural Resources and Parks, Wastewater Treatment Division and/or the EPA, as applicable, for all wastewater discharged into the AWSCS. To the extent that the City imposes additional limits on sewage that may be accepted into the City's sanitary sewer system, those additional limitations shall apply to the MIT so long as they (a) address the quality of effluent accepted into the system; and (b) apply to all customers served by the City either directly or by contract. Provided, that prior to the imposition of any limit, the City shall confer with the MIT and provide assurances to the MIT that any change will not affect or otherwise limit existing MIT services. Provided further, the City may not impose any additional limit that would affect the right of the MIT to fully utilize its capacity ownership rights in the AWSCS, or that would be inconsistent with the express provisions and limits set out in this Agreement. The MIT shall deliver to the AWSCS only such sewage collected or received by the MIT as is in conformity with the rules and standards set out in this section. The MIT shall not accept sewage or wastes from any person, firm, corporation, or other entity that is located outside of its service area boundaries, without written consent of the City. Should the MIT or the City at any time suspect that the wastewater is not meeting these standards, the party suspected of being in violation shall make every effort to locate and eliminate the source of contamination.

6.3 Damage to the AWSCS resulting from wastewater from either the MIT or City collection systems that does not meet the standards of Section 6.1 and 6.2, shall be addressed as follows: Where the MIT is the offending party, it will reimburse the City for any and all such damages; where the City is the offending party it shall be responsible for repairing any damage at its sole

cost and expense. In addition, either party that believes that the other party is delivering wastewater to the AWSCS that does not meet the standards set out in this section may seek injunctive relief under Section 10.3 against the offending party to enjoin the violation without first complying with the requirements of Sections 10.1 and 10.2.

6.4 MIT specifically agrees that should the City believe that the MIT is delivering wastewater that does not meet the standards set out in this Agreement and the City does not take action permitted under Section 6.3, the failure to take such action shall not be deemed a waiver of any of the City's rights under this Agreement and the MIT will not assert the doctrine of wavier, estoppel, or laches against the City in any subsequent action relating to the delivery of wastewater that does not meet the standards under this Agreement.

7. RESPONSIBILITY FOR DAMAGES

7.1 The City and the MIT shall each be responsible for any damage that is caused to the AWSCS (not including routine maintenance and repair) by their respective negligent acts or the acts of their customers. In such case the cost of repair shall be born by the negligent party.

7.2 The City shall perform repairs to the AWSCS as noted in Section 3.3. Where the repair was necessitated by the negligent actions of the MIT as described in Section 7.1 above, the reasonable cost for such repairs will be billed to the MIT, and shall bear interest, at the then existing ninety (90) day Treasury Bill rate, after thirty days from the date of billing. Where the repairs to the AWSCS are caused by the City, the City shall complete the repairs, at its sole expense, in a reasonable time so as not to interfere with the continued operation of the AWSCS. Where the damage is caused by both the MIT and City, each shall be equally (50%-50%) responsible for its share of the damage repair costs. Questions as to whether particular damage is the result of the negligence of either or both parties and the needed repairs to fix the damage shall be resolved under Section 10.

8. CAPACITY RIGHTS

Payment of invoices associated with the design, construction, inspection and project management of AWSCS's sewer improvements entitles the MIT to ownership of capacity within the AWSCS as outlined within Exhibit "A".

9. TERMINATION OF AGREEMENT

It is the intention of the parties that this Agreement shall not terminate during its term. If a party believes that the other party is in violation of this Agreement, that party may seek redress under Section 10. Provided, that the

parties thereto may agree in writing to terminate this Agreement on whatever terms and conditions they determine to be acceptable. Provided further, that neither party may force the other party to terminate this Agreement, nor shall the failure to agree to terminate this Agreement be subject to the procedure setout in Section 10.

10. DISPUTE RESOLUTION AND LIMITED WAIVER OF SOVEREIGN IMMUNITY

10.1 **Dispute Resolution - Mediation.** In the event the MIT and the City are engaged in a dispute, which relates to or arises under this Agreement, and they are unable to resolve said dispute within 30 calendar days, either party may request mediation.

10.1.1 The party requesting Mediation shall notify the other party in writing of its request to mediate a dispute identified in Section 10.1. If the parties agree to enter into mediation within 20 calendar days from such request the matter shall be deemed stayed and the arbitration clause contained herein shall not be put into effect. Mediation shall continue for no more than 90 calendar days at which point the mediation shall be deemed failed unless the parties have reached an agreement and have had such agreement approved by the governing bodies of each respective party and, if applicable, the Bureau of Indian Affairs. The parties may agree to continue mediation for a longer period. If such agreement is not approved by the governing bodies of each respective party or is not enforceable in the United States District Court for the Western District of Washington, the mediation shall be deemed failed and the unresolved issue shall be submitted to binding arbitration as set forth herein.

10.2 **Failure to mediate:** In the event that the parties do not reach an agreement to mediate within 20 calendar days of receipt of the notice requesting mediation by the non-requesting party, the matter shall be submitted to binding arbitration as set forth herein.

10.3 **Arbitration:** Any controversy or claim that relates to or arises under this Agreement or the breach thereof, shall be settled by arbitration administered by the American Arbitration Association in accordance with its applicable rules. Judgment on the decision rendered by the arbitrator may be entered into the United States District Court for the Western District of Washington. The arbitrator shall not have authority to enter an order terminating this Agreement.

10.4 **Attorney fees and costs:** Each party shall bear its own costs of mediation and arbitration.

10.5 **Limited Waiver of Sovereign Immunity and Consent to Jurisdiction of Federal Court.** The MIT hereby waives its sovereign immunity and consents to the jurisdiction of the United States District Court for the Western District of Washington concerning disputes regarding the interpretation of this Agreement and the enforcement of any rights, obligations or liabilities, in law or in equity, pertaining to hold harmless provisions of this Agreement. Such waiver of Sovereign Immunity and Consent to jurisdiction shall apply to no other court. This Limited Waiver of Sovereign Immunity and Consent to Jurisdiction has been specifically negotiated by the parties and the decision of the City to enter into this Agreement was made in part based on this limited waiver of sovereign immunity.

10.6 **Disclaimer of MIT Tribal Court Jurisdiction.** The MIT agrees that the MIT Tribal Court has no jurisdiction over the force, effect, and interpretation of this Agreement, nor the resolution of disputes that pertain to its implementation. The MIT further agrees that it has no authority to submit the City to the jurisdiction of the MIT Tribal Court with regard to any sewer-related matters or disputes that may arise between the parties under this Agreement.

11. PERFORMANCE, AMENDMENT, AND INTERPRETATION

Each party agrees that it will execute any and all instruments, documents and resolutions or ordinances necessary to give effect to the terms of this Agreement.

This Agreement may be modified only if such modifications are written and approved by written resolutions adopted jointly by the Auburn City Council, the MIT Tribal Council, and the BIA, if required.

The parties shall comply with all applicable rules and regulations pertaining to them in connection with the matters covered herein.

This document has been mutually negotiated between the parties. No adverse inference or ambiguity shall be construed against the party preparing this document for signature. No waiver by either party of any term or condition of this Agreement shall be deemed or construed to be a waiver of any other term or condition, nor shall a waiver of any breach be deemed to constitute a waiver of any subsequent breach, whether of the same or a different portion of this Agreement.

12. TERM OF AGREEMENT

The initial Term of this Agreement shall continue until the AWSCS constructed under this Agreement is replaced in its entirety or 50 years whichever is the longer. If the parties jointly agree to replace the AWSCS the

parties shall negotiate the terms and conditions of a new agreement that provides for both MIT and City ownership and use of capacity in the new sewer line. If the parties can not reach an agreement on the terms of a new agreement with respect to the new AWSCS, then the MIT may continue to have the right to use the AWSCS in the same manner and under the same conditions as set out in this Agreement until the existing AWSCS is fully replaced or until the 50 year term referred to above ends, whichever is longer.

13. INDEMNIFICATION

The MIT agrees to indemnify and hold the City and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, losses, damages or costs, of whatsoever kind or nature, brought against the City arising out of, in connection with, or incident to the execution of this Agreement and/or the Tribe's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of the City, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of the Tribe; and provided further, that nothing herein shall require the Tribe to hold harmless or defend the City, its agents, employees, and/or officers, from any claims arising from the sole negligence of the City, its agents, employees, and/or officers. No liability shall attach to the City by reason of entering this Agreement except as expressly provided herein.

The City agrees to indemnify and hold the MIT and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, losses, damages or costs, of whatsoever kind or nature, brought against the MIT arising out of, in connection with, or incident to the execution of this Agreement and/or the City's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of the MIT, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of the City; and provided further, that nothing herein shall require the City to hold harmless or defend the MIT, its agents, employees, and/or officers, from any claims arising from the sole negligence of the MIT, its agents, employees, and/or officers. No liability shall attach to the MIT by reason of entering this Agreement except as expressly provided herein.

Each party shall maintain in full force and effect throughout the term of this Agreement a policy of comprehensive general liability insurance, or demonstrate that the party is self-insured, with minimum coverage of one

million dollars per occurrence / two million dollars aggregate for personal injury, including death, and property damage. The parties may agree to increase the coverage limits set out in this section or if no agreement on different limits can be reached, any party can submit the issue for resolution under Section 10. If insurance is provided the insured party shall include the other party as an additional named insured. If a party relies on self-insurance, the other party shall be named as a third party beneficiary with enforcement rights to seek indemnification.

The City and MIT agree to hold each other harmless from third-party claims arising from the use of wastewater conveyance facilities within the respective jurisdictions and service areas.

14. ASSIGNMENT

The parties shall not assign this Agreement or any interest, obligation or duty therein without the express written consent of the other party.

15. ATTORNEY'S FEES

If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

16. NOTICES

All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Auburn
Public Works Director
25 West Main Street
Auburn, WA 98001
(253)-931-3010

Muckleshoot Indian Tribe
Assistant Tribal Operations Manager
Community Development
39015 172nd Ave. S.E.
Auburn, WA 98092
253-876-3104

or to such other representative addresses as either party may hereafter from time to time designate in writing. All notices and payments mailed by first class mail, postage prepaid shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed.

Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

17. NONDISCRIMINATION

Each of the parties, for itself, its heirs, personal representatives, successors in interest, and assigns, as part of the consideration hereof, does hereby covenant and agree that it will comply with statutes, executive orders and such rules as are promulgated there under that are applicable to a party to assure that no person shall on the grounds of race, creed, color, national origin, sex, age, or the presence of any sensory, mental or physical handicap be discriminated against or receive discriminatory treatment by reason thereof.

18. INTEGRATION.

This Agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this Agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

19. OBLIGATION INTACT.

Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either the MIT or the City regarding provision of sewer service, except as specifically set forth herein.

20. OBLIGATION TO COMPLETE PROJECT.

The Parties expect that the AWSCS shall be constructed in substantially the same form as described in Exhibit A. The parties expect that, absent an unforeseen intervening event that is outside the control of the parties, that could not be avoided by the use of due care, that all segments of the AWSCS will be completed within six years of the effective date of this Agreement, unless otherwise agreed upon by the parties. Should either party fail to take any action required under this Agreement such that the AWSCS is delayed or its construction stopped, the other party may seek injunctive relief under Section 10 to compel the other party to undertake any required action under this Agreement to complete the AWCSC. Provided, that if the City is the non-complying party, the MIT may continue to transport effluent through the existing Auburn Way South sewer line to accommodate at least a peak flow of 1.34cfs without any limitation on the source of such effluent so long as it comes from the MIT service area and meets effluent standards set out in this Agreement until the AWSCS is completed. Provided further, unless a court holds otherwise, should the City be held to be legally incapable of completing the AWSCS the MIT may transport effluent through the existing Auburn Way South

sewer line to accommodate at least a peak flow of 1.34cfs without any limitation on the source of such effluent so long as it comes from the MIT service area and meets effluent standards set out in this Agreement. Provided further, to the extent that the MIT has paid any money to the City as required under this Agreement and the City has become legally incapable of completing the AWSCS, the City shall return to the MIT any funds paid by the MIT, including accrued interest, without regard to whether the funds have been expended by the City, unless some other agreement between the MIT and the City can be established.

IN WITNESS TO THE TERMS OF THIS AGREEMENT, the parties hereto have subscribed their names:

Plotted: December 2003

Exhibit 1 Exhibit A
Resolution No. 3660
Page 2 of 2

Exhibit B
Auburn-Muckleshoot Indian Tribe Sanitary Sewage Agreement

Auburn Way South Conveyance System (AWSCS) Operation and Maintenance Activities

Line Locates
Locate sewer lines for construction activities that take place near existing sewer pipes.

High Velocity Jetting
Use high-pressure water discharged from a nozzle to scrub the internal surfaces of the AWSCS.

Vacuum Cleaning
Vacuum clean the AWSCS to collect solids, fats, oils and possibly grease that may have accumulated. This will typically be done in conjunction with high pressure cleaning.

Rat Baiting
Place rat poison in manholes to eliminate existing or potential problems.

Visual Inspection of AWSCS
Pull manhole lids to visually observe the flow and assess whether capacity problems are being experienced. This will be done most frequently during storm events.

Smoke Testing
Smoke test AWSCS to determine if any cracks or broken pipe exist.

TV Inspection
Inspect AWSCS for breaks, bellies or other pipeline problems.

Manhole Maintenance
Re-grout AWSCS manhole collars that may have shifted and cracked allowing ground water to enter the manhole. Add a riser ring if needed due to manhole settlement.

Repairs and Replacement
Repairs and replacement to the AWSCS shall be made consistent with the terms of the Agreement.

Exhibit C

SANITARY SEWAGE CONNECTION AGREEMENT

between the

CITY OF AUBURN

and the

MUCKLESHOOT INDIAN TRIBE

of the

MUCKLESHOOT INDIAN RESERVATION
KING COUNTY, WASHINGTON, USA

This Agreement is entered into on this ___ day of _____, 1997, in King County, Washington, between the City of Auburn, a municipal corporation under the laws of the State of Washington, hereinafter referred to as the "City," and the Muckleshoot Indian Tribe, a federally recognized Indian Tribe located on the Muckleshoot Indian Reservation, hereinafter referred to as the "MIT" and "MIT Reservation" respectively.

WHEREAS, in order to meet the standards prescribed by the State of Washington, Department of Ecology, for the collection and disposal of sewage effluent within the State, the City constructed a sanitary sewage collection system including transmission facilities to the King County Department of Natural Resources, Water Pollution Control Division, hereinafter referred to as "Metro", wastewater treatment plant; and

WHEREAS, the MIT has identified the need for community sewage collection and disposal facilities to resolve current sanitation needs of the MIT Reservation not currently served by a sanitary sewage collection system; and

WHEREAS, the Indian Health Service, hereinafter referred to as "IHS," the Environmental Protection Agency, hereinafter referred to as "EPA," the MIT and the City concur in the need for a sewage collection, treatment and disposal system to protect the health of MIT members and to safeguard the environment in and around the MIT Reservation; and

WHEREAS, the IHS, the EPA, the MIT and the City have entered into a separate Memorandum of Agreement to provide for the construction of a sewage collection and transmission system on the MIT Reservation and for connection of this sewage system to the City's sewage system utilizing funding from the Indian Set-Aside Program of the Clean Water Act - 1987 amendments, through the EPA and funding from the IHS through Sanitation Facilities Construction Program, Public Law 86-121, under Project PO-94-690; and

WHEREAS, this Agreement is required by EPA and IHS for the MIT to obtain the funding to resolve its current residential sanitation needs; and

WHEREAS, the consideration the City will receive from this Agreement is enhancement of public health by connecting current septic systems to a new sewer system; and

WHEREAS, furtherance of public health and safety of area inhabitants requires that all sewage collected by the MIT and discharged into the City's system of sanitary sewers be both non-harmful and non-toxic to both the City's system of sanitary sewers and area residents, as well as in conformity with reasonable rules and regulations; and

WHEREAS, the Auburn City Council has by Resolution No. 2800 and 2671, a copy of which ~~is~~ attached hereto and is incorporated herein by this reference, expressly reviewed and reaffirms the policy set forth in Resolution No. 2671 authorizing the execution of the September 6, 1995, Memorandum of Agreement Among the IHS, the EPA, the City, and the MIT of the MIT Reservation, also identified as Public Law 86-121, Project PO-94-690 ("Four Party Agreement" herein), and thereby authorized its Mayor to execute this Agreement which authorizes sanitary sewage connections for residential, single family housing units and specific existing non-residential facilities;

WHEREAS, all parties agree that this Agreement is solely for the purpose of protecting public health and contemplates only the connection of the 40 existing homes in the Skopabsh Village, up to 230 units of residential housing, and those other facilities set forth in the City's Resolution No. 2671, page two, which are defined as "Tribal administration, Tribal school, library, senior center, Tribal store, churches";

WHEREAS, the MIT Tribal Council has by Resolution No. 97-188, a copy of which is attached hereto and is incorporated herein by this reference, expressly reviewed and approved this Agreement and secured Bureau of Indian Affairs, hereinafter referred to as "BIA", approval pursuant to Title 25, Section 81, of the U.S. Code; and

WHEREAS, the dispute resolution provisions of this Agreement shall apply to all issues arising between the parties which relate to sewer and sewer related services; and

NOW, THEREFORE, in order to provide for connection and continued use of the MIT's sewage collection and transmission system to the City's sewage system, the parties mutually agree:

I. CONNECTION AUTHORIZED

1.1 MIT is authorized to connect to City sewer line to service only 40 existing homes in Skopabsh Village, MIT residential units in existence at the time of City Resolution No. 2671 passage (estimated to be approximately 130 units), up to a maximum of 100 additional units of single family housing, and MIT governmental or community facilities such as administration, school, library, senior center, store, and churches.

II. CITY'S SYSTEM DEVELOPMENT CHARGE

2.1 **Determination of System Development Charge.** That the MIT agrees to provide the City with a listing of all connections to the MIT's sewage system and agrees to pay the City a one-time System Development Charge, hereinafter referred to as SDC, for each connection to the MIT's sewage system. This listing will be updated by the MIT as needed on a monthly basis as an attachment to the monthly utility fee paid to the City. The SDC for each connection shall be as calculated utilizing Metro forms 1057, 1058, and 0461, latest revisions, copies of which are attached hereto, for Residential Customer Equivalents, hereinafter referred to as "RCE's". The MIT has already pre-paid the SDC's for 230 RCE units with IHS funds in April, 1996. The current charge for a single family residential and every other RCE connection is $840.

2.2 This SDC rate is subject to change as described in Article XIV. of this Agreement.

2.3 The City agrees to waive the SDC for the 40 existing MIT homes in the Skopabsh Village housing area due to these homes being connected to the City sewage system since 1977.

III. CITY'S USER FEE

3.1 Because the MIT has responsibility for ownership, operation and maintenance of the MIT's sewage collection and transmission system, the parties agree that the MIT will provide the City with a monthly user fee equivalent to fifty percent (50%) of the user fee charged to City customers.

3.2 The MIT will provide the City with 50% of the City monthly user fee as charged to the City customers. For other than single family residential connection, this will include an additional volume amount per month. The volume amount shall be calculated as follows:

V = monthly volume from water service meter, in cubic feet
R = current applicable rate, in dollars

$$\text{Volume amount billing} = \frac{[V - 750] * R * (0.5)}{(100) * (7.5)}$$

3.3 Each connection other than single family residential shall have a water service meter installed prior to sanitary sewer connection. Each single family residential connection shall have a water service meter installed prior to 1 September 1997, or prior to sanitary sewer connection thereafter.

3.4 This rate and the applicable percentage to ownership, operation, and maintenance is subject to change as described in Article XIV. of this Agreement.

IV. METRO'S USER FEE

4.1 The MIT will provide the City with the Metro monthly user fee as charged to the City customers. For other than single family residential connection, this will include an additional volume amount per month. The volume amount shall be calculated as follows:

V = monthly volume from water service meter, in cubic feet
R = current applicable rate, in dollars

$$\text{Volume amount billing} = \frac{[V - 750] * (R)}{(100) * (7.5)}$$

4.2 Each connection other than single family residential shall have a water service meter installed prior to sanitary sewer connection.

4.3 This rate is subject to change as described in Article XIV. of this Agreement.

V. QUALITY OF SEWAGE

5.1 The MIT agrees to connect only the 40 homes in the Skopabsh Village, up to 230 units of residential housing, and those other facilities set forth in the City's Resolution No. 2671, page two, which are defined as "Tribal administration, Tribal school, library, senior center, Tribal store, churches ..." that discharge domestic type sewage into the City's sewage system. The MIT will not permit industrial waste producing developments to connect to their community sewage system. For

purposes of this Agreement domestic type sewage shall be defined as that type of sewage which is contributed by a residential user.

5.2 The MIT agrees to enforce all sewage collection and transmission system effluent quality standards as required by the City, Metro and/or the EPA for all effluent discharged into the City's sewage system. The MIT shall deliver to the City sanitary sewer system only such sewage collected or received by the MIT as is in conformity with and subject to such reasonable rules and regulations as currently exist or as may be adopted from time to time by the City, Metro, or the EPA. The MIT shall not accept sewage or wastes from any person, firm, corporation, or other entity which is located within or without it boundaries, or is otherwise delivering its sewage into the MIT's sanitary sewer system, without written consent of the City. Should the MIT or the City at any time suspect that the effluent from the MIT collection system is not meeting these standards, the MIT shall make every effort to locate and eliminate the source of contamination.

5.3 Should damages to the City system result from effluent from the MIT's collection system that does not meet the standards of Section 5.2, the MIT will reimburse the City for any such damages.

5.4 The MIT's transmission of effluent to the City which does not meet the effluent quality standards as required by the City, Metro, and/or the EPA shall constitute a material breach of this Agreement by the MIT entitling the City to immediately terminate this Agreement for cause. Without terminating this Agreement, the City may in its sole discretion and upon provision of notice to the MIT refuse to accept any effluent it believes is not meeting the effluent quality standards as required by the City, Metro, and/or the EPA and continue to accept effluent which does meet applicable standards. In such event, the MIT specifically agrees that the City shall not be deemed to have waived any of its rights under this Agreement and the MIT will not assert doctrines of waiver, estoppel, and laches against the City in any subsequent action pertaining to this Agreement and the rejection and acceptance of conforming and non-conforming effluents.

VI. ~~SEWER COMMISS~~SYSTEMS COORDINATION

6.1 In the interest of continuing to promote better communication and cooperation between the MIT and the City, both parties agree to send a representative to participate in all regular and special meetings of the MIT's Utility District and the City's Public Works Committee. Both parties shall notify the other party in writing of all such meetings.

6.2 The MIT and the City agree to provide technical and operational assistance to the other party upon request and as resources of manpower or equipment or plant may be available on a cost reimbursable basis. If one party assists the other, the party assisted agrees to honor payment of billings for labor and equipment rental. Both parties will make available established hourly rates for purposes of encouraging this program.

VII. SEWAGE FLOW MEASUREMENT

7.1 The quantity of sewage entering the City's collection system shall be measured by a flow meter located in the City's regulation station. The proper calibration of this flow meter will be the responsibility of the City. The MIT shall keep monthly records of the sewage pumps running time hour meters and of the average pumping rate for each pump for comparison and confirmation of the flow meter calibration on an annual cycle. In the event that the flow meter appears to have malfunctioned, the hour meter readings and the corresponding flow rates shall be used to determine the amount of sewage that has been pumped to the City's sewage system until the flow meter repairs are completed. The MIT will report the total sewage flow as measured utilizing the pump running time hour meters estimated method to the City monthly, as an attachment to the monthly user fee payment.

VIII. TRIBAL OR CITY OWNERSHIP AND MAINTENANCE

8.1 The MIT shall own, operate and maintain all gravity collection lines, sewage lift stations and force main piping located upstream of the City's regulation station and generally within the southeastern portion of the MIT Reservation in Sections 1, 2 and 12 of Township 20 North, Range 5 East, W.M., but, also including the gravity and force main piping located outside of the MIT Reservation boundaries in Section 35 of Township 21 North, Range 5 East, W.M., upstream from the City's regulation station.

8.2 The gravity and force main line located downstream from the City's regulation station to the connection manhole at the corner of Auburn-Enumclaw Highway and 368th Street shall be conveyed to and be owned, operated and maintained by the City provided however that MIT residential connections will be permitted, but no non-MIT connections will be authorized without MIT written approval.

8.3 The MIT operations staff shall operate their facilities in conformance with the Plan of Operation developed with the assistance of the IHS during the design and construction of the facilities.

8.4 In order to maintain compatibility of design/construction operating systems, the MIT agrees to construct and maintain all property referred to herein in accordance with standards and specifications provided by the City.

IX. INTERRUPTION OF SERVICE

9.1 It is understood that the City will periodically need to restrict or shut off sewage flow into their collection system in order to perform repair or maintenance on downstream facilities. For scheduled maintenance or repair activities the City shall notify the MIT, in writing, at least five working days in advance. Such notice shall indicate the work that is to be performed, the anticipated duration of this work, what restrictions or changes to the Plan of Operation will be necessary and a contact person for coordinating all activities with the MIT's operations staff.

9.2 It is also understood that emergency situations may arise that could threaten public health and/or the continued operation of the City's sewage collection system and the City may be unable to notify the MIT in the manner prescribed above (in Section 9.1). In such a situation the City shall use best efforts to contact the MIT's Utility staff (operator or Council officers) and request assistance in regulating the discharge of effluent from the MIT's sewage system.

9.3 The MIT, by reason of this Agreement, shall grant the City an access easement to pump station #2 sufficient to permit the City to regulate the sewage flow and to permit emergency repair work on the City's sewage system. A copy of the Easement form is attached hereto as Exhibit A and is incorporated herein by reference as though fully set forth.

9.4 The MIT agrees to assume liability, if any, for sewage back-ups, if any, within the MIT's sewage system that are caused by capacity shortfalls and flow control spill incidents within the MIT's sewage system, and will hold the City harmless from any such claims, all as more particularly described in Article X. of this Agreement.

9.5 The MIT shall procure and maintain in full force and effect throughout the term of this Agreement a policy of comprehensive general liability insurance with minimum coverage of one million dollars per occurrence/two million dollars aggregate for personal injury including death, and property damage. As a condition of providing service, the City reserves the right, in its sole discretion, to demand increased minimum coverage limits at five (5) year intervals from the date of signing hereof. In the event the MIT does not provide proof of insurance issued by a company approved by the City, with increased limits, within thirty (30) days of such request the City shall be authorized to procure such a policy on its own behalf and deduct such policy premiums from the reserve account established pursuant to this Agreement. Such policy shall name the City as an additional named insured and shall include a provision in such policy prohibiting cancellation or reduction in coverage except upon at least thirty (30) written days notice to the City. Cancellation or reduction of the required insurance shall constitute a material breach of this Agreement and, at the City's sole option, may constitute grounds for the City to immediately terminate this Agreement. Further, the MIT agrees to execute all documents and do all things necessary to allow the City, as additional named insured, to recover directly from the insurance carrier in the event of loss, without having to first commence dispute resolution proceedings or bring suit against the MIT.

X. SEWAGE FLOW CAPACITY

Release Monitoring, Metering and Regulation:

10.1 **Conceptual Premises.** The MIT and the City agree to the following conceptual premises with regard to operation and maintenance of the sewer system pursuant to this Agreement:

A. Prior to City approval of sanitary sewer connection, the City shall approve construction documents as per the Four Party Agreement and the following plans, specifications, and conditions will be met:

1. The MIT agrees to construct and dedicate in fee title all infrastructure concerning the system, except for the regulation station vault to be designed and constructed by the City, from the upstream side of the vault, northwesterly to the City's receiving manhole near the City limits. (Exhibit B: general map illustration)

2. The City will design and construct the regulation station, downstream monitoring gauges, telemetry and control cabinet. The City will seek to coordinate this design with the MIT's consultant (IHS) to assure compatibility with the connection and regulation telemetry of the MIT's #2 pump station.

3. The MIT and City agree to cost share the City's design and construction effort referenced in Section 10.1.A.2. on a 50/50 percentage basis according to and for the mutual benefits accruing to both parties. The MIT agrees to pay its share of the City's improvements prior to construction contract award. No connection shall be allowed until such time as all payments are received by the City.

4. The MIT and City agree to share the monthly communication and any associated maintenance and repair bills as necessary to operate and maintain the telemetry system so long as the MIT's sanitary sewer system is connected to the City's sanitary sewer system. These costs will be included on each monthly sewer bill presented to the MIT. The City will be responsible for maintaining the telemetry system up to and including the telemetry intertie box located at the pump station #2. The MIT hereby grants the City and its system maintenance agents right of entry to all locations served by the City's telemetry system.

10.2 **Regulatory Concept:** Generally the system components consist of:

1. Downstream monitoring gauges will be installed at two manholes in the City's system for purposes of measuring, recording and telemetering "real time" control signals to the MIT's pump station that regulates releases to the City's system.

2. A regulatory vault consisting of and containing a manual gate valve, a motor operated ball valve, flow meter, and telemetry devices shall be installed at a location along the force main downstream of Pump Station #2.

3. In Pump Station #2 the design shall provide an additional wet well surcharge minimum capacity volume of 1,400 cubic feet to accommodate pump regulation. Pumping capacity at Pump Station #2 may be overridden by City telemetry. Override telemetry will control operation of both high volume and low volume pumps, as the IHS has installed no variable flow pumps. As such, the only operations available are fixed high volume, fixed low volume, and all off - no volume.

4. The regulation of the pump station shall be responsive to the downstream monitoring gauge signals and the flow control valve in the regulation vault to assure the performance objectives outlined herein are met, and maximum flows are therefor not exceeded.

5. The telemetry system shall be capable of recording the actual flow data in digital format on a continuous basis and down-loading to a computer system in both the MIT office and the City utility office via modem. The computer software will be capable of showing the real-time flow data at all monitored points (Pump Station #2, Regulatory vault, and monitoring gauges).

6. As the City and MIT decide to modify this Agreement to accommodate adjustments of release rates allowable, the telemetry system shall be capable of receiving programmable updates.

7. Prior to issuance of the connection approval the MIT and its contractor will perform commissioning tests to demonstrate to the City's satisfaction that the system accomplishes the following performance objectives:

a. The pump station responds to regulate the flow releases to the City's system in such a manner that when the City's pipe being monitored is equal to or greater than 80% full as measured by

flow depth within the pipe, the pumping rate is curtailed, and if necessary, reduced to zero.

b. As the City's pipe being monitored drops to a 75% of full condition, the system will query the status of wet well levels and pump down times to assess when pumps are re-energized to commence pumping. The system will periodically continue to query system status at such time as pumping decisions are required.

c. The pump station can be calibrated to deliver flows as dictated by the City's downstream capacity available, and within the limits of flow control as provided by IHS construction to date.

d. At a monitored one-foot surcharge within a gauging manhole, the regulation station will automatically shut off influent flow from the MIT's Pump Station #2, and influent flow shall remain off until the surcharge has disappeared. This will be the only condition mandating zero flow from the MIT's Pump Station #2 except for emergency conditions.

10.3 **Maximum Flow to Be Accepted By City.** The maximum allowable sewage flow rate from the MIT's sewage system to the City's sewage system shall not exceed the capacity available within the City's system at any time as determined by City monitoring gauges. Such flow can be released at any time capacity is available within the City's system.

10.4 **Funding of Future Improvements By MIT A Condition Precedent to Continuing Flow to the City System.**

a. The MIT acknowledges that its share of funding the design and construction of any future capacity expansion effort of the City system is an express condition precedent to the City proceeding with expansion of its system. Payment of this funding share by the MIT is necessitated by the fact that acceptance of MIT flow by the City will consume previously existing capacity, makes such capacity unavailable to the City, and requires subsequent improvements to the City system in order for the City to have and maintain the capacity necessary for the City's own needs and uses. Such funding amounts may be credited against future MIT SDC amounts, if any.

b. The prorata share of City system expansion projects between the MIT and the City shall be determined based on benefit received.

XI. COLLECTION OF FEES, TERMINATION OF SERVICE, AND BREACH OF AGREEMENT

11.1 Collection of Development Charges, User, and Connection Fees.

A. Payment as Condition Precedent. The Agreement is between the MIT and the City and no third parties, even though third parties may be indirectly benefited. As a condition precedent to connection and continued service, the MIT shall pay all necessary development charges and user fees. Additionally the MIT shall apply for any necessary City approvals on behalf of members or property owners within MIT jurisdiction who desire to be connected to the sewer system. The City's issuance of a permit shall be directly conditioned upon completion of those items specified in any particular permit as well as the MIT's payment of the permit fees. The MIT and the City expressly agree that the City shall not be responsible for collecting of SDC's, user charges, permitting fees, or any other moneys of any kind from any other individual or entity.

B. Establishment of Reserve Account for Future System Expansion and Related Costs. The City and MIT shall, upon execution of this Agreement, establish a supplemental reserve account in the amount of Five Hundred Thousand Dollars ($500,000.00) to provide for future funding of anticipated system expansion necessitated on account of increased flows resulting from this Agreement, non-budgeted uses of funds necessitated by natural disasters and other public health reasons, payment of insurance premiums, and any other unpaid charges or fees pertaining to the use of the system or permits pertaining thereto. The City and the MIT shall each contribute Two Hundred Fifty Thousand Dollars ($250,000.00) and the fund shall be maintained at this level with each party replacing the funds which are withdrawn on account of its respective obligations. The fund shall be established in a Restricted Use account of the Sanitary Sewer Fund as designated by the City. The interest accruing thereon, if any, shall be apportioned between the parties in relation to their respective contributions and any such interest and principal remaining at the termination of this Agreement shall be returned to the remitter of such funds upon such termination and settlement of all claims and disputes pertaining to this Agreement. The City shall, upon consultation

with the MIT, be authorized to immediately draw upon and use the funds in the reserve account for the uses and purposes herein mentioned. The City shall account to the MIT for all such funds used. Nothing contained herein shall derogate from the need of the MIT to pay in advance as a condition precedent for the City's performance under other provisions of this Agreement.

11.2 **MIT's Right to Terminate Agreement.** The MIT shall have the right to terminate the discharge of sewage from their sewage system to the City's at any time for any reason, or no reason whatsoever, by providing the City with a minimum of five (5) years' written notice prior to termination of such discharge. The City agrees to terminate this Agreement with the MIT at the date noted upon said written notice. Monetary and other obligations owed by the MIT to the City on the date of termination shall survive.

11.3 **City's Right to Terminate Agreement.** The City shall have the right to terminate this Agreement at any time for any reason, or no reason whatsoever, by providing the MIT with a minimum of five (5) years' written notice prior to termination. The City shall also have the right to immediately terminate this Agreement for any reason constituting a material breach. In addition to those breaches defined by law, the City and the MIT expressly agree that a material breach justifying the City to immediately terminate service shall include, but not be limited to, the non-payment of SDC's or user fees, failure of the MIT to provide proof of insurance required herein, exceeding the number of type of sewer connections allowed under this Agreement, discharge of non-domestic sewage into the system, and/or failure of MIT to honor easements, and/or failure to fund the reserve account specified herein.

11.4 **Right to Rely upon Notice of Termination.** As between the City and the MIT, in the event that one party, hereinafter referred to as the "Transmitting Party," sends the other party a notice to terminate this Agreement, the party receiving such notice, hereinafter referred to as the "Receiving Party," shall have a right to rely upon such notice. Absent prior written agreement to the contrary, the Transmitting Party shall not be allowed to revoke its notice of intent to terminate this Agreement or to otherwise keep this Agreement in full force and effect beyond the termination date specified in the notice. This provision shall be effective regardless of whether or not the Transmitting Party actually changes its position, or the Receiving Party otherwise relies in any material manner upon the Transmitting Party's notice of termination.

XII. DISPUTE RESOLUTION AND LIMITED WAIVER OF SOVEREIGN IMMUNITY

12.1 **Dispute Resolution - Mediation.** In the event the MIT and the City are engaged in a dispute which relates to this Agreement or any other issue arising relating to sanitary sewer, and they are unable to resolve said dispute within ninety (90) days, either party may request mediation of any dispute, in any manner agreed upon by the parties.

a. Mediation shall be commenced by the party requesting it notifying the other party in writing of its request to mediate a dispute arising between the parties which relate to sanitary sewer and sewer related services. If the parties agree to enter into mediation within 20 days from such request the matter shall be deemed stayed and the arbitration clause continued herein shall not be put into effect. Mediation shall continue for no more than one hundred twenty (120) days at which point the mediation shall be deemed failed unless the parties have reached an agreement and have had such agreement approved by the governing bodies of each respective party and, if applicable, the Bureau of Indian Affairs. If such agreement is not approved by the governing bodies of each respective party or is not enforceable in the United States District Court for the Western District of Washington, the mediation shall be deemed failed and the unresolved issue shall be submitted to binding arbitration as set forth herein.

b. In the event the parties do not reach an agreement to mediate within twenty (20) days of receipt of the notice requesting mediation by the non-requesting party, the matter shall be submitted to binding arbitration as set forth herein.

c. Each party shall bear its own costs of mediation.

12.2 **Arbitration.** Any controversy or claim arising out of or relating to this Agreement, or the breach thereof, shall be settled by arbitration administered by the American Arbitration Association in accordance with its applicable rules. Judgment on the decision rendered by the arbitrator may be entered into the United States District Court for the Western District of Washington. Each party shall bear its own costs of arbitration.

12.3 **Limited Waiver of Sovereign Immunity and Consent to Jurisdiction of Federal Court.** The MIT hereby waives its sovereign immunity and consents to the jurisdiction of the United States District Court for the Western District of Washington concerning disputes regarding the interpretation of this Agreement and the enforcement of any rights hereunder, including collection of any SDC's, User Fees, or other obligations or liabilities, in law or in equity, pertaining to hold harmless provisions of this Agreement. Such waiver of Sovereign Immunity and Consent to jurisdiction shall apply to no other court. This Limited Waiver of Sovereign Immunity and Consent to Jurisdiction has been specifically negotiated by the parties and decision of the City to extend sanitary sewer service to the MIT and a portion of the MIT's payments hereunder are expressly made the consideration for this Limited Waiver and Consent to Jurisdiction.

12.4 **Disclaimer of MIT Tribal Court Jurisdiction.** The MIT agrees that the MIT Tribal Court has no jurisdiction over the force, effect, and interpretation of this Agreement, nor the resolution of disputes which pertain to its implementation. The MIT further agrees that it has no authority to submit the City to the jurisdiction of the MIT Tribal Court with regard to any sewer-related matters or disputes which may arise between the parties.

XIII. FEE AND CHARGES PAYMENTS

13.1 The City shall bill the MIT on a monthly basis for any fees or charges as determined in Articles II, III, and IV of this Agreement. The MIT shall have thirty (30) days to provide payment of the amount to the City from the date of bill issuance.

13.2 In the event that any payments for a sewer bill due under this Agreement shall remain unpaid in excess of the thirty (30) days from the date of issuance, then the bill shall be delinquent. In the event that a bill becomes delinquent, the City shall give the MIT fifteen (15) days' notice of its intent to enforce collection of said bill. A bill which has been properly addressed and deposited in the United States Postal Service shall be deemed to be presented to the MIT for payment.

13.3 If the MIT believes that the City's bill for fees or charges is in error, the MIT shall notify the City of the error no later than fifteen (15) days following the date of bill issuance, accompanied by any supporting documents. Within ten (10) days thereafter, the City and MIT shall meet to attempt to resolve the dispute. If the dispute cannot be resolved

informally, then the parties shall proceed pursuant to Article XII (Dispute Resolution). In any event, the MIT shall pay any uncontested portion of the bill within thirty (30) days after date of issuance. The MIT shall also continue to pay uncontested subsequent monthly bills as provided in this Section.

13.4 If the bill remains unpaid fifteen (15) days following the City's notice of intent to enforce collection, then the City may at its discretion discontinue service to the MIT; provided that the MIT has not provided notice to the City pursuant to Paragraph 12.1. If the MIT has given such notice, the City shall have the authority to discontinue service for failure to pay only in the event that the MIT has not paid the uncontested portion of the bill.

13.5 If the billing dispute is resolved in favor of the City pursuant to Article XII (Dispute Resolution), and the bill remains unpaid for five working days thereafter, the City may at its discretion discontinue service to the MIT unless otherwise specified within the dispute resolution.

XIV. CHANGES TO RATES AND CHARGES

The City's and/or Metro's user fee rate structure and charges for the MIT shall be changed only at such times as the City and/or Metro adjusts its rates and charges through established procedures for all other users.

XV. HOLD HARMLESS AND INDEMNIFICATION

The MIT agrees to indemnify and hold harmless City, and its agents and employees, from and against all claims, damages, losses, and expenses, including reasonable attorneys' fees, which originate from events which occur on MIT owned or controlled land or facilities including, but not being limited to, sanitary sewer backups, floods, spillage, property damage, personal injury, and other types of sewage contamination, except that this indemnification shall not apply to the sole negligent or intentional acts of the City and its agents and employees.

XVI. PERFORMANCE OF AGREEMENT

Each party agrees that it will execute any and all instruments, documents and resolutions or ordinances necessary to give effect to the terms of this Agreement. Furthermore, the City shall have access at reasonable times and on reasonable notice to inspect the MIT's sanitary sewer system and related

facilities for the purpose of verification of the number of hook ups, type of discharge, and operation levels which constitute the basis of the MIT's obligations to the City on account of fees and charges.

XVI. AMENDMENT OF THIS AGREEMENT

This Agreement may be modified only if such modifications are written and are approved by written resolutions adopted jointly by the Auburn City Council, the MIT Tribal Council, and the BIA.

XVII. CONSTRUCTION AND INTERPRETATION.

This document has been mutually negotiated between the parties. No adverse inference or ambiguity shall be construed against the party preparing this document for signature. No waiver by either party of any term or condition of this Agreement shall be deemed or construed to be a waiver of any other term or condition, nor shall a waiver of any breach be deemed to constitute a waiver of any subsequent breach, whether of the same or a different portion of this Agreement.

XVIII. TERM OF AGREEMENT.

The initial Term of this Agreement shall be fifty (50) years from the date that the parties executed this Agreement unless terminated earlier pursuant to Section XI of this Agreement. This Agreement shall be automatically renewed for an additional term of fifty (50) years (without any action required by either party), provided that either party may decline to renew the Agreement by notifying the other party by written notice at least five (5) years prior to the end of the initial Term of this Agreement.

IN WITNESS TO THE TERMS OF THIS AGREEMENT, the parties hereto have subscribed their names:

RESOLUTION NO. 3502

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE MUCKLESHOOT INDIAN TRIBE FOR THE OPERATION OF A TEMPORARY SEWAGE LIFT STATION.

WHEREAS, the Muckleshoot Indian Tribe (Tribe), and the City of Auburn (Auburn) are authorized to enter into this Agreement under the authority of their respective enabling legislation and under the authority of Chapter 39.34 RCW, the Interlocal Cooperation Act; and

WHEREAS, the parties desire clarification on the ownership, the maintenance, and the operational responsibilities for a lift station serving the Swan Flats development; and

WHEREAS, it is in the public interest for the parties herein to enter into a sanitary sewer agreement for the operation of a sanitary sewer lift station to facilitate service from the Swan Flats plat.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. Pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and the Tribe have legal authority to cooperate with other localities on the basis of mutual advantage and provision of services.

Section 2. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute the Interlocal Agreement between Auburn and the Tribe with minor administrative changes if required. A copy of said Agreement is attached hereto, denominated as Exhibit "A" and made a part hereof as though set forth in full herein.

Section 3. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 4. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 5th day of August, 2002.

EXHIBIT "A"

Interlocal Agreement between the Muckleshoot Indian Tribe and the City of Auburn

(Sanitary Sewer Service for Swan Flats)

THIS INTERLOCAL AGREEMENT made and entered into, pursuant to the interlocal Cooperation Act, chapter 39.34 of Revised Code of Washington, on the 5th day of, August, 2002, by and between the CITY OF AUBURN, a municipal corporation of the State of Washington (hereinafter referred to as "Auburn"), and the MUCKLESHOOT INDIAN TRIBE, a federally recognized Indian Tribe located upon the Muckleshoot Indian Reservation (hereinafter referred to as "Tribe").

WITNESSETH:

WHEREAS, the Tribe has purchased the single-family housing plat known as Swan Flats for the construction of single-family homes; and

WHEREAS, a temporary, private sewage lift station is established to facilitate the conveyance of the Swan Flats' wastewater into Auburn's public sanitary sewer system; and

WHEREAS, the lift station required by the Swan Flats plat for sanitary sewer services shall be owned, maintained, and operated by the Tribe; and

WHEREAS, once improvements have been made to the public sanitary sewer system located along Academy Drive to facilitate gravity wastewater flow from Swan Flats to the improved sewer line then Auburn shall bypass the private lift station and establish the piping required to connect Swan Flats plat with Auburn's sewer system without the use of pumps; and

WHEREAS, the property owners' responsibility to own, operate, and maintain the sanitary sewer lift station servicing the Swan Flats plat was imposed upon the plat and is not being imposed upon the Tribe as a special condition; and

WHEREAS, the Tribe and Auburn are willing to enter into this agreement which clarifies the maintenance responsibilities for the existing lift station servicing the Swan Flats plat; and

WHEREAS, the Tribe has purchased a majority of the properties within the Swan Flats plat and desires to be the responsible party for the operation and maintenance of the private sanitary sewer lift station in lieu of a homeowners association.

NOW, THEREFORE in consideration of their mutual covenants, conditions, and promises, THE PARTIES HERETO DO HEREBY AGREE as follows:

1. CONDITIONS

A. Auburn shall install sanitary sewer pipe to bypass the Swan Flats lift station concurrent with any sanitary sewer improvements done to the existing public sewer line along Academy Drive that would facilitate gravity sewer service from Swan Flats.

B. The Tribe shall own, operate, and maintain the lift station established upon Lot 1 of the Swan Flats plat until the gravity facilities are constructed and the pump station is no longer required for service.

C. The Muckleshoot Indian Tribe shall post an all weather sign with a minimum letter height of one inch that details the appropriate person and/or agency and phone number of who to contact if the sewer lift station requires service. The current contact information established by the Muckleshoot Indian Tribe for the servicing of the lift station is as follows:

DEWEY MILLER
Muckleshoot Indian Tribe
Public Works
360-802-4727

After hour phone numbers and emergency contacts shall be mentioned on the sign and supplied to Auburn 20 days prior to the effective date of this Agreement.

D. If Tribal response is delayed and the City is contacted, and a health hazard is created due to the failure of the lift station then the City may respond to contain and possibly correct the health situation until Tribal response is on-site. The Tribe agrees to reimburse the City for reasonable expenses for time and materials related to any such response.

E. No connections shall be made to Auburn's public sewer system without first obtaining the appropriate permits from the City as established within Auburn City Code 13.20.

F. Upon installation of the sanitary sewer bypass of the Swan Flats lift station by the City, the Tribe shall cap the existing eight-inch PVC sewer pipe, conveying wastewater from the City's sewer system to the lift station, at the property line to lot one. The tribe may request that the City do this work at the time of the diversion at no cost to the Tribe. After connection to the City gravity sewer system the Tribe may dispose of or retain the lift station as it deems appropriate.

2. INSURANCE

The Tribe shall maintain, at a minimum, a two million liability insurance policy as of the effective date of this agreement; the Tribe shall continue such insurance coverage during the term of this agreement unless otherwise agreed upon by the parties.

3. INDEMNIFICATION

A. The Tribe agrees to indemnify and hold the City and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against the City arising out of, in connection with, or incident to the execution of this agreement and/or the Tribe's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of the City, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of the Tribe; and provided further, that nothing herein shall require the Tribe to hold harmless or defend the City, its agents, employees, and/or officers, from any claims arising from the sole negligence of the City, its agents, employees, and/or officers. No liability shall attach to the City by reason of entering this agreement except as expressly provided herein.

B. The City agrees to indemnify and hold the Tribe and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever king or nature, brought against the Tribe arising out of, in connection with, or incident to the execution of this agreement and/or the City's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of the Tribe, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of the City; and provided further, that nothing herein shall require the City to hold harmless or defend the Tribe, its agents, employees, and/or officers, from any claims arising from the sole negligence of the Tribe, its agents, employees, and/or officers. No liability shall attach to the Tribe by reason of entering this agreement except as expressly provided herein.

4. COMPLIANCE WITH REGULATIONS AND LAWS

The parties shall comply with all applicable rules and regulations pertaining to them in connection with the matters covered herein.

5. DISPUTE RESOLUTION AND LIMITED WAVIER OF SOVEREIGN IMMUNITY

A. In the event the Tribe and the City are engaged in a dispute, which relates to this Agreement, and they are unable to resolve said dispute within ninety (90)

days, either party may request mediation of any dispute in any manner agreed upon by the parties.

a. Mediation shall be commenced by the party requesting it by notifying the other party in writing of its request to mediate a dispute arising between the parties which relate to sanitary sewer and sewer related services to Swan Flats. If the parties agree to enter into mediation within twenty (20) days from such request the matter shall be deemed stayed and the arbitration clause continued herein shall not be put into effect. Mediation shall continue for no more than one hundred and twenty (120) days at which point the mediation shall be deemed failed unless the parties have reached an agreement and have had such agreement approved by the governing bodies. If such agreement is not approved by the governing bodies of each respective party or is not enforceable in the United States District Court for the Western District of Washington, the Mediation shall be deemed failed and the unresolved issue shall be submitted to binding arbitration as set forth herein.

b. In the event the parties do not reach an agreement to mediate within twenty (20) days of receipt of the notice requesting mediation by the non-requesting party, the matter shall be submitted to binding arbitration as set forth herein.

c. Each party shall bear its own cost of mediation.

B. Any controversy or claim arising out of or relating to this agreement, or the breach thereof, shall be settled by arbitration administered by the American Arbitration Association in accordance with its applicable rules. Judgment on the decision rendered by the arbitrator may be entered into the United States District Court for the Western District of Washington. Each party shall bear its own costs of arbitration.

C. The Tribe hereby waives its sovereign immunity and consents to the jurisdiction of the United States District Court for the Western District of Washington concerning disputed regarding the interpretation of this Agreement and the enforcement of any rights hereunder, including other obligations or liabilities, in law or in equity, pertaining to immunity provisions of this Agreement. Such waiver of Sovereign Immunity and Consent to jurisdiction shall apply to no other court.

D. The Tribe agrees that the Muckleshoot Indian Tribal Court has no jurisdiction over the force, effect, and interpretation of this Agreement, nor the resolution of disputes that pertain to its implementation. The Tribe further agrees that it has no authority to submit the City to the jurisdiction of the Muckleshoot Indian Tribal Court with regards to any sewer-related matters or disputes which may arise between the parties.

6. ASSIGNMENT

The parties shall not assign this agreement or any interest, obligation or duty therein without the express written consent of the other party.

7. ATTORNEY'S FEES

If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

8. NOTICES

All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

The Muckleshoot Indian Tribe
Thomas Reber
Muckleshoot Indian Tribe
Assistant Tribal Operations Manager
Community Development
40320 Auburn Enumclaw Road
Auburn, WA 98092
Phone # 360.802.1922
Fax # 360.802.4727

The City of Auburn
Jeff Roscoe
Sanitary Sewer Engineer
Auburn Public Works
Department
25 West Main Street
Auburn WA 98001-4998
Phone # 253.931.4008
FAX # 253.931.3053

or to such other representative addresses as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

9. NONDISCRIMINATION

Each of the parties, for itself, its heirs, personal representatives, successors in interest, and assigns, as part of the consideration hereof, does hereby covenant and agree that it will comply with applicable statutes, executive orders and such rules as are promulgated to assure that no person shall on the grounds of race, creed, color, national origin, sex, age, or the presence of any sensory, mental or physical handicap be discriminated against or receive discriminatory treatment by reason thereof.

10. INTEGRATION.

This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements

other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

11. OBLIGATION INTACT.

Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either the Tribe or the City regarding provision of sewer service, except as specifically set forth herein.

12. MISCELLANEOUS

A. The captions in this agreement are for convenience only and do not in any way limit or amplify the provisions of this agreement.

B. The duration of this agreement shall be until the sanitary sewer improvements are established that will allow the City to extend a gravity sewer main to bypass the private lift station or for the period of time it reasonably takes for the performance of parties as completed herein.

C. The purpose of this agreement is to clarify the Tribe's role for the maintenance and operation of the private lift station together with the City's role in the establishment of a gravity sewer system to serve Swan Flats.

D. The performances of the duties of the parties provided hereby shall be done in accordance with standard operating procedures and customary practices of the parties.

E. No provision of this agreement shall relieve either party of its public agency obligations and/or responsibilities imposed by law.

F. If any term, provision, condition or portion of this Agreement is held to be invalid, or unenforceable by a final decision of any court having jurisdiction on the matter, the remaining of this Agreement or the application of such term or provision to persons or circumstances other then those as to which it is held invalid or unenforceable shall not be affected thereby and shall continue in full force and effect.

G. No modifications or amendments of this agreement shall be valid or effective unless evidenced in writing and signed by both parties.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first above written.

LAKEHAVEN UTILITY DISTRICT

- Sewer Service Boundaries (Resolutions 3651, 3824, and 2005-1038)
- Sewer District's Sanitary Sewer Service Area (Resolution 5353)

RESOLUTION NO. 3651

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES BETWEEN THE LAKEHAVEN UTILITY DISTRICT AND THE CITY OF AUBURN

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to RCW 35A.21.150, Auburn has the legal authority to maintain a sewerage system; and

WHEREAS, pursuant to RCW 57.08.044, Lakehaven has the legal authority, whether by contract or otherwise, to provide sewer service to property owners in areas outside existing district boundaries; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Lakehaven's 1999 Draft Comprehensive Wastewater System Plan notes a region within Auburn's Potential Annexation Area (hereinafter referred to as "Auburn's PAA") to which Lakehaven intends to provide sanitary sewer service; and

WHEREAS, Lakehaven is currently providing sanitary sewer service within Auburn's PAA; and

WHEREAS, portions of the Lakehaven sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of Auburn's PAA; and

WHEREAS, Auburn has evaluated sewer service issues and determined that it is not cost feasible to provide direct sewer service within its PAA adjacent to Lakehaven's sanitary sewer infrastructure; and

WHEREAS, Lakehaven's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities and sanitary sewer planning;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an Interlocal Agreement Establishing Sanitary Sewer Service Boundaries between the Lakehaven Utility District and the City of Auburn in substantial conformity with

the agreement attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. This resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 20th day of January, 2004.

EXHIBIT "A"

LAKEHAVEN UTILITY DISTRICT and CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 2nd day of February, 2004, by and between **LAKEHAVEN UTILITY DISTRICT**, a Washington municipal corporation (hereinafter referred to as "Lakehaven"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn has the legal authority to cooperate with other localities and utilities on the basis of mutual advantage and the efficient provision of municipal services; and

WHEREAS, pursuant to RCW 35A.21.150, Auburn has the legal authority to maintain a sewerage system; and

WHEREAS, pursuant to RCW 57.08.005(5) and 57.08.044, Lakehaven, as a special purpose water/sewer district, has the legal authority, whether by contract or otherwise, to provide sewer service to property owners in areas outside existing district boundaries; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, Lakehaven's adopted and approved 1999 Comprehensive Wastewater System Plan and its Amendment No. 1 notes a region within Auburn's Potential Annexation Area (hereinafter referred to as "Auburn's PAA") to which Lakehaven intends to provide sanitary sewer service; and

WHEREAS, Lakehaven is currently providing sanitary sewer service within Auburn's PAA; and

WHEREAS, portions of the Lakehaven sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of Auburn's PAA; and

WHEREAS, Auburn has evaluated sewer service issues and determined that it is not cost feasible to provide direct sewer service within its PAA adjacent to Lakehaven's sanitary sewer infrastructure; and

WHEREAS, Lakehaven's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities and sanitary sewer planning;

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. **Sewer Service Area.** The parties have agreed to a mutual sewer service planning boundary as depicted on the maps attached hereto as Attachment 1 and legally described in Attachment 2, which are by this reference incorporated herein. Both parties further agree that, through this designation of the service boundary, Lakehaven shall provide sanitary sewer service to properties mutually within its sanitary sewer service area and Auburn's PAA, also depicted on Attachment 1, in accordance with and subject to the terms and conditions of this Agreement.

2. **Management, Regulation and Control of Sewer System.** Lakehaven shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its sewerage system within the area mutually designated as Lakehaven's sanitary sewer service area and Auburn's PAA as depicted in Attachment 1, together with any additions, extensions and betterments thereto. Lakehaven shall also be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation of the sewerage system and improvements to be located therein.

3. **Service Rates and Connection Charges.**

   a) **Permit Required.** No connection shall be made to Lakehaven's sanitary sewer system unless the property owner first pays the associated fees and submits the proper information to obtain a Lakehaven sanitary sewer connection permit, and otherwise meets the requirements for service as provided in duly adopted Resolutions of Lakehaven. The connection shall be subject to inspection for compliance with Lakehaven's standards as adopted at the time the connection is made.

b) **Rates.** The rates charged to the sanitary sewer customer by Lakehaven mutually within Lakehaven's sanitary sewer service area and Auburn's PAA, as depicted on Attachment 1, shall be fixed, altered, regulated and otherwise controlled by Lakehaven pursuant to the limitation on such authority as set forth in Chapter 57 RCW, or other applicable laws.

4. **Sewer Availability Certificates.** Lakehaven shall continue to issue sewer availability certificates for property located both within its sanitary sewer service area and Auburn's PAA, as depicted in Attachment 1.

5. **Future Annexations.** Each of the parties agree that Lakehaven shall provide sanitary sewer service to the area depicted in Attachment 1 without regard to the present corporate boundaries of the parties and without regard to future corporate boundaries as they may be periodically altered through annexation.

6. **Lakehaven Comprehensive Sewer Planning.** The terms of this Agreement will be included as an amendment to Lakehaven's Comprehensive Wastewater System Plan. Lakehaven will submit to Auburn all Comprehensive Wastewater System Plans and amendments thereto involving areas and/or system improvements within Auburn's PAA.

7. **Auburn Comprehensive Sewer Planning.** The terms of this Agreement will be included as an amendment to Auburn's Comprehensive Sewerage Plan. Auburn will submit to Lakehaven all Comprehensive Sewerage System Plans and amendments thereto involving area and/or system improvements within Auburn's PAA.

8. **Reliance.** Each party hereto acknowledges that the terms hereof will be relied upon by the other in its comprehensive planning to meet the needs of the service area designated herein.

9. **Liability.** The parties agree that this Agreement shall not be a source of liability for either party for any failure or interruption of service in the service area of the other party, as designated herein.

10. **Government Approvals.** Auburn will give notice of the adoption of this Agreement to Metropolitan/King County, to the Department of Ecology, to the Department of Health, and to any other agency with jurisdiction over, or other interest in, the terms hereof, and the parties shall cooperate and assist each other in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. **Boundary Review Board.** In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Lakehaven or Auburn, the parties will, at the time of such service, jointly seek King County Boundary Review Board approval of such service in accordance with RCW 36.93.090.

12. Service Amendments. Any changes to the service areas described herein shall be by mutual written agreement. Each party, through Auburn's Director of Public Works and Lakehaven's General Manager respectively, may give written permission to the other, on a case-by-case basis, to provide service to the other party's adjacent or nearby sewer service area based upon considerations of economic efficiency. Such written permission(s) shall be filed with this agreement for future reference.

13. Alteration, Amendment or Modification. Any alterations, amendments or modifications to this agreement shall be by mutual consent of the parties.

14. Indemnification and Hold Harmless. Each Party hereto agrees to protect, defend, and indemnify the other Party, its officers, officials, employees and agents from any and all cost, claims judgements and/or awards of damages, arising out of or in any way resulting from the Party's default, failure of performance, or negligent conduct associated with this agreement, by the Party, its employees, subcontractors or agents. Each Party agrees that its obligations under this provision extend to any claim, demand, and/or cause of action brought by or on behalf of any of its employees, or agents. The foregoing indemnity is specifically and expressly intended to constitute a waiver of each Party's immunity under Washington's Industrial Insurance Act, RCW Title 51, as respects the other Party only, and only to the extent necessary to provide each Party with a full and complete indemnity of claims made by the other Party's employees. The Parties acknowledge that these provisions were specifically negotiated and agreed upon by them.

15. Miscellaneous. Auburn and Lakehaven agree that an area in the vicinity of 51st Avenue South and South 320th Street and depicted in Attachment 3 is currently being served by Auburn via temporary pump station and may in the future be more efficiently served by a gravity conveyance system discharging to Lakehaven's facilities. This section does not obligate Lakehaven to accept any sanitary sewer facilities in said area. This section is intended only to make Lakehaven aware of Auburn's desire to eventually adjust the sanitary sewer service boundaries to allow Lakehaven to provide sanitary sewer service to said area, and for Lakehaven to plan for this action. Auburn and Lakehaven will abide by Section 12 of this Agreement when adjusting sanitary sewer service boundaries.

16. Integration. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

17. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Lakehaven or Auburn regarding provision of sewer service, except as specifically set forth herein.

Lakehaven - Auburn Interlocal Agreement Establishing Sanitary Sewer Service Boundaries

Dec 2003

PAGE 1 /1

RESOLUTION NO. 3824

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT WITH THE LAKEHAVEN UTILITY DISTRICT FOR THE PURPOSE OF PROVIDING SANITARY SEWER SERVICE FROM AUBURN TO PROPERTY LOCATED WITHIN THE LAKEHAVEN UTILITY DISTRICT'S SANITARY SEWER SERVICE AREA

WHEREAS, pursuant to RCW 35A.11.040 Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, in January 2004 the Commissioners of the Lakehaven Utility District adopted Resolution No. 2004-1006 authorizing the General Manager to execute an interlocal agreement with Auburn, which agreement was subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3651; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, a single family residential development (hereinafter referred to as "Jovita Heights-West Hill") has been proposed that lies within the distinct Sanitary Sewer Service Areas of both Auburn and Lakehaven as established and described in the Original Agreement; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to those portions of Jovita Heights-West Hill that lie within both the Auburn Sanitary Sewer Service Area and the Lakehaven Sanitary Sewer Service Area; and

WHEREAS, portions of the Lakehaven sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to those portions of Jovita Heights-West Hill that lie within both the Lakehaven Sanitary Sewer Service Area and the Auburn Sanitary Sewer Service Area; and

WHEREAS, the developer of Jovita Heights - West Hill has requested that Auburn provide sanitary sewer service to the entire development to afford maximum efficiency in its use of existing and future facilities; and

WHEREAS, Auburn has evaluated sanitary sewer service issues relative to the developer's request and determined that it is feasible for Auburn to provide sanitary sewer service to the entire development.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an Interlocal Agreement with the Lakehaven Utility District in substantial conformity with the

agreement attached hereto, marked as Exhibit "1" and incorporated herein by this reference

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 22nd day of February, 2005.

EXHIBIT 1

AMENDMENT NO. 1
TO THE LAKEHAVEN UTILITY DISTRICT AND CITY OF AUBURN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 22nd day of February, 2005, by and between **LAKEHAVEN UTILITY DISTRICT**, a Washington municipal corporation (hereinafter referred to as "Lakehaven"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington, as an amendment to the Interlocal Agreement dated February 2, 2004, between the parties and executed on the 8th day of January, 2004, and the 20th day of January, 2004, respectively (hereinafter referred to as "Original Agreement").

WITNESSETH:

WHEREAS, in January 2004 the Commissioners of the Lakehaven Utility District adopted Resolution No. 2004-1006 authorizing the General Manager to execute an interlocal agreement with Auburn, which agreement was subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3651; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, a single family residential development (hereinafter referred to as "Jovita Heights-West Hill") has been proposed that lies within the distinct Sanitary Sewer Service Areas of both Auburn and Lakehaven as established and described in the Original Agreement; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to those portions of Jovita Heights-West Hill that lie within both the Auburn Sanitary Sewer Service Area and the Lakehaven Sanitary Sewer Service Area; and

WHEREAS, portions of the Lakehaven sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to those portions of Jovita Heights-West Hill that lie within both the Lakehaven Sanitary Sewer Service Area and the Auburn Sanitary Sewer Service Area; and

WHEREAS, the developer of Jovita Heights-West Hill has requested that Auburn provide sanitary sewer service to the entire development to afford maximum efficiency in its use of existing and future facilities; and

WHEREAS, Auburn has evaluated sanitary sewer service issues relative to the developer's request and determined that it is feasible for Auburn to provide sanitary sewer service to the entire development; and

WHEREAS, Lakehaven has evaluated the request and determined that, conditioned on mitigation of the impacts incident thereto, Lakehaven can transfer to Auburn that portion of its Sanitary Sewer Service Area that lies within Jovita Heights-West Hill so that Auburn can provide sanitary sewer service to the entire development.

NOW, THEREFORE in consideration of their mutual covenants, conditions, and promises, **IT IS HEREBY AGREED** by and between the parties hereto as follows:

ITEM ONE REVISION TO ATTACHMENT 1 OF THE ORIGINAL AGREEMENT, Page 2 of 2:

Attachment 1 of the Original Agreement is a graphical representation of the sanitary sewer service area boundary between Auburn and Lakehaven as established in the Original Agreement. Page Two of Attachment 1, as such Attachment 1 is attached hereto and by this reference incorporated herein, revises the sanitary sewer service area shown in the Original Agreement to reflect the transfer to Auburn of certain sanitary sewer service areas originally granted to Lakehaven; more specifically, those parcels located within the City of Auburn, east of 56th Avenue South between South 336th Street and South 344th Street, together with those parcels located outside the City of Auburn, east of 55th Avenue South between South 340th Street and South 348th Street.

ITEM TWO REVISION TO ATTACHMENT 2 OF THE ORIGINAL AGREEMENT:

The legal description for the sanitary sewer service area boundary is revised to reflect the service area modification described in Item One of this Amendment. Attachment 2 is attached hereto as the legal description of the revised sanitary sewer service area boundary and by this reference is incorporated herein.

ITEM THREE REVISION TO SECTION 1: Sewer Service Area.

Section One of the Original Agreement, entitled "Sewer Service Area," is hereby amended to hereinafter read as follows:

The parties have agreed to a mutual sewer service planning boundary as depicted on the maps attached hereto as Attachment 1 and as legally described in Attachment 2, which are by this reference each incorporated herein. Both parties further agree that, through this designation of the sanitary sewer service boundary, Lakehaven shall provide sanitary sewer service to properties mutually within its revised sanitary sewer service area and Auburn's PAA, also depicted on Attachment 1, while Auburn shall provide sanitary sewer service to properties located within its revised sanitary sewer service area, including portions of Lakehaven's corporate boundary, in accordance with and subject to the terms and conditions of this Agreement.

ITEM FOUR REMAINING TERMS UNCHANGED:

That all other provisions of the Original Agreement not herein amended shall remain in full force and effect.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first below written.

THENCE southerly, along said centerline of 58th Avenue South, to the North margin of South 336th Street;

THENCE westerly, along said North margin of South 336th Street to the West margin of 56th Avenue South;

THENCE southerly, along said West margin of 56th Avenue South to the North margin of South 340th Street;

THENCE westerly, along said North margin of South 340th Street to the West margin of 55th Avenue South;

THENCE southerly, along said West margin of 55th Avenue South to the South margin of South 348th Street;

THENCE easterly, along said South margin of South 348th Street to the East margin of 56th Avenue South;

THENCE northerly, along said East margin of 56th Avenue South, to the easterly projection of the South line of Lot 24, Block 27, Jovita Heights, according to the plat thereof recorded in Volume 20 of Plats, Page 12, records of King County, Washington, and the terminus of this boundary description.

LAKEHAVEN UTILITY DISTRICT
King County, Washington

Resolution No. 2005-1038

A RESOLUTION of the Board of Commissioners of the Lakehaven Utility District, King County, Washington, approving an amendment to the sanitary sewer service boundary with the City of Auburn, authorizing the General Manager to execute an agreement reflecting such amendment on behalf of the District and amending District Resolution No. 2004-1006.

WHEREAS, the District is authorized under state law to provide water and sanitary sewer service pursuant to adopted comprehensive plans, and

WHEREAS, under authority of existing regulatory requirements, the District and the City of Auburn have determined to establish, by interlocal agreement, service area boundaries between their respective water and sewer systems, and

WHEREAS, since the adoption of the sewer service area boundary, Auburn and the District have concluded that certain territory within the area designated for sewer service by the District would be better served by Auburn, and

WHEREAS, Auburn and the District have discussed terms for an agreement which would transfer the service jurisdiction for such area to Auburn, and

WHEREAS, the Board believing the transfer of service jurisdiction to be in the best interests of the District

NOW, THEREFORE, **BE IT RESOLVED** as follows:

1. The District hereby approves an amendment to the "Interlocal Agreement Establishing Sanitary Sewer Service Boundaries" with the City of Auburn to provide that the area referenced in Exhibit "A" shall hereinafter be included within the service area jurisdiction of the City of Auburn.
2. The General Manager is hereby directed to execute an agreement with Auburn to provide for such transfer.
3. Resolution No. 2004-1006 is hereby amended in part to reflect the transfer of service jurisdiction herein.
4. This Resolution shall be effective on the date of adoption below.

ADOPTED by the Board of Commissioners of Lakehaven Utility District, King County, Washington, at an open public meeting this 10th day of March, 2005.

RESOLUTION NO. 5353

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN AMENDMENT TO THE INTERLOCAL AGREEMENT WITH THE LAKEHAVEN WATER AND SEWER DISTRICT FOR THE PURPOSE OF MODIFYING THE SEWER DISTRICT'S SANITARY SEWER SERVICE AREA

WHEREAS, pursuant to RCW 35.A.11.040, Auburn has the legal authority to exercise its powers and perform any of its functions as set forth in RCW 39.34; and

WHEREAS, in January 2004 the Commissioners of the Lakehaven Utility District adopted Resolution No. 2004-1006 authorizing the General Manager to execute an interlocal agreement with Auburn, which agreement was subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3651; and

WHEREAS, in March 2005 the Commissioners of the Lakehaven Utility District adopted Resolution No. 2005-1038 authorizing the General Manager to execute an amendment to the interlocal agreement with Auburn, which amendment subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3824; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to a number of properties that lie within the Lakehaven Sanitary Sewer Service Area and adjacent to Auburn's Sanitary Sewer Service Area; and

WHEREAS, Auburn has evaluated sanitary sewer service issues relative to the adjacent properties and determined that it is feasible for Auburn to provide sanitary sewer service to those properties; and

WHEREAS, Lakehaven has evaluated the request and determined that Lakehaven can transfer to Auburn that portion of its Sanitary Sewer Service Area adjacent to the City of Auburn's infrastructure so that Auburn can provide sanitary sewer service to those properties.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an amendment to the Interlocal Agreement with Lakehaven Utility District, in substantial conformity with the agreement attached hereto, marked as Exhibit A and incorporated herein by this reference.

Section 2. The Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directions of this legislation.

Section 3. This Resolution shall take effect and be in force upon passage and signatures thereon.

DATED and SIGNED on this 19th day of March, 2018.

AMENDMENT NO. 2
TO THE LAKEHAVEN WATER AND SEWER DISTRICT AND CITY OF AUBURN
INTERLOCAL AGREEMENT ESTABLISHING
SANITARY SEWER SERVICE BOUNDARIES

AMENDMENT NO. 2
TO THE LAKEHAVEN WATER AND SEWER DISTRICT AND CITY OF AUBURN
INTERLOCAL AGREEMENT ESTABLISHING
SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 12th day of April 2018, by and between LAKEHAVEN WATER AND SEWER DISTRICT, a Washington municipal corporation (hereinafter referred to as "Lakehaven"), and the CITY OF AUBURN, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington, as an amendment to the Interlocal Agreement dated February 2, 2004, between the parties and executed on the 8th day of January, 2004, and the 20th day of January, 2004, respectively (hereinafter referred to as "Original Agreement") as amended by Amendment No. 1 to that agreement, dated February 22, 2005, between the parties and executed on the 10th day of March, and the 22nd day of February, 2005, respectively.

WITNESSETH:

WHEREAS, in January 2004 the Commissioners of the Lakehaven Water and Sewer District adopted Resolution No. 2004-1006 authorizing the General Manager to execute an interlocal agreement with Auburn, which agreement was subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3651; and

WHEREAS, in March 2005 the Commissioners of the Lakehaven Water and Sewer District adopted Resolution No. 2005-1038 authorizing the General Manager to execute an amendment to the interlocal agreement with Auburn, which amendment subsequently signed by the City of Auburn as authorized under Auburn Resolution No. 3824; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized with sufficient wastewater conveyance capacity and are situated so as to be capable of affording sewer service to a number of properties that lie within the Lakehaven Sanitary Sewer Service Area and adjacent to Auburn's Sanitary Sewer Service Area; and

WHEREAS, Auburn has evaluated sanitary sewer service issues relative to the adjacent properties and determined that it is feasible for Auburn to provide sanitary sewer service to those properties; and

WHEREAS, Lakehaven has evaluated the request and determined that Lakehaven can transfer to Auburn that portion of its Sanitary Sewer Service Area adjacent to the City of Auburn's infrastructure so that Auburn can provide sanitary sewer service to those properties.

NOW, THEREFORE in consideration of their mutual covenants, conditions, and promises, IT IS HEREBY AGREED by and between the parties hereto as follows:

ITEM ONE REVISION TO SERVICE AREA BOUNDARY

The parties have agreed to modify the mutual sewer service planning boundary as established in the Original Agreement and modified by Amendment No. 1. The properties depicted in Exhibit A and described in Exhibit B are hereby designated to be within the City of Auburn's sanitary sewer service area and no longer within the Lakehaven Water and Sewer District's sanitary sewer service area.

ITEM TWO REMAINING TERMS UNCHANGED:

That all other provisions of the Original Agreement as modified by Amendment No. 1 not herein amended shall remain in full force and effect.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first below written.

EXHIBIT 'A'

Legal Description for Lakehaven to Auburn Sewer Service Transfer Area

A portion of the southeast quarter of the southwest quarter of Section 14 and the northeast quarter of the northwest quarter of section 23, all in Township 21 North, Range 4 East, W.M., City of Auburn, King County, Washington, said portion described as follows:

Commencing at an angle point in the westerly boundary of the Interlocal Agreement described in City of Auburn Resolution 3824 dated February 22, 2005, said angle point being at the intersection of the north margin of State Highway No. 18 and the southerly projection of the centerline of 58th Avenue South;

Thence southerly along said westerly boundary and said southerly projection of 58th Avenue South to the south margin of the lands conveyed to the City of Auburn from the State of Washington in deed recorded under King County Recording No. 8709221482 and the point of beginning for this boundary description;

Thence continuing southerly along said westerly boundary and said southerly projection of 58th Avenue South to the north margin of South 336th Street;

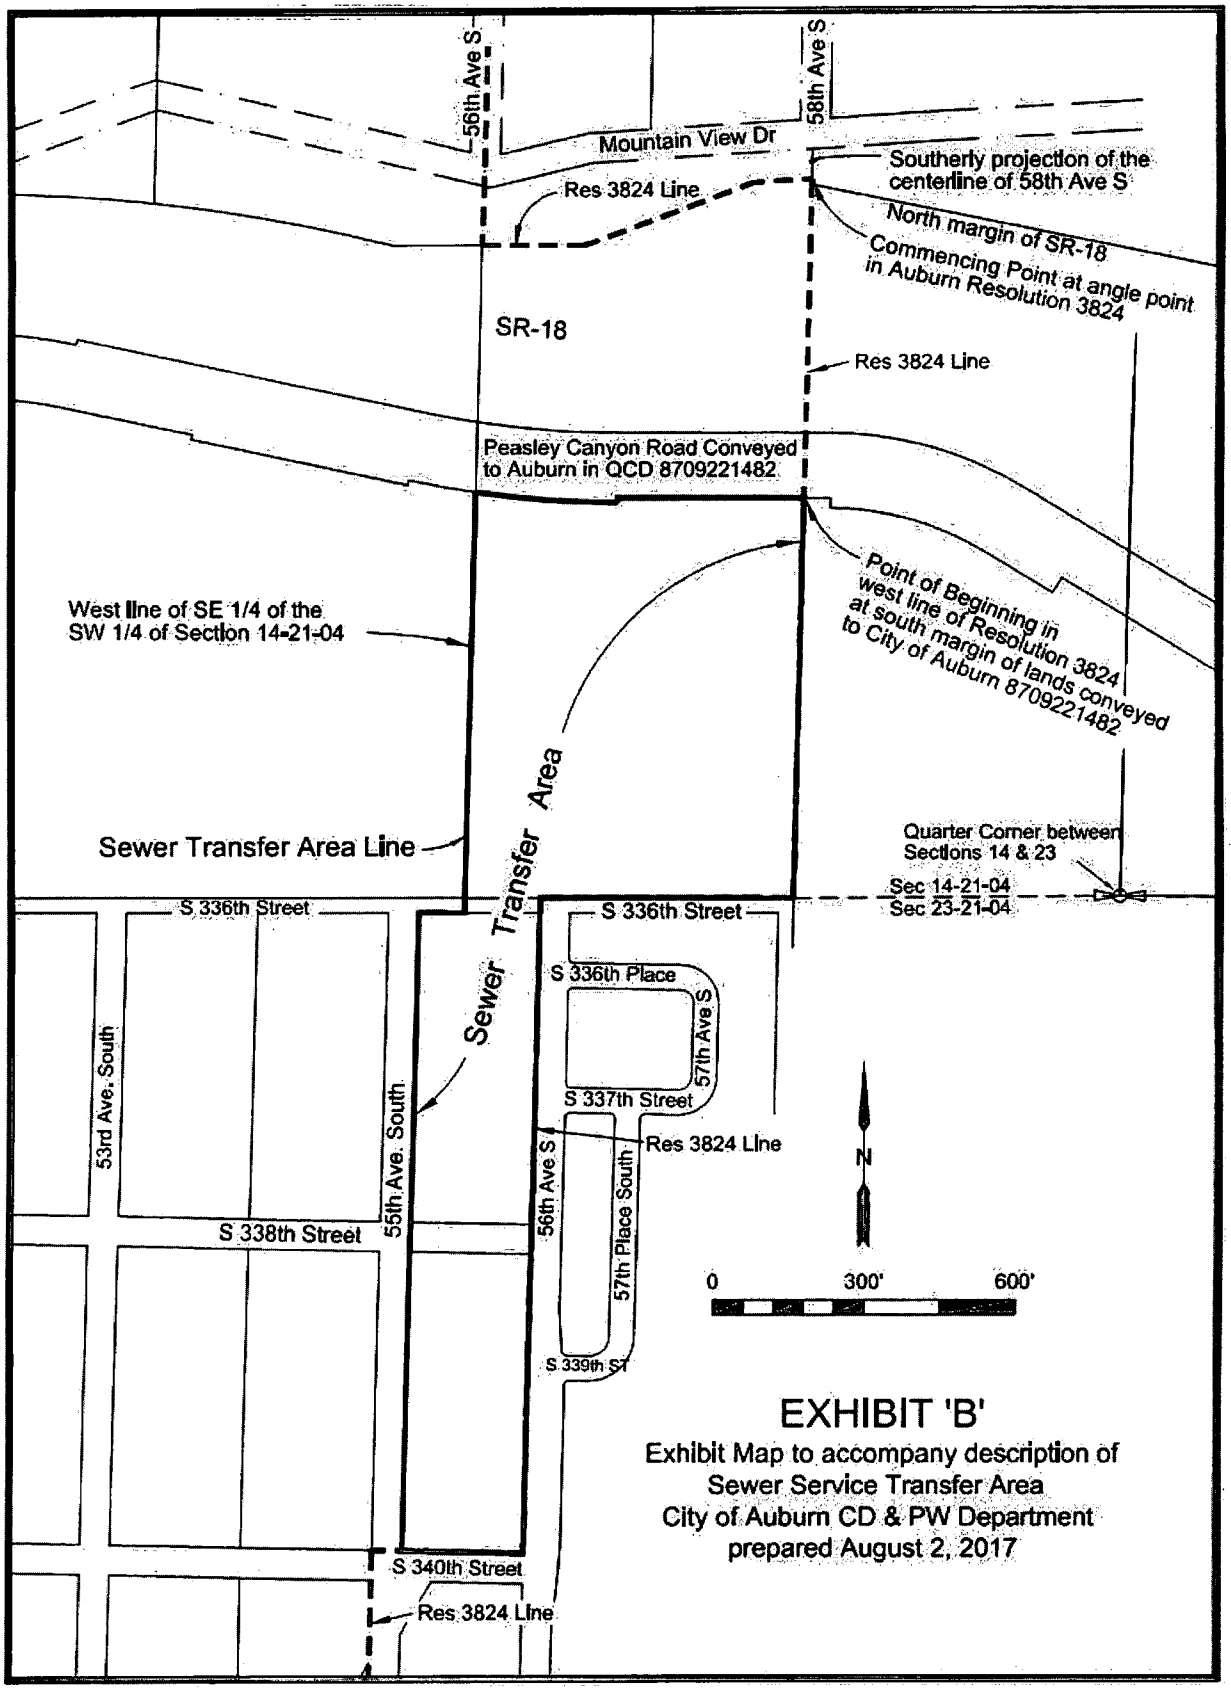
Thence westerly along said westerly boundary and the north margin of South 336th Street to the west margin of 56th Avenue South;

Thence southerly along said westerly boundary and the west margin of 56th Avenue South to the north margin of South 340th Street;

Thence westerly along said westerly boundary and said north margin of South 340th Street to the east margin of 55th Avenue South;

Thence leaving said westerly boundary of City of Auburn Resolution 3824, northerly along said east margin of 55th Avenue South to the south margin of South 336th Street;

Thence easterly along said south margin of South 336th Street to the southerly projection of the west line of the southeast quarter of the southwest quarter of said Section 14;



Thence northerly along said west line to said south margin of the lands conveyed to the City of Auburn in deed recorded under King County Recording No. 8709221482;

Thence easterly along said south margin to the point of beginning.

LAKEHAVEN WATER AND SEWER DISTRICT
King County, Washington

Resolution No. 2018-1306

A RESOLUTION of the Board of Commissioners of the Lakehaven Water and Sewer District, King County, Washington, approving Amendment No. 2 to the sanitary sewer service boundary with the City of Auburn, authorizing the General Manager to execute an agreement reflecting such amendment on behalf of the District and amending District Resolution No. 2004-1006.

WHEREAS, the District is authorized under state law to provide water and sanitary sewer service pursuant to adopted comprehensive plans, and

WHEREAS, under authority of existing regulatory requirements, the District and the City of Auburn have determined to establish, by interlocal agreement, service area boundaries between their respective water and sewer systems, and

WHEREAS, since the adoption of the sewer service area boundary, Auburn and the District have concluded that certain territory within the area designated for sewer service by the District would be better served by Auburn, and

WHEREAS, the parties have previously executed Amendment No. 1 to the interlocal agreement to transfer service jurisdiction of an area to Auburn, and

WHEREAS, Auburn and the District have discussed terms for a second amendment which would transfer the service jurisdiction for an additional area to Auburn, and

WHEREAS, the Board believing the transfer of service jurisdiction to be in the best interests of the District

NOW, THEREFORE, BE IT RESOLVED as follows:

1. The District hereby approves an Amendment No. 2 to the "Interlocal Agreement Establishing Sanitary Sewer Service Boundaries" with the City of Auburn to provide that the area referenced in Exhibit "A" shall hereinafter be included within the service area jurisdiction of the City of Auburn.

2. The General Manager is hereby directed to execute an agreement with Auburn to provide for such transfer.

3. Resolution No. 2004-1006 is hereby amended in part to reflect the transfer of service jurisdiction herein.

4. This Resolution shall be effective on the date of adoption below.

ADOPTED by the Board of Commissioners of Lakehaven Water and Sewer District, King County, Washington, at an open public meeting this 12th day of April, 2018.

RE: AUBURN-LAKEHAVEN SEWER INTERLOCAL AGREEMENT AMENDMENT (NO. 2)
Revised Sewer Service Area Boundary

Mr. Elwell:

Enclosed is an original signed copy of Lakehaven Resolution 2018-1306, adopted by Lakehaven's Board of Commissioners on 4/12/18, along with an original of the referenced ILA Amendment signed by the Board President & Lakehaven's General Counsel; amending the sewer service area boundary in the vicinity of southeast Peasley Canyon. At this time, Lakehaven will consider the service area boundary amended accordingly. Thanks for your assistance in this matter.

Let me know if there's any questions or if additional information is needed.

Sincerely,

Brian Asbury
Development Engineering Supervisor

CITY OF ANGOLA

- Sewer Service Boundaries (Resolution 3589)
- Water And Sewer Utility Service, Billing, And Collection (Resolution 5505)

RESOLUTION NO. 3589

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN INTERLOCAL AGREEMENT ESTABLISHING SANITARY SEWER SERVICE BOUNDARIES BETWEEN THE CITY OF AUBURN AND THE CITY OF ALGONA

WHEREAS, pursuant to RCW 35A.11.040 Auburn and Algona have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Algona have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn and Algona have the legal authority to maintain a sewerage system.

NOW, THEREFORE, THE COUNCIL OF THE CITY OF AUBURN, WASHINGTON, IN A REGULAR MEETING DULY ASSEMBLED, HEREWITH RESOLVES THAT:

Section 1. The Mayor and City Clerk of the City of Auburn are herewith authorized to execute an Interlocal Agreement establishing sanitary sewer service boundaries between the City of Auburn and the City of Algona in the

form substantially as the agreement attached hereto, marked as Exhibit "1" and incorporated herein by this reference.

Section 2. That the Mayor is hereby authorized to implement such administrative procedures as may be necessary to carry out the directions of this legislation.

Section 3. That this resolution shall be in full force and effect upon passage and signatures hereon.

DATED this 21st day of April, 2003.

INTERLOCAL AGREEMENT
between
CITY OF ALGONA and CITY OF AUBURN
for the
THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

THIS AGREEMENT, made and entered into this 21st day of April, 2003, by and between the **CITY OF ALGONA**, a Washington municipal corporation (hereinafter referred to as "Algona"), and the **CITY OF AUBURN**, a Washington municipal corporation, (hereinafter referred to as "Auburn"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040 Auburn and Algona have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Auburn and Algona have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Auburn and Algona have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Algona sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of the Auburn Sanitary Sewer Service Area; and

WHEREAS, Auburn has evaluated and determined it is in Auburn's best interest to allow Algona to provide sewer service to property within Auburn's municipal boundary that lies adjacent to Algona's sanitary sewer infrastructure; and

WHEREAS, Algona has sufficient capacity within their sanitary sewer facilities to support these adjustments to the existing sewer service areas; and

WHEREAS, the parties desire to allow Algona to construct, reconstruct, repair and maintain sewer facilities, and to authorize connections to Algona's sewer system for service to the areas noted in Exhibit A; and

WHEREAS, Algona's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. **Sewer Service Area.** The parties have agreed to adjust their sewer service area boundary between them. The area to be adjusted is graphically depicted on the map attached hereto as Exhibit "A", which is by this reference incorporated herein. Exhibit "A" represents an increase in Algona's sewer service area and a decrease in Auburn's current sewer service area. Both parties further agree that Algona, in providing sewer service to the additional areas as shown on Exhibit "A", shall be furnishing sewer service to properties within Auburn's water service area and Auburn's municipal jurisdiction in accordance with and subject to the terms and conditions of this Agreement.

2. **Management, Regulation and Control of Sewer System.** Algona shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its sewerage system as installed within the areas described in Exhibit "A", together with any additions, extensions and betterments thereto. Algona shall also be responsible for obtaining all necessary governmental franchises, approvals, easements and permits for the installation, maintenance, and operation of said sewerage systems as described above.

3. **Rates, Charges, Permits, and Billing Responsibilities.** Through this Agreement Auburn is turning over the responsibility to own, operate, and maintain the sanitary sewer system including private side sewers within the public right of way to Algona. Algona shall be the responsible agency to issue sewer certificates of availability for any development located within the area described by Exhibit "A".

No connection or modification shall be made to Algona's sanitary sewer system and or private side sewer services connected to Algona's sewer system unless the property owner first pays the associated fees and submits the proper information to obtain an Algona sanitary sewer permit. Sanitary sewer permits shall be subject to inspection and approval for compliance with Algona's Sanitary Sewer Standards as adopted at the time the connection is made.

The rates charged to Algona's sanitary sewer customers shall be fixed, altered, regulated and controlled by Algona pursuant to all applicable laws or regulations

promulgated on the subject of rates and charges for sewer service. No surcharge shall be charged to the customers served under this agreement on the sole basis that those customers are outside of Algona's city limits.

To establish a quantitative usage, Algona shall manually read Auburn's water meters servicing those properties described in Exhibit "A". Algona shall also have the ability to annually request water usage data from Auburn for said properties.

4. Boundary Review Board. In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Algona or Auburn, the parties will at the time of such service jointly seek approval of the King County Boundary Review Board in accordance with R.C.W. 36.93.090.

5. Comprehensive Sewer Planning. The terms of this Agreement will be included as an element of Auburn and Algona's Comprehensive Sewerage Plans.

6. Reliance. Each party hereto acknowledges that the other will rely upon the terms of this agreement in its comprehensive planning to meet the needs of the service area designated herein.

7. Indemnification. Algona agrees to indemnify and hold Auburn and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Auburn arising out of, in connection with, or incident to the execution of this agreement and/or Algona's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Auburn, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Algona; and provided further, that nothing herein shall require Algona to hold harmless or defend Auburn, its agents, employees, and/or officers, from any claims arising from the sole negligence of Auburn, its agents, employees, and/or officers. No liability shall attach to Auburn by reason of entering this agreement except as expressly provided herein.

Auburn agrees to indemnify and hold Algona and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever king or nature, brought against Algona arising out of, in connection with, or incident to the execution of this agreement and/or Auburn's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Algona, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Auburn; and provided further, that nothing

herein shall require Auburn to hold harmless or defend Algona, its agents, employees, and/or officers, from any claims arising from the sole negligence of Algona, its agents, employees, and/or officers. No liability shall attach to Algona by reason of entering this agreement except as expressly provided herein.

8. Assignment. The parties shall not assign this agreement or any interest, obligation or duty therein without the express written consent of the other party.

9. Attorney's Fees. If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

10. Government Approvals. The parties will give notice of the adoption of this Agreement to King County's Department of Natural Resources – Wastewater Treatment Division, to the Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of Auburn's Director of Public Works and Algona's Director of Public Works.

12. Notices. All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Algona
Director of Public Works
402 Wards Street
Algona, WA 98001
253-833-2741

City of Auburn
Director of Public Works
25 west Main Street
Auburn, WA 98001
253-931-3010

or to such other representative as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by

certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

13. Alteration, Amendment or Modification. Algona and Auburn hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement upon written agreement of both parties to such alteration, amendment or modification. Such written consent(s) shall be filed with this agreement for future reference.

14. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

15. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Algona or Auburn regarding provision of sewer service, except as specifically set forth herein.

16. Miscellaneous.

A. The captions in this agreement are for convenience only and do not in any way limit or amplify the provisions of this agreement.

B. This agreement is established in perpetuity. Modifications can be established upon written agreement between both parties.

C. The purpose of this agreement is to clarify Algona's and Auburn's sanitary sewer responsibilities for providing service and maintaining public sewer facilities.

D. If any term, provision, condition or portion of this Agreement is held to be invalid, or unenforceable by a final decision of any court having jurisdiction on the matter, the remaining of this Agreement or the application of such term or provision to persons or circumstances other then those as to which it is held invalid or unenforceable shall not be affected thereby and shall continue in full force and effect, unless such court determines that invalidity or unenforceability materially interferes with or defeats the purposes hereof, at which time Auburn or Algona shall have the right to terminate the Agreement.

E. No modifications or amendments of this agreement shall be valid or effective unless evidenced by an agreement in writing signed by both parties.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first above written.

RESOLUTION NO. 5505

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT CONCERNING WATER AND SEWER UTILITY SERVICE, BILLING, AND COLLECTION

WHEREAS, both Algona and Auburn (each a "Party" and collectively "the Parties") are "public agencies" as defined by Chapter 39.34 RCW, and are authorized by that statute to cooperate on a basis of mutual advantage in order to provide for services and facilities;

WHEREAS, Algona owns and operates a water utility ("Algona Water System") and a sanitary sewer utility ("Algona Sewer System"), which collectively provide water and sewer service to customers located within Algona's utility service area(s);

WHEREAS, Auburn owns and operates a water utility ("Auburn Water System") and a sanitary sewer utility ("Auburn Sewer System"), which collectively provide water and sewer service to customers located within Auburn's utility service area(s);

WHEREAS, there are three parcels located within the City limits of Auburn at 1611 West Valley Highway S (APN 2321049039), 1743 West Valley Highway S (APN 3751600709) and 1929 West Valley Highway S (APN 3751600711) (collectively, "West Valley Parcels") that are connected to and served by the Auburn Water System, but are also connected to and served by the Algona Sewer System;

WHEREAS, there are four parcels located within the City limits of Algona at 502 Boundary Boulevard (APN 0301510060), 512 Boundary Boulevard (APN 0301510120), 1196 Industry Drive N (APN 0301510190) and a vacant parcel located between 502 and 512 Boundary Boulevard (APN 0301510100) (collectively, "Boundary Boulevard Parcels")

that are connected to and served by the Algona Water Utility, but are also connected to and served by the Auburn Sewer System;

WHEREAS, the dissociation between the water and sewer service connections for the West Valley Parcels and Boundary Boulevard Parcels is longstanding and of uncertain origin;

WHEREAS, to the best of the Parties' mutual belief and understanding, said dissociation may have resulted from various factors, including without limitation the timing of annexation, development and/or utility connection of the underlying properties;

WHEREAS, the water and sewer utility usage of the West Valley Parcels has historically been roughly equivalent to the water and sewer utility usage of the Boundary Boulevard Parcels;

WHEREAS, each Party's billing and collection for sanitary sewer service usage is based primarily upon water usage, such that each Party may approximately measure, bill and collect for a customer's sewer utility service by measuring the volume of water service provided to that customer;

WHEREAS, the significant expense of connecting the West Valley Parcels to the Auburn Sewer System, and of connecting the Boundary Boulevard Parcels to the Algona Sewer System, would be greatly disproportionate to the practical benefits resulting from such connection, which would be nominal;

WHEREAS, the Parties are currently evaluating permanent options to address the issue of water and sewer utility service for the West Valley Parcels and Boundary Boulevard Parcels and will continue to engage in discussions regarding the same as the

lines require repair or replacement or as development in the respective area(s) occurs; and

WHEREAS, as an interim approach, the Parties mutually desire to simplify the billing relationships and to contractually define their respective rights, obligations costs and liabilities regarding the provision of water and sewer utility service to the West Valley Parcels and the Boundary Boulevard Parcels while a permanent solution is identified and implemented.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, RESOLVES as follows:

Section 1. The Mayor is authorized to execute an interlocal agreement with the City of Algona, in substantial conformity with the agreement attached as Exhibit A.,

Section 2. The Mayor is authorized to implement those administrative procedures necessary to carry out the directives of this legislation.

Section 3. This Resolution will take effect and be in full force on passage and signatures.

Dated and Signed this 6th day of April, 2020.

EXHIBIT A TO RESOLUTION 5505

INTERLOCAL COOPERATION AGREEMENT CONCERNING WATER AND SEWER UTILITY SERVICE, BILLING AND COLLECTION

INTERLOCAL COOPERATION AGREEMENT

Water and Sewer Utility Service, Billing and Collection

THIS INTERLOCAL COOPERATION AGREEMENT ("Agreement") is entered into as of April 9, 2020 ("Effective Date") by and between the City of Algona, Washington ("Algona") and the City of Auburn, Washington ("Auburn"), both municipal corporations organized under the laws of the State of Washington, pursuant to the Interlocal Cooperation Act, Chapter 39.34 RCW.

Recitals

A. Both Algona and Auburn (each a "Party" and collectively "the Parties") are "public agencies" as defined by Chapter 39.34 RCW, and are authorized by that statute to cooperate on a basis of mutual advantage in order to provide for services and facilities.

B. Algona owns and operates a water utility ("Algona Water System") and a sanitary sewer utility ("Algona Sewer System"), which collectively provide water and sewer service to customers located within Algona's utility service area(s).

C. Auburn owns and operates a water utility ("Auburn Water System") and a sanitary sewer utility ("Auburn Sewer System"), which collectively provide water and sewer service to customers located within Auburn's utility service area(s).

D. There are three parcels located within the City limits of Auburn at 1611 West Valley Highway S (APN 2321049039), 1743 West Valley Highway S (APN 3751600709) and 1929 West Valley Highway S (APN 3751600711) (collectively, "West Valley Parcels") that are connected to and served by the Auburn Water System, but are also connected to and served by the Algona Sewer System.

E. There are four parcels located within the City limits of Algona at 502 Boundary Boulevard (APN 0301510060), 512 Boundary Boulevard (APN 0301510120), 1196 Industry Drive N (APN 0301510190) and a vacant parcel located between 502 and 512 Boundary Boulevard (APN 0301510100) (collectively, "Boundary Boulevard Parcels") that are connected to and served by the Algona Water Utility, but are also connected to and served by the Auburn Sewer System.

F. The dissociation between the water and sewer service connections for the West Valley Parcels and Boundary Boulevard Parcels is longstanding and of uncertain origin. To the best of the Parties' mutual belief and understanding, said dissociation may have resulted from various factors, including without limitation the timing of annexation, development and/or utility connection of the underlying properties.

G. The water and sewer utility usage of the West Valley Parcels has historically been roughly equivalent to the water and sewer utility usage of the Boundary Boulevard Parcels.

H. Each Party's billing and collection for sanitary sewer service usage is based primarily upon water usage, such that each Party may approximately measure, bill and collect for a customer's sewer utility service by measuring the volume of water service provided to that customer.

I. The significant expense of connecting the West Valley Parcels to the Auburn Sewer System, and of connecting the Boundary Boulevard Parcels to the Algona Sewer System, would be greatly disproportionate to the practical benefits resulting from such connection, which would be nominal.

J. The Parties are currently evaluating permanent options to address the issue of water and sewer utility service for the West Valley Parcels and Boundary Boulevard Parcels and will continue to engage in discussions regarding the same as the lines require repair or replacement or as development in the respective area(s) occurs.

K. As an interim approach, the Parties mutually desire to simplify the billing relationships and to contractually define their respective rights, obligations costs and liabilities regarding the provision of water and sewer utility service to the West Valley Parcels and the Boundary Boulevard Parcels while a permanent solution is identified and implemented.

NOW, THEREFORE, in consideration of the mutual benefits set forth herein, and other good and sufficient consideration the receipt and sufficiency of which are mutually acknowledged, including without limitation the public interest, the Parties hereby agree as follows:

Terms

Section 1. Authority and Purpose. This Agreement is executed pursuant to Chapter 39.34 RCW as a cooperative endeavor of the Parties. The purpose of this Agreement is to establish a contractual relationship governing the provision of water and sewer utility service for the West Valley Parcels and the Boundary Boulevard Parcels, and to set forth the Parties' respective rights, obligations, costs and liabilities regarding this undertaking. This Agreement shall be reasonably construed in furtherance of said purpose.

Section 2. West Valley Parcels—Connection, Service, Billing and Collection.

2.1 Connection and Service. The West Valley Parcels shall remain connected to and served by the Auburn Water System and the Algona Sewer System.

2.2 Billing and Collection. Auburn shall be exclusively responsible for billing and collecting utility payments from the West Valley Parcels for both water and sewer utility service pursuant to Auburn's adopted utility rate schedule(s). Auburn shall maintain accurate records of water and sewer usage, billing and payments with respect to the West Valley Parcels, but shall not be required to remit any such payments to Algona except as expressly set forth in this Agreement.

Section 3. Boundary Boulevard Parcels—Connection, Service, Billing and Collection.

3.1 Connection and Service. The Boundary Boulevard Parcels shall remain connected to and served by the Algona Water System and the Auburn Sewer System.

3.2 Billing and Collection. Algona shall be exclusively responsible for billing and collecting utility payments from the Boundary Boulevard Parcels for both water and sewer utility service pursuant to Algona's adopted utility rate schedule(s). Algona shall maintain accurate records of water and sewer usage, billing and payments with respect to the Boundary Boulevard Parcels, but shall not be required to remit any such payments to Auburn except as expressly set forth in this Agreement.

Section 4. Inspection Rights; Annual Review.

4.1 Inspection Rights. Each Party shall, upon written request, promptly provide the other Party with access to and copies of its utility billing records for the West Valley Parcels and the Boundary Boulevard Parcels.

4.2 Annual Review. Upon the request of Algona, Auburn shall provide to Algona a written summary of the water and sewer utility billing and collection records of the West Valley Parcels for the preceding year. Upon the request of Auburn, Algona shall provide a written summary of the water and sewer utility billing and collection records of the Boundary Boulevard Parcels for the preceding year. Upon receipt of the above-referenced written summaries, the Parties shall confer as deemed mutually appropriate to determine whether to continue, terminate or amend this Agreement.

Section 5. Ownership, Regulation Operation, Maintenance and Repairs. Except as otherwise expressly provided herein, nothing in this Agreement shall be construed as altering or otherwise modifying the Parties' respective rights, duties, obligations and liabilities concerning their respective water and sewer utility systems. Without limitation of the foregoing: Auburn shall own and remain exclusively responsible for all regulation, operation, maintenance and repairs of the Auburn Water System and the Auburn Sewer System, and (ii) Algona shall own and remain exclusively responsible for all regulation, operation, maintenance and repairs of the Algona Water System and the Algona Sewer System.

Section 6. Meter Removal. Algona may in its sole discretion remove or otherwise decommission Algona's utility service meters for any or all of the West Valley Parcels. Algona agrees to provide at least five business days' notice to Auburn of any meter removal or decommissioning.

Section 7. Term. This Agreement shall be in force as of the Effective Date written above following mutual execution by the Parties, and shall remain in effect for ten (10) years thereafter ("Term"), unless terminated earlier in accordance with Section 8. The Parties may at their option extend the Term for one or more mutually agreed upon periods through a writing signed by both Parties.

Section 8. Termination. Either Party may terminate this Agreement with or without cause by providing the other Party with one hundred and eighty (180) days written notice of its intent to terminate.

Section 9. Administration; No Separate Entity Created. The Algona Public Works Director and the Auburn Public Works Director shall serve as joint administrators of this Agreement. No separate legal entity is formed hereby.

Section 10. Property Acquisition, Retention and Disposition. No joint acquisition of real or personal property is contemplated by this Agreement. Except as provided in this section, any other real or personal property acquired by a Party shall remain within the sole and exclusive ownership and control of that Party following the termination or expiration of this Agreement.

Section 11. Indemnification. Each Party shall defend, indemnify and hold the other Party, its officers, officials, employees and volunteers harmless from and against any and all claims, injuries, damages, losses or suits including attorney fees, arising out of or resulting from the acts, errors or omissions of the first Party in its performance of this Agreement. Without prejudice to the foregoing, it is expressly understood that each Party's obligations under this section shall include exclusive responsibility for any claims, injuries, damages, losses or suits arising out of or otherwise relating to the content and validity of that Party's codes, ordinances and regulations, and that the other Party, its officers, officials, employees and volunteers shall have no liability or responsibility whatsoever therefore.

It is further specially and expressly understood that the indemnification provided herein constitutes each Party's waiver of immunity under industrial insurance, Title 51 RCW, solely for the purposes of this indemnification. This waiver has been mutually negotiated by the Parties.

The provisions of this section shall survive the expiration or termination of this Agreement.

Section 12. Governing Law and Venue; Attorneys' Fees. This Agreement shall be governed by the laws of the State of Washington. The venue for any action arising out of this Agreement shall be the Superior Court for King County, Washington. The substantially prevailing Party in any such action shall be entitled to an award of its reasonable attorneys' fees.

Section 13. No Employment Relationship Created. The Parties agree that nothing in this Agreement shall be construed as creating an employment relationship between Algona and any employee, agent, representative or contractor of Auburn, or between Auburn and any employee, agent, representative or contractor of Algona.

Section 14. Notices. Notices to Algona shall be sent to the following address:

City of Algona
Attn: Public Works Director
200 Washington Blvd.
Algona, WA 98001

Notices to Auburn shall be sent to the following address:

City of Auburn
Attn: Public Works Director
25 W. Main Street
Auburn, WA 98001

Section 15. Duty to File or Post Agreement. Prior to this Agreement's entry into force, Auburn shall, pursuant to RCW 39.34.040, (1) file this Agreement with the King County Auditor's Office, or (2) list this Agreement by subject on Auburn's internet web site.

Section 16. Integration. This document, together with any exhibits thereto, constitutes the entire embodiment of the contract between the Parties, and, unless modified in writing by an amendment signed by the Parties hereto, shall be implemented exclusively as described above. All oral agreements and understandings between the Parties related to the subject matter hereof shall be deemed superseded by this Agreement and shall hereinafter be null and void.

Section 17. No Third-Party Beneficiary Created. This Agreement is executed for the sole and exclusive benefit of the signatory Parties. Nothing in this Agreement, whether expressed or implied, is intended to confer any right, remedy or other entitlement upon any person other than the Parties hereto, nor is anything in this Agreement intended to relieve or discharge the obligation or liability of any third party, nor shall any provision herein give any third party any right of action against any party hereto.

Section 18. Signatory Warranty. Each signatory hereto warrants and represents that he/she has been authorized to execute this Agreement by appropriate action of the legislative body of his/her respective city.

Section 19. Execution in Counterparts. This Agreement may be executed in separate counterparts.

Section 20. Regulatory Authority Reserved. Nothing herein shall be construed as waiving, limiting or otherwise abridging in any manner regulatory authority of either party, which Algona and Auburn each hereby expressly reserve in full.

EXECUTED this 9th day of April, 2020.

RESOLUTION NO. 3760

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR AND CITY CLERK TO EXECUTE AN ADDENDUM TO AN INTERLOCAL AGREEMENT BETWEEN THE CITY OF AUBURN AND THE CITY OF BONNEY LAKE FOR THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

WHEREAS, in March of 1998 the City Council of the City of Auburn adopted Resolution No. 2925 authorizing the Mayor and City Clerk to execute a settlement agreement that was subsequently signed by the City of Auburn and the City of Bonney Lake; and

WHEREAS, among other items, that settlement agreement set forth a water service area boundary between the City of Auburn and the City of Bonney Lake; and

WHEREAS, subsequent to approval of the settlement agreement the Potential Annexation Areas (PAA) for the City of Auburn and City of Bonney Lake were amended to coincide with the water service area boundary; and

WHEREAS, since the time of the agreement it has been found that a parcel was divided by the water service area boundary set forth in said settlement agreement, and by the subsequent PAA boundary established based on the water service area boundary, and said parcel lies partially within and partially outside of the Auburn PAA; and

WHEREAS, part of the Lake Tapps Parkway East extension's right-of-way also lies partially within and partially outside of the Auburn water service area boundary established by the settlement agreement, and partially within and partially outside the subsequent PAA boundary established based on the water service area boundary; and

WHEREAS, sound growth management and transportation planning principles are best served by including entire parcels and entire street right-of-ways entirely within a PAA.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor and City Clerk are hereby authorized to execute Addendum No. 1 to the Settlement Agreement between the City of Auburn and the City of Bonney Lake in substantial conformity with the Addendum attached hereto, marked as Exhibit "A" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

Dated and Signed this 7th day of February, 2005.

ADDENDUM NO. 1

ADDENDUM TO SETTLEMENT AGREEMENT BETWEEN THE CITY OF BONNEY LAKE AND THE CITY OF AUBURN RELATING TO WATER SERVICE AREA BOUNDARY

THIS ADDENDUM is made and entered into this 14th day of February, 2005, by and between the **CITY OF BONNEY LAKE**, a municipal corporation of the State of Washington (hereinafter referred to as "Bonney Lake") and the **CITY OF AUBURN**, a municipal corporation of the State of Washington (hereinafter referred to as the "Auburn"), as an addendum to the Settlement Agreement between the parties executed on the 5th day of March, 1998.

W I T N E S S E T H:

WHEREAS, in March 1998 the City Council of the City of Auburn passed Resolution No. 2925 authorizing the Mayor and City Clerk to execute a settlement agreement that was subsequently signed by the City of Auburn and the City of Bonney Lake; and

WHEREAS, among other items, the settlement agreement set forth a water service area boundary between the City of Auburn and the City of Bonney Lake; and

WHEREAS, Exhibit B to the settlement agreement implied that Auburn's Urban Growth Area (UGA) was established to conform with the water service area boundary set forth in the settlement agreement; and

WHEREAS, subsequent to approval of the settlement agreement the Potential Annexation Area (PAA) for the City of Auburn was amended to coincide with the water service area boundary; and

WHEREAS, Exhibit B to the settlement agreement stated that the UGA and water service area boundary was established to follow property lines; and

WHEREAS, since the time of the agreement it has been found that a parcel was divided by the water service area boundary set forth in said settlement agreement, and by the subsequent PAA boundary established based on the water service area boundary, and said parcel lies partially within and partially outside of the Auburn PAA; and

WHEREAS, part of the Lake Tapps Parkway East extension's right-of-way also lies partially within and partially outside of the Auburn water service area boundary established by the settlement agreement, and partially within and partially outside the subsequent PAA boundary established based on the water service area boundary; and

WHEREAS, sound growth management and planning principles are best served by including entire parcels within a PAA.

NOW THEREFORE in consideration of their mutual covenants, conditions and promises, the PARTIES DO HEREBY AGREE as follows:

ITEM ONE: ADDITION OF PROPERTY
The Settlement Agreement is revised to include a portion of Pierce County parcel # 052005-4046, a portion of the Lake Tapps Parkway as it extends from the west boundary of 182nd Ave East west to Auburn's existing Urban Growth Area, and a portion of the natural gas pipe line parcel as noted in the attached Exhibit C. Exhibit C, attached hereto and incorporated by reference as if fully set forth herein, shall provide both a graphical representation and a legal description for the parcels that are to be included in Auburn's UGA for urban services and incorporated into the area that Bonney Lake shall be the water purveyor for within Auburn's UGA as defined in the original settlement agreement between Auburn and Bonney Lake.

ITEM TWO: REMAINING TERMS UNCHANGED:
That all other provisions of the Settlement Agreement between the parties executed on the 5th day of March, 1998, shall remain unchanged, and in full force and effect.

IN WITNESS WHEREOF the parties hereto have executed this Agreement as of the day and year first above written.

RESOLUTION NO. 3796

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT WITH THE CITY OF BONNEY LAKE TO PROVIDE SANITARY SEWER SERVICE FROM AUBURN TO PROPERTY LOCATED WITHIN BONNEY LAKE'S SANITARY SEWER SERVICE AREA

WHEREAS, pursuant to RCW 35A.11.040 Bonney Lake and Auburn have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Bonney Lake and Auburn have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Bonney Lake and Auburn have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system are sized and are situated so as to be capable of affording sewer service to a portion of the Bonney Lake Sanitary Sewer Service Area; and

WHEREAS, Bonney Lake has evaluated and determined it is in Bonney Lake's best interest to establish this Agreement allowing Auburn to provide sewer service to property within Bonney Lake's sanitary sewer service area that lies in the vicinity of Auburn's sanitary sewer infrastructure; and

WHEREAS, Auburn's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an Interlocal Agreement with the City of Bonney Lake in substantial conformity with the agreement attached hereto, marked as Exhibit "1" and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this Resolution shall take effect and be in full force upon passage and signatures hereon.

INTERLOCAL AGREEMENT
between
CITY OF AUBURN and CITY OF BONNEY LAKE
for the
THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

(Fairweather Cove)

Recording # 200511100193

THIS AGREEMENT, made and entered into by and between the **CITY OF AUBURN**, a Washington municipal corporation (hereinafter referred to as "Auburn"), and the **CITY OF BONNEY LAKE**, a Washington municipal corporation, (hereinafter referred to as "Bonney Lake"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040 Bonney Lake and Auburn have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Bonney Lake and Auburn have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Bonney Lake and Auburn have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of the Bonney Lake Sanitary Sewer Service Area; and

WHEREAS, Bonney Lake has evaluated and determined it is in Bonney Lake's best interest to establish this Agreement allowing property located within Bonney Lake's sewer service area and designated within Pierce County's Urban Growth Area (CUGA), to connect into Auburn's public sanitary sewer facilities; and

WHEREAS, Auburn recognizes the negative impacts septic tanks can have on water quality and the quality of life within and around Lake Tapps; and

WHEREAS, Auburn has sufficient wastewater conveyance capacity within their sanitary sewer facilities to support these adjustments to the existing sewer service areas; and

WHEREAS, Auburn's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. Sewer Service Area. The parties have agreed that Auburn will provide sanitary sewer service to Bonney Lake for a portion of Bonney Lake's sanitary sewer service area as graphically depicted on the map and legally described as Attachment "A", attached hereto, which is by this reference incorporated herein. Attachment "A" represents Bonney Lake's sewer service area that Bonney Lake has negotiated with Auburn for wastewater conveyance and treatment via Auburn and King County facilities. The actual sewer service provider to the area depicted within Attachment "A" shall remain Bonney Lake. Both parties further agree that Auburn and Bonney Lake shall be subject to the terms and conditions of this Agreement.

2. Management, Regulation and Control of Sewer System. Auburn shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its sewerage system as installed within Auburn's sanitary sewer service area. Auburn shall be responsible for obtaining and maintaining a franchise from Pierce County for Auburn facilities located in Pierce County right of way.

Bonney Lake shall have the sole responsibility and authority for those facilities that extend outside of the public right of way within the region depicted within Attachment "A". Bonney Lake shall be responsible for obtaining and maintaining a franchise from Pierce County for Bonney Lake facilities located in Pierce County right of way. Bonney Lake shall be responsible for the issuance of side sewer permits and the inspection of facilities located upon private property. Certificates of sewer availability shall be issued from Auburn to Bonney Lake. Bonney Lake shall be responsible for ensuring the conditions of these certificates are met.

3. Rates, Charges, Permits, and Billing Responsibilities. Auburn rates and connection charges (system development charges) shall be billed from Auburn to Bonney Lake in accordance with existing Auburn City Code at the time of service. Bonney Lake shall provide Auburn with the appropriate information so that accurate billings can be established. Auburn and King County shall have the authority to visit sites, upon threat of termination of service, to verify information provided by the property owner and/or Bonney Lake is accurate. King County's capacity charge shall be billed to the property seeking service directly from King County. Bonney Lake may elect to pay the King County capacity charge directly to King County and collect

the costs with the price of the Bonney Lake permit. Auburn shall issue permits to Bonney Lake prior to Bonney Lake's issuing of permits to the property owners. Neither Auburn nor this agreement governs Bonney Lake's rates and fees to be charged to the property owner for the appropriate Bonney Lake side sewer permit.

For Commercial establishments, no additional connections or modification to existing facilities shall be made that would alter the number of plumbing fixtures in the facilities that convey wastewater to Auburn, unless the property owner first pays the associated fees and submits the proper information to obtain a Bonney Lake sanitary sewer permit. Bonney Lake shall in turn seek an Auburn side sewer permit.

Sanitary sewer permits shall be subject to inspection and approval by Bonney Lake. Bonney Lake shall ensure that compliance with Auburn's Sanitary Sewer Standards, as adopted at the time the connection, is made. With this agreement Bonney Lake is providing Auburn with the right to manually read Bonney Lake's water meters for the properties described in Attachment "A"; however, if requested by Auburn, Bonney Lake shall provide water usage information.

The rates and fees charged to Auburn's sanitary sewer customers shall be fixed, altered, regulated and controlled by Auburn pursuant to all applicable laws and regulations promulgated on the subject of rates and charges for sewer service. No surcharge shall be charged to the customers served under this agreement on the sole basis that those customers are outside of Auburn's city limits.

Auburn shall send bills for sanitary sewer service from said property to Bonney Lake's Finance department once every two months.

4. Boundary Review Board. In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Auburn or Bonney Lake, the parties will at the time of such service jointly seek approval of the Pierce County Boundary Review Board in accordance with R.C.W. 36.93.090.

5. Comprehensive Sewer Planning. The terms of this Agreement will be included as an element of Bonney Lake and Auburn's Comprehensive Sewerage Plans.

6. Reliance. Each party hereto acknowledges that the other will rely upon the terms of this agreement in its comprehensive planning to meet the needs of the service area designated herein.

7. Indemnification. Auburn agrees to indemnify and hold Bonney Lake and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Bonney Lake arising out of, in connection with, or incident to the execution of this

agreement and/or Auburn's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Bonney Lake, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Auburn; and provided further, that nothing herein shall require Auburn to hold harmless or defend Bonney Lake, its agents, employees, and/or officers, from any claims arising from the sole negligence of Bonney Lake, its agents, employees, and/or officers. No liability shall attach to Bonney Lake by reason of entering this agreement except as expressly provided herein.

Bonney Lake agrees to indemnify and hold Auburn and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Auburn arising out of, in connection with, or incident to the execution of this agreement and/or Bonney Lake's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Auburn, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Bonney Lake; and provided further, that nothing herein shall require Bonney Lake to hold harmless or defend Auburn, its agents, employees, and/or officers, from any claims arising from the sole negligence of Auburn, its agents, employees, and/or officers. No liability shall attach to Auburn by reason of entering this agreement except as expressly provided herein.

8. Assignment. The parties shall not assign this agreement or any interest, obligation or duty therein without the express written consent of the other party.

9. Attorney's Fees. If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

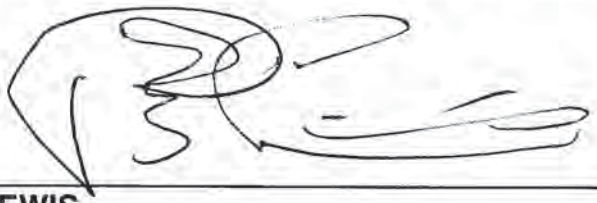
10. Government Approvals. The parties will give notice of the adoption of this Agreement to King County's Department of Natural Resources – Wastewater Treatment Division, to the Pierce County Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of Bonney Lake's Director of Public Works and Auburn's Director of Public Works.

12. Notices. All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Auburn	**City of Bonney Lake**
Director of Public Works	Director of Public Works
25 West Main Street	PO Box 7380
Auburn, WA 98001	19306 Bonney Lake Blvd
	Bonney Lake, WA 98390
253-931-3010	253-862-8602

or to such other representative as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.



13. Alteration, Amendment or Modification. Auburn and Bonney Lake hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement upon written agreement of both parties to such alteration, amendment or modification. Such written consent(s) shall be filed with this agreement for future reference.

14. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

15. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Auburn or Bonney Lake regarding provision of sewer service, except as specifically set forth herein.

RESOLUTION NO. 3873

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, AUTHORIZING THE MAYOR TO EXECUTE AN INTERLOCAL AGREEMENT WITH THE CITY OF BONNEY LAKE FOR THE ESTABLISHMENT OF A RIGHT OF WAY USE PERMIT WITH PIERCE COUNTY

WHEREAS, both Auburn and Bonney Lake are agencies qualified to engage in furnishing sanitary sewer service within their approved service areas; and

WHEREAS, the residential development of "Fairweather Cove" is located within an unincorporated area of Pierce County designated to be serviced with sanitary sewer service from Bonney Lake at approximately 16th Street East and Sumner Tapps Highway,

WHEREAS, Bonney Lake lacks a franchise to operate, maintain, repair, and construct sewer mains and service lines, and appurtenances in, over, along, and under County roads and rights-of-way within the area of Pierce County, Washington in which Fairweather Cove is located; and

WHEREAS, Bonney Lake is in the process of completing an update to its Comprehensive Sewer Plan and intends to thereafter apply for, and receive, a franchise with Pierce County to enable it to provide sewer service to that area of Pierce County in which Fairweather Cove is located; and

WHEREAS, Auburn maintains a franchise agreement with Pierce County, dated July 8, 1996, and expiring on July 8, 2021, covering the area of Pierce County in which Fairweather Cove is located; and

WHEREAS, while service through Auburn's sewer system is available, sewer service to Fairweather Cove is more feasible through Bonney Lake's sewer system; and

WHEREAS, Bonney Lake received a request for sewer service to Fairweather Cove from Harbour Homes, the owner thereof, hereinafter referred to as "Developer", in August 2001; and

WHEREAS, Bonney Lake and Auburn are pursuing a separate agreement between them that would allow for Bonney Lake to convey wastewater from a portion of Bonney Lake's service area into Auburn's wastewater conveyance system for treatment and disposal in an effort to provide for the most efficient sewer service to future customers at a reasonable cost; and

WHEREAS, both Bonney Lake and Auburn agree that Fairweather Cove is best served by Bonney Lake under an interlocal agreement with Auburn; and

WHEREAS, Bonney Lake entered into a Developer Public Facility Extension Agreement ("Extension Agreement"), with the Developer under which the Developer is required to construct necessary public improvements to serve Fairweather Cove; and

WHEREAS, Auburn is willing to accept interim ownership and to assume interim responsibility for operation and maintenance of the Developer's public sewer improvements, subject to the terms, limitations, and conditions of this Agreement; and

WHEREAS, Bonney Lake is willing to accept transfer of ownership and responsibility for operation and maintenance of the Developer's public

sewer improvements upon obtaining a sanitary sewer franchise from Pierce County to serve the area in which Fairweather Cove is located.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF AUBURN, WASHINGTON, HEREBY RESOLVES as follows:

Section 1. The Mayor is hereby authorized to execute an interlocal agreement with the City of Bonney Lake, in substantial conformity with the agreement attached hereto, marked as Exhibit 1 and incorporated herein by this reference.

Section 2. That the Mayor is authorized to implement such other administrative procedures as may be necessary to carry out the directives of this legislation.

Section 3. That this resolution shall take effect and be in full force upon passage and signatures hereon.

DATED and signed this 18th day of July, 2005.

WHEREAS, both Auburn and Bonney Lake are agencies qualified to engage in furnishing sanitary sewer service within their approved service areas; and

WHEREAS, the residential development of "Fairweather Cove" is located within an unincorporated area of Pierce County designated to be serviced with sanitary sewer service from Bonney Lake at approximately 16th Street East and Sumner Tapps Hwy.,

WHEREAS, Bonney Lake lacks a franchise to operate, maintain, repair, and construct sewer mains and service lines, and appurtenances in, over, along, and under County roads and rights-of-way within the area of Pierce County, Washington in which Fairweather Cove is located; and

WHEREAS, Bonney Lake is in the process of completing an update to its Comprehensive Sewer Plan and intends to thereafter apply for, and receive, a franchise with Pierce County to enable it to provide sewer service to that area of Pierce County in which Fairweather Cove is located; and

WHEREAS, Auburn maintains a franchise agreement with Pierce County, dated July 8, 1996, and expiring on July 8, 2021, covering the area of Pierce County in which Fairweather Cove is located; and

WHEREAS, while service through Auburn's sewer system is available, sewer service to Fairweather Cove is more feasible through Bonney Lake's sewer system; and

WHEREAS, Bonney Lake received a request for sewer service to Fairweather Cove from Harbour Homes, the owner thereof, hereinafter referred to as "Developer", in August 2001; and

WHEREAS, Bonney Lake and Auburn are pursuing a separate agreement between them that would allow for Bonney Lake to convey wastewater from a portion of Bonney Lake's service area into Auburn's wastewater conveyance system for treatment and disposal in an effort to provide for the most efficient sewer service to future customers at a reasonable cost; and

WHEREAS, both Bonney Lake and Auburn agree that Fairweather Cove is best served by Bonney Lake under an interlocal agreement with Auburn; and

WHEREAS, Bonney Lake entered into a Developer Public Facility Extension Agreement ("Extension Agreement"), with the Developer under which the Developer is required to construct necessary public improvements to serve Fairweather Cove; and

WHEREAS, Auburn is willing to accept interim ownership and to assume interim responsibility for operation and maintenance of the Developer's public sewer improvements, subject to the terms, limitations, and conditions of this Agreement; and

WHEREAS, Bonney Lake, shall accept transfer of ownership and responsibility for operation and maintenance of the Developer's public sewer improvements upon obtaining a sanitary sewer franchise from Pierce County to serve the area in which Fairweather Cove is located.

NOW, THEREFORE BE IT AGREED AS FOLLOWS:

1. Consistent with the terms of this Agreement and Auburn's sewer franchise agreement with Pierce County, Auburn shall own, operate, and maintain, for the period of time described herein, public sewer improvements for Fairweather Cove, constructed pursuant to the Extension Agreement between Bonney Lake and Developer, to the point of connection of said improvements with Auburn's existing gravity sewer located along the Sumner Lake Tapps Hwy. Auburn shall receive wastewater from Fairweather Cove through these improvements, and shall provide sewer service from this point through Auburn's conveyance system to King County's conveyance system for ultimate disposal at the King County sewer treatment plant located in Renton, Washington.

2. Bonney Lake shall administer all aspects of the Extension Agreement, including the construction of the sewer improvements required to serve Fairweather Cove to Bonney Lake standards. Auburn shall have the right to inspect and approve plans for and construction of the public sewer improvements required to serve Fairweather Cove as necessary to comply with Auburn's sewer franchise with Pierce County. Upon request from Bonney Lake, Auburn shall

apply for the R-O-W permit required from Pierce County for construction of the Developer's public sewer improvements in Pierce County right-of-way.

3. Auburn and Bonney Lake shall work in good faith to review all project plans, and to inspect all project construction, in a timely manner, and, where and when appropriate, to modify Bonney Lake's standards to facilitate compliance with the terms and conditions of Auburn's sewer franchise with Pierce County. Bonney Lake agrees that it shall be responsible to comply with any requirements that may be generated if this Agreement is submitted to the Pierce County Boundary Review Board for approval.

4. Upon Developer's completion of construction of sewer improvements and satisfaction of all terms and conditions of the Extension Agreement Bonney Lake shall transfer temporary ownership to Auburn, for all public sewer improvements in Pierce County required to serve Fairweather Cove.

5. Following satisfactory completion of the sewer improvements, property owners within Fairweather Cove may apply for connection to the sewer system as single-family residential customers of the Bonney Lake Sewer Utility. Connection charges, monthly rates and other charges shall be collected as defined by the Auburn - Bonney Lake Interlocal Agreement for the Establishment of Sanitary Sewer Service Boundaries attached hereto and incorporated herein by this reference as Attachment B (Auburn Resolution No. 3796).

6. In consideration of the receipt of the charges referenced in paragraph 5 above, Bonney Lake agrees to provide the operation, repair and maintenance, both ordinary and extraordinary, of the Auburn-owned public sewer improvements for Fairweather Cove, as referenced in paragraph 4 of this Agreement. If any such operation and maintenance triggers any of the provisions of Auburn's sewer franchise with Pierce County, Bonney Lake shall promptly notify Auburn. Bonney Lake shall abide by any such provisions at the sole discretion of Auburn and at the sole cost of Bonney Lake.

7. Upon Bonney Lake's written notice to Auburn that it has secured a sewer franchise with Pierce County for the area of Pierce County in which the Fairweather Cove development is located, a copy of which franchise shall be provided with the written notice to Auburn, Auburn shall, by bill of sale, immediately thereafter transfer ownership of the facilities temporarily owned by Auburn pursuant to this Agreement, to Bonney Lake.

8. Bonney Lake agrees to reimburse Auburn for all expenses incurred by Auburn, including the cost of time spent by Auburn employees calculated at labor rates used to establish Auburn's fees and charges, in connection with this Agreement and the provision of service to Bonney Lake's customers pursuant to the provisions herein. Auburn agrees to submit to Bonney Lake, no less than

annually, a statement of charges due and Bonney Lake shall pay the same within 45 days of the billing date. The parties agree to work cooperatively to resolve any dispute that may arise with respect to any such billing.

9. This Agreement may be terminated or modified, but only as agreed to in writing by both the parties.

10. Bonney Lake and Auburn agree to indemnify, defend and hold each other harmless from and against any loss, cost, damage, or expense of any kind arising out of injury to person or damage to property in any manner caused by the parties' own negligent conduct in the performance of this interlocal agreement.

11. This Agreement constitutes the only agreement between the parties concerning sewer service to the Fairweather Cove Development and nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Bonney Lake or Auburn regarding the provision of sewer service within their respective service areas except as specifically set forth herein.

INTERLOCAL AGREEMENT
between
CITY OF AUBURN and CITY OF BONNEY LAKE
for the
THE ESTABLISHMENT OF SANITARY SEWER SERVICE BOUNDARIES

(Fairweather Cove)

THIS AGREEMENT, made and entered into by and between the **CITY OF AUBURN**, a Washington municipal corporation (hereinafter referred to as "Auburn"), and the **CITY OF BONNEY LAKE**, a Washington municipal corporation, (hereinafter referred to as "Bonney Lake"), both being duly organized and existing under and by virtue of the laws of the State of Washington,

WITNESSETH:

WHEREAS, pursuant to RCW 35A.11.040 Bonney Lake and Auburn have the legal authority to exercise their powers and perform any of their functions as set forth in RCW 39.34; and

WHEREAS, pursuant to RCW 39.34, the Interlocal Cooperation Act, Bonney Lake and Auburn have the legal authority to cooperate with other localities on the basis of mutual advantage and provision of services; and

WHEREAS, pursuant to RCW 35A.21.150 Bonney Lake and Auburn have the legal authority to maintain a sewerage system; and

WHEREAS, the parties recognize the responsibility of public sanitary sewer utilities to provide efficient and reliable service to their customers at reasonable cost; and

WHEREAS, portions of the Auburn sanitary sewer system have been sized and are situated so as to be capable of affording sewer service to a portion of the Bonney Lake Sanitary Sewer Service Area; and

WHEREAS, Bonney Lake has evaluated and determined it is in Bonney Lake's best interest to establish this Agreement allowing property located within Bonney Lake's sewer service area and designated within Pierce County's Urban Growth Area (CUGA), to connect into Auburn's public sanitary sewer facilities; and

WHEREAS, Auburn recognizes the negative impacts septic tanks can have on water quality and the quality of life within and around Lake Tapps; and

ATTACHMENT "B"

WHEREAS, Auburn has sufficient wastewater conveyance capacity within their sanitary sewer facilities to support these adjustments to the existing sewer service areas; and

WHEREAS, Auburn's delivery of sewer service to these areas will provide the maximum efficiency in the use of existing and future facilities, together with orderly and efficient sanitary sewer planning.

NOW, THEREFORE:

IT IS HEREBY AGREED by and between the parties hereto as follows:

1. **Sewer Service Area.** The parties have agreed that Auburn will provide sanitary sewer service to Bonney Lake for a portion of Bonney Lake's sanitary sewer service area as graphically depicted on the map and legally described as Attachment "A", attached hereto, which is by this reference incorporated herein. Attachment "A" represents Bonney Lake's sewer service area that Bonney Lake has negotiated with Auburn for wastewater conveyance and treatment via Auburn and King County facilities. The actual sewer service provider to the area depicted within Attachment "A" shall remain Bonney Lake. Both parties further agree that Auburn and Bonney Lake shall be subject to the terms and conditions of this Agreement.

2. **Management, Regulation and Control of Sewer System.** Auburn shall have the sole responsibility and authority to construct, maintain, manage, conduct and operate its sewerage system as installed within Auburn's sanitary sewer service area. Auburn shall be responsible for obtaining and maintaining a franchise from Pierce County for Auburn facilities located in Pierce County right of way.

Bonney Lake shall have the sole responsibility and authority for those facilities that extend outside of the public right of way within the region depicted within Attachment "A". Bonney Lake shall be responsible for obtaining and maintaining a franchise from Pierce County for Bonney Lake facilities located in Pierce County right of way. Bonney Lake shall be responsible for the issuance of side sewer permits and the inspection of facilities located upon private property. Certificates of sewer availability shall be issued from Auburn to Bonney Lake. Bonney Lake shall be responsible for ensuring the conditions of these certificates are met.

3. **Rates, Charges, Permits, and Billing Responsibilities.** Auburn rates and connection charges (system development charges) shall be billed from Auburn to Bonney Lake in accordance with existing Auburn City Code at the time of service. Bonney Lake shall provide Auburn with the appropriate information so that accurate billings can be established. Auburn and King County shall have the authority to visit sites, upon threat of termination of service, to verify information provided by the

ATTACHMENT "B"

property owner and/or Bonney Lake is accurate. King County's capacity charge shall be billed to the property seeking service directly from King County. Bonney Lake may elect to pay the King County capacity charge directly to King County and collect the costs with the price of the Bonney Lake permit. Auburn shall issue permits to Bonney Lake prior to Bonney Lake's issuing of permits to the property owners. Neither Auburn nor this agreement governs Bonney Lake's rates and fees to be charged to the property owner for the appropriate Bonney Lake side sewer permit.

For Commercial establishments, no additional connections or modification to existing facilities shall be made that would alter the number of plumbing fixtures in the facilities that convey wastewater to Auburn, unless the property owner first pays the associated fees and submits the proper information to obtain a Bonney Lake sanitary sewer permit. Bonney Lake shall in turn seek an Auburn side sewer permit.

Sanitary sewer permits shall be subject to inspection and approval by Bonney Lake. Bonney Lake shall ensure that compliance with Auburn's Sanitary Sewer Standards, as adopted at the time the connection, is made. With this agreement Bonney Lake is providing Auburn with the right to manually read Bonney Lake's water meters for the properties described in Attachment "A"; however, if requested by Auburn, Bonney Lake shall provide water usage information.

The rates and fees charged to Auburn's sanitary sewer customers shall be fixed, altered, regulated and controlled by Auburn pursuant to all applicable laws and regulations promulgated on the subject of rates and charges for sewer service. No surcharge shall be charged to the customers served under this agreement on the sole basis that those customers are outside of Auburn's city limits.

Auburn shall send bills for sanitary sewer service from said property to Bonney Lake's Finance department once every two months.

4. Boundary Review Board. In the event that implementation of the terms hereof results in permanent sewer service to areas that will be outside the respective service boundaries of Auburn or Bonney Lake, the parties will at the time of such service jointly seek approval of the Pierce County Boundary Review Board in accordance with R.C.W. 36.93.090.

5. Comprehensive Sewer Planning. The terms of this Agreement will be included as an element of Bonney Lake and Auburn's Comprehensive Sewerage Plans.

6. Reliance. Each party hereto acknowledges that the other will rely upon the terms of this agreement in its comprehensive planning to meet the needs of the service area designated herein.

ATTACHMENT "B"

7. **Indemnification**. Auburn agrees to indemnify and hold Bonney Lake and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Bonney Lake arising out of, in connection with, or incident to the execution of this agreement and/or Auburn's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Bonney Lake, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Auburn; and provided further, that nothing herein shall require Auburn to hold harmless or defend Bonney Lake, its agents, employees, and/or officers, from any claims arising from the sole negligence of Bonney Lake, its agents, employees, and/or officers. No liability shall attach to Bonney Lake by reason of entering this agreement except as expressly provided herein.

Bonney Lake agrees to indemnify and hold Auburn and its agents, employees, and/or officers, harmless from and shall process and defend at its own expense any and all claims, demands, suits, at law or equity, actions, penalties, loses, damages or costs, of whatsoever kind or nature, brought against Auburn arising out of, in connection with, or incident to the execution of this agreement and/or Bonney Lake's performance or failure to perform any aspect of this Agreement; provided, however, that if such claims are caused by or result from the concurrent negligence of Auburn, its agents, employees, and/or officers, this indemnity provision shall be valid and enforceable only to the extent of the negligence of Bonney Lake; and provided further, that nothing herein shall require Bonney Lake to hold harmless or defend Auburn, its agents, employees, and/or officers, from any claims arising from the sole negligence of Auburn, its agents, employees, and/or officers. No liability shall attach to Auburn by reason of entering this agreement except as expressly provided herein.

8. **Assignment.** The parties shall not assign this agreement or any interest, obligation or duty therein without the express written consent of the other party.

9. **Attorney's Fees.** If either party shall be required to bring any action to enforce any provision of this Agreement, or shall be required to defend any action brought by the other party with respect to this Agreement, and in the further event that one party shall substantially prevail in such action, the losing party shall, in addition to all other payments required therein, pay all of the prevailing party's reasonable costs in connection with such action, including such sums as the court or courts may adjudge reasonable as attorney's fees in trial court and in appellate courts.

ATTACHMENT "B"

10. Government Approvals. The parties will give notice of the adoption of this Agreement to King County's Department of Natural Resources – Wastewater Treatment Division, to the Pierce County Department of Health, and to any other agency with jurisdiction or mission relevant to the terms hereof, and shall cooperate and assist in all reasonable manner in procuring any necessary approvals hereof by those agencies.

11. Service Amendments. Any changes to the service areas described herein shall be by mutual agreement. Each party may give permission to the other on a case-by-case basis to provide service by one party into the other party's adjacent or nearby service area based upon considerations of economic efficiency for providing the service with mutual consent of Bonney Lake's Director of Public Works and Auburn's Director of Public Works.

12. Notices. All notices between the two agencies hereunder may be delivered or mailed. If mailed, they shall be sent to the following respective addresses:

City of Auburn
Director of Public Works
25 West Main Street
Auburn, WA 98001

253-931-3010

City of Bonney Lake
Director of Public Works
PO Box 7380
19306 Bonney Lake Blvd
Bonney Lake, WA 98390
253-862-8602

or to such other representative as either party may hereafter from time to time designate in writing. All notices and payments mailed by regular post (including first class) shall be deemed to have been given on the second business day following the date of mailing, if properly mailed and addressed. Notices and payments sent by certified or registered mail shall be deemed to have been given on the day next following the date of mailing, if properly mailed and addressed. For all types of mail, the postmark affixed by the United States Postal Service shall be conclusive evidence of the date of mailing.

13. Alteration, Amendment or Modification. Auburn and Bonney Lake hereby reserve the right to alter, amend or modify the terms and conditions of this Agreement upon written agreement of both parties to such alteration, amendment or modification. Such written consent(s) shall be filed with this agreement for future reference.

14. Sanctity of Agreement. This agreement constitutes the entire agreement of the parties regarding the subject matter hereof, and there are no other representations or oral agreements other than those listed herein, which vary the

terms of this agreement. Future agreements may occur between the parties to transfer additional or future service areas by mutual agreement.

15. Obligation Intact. Nothing herein shall be construed to alter the rights, responsibilities, liabilities, or obligations of either Auburn or Bonney Lake regarding provision of sewer service, except as specifically set forth herein.

16. Miscellaneous.

A. The captions in this agreement are for convenience only and do not in any way limit or amplify the provisions of this agreement.

B. This agreement is established in perpetuity. Modifications can be established upon written agreement between both parties.

C. The purpose of this agreement is to clarify Auburn's and Bonney Lake's sanitary sewer responsibilities for providing service and maintaining public sewer facilities.

D. If any term, provision, condition or portion of this Agreement is held to be invalid, or unenforceable by a final decision of any court having jurisdiction on the matter, the remaining of this Agreement or the application of such term or provision to persons or circumstances other then those as to which it is held invalid or unenforceable shall not be affected thereby and shall continue in full force and effect, unless such court determines that invalidity or unenforceability materially interferes with or defeats the purposes hereof, at which time Bonney Lake or Auburn shall have the right to terminate the Agreement.

E. No modifications or amendments of this agreement shall be valid or effective unless evidenced by an agreement in writing signed by both parties.

IN WITNESS WHEREOF the parties hereto have executed this agreement as of the day and year first above written.

CAUTION: The following message originated from outside the City of Auburn. Be careful opening links and attachments

Good aftrnoon Robert,
The King County UTRC met on July 17 to review the draft 2024 Comprehensive Sewer System Plan for the City of Auburn. I have attached the comment letter approved by the UTRC. Please note that the letter includes a comment that was not in my draft list that we reviewed. The additional comment asks for the urban growth area boundary been shown on two of the figures.

Please let me know if you have any questions.

I look forward to receiving the final plan.

Regards,
Dan

City of Auburn, 2024 Comprehensive Sewer Plan (DRAFT), June 2024

The City of Auburn ("City") submitted a draft 2024 Comprehensive Sewer Plan ("Plan") for review by the King County Utilities Technical Review Committee (UTRC) on June 17, 2024.

Staff has reviewed the Plan for local statutory requirements and impacts on service to residents in the unincorporated county.

On July 17, 2024, the UTRC held a meeting to review the Plan and provide comments to the applicant. The UTRC has the following comments, and requested changes and clarifications:

General Comments

1) Prior to the UTRC acting on a recommendation, a signed checklist and the issued threshold determination must be provided.
2) The City Council must adopt the Plan prior to sending it to King County County for final review and approval.
3) King County Code (13.24.010 H. Water and sewer system comprehensive plans) requires wastewater system plans to identify and describe areas of concern with respect to corrosion and odor control and steps being taken to reduce their occurrence. It does not appear that the Plan addresses odor or corrosion. Please include additional text in the plan document to address odor and corrosion concerns and steps the City plans to take.
4) King County Code (13.24.010 H. Water and sewer system comprehensive plans) requires wastewater system plans to compare amounts of inflow and infiltration (I/I) to the system with King County's 1,100 gallons-per-acre-per-day-standard, and steps being taken to reduce the inflow and infiltration. While the Plan does identify existing and projected I/I and indicates annual projects will be constructed to address needs, the Plan does not compare these with the County's standard. Please include text in the Plan that provides this comparison.
5) The Plan recognizes some existing development within the City's sanitary sewer service area is served by on-site septic systems. How many existing on-site septic systems currently exist within the City's sewer service area? If all these on-site septic systems connected to the City's sewer system, would the system require significant improvements to accommodate the additional wastewater flow?
6) Various figures. The City's Sewer Service Area (SSA) is masked by the City's municipal boundaries on various figures/maps. Can this boundary be shown differently to allow the SSA boundary to be seen more clearly? On various maps there appears to be a fourth area shown as unincorporated King County within the City's SSA which may be an error. This area

includes Parcel Nos. 1721059045, 1721059248, 1721059249, 1721059250. These parcels are owned by the City and shown as within the City's municipal boundaries on King County i-Map.

7) The Plan references and the appendix includes 7 interlocal agreements with neighboring wastewater purveyors agreeing to changes to sewer service areas. It would be beneficial if the Plan included a figure that illustrated these sewer service boundary changes.

Specific Comments/Questions

8) Page 1-7, Figure 1.2 Study Area, and page 3-3, Figure 3.1 City of Auburn Land Use Designations. Please add symbology that identifies the boundary of the urban growth area.

9) Page 2-3, Section 2.3.2 System Planning. Policy 2.5 states, "The Sanitary Sewer Utility does not intend and will not Plan to extend sanitary sewer service to or through King or Pierce County rural zoned property. Exceptions will only be considered for reasons of health, safety, or service to a school in accordance with King or Pierce County policies." Please recognize that the City of Auburn does not have the authority to connect rural zoned to its sewer system without the approval of King County. Please clarify this in the Plan.

10) Page 2-3, Section 2.3.2 System Planning. Policy 2.6 states, "Allow development where sewer is not readily available to be served by individual onsite (septic) systems, if the individual lots are suitable for onsite systems, per the requirements and approval of King County..." For unincorporated urban King County areas within the City's sewer service area, King County Code 13.24.136 only allows on-site septic systems to be permitted for single detached residences, and short sub-divisions on an interim basis it if meets specific criteria. All other development is required to be connected. Please provide clarification for unincorporated King County areas in the Plan.

11) Page 2-3, Section 2.3.2 System Planning. It does not appear that the City has any policy that would encourage or require existing development utilizing an on-site septic system to connect to the City's sewer system. Please provide or clarify the City's policy for existing development connecting to the City's sewer system. Does the City have a proactive strategy to connect existing development to its sewer system? On page 1-4 under the King County Policy reference, text points to Chapter 5 which discusses projects that would serve currently unserved areas; however, it does not appear that there is a strategy to encourage existing development to connect to the new segments of the sewer system. Please clarify in the Plan.

12) Page 3-2, Section 3.3 Land Use. The text describes and Figure 3.1 illustrates the location of designated land uses within the City of Auburn. This section does not include any land use information addressing areas outside of the City's municipal boundary, and within its sewer service area. Please include. It would also be informational to include the total area within the City's service area and percent within unincorporated King County and other neighboring municipalities.

13) Page 4-2, Section 4.1.3 Lea Hill Sewer Basin. The text states that there is a significant unsewered area in the north portion of this sewer basin. Is this area unsewered because it is primarily undeveloped, or is there development that is currently serviced by on-site septic systems? Please clarify in the Plan.

14) Page 4-2, Section 4.1.5 South Hill Sewer Basin. The text states, "The eastern half...of the sewer basin is currently developed as a low-density rural area and is unsewered." The reference to this area as being a rural area is misleading as it is within the designated urban growth area. It would be more appropriate to refer to the area as being a low-density residential area. Please clarify in the Plan.

15) Page 4-13 Section 4.6 Water Reclamation and Reuse. The text mentions the King County Water Reclamation Evaluation Checklist was completed as part of the City's water system plan. Please provide this checklist as an appendix to this Plan. While the Plan identifies potential reclaimed water sources and notes the City will need to determine if it would be feasible source, it would be beneficial if the Plan discussed the type of capital projects that would need to be constructed to obtain reclaimed water from these sources.

16) Page 5-5, Section 5.3.2 Future Conditions Wet Weather Flow Assumptions. The text states, "Figure 5.4 identifies the portion of the collection system that is currently developed with available sewer in yellow,..."; however, the legend for this figure indicates that yellow represents "Developed with Sewer." These two phrases are not same. Please correct as appropriate.

17) Page 5-5, Section 5.3.2 Future conditions Wet Weather Flow Assumptions. The text states that, "It was assumed that all developable parcels would be developed and connected for the 2044 scenario..." Does this assumption include the connection of existing development that is currently served by on-site septic systems? If yes, how many additional connections would be attributed to these types of properties?

18) Page 5-5, Section 5.3.2 Future conditions Wet Weather Flow Assumptions. The text states that, "It was assumed that the I/I of future sewered areas would be 1,500 gallons per acre per day..." What is the basis for this assumption?

19) Page 5-7, Figure 5.4, Future Contributing Areas. The legend for this figure is misleading. Many of the areas identified as "Developable" are already developed utilizing on-site septic systems. Would it be more appropriate to identify these areas as "Developable/Infill"? It would be beneficial to identify the number and location of existing on-site septic systems.

20) Page 5-10, Figure 5.6 Existing System Deficiencies, Page 5-11, Figure 5.7 2044 System Deficiencies, and Page 5-12 2044 Climate Change Design System Deficiencies. The legend on each of these figures shows that only the City's critical sewer system infrastructure was included in the system's model and analysis. Why wasn't the entire system modeled? Please include text in the Plan that describes the extent of the system that was modeled and limitations of the analysis relevant to the entire sewer system.

The King County UTRC thanks you for the opportunity to review and comment. Please contact me at (206)263-3733 or dcardwell@kingcounty.gov if you have any questions.

Subject: City of Auburn Sewer Plan

External Email

I'm using Mimecast to share large files with you. Please see the attached instructions.

Sean,

As we discussed a couple of weeks ago, Auburn is ready to submit our draft Sewer Plan for your review. This is the first time I've used our "Mimecast Large File Send," method of delivering a large file, so please let me know if you encounter any difficulties downloading it. We will be going through our SEPA process simultaneous with your review, so that documentation is not included yet. We are also submitting to the King County UTRC for their review.

Thank you and please let me know if you have any questions.

Bob Elwell
City of Auburn
Sewer Utility Engineer
25 West Main Street, Auburn WA 98001

General Sewer Plan - Ecology Comment Sheet for City of Auburn

GSP Revision Date: June 1, 2024
GSP Contact: Robert Elwell

Reviewed By: Sean Wilson, P.E.
Review Date: 8/8/2024

Comment No.	Page #	Section	Comment	Ecology Reviewer	GSP Response	GSP Responder	Ecology Acceptance Comments
1	N/A	General	Per RCW 90.48.495 Water conservation measures to be considered in general sewer plans. "The Department of Ecology shall require sewer plans to include a discussion of water conservation measures considered or underway that would reduce flows to the sewerage system and an analysis of their anticipated impact on public sewer service and treatment capacity." The GSP does not discuss water conservation. If the District has a water conservation program in a related Water System Plan, it merits mentioning in the GSP to help satisfy this requirement.	Wilson			
2	2	General	Please ensure that the final version includes a P.E. stamp and signature.	Wilson			
3	15	1.20	Although Chapter 1.2 references an Appendix D with a SEPA Determination of Non-Significance, that appendix does not appear to be included in the document. A completed SEPA checklist and DNS or EIA is required for Ecology approval.	Wilson			
4	18	1.3.5	Thank you for including the interlocal agreements with King County and other local sewer districts. In this section, please identify the capacity available to the District at the King County facilities for treatment and identify whether any agreements contain capacity constraints that may limit or otherwise constrain the District's ability to provide sewer service. If they exist, please summarize any relevant conditions for King County's acceptance of sewage flows (e.g. flow limits, I/I peaking factor limits, etc.). If no such conditions for acceptance exist in the agreements, please include a statement to that effect.	Wilson			
5	19	1.3.5	Per WAC 173-240-050(3)(f), please include all wastewater treatment facilities within 20 miles. This can be done on Figure 1.1 or any where else that you believe is appropriate.	Wilson			
6	20	Figure 1.2	In accordance with 173-240-050(3)(c), please provide a narrative description or figure showing the expected extent of the district's service area. It is implied that there is expected change but should be stated or shown explicitly.	Wilson			
7	20	Figure 1.2 and Section 1.4	There appears to be at least 5 parcels in the northeast portion of the District's service area which are also included in the adjacent City of Kent service area. It does not seem possible to have service provided by both entities. Please further explanation withing Section or revise the map to accurately reflect service areas.	Wilson			
8	27	2.3.3	WAC 173-240-104 extends to grinder pumps that serve a single residence. Policy 3.5 states that "the City will not install, own, or maintain (outside of emergencies) any part of a private non-gravity system". Please explain what policies, ordnances, or agreements the District has in place to ensure that these non-gravity systems are properly designed and that the District has access rights in the case of emergency to protect public health and water quality?	Wilson			

Comment No.	Page #	Section	Comment	Ecology Reviewer	GSP Response	GSP Responder	Ecology Acceptance Comments
9	27	2.3.3	Policy 3.7 appears to be in conflict with WAC 172-240-104. Please clarify how the District ensures that private systems are property designed and maintained. Are designs reviewed? Are private systems inspected by the District at some frequency? Does the District have rights to access and work on private systems in an emergency? Policy 5.9 appears to commit the District to providing emergency service but does not describe how access rights are granted in emergency cases.	Wilson			
10	41	4.20	Explain what is being done to protect the two wellheads that are within 100ft of an existing sewer line. Is there a plan to relocate those lines either proactively or during the next rehab of those lines?	Wilson			
11	50	4.50	Per WAC 173-240-050(3)(i), please include the quantity and periods of wastewater production for the industrial users presented in Table 4.2. Additionally, please provide additional information about expected future flows from industrial user expansion or including industries.	Wilson			
12	64-65	Figures 5.7 and 8	It is hard to tell from these two figures if the future/planned sewer lines were included in the forward looking models. Can you confirm that the expanded basins (at minimum their flow) was included within these model runs? If they were included, it would be helpful to include the fully built out lines on these two figures to make it clear that future expansion was included.	Wilson			
13	66	5.50	Although not highlighted in red in Table 5-4, the F Street and Ellingson Road lift stations appears to be quite close to its capacity in the 2044 scenario. Why was additional monitoring or planned expansion of these LS not included in the CIP?	Wilson			
14	75	5.8.4.1	Basin A10 also appears to have quite high I/I flow rates and peaking factor. Please explain why additional monitoring is not suggested for this basin.	Wilson			
15	85	6.40	The District is required to immediately report to Ecology all spills to the environment and back-ups of sewage into buildings. Please revise this section to include more information regarding reporting of spills/back-ups to Ecology's ERTS system.	Wilson			
16	93	7.2.2	It is difficult to determine if all areas of deficiency identified in Figure 5.6-8 have associated projects in the CIP. It is suggested that deficiencies identified are given unique IDs and that the deficiency IDs associated with each project in 7.2.2 are added to the project descriptions of 7.2.2. Another method, figure or table could also be used to help with this comparison but additional clarity is needed.	Wilson

1	N/A	General	Per RCW 90.48.495 Water conservation measures to be considered in general sewer plans. "The Department of Ecology shall require sewer plans to include a discussion of water conservation measures considered or underway that would reduce flows to the sewerage system and an analysis of their anticipated impact on public sewer service and treatment capacity." The GSP does not discuss water conservation. If the District has a water conservation program in a related Water System Plan, it merits mentioning in the GSP to help satisfy this requirement.	We added a section (Section 1.3.7) to Chapter 1 which reads: The City of Auburn's Sanitary Sewer Service Area largely overlaps with its Water Service Area, therefore, water conservation efforts undertaken by the City's Water Utility will, by far, be the most likely to affect sewage flows handled by the City's sewage collection system. The Water Utilities program is described in Section 4.3 of the 2024 Water System Plan. The primary effect of such measures on the sewer system would be to reduce the overall wastewater flow, while potentially increasing wastewater strength. Since the City's sewer hydraulic model calibration was based on actual measured flows, the effects of existing conservation measures have been accounted for. Further increased effectiveness of water conservation efforts could result in capacity improvement projects being eliminated or delayed if anticipated flow increases are not realized.
2	2	General	Please ensure that the final version includes a P.E. stamp and signature.	Our consultant, Edward Wicklein of Carollo Engineers, will stamp the plan on a stamp page that has been added as the 2nd page of document.
3	15	1.2	Although Chapter 1.2 references an Appendix D with a SEPA Determination of Non-Significance, that appendix does not appear to be included in the document. A completed SEPA checklist and DNS or EIA is required for Ecology approval.	The Checklist and DNS were added as Appendix D
4	18	1.3.5	Thank you for including the interlocal agreements with King County and other local sewer districts. In this section, please identify the capacity available to the District at the King County facilities for treatment and identify whether any agreements contain capacity constraints that may limit or otherwise constrain the District's ability to provide sewer service. If they exist, please summarize any relevant conditions for King County's acceptance of sewage flows (e.g. flow limits, I/I peaking factor limits, etc.). If no such conditions for acceptance exist in the agreements, please include a statement to that effect.	Added to Section 1.3.5 "Under the current agreement, the City is obligated to deliver all of the sewage and industrial wastes collected or received by the City, and Metro (King County) shall accept the sewage and industrial wastes delivered for treatment. There is currently no limit on the quantity of wastewater delivered by the City to Metro (King County)."
5	19	1.3.5	Per WAC 173-240-050(3)(f), please include all wastewater treatment facilities within 20 miles. This can be done on Figure 1.1 or any where else that you believe is appropriate.	Figure 1.1 has been updated to include the other Treatment Facilities.

6	20	Figure 1.2	In accordance with 173-240-050(3)(c), please provide a narrative description or figure showing the expected extent of the district's service area. It is implied that there is expected change but should be stated or shown explicitly. Response to a request for clarification: I believe what I was referring to the last paragraph of 1.4.1 and the discussion of annexation in 1.4.2. The shaded colors for "Service Area Outside of City Limits" on Figure 1.2 is helpful but there does not appear to be any of those in areas in eastern Algona. If the boundaries of the City of Auburn service area are not expected to change, I suggest refining the labels in the legend of Figure 1.2 to make this clearer or including language in the 1.4 intro to state it more clearly. It might also be helpful to have a different shade for areas inside of Auburn's city limits that are served by adjacent sewer services (but this is not critical).	When the intelocal agreements between Auburn and neighboring agencies established the service area boundaries, those boundaries were primarily based on terrain and minimizing future required pumping, and those boundaries often traversed unsewered areas that were, at the time, part of unincorporated King County. As future extension of public sewer to those areas occurs, it may make sense for one agency to provide service to an area that was originally designated for the other, but it won't be clear until it actually happens. The interlocal agreements between our agencies include provisions for the respective Public Works Directors or General Managers to agree that the other agency may serve parcels that are in the their designated service areas for reasons of efficiency, etc. We have added labels to the map to reflect the locations of letters of agreement, where Auburn may serve several parcels, although, to this point, those developments or connections have not yet been made. When those systems are established and if it makes sense for them to be permanent, the two agencies will apply to the Boundary Review Board to permanently change the boundary. Our original map was potentially misleading as it showed some of these boiundaries as already being changed. We've removed those speculated boundaries and have simply pointed to areas where they may change in the future. We hesitate to draw specific speculative boundaries at this point, as any adjustments would be small and very dependent on the timing of large developments, land use changes, etc. Regarding Algona, there are two agreement between us. The first one was to allow some businesses within Auburn along West Valley Highway to connect to Algona's system. Subsequent development and sewer extensions made it feasible for those developments connected to Algona to, at some point int he future, disconnect from them and connect to Auburn. Also, some subdivision and boundary adjustments in those areas rendered the service responsibilities a bit muddled. Finally, there are several parcels along the northern border of Algona that are currently connected to Auburn's sewer main in Boundary Blvd. Those connections had occurred years earlier. The 2020 agreement between the cities, was our resolution of this unclarity, and established Algona as the service provider for the parcels within the city limits of Algona, and the same for the parcels in Auburn. The result of this agreement is that the city boundaries between Algona and Auburn also serves as the service area boundary.
7	20	Figure 1.2 and Section 1.4	There appears to be at least 5 parcels in the northeast portion of the District's service area which are also included in the adjacent City of Kent service area. It does not seem possible to have service provided by both entities. Please further explanation withing Section or revise the map to accurately reflect service areas.	The interlocal agreements between our agencies include provisions for the respective Public Works Directors or General Managers to agree that the other agency may serve parcels that are in the other's designated service areas for reasons of efficiency, etc. Since these particular adjustments are speculative and have not yet resulted in service to those parcels, we have adjusted the service area boundary to reflect the existing one. We have added labels to the map to reflect the locations of letters of agreement, but have not included definitive boundaries. If and when those systems are established and if it makes sense for them to be permanent, the two agencies will apply to the Boundary Review Board to permanently change the boundary.

8	27	2.3.3	WAC 173-240-104 extends to grinder pumps that serve a single residence. Policy 3.5 states that "the City will not install, own, or maintain (outside of emergencies) any part of a private non-gravity system". Please explain what policies, ordnances, or agreements the District has in place to ensure that these non-gravity systems are properly designed and that the District has access rights in the case of emergency to protect public health and water quality?	All connections to the sewer system require a sewer permit, and in the case of the use of a grinder pump, that permit is designated with the subtype, "grinder pump." Consistent with Policy 3.3 and 3.5 and Auburn City Code 13.20.200, that permit application is reviewed by public works staff to verify that gravity is infeasible and to request design information including pump system specifications, alarm locations (audio and visual), and pressure line location. For your reference, I have included several city code sections related to this practice: Auburn City Code (ACC) 13.20.200 **Permits-Application-Inspection-Fee** An application for any side sewer permit shall be made with the city, which the applicant shall supplement with plans, specifications or other information as deemed necessary by the city. The sewer permit fee shall be imposed based on the fee schedule that is in effect at the time the submitted utility permit application is determined to be complete and shall be payable prior to issuance of the permit. Any work undertaken within a public right-of-way is subject to Chapter 12.66 ACC for work within the city or subject to other applicable permit requirements as specified by the city or county with jurisdiction where the work is being performed. Also, The City has the ability to enter the property for inspections (13.20.500) and to complete repairs (13.20.510) 13.20.500 **Access for inspections.** The city shall have access, subject to the provisions of Chapter 1.20 ACC, to all buildings and premises served by the sewer system for the purpose of inspecting pipes and fixtures. Inspection shall include verification of the manner in which domestic water is being used, and the satisfactory compliance with the provisions of this chapter. 13.20.510 **Inadequate systems – Action to effect compliance.** When any side sewer or private sewage system is constructed, connected or repaired and does not comply with the provision of this chapter, and is a menace to health or is liable to cause damage to public or private property, the city shall give notice thereof to the owner, agent or occupant of the property in which such condition exists. Should the owner, agent or occupant fail to remedy the condition within the time specified in the notice, the city may perform such work as may be necessary to comply with this chapter. The cost of such work shall be collected from the person responsible for the condition or the amount thereof shall become a lien upon the property and shall be collected in the manner provided by
9	27	2.3.3	Policy 3.7 appears to be in conflict with WAC 173-240-104. Please clarify how the District ensures that private systems are property designed and maintained. Are designs reviewed? Are private systems inspected by the District at some frequency? Does the District have rights to access and work on private systems in an emergency? Policy 5.9 appears to commit the District to providing emergency service but does not describe how access rights are granted in emergency cases.	Auburn City Code (13.20.010.W) defines a private sewer as, "sewage conveyance facilities which are owned, operated, maintained and controlled by the property owner served by that system." and it does not include any treatment systems. They are essentially larger versions of side sewer that serve one customer, and their design is reviewed and construction inspected as part of a civil permit (grading, etc.) or the sewer connections permit. Any change to any system requires an additional permit and additional review. Similar to Item 8 (above) City Code (13.20.500, 13.20.510) provides for inspection and repair on private systems. For clarity, we modified Policy 3.7 to read: Allow private sewer conveyance systems, consistent with Washington Administrative Code (WAC) 173-240-104(3)(b), within the SSSA as long as they are designed and operated per City standards and are not part of sewer extensions to

10	41	4.2	Explain what is being done to protect the two wellheads that are within 100ft of an existing sewer line. Is there a plan to relocate those lines either proactively or during the next rehab of those lines?	Our consultant performed a more precise analysis of the distances, and found that they are very close to the 100 foot limit. We added a statement indicating that as repair or replacement of those lines occurs, we will establish a more definitive distance and address the location as part of that project. We Modified/Added to 4.2 as follows: "Most of the sewer lines are located more than 100 feet from the wellheads as stipulated for new sewer works by Ecology's CSWD (G2-1.5.3), two well sites are close to 100 feet from existing sanitary sewers in the central part of the system. As part of the sewer inspection activities outlined the Chapter 7 CIP, the distance between wellheads and sewers will be definitively measured at these sites. If sanitary sewers are within 100 feet from the wellheads, based on condition and other projects in the vicinity, the sewer distance can be addressed as part of the Sanitary Sewer Repair and Replacement/System Improvements project summarized in Chapter 7, following the outlined priority methodology.
11	50	4.5	Per WAC 173-240-050(3)(i), please include the quantity and periods of wastewater production for the industrial users presented in Table 4.2. Additionally, please provide additional information about expected future flows from industrial user expansion or including industries.	The permitted daily discharge quantities for each of the industrial users have been added to Table 4.2, and those are the quantities anticipated by the King County Industrial Waste Group. The following text was added following that table: King County Industrial Waste staff have indicated that the overall volume of industrial waste flows has generally been consistent and primarily concentrated during working hours during weekdays. While the City does not limit or prescribe the number or types of industrial businesses in the City, it is assumed that collectively, the amount and quality of future industrial wastewater flows from those businesses will be similar to existing flows.
12	64-65	Figures 5.7 and 8	It is hard to tell from these two figures if the future/planned sewer lines were included in the forward looking models. Can you confirm that the expanded basins (at minimum their flow) was included within these model runs? If they were included, it would be helpful to include the fully built out lines on these two figures to make it clear that future expansion was included.	The future planned sewer lines are not included in these figures, and the future anticipated flows were added to the nearest catchments. They are used to show capacity deficiencies within the existing system that include future flows.
13	66	5.5	Although not highlighted in red in Table 5-4, the F Street and Ellingson Road lift stations appears to be quite close to its capacity in the 2044 scenario. Why was additional monitoring or planned expansion of these LS not included in the CIP?	As currently modelled, the stations will have adequate capacity during this planning period. Two pump station condition assessments are projected to be completed during the 20-year planning period as well as two sewer plans (and hydraulic model) updates. If the projected flow increase is exceeded, specific improvements to those stations will be reprioritized as part of those evaluations.
14	75	5.8.4.1	Basin A10 also appears to have quite high I/I flow rates and peaking factor. Please explain why additional monitoring is not suggested for this basin.	Basin A10 is added to the list for future evaluation
15	85	6.4	The District is required to immediately report to Ecology all spills to the environment and back-ups of sewage into buildings. Please revise this section to include more information regarding reporting of spills/back-ups to Ecology's ERTS system.	Add: to 6.4.1 after bullet points: If any sewage is spilled to the environment or backs up into a building due to problems with the City sewer system staff will immediately report the spill to the Department of Ecology's ERTS System.

16	93	7.2.2	It is difficult to determine if all areas of deficiency identified in Figure 5.6-8 have associated projects in the CIP. It is suggested that deficiencies identified are given unique IDs and that the deficiency IDs associated with each project in 7.2.2 are added to the project descriptions of 7.2.2. Another method, figure or table could also be used to help with this comparison but additional clarity is needed.	Text in chapter 5 and 7 has been updated to better link deficiency's with CIP's The following text was added to Section 5.8.2: These areas are included withing the CIPs in Chapter 7 with some additional discussion, however not all of them have a specific CIP number associated with them. Area 1 has high I/I and is recommended for continued monitoring with a specific CIP Project 9. Area 4 is a large project with a specific CIP. Areas 2, 3 5 and 6 are all shorter lengths of piping and included within a programmatic CIP. In Tables 7.1 and 7.2, it is shown that the areas where future capacity is an issue are to be included as part of the the programmatic repair and replacement projects generated every two years +/-.
17	64-65	Figures 5.7 and 8	It is hard to tell from these two figures if the future/planned sewer lines were included in the forward looking models. Can you confirm that the expanded basins (at minimum their flow) was included within these model runs? If they were included, it would be helpful to include the fully built out lines on these two figures to make it clear that future expansion was included.	Flows from future projected increases in population/employment were included and added to the existing system at their most likely point of connection. The future planned sewer lines are not included in these figures, which were used to show capacity deficiencies within the existing system including those future flows.

UTRC Comments				
Comment No.	Page #	Section	Comment	Response
1			Prior to the UTRC acting on a recommendation, a signed checklist and the issued threshold determination must be provided.	The Checklist and DNS were added as Appendix D
2			The City Council must adopt the Plan prior to sending it to King County for final review and approval	The adoption is planned for December 2024
3			King County Code (13.24.010 H. Water and sewer system comprehensive plans) requires wastewater system plans to identify and describe areas of concern with respect to corrosion and odor control and steps being taken to reduce their occurrence. It does not appear that the Plan addresses odor or corrosion. Please include additional text in the plan document to address odor and corrosion concerns and steps the City plans to take.	A specific section related to odor control and erosion was added to Chapter 4 (4.5, which renumbered the next two sections) **4.5 Odor Control and Corrosion** Sewer Policy 5.11 commits the City to monitor frequent odor complaints and to act when three per month are documented. City staff investigate all odor complaints to determine their source, persistence, and potential source if it can be identified. Strategies for mitigating odor include sealing sewer manhole lids, adding bioxide to pump station wet wells to minimize the generation of hydrogen sulfide gas, and filtering wet well ventilation at pump stations. These strategies have been effective, and the City currently has no sites where persistent odor has been detected or reported. City staff assess corrosion in the system as part of manhole inspections, CCTV inspections of sewer mains, and pump station wet well maintenance activities. The City has not identified any persistent widespread problems with corrosion, but as specific incidents of corrosion are identified those observations are recorded in the City's CMMS. Strategies for managing corrosion include replacing or lining (using Cured-in-Place Pipe) sewer mains, replacing corroded manhole rings and covers, and coating concrete pump station wet wells.
4			King County Code (13.24.010 H. Water and sewer system comprehensive plans) requires wastewater system plans to compare amounts of inflow and infiltration (I/I) to the system with King County's 1,100 gallons-per-acre-per-day-standard, and steps being taken to reduce the inflow and infiltration. While the Plan does identify existing and projected I/I and indicates annual projects will be constructed to address needs, the Plan does not compare these with the County's standard. Please include text in the Plan that provides this comparison.	Added to section 5.3.2: "This I/I rate is slightly higher than the King County target value of 1,100 gpad, providing a level of conservatism in projecting future peak flows." Also added discussion in section 5.6 before Table 5.5: " King County has a target I/I rate of 1,100 gpad during the design storm. Although some basins exceed the County target, the City average I/I rate is 1,446 gpad during the design storm. "

5			The Plan recognizes some existing development within the City's sanitary sewer service area is served by on-site septic systems. How many existing on-site septic systems currently exist within the City's sewer service area? If all these on-site septic systems connected to the City's sewer system, would the system require significant improvements to accommodate the additional wastewater flow?	The future scenarios assumed the septic had been connected. The system with proposed improvements can convey the flow
6			Various figures. The City's Sewer Service Area (SSA) is masked by the City's municipal boundaries on various figures/maps. Can this boundary be shown differently to allow the SSA boundary to be seen more clearly? On various maps there appears to be a fourth area shown as unincorporated King County within the City's SSA which may be an error. This area includes Parcel Nos. 1721059045, 1721059248, 1721059249, 1721059250. These parcels are owned by the City and shown as within the City's municipal boundaries on King County i-Map.	The maps have been corrected to reflect those parcels being part of the City.
7			The Plan references and the appendix includes 7 interlocal agreements with neighboring wastewater purveyors agreeing to changes to sewer service areas. It would be beneficial if the Plan included a figure that illustrated these sewer service boundary changes.	Figure 1.2 reflects the cumulative effect of those interlocal agreements.
8			Page 1-7, Figure 1.2 Study Area, and page 3-3, Figure 3.1 City of Auburn Land Use Designations. Please add symbology that identifies the boundary of the urban growth area.	The figures have been updated, however the UGA essentially matches our City Limits, except for pockets of unincorporated KC and one pocket of Pierce County .
9			Page 2-3, Section 2.3.2 System Planning. Policy 2.5 states, "The Sanitary Sewer Utility does not intend and will not Plan to extend sanitary sewer service to or through King or Pierce County rural zoned property. Exceptions will only be considered for reasons of health, safety, or service to a school in accordance with King or Pierce County policies." Please recognize that the City of Auburn does not have the authority to connect rural zoned to its sewer system without the approval of King County. Please clarify this in the Plan.	We added the following clarifying statement to the end of Policy 2.5: " ...and with the approval of King or Pierce County."
10			Page 2-3, Section 2.3.2 System Planning. Policy 2.6 states, "Allow development where sewer is not readily available to be served by individual onsite (septic) systems, if the individual lots are suitable for onsite systems, per the requirements and approval of King County..." For unincorporated urban King County areas within the City's sewer service area, King County Code 13.24.136 only allows on-site septic systems to be permitted for single detached residences, and short sub-divisions on an interim basis it if meets specific criteria. All other development is required to be connected. Please provide clarification for unincorporated King County areas in the Plan.	We added the following clarifying words (in red) to Policy 2.6: "...per the requirements and approval of King County or Pierce County Department of Health, and the City's or Counties' development codes. The ..."
11			Page 2-3, Section 2.3.2 System Planning. It does not appear that the City has any policy that would encourage or require existing development utilizing an on-site septic system to connect to the City's sewer system. Please provide or clarify the City's policy for existing development connecting to the City's sewer system. Does the City have a proactive strategy to connect existing development to its sewer system? On page 1-4 under the King County Policy reference, text points to Chapter 5 which discusses projects that would serve currently unserved areas; however, it does not appear that there is a strategy to encourage existing development to connect to the new segments of the sewer system. Please clarify in the Plan.	The reference on page 1-4 referred to our conceptual planning as to how those areas could be served by sewer extensions but do not represent specific capital projects. The Utility/City has not committed to spending funds from existing customers for specific capital projects to extend public sewer to unsewered areas. Policies 6.15 and 6.16 do allow staff some flexibility to construct extensions, pump stations, etc. in some situations. Also, Policy 6.2 provides for the use of alternate funding for infrastructure.

12			Page 3-2, Section 3.3 Land Use. The text describes and Figure 3.1 illustrates the location of designated land uses within the City of Auburn. This section does not include any land use information addressing areas outside of the City's municipal boundary, and within its sewer service area. Please include. It would also be informational to include the total area within the City's service area and percent within unincorporated King County and other neighboring municipalities.	Figure has been updated to include all land within the service boundary and a table showing relative areas of different jurisdictions within the service area.
13			Page 4-2, Section 4.1.3 Lea Hill Sewer Basin. The text states that there is a significant unsewered area in the north portion of this sewer basin. Is this area unsewered because it is primarily undeveloped, or is there development that is currently serviced by on-site septic systems? Please clarify in the Plan.	We added the following text (in red) to that section "...Lea Hill Sewer Basin. The area is substantially developed with single family homes on lots between 1/4 acre and 1 acre that use existing on-site septic systems. The northeast..."
14			Page 4-2, Section 4.1.5 South Hill Sewer Basin. The text states, "The eastern half...of the sewer basin is currently developed as a low-density rural area and is unsewered." The reference to this area as being a rural area is misleading as it is within the designated urban growth area. It would be more appropriate to refer to the area as being a low-density residential area. Please clarify in the Plan.	We changed the word "rural" to "residential"
15			Page 4-13 Section 4.6 Water Reclamation and Reuse. The text mentions the King County Water Reclamation Evaluation Checklist was completed as part of the City's water system plan. Please provide this checklist as an appendix to this Plan. While the Plan identifies potential reclaimed water sources and notes the City will need to determine if it would be feasible source, it would be beneficial if the Plan discussed the type of capital projects that would need to be constructed to obtain reclaimed water from these sources.	The checklist has been added as Appendix E. Noted just under 4.7 (formerly 4.6) just after Checklist ", a copy of which is included as Appendix E, " Added under 4.7.2 (formerly 4.6.2): Receiving water from any of the existing treatment plants would involve the construction of long (7-15 mile) pipelines since none of them are located in or immediately adjacent to Auburn. Also, since reclaimed water cannot be mixed with potable water, all of the options listed below would also require the installation of a separate reclaimed water distribution system to convey that water directly to potential users.
16			Page 5-5, Section 5.3.2 Future Conditions Wet Weather Flow Assumptions. The text states, "Figure 5.4 identifies the portion of the collection system that is currently developed with available sewer in yellow,..."; however, the legend for this figure indicates that yellow represents "Developed with Sewer." These two phrases are not same. Please correct as appropriate.	The figure has been updated.
17			Page 5-5, Section 5.3.2 Future conditions Wet Weather Flow Assumptions. The text states that, "It was assumed that all developable parcels would be developed and connected for the 2044 scenario..." Does this assumption include the connection of existing development that is currently served by on-site septic systems? If yes, how many additional connections would be attributed to these types of properties?	Yes they were accounted for. Specific connections were not tabulated, it was assumed that there may be some redevelopement in this process, so the land use flow factors where combined with the contributing area being connected to generate the flow
18			Page 5-5, Section 5.3.2 Future conditions Wet Weather Flow Assumptions. The text states that, "It was assumed that the I/I of future sewered areas would be 1,500 gallons per acre per day..." What is the basis for this assumption?	This I/I rate is slightly higher than the King County target value of 1,100 gpad, providing a level of conservatism in projecting future peak flows, and closer to the actual level of I/I into the system. - Text has been added to this section.
19			Page 5-7, Figure 5.4, Future Contributing Areas. The legend for this figure is misleading. Many of the areas identified as "Developable" are already developed utilizing on-site septic systems. Would it be more appropriate to identify these areas as "Developable/Infill"? It would be beneficial to identify the number and location of existing on-site septic systems.	The figure has been updated
20			Page 5-10, Figure 5.6 Existing System Deficiencies, Page 5-11, Figure 5.7 2044 System Deficiencies, and Page 5-12 2044 Climate Change Design System Deficiencies. The legend on each of these figures shows that only the City's critical sewer system infrastructure was included in the system's model and analysis. Why wasn't the entire system modeled? Please include text in the Plan that describes the extent of the system that was modeled and limitations of the analysis relevant to the entire sewer system.	The modeling focused on the key conveyance infrastructure, neglecting smaller collector pipes which generally have adequate capacity to convey the flow. This approach reduces the modeling computational effort, while providing necessary conveyance information.

Dan,

I went back and found the voicemail that I somehow had missed. I'm sure it was my error that marked it "already listened to." I see your point in adding "as appropriate" to the end of Policy 2.5 and after the word "codes" in Policy 2.6. As you said, it's not likely the current wording would ever cause a problem, but it adds small amount of precision. We will plan on making that change in the plan we send to our Council and subsequently to you.

Thanks again for the prompt response to the resubmittal and sorry for missing it.

Hello Bob,
I had left you a voice mail a week or so from receiving the updated plan. I thought I had followed it up with an email…but as I look back it doesn't look like I did. I had a few minor items for clarity purposes; however, they are not substantial enough to delay a positive recommendation from the UTRC.

Dan

Hello Dan,

Our Sewer Plan, along with our overall City Comprehensive Plan (and Water and Storm as well) are scheduled to be adopted by our City Council on December 16, after which we would submit a final copy to you for UTRC, and eventually King County Council, approval. Based on our resubmitted plan and responses to your review comments, do you have any concerns that you think we have not yet addressed? Ideally we would like to resolve any outstanding issues prior to Council adoption to avoid having to amend it later.

Thanks again for your prompt first review and associated discussion.

Hi Robert,

Thank you for your patience. Your revised draft came in the day before I was out for a couple of weeks on holiday. So this review took me a bit longer than I hoped. The edits and responses look good to me so we should be ready to approve it once you have Council adoption, signature on the PE stamp, and remove the "Draft" labels.

Let me know if you have any questions for me.
Kind regards,

Sean Wilson, P.E.

TM 1 MODEL CALIBRATION REPORT

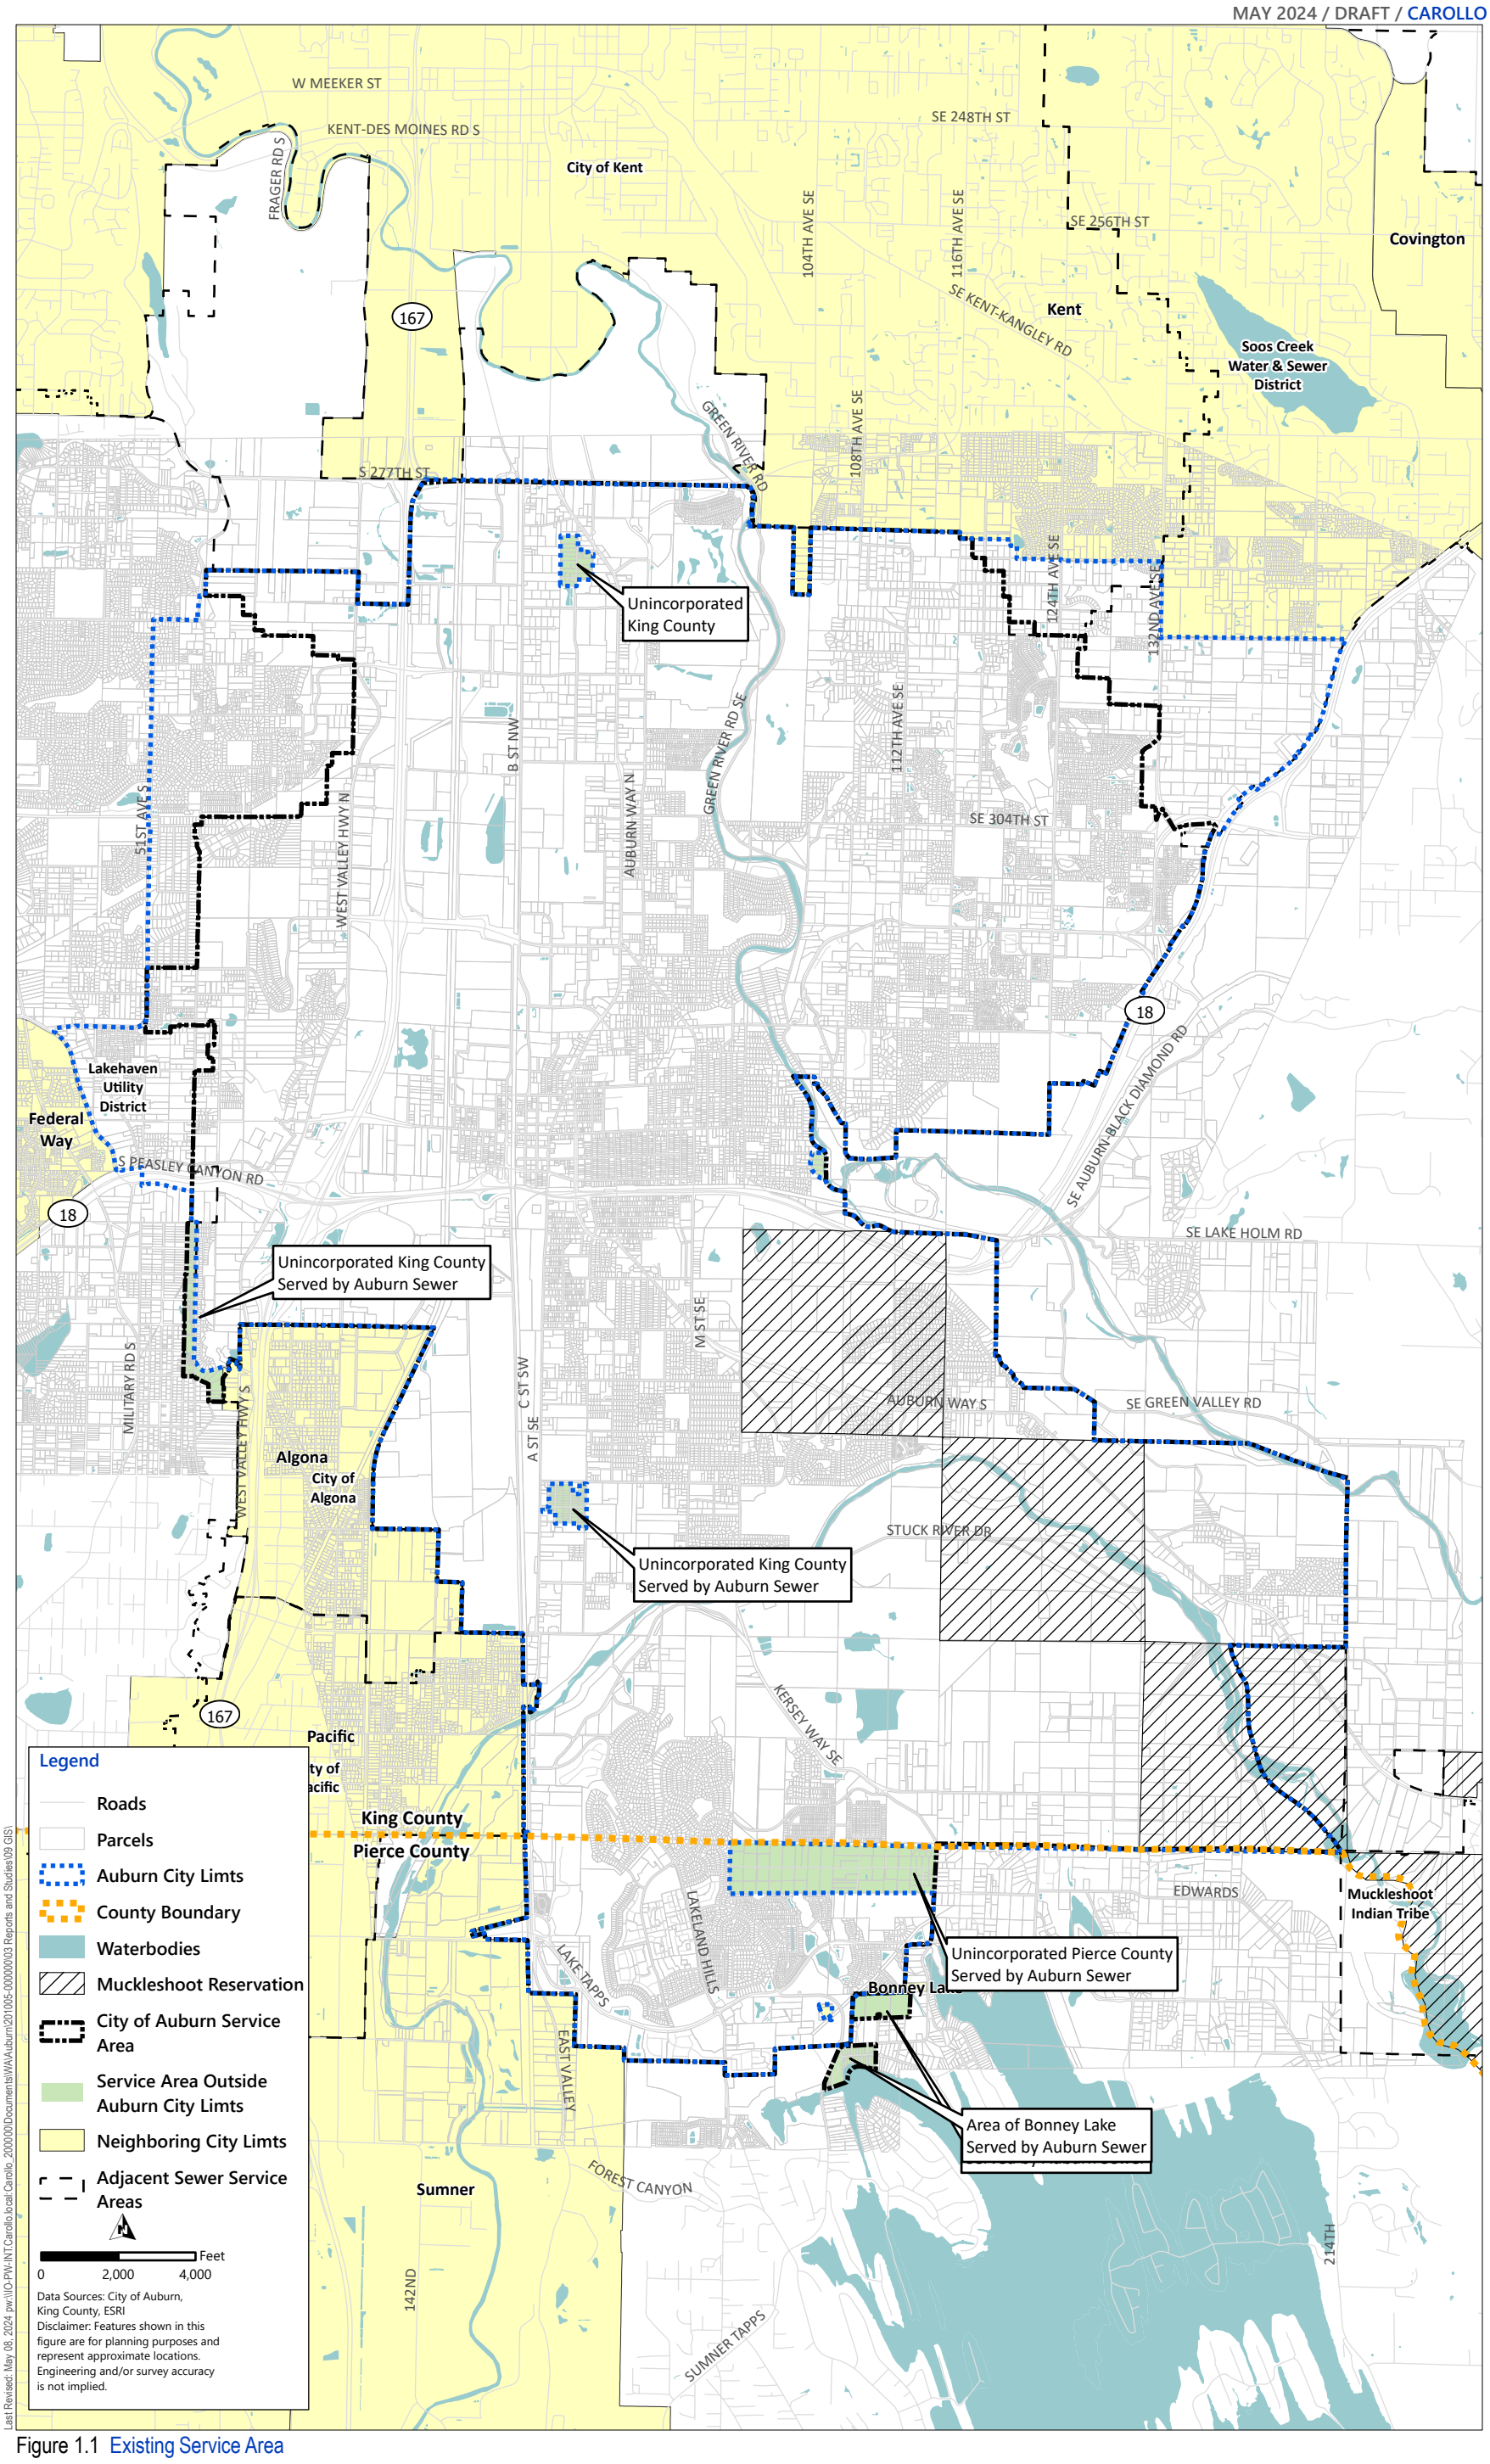
1.1 Introduction

Sanitary Sewer collection system models are valuable tools used to assess the performance of collection systems during dry and wet weather conditions, and to plan for future improvements. These models provide a means to simulate the impact of different sized storms on the collection system and determine where system deficiencies are likely to occur. In addition, a well-calibrated model provides an easy way to test alternative improvement scenarios. This Technical Memorandum summarizes the City of Auburn's (City) sewer collection system hydraulic model update and calibration for use in the City's sewer system conveyance planning.

1.2 Existing Service Area

The City's service area is shown in Figure 1.1. The service area contains approximately 17,968 acres. The current service area includes most of the City limits, parts of City of Kent, some unincorporated areas of both King and Pierce County's, and part of the Muckleshoot Indian Reservation.



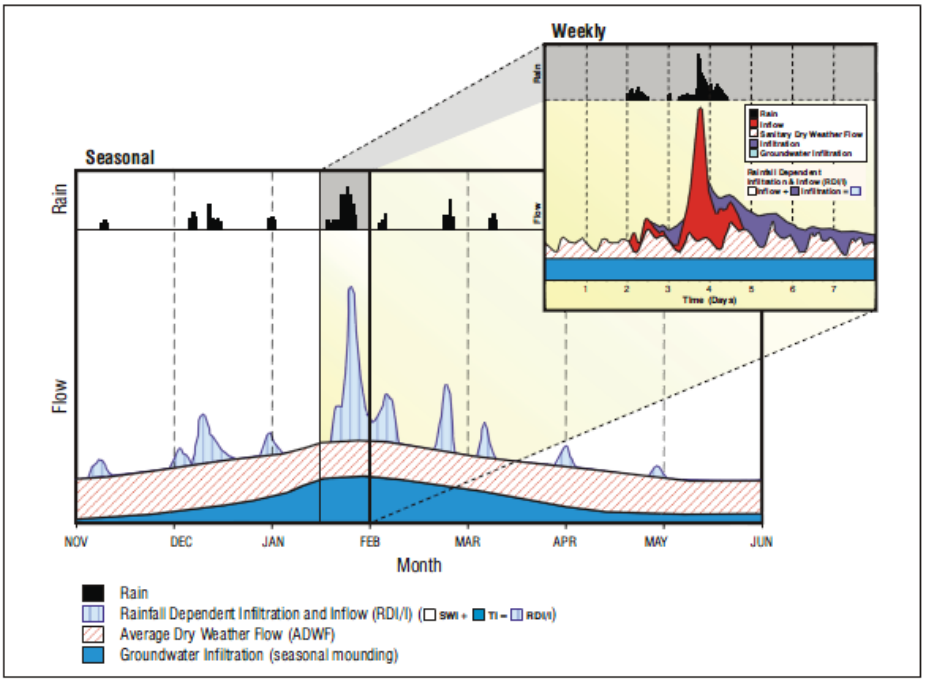


Figure 1.1 Existing Service Area

1.3 Sewer Collection Flows

Sewer collections systems are intended to convey sanitary flows, but frequently have additional flows from other sources. The different flow components are described in the section below and illustrated in Figure 1.2.

1.3.1 Dry Weather Flow Components

Average dry weather flow (ADWF) is the flow that is always entering the collection system on a daily basis. There are two primary components of ADWF, base wastewater flow (BWF) that is the sanitary flow the system is intended to convey, and dry weather ground water infiltration. ADWF was estimated from an average of dry weather flow (DWF) data at each flow meter from 2020 to 2022. Section 1.4 describes the flow monitoring efforts performed by ADS Environmental Services (ADS), which went into determining the ADWFs. The ADWF serves as the baseline flow in the hydraulic model.

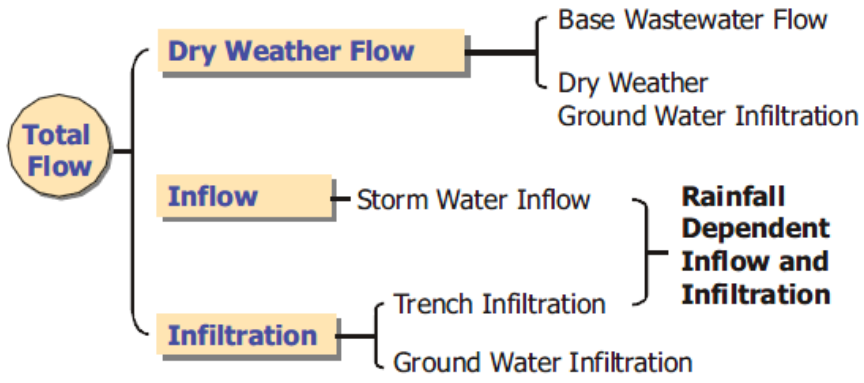

Figure 1.2 Typical Wastewater Flow Components

Note: This figure is not based on flow data specific to the City.

1.3.1.1 Base Wastewater Flow

The BWF is the sanitary flow generated by routine water usage of the collection system service area residential, commercial, and industrial customers. Conveying this flow is the primary function of the collection system. The flow has a diurnal (24-hour) pattern that varies by individual customer's water use patterns. Typically, a residential diurnal pattern has two peaks with the more pronounced peak following the wake-up hours of the day, and a less pronounced peak occurring in the evening. Commercial and industrial patterns, though they vary depending on the type of use, typically have more consistent higher flow patterns during business hours, and lower flows at night. Furthermore, the diurnal flow pattern of a weekend may vary from the diurnal flow experienced during a weekday. Diurnal patterns are applied to ADWFs, and cumulatively make up the flows through the wastewater collection system. The diurnal patterns utilized for the City's collection system basins are developed in Section 1.4.2.1.

1.3.1.2 Dry Weather Groundwater Infiltration

Dry weather groundwater infiltration (GWI) will enter the sewer system when the relative depth of the groundwater table is higher than the depth of the pipeline and the sanitary sewer pipe, allowing infiltration through defects such as cracks, misaligned joints, and broken pipelines. Dry weather GWI (or base infiltration) cannot easily be separated from BWF by flow measurement techniques. Therefore, dry weather GWI is typically grouped with BWF.

1.3.2 Wet Weather Flow Components

Wet weather flow (WWF) includes two components:

- Inflow and infiltration (I/I): The stormwater I/I response in the sewer system to rainfall is seen immediately (inflow) or within hours after the storm (infiltration).
- GWI: Wet weather GWI is not specific to a single rainfall event, but instead from effects of saturated soils on the sewer system over the entire wet weather season. The depth of groundwater rising above the pipe invert elevation causes GWI. Sewer pipes within close proximity to a body of water can also be greatly influenced by groundwater effects.

1.3.2.1 Inflow and Infiltration

I/I are rainfall derived flows in the collection system from specific storm events. Inflow is stormwater that enters the sewer system via a direct connection to the system, such as roof drain and downspout connections, leaky manhole covers, and inappropriate storm drain connections. Infiltration is stormwater that enters the sewer system by percolating through the soil and entering through foundation drains and sumps inappropriately connected to the system, defects in pipelines, manholes, and joints. Some common sources of I/I are shown in Figure 1.3. The adverse effects of I/I entering the sewer system is increases in both flow volume and peak flows such that the sewer system may operate at or above its capacity, as illustrated in Figure 1.4. If too much I/I enter the sewer system, sanitary sewer overflows (SSO) could occur.

1.3.2.2 Groundwater Infiltration

GWI, one of the components of I/I, is associated with extraneous water entering the sewer system through defects in pipes and manholes while the ground is saturated during the wet weather season. GWI is related to the condition of the sewer pipes, manholes, and groundwater levels. GWI may occur throughout the year, although rates are typically higher in the late winter and early spring in the Pacific Northwest.

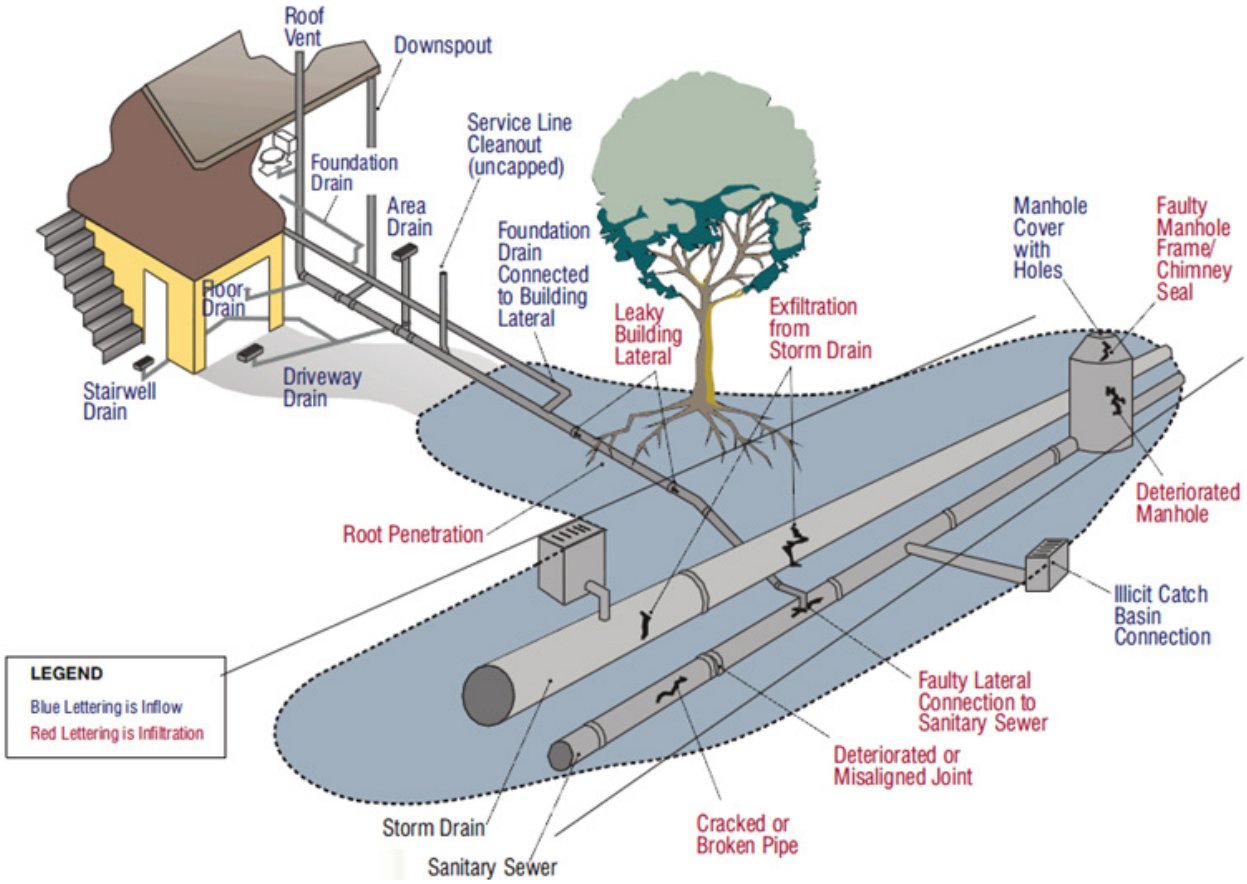

Figure 1.3 Typical Sources of I/I

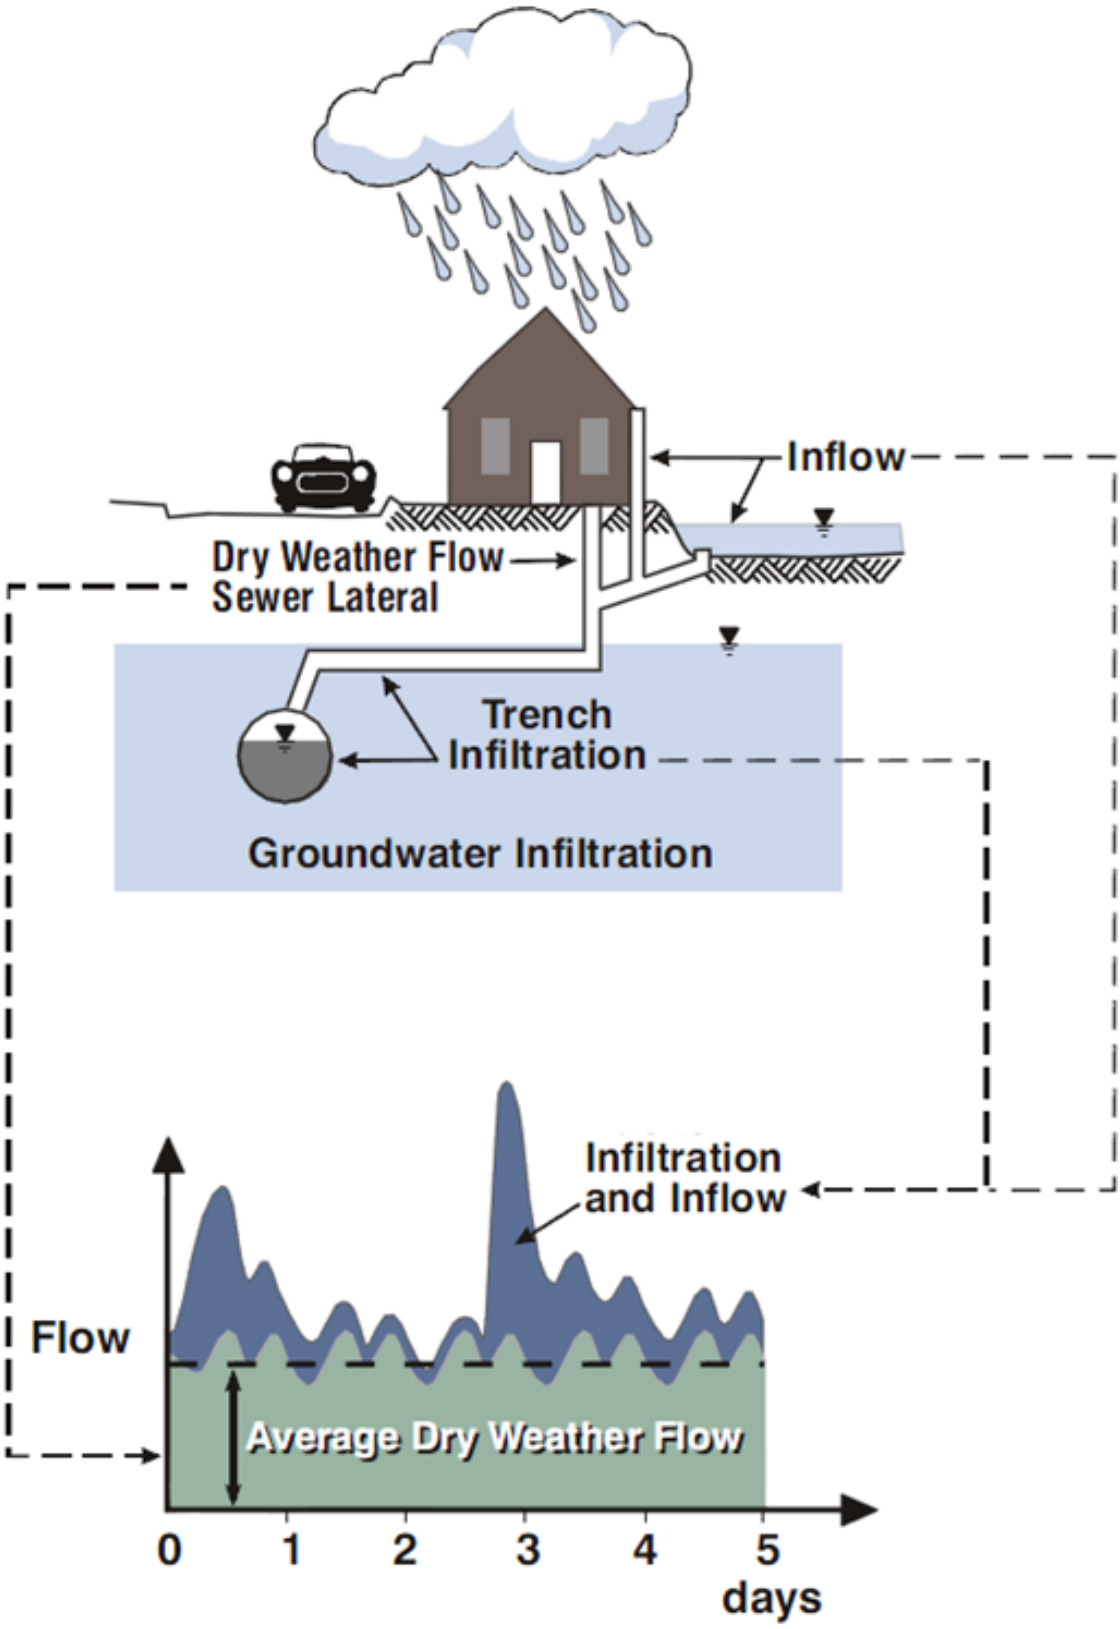

Figure 1.4 Typical Effects of I/I

1.4 Flow Monitoring Program

Prior to the Comprehensive Sewer Planning effort, the City contracted with ADS to conduct a temporary flow monitoring program within the City's sanitary sewer collection system. The City also obtained flow data from meters within the City that are part of King County's larger flow monitoring program. The purposes of the flow monitoring program were to collect data for correlating actual collection system flows to the hydraulic model predicted flows, evaluate the system's capacity, and estimate basin I/I. The flow monitoring data was collected for a period of two years of wet season, monitoring from 2020 to 2022. The "Auburn WA 2020-21 Draft I&I Report v1" prepared by ADS summarizes the flow monitoring program and was submitted to the City as a stand-alone report. The report can be found in Attachment 1A.

1.4.1 Program Description

1.4.1.1 Flow Monitoring Sites and Tributary Areas

A total of 40 sewer basins were monitored during the flow monitoring period from 2020 to 2022 within the service area, and seven King County meters recorded data within the City. A total of 20 of the meters and all seven of the King County meters recorded data over the first wet season from October 2, 2020 to April 15, 2021. Four meters recorded data from 2020 to 2022. The remaining 16 meters were sub-basin monitoring over the 2021-2022 wet weather season.

The remainder of this report will focus on the 22 flow monitoring locations that encompass larger tributary areas and have accurate data for the first wet season period. These meters were selected for calibration and offer the best distribution of data across the collection system and encompass the City's critical sewered areas. These 22-meter locations are identified in Figure 1.5. Table 1.1 lists the flow monitoring locations that were selected for calibration and the diameters for the associated sewers. Figure 1.6 provides a schematic illustrating all 47 flow monitoring locations relationship to help understand how the basins connect and the time data was recorded at each meter site. Figure 1.7 provides the same schematic showing the meters that were selected for model calibration.

Meter data quality was reviewed at all sites and deemed acceptable to use for model calibration. The quality of meter data and other trends in the flow can be determined from scattergraphs, which plot the depth versus velocity as compared to the manning's curve for the pipe segment. Scattergraphs for each site can be found in the Flow Meter Quality Review, Attachment 1B.

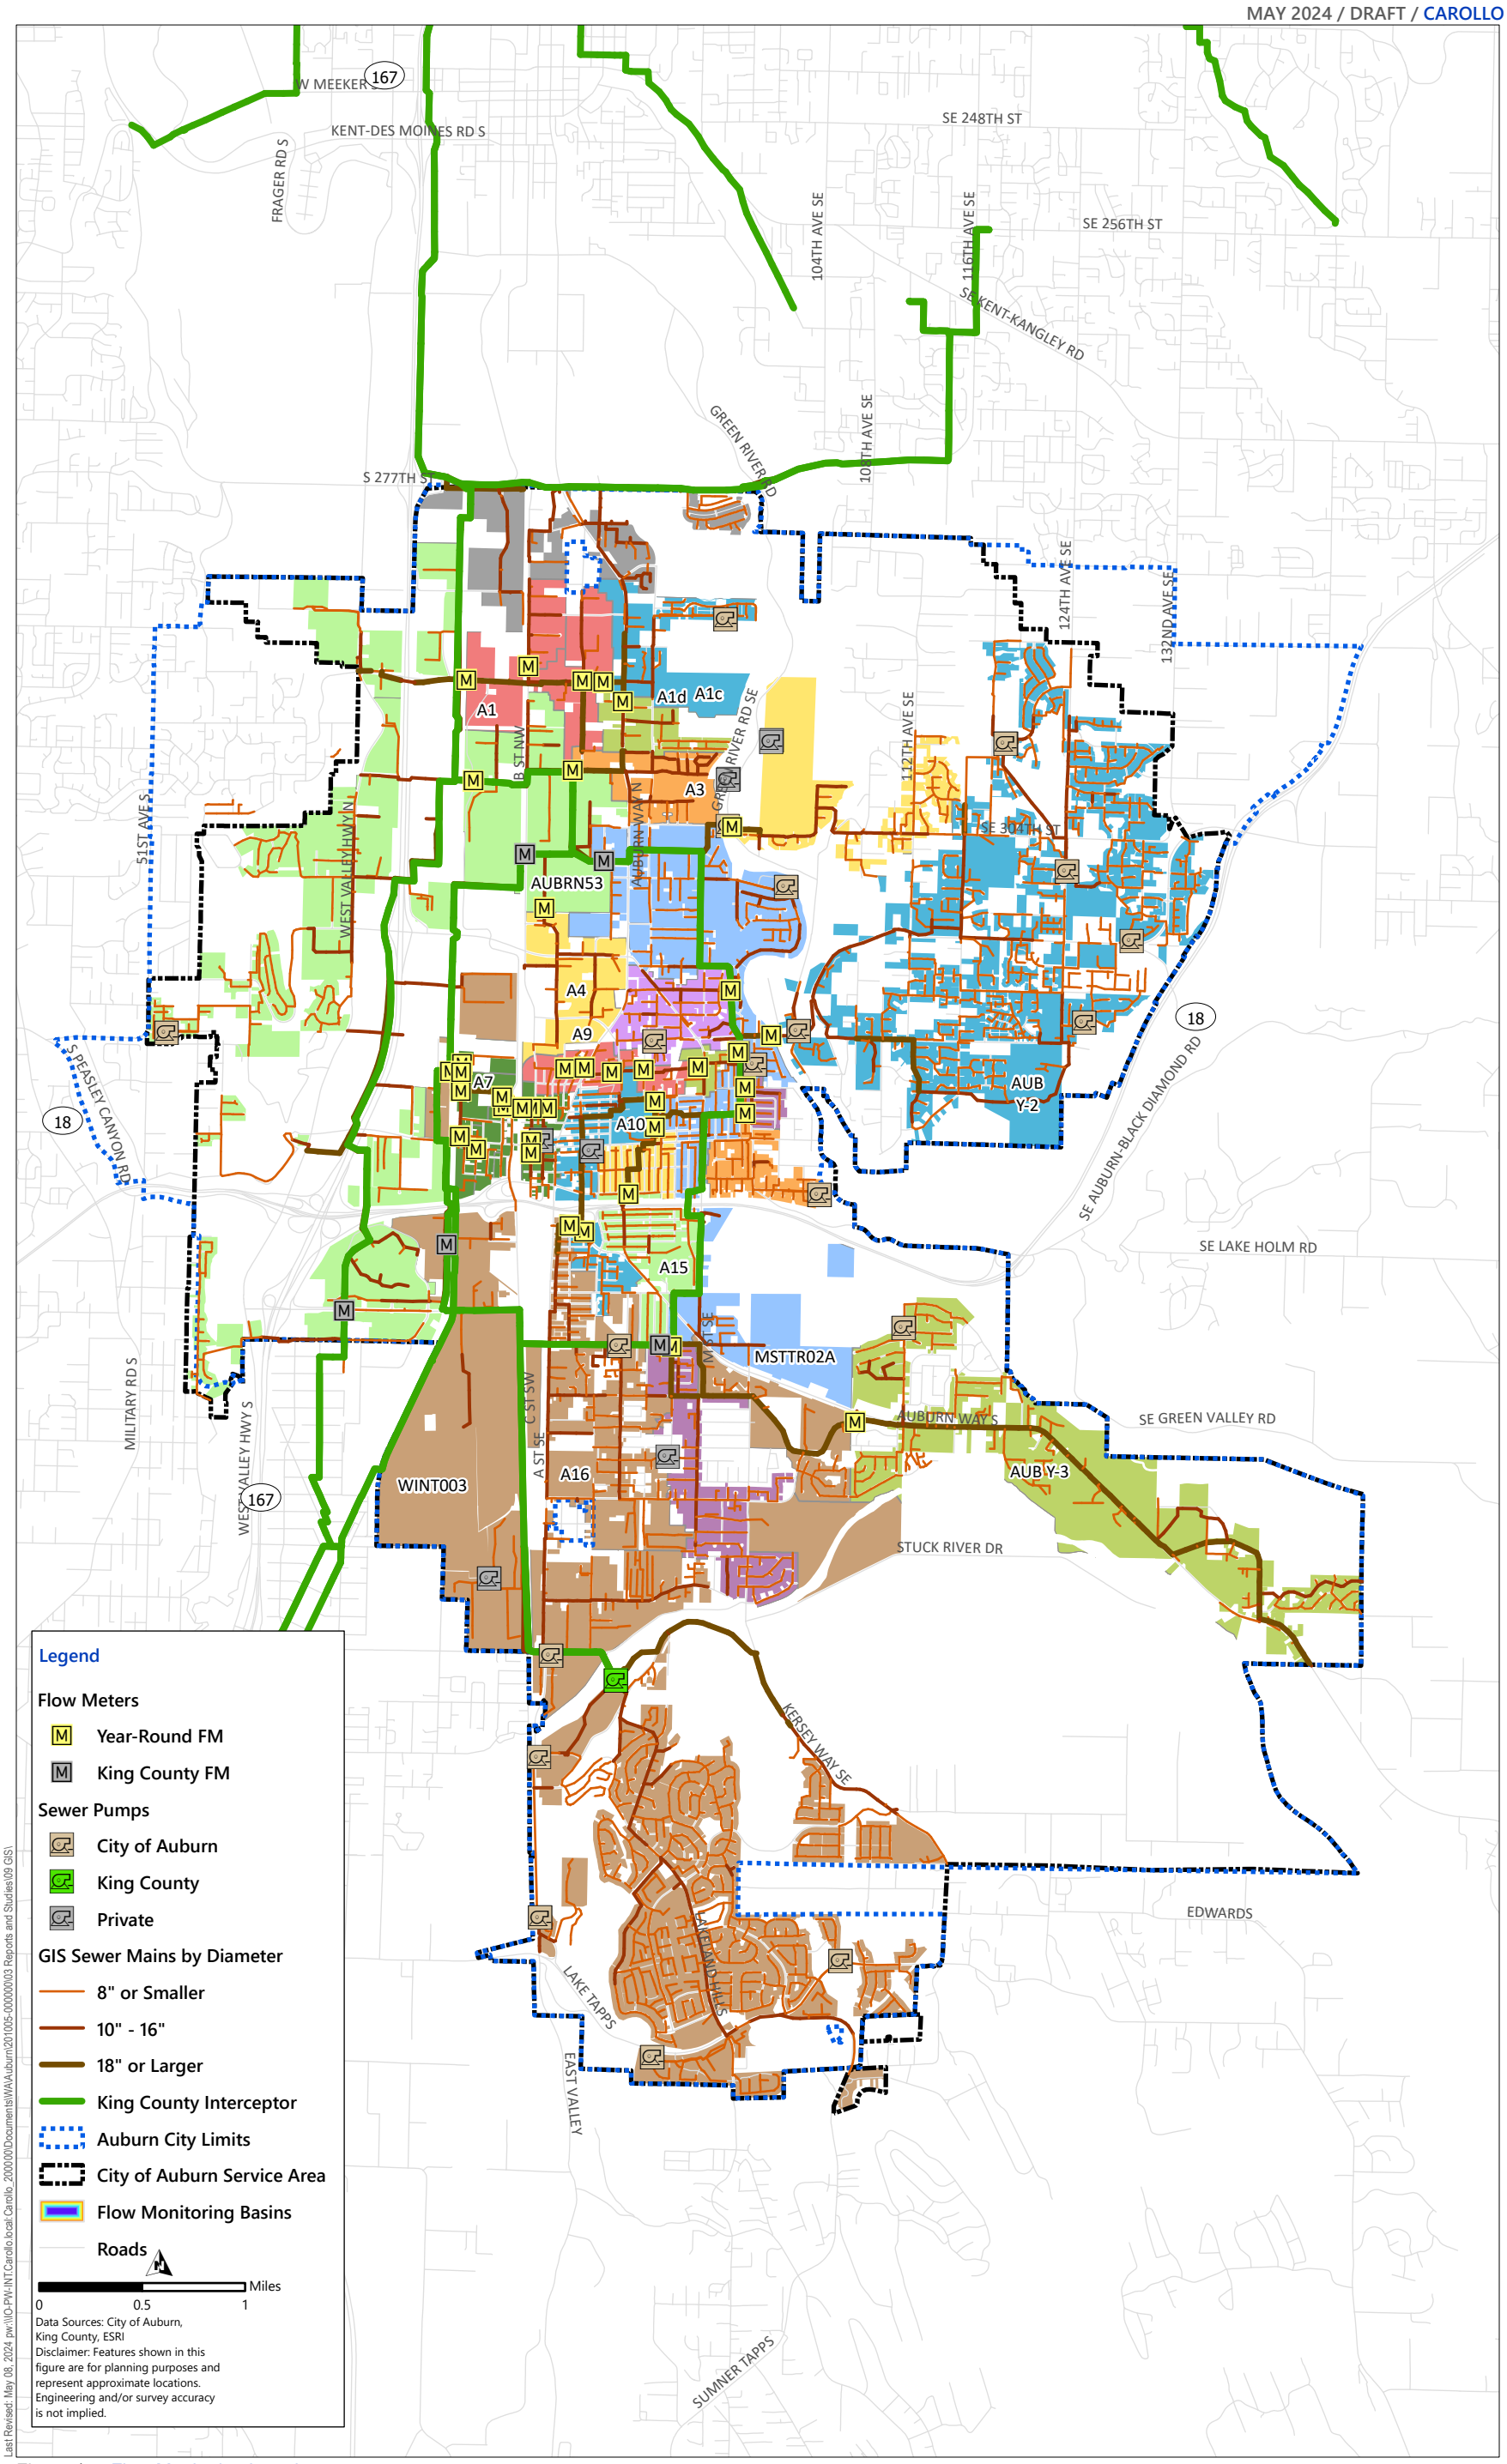

Figure 1.5 Flow Monitoring Locations
CITY OF AUBURN
2024 COMPREHENSIVE SEWER PLAN

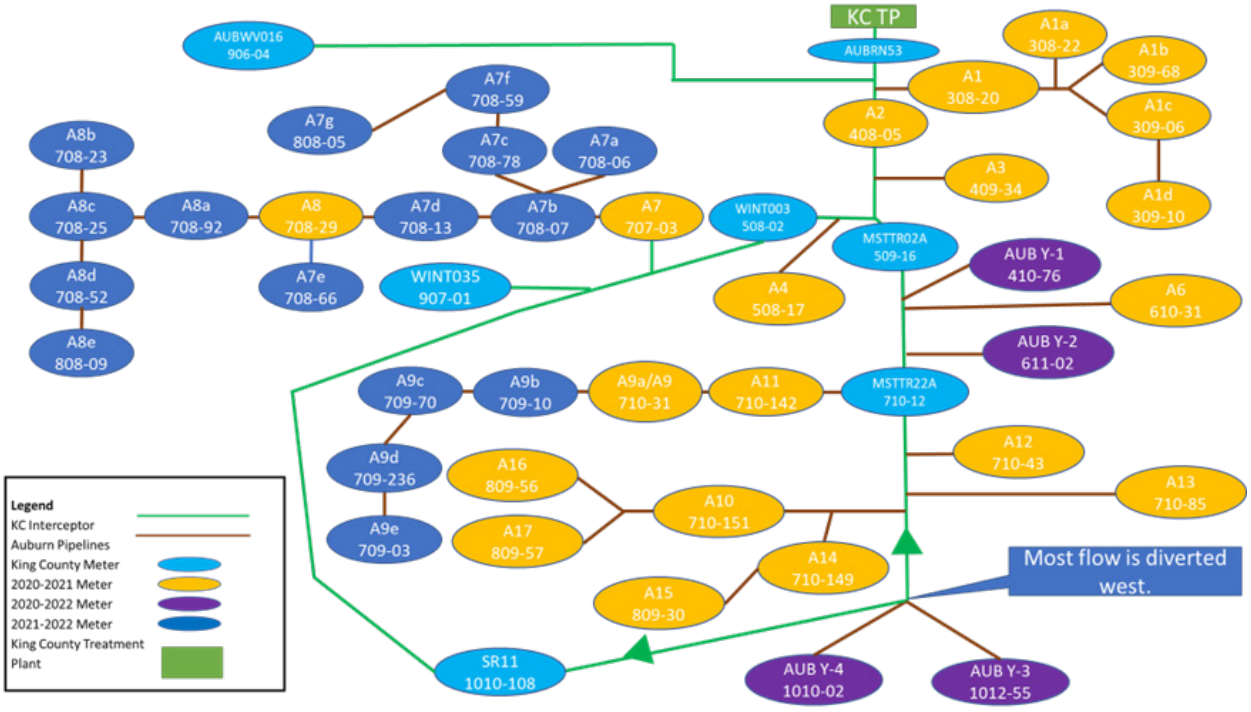

Figure 1.6 Flow Monitoring Schematic

Figure 1.7 Flow Monitoring Schematic of Meters Chosen for Calibration

1.4.1.2 Flow Meter Description

The flow meters used were area velocity meters. The velocity meter measured water with a Doppler signal and the depth measured with either a submerged pressure sensor or level transducer. Level was converted to area based on the pipe diameter. ADS selected the optimal type of flow meter to use on a site-to-site basis based on the hydraulic characteristics at each site, as well as other factors.

ADS conducted an analysis of the data retrieved from each flow meter and made adjustments as needed for calibration based on the field measurements. The flow at each meter was then calculated at 15-minute intervals based on the continuity equation:

$$Q = V \times A$$

Where:

- Q = Pipeline flow rate, cubic feet per second.
- V = Average velocity, feet per second.
- A = Cross sectional flow area, square feet.

1.4.1.3 Rain Gauges

One rain gauge was installed by ADS to record rainfall that occurred throughout the flow monitoring program and six existing king county rain gauges were used. The location of the rain gauge is shown in Figure 1.5.

1.4.2 Flow Monitoring Results

The flow monitoring program data were evaluated by components including DWF, rainfall, and WWF. Data collected from flow meter AUB A-1 is presented throughout this Technical Memorandum as an example of the type of data and the results from the flow monitoring program. Results for all other meters are included in Attachment 1B.

1.4.2.1 DWF Data

Base flow can be estimated for a wastewater collection system by comparing DWF and WWF at the flow monitoring locations. To estimate ADWF for more specific areas, such as individual wastewater basins, DWF's are typically estimated based on the area contributing to flows and flow coefficients developed for each land use type. This method is based on the assumption that areas with similar land uses, such as low-density residential parcels, produce equivalent quantities of wastewater flow on a per area basis. System-wide flows can be compared to known flows at flow monitors to verify accuracy. This method of estimating base flows is an industry standard for planning and provides sufficiently accurate data for planning purposes.

Existing ADWFs for each basin were estimated using data from the flow monitoring program for each of the flow monitoring basins. ADWF was developed using the driest days from the flow monitoring period based on the following set of minimum criteria:

- Less than 0.1 inch of rain in the previous 24 hours.
- In addition, those dry days that exhibited unusual flow patterns were not used to generate net dry day flow values for a basin.

Characteristic dry weather 24-hour diurnal flow patterns for each site were developed from hourly data. The hourly flow data were also used to calibrate the hydraulic model for the observed DWF's during the flow monitoring period. Hourly patterns for weekday and weekend flows vary and were separated to better define DWF. An example of the ADWF from Flow Meter AUB A-1, are shown in Figure 1.8. Both gross and net ADWF are developed for each meter data set. Gross ADWF corresponds to the total measured flow at the meter and includes all upstream areas while net basin flows are those associated only with the basin as monitored by its meter of the same name, and therefore excludes all flow from upstream meters (if any). A summary of the DWFs is outlined in Table 1.2.

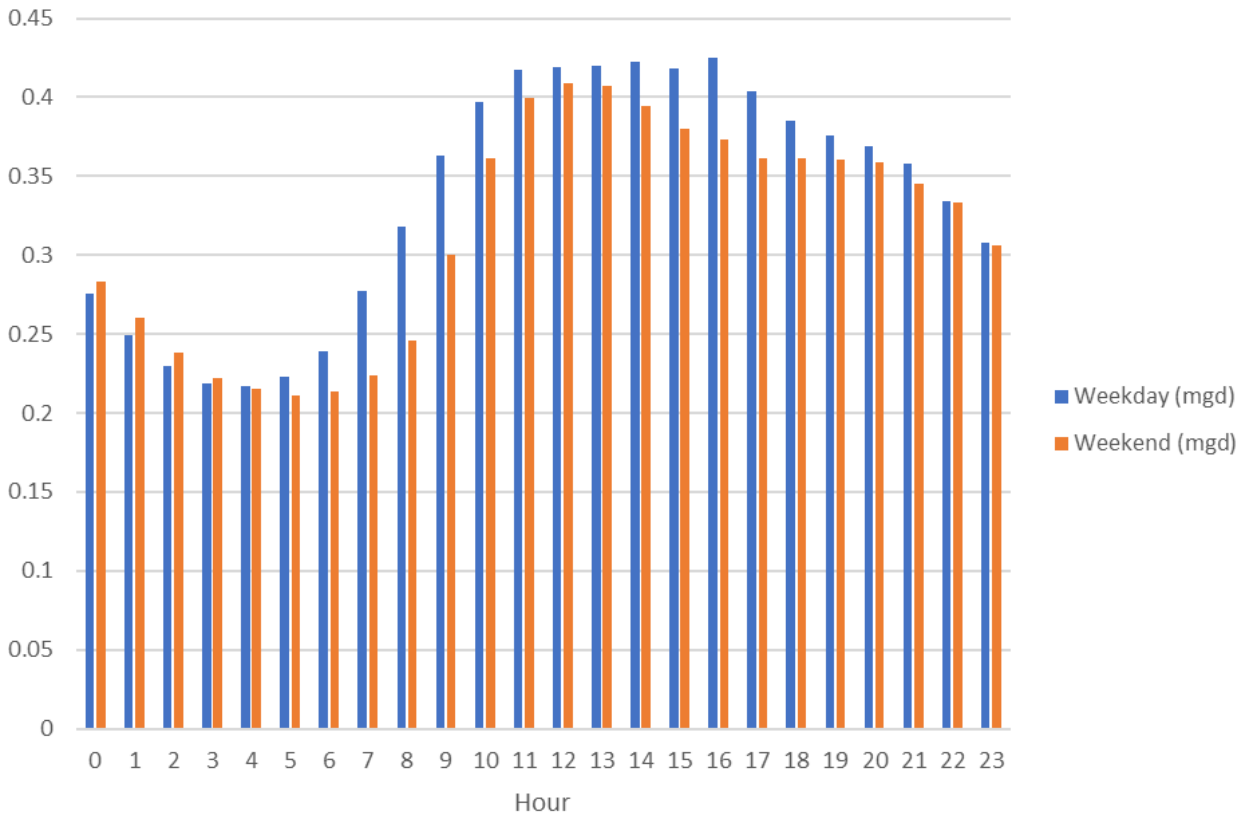

Figure 1.8 Typical Weekday vs Weekend DWF (Meter AUB A-1)

Table 1.2 ADWF Development Summary

Meter ID	Weekday Gross ADWF (mgd)	Weekend Gross ADWF (mgd)	Weekday/Weekend Ratio	Gross ADWF (mgd)	Net ADWF (mgd)

AUBRN53	7.817	7.800	1.002	7.812	0.949

Abbreviations: mgd - million gallons per day.

1.4.2.2 Rainfall Data

An important part of the flow monitoring program is the collection and analysis of rainfall data. Four significant rainfall events occurred during the course of the flow monitoring period, as well as a few other relatively minor events. The storms recorded during the flow monitoring program generated an I/I response in the collection system and were appropriate for I/I analysis and model calibration purposes. The hourly flow measured at seven different rain gauges recording rainfall over the course of the flow monitoring program are illustrated in Figure 1.9. Figure 1.10 illustrates the total accumulation of rainfall over the course of the flow monitoring period for the gauges including the ADS tipping bucket type rain gauge (RG41Y). Table 1.3 summarizes the four largest events over the total rainfall period, recorded at the RGAUB rain gauge. The RGAUB rain gauge best represented the rainfall distribution between the gauges and was used in the model for WWF calibration.

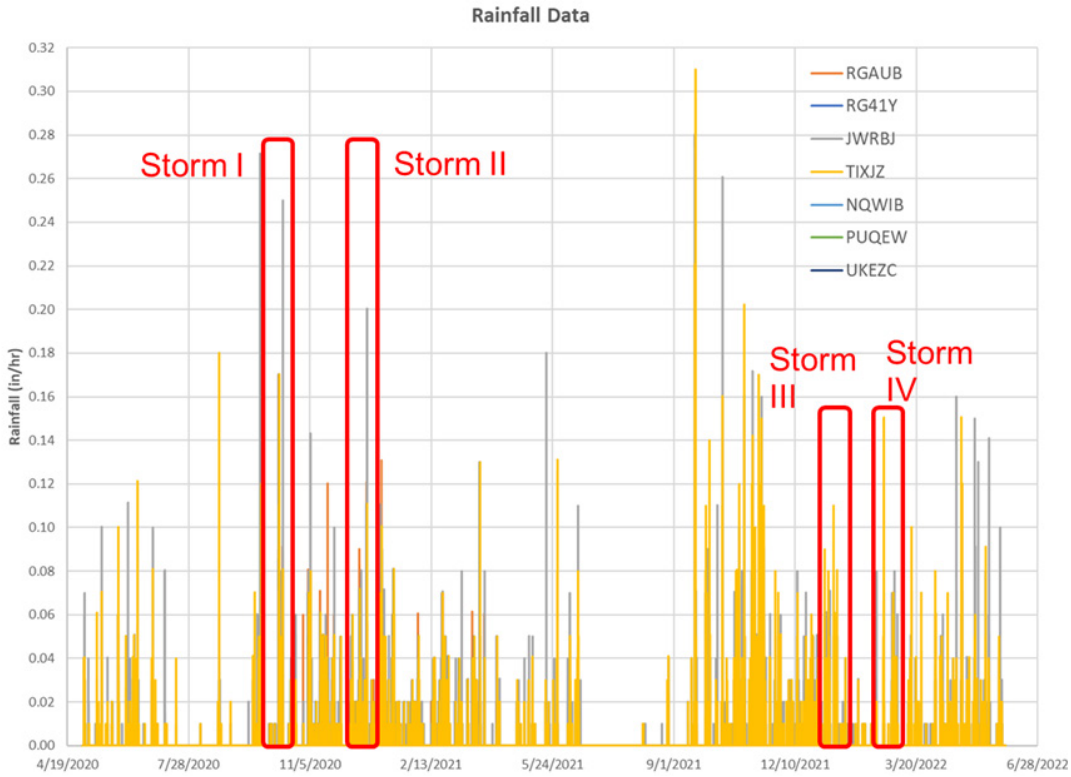

Figure 1.9 Rainfall Intensity

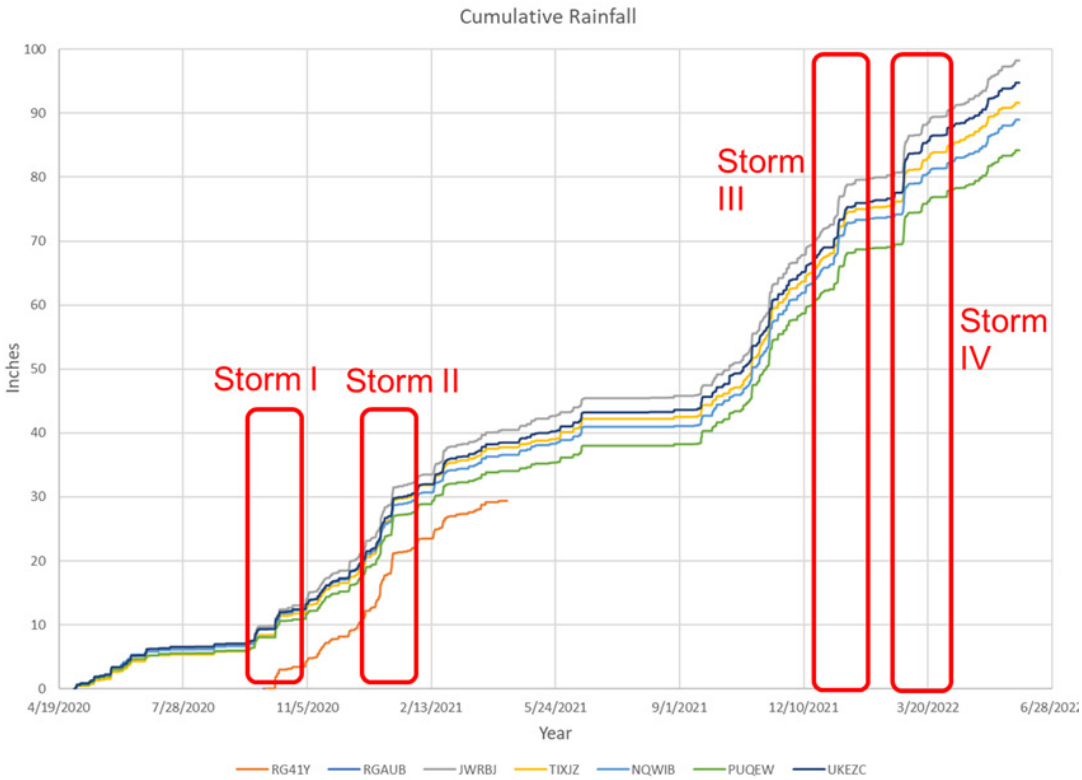

Figure 1.10 Cumulative Rainfall

Storm Event	Start Date	End Date	Total Event Rainfall (inch)	Max 24-hour Volume (inch)	Peak Intensity (inch/hour)
Storm I	October 6, 2020	October 13, 2020	1.98	1.52	0.17
Storm II	December 30, 2020	January 6, 2021	4.06	1.66	0.13
Storm III	January 8, 2021	January 15, 2021	3.20	2.08	0.06
Storm IV	February 18, 2021	February 25, 2021	1.67	1.31	0.07

1.5 Zoning and Land Use Data

Land use designations and regulations provide important information in evaluating existing sewer system capacity. Land use determines the area available for various types of development including both single-family and multi-family residential development, as well as commercial and industrial uses that provide the economic base necessary to support residential development.

Land use information is an integral component in estimating the amount of wastewater generated within any City. The type of land use in an area will affect the volume of wastewater generated. Additionally, the service area is typically comprised of both sewered and unsewered areas: sewered areas contribute flow to the collection system, while unsewered areas are vacant, undeveloped land, or development such as parks or parking facilities without a wastewater connection and do not currently contribute flow to the collection system.

Future land use designations can be different from the existing zoning designations. A relationship between existing and future designations was developed, based on the Comprehensive Land Use Plan. This relationship was expanded based on the City's geographic information system (GIS) Table 1.4 summarizes the correlation between zoning and land use and was used to develop wastewater flow coefficients.

Table 1.4 Existing Zoning and Future Land Use Correlation

Land Use Designation	Zoning
Residential Conservancy	Residential Conservancy
Single Family	Residential 20, 16, 7, 5, 1 du/Acre, Planned Unit Development District, Lea Hill Overlay
Moderate Density Residential	Residential 10 du/acre
Heavy Commercial	Heavy Commercial District, Mixed Use Commercial
Light Industrial	Light Industrial District, Central Business District
Light Commercial	Light Commercial District, Neighborhood Shopping District
Heavy Industrial	Heavy Industrial District
Multi-Family	Residential Manufactured/Mobile Home Community
Institutional	Institutional Use District, Public Use District, Airport Landing Field District
Downtown Urban Center	Downtown Urban Center
Neighborhood Commercial	Residential Office District, Residential Office District-Hospital
Open Space	Open Space
Parks	Parks

Abbreviations: du/acre – dwelling units

1.5.1 Zoning and Existing Served and Connected Area

The current zoning within the existing service area is shown in Figure 1.11. Right-of-Ways, unbuildable land, open space and parks were removed from this analysis, as these areas are assumed to contribute no sanitary flows to the collection system. Table 1.5 provides a summary of the zoning categories and acreages for the existing service area and connected area from each category.

Table 1.5 Existing Zoning Summary

Zoning	Area (acres)	Percent of Total Area
Airport Landing Field District	110	0.6%
Central Business District	28	0.2%
Downtown Urban Center	91	0.5%
Heavy Commercial District	1,183	6.6%
Heavy Industrial District	776	4.3%
Institutional Use District	1,041	5.8%
Lakeland Hills South Special Plan Area – Planned Unit Development	667	3.7%
Light Commercial District	242	1.3%
Light Industrial District	1,272	7.1%
Mixed Use Commercial	67	0.4%
Neighborhood Shopping District	9	0.0%
Open Space/Parks	1,125	6.3%
Planned Unit Development District	136	0.8%
Public Use District	531	3.0%
Residential 1 du/acre	751	4.2%
Residential 10 du/acre	205	1.1%
Residential 16 du/acre	38	0.2%
Residential 20 du/acre	511	2.8%
Residential 5 du/acre	2,758	15.3%
Residential 7 du/acre	1,617	9.0%
Residential Conservancy	1,245	6.9%
Residential Manufactured/Mobile Home Community	443	2.5%
Residential Office District	75	0.4%
Residential Office District-Hospital	1	0.0%
Terrace View District	50	0.3%
Unclassified Use District	379	2.1%
Unknown(1)	501	2.8%
Right-of-Way	2,116	11.8%
Total	**17,968**	**100.0%**

Notes:
(1) Land Use is based on City's GIS, areas within the service boundary, but outside City limits including the area in Kent, Bonney Lake and unincorporated King and Pierce County are listed as Unknown.

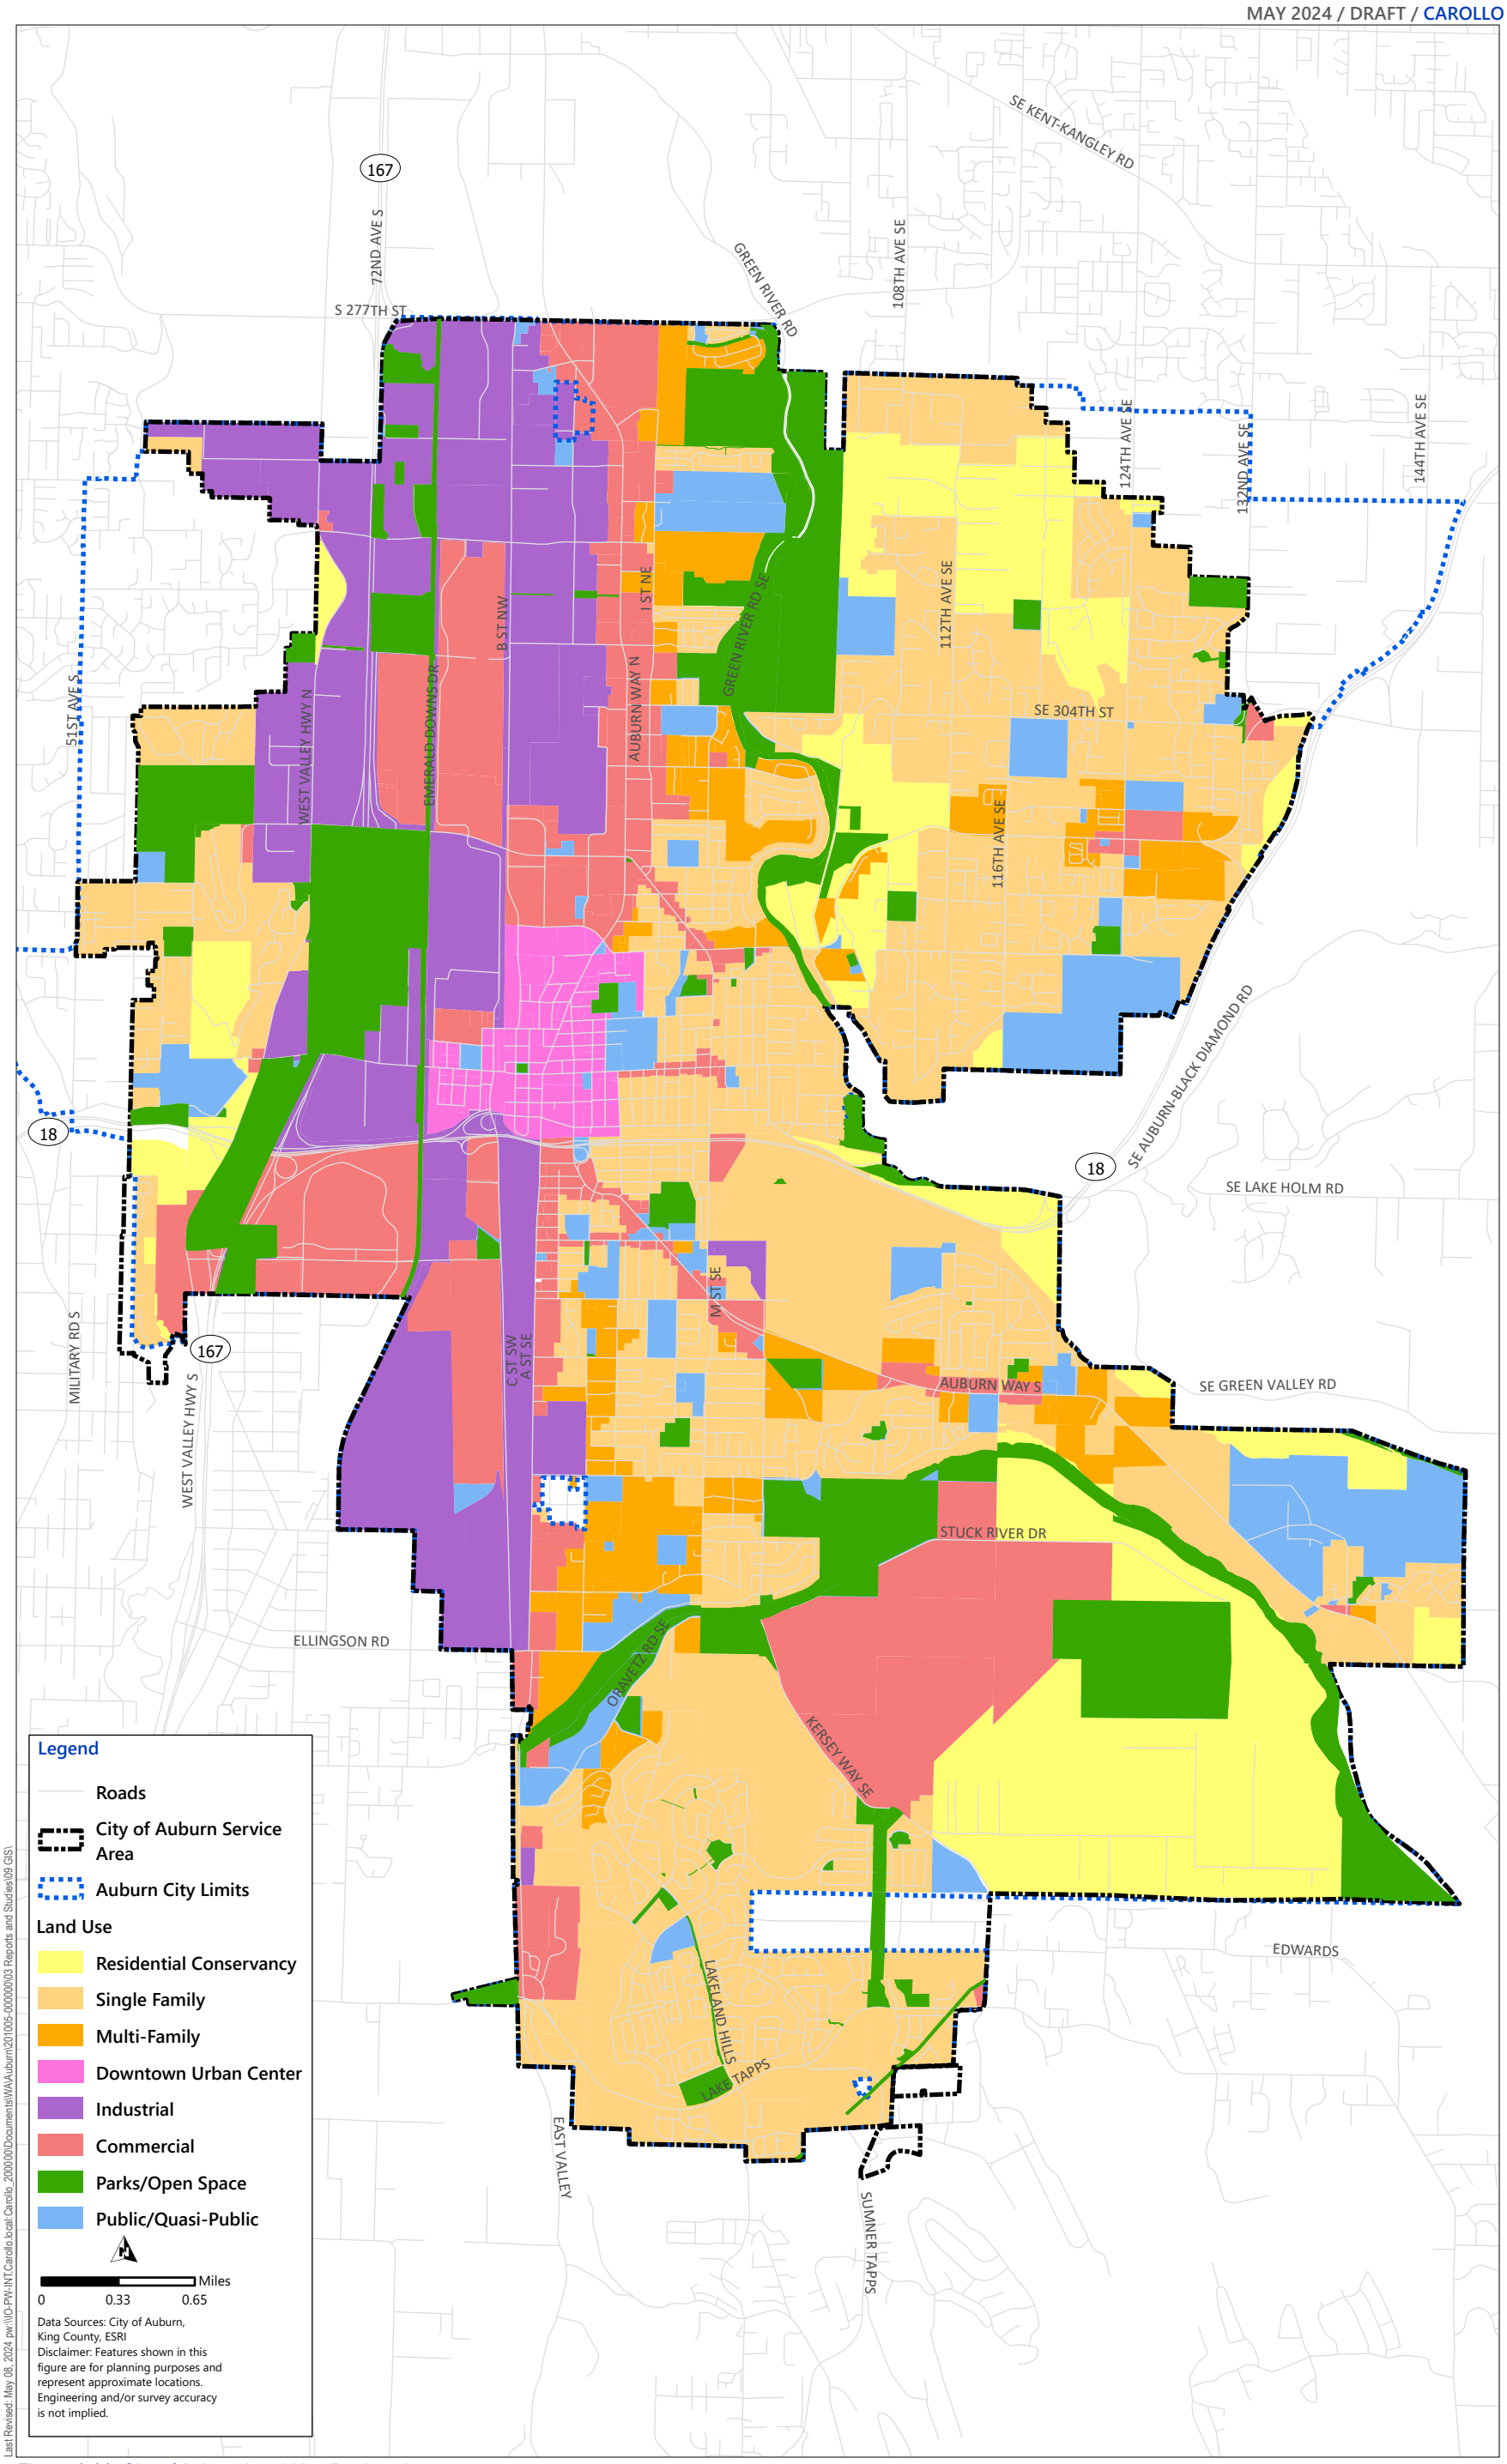

Figure 1.11 City of Auburn Land Use Designations

1.5.2 Future Land Use

Table 1.6 provides land use summary for the existing service area. Open space, parks, unbuildable land, Streets, and Right-of-Way are removed from this analysis and are assumed to contribute zero sanitary sewer flow in the future. The future land use within the existing service area is shown in Figure 1.12. The Land Use elements of the Comprehensive Plan can be found in Attachment 1C.

Table 1.6 Future Land Use Summary

Land Use Designation	Area (acres)	Percent of Total Area
Downtown Urban Center	213	1.2%
Heavy Commercial	1,529	8.5%
Heavy Industrial	753	4.2%
Institutional	2,167	12.1%
Light Commercial	335	1.9%
Light Industrial	1,325	7.4%
Moderate Density Residential	449	2.5%
Multi-family	1,096	6.1%
Neighborhood Commercial	82	0.5%
Neighborhood Commercial Overlay	53	0.3%
Open Space/Parks	1,438	8.0%
Residential Conservancy	1,297	7.2%
Single Family	6,977	38.8%
Unknown(1)	254	1.4%
Total	**17,968**	**100.0%**

Notes:
(1) Land Use was provided from City's GIS. Note it does not cover the entire wastewater service area. The unknown portion is unincorporated areas including the area in Kent, Bonney Lake Areas and unincorporated King County Area.

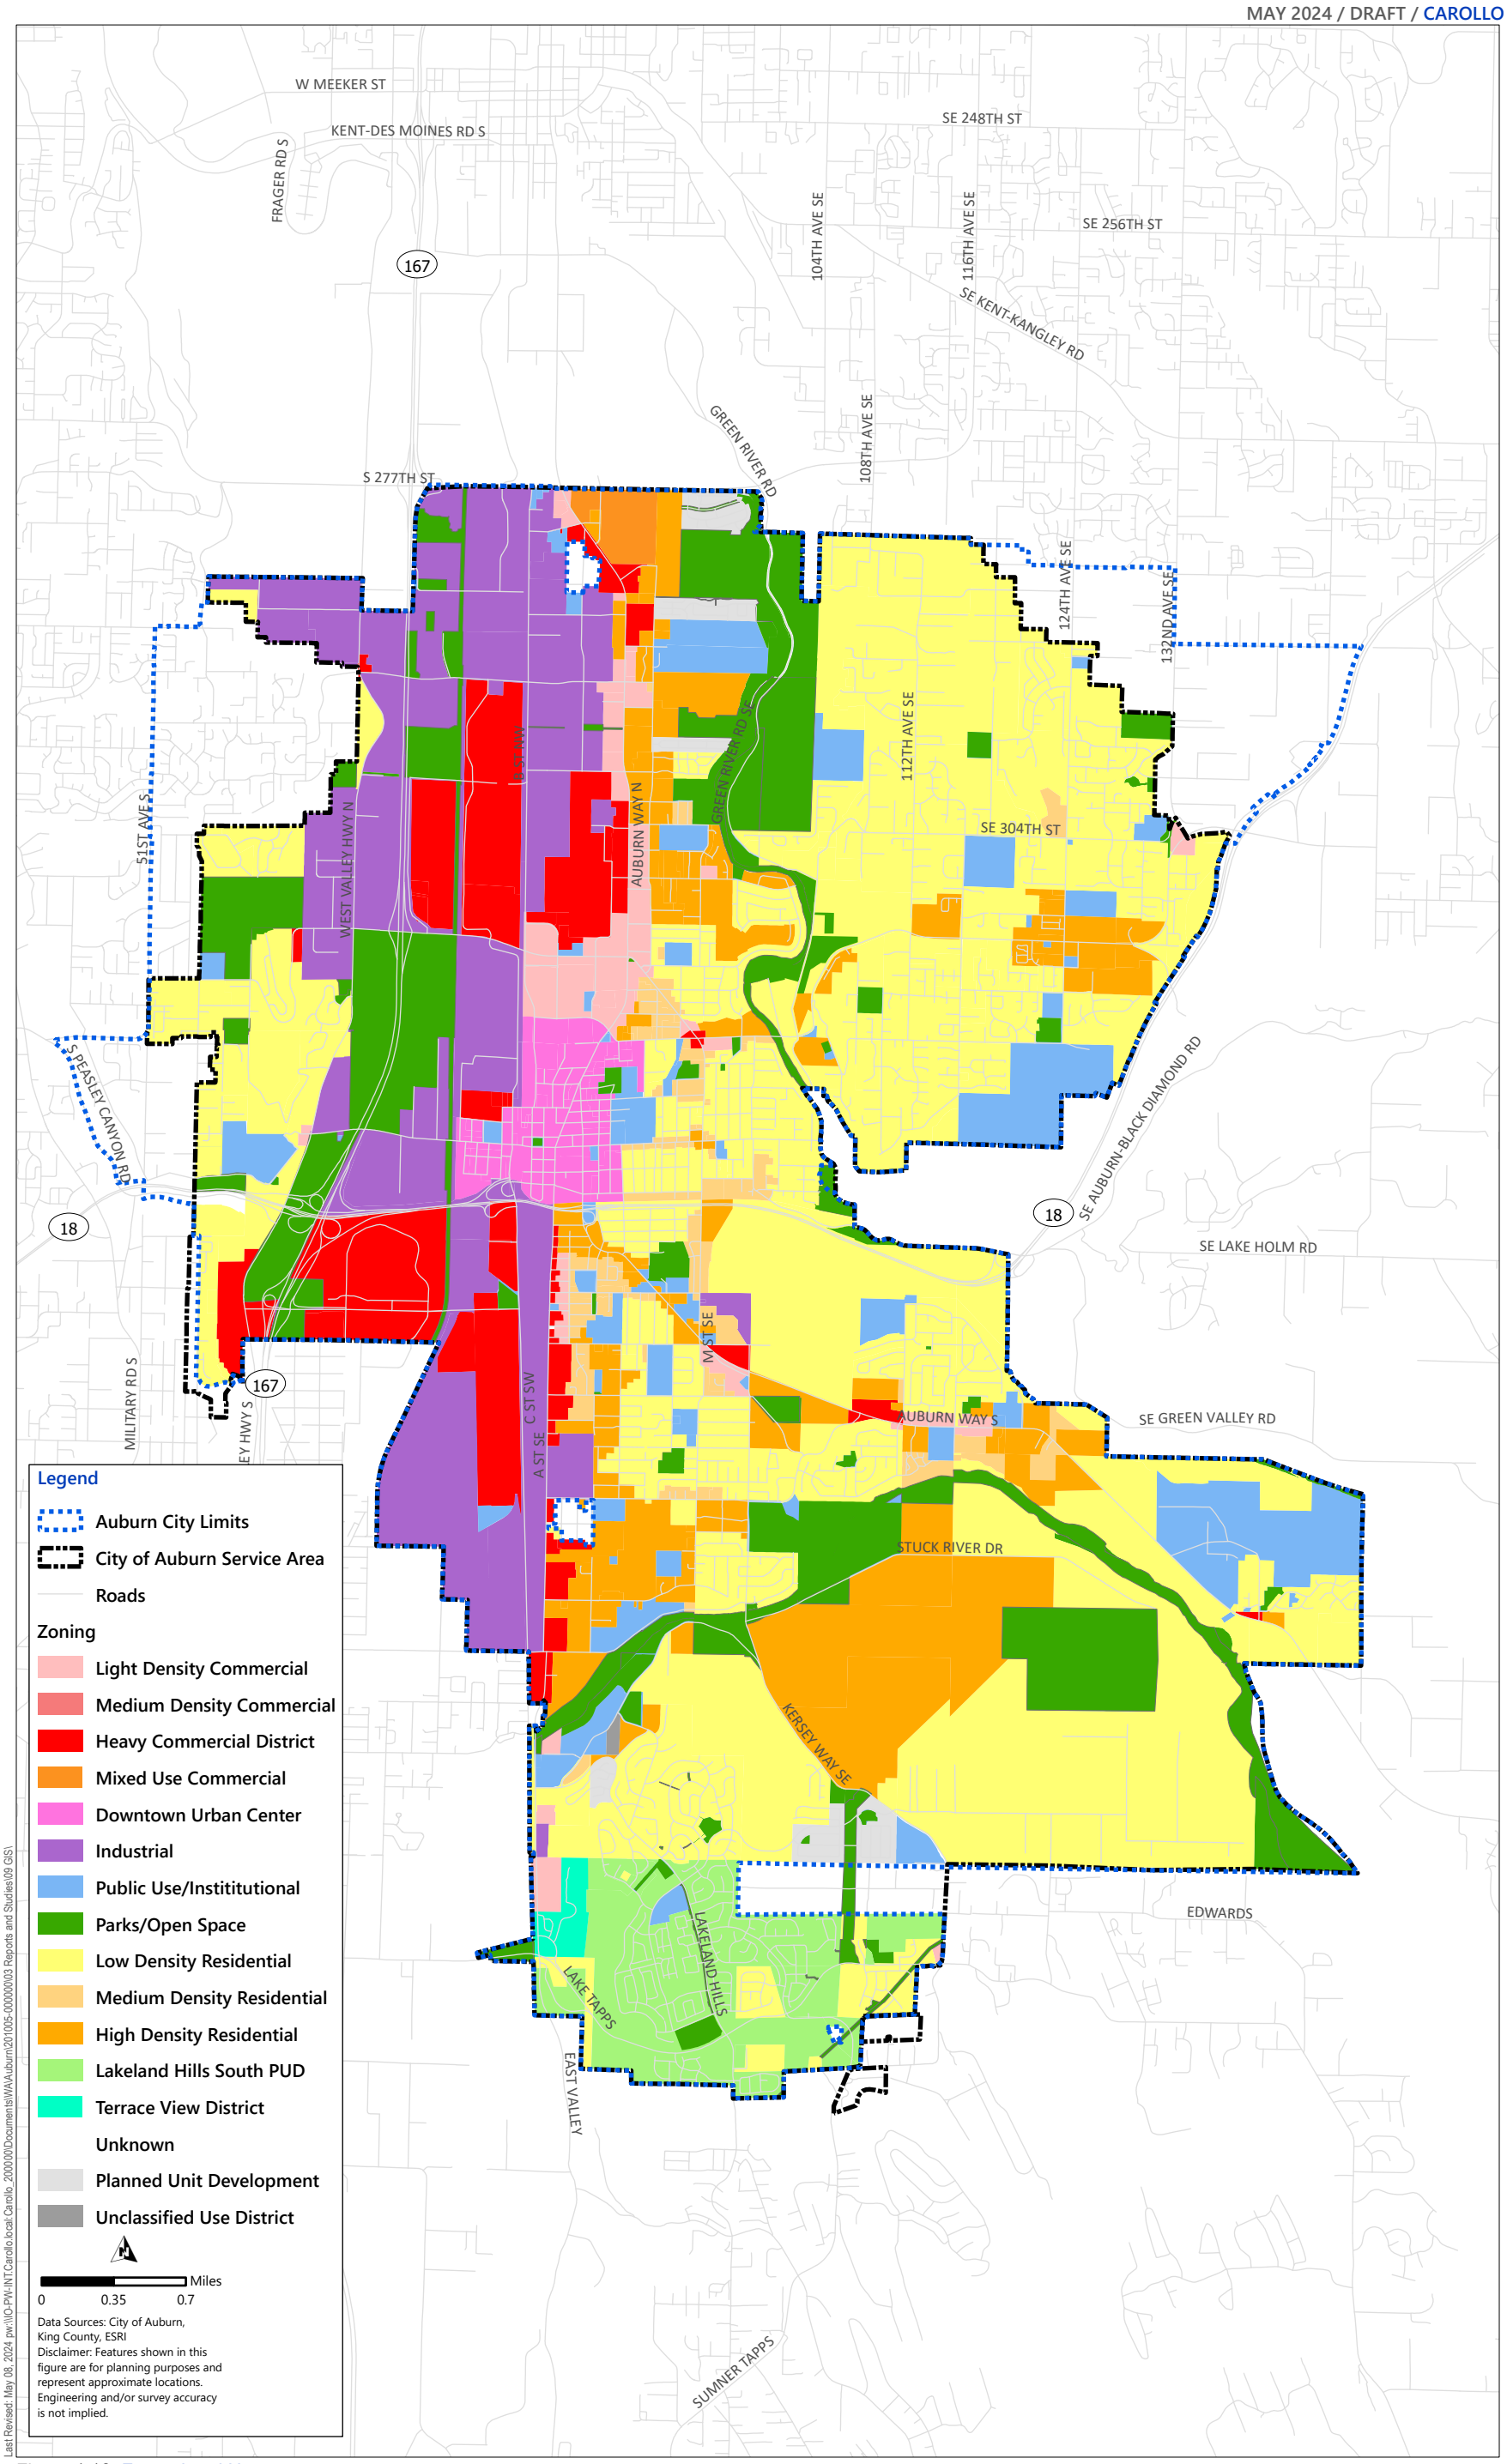

Figure 1.12 Future Land Use
CITY OF AUBURN
2024 COMPREHENSIVE SEWER PLAN

1.6 Wastewater Flow Factors

In order to develop wastewater flow projections and allocate future flows to the collection system, relationships between land use and wastewater generation were developed. These relationships, called wastewater flow factors are established based on the average wastewater flow generated for each existing land use type. The land use flow factors were established to project the estimated ADWF through future development of the City's wastewater collection system and project future flows within the existing service area boundary.

Average wastewater flow coefficients are volume rates, usually expressed in gallons per day per acre (gpda), applied to either gross or net acres to calculate average day flow generated from a particular land use type. A flow coefficient was developed for each of the land use classifications that were discussed previously. The flow coefficient provides a means to transform a land use category from acreage into wastewater flow. The resulting flow is then inputted into the appropriate sewer area in the sewer system model. Wastewater flow coefficients for residential areas typically range between 500 to 3,000 gpda, and commercial and industrial areas might range from 1,000 to 4,000 gpda, with typical values averaging approximately 1,500 gpda. Land uses designated as open space and parks are assumed to generate negligible amounts of sewage flow, and as a result have a flow coefficient of zero.

Figure 1.13 outlines the portion of the system that is currently considered sewered and contributing flows to the collection system. This acreage is assigned to each catchment in the system and used for rainfall runoff routing.

Flow monitoring basins were developed to define the upstream tributary area for each meter selected for calibration, using only connected and developed parcels. Flow factors are applied across these flow monitoring basins to allocate ADWF. Figure 1.14 outlines the flow monitoring basins used for this process.

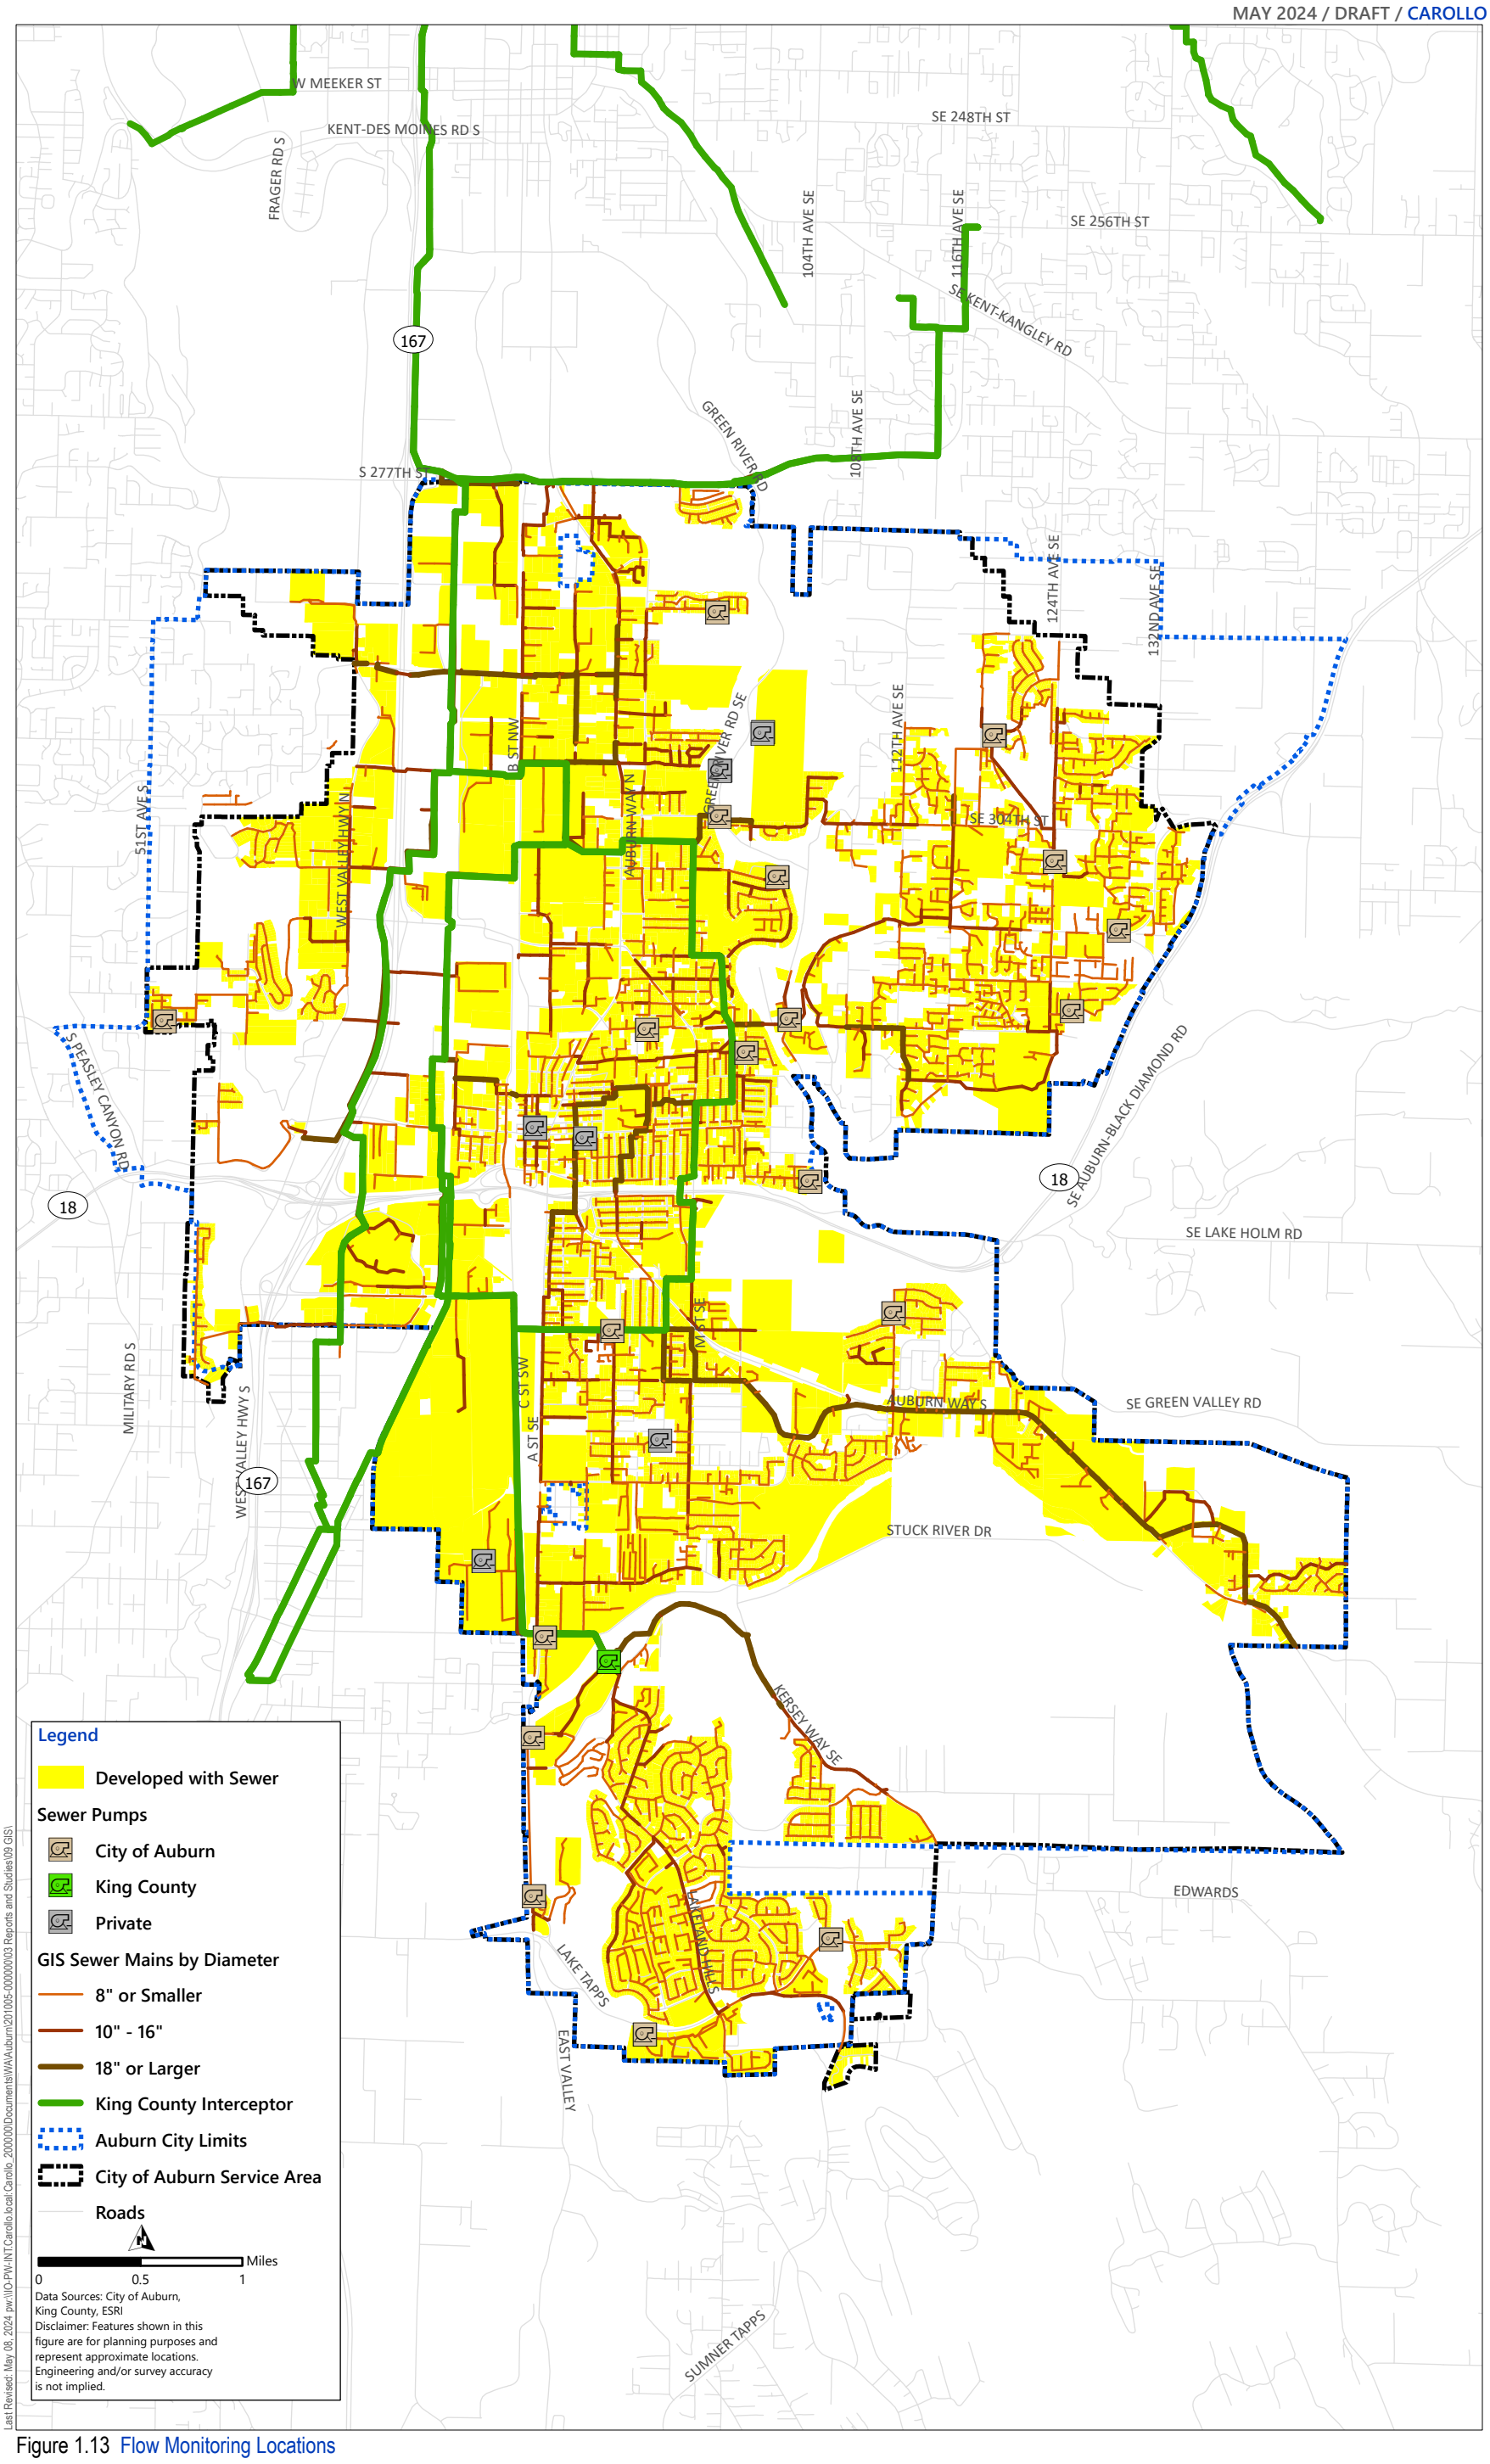

Figure 1.13 Flow Monitoring Locations
CITY OF AUBURN
2024 COMPREHENSIVE SEWER PLAN

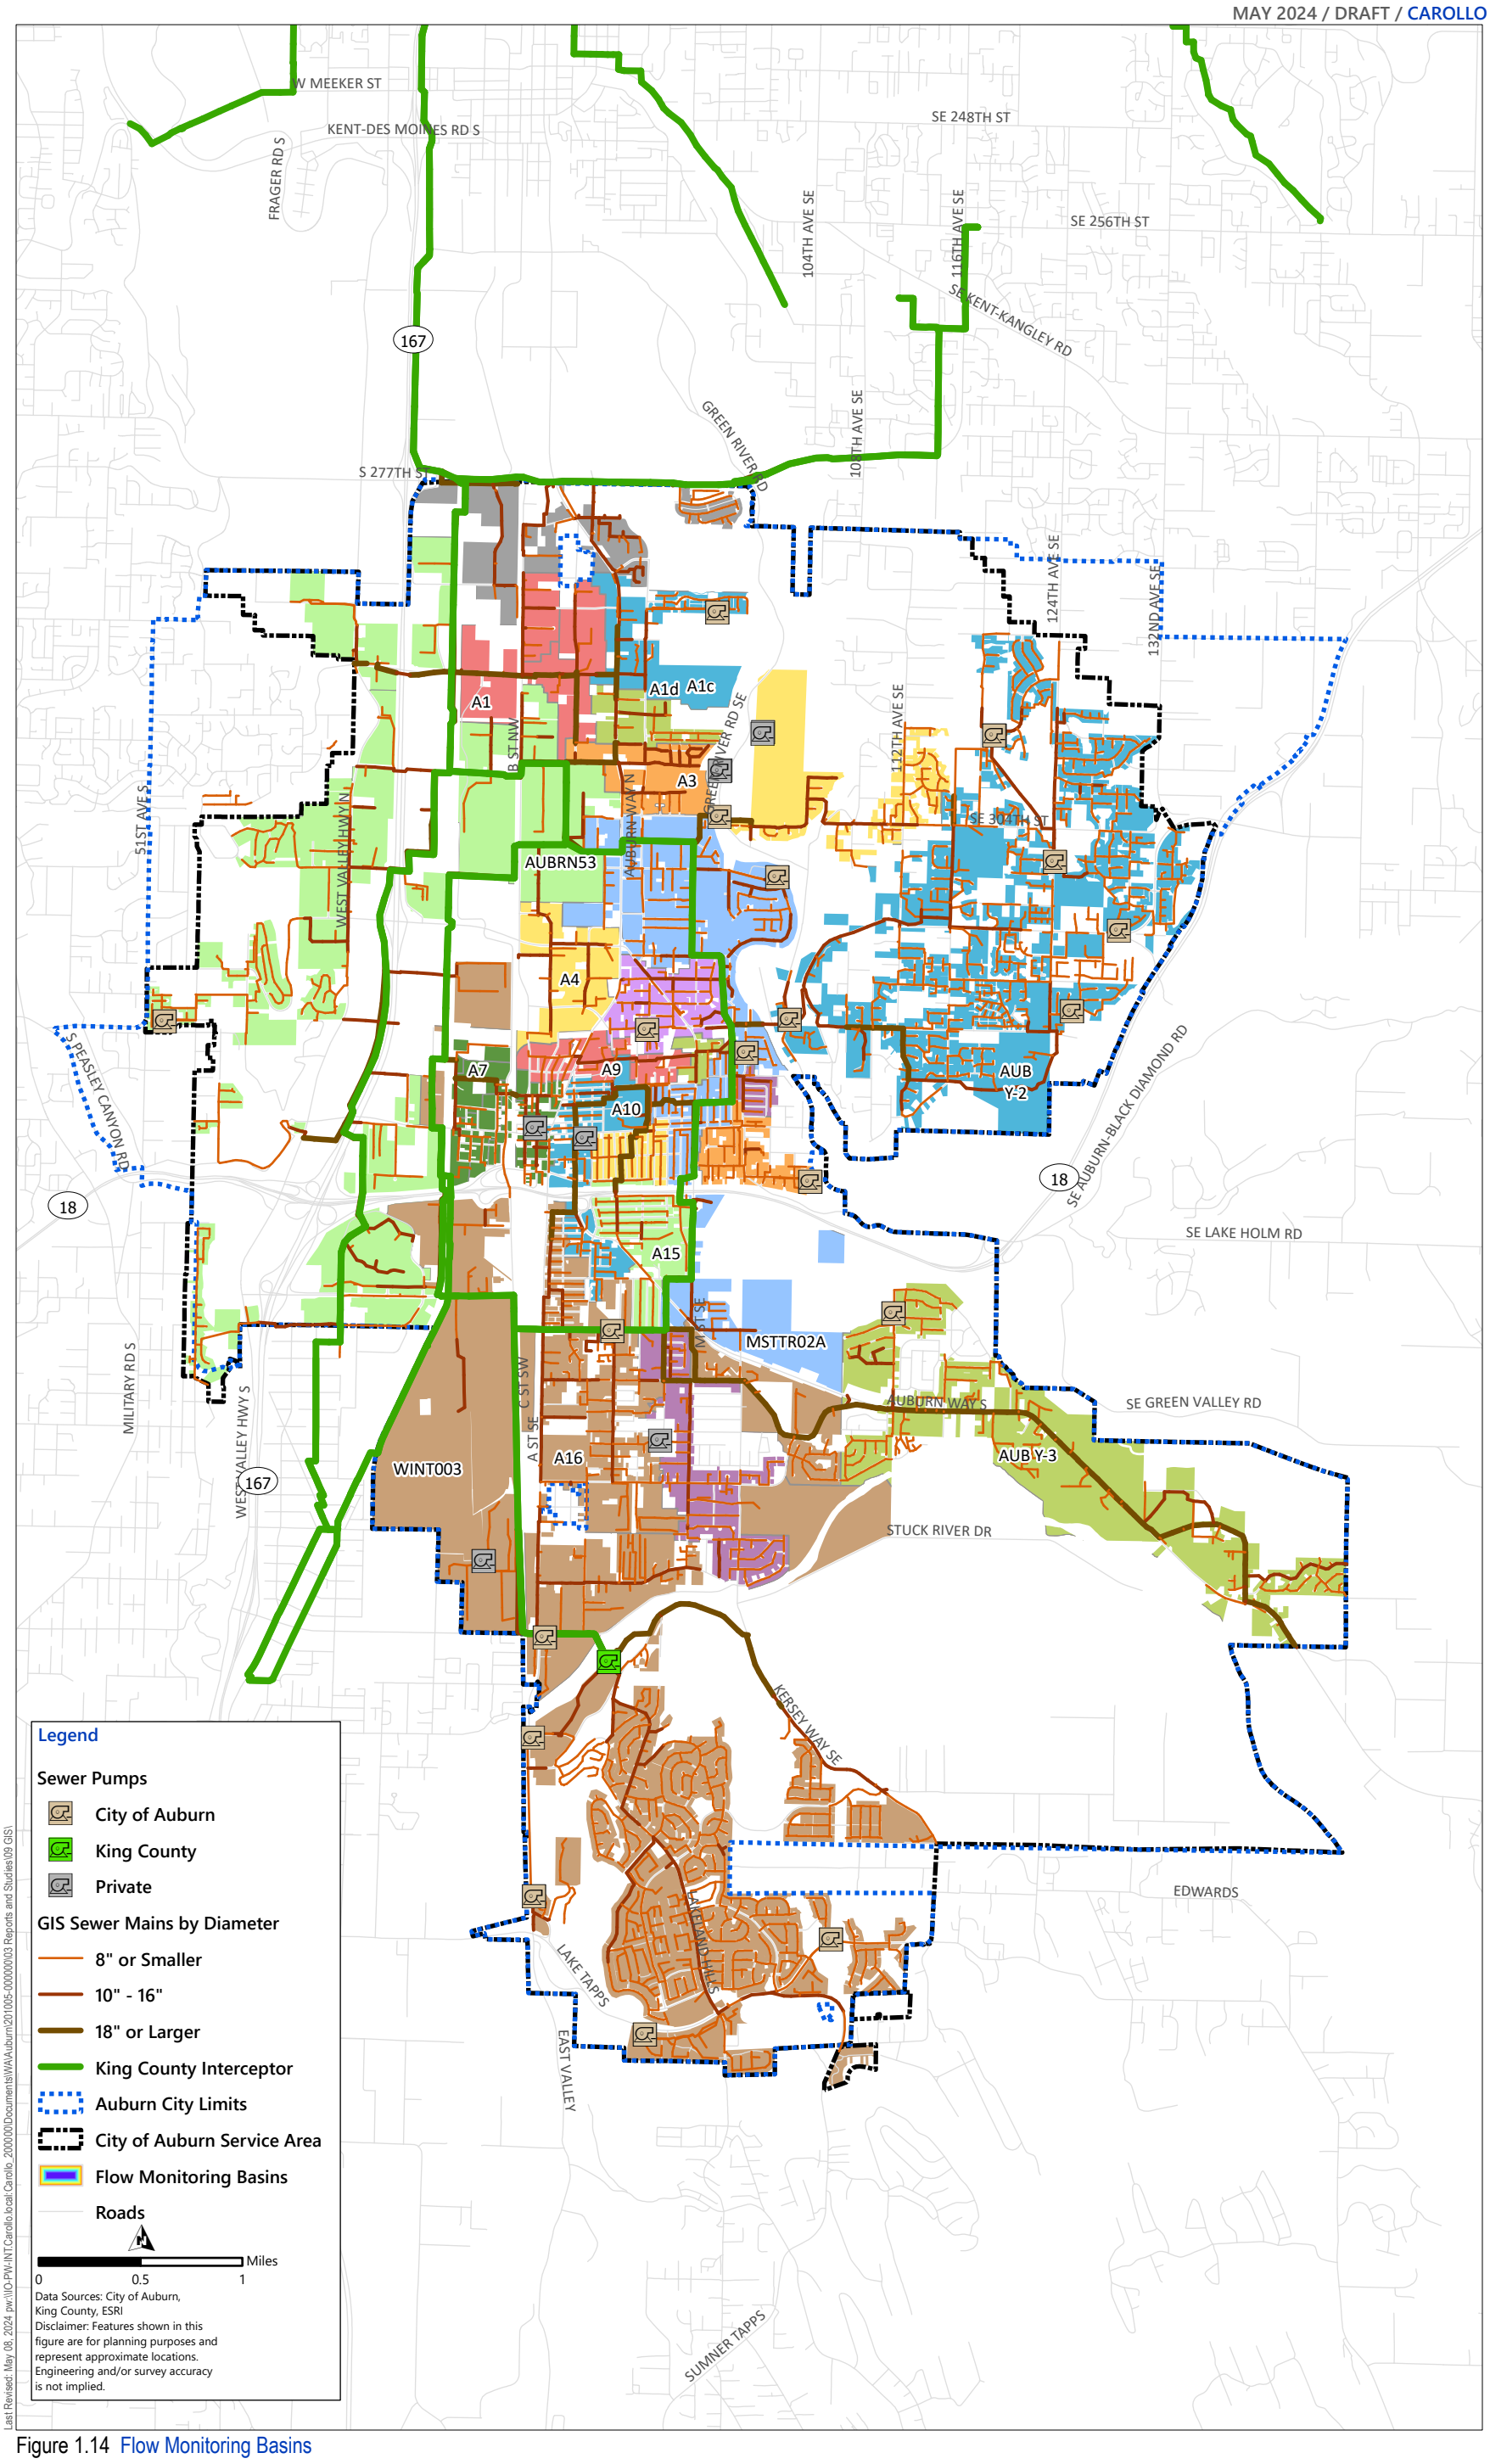

Figure 1.14 Flow Monitoring Basins
CITY OF AUBURN
2024 COMPREHENSIVE SEWER PLAN

1.6.1 Flow Factor Development

The coefficients are developed using the following procedure:

- Average flows for each flow metering tributary area were extracted from the flow-monitoring data (see Section 1.4).
- The acres for each land use type contained in each flow-monitoring tributary area were calculated using GIS data.
- Preliminary coefficients for each land use type were assumed based on typical values, which can be estimated from the approximate number of dwelling units per acre, the assumed per capita wastewater generation rates, and/or the typical number of people per dwelling unit for each land use type.
- The coefficients for each flow metering tributary area are adjusted up or down (balanced) within a reasonable range (based on engineering judgment) until the calculated average flows from each tributary matched flow monitoring period measurements. If the flow coefficients produced average flows that were significantly different from the field measured flows, further investigation was conducted to verify that the tributary basins were delineated correctly and if the collection system configuration was correct.
- Once the coefficients for the 22 flow meter tributary areas are balanced, the weighted average of the coefficients for each land use type is calculated based on the acreage contribution from each metering tributary area.
- The flow coefficients were then adjusted to balance the calculated flows for the overall developed sewer service area, where flow-monitoring data was available.

The weighted wastewater flow coefficients and land use areas that represent existing ADWF are summarized in Table 1.7. The land use coefficients generate an ADWF to the modeled collection system of 7.77 mgd, a -0.5 percent difference from the measured ADWF of 7.81 mgd.

Wastewater flow factors were compared to the Comprehensive Plan, Attachment 1C, to confirm they correspond to the densities and allowable dwelling unit per acre for each land use type. This was done at a flow monitoring basin level such that the flow factors matched the relative densities, however when averaged out across the system some flow factors are smaller or larger than the expected density based on the flow monitoring basin the majority of the land use acreage is within. The detailed flow factors at a flow monitoring basin level are shown in Attachment 1D.

Table 1.7 Flow Factor Development Summary

Land Use Type	Developed Area (acres)	Wastewater Flow Factor (gpda)	Existing ADWF (mgd)
Single Family	2,778	920	2.56
Moderate Density Residential	147	950	0.14
Residential Conservancy	11	800	0.01
Open Space	1	0	0.00
Neighborhood Commercial	64	1,020	0.07

Total	17,968		
		Total Estimated ADWF	**7.77**
		Measured ADWF	**7.81**
		Percent Difference	**-0.5%**

1.7 Hydraulic Model Overview

A wastewater collection system model is a simplified representation of the real sewer system. Wastewater system models can assess the conveyance capacity of the collection system. The model can be used to size new infrastructure. In addition, sewer system models can perform "what if" scenarios to assess the impacts of future developments and land use changes. The City's collection system hydraulic model was updated and expanded using a multi-step process utilizing data from a variety of sources. This section summarizes the hydraulic model development process, including a description of the modeled collection system, the hydraulic model elements, and the model creation process.

1.7.1 Selected Hydraulic Modeling Software

The City's previous collection system hydraulic model was developed using the Mike Urban hydraulic modeling software package, developed by DHI. This project converted the model from Mike Urban to Mike+, the current DHI collection system product. The hydraulic modeling engine for the Mike+ software package is now 1D, it was previously MOUSE. The model was updated to use the 1D engine, which is widely used throughout the world for planning, analysis, and design related to stormwater runoff, combined sewers, sanitary sewers, and other free surface drainage systems such as streams and rivers.

The latest version (2022) of Mike+ was used for the hydraulic model update. More information about the modeling software can be found in the Mike+ Collection Systems Guide[1].

1.7.2 Modeled Collection System and Skeletonization

The City provided Carollo Engineers, Inc. with an initial skeletonized model. Skeletonization is the process of identifying the key system conveyance components to include in the model. Smaller pipelines not considered essential for the intended analysis purpose are removed from the modeled set. The purpose of skeletonizing a system is to develop a model that accurately simulates the hydraulics of a collection system, while at the same time reducing the complexity as well as computational run times and to simplify data management.

It is common practice in sewer system master planning to exclude small diameter sewers when developing a hydraulic computer model. Key sewers are included in the City's hydraulic model where needed for connectivity, or where it was determined that the pipes in question were considered as primary collectors. The collection system remains skeletonized for this project, with no increase in modeled system coverage. Pipes were updated to reflect projects and changes that occurred since the last plan.

1.7.3 Elements of a Hydraulic Model

The following provides a brief overview of the various elements of the hydraulic model and the required input parameters associated with each:

- **Nodes (Manhole):** Sewer manholes, cleanouts, and other locations where pipes begin, pipe sizes change, or pipelines intersect are represented by junctions in the hydraulic model. Required inputs for junctions include rim elevation, invert elevation, diameter, and surcharge depth (used to represent pressurized systems). Nodes are also used to represent locations where flows are split or divided between two or more downstream links.
- **Pipes:** Gravity sewers and force mains are represented as pipes in the hydraulic model. Input parameters for pipes include length, friction factor (e.g., Manning's n for gravity mains, Hazen Williams C for force mains), invert elevations, diameter, shape, and whether or not the pipe is a force main.
- **Nodes (Basin):** For collection system modeling, basins are typically used to represent pump station wet wells (although other storage basins, etc., can be modeled as basin). Input parameters for basins include invert elevation, wet well depth, and wet well cross section or a depth-area relationship.
- **Pumps:** Pumps are included in the hydraulic model as links. Input parameters for pumps include pump curves and operational controls.
- **Nodes (Outfalls):** Outfalls represent areas where flow can leave the system. For sewer system modeling, an outfall typically represents an overflow point or the connection to the wastewater treatment plant.
- **Boundary Conditions (Rainfall):** Rain gauges are locations where rainfall is input to the hydraulic model for simulation of WWF. The rain can be historical, projected, or theoretical hourly rainfall events.

[1] Mike+ Collection System User Guide, DHI 2022.

- **Catchments:** Catchments represent areas of land whose topography and drainage characteristics direct flow to a single discharge point into the sewer system. Catchments can be used to define sanitary flows or to route a portion of the rainfall runoff into the system. Inflow conditions for the catchments are defined model inputs. Figure 1.15 outlines all the modeled catchments in the collection system model.
- **Inflows:** There are two primary flow sources that enter into the collection system, which are input through individual junctions (and storage nodes) in the model:
  - *Dry Weather. Dry weather inflows simulate base sanitary wastewater flows and represent the average flow. The DWF can be multiplied by up to four patterns that vary the flow by month, day, hour, and day of the week (e.g., weekday or weekend). The dry weather diurnal patterns are adjusted during the dry weather calibration process to match the known typical daily flow fluctuations. Two diurnal patterns were developed for each basin, respectively representing weekday and weekend days (see Section 1.4.2.1).*
  - *Rainfall derived infiltration and inflow (RDII). RDII are flows into the collection system originating from rainfall. Several models are available in Mike Urban to capture these effects. The models have a number of parameters that are adjusted during the wet weather calibration process to model the flows into the collection during different storm events.*

CITY OF AUBURN
2024 COMPREHENSIVE SEWER PLAN

1.8 Hydraulic Model Calibration

Hydraulic model calibration is a crucial component of the hydraulic modeling effort. Calibrating the model to match data collected during the flow monitoring program ensures the most accurate results possible. The calibration process consists of calibrating to both dry and wet weather conditions.

For this project, both dry and wet weather calibration were conducted at the 22 metering sites presented and discussed in Section 1.4:

- DWF calibration ensures an accurate depiction of ADWF generated within the existing service area, and diurnal fluctuations.
- WWF calibration consists of calibrating the hydraulic model to a specific storm event or events to accurately simulate the peak flow and volume of I/I into the sewer system. The amount of I/I is essentially the difference between the WWF and DWF components.

1.8.1 Calibration Standards

The hydraulic model was calibrated in accordance with international modeling recommendations. The Urban Drainage Group (UDG), formerly known as Wastewater Planning Users Group, a section of the Chartered Institution of Water and Environmental Management (CIWEM), has established generally agreed upon principles for model verification. The dry weather and wet weather calibration focused on meeting the recommendations on model verification contained in the "Code of Practice for the Hydraulic Modeling of Urban Drainage Systems," published by the CIWEM UDG[2], as summarized below.

1.8.1.1 Dry Weather Calibration Standards

Dry weather calibration should be carried out for two dry weather days and the modeled flows and depths should be compared to the field-measured flows and depths. Both the modeled and field-measured flow hydrographs should closely follow each other in both shape and magnitude. In addition to the shape, the flow hydrographs should also meet the following criteria as a general guide:

- The timing of flow peaks and troughs should be within 1 hour.
- The peak flow rate should be within the range of ±10 percent.
- The volume of flow (or the average rate of flow) should be within the range of ±10 percent. If applicable, care should be taken to exclude periods of missing or inaccurate data.
- The unsurcharged depth should be within ±10 percent or ±4 inches, whichever is greater.

[2] UDG, Code of Practice for the Hydraulic Modelling of Urban Drainage Systems, 1st Edition CIWEM 2017 www.ciwem.org.

1.8.1.2 Wet Weather Calibration Standards

For each meter, three separate storms should be simulated with the model. For at least two storms out of the three events from the flow monitoring period, the model-simulated flows and depths should match the field-measured flows and depths within the accepted criteria. The modeled and field flow hydrographs for the calibration storms should closely follow each other in both shape and magnitude, until the flow has substantially returned to DWF rates.

In addition to the shape, the flow hydrographs should also meet the following criteria as a general guide:

- The timing of the peaks and troughs should be similar with regard to the duration of the events.
- The peak flow rates at significant peaks should be in the range of +25 percent to -15 percent and should be generally similar throughout.
- Modeled volume of flow should be within +20 percent to -10 percent of measured volume of flow.
- The depth of surcharge should be in the range of +20-inches to -4-inches.
- The difference between maximum unsurcharged depth should be within the range of ± 4-inches.

The UDG recommends that for wet weather calibration, the use of a single calibration period incorporating a number of rainfall events should be considered whenever possible. In other words, if the flow monitoring program captured several back to back storms, it may be preferable to use the back to back storms events as the calibration storms, as opposed to calibrating to two separate storms that have occurred weeks or months apart. Model calibration simulations should be run for a duration long enough that the RDII response is no longer apparent in the measured data.

1.8.2 DWF Calibration

1.8.2.1 Dry Weather Calibration Process

The DWF calibration process consists of several steps, as outlined below:

- The first step in the calibration process was to divide the City into flowmeter tributary areas. GIS analysis was used to create 22 tributary areas, one for each flowmeter from the flow monitoring program that was selected to be used for calibration. A map showing the locations of each flow monitoring site and their associated tributary area was provided in Section 1.4 and Section 1.6, along with a schematic of the flow meters.
- The next step was to define the flow volumes within each area, which was accomplished by applying the flow factors outlined in Table 1.7 to the catchments proportionally based on the distribution of land use types withing the catchment.

- The last step is to create diurnal patterns to match the temporal distribution of flow. A diurnal curve is a pattern of hourly multipliers that are applied to the base flow to simulate the variation in flow that occurs throughout the day. Two diurnal curves were developed for each flow monitoring tributary area, one representing weekday flow and one representing weekend flow. The diurnal patterns were initially developed based on the flow monitoring data and adjusted as part of the calibration process until the model-simulated flows closely matched the field-measured flows. Figure 1.16 shows the calibrated weekday and weekend diurnal patterns for the area tributary to Meter AUB A1. Similar diurnal curves were developed for each of the meters and its tributary area. These additional curves are available in Attachment 1E.

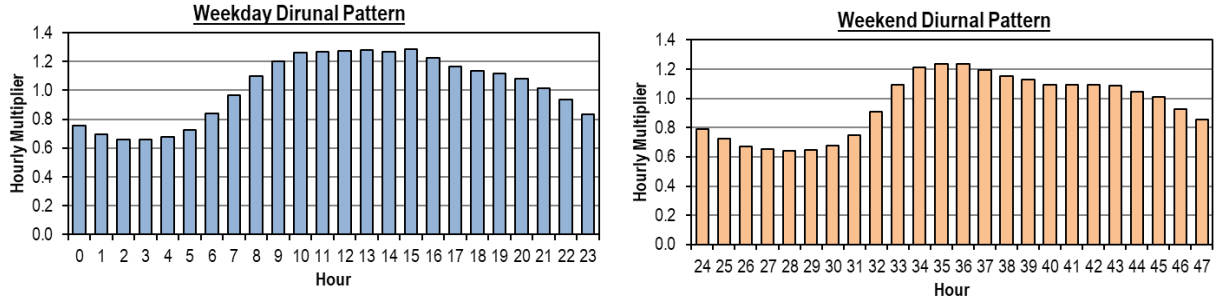

Figure 1.16 Example Diurnal Pattern

1.8.2.2 Dry Weather Calibration Discussion

Table 1.8 provides a summary of the DWF calibration using the average and daily peak flow results for both weekday and weekend conditions. As shown on Table 1.8, the model-simulated average for all sites are within 10 percent. The peak flows for both weekday and weekend DWF were all within 10 percent, except for meters A3, A7, Y-2, and MSTTR02A. Those four meters showed variability between weekday and weekend volume, but still match for the average day DWF.

Attachment 1E contains a detailed DWF calibration summary sheet for each of the 22 metering sites. Each calibration sheet provides plots that compare the model-simulated and field-measured flow data for both weekday and weekend conditions. An example of the dry weather calibration for Meter AUB A1 is shown on Figure 1.17.

There is good overall correlation of the field-measured data to the model output results. A total of 18 of 22 meters meet criteria for both level and velocity, indicating a well calibrated model for DWFs. Manning's n values were adjusted by flow monitoring basin so that modeled levels would better match the measured data. However, even after these changes some levels could not be matched. The Mike 1D engine simulates flow well under these conditions, but level and velocity are less accurate with the Saint-Venant equations meant for free flow conditions.

To account for this, the modeled manhole head losses were adjusted for steep pipes throughout the collection system. For pipes with slopes greater than 0.01 or 1 percent, the head loss was defined as weighted inlet energy with a smaller effective area instead of the default Mouse Classic Engelund. This change ignores inlet expansion losses and assumes the energy level in the manhole equals the inlet pipe. Thus, the manhole level is reduced to better match the field measured data for steep slopes. These

changes moved the levels closer to being in criteria, but the level changes were not significant enough that all these sites could not be moved into calibration criteria.

All 4 meters outside of criteria had higher modeled levels than measured level. Meter A6, A7, Y-2, are all meters located on steep pipe slopes where a hydraulic jump is occurring. These sites are also at points where the pipe size is transitioning. The monitoring at Site A6 was done at a manhole that transitions from a 12-inch to a 30-inch, site A7 was done at a manhole that transitions from an 18-inch to a 36-inch, and Y-2 is where 14-inch transitions to a 24-inch. The modeled levels are exported at the downstream end of the pipe in the monitoring manhole where the hydraulic grade line (HGL) is governed by larger diameter downstream pipe, leading to higher levels than measured. These three sites remained out of criteria for WWF as well.

Site AUBRN53 was also slightly out of criteria but moved into criteria during WWF's so this was deemed less of a concern.

Table 1.8 DWF Calibration Results

Flow Meter ID	Weekday Average Flow Percent Error	Weekday Peak Flow Percent Error	Weekday Max Level Difference (inches)	Weekend Average Flow Percent Error	Weekend Peak Flow Percent Error	Weekday Max Level Difference (inches)	ADWF Percent Error

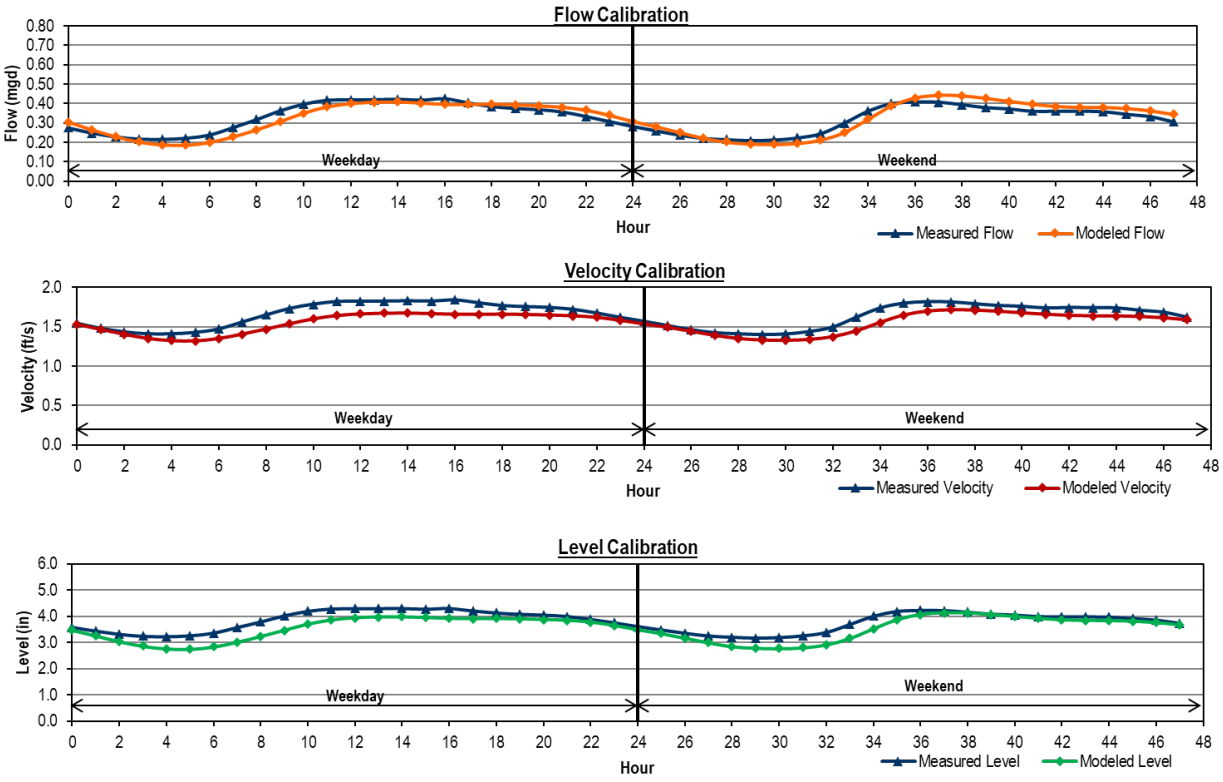

Figure 1.17 Example DWF Calibration (Meter AUB A1)

1.8.3 Wet Weather Flow Calibration

1.8.3.1 Wet Weather Flow Calibration Process

The WWF calibration enables the hydraulic model to accurately simulate RDII entering the collection system during storms. The WWF calibration process consists of running model simulations of historic rainfall events based on data collected as part of a system flow monitoring program. The goal of any WWF monitoring program is to capture and characterize a system's response to a significant rainfall event, preferably during wet antecedent moisture conditions. As outlined below, the WWF calibration process consists of several elements:

- **Identify calibration rainfall events.** The selection of a particular calibration storm or group of storms is based on a review of the flow and rainfall data. There is a good range of different event types available for the different meters. Major rainfall events that were used as calibration rainfall events were identified as part of Section 1.4.2.2. Table 1.3 summarizes the four storms picked for calibration for each of the 2 sites. The use of a single calibration period incorporating a number of rainfall events was considered whenever possible. All meters except for WINT003, MSTR002A, and AUBRN53 used the first three storms, those three used the 4th event due to meter availability. Figure 1.9 illustrated the storms used in the model calibration process.

- **Define RDII tributary areas.** For the WWF calibration, RDII flows are added on top of the DWF. The model calculates two types of response: a slow response corresponding mainly to infiltration, or slow response curve (SRC), and a fast response corresponding mainly to direct inflow, or fast response curve (FRC). Imperviousness is the fraction of the catchment area that is impervious and connected to the collections system, generating the FRC runoff, and rainfall derived infiltration (RDI) Area, which is the fraction of the total catchment area that contributes to the SRC. The imperviousness and RDI runoff component are two major model-specific data in the model calculation of WWFs, and each have a number of subparameter components that are adjusted to tune to response timing. These area values were initially set based on engineering judgment, as well as the previously used values, and then adjusted until the model-simulated wet weather flow volume roughly matched the field-measured flows.
- **Create I/I parameter database and modify to match field-measured flows.** The main step in the WWF calibration process involves adjusting both Model A and RDI parameters for each flow monitoring tributary area. Figure 1.18 provides a schematic of the RDI model used. Attachment 1F summarizes all calibrated parameters by flow monitoring site, for current conditions. As with the dry weather calibration, the wet weather calibration process compared the meter data with the model output. Comparisons were made for average and peak flows as well as the temporal distribution of flow until flows returned to their baseline levels. According to the CIWEM UDG, a hydraulic model is generally considered calibrated to WWF conditions if the modeled peak flows are within +25 percent to -15 percent of the field-measured data, and if the average modeled volumes are within +20 percent to -10 percent of the field-measured data. Calibration was performed for the depth of flow as well, this is considered calibrated when peak depths are with ± 4-inches when unsurcharged, and +20-inches to -4 inches when surcharged.
- **Adjust model variables to match field-measured velocity and flow depths.** Once the model-simulated flows matched the field-measured flows within the acceptable limits, the model-simulated velocity and flow depth were compared to the field-measured velocity and flow depth. Adjustments were made to various model parameters until the modeled and measured velocity and depth closely matched one another. The primary varied parameters for this process are node head losses and pipeline roughness (Manning's n), although other parameters can also be adjusted as calibration results are generated. Sediment buildup and movement in the pipe will also influence the level and depth, but these are very difficult to quantify and can change frequently, therefore they are not included in the calibration.

  Manning's roughness coefficients, or n values, have industry accepted ranges based on a number of variables. Roughness coefficients increase over time depending on the construction methods, installation quality, system maintenance, and other environmental factors. There can be certain factors within the City's collection system that can result in roughness coefficients that differ from the typical range. These could include joint misalignment, cracks, and debris (e.g., root intrusion, etc.) that lead to increased turbulence in a pipe and an increase in the apparent Manning's n factor.

  If the model is unable to reasonably match the field-measured flow depth and velocity within the acceptable range of Manning's roughness coefficients, further investigation should be conducted to help determine the cause of the discrepancy. Some issues that could cause such a discrepancy can include errors in the slope or diameter of a pipeline, downstream blockages, pipeline sags, and, in some cases, influences from downstream pump station operations.

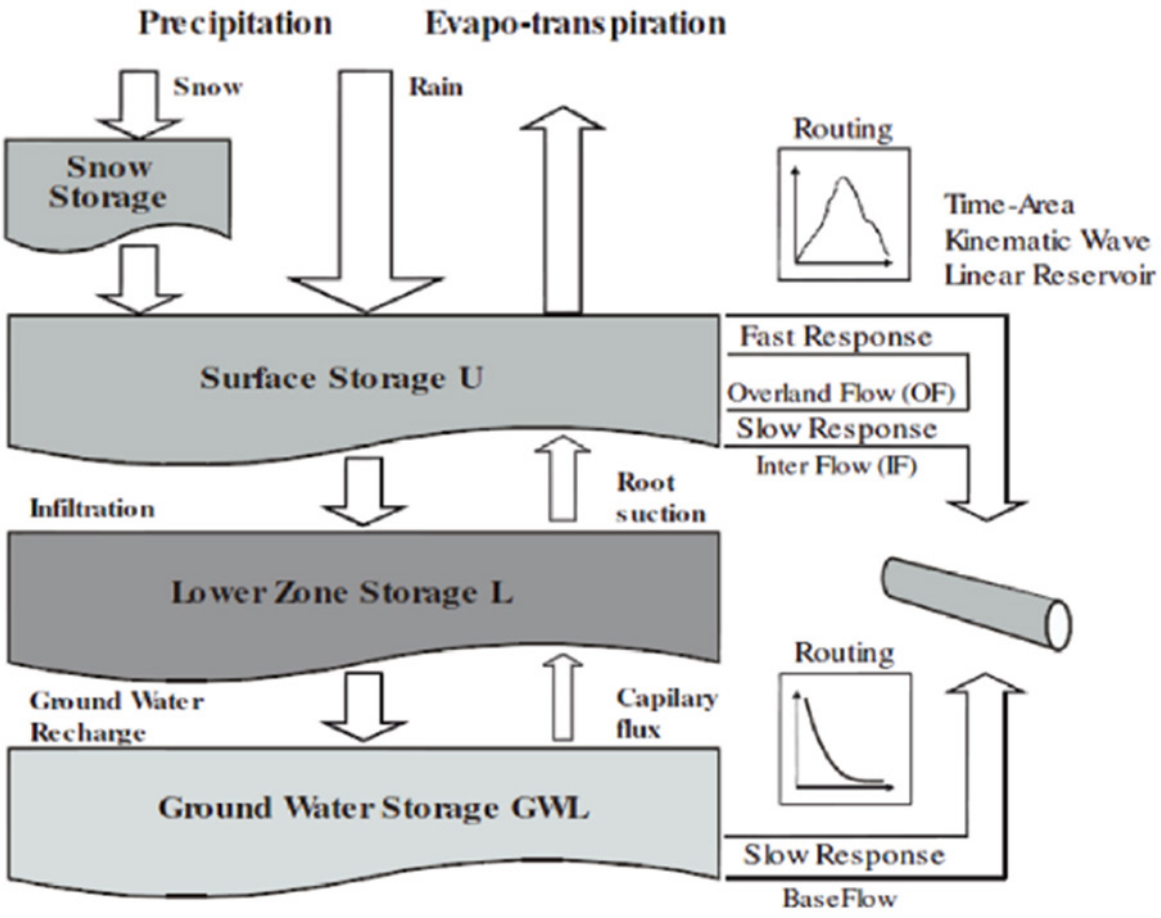

Figure 1.18 RDI Model Schematic

1.8.3.2 Wet Weather Calibration Results

Attachment 1G contains a detailed WWF calibration summary sheet for each of the 22-meter sites. The modeled outputs at each flow meter were compared to the data from three storms recorded during the flow monitoring period for calibration. Each calibration sheet provides plots that compare the model-simulated and field-measured flow, velocity, and level data for the calibration storms. An example of the wet weather calibration for Meter AUB 1A is shown on Figure 1.19.

Table 1.9 provides a summary of the WWF calibration using the total volume and peak flow results. Of the 22 meters, 21 had two or more storm event responses within calibration standards for volume and peak flows. Meter A12 was the only site outside of criteria for volume, peak still matched, and this was due to abnormal DWF data during the WWF calibration period. As shown on Table 1.9, the model-simulated average and peak flows at all other meter sites were within the acceptable tolerances for the calibration storms, and therefore the model was considered calibrated and ready to use for capacity analysis purposes.

As discussed in Section 1.8.1, it is critical that the hydraulic model is not only calibration to volume and peak flow, but also level data. This will ensure accuracy and trust in modeled results when evaluating capacity deficiencies; which are based on a HGL criteria in the collection system.

Modeled data at almost all meters closely matched the recorded level information, of the 22 meters with level data, 18 met the level calibration standard. Meters A6, A7, and Y-2 did not meet the level criteria during DWF either and are discussed in Section 1.8.2. Meter Y-1 fell out of level criteria for WWF. The measured data indicated backwatering and surcharging effects during the latter two storm events, and this surcharging was not replicated in the model. This meter is located right upstream of the Green River Siphon, indicating potential sediment buildup constricting flows in the field, and not replicated in the model.

1.8.3.3 Hydraulic Model Calibration Summary

Calibration of the City's hydraulic model was a multi-step process that involved comparing model-simulated flow to the actual field-measured data for both dry and wet weather conditions. The model met all flow CIWEM standards for ADWF and most standards for level. Results showed the model met CIWEM standards for calculation of flows during peak wet weather flow. The CIWEM level standards were met at 18 of the 22 sites used for model calibration. For the meters outside of level criteria, 3 of the 4 meters were over predicting levels, offering a conservative approach for system analysis. These calibration results provide a high level of confidence in the model's accuracy such that the model can be considered calibrated and ready to use for subsequent capacity analysis.

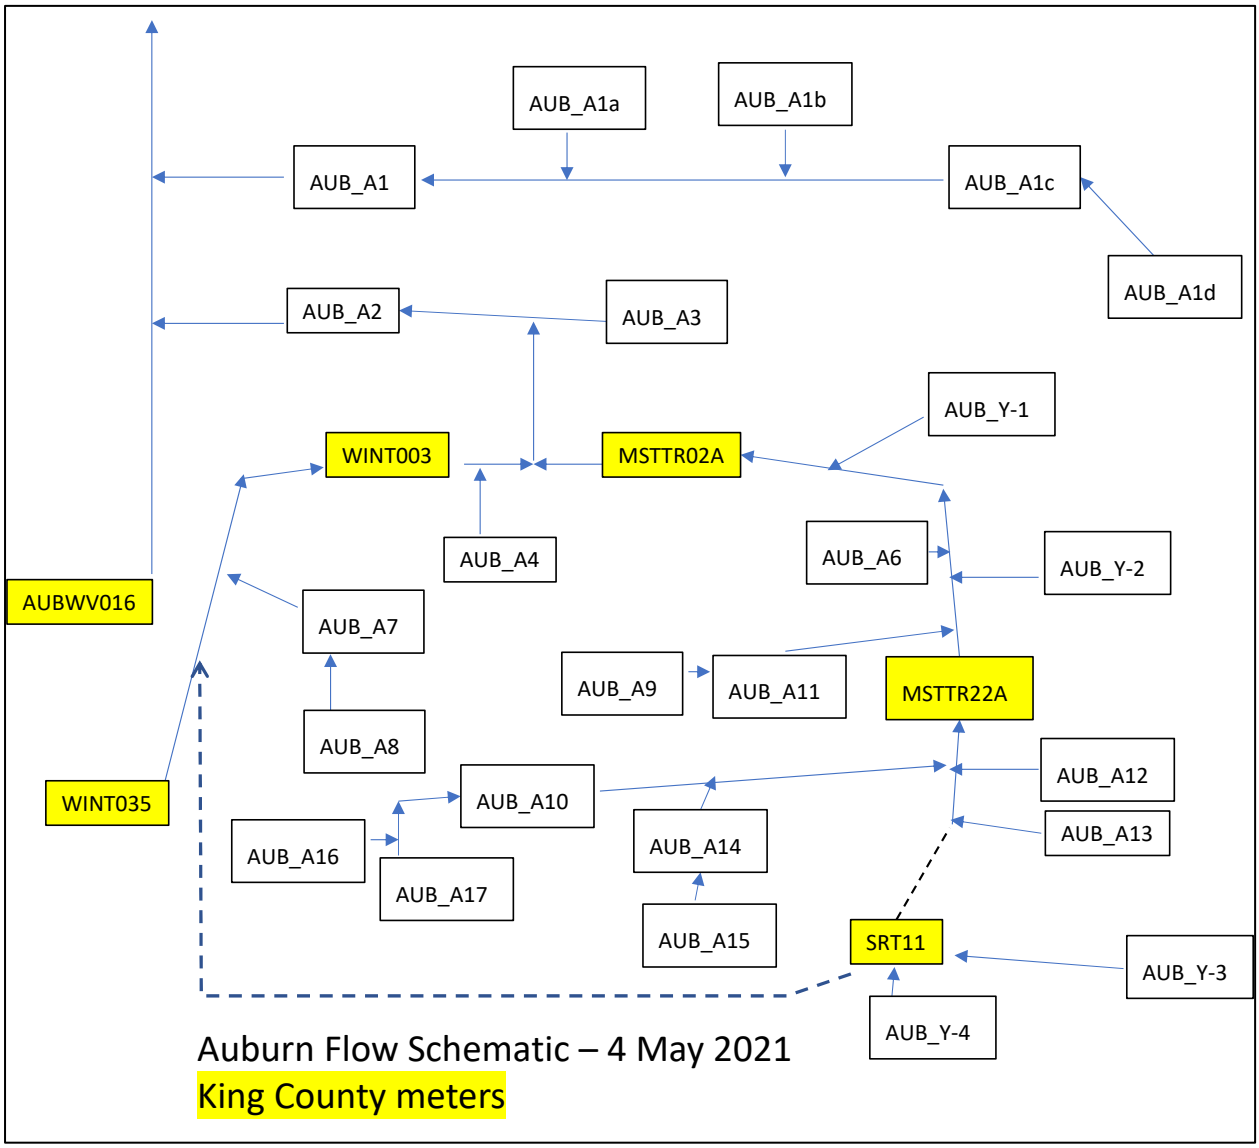
Appendix C – Q vs i Plots 24

1.0 – Overview

ADS Environmental Services (ADS) was retained by the City of Auburn to conduct a Rainfall Dependent Infiltration Inflow (RDII) analysis of its sanitary sewer system. The scope of the study was to characterize dry weather and wet weather flow conditions at twenty-four (24) temporary flow metering locations and six (6) King County permanent flow meters. One temporary rain gauge and two King County rain gauges were used for rain data.



The metering period was from 2 October 2020 through 15 April 2021. This metering period is characterized as a generally dry October following by a rainy winter. A total of 13 storms were analyzed. Two storms on 2 January and 11 January exceeded 3 inches of rainfall, but only one sewer surcharged (Y-1) and the rest of the sewers barely reached half full. It appears that snow melt affected the 14 February storm. Section 2.3 discusses the rainfall in more detail.

When the two sets of flow data were first integrated, there was large flow imbalance between the most downstream Auburn meter (A2) and the four upstream meters, two of which were King County meters. ADS discovered nearly a half-inch difference in the pipe size and King County found a depth sensor offset of over one inch at meter MSTTR02A. After both corrections were made, a small positive balance exists, but it is suspected that the King County meter WINT003 is still reading a bit high.

RDII volumes are normalized two ways in this report; Capture Coefficient (Percent rainfall entering sewers) and Gallons per LF of sewer per inch of rainfall. In a third method basins are ranked by RDII volume expected from a 2.4 -inch storm applied to the Q vs. i relationship generated at each sewershed. Historic King County DDF (Depth Duration Frequency) data indicate that a 5-year, 24-hour storm is 2.4 inches.

Figure 1 is a schematic layout of the metering network including the six King County meters. A diversion exists at SRT11 that conveys all flows to the west and it is believed that all the flow occurring during this metering period followed that path.

FIGURE 1. Meter Schematic for Seventeen Meters.

2.0 – Steps of a Wet Weather RDII Analysis

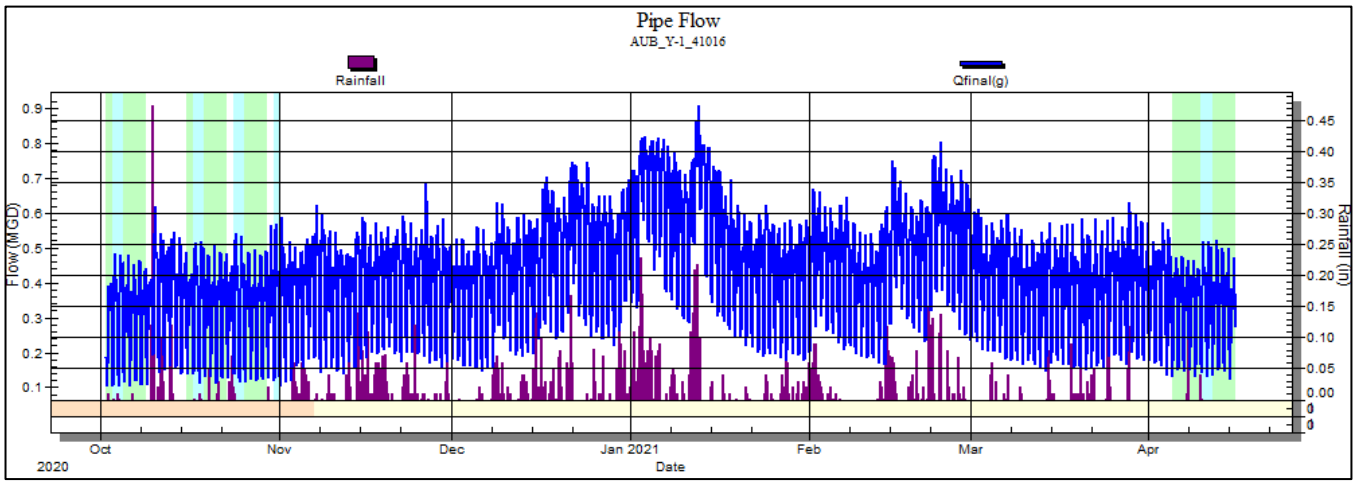
The following sections address the steps followed to conduct the dry-day and the RDII analyses. These steps include determining the basin size and performing a quality check on the wastewater produced by each basin. Rainfall data are examined and RDII is calculated.

2.1 - Basin Size

The size of each basin in Acres and length (LF) of public sewer was determined using the City's GIS information and the sizes are listed in Table 1. Appendix A is a map showing the basin boundaries used to determine basin sizes. There are two reasons to keep track of basin size. The first use is to 'normalize' the flow measurements by basin size to produce an apples-to-apples comparison of RDII severity. Secondly, the basin size has value in interpreting RDII severity. Large basins will exhibit RDII severity close to the system wide average and small basins will exhibit RDII severity much higher and much lower than the system average. If there are upstream meters, the basin size is the area between the meters, also called the Net basin size.

GIS information was not complete for the King County basins of AUBWV016 and WINT035 and those basin sizes are estimates.

Table 1 Basin Sizes in Linear Feet and Acres



Basin	Area lac)	Length (LF)

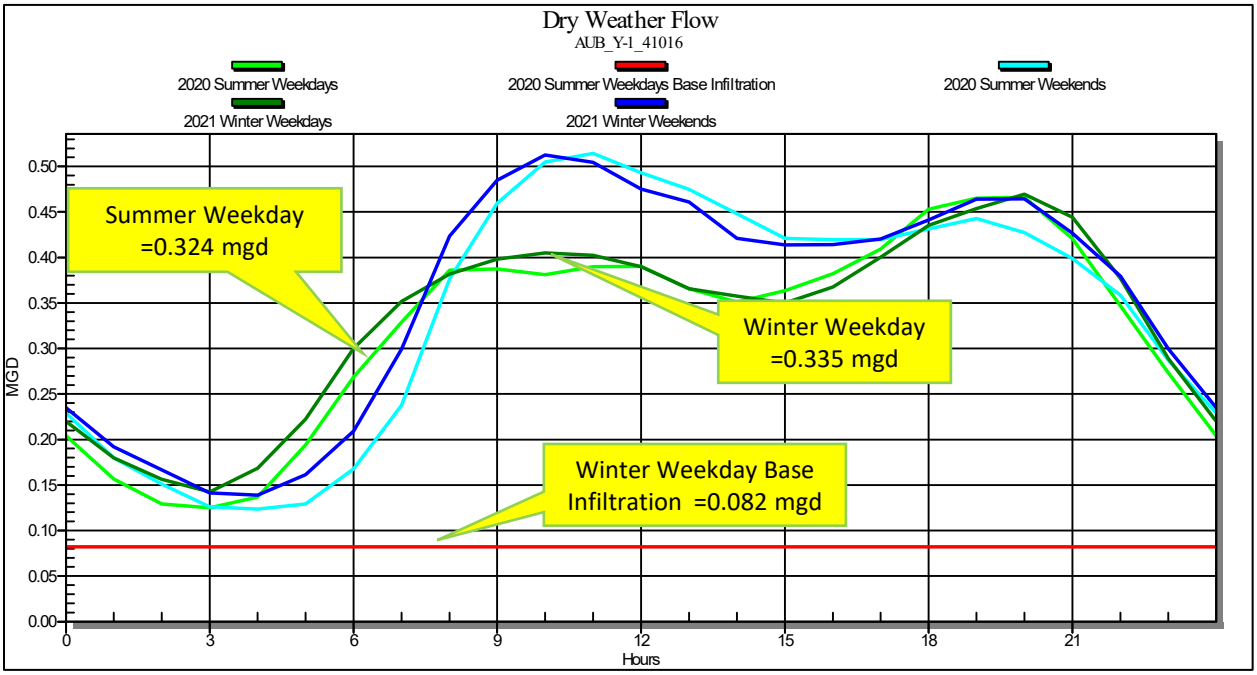
WINT035	1,846	239,999

2.2 – Average Dry Day Flow (ADDF)

A first step in conducting an RDII analysis is to determine Average Dry Day Flow (ADDF) at each metering location and this information is used in two ways. The first is that the ADDF is subtracted from the flow measured during a storm and the difference is RDII. The second is that the shape of the ADDF hydrograph is used to estimate what portion of the ADDF is wastewater production (WWP) and what portion is base infiltration (BI).



Early in the analysis of RDII data it was observed that there were two distinctly different rain-to-RDII relationships; a Summer season ending 6 November and Winter which is the rest of the metering period. This distinction is common and is a function of vegetation; either actively growing or dormant. Figure 2 shows the hydrograph for the AUB_Y-1 meters with selected dry days shown by the vertical shaded green (weekday) and blue (weekend) bars. Summer days are in October and winter days are in April.

Figure 2 Selected Dry Days are shaded in green (weekday) and blue (weekend).

For each meter the ADDF is decomposed into the two components of wastewater production (WWP) and base infiltration (BI) as shown in Figure 3. In this case the summer weekday value is 0.324 mgd (324,000 gallons per day) and winter weekday is 0.335 mgd. The estimated base infiltration (BI) is based on the shape of the weekday ADDF hydrograph and is shown as the red horizontal line at 0.082 mgd. The percent of base infiltration at this site is 0.082 mgd/0.324 mgd or 25% base infiltration.

Figure 3 Average Dry Day Diurnal Curves for Weekdays and Weekends

Calculating Base Infiltration

Base Infiltration (BI) is a component of I/I that is related to ground water and that could include leaking water lines, leaking plumbing fixtures and springs. It may be a seasonal phenomenon as rainfall affects ground water levels, but generally remains relatively steady over weeks and months. The most rigorous method for determining the quantity of base infiltration originating in a basin is to determine the quantity of potable water flowing into each building within the basin and subtract it from the measured sewer flow coming out of the basin. This is an expensive and sometimes difficult exercise and usually is not done for a short-term flow metering study.

For this analysis an empirical method for estimating base infiltration was used. The method is borrowed from the potable water industry, which has estimated that the rate of residential water usage during the overnight hours is approximately 12% of the daily average use. This empirical method provides an estimate of the average wastewater production (WWP) in a Basin based on the average flow ($Q_{avg\text{-}D}$) and minimum flow ($Q_{min\text{-}D}$) of the average dry day hydrograph.

Subtracting WWP from $Q_{avg\text{-}D}$ provides an estimate of base infiltration (BI). The equations to estimate WWP and BI are listed in Equations BI 1 and BI 2.

Equation BI 1

$$WWP = \frac{(Q_{avg-D} - \mathrm{Q_{min-D}})}{X}$$

Where; X = .88 (from potable water use records)

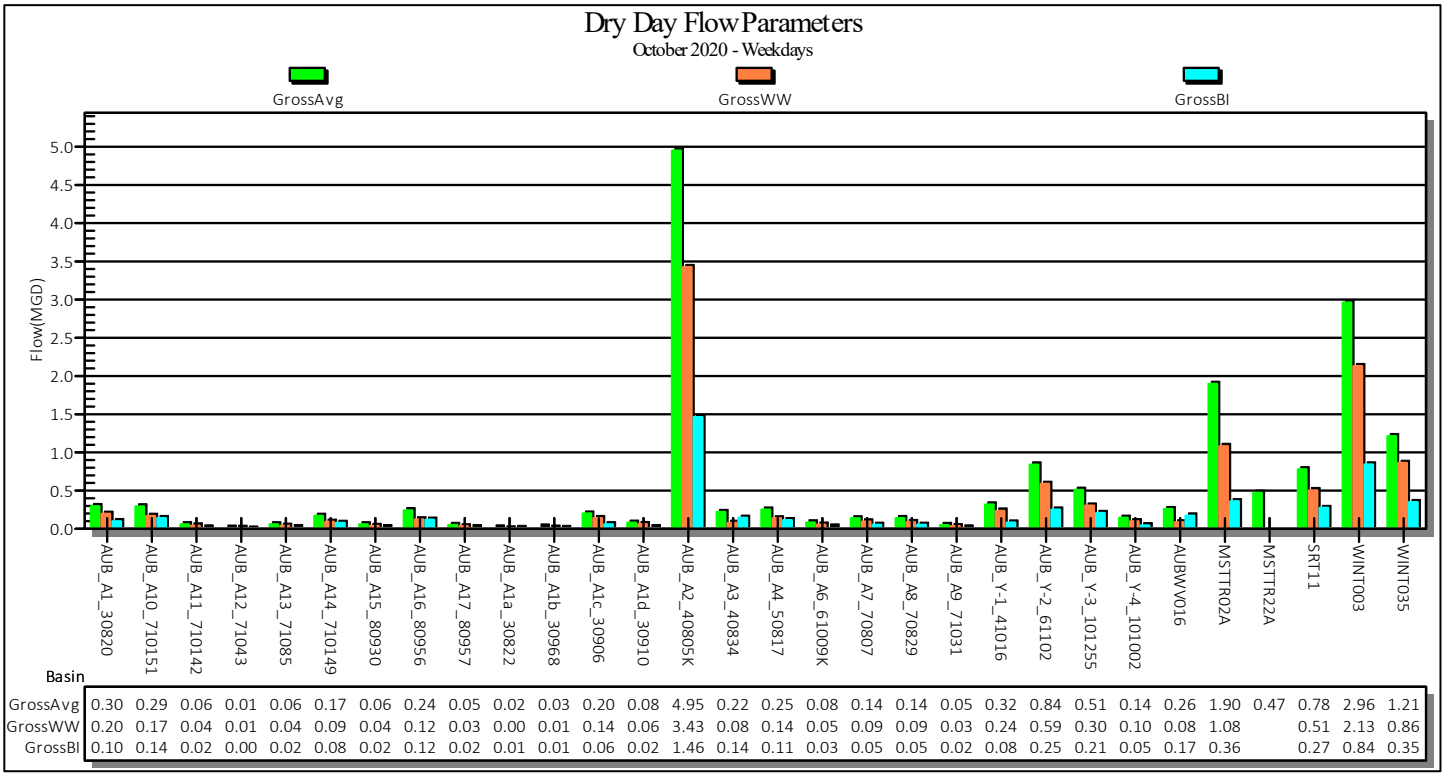
Equation BI 2

$$Q_{BI} = Q_{avg-D} - WWP$$

In concept, this method generates an estimate of WWP based on the difference between average flow and minimum flow. As base infiltration varies over the year the difference between average and minimum flow (and WWP) is expected to remain constant. This method of estimating is reliable for residential neighborhoods with sewer basin sizes on the order of 20,000 LF.

A refinement to this empirical method, the Stevens/Schutzbach equation, uses a curve fitting technique to increase the reliability of the BI estimation at meters with higher flows. As sewer sheds become larger with longer travel times, the normal dry day hydrograph flattens, which in turn affect the minimum to average relationships. Equation BI 3 is the Stevens/Schutzbach equation that was used to estimate base infiltration in all Basins. $Q_{avg\text{-}D}$ is the average flow and MDF is the minimum flow of the dry day hydrograph.

Equation BI 3



Stevens/Schutzbach Equation

$$\mathrm{Q_{BI}} = \frac{0.4 * \mathrm{Q_{min-D}}}{1 - 0.60(\frac{\mathrm{Q_{min-D}}}{\mathrm{Q_{avg-D}}})^{\mathrm{Q_{avg-D}}^{0.70}}}$$

Equation BI 3 is also dependent on average and minimum flows that occur in traditional residential flow patterns. Reliability decreases in non-residential basins and in basins where the flow meter measures flow from cycling pump stations. Although there are several limitations, this method is considered the best for estimating BI in residential areas using only flow data. In commercial or industrial areas this method can produce unreliable results.

Figure 4 is a graph of the gross average dry day flow (ADDF), the wastewater production and base infiltration at each meter. The term, "gross," refers to the meter measurement prior to any upstream meter subtraction.

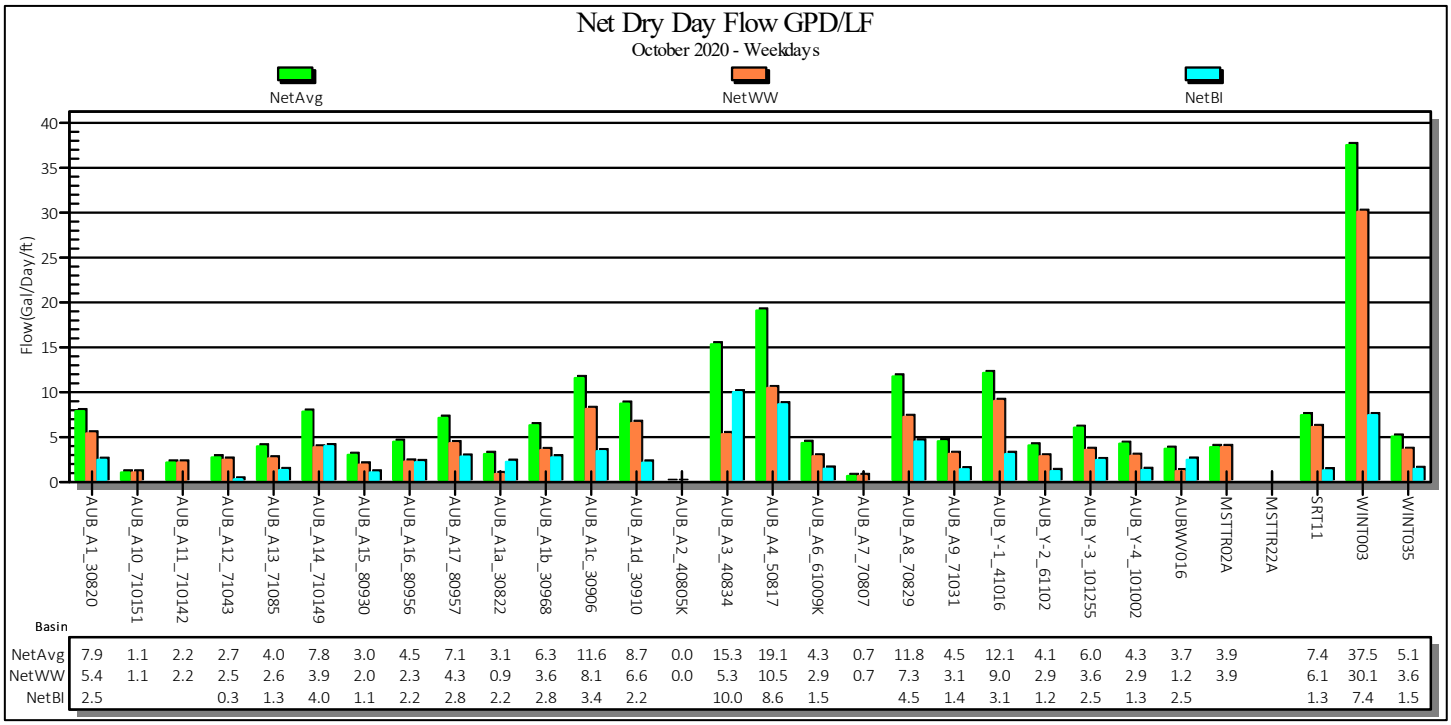


Figure 4 ADDF Wastewater Production and Base Infiltration

Basin																														
GrossAvg	0.30	0.29	0.06	0.01	0.06	0.17	0.06	0.24	0.05	0.02	0.03	0.20	0.08	4.95	0.22	0.25	0.08	0.14	0.14	0.05	0.32	0.84	0.51	0.14	0.26	1.90	0.47	0.78	2.96	1.21

The Net ADDF, Net WWP, and Net BI are normalized by the length of sewer in each basin to obtain an apples-to-apples comparison expressed in GPD/LF of public sewer as shown in Figure 5. The WWP values are a function of land use with WWP in medium-density residential sewer sheds typically being in the range of 2 - 5 gpd/LF. Low density residential areas can produce less than 2 gpd/LF and high density residential (apartments) and business districts can be 5 to 10 gpd/LF range. Basins that have wastewater productions that appear to be outliers are AUB_A2 (imbalance), MSTTR22A and WINT035.

Figure 5 Net ADDF, Wastewater Production and Base Infiltration values in GPD/LF.

2.3 - Rainfall Analysis

This rainfall analysis looks at the total rainfall recorded by each rain gauge for each storm and looks at the maximum return frequency for each rain gauge and each storm. There were thirteen storms that were analyzed. Selecting a storm in King County during the winter is subjective because of the frequent but small amounts of rainfall. Selecting a storm is a balance between seeing a significant flow response to rain followed by a return to normal before the following rain. Table 2 lists the measured rainfall for each of the three rain gauges and thirteen storms. The right side of this table displays the maximum return frequency corresponding duration for each storm. Yellow shaded storms exceeded a one-year return frequency.

Table 2 Rainfall totals and Maximum Return Frequency

2.4 - RDII Volumes

The rainfall dependent infiltration and inflow (RDII) is determined on both a gross and net flow basis. Figure 6 shows the process for the storm of 2 January 2021 at meter AUB_A8. The blue hydrograph is the gross flow measured by the meter and the gold hydrograph is the gross RDII calculated at the meter. If there is an upstream meter, net RDII is calculated by subtracting two gross RDII hydrographs.

A key observation here is how reflective the RDII hydrograph is to the rainfall. The fact that flow increases are timed almost exactly with the rainfall suggest the RDII sources are likely traditional inflow sources. The hydrographs for the 8 largest storms for all meters are included in Appendix B.

Figure 6 Storm hydrograph showing calculated RDII

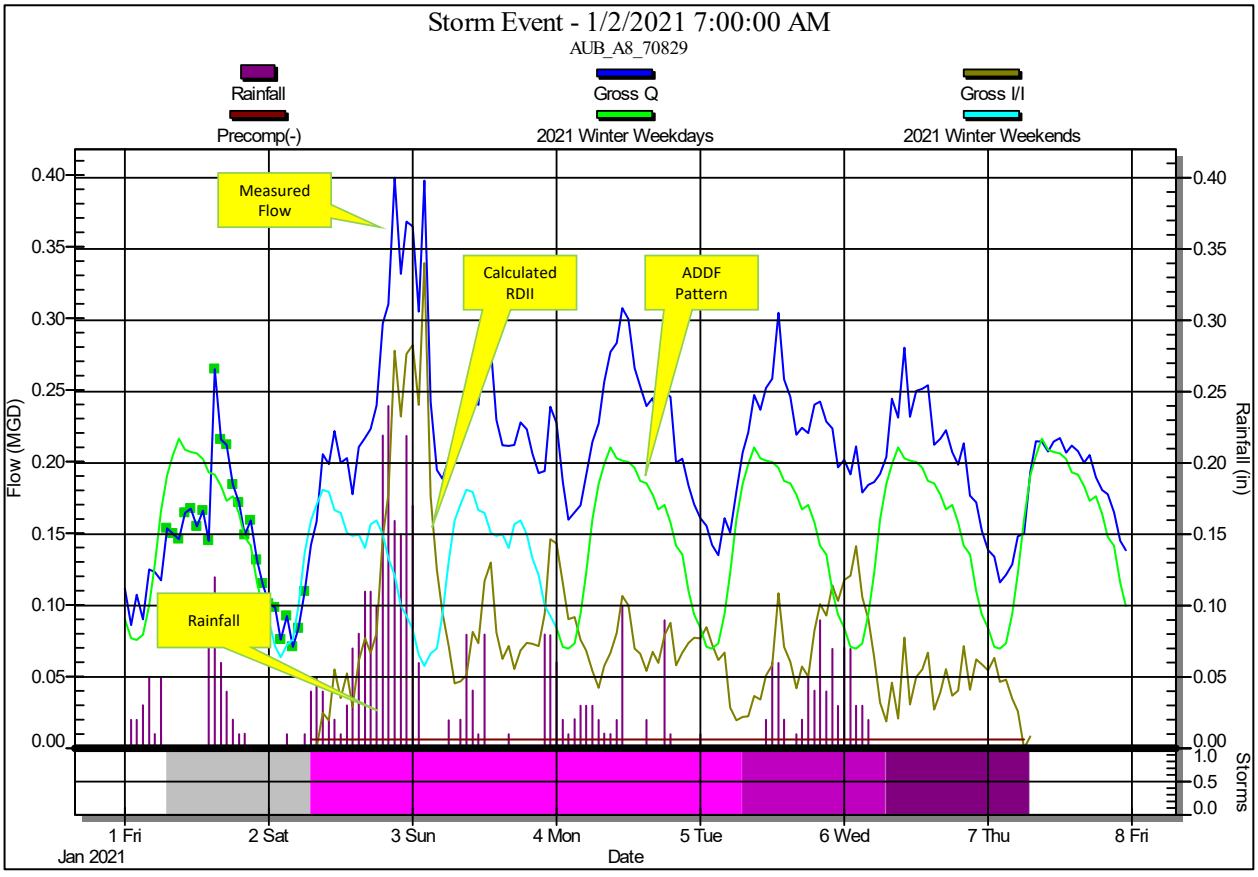

Figure 7 shows the RDII volumes in million gallons from the 6 largest storms. These values are total RDII volume measured during the storm and recovery period.

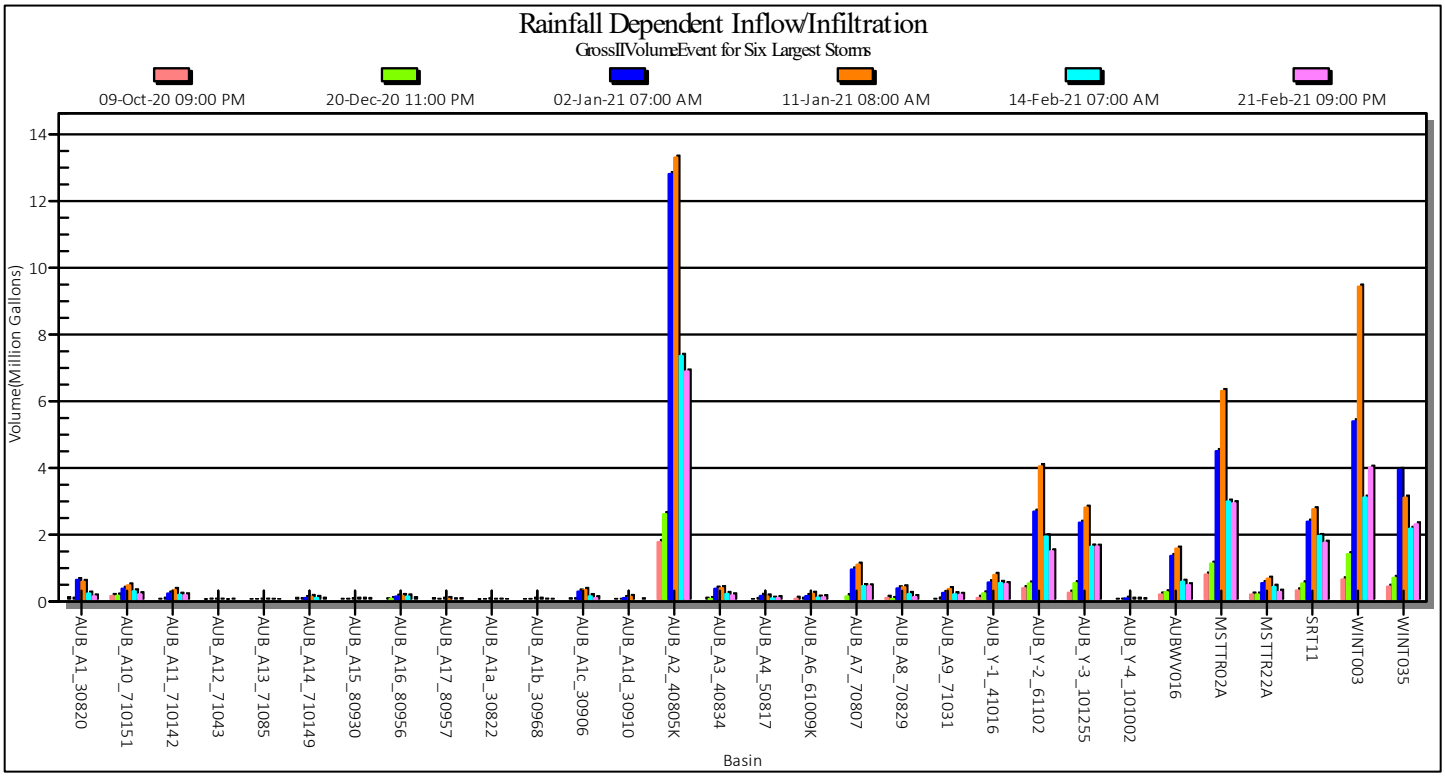
Figure 7 Gross RDII volume for each meter for the 6 largest storms.



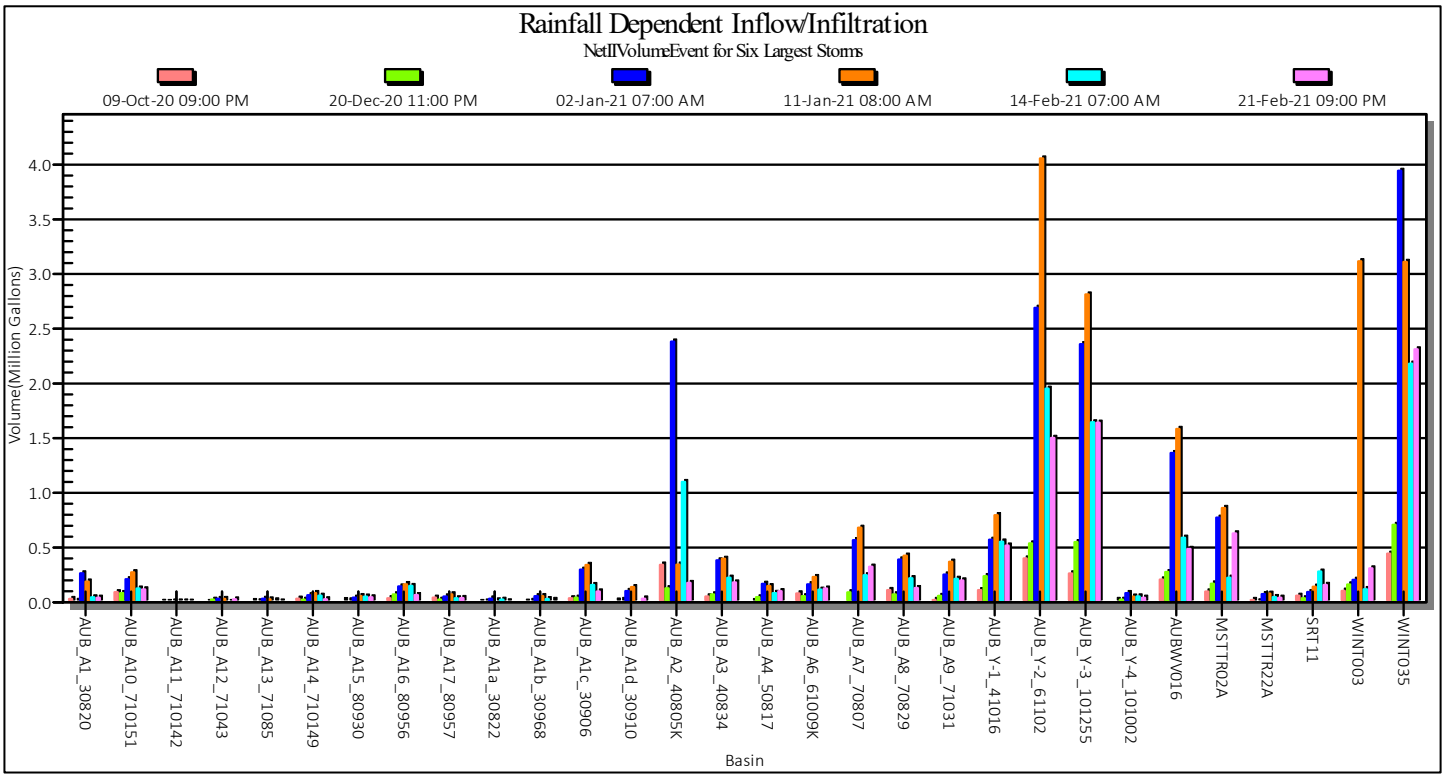


Figure 8 shows the Net Volume of RDII from the 6 largest storms. Net RDII is the volume generated within each sewer shed. Upstream RDII is subtracted from the downstream RDII.

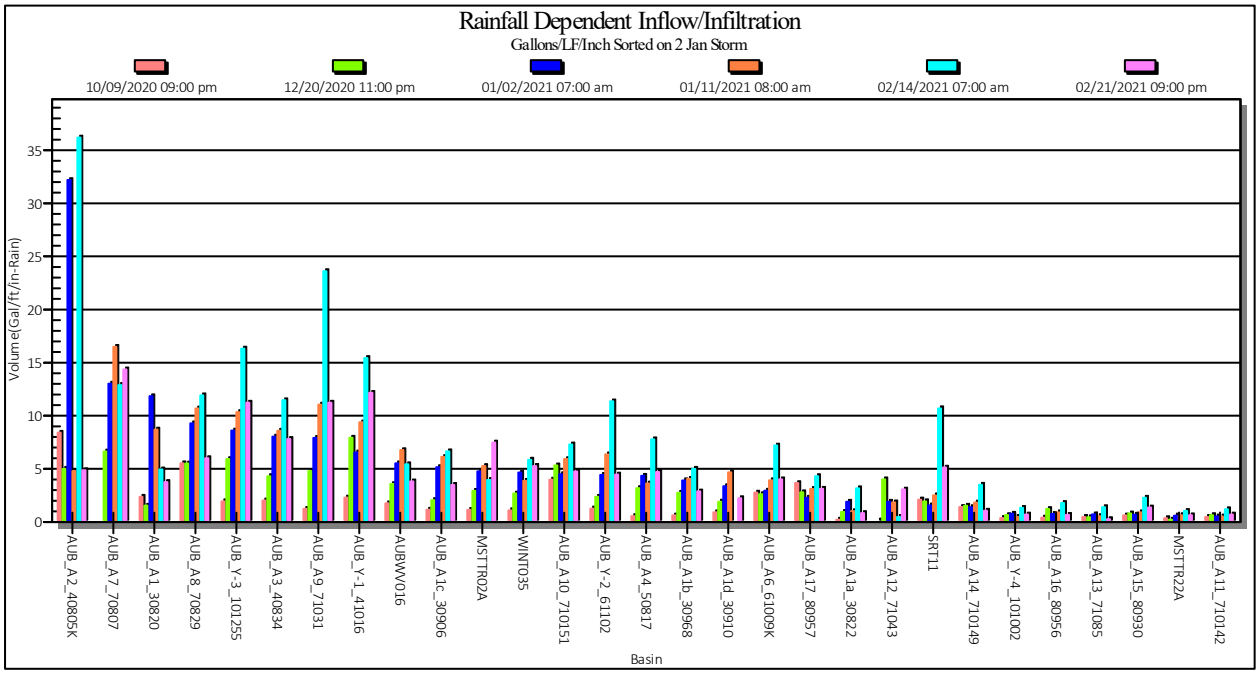
Figure 8 Net RDII volumes from the 6 largest storms.



2.5 - RDII Severity

RDII volumes in Sections 2.4 are 'normalized' by dividing the RDII values by both the basin size and inches of rainfall to get an apples-to-apples comparison of RDII severity. The most reliable normalization is by length of sewer (Gallons/LF/Inch of rainfall) in a sewershed and the second method is by acreage (Capture Coefficient or Percent Rainfall entering sewer). Normalizing by LF is more reliable because it better reflects the possible connections on the 'sewer frontage' and does not include non-sewered areas such as parks, school athletic fields, cemeteries etc. Capture coefficient values tend to be biased low because of the unsewered areas.

There is not a published set of standards for RDII severity expressed by either method because the measured value is affected by the antecedent moisture condition of the soil. These threshold levels will be higher in the winter when vegetation is dormant or after a series of rainfall with saturated soil conditions. The threshold values with be lower in the summer and fall when vegetation is actively taking up moisture and after a long dry period with low soil moisture. This study was conducted in both low antecedent moisture conditions in October and November and higher moisture condition later in the metering period.

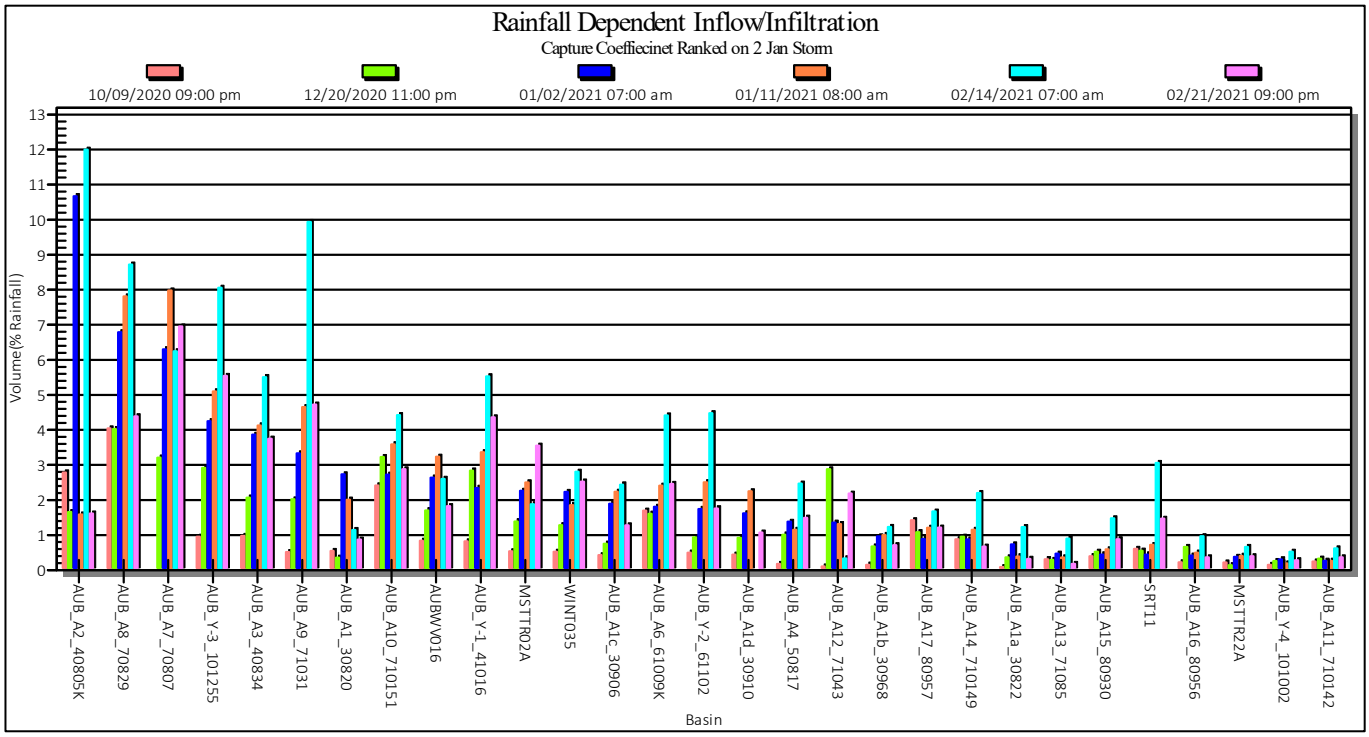


Figure 9 shows RDII normalized by sewer length (Gal/LF/inch) and sorted on the 2 January storm. For severity normalized by length, a general rule of thumb is that sewersheds in the winter/spring with values less than ~10 to 12 Gal/LF/Inch do not have excessive RDII, values up to 20 Gal/LF/Inch are marginal and values over 20 Gal/LF/Inch are considered excessive. In low moisture conditions values greater than 10 Gal/LF/inch may be considered to fall within the 'marginal' range. The AUB_A2 basin should be discounted because of the balancing problem and the 2 Feb storm should be discounted because of the snow melt.

Figure 9 RDII Severity in Gallons/LF/Inch

Although there are no fixed standards for the Capture Coefficient, it is generally considered that values of less than 5% do not have excessive RDII, between 5% and 7% are marginal and values greater than 7% to 10% are severe. These threshold values can be lower in low moisture conditions. Figure 10 shows the Capture Coefficient (percent rainfall entering sewer) for the six largest storms sorted on the 2 January storm. The Capture Coefficient tends to be biased low because it includes non-sewered areas such as parks and athletic fields.

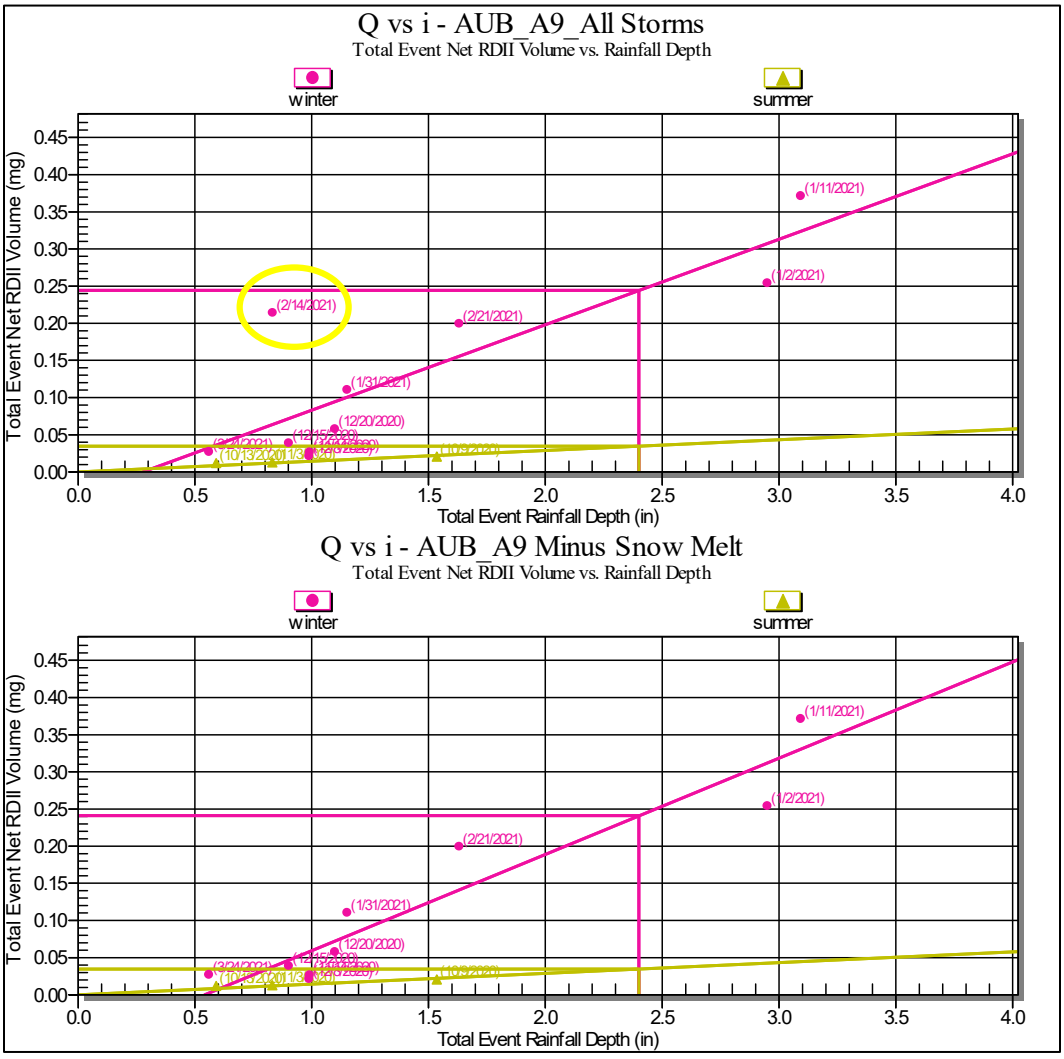

Figure 10 RDII as Capture Coefficient

2.6 - Projected RDII Volumes

A third method is to apply a design storm to the Q vs i plots for each basin. Figure 11 displays the Q vs. i plots of RDII volume vs. rainfall for AUB_A9 for each storm separated into seasons. Each data point on this plot is composed of the RDII volume measured during each storm and the rainfall that fell during the storm. In the top plot a 2.4-inch (5-yr., 24-Hr) storm is applied to the regression line resulting in a predicted RDII volume of just over 0.24 MG. Because the snow melt storm of 14 Feb should not be included here, it was removed to generate the bottom plot. The results did not change much, and the projected RDII volume is 0.24 MG. Appendix C includes this plot minus the 14 Feb snow melt storm for each basin.

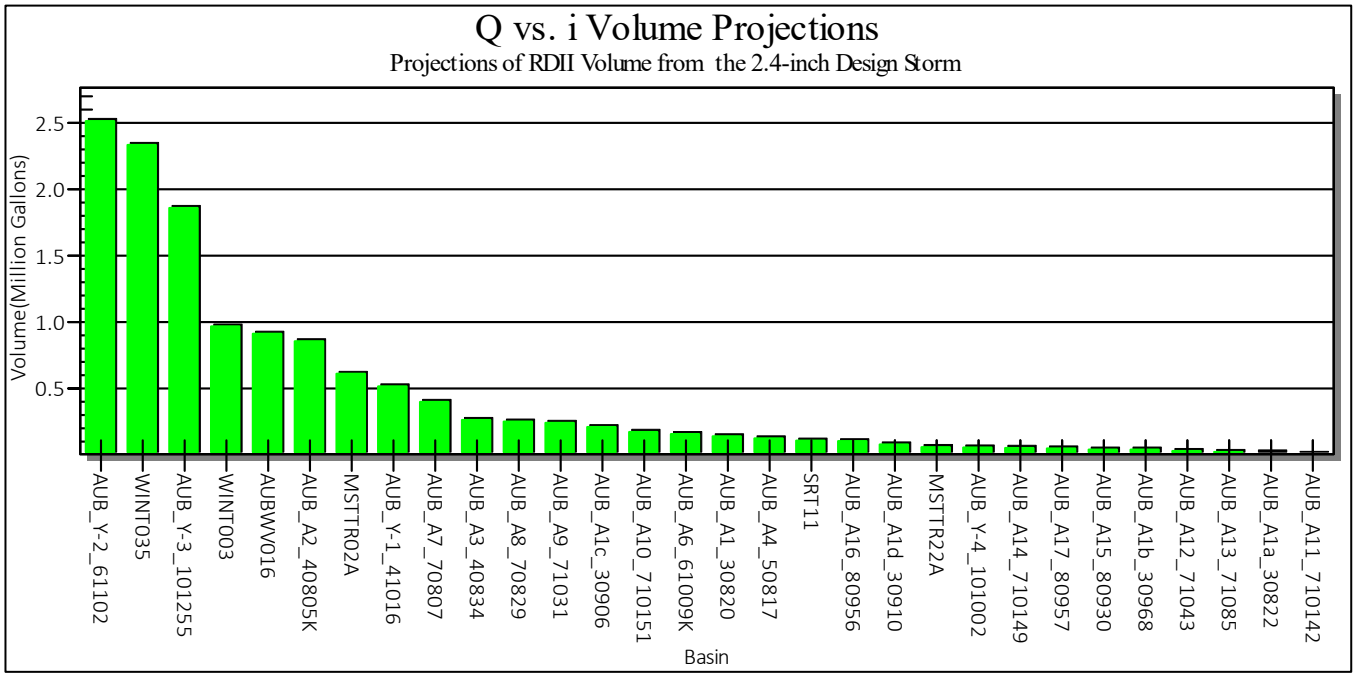

Figure 11 Q vs. i Plots of RDII Volume vs. Rainfall, with and without the snowmelt of 14 Feb 2021.

a) Which sewersheds generate the most RDII volumes?

Figure 12 shows the projected net volumes from each of the sewersheds based on the Q vs i projections. It is not surprising the larger sewersheds produce the greatest volume of RDII. The values from WINT003 and AUB_A2 are treated with less confidence because of the flow balance issues described earlier. Also, WINT035 and AUBWV016 and not considered part of the Auburn system and are included here just for completeness of the data set.

Figure 12 Plot of Net Projected RDII volumes from each sewershed.

b) Sewersheds ranked on projected RDII - in Gal/LF/Inch

The projected RDII volumes from a 2.4-inch design storm are converted to Gallons/LF/Inch in the last column on Table 3 and are ranked. The R^2 column is the correlation coefficient and values less than 0.7 are less reliable and the user should be cautious about using the projected values. Poor correlations can be due to non-uniform rainfall or some data issue. For example, the flow from AUB_A11 was shallow and erratic and the RDII was low.

There is not a definitive way to determine when RDII is 'too much', but a rule of thumb is that values greater that 10 gal/LF/Inch or so are probably in the range that deserves attention. But Keep in mind that larger basins appear to have lower severity than many smaller basins. Basins Y-2 and Y-3 are two largest sewersheds in the Auburn system and generated the most RDII of all the Auburn sewersheds but fall below the rule of thumb for severity.

Table 3 Projected RDII Volume in Millions of Gallons from a 2.4-inch storm.

Net Volume Projected from a 2.4-inch storm applied to Winter Season Q vs I Plot

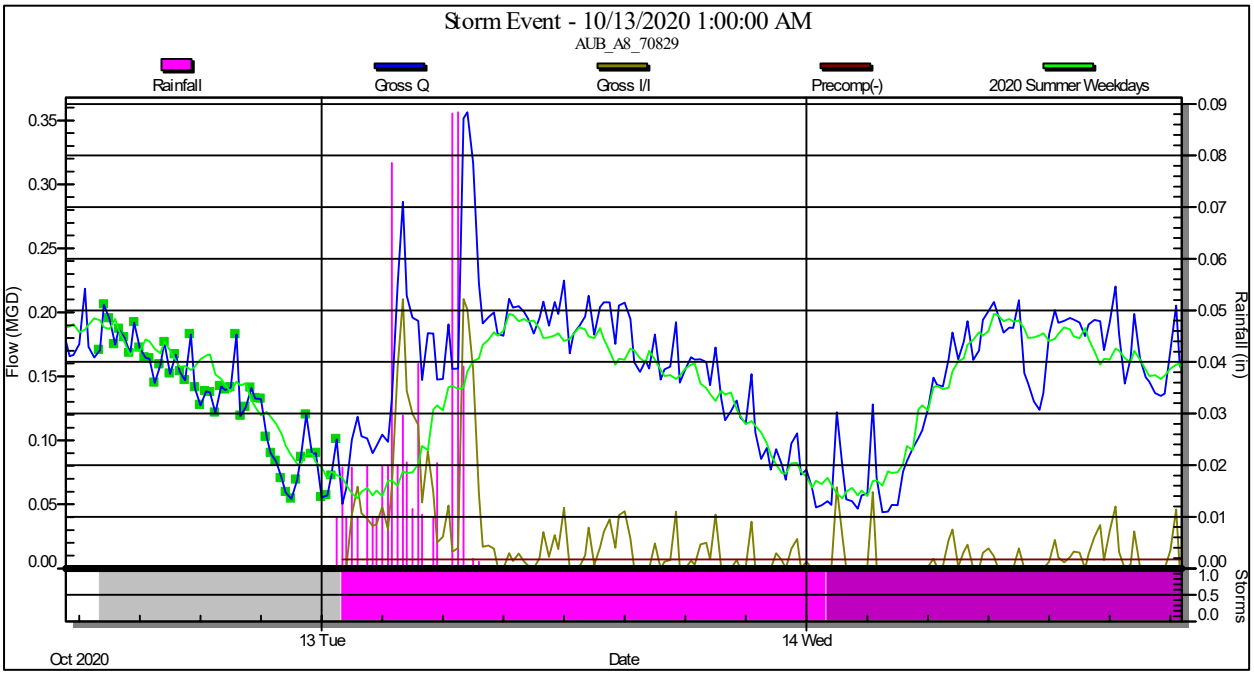
3.0 – Operational Capacities

Operational capacity is the actual flow that a pipe can carry as opposed to the theoretical capacity based on pipe slope and roughness of the pipe section in which the meter is installed. The technique for this analysis is to plot a depth-velocity scattergraph of the meter data upon which are also plotted a pipe curve (Lanfear-Coll [Manning] or Stevens-Schutzbach) and Iso-Q lines. The technique requires that the pipe fill to around 80% full so that hydraulic behavior can be observed. As it turns out only one pipe reached more than 60% full and that was AUB_Y-1 at the Green River siphon and it surcharged to 24 inches. Figure 13 is a scattergraph of meter AUB_Y-1 it shows a Theoretical Capacity of approximately 4 mgd and the Operational Capacity of 0.8 mgd circled in red. It surcharged during the 2 Jan and 11 Jan storms.

In this case both the Lanfear-Coll and the Stevens-Schutzbach curves are plotted. What is observed here is that the theoretical capacity, as established by the Stevens-Schutzbach curve is around 4 mgd in this 17.5-inch pipe. However, the actual data show that the sewer enters backwater at around 7 inches of depth and carries around 0.8 mgd throughout the surcharge to around 24 inches. There is a distinction in hydraulic conditions based on how data behave relative to the Iso-Q lines. Data will adhere to an Iso-Q line if there is a 'Hard restriction' downstream such as an under-sized pipe or a siphon.

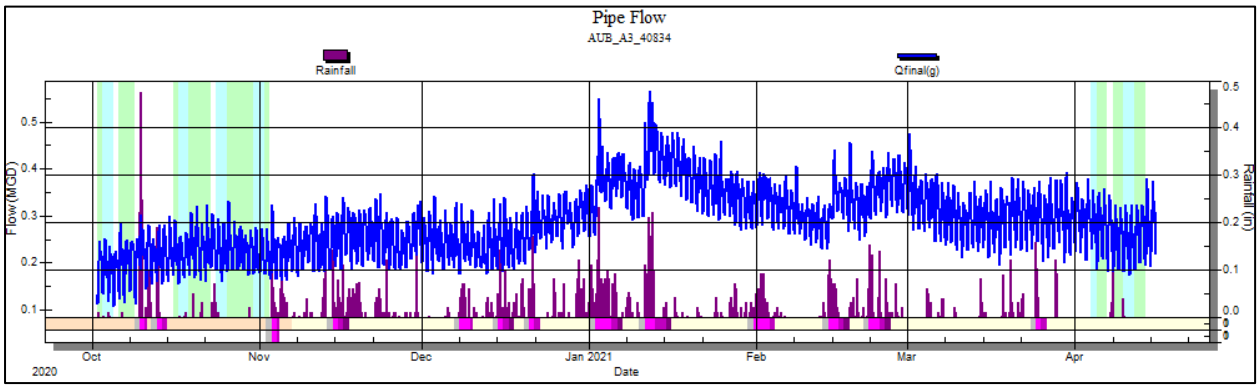
GIS data indicated there is a double barrel siphon downstream of this meter with 8-inch and 12-inch barrels. However, the scattergraph pattern reveals that only one barrel is active. Scattergraphs for all sites are included in Appendix B.

Figure 13 Scattergraph reveals both Theoretical and Operation Capacity of the sewer.



.

4.0 – Subjective Views of Hydrographs



In addition to the numerical analysis in this report we have plotted storm hydrographs for the eight largest storms at each meter in Appendix B. It is noticeable that there appear to be minor sources of Inflow during high intensity storms of October as shown in Figure 14. The gold RDII hydrograph follows the rainfall hyetograph very closely indicating that the RDII is the direct result of rainfall, a classic inflow source such as a roof drain. This hydrograph is in 15-minute time steps, but the observations can easily be made in the 60-minute plots in Appendix B.

Figure 14 Hydrographs in 15-minute time steps showing what appears to be source(s) of Inflow.

On the other hand, the hydrograph from AUB_A2 in Figure 15 reveals a sewershed that does not include many ‘spikes’ from sources of Inflow, but does reflect dramatic influence of base infiltration as the soil moisture increases and declines slowly over the wet season.

Figure 15 Sewershed AUB_A3 experiences RDII more similar to infiltration rather than inflow.

5.0 – Conclusions

1. By design this metering period captured the traditional dry weather period in October and the wet season beginning in November. Five storms recorded a return frequency of at least one year in at least one rain gauge. Two January storms exceeded 3 inches of rainfall.
2. The sewer system handled these storms readily with only one sewer surcharging and that was due to the restricted flow at a downstream siphon. The Green River siphon at AUB_Y1 is shown to have an 8-inch barrel and a 12-inch barrel, but the scattergraph indicates that only one barrel was functioning.
3. The wide range of basin sizes between the larger 'Y' basins and the smaller 'A' basins is what would have been expected. The 'Y' basin generated the most RDII, but RDII severity of the smaller basins was both higher and lower than the 'Y' basin. The intuitive observation about severity should be avoided; "The large basins don't look so bad".
4. Many of the 'A' basins performed well with small RDII contributions, but some 'A' basins experience minor sources of Inflow.
5. The RDII severity calculations are low compared to what is often experienced in other collection systems.

SUBJECT: Auburn Temporary Flow Monitoring Report

Dear Bob,

ADS is pleased to submit this temporary flow monitoring report for the city of Auburn. The metering was conducted at twenty-four (24) locations. The study was conducted during the period of Tuesday, September 22, 2020 to Wednesday, April 14, 2021.

The report contains depth, velocity, and quantity hydrographs based on an hourly average as well as daily long tables for the metering period. All data can easily be exported from the PRISM data hosting website.

In addition, we would be happy to further explain any details about the report that may seem unclear. Should you have any questions or comments, you may contact the Project Manager, Shawn Hoglan at 206-571-0130.

It has been our pleasure to be of service to you in the performance of this project. Thank you for choosing ADS products and services to meet your flow monitoring needs.

Sincerely,
ADS ENVIRONMENTAL SERVICES

Tony Locke

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.87	1.68	0.337
Minimum	2.53	1.08	0.121
Maximum	5.41	2.25	0.713
Min Time	10/03/2020 3:00:00 AM	10/31/2020 5:00:00 AM	10/03/2020 5:00:00 AM
Max Time	01/12/2021 10:00:00 AM	01/12/2021 10:00:00 AM	01/12/2021 10:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	94.934
VFINAL (ft/s)	94.934
QFINAL (MGD - Total MG)	94.934

Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A1_30820

Site Address /Location:	Opposite 627 - 637 37th St NW			Monitor Series	Location Type
				TRITON+	Temporary
Site Access Details:	Park by kerb	Latitude:	47.340149	Pipe Size (H x W)	Pipe Shape
		Longitude:	-122.238708	21.00 X 21.00	Circular

Manhole #	System Characteristics
A130820	Commercial
Access	Traffic
Drive	None

Installation Information	
Installation Date:	Installation Type:
Friday, October 2, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi
Installation Confirmation:	
Time	
10:41:00 AM	
Depth of Flow (Wet DOF) (in)	
3.88	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
2.02	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:	
Manhole Depth (Approx. FT):	Manhole Configuration
8	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good
Communication Information:	
Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole
Additional Site Info. / Comments:	

ADS Project Name:	Auburn.TFM.WA20-22

SITE INFORMATION

Pipe	Elliptical (23.88 in H x 23.75 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

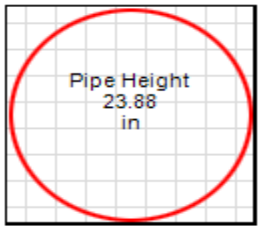
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	5.60	0.80	0.297
Minimum	3.67	0.37	0.093
Maximum	10.47	1.32	1.093
Min Time	04/04/2021 5:00:00 AM	11/24/2020 5:00:00 AM	04/04/2021 5:00:00 AM
Max Time	01/02/2021 9:00:00 PM	01/03/2021 12:00:00 AM	01/02/2021 9:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	98.75
VFINAL (ft/s)	98.75
QFINAL (MGD - Total MG)	98.75

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A10_710151

Site Address /Location:	1498 Henry Rd			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Located within roadway	Latitude:	47.314373°	Pipe Size (H x W): 14.13 x 14.13	Pipe Shape: Circular
		Longitude:	-122.209694°		

Manhole #	System Characteristics
710-142	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Wednesday, September 23, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
8:49:00 AM	14.13 x 14.13
Depth of Flow (Wet DOF) (in)	
2.63	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.64	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.44	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Common Trench
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Pipe	Round (14.13 in H)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

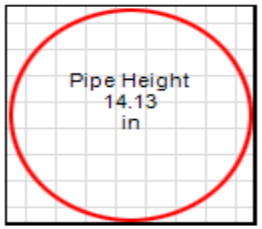
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.41	0.84	0.071
Minimum	1.30	0.37	0.012
Maximum	4.84	1.55	0.330
Min Time	10/23/2020 4:00:00 AM	10/27/2020 4:00:00 AM	10/27/2020 4:00:00 AM
Max Time	01/03/2021 1:00:00 AM	01/03/2021 1:00:00 AM	01/03/2021 1:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.217
VFINAL (ft/s)	99.217
QFINAL (MGD - Total MG)	99.217

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A11_710142

Site Address /Location:	1498 Henry Rd			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Located within roadway	Latitude:	47.314373°	Pipe Size (H x W): 14.13 x 14.13	Pipe Shape: Circular
		Longitude:	-122.209694°		

Manhole #	System Characteristics
710-142	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Wednesday, September 23, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
8:49:00 AM	14.13 x 14.13
Depth of Flow (Wet DOF) (in)	
2.63	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.64	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.44	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Common Trench
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

AUB_A12_71043

Site Commentary

SITE INFORMATION

Pipe	Elliptical (11.5 in H x 12 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	0.78	1.07	0.018
Minimum	0.10	0.21	0.000
Maximum	1.90	2.60	0.088
Min Time	09/27/2020 2:00:00 AM	11/18/2020 4:00:00 AM	10/14/2020 3:00:00 AM
Max Time	11/14/2020 6:00:00 PM	11/30/2020 11:00:00 AM	02/07/2021 10:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	99.319
VFINAL (ft/s)	99.319
QFINAL (MGD - Total MG)	99.319

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A12_71043

Site Address /Location:	510 4th St NE		
Site Access Details:	located on roadway	Latitude:	47.311779°
		Longitude:	-122.209121°

Monitor Series	Location Type
TRITON+	Temporary
Pipe Size (H x W)	Pipe Shape
11.50 x 12.00	Circular
Manhole #	System Characteristics
710-43	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Wednesday, September 23, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Downstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
9:33:00 AM	16.25x16.38
Depth of Flow (Wet DOF) (in)	
1.50	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.44	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Common Trench
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Round (8 in H)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced flow changes and backwater conditions during the monitoring period. An ADS field crew removed debris buildup from the sensors during a site visit on October 30th. A confirmation was taken which verified the sensors are working properly.

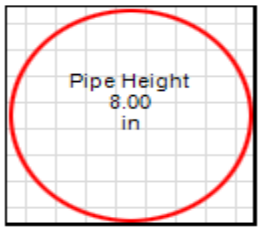
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.05	0.93	0.045
Minimum	0.67	0.22	0.005
Maximum	5.60	1.57	0.129
Min Time	01/23/2021 4:00:00 AM	12/10/2020 4:00:00 AM	01/23/2021 4:00:00 AM
Max Time	12/10/2020 12:00:00 PM	02/11/2021 6:00:00 PM	10/10/2020 11:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.284
VFINAL (ft/s)	99.284
QFINAL (MGD - Total MG)	99.284

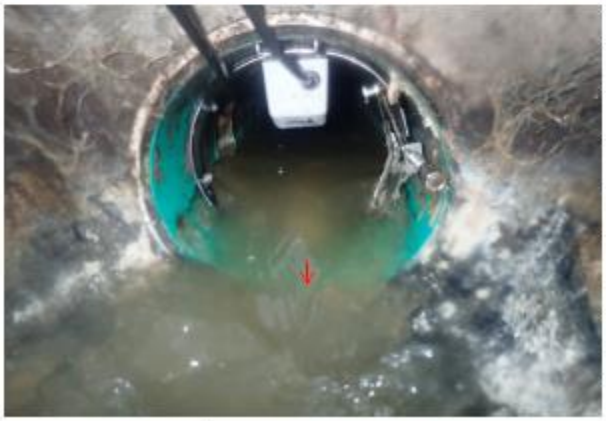
Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A13_71085



Site Address /Location:	Adjacent 1546 2nd St NE			Monitor Series	Location Type
				TRITON+	Temporary
Site Access Details:	Inbetween Pike St NE and RSt NE	Latitude:	47.310005	Pipe Size (H x W)	Pipe Shape
		Longitude:	-122.209035	8.00 x 8.00	Circular

Manhole #	System Characteristics
A13 710-85	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Wednesday, September 23, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
11:24:00 AM	16.25x16.38
Depth of Flow (Wet DOF) (in)	
2.50	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.97	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Common Trench
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (18 in H x 18 in W)
Silt	0.38 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced some backwater conditions during the monitoring period.

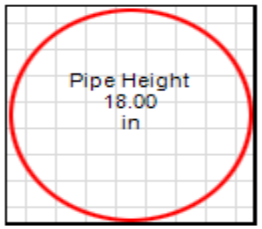
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	4.68	0.79	0.182
Minimum	2.63	0.40	0.068
Maximum	9.24	1.42	0.357
Min Time	11/08/2020 6:00:00 AM	01/03/2021 3:00:00 AM	11/02/2020 3:00:00 AM
Max Time	01/02/2021 9:00:00 PM	11/23/2020 8:00:00 AM	10/09/2020 11:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	98.74
VFINAL (ft/s)	98.74
QFINAL (MGD - Total MG)	98.74

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A14_710149

Site Address /Location:	Auburn High School - I St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Keys Required	Latitude:	47.309599°	Pipe Size (H x W): 18.00 x 18.00	Pipe Shape: Circular
		Longitude:	-122.218373°		

Manhole #	System Characteristics
710-149	Residential
Access	Traffic
Drive	Medium

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Thursday, September 24, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors): Upstream 0-5 FT	Monitor Location: Manhole
Sensors / Devices: Peak Combo (CS4), Smart Depth (CS5)	Pressure Sensor Range (psi): 0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
2:10:00 PM	18.00 x 18.00
Depth of Flow (Wet DOF) (in): 5.63	
CS5 Physical Offset (in): 1.38	Measurement Confidence (in): 0.25"
Peak Velocity (fps): 0.88	Velocity Sensor Offset (in): N/A
Silt (in): 0.38	Silt Type: Soft / Loose

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
6	Single
Manhole Material: Concrete	Manhole Condition: Good
Manhole Opening Diameter (in): 24	Manhole Diameter (Approx.): 26
Manhole Cover: Steel	Manhole Frame: Normal
Active Connections: Yes, Inside	Air Quality: Normal
Pipe Material: PVC	Pipe Condition: Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

710-149 / 710 -151 In Same M/H (710-150)

Pipe	Round (21 in H)
Silt	0.38 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.89	0.45	0.058
Minimum	1.84	0.19	0.013
Maximum	3.95	0.72	0.135
Min Time	01/07/2021 3:00:00 AM	03/31/2021 2:00:00 AM	01/07/2021 3:00:00 AM
Max Time	11/23/2020 8:00:00 AM	02/22/2021 1:00:00 PM	11/23/2020 8:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	99.263
VFINAL (ft/s)	99.263
QFINAL (MGD - Total MG)	99.263

Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A15_80930

Site Address /Location:	641 4th St SE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Park on 4th St SE	Latitude:	47.304257	Pipe Size (H x W): 21.00 x 21.00	Pipe Shape: Circular
		Longitude:	-122.220984		

Manhole #	System Characteristics
809-30	Residential
Access	Traffic
Drive	Medium

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Installation Information

Installation Date:	Installation Type:
Wednesday, September 23, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	Pipe Size (HxW)
12:23:00 PM	16.25x16.38
Depth of Flow (Wet DOF) (in)	
3.50	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.61	N/A
Silt (in)	Silt Type
0.38	Soft / Loose

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
6	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Alternate location for A15 809-02

AUB_A16_80956

Site Commentary

SITE INFORMATION

Pipe	Round (18 in H)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

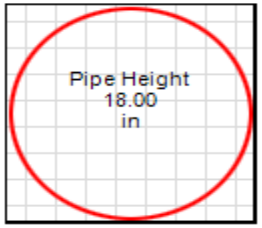
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.07	3.29	0.243
Minimum	1.56	0.87	0.042
Maximum	3.04	4.51	0.575
Min Time	12/17/2020 3:00:00 AM	12/17/2020 4:00:00 AM	12/17/2020 4:00:00 AM
Max Time	01/02/2021 10:00:00 PM	01/02/2021 10:00:00 PM	01/02/2021 10:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.761
VFINAL (ft/s)	99.761
QFINAL (MGD - Total MG)	99.761

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A16_80956

				Monitor Series	Location Type
Site Address /Location:	Opposite 225 6th St SE			TRITON+	Temporary
Site Access Details:	Park in Eastbound lane	Latitude:	47.3019	Pipe Size (H x W)	Pipe Shape
		Longitude:	-122.226958	21.00 X 21.00	Circular

Manhole #	System Characteristics
A130820	Commercial
Access	Traffic
Drive	Heavy

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Monday, September 28, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
14:26:00 AM	
Depth of Flow (Wet DOF) (in)	
2.50	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.58	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
8	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (9.5 in H x 9.25 in W)
Silt	1.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced a flow change on October 25th and backwater conditions April 13th through April 14th. An ADS field crew performed a confirmation on January 27th which verified the sensors are working properly.

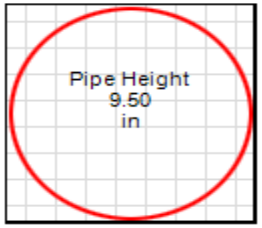
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.07	0.48	0.041
Minimum	1.92	0.15	0.010
Maximum	5.56	1.61	0.218
Min Time	12/10/2020 3:00:00 AM	04/14/2021 4:00:00 AM	04/06/2021 3:00:00 AM
Max Time	04/14/2021 11:00:00 AM	10/09/2020 11:00:00 PM	10/09/2020 11:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	96.773
VFINAL (ft/s)	96.773
QFINAL (MGD - Total MG)	96.773

Installation Information

Installation Date:	Installation Type:
Thursday, September 24, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
14:59:00 AM	
Depth of Flow (Wet DOF) (in)	
2.63	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.94	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
6	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

SITE INFORMATION

Pipe	Elliptical (10 in H x 9.88 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

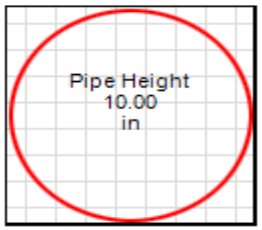
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	1.73	0.71	0.029
Minimum	1.14	0.25	0.008
Maximum	3.27	2.37	0.113
Min Time	12/31/2020 4:00:00 AM	01/20/2021 9:00:00 PM	11/03/2020 2:00:00 AM
Max Time	04/02/2021 7:00:00 PM	12/11/2020 12:00:00 PM	12/10/2020 6:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.842
VFINAL (ft/s)	99.842
QFINAL (MGD - Total MG)	99.842

Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A1a_30822

Site Address /Location:	3802 B St NW			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	located in road	Latitude:	47.341163	Pipe Size (H x W): 10.00 X 9.88	Pipe Shape: Circular
		Longitude:	-122.232272		

Manhole #	System Characteristics
A1a30822	Commercial
Access	Traffic
Drive	Medium

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Tuesday, September 22, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
7:57:00 AM	
Depth of Flow (Wet DOF) (in)	
1.88	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.97	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced flow changes during the monitoring period.

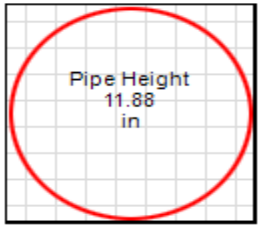
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.62	0.32	0.029
Minimum	1.44	0.05	0.003
Maximum	5.65	1.57	0.214
Min Time	11/08/2020 10:00:00 PM	04/13/2021 12:00:00 AM	04/13/2021 12:00:00 AM
Max Time	03/01/2021 12:00:00 PM	11/13/2020 1:00:00 PM	11/13/2020 1:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.827
VFINAL (ft/s)	99.827
QFINAL (MGD - Total MG)	99.827

Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A1b_30968

Site Address /Location:	Cnr 37th St and C St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Located on road edge	Latitude:	47.340252	Pipe Size (H x W): 11.88 X 11.88	Pipe Shape: Circular
		Longitude:	-122.226663		

Manhole #	System Characteristics
A1b30968	Commercial
Access	Traffic
Drive	Light

Installation Information	
Installation Date:	Installation Type:
Tuesday, September 22, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi
Installation Confirmation:	
Time	
8:35:00 AM	
Depth of Flow (Wet DOF) (in)	
1.75	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.35	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:	
Manhole Depth (Approx. FT):	Manhole Configuration
7	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good
Communication Information:	
Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole
Additional Site Info. / Comments:	

ADS Project Name:	Auburn.TFM.WA20-22

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

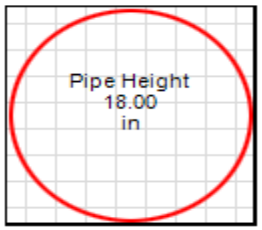
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	7.27	0.67	0.234
Minimum	5.45	0.31	0.064
Maximum	9.70	1.04	0.555
Min Time	10/01/2020 2:00:00 AM	10/19/2020 2:00:00 AM	10/09/2020 2:00:00 AM
Max Time	01/02/2021 9:00:00 PM	01/02/2021 9:00:00 PM	01/02/2021 9:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.334
VFINAL (ft/s)	99.324
QFINAL (MGD - Total MG)	99.324

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A1c_30906

Site Address /Location:	184 37th St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	located in middle lane on yellow lines	Latitude:	47.340141	Pipe Size (H x W): 18.00 X 18.00	Pipe Shape: Circular
		Longitude:	-122.224548		

Manhole #	System Characteristics
A1c30906	Residential
Access	Traffic
Drive	Medium

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information	
Installation Date: Wednesday, September 23, 2020	Installation Type: Doppler Standard Ring and Crank
Monitoring Location (Sensors): Upstream 0-5 FT	Monitor Location: Manhole
Sensors / Devices: Peak Combo (CS4), Smart Depth (CS5)	Pressure Sensor Range (psi): 0 - 5 psi
Installation Confirmation:	
Time: 7:50:00 AM	
Depth of Flow (Wet DOF) (in): 7.00	
CS5 Physical Offset (in): 1.38	Measurement Confidence (in): 0.25"
Peak Velocity (fps): 0.81	Velocity Sensor Offset (in): N/A
Silt (in): 2.5	Silt Type
Hydraulic Comments:	
Manhole / Pipe Information:	
Manhole Depth (Approx. FT): 8	Manhole Configuration: Single
Manhole Material: Concrete	Manhole Condition: Good
Manhole Opening Diameter (in): 24	Manhole Diameter (Approx.): 26
Manhole Cover: Steel	Manhole Frame: Normal
Active Connections: No	Air Quality: Normal
Pipe Material: Concrete	Pipe Condition: Good
Communication Information:	
Communication Type: Wireless	Antenna Location: Manhole Pick / Vent Hole
Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (18.13 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Data are not available from February 15th through February 19th due to a monitor problem. The monitor was replaced on February 19th to resolve the problem.

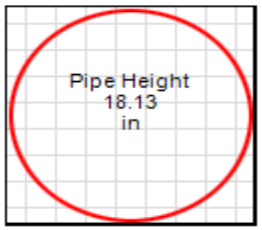
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	1.81	1.41	0.087
Minimum	0.63	0.55	0.012
Maximum	2.94	2.27	0.190
Min Time	11/02/2020 3:00:00 AM	12/20/2020 3:00:00 AM	11/01/2020 4:00:00 AM
Max Time	01/02/2021 1:00:00 PM	11/01/2020 11:00:00 AM	01/03/2021 12:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	97.749
VFINAL (ft/s)	97.749
QFINAL (MGD - Total MG)	97.749

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES	AUB_A1D_30910

Site Address /Location:	35th St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Right lane closure needed	Latitude:	47°20'19.65"N	Pipe Size (H x W): 18.13 X 18.00	Pipe Shape: Circular
		Longitude:	122°13'20.72"W		

Manhole #	System Characteristics
A1D30910	Residential
Access	Traffic
Drive	Heavy

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Tuesday, September 22, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Downstream 5-10 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
9:25:00 AM	
Depth of Flow (Wet DOF) (in)	
2.25	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.57	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
10	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (71.5 in H x 70 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

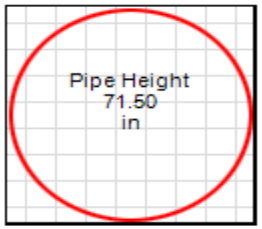
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	15.12	2.00	5.587
Minimum	9.17	1.29	1.708
Maximum	25.82	2.57	14.268
Min Time	10/04/2020 5:00:00 AM	10/04/2020 5:00:00 AM	10/04/2020 5:00:00 AM
Max Time	01/12/2021 8:00:00 PM	01/13/2021 2:00:00 AM	01/12/2021 9:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	95.015
VFINAL (ft/s)	95.015
QFINAL (MGD - Total MG)	95.015

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

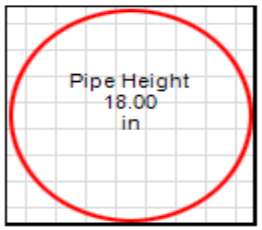
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.17	3.55	0.282
Minimum	1.43	2.13	0.096
Maximum	3.13	4.25	0.566
Min Time	09/27/2020 2:00:00 AM	10/02/2020 3:00:00 AM	09/25/2020 2:00:00 AM
Max Time	01/12/2021 9:00:00 AM	01/12/2021 9:00:00 AM	01/12/2021 9:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.782
VFINAL (ft/s)	99.782
QFINAL (MGD - Total MG)	99.782

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A3_40834

Site Address /Location:	221 30th St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	located in middle lane on yellow line. Small traffic diverson	Latitude:	47.333897	Pipe Size (H x W): 18.00 X 18.00	Pipe Shape: Circular
		Longitude:	-122.227492		

Manhole #	System Characteristics
A340834	Industrial
Access	Traffic
Drive	Medium

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Tuesday, September 22, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
10:58:00 AM	
Depth of Flow (Wet DOF) (in)	
2.00	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
4.48	N/A
	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Site Commentary

SITE INFORMATION

Pipe	Elliptical (12 in H x 11.75 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced flow changes during the monitoring period.

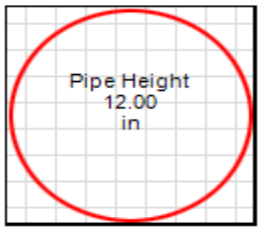
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.65	2.02	0.259
Minimum	1.66	0.71	0.030
Maximum	6.66	2.57	0.593
Min Time	02/13/2021 10:00:00 AM	02/13/2021 10:00:00 AM	02/13/2021 10:00:00 AM
Max Time	02/13/2021 3:00:00 PM	10/09/2020 8:00:00 AM	02/13/2021 3:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	94.975
VFINAL (ft/s)	94.975
QFINAL (MGD - Total MG)	94.975

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A4_50817

Site Address /Location:	1704 B St, NW			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Back of parking lot	Latitude:	47.324355°	Pipe Size (H x W): 12 X 11.75	Pipe Shape: Circular
		Longitude:	-122.230253		

Manhole #	System Characteristics
A450817	Commercial
Access	Traffic
Walk (Commercial)	None

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information	
Installation Date:	Installation Type:
Friday, October 2, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi
Installation Confirmation:	
Time	
7:20:00 AM	
Depth of Flow (Wet DOF) (in)	
3.25	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
2.24	N/A
Silt (in)	Silt Type
0	
Hydraulic Comments:	
Manhole / Pipe Information:	
Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good
Communication Information:	
Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

SITE INFORMATION

Pipe	Elliptical (11.75 in H x 12 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

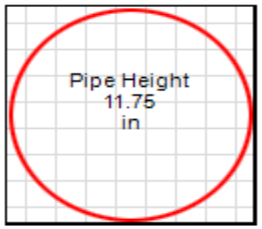
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	4.88	0.47	0.096
Minimum	3.28	0.21	0.025
Maximum	10.05	1.32	0.400
Min Time	04/14/2021 2:00:00 AM	12/15/2020 3:00:00 AM	12/15/2020 3:00:00 AM
Max Time	01/12/2021 7:00:00 PM	01/21/2021 1:00:00 PM	01/02/2021 9:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	99.741
VFINAL (ft/s)	99.741
QFINAL (MGD - Total MG)	99.741

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A6_61009K

Site Address /Location:	12th St NE + Pike St NE			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	located in residental road, light traffic	Latitude:	47.318639	Pipe Size (H x W): 11.75 X 12.00	Pipe Shape: Circular
		Longitude:	-122.210787		

Manhole #	System Characteristics
A661009k	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Tuesday, September 22, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
12:47:00 PM	
Depth of Flow (Wet DOF) (in)	
4.75	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
0.9	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
5	Single
6	Manhole Condition:
PVC	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	28
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (18 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced some backwater conditions during the monitoring period.

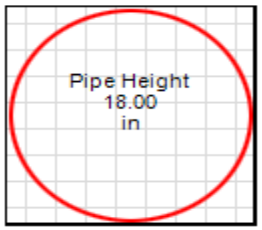
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.15	1.15	0.166
Minimum	1.65	0.40	0.030
Maximum	6.64	2.37	0.908
Min Time	11/01/2020 3:00:00 AM	11/29/2020 5:00:00 AM	11/01/2020 4:00:00 AM
Max Time	01/12/2021 9:00:00 AM	01/12/2021 9:00:00 AM	01/12/2021 9:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	89.609
VFINAL (ft/s)	89.609
QFINAL (MGD - Total MG)	89.609

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A7_70807

Site Address /Location:	Opposite 420 H St NW			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Located on Interurban trail	Latitude:	47.3125628	Pipe Size (H x W): 18.00 X 18.00	Pipe Shape: Circular
		Longitude:	-122.2394872		

Manhole #	System Characteristics
A770807	Residential
Access	Traffic
Drive	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Tuesday, October 13, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
7:25:00 PM	
Depth of Flow (Wet DOF) (in)	
4.63	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
2.13	N/A
Silt (in)	Silt Type
0	

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
5	Single
Pipe Material	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	28
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

King County M/H

Site Commentary

SITE INFORMATION

Pipe	Elliptical (15 in H x 15 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced backwater conditions from October 9th through October 12th.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	1.77	2.72	0.148
Minimum	1.30	0.47	0.047
Maximum	7.85	4.27	0.458
Min Time	12/06/2020 2:00:00 AM	10/10/2020 12:00:00 AM	11/11/2020 2:00:00 AM
Max Time	10/10/2020 1:00:00 AM	01/12/2021 9:00:00 AM	01/12/2021 9:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	97.749
VFINAL (ft/s)	97.749
QFINAL (MGD - Total MG)	97.749

Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A8_70829

Site Address /Location:	3rd St NW			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Located in parking area next to driveway	Latitude:	47.310238	Pipe Size (H x W): 15.00 X 15.00	Pipe Shape: Circular
		Longitude:	122.234096		

Manhole #	System Characteristics
AUB_A8_70829	Commercial
Access	Traffic
Walk (Commercial)	Light

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.11.325

Installation Information

Installation Date:	Installation Type:
Thursday, September 24, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Time	
8:06:00 AM	
Depth of Flow (Wet DOF) (in)	
2.13	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
4.14	N/A
Silt (in)	Silt Type
0	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
6	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Concrete	Good

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

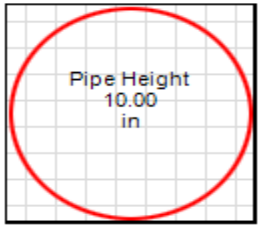
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.73	0.76	0.063
Minimum	1.39	0.33	0.011
Maximum	6.15	1.48	0.336
Min Time	12/07/2020 3:00:00 AM	04/03/2021 2:00:00 AM	12/07/2020 3:00:00 AM
Max Time	01/03/2021 12:00:00 AM	01/03/2021 12:00:00 AM	01/03/2021 12:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	98.801
VFINAL (ft/s)	98.801
QFINAL (MGD - Total MG)	98.801

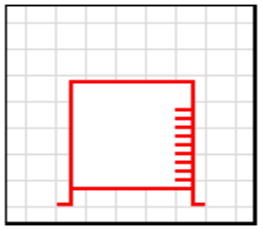
Auburn.TFM.WA20-22		Site Name
Flow Monitoring Site Report	ADS ENVIRONMENTAL SERVICES®	AUB_A9_71031

Site Address /Location:	Frank Fulmer Park			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Entrance on 5th St NE	Latitude:	47.313160°	Pipe Size (H x W): 10 x 10	Pipe Shape: Circular
		Longitude:	-122.214022°		

Manhole #	System Characteristics
710-31	Residential
Access	Traffic
Drive	None

Installation Information	
Installation Date:	Installation Type:
Thursday, September 24, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi
Installation Confirmation:	
Time	Pipe Size (HxW)
10:46:00 AM	10 x 10
Depth of Flow (Wet DOF) (in)	
3.13	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.64	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.15	N/A
Silt (in)	Silt Type
0	
Hydraulic Comments:	
Manhole / Pipe Information:	
Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
24	26
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Good
Communication Information:	
Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole
Additional Site Info. / Comments:	



ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519

Site Commentary

SITE INFORMATION

Pipe	Elliptical (17.63 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced surcharge events during the month of January.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	5.58	1.36	0.421
Minimum	3.79	0.49	0.088
Maximum	23.30	2.25	0.907
Min Time	10/21/2020 3:00:00 AM	09/22/2020 3:00:00 AM	09/22/2020 3:00:00 AM
Max Time	01/12/2021 9:00:00 PM	02/23/2021 10:00:00 PM	01/12/2021 9:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Flow Monitoring Site Report

ADS ENVIRONMENTAL SERVICES®

Site Name

AUB_Y-1_41016

Site Address /Location:	Green River Rd SE		
Site Access Details:	Park at Pump Station Along Green River	Latitude:	47.330137°
		Longitude:	-122.210973°

Monitor Series	Location Type
TRITON+	Temporary
Pipe Size (H x W)	Pipe Shape
17.63 x 18.00	Circular
Manhole #	System Characteristics
Y-1 (410-16)	Residential
Access	Traffic
Drive	None

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.22.325

Installation Information

Installation Date:	Installation Type:
Thursday, May 14, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Confirmation Time:	Pipe Size (HxW)
14:04:00 PM	17.63 x 18.00
Depth of Flow (Wet DOF) (in)	
4.63"	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.25"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.69	0"
Silt (in)	Silt Type
0.00"	

Hydraulic Comments:
Screen structure downstream

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
3	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
26	
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Fair

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Green River Siphon Downstream

Site Commentary

SITE INFORMATION

Pipe	Elliptical (14.25 in H x 14.5 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.10	9.02	1.095
Minimum	1.93	6.02	0.362
Maximum	5.82	11.70	2.995
Min Time	10/03/2020 3:00:00 AM	11/10/2020 4:00:00 AM	11/01/2020 4:00:00 AM
Max Time	01/03/2021 12:00:00 AM	01/12/2021 11:00:00 AM	01/03/2021 12:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Flow Monitoring Site Report

ADS ENVIRONMENTAL SERVICES®

Site Name

AUB_Y-2_61102

Site Address /Location:	1608 8th St NE, Auburn WA			Monitor Series: TRITON+	Location Type: Temporary
Site Access Details:	Site within West bound lane control required	Traffic	Latitude: 47.315348° Longitude: -122.206507°	Pipe Size (H x W): 14.25 x 14.50	Pipe Shape: Circular

Manhole #: AUB Y-2(611-02)	System Characteristics: Residential
Access: Drive	Traffic: Heavy

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.22.325

Installation Information

Installation Date:	Installation Type:
Thursday, May 14, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors): Upstream 0-5 FT	Monitor Location: Manhole
Sensors / Devices: Peak Combo (CS4), Smart Depth (CS5)	Pressure Sensor Range (psi): 0 - 5 psi

Installation Confirmation:

Confirmation Time:	Pipe Size (HxW):
7:49:00 PM	14.25 x 14.50
Depth of Flow (Wet DOF) (in): 2.63"	
CS5 Physical Offset (in): 1.38	Measurement Confidence (in): 0.38"
Peak Velocity (fps): 11.15	Velocity Sensor Offset (in): 0"
Silt (in): 0.00"	Silt Type

Hydraulic Comments: Fast Flow, 0.25 Ripples

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration:
6	Single
Manhole Material: Concrete	Manhole Condition: Good
Manhole Opening Diameter (in): 26	Manhole Diameter (Approx.):
Manhole Cover: Steel	Manhole Frame: Normal
Active Connections: No	Air Quality: Normal
Pipe Material: Vitrified Clay Pipe	Pipe Condition: Fair

Communication Information:

Communication Type: Wireless	Antenna Location: Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Siphon Upstream

Site Commentary

SITE INFORMATION

Pipe	Elliptical (23 in H x 23.5 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.79	5.27	0.722
Minimum	1.82	3.21	0.231
Maximum	5.34	7.28	2.420
Min Time	11/01/2020 4:00:00 AM	10/03/2020 3:00:00 AM	10/03/2020 3:00:00 AM
Max Time	01/03/2021 1:00:00 AM	01/12/2021 10:00:00 AM	01/03/2021 1:00:00 AM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:

Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Flow Monitoring Site Report

ADS ENVIRONMENTAL SERVICES®

Site Name

AUB_Y-3_101255

Site Address /Location:	2272 Riverwalk Dr SE		
Site Access Details:	Park next to M/H	Latitude:	47.288431°
		Longitude:	-122.197152°

Monitor Series	Location Type
TRITON+	Temporary
Pipe Size (H x W)	Pipe Shape
23.00 x 23.50	Circular
Manhole #	System Characteristics
Y-3(101-255)	Residential
Access	Traffic
Drive	None

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.22.325

Installation Information

Installation Date:	Installation Type:
Thursday, May 14, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Confirmation Time:	Pipe Size (HxW)
12:46:00 PM	23.00 x 23.50
Depth of Flow (Wet DOF) (in)	
2.63"	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.38"
Peak Velocity (fps)	Velocity Sensor Offset (in)
5.4	0"
Silt (in)	Silt Type
0.00"	

Hydraulic Comments:

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
26	
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
PVC	Fair

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

Additional Site Info. / Comments:

Site Commentary

SITE INFORMATION

Pipe	Elliptical (18 in H x 18 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021**, along with observed minimum and maximum data, are provided in the following table.

This site experienced backwater conditions during the month of January.

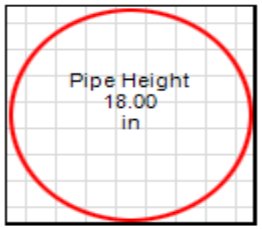
Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.77	1.25	0.145
Minimum	1.72	0.48	0.044
Maximum	5.91	1.65	0.274
Min Time	11/10/2020 4:00:00 AM	01/13/2021 4:00:00 AM	04/04/2021 4:00:00 AM
Max Time	01/12/2021 7:00:00 PM	11/26/2020 11:00:00 AM	01/12/2021 7:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the one hour average.

DATA UPTIME

Data uptime observed during **Tuesday, September 22, 2020 to Wednesday, April 14, 2021** is provided in the following table:



Percent Uptime	
DFINAL (in)	100
VFINAL (ft/s)	100
QFINAL (MGD - Total MG)	100

Flow Monitoring Site Report

ADS ENVIRONMENTAL SERVICES®

Site Name

AUB_Y-4_101002

Site Address /Location:	Cnr K St SE and 17th SE, Auburn		
Site Access Details:	Park on K St SE	Latitude:	47.293542°
		Longitude:	-122.216166°

Monitor Series	Location Type
TRITON+	Temporary
Pipe Size (H x W)	Pipe Shape
18.00 x18.00	Circular

Manhole #	System Characteristics
Y-4(1010-02)	Residential
Access	Traffic
Drive	None

ADS Project Name:	Auburn.TFM.WA20-22
ADS Project Number:	22519.22.325

Installation Information

Installation Date:	Installation Type:
Thursday, May 14, 2020	Doppler Standard Ring and Crank
Monitoring Location (Sensors):	Monitor Location:
Upstream 0-5 FT	Manhole
Sensors / Devices:	Pressure Sensor Range (psi)
Peak Combo (CS4), Smart Depth (CS5)	0 - 5 psi

Installation Confirmation:

Confirmation Time:	Pipe Size (HxW)
10:08:00 PM	18.00 x 18.00
Depth of Flow (Wet DOF) (in)	
2.88	
CS5 Physical Offset (in)	Measurement Confidence (in)
1.38	0.38"
Peak Velocity (fps)	Velocity Sensor Offset (in)
1.42	0"
Silt (in)	Silt Type
0.00"	

Hydraulic Comments:

Slight bend after monitoring point

Manhole / Pipe Information:

Manhole Depth (Approx. FT):	Manhole Configuration
9	Single
Manhole Material:	Manhole Condition:
Concrete	Good
Manhole Opening Diameter (in)	Manhole Diameter (Approx.):
26	
Manhole Cover	Manhole Frame
Steel	Normal
Active Connections	Air Quality:
No	Normal
Pipe Material	Pipe Condition:
Vitrified Clay Pipe	Fair

Communication Information:

Communication Type	Antenna Location
Wireless	Manhole Pick / Vent Hole

VOLUME 1
LAND USE ELEMENT

Vision

The Auburn community is both physically and socially connected. We take pride in the quality of our built environment as well as the beauty and function of our natural environment. Land use patterns are supported by a complete and efficient transportation and utility infrastructure system. Neighborhoods, commercial centers, and parks are attractive, interesting, accessible, and well maintained. Natural riverine and forested corridors are interspersed throughout the city, offering sanctuaries where fish and wildlife reside, and providing opportunities for people to observe and learn about the environment. Residents have a strong association with their neighborhoods, and are engaged and involved in the decisions that steer Auburn into the future.

Conditions and Trends

Dispersed Land Use Pattern

For the first 100 years of Auburn's existence, the land use pattern developed in a relatively logical manner. Auburn was fully contained to the valley floor with a traditional downtown urban center, several north/south heavy commercial and industrial corridors paralleling Highway 167, and a surrounding housing stock that was built primarily between 1910 and 1960. In the last 30 years, the land use pattern of Auburn has changed, primarily from incorporation of areas to the south, east, and west. Each newly incorporated area has its own identity and land use pattern.

Disconnected Communities

Because a significant portion of today's Auburn was settled prior to incorporation, the basic land use patterns and infrastructure have already been established. Furthermore, much of today's Auburn land use pattern was established in either Auburn, the Muckleshoot Reservation, or prior to incorporation in King County or Pierce County. Given the mix of jurisdictional oversight, myriad land use policies, regulations, infrastructure standards, and investments have been applied in these areas. This has resulted in a relatively uncoordinated and random land use pattern. It also means that the various communities lack connectivity to each other, have a mix of identities, and are experiencing a change in their character from rural to more urban.

Robust Diversity of Land Use

Auburn has a strong mix of housing and industry. Auburn's residential land use pattern includes a variety of densities, ages, and housing type. Auburn's nonresidential land use pattern includes a mix of local and regional retail, entertainment, services, manufacturing, warehousing, and distribution centers. This mix of land use is a strength because it exemplifies social, economic, and cultural diversity.

Diversity in Natural Resources

Auburn's natural resources include the Green River and its tributaries, the White River and its tributaries, a robust inventory of wetlands, floodplains, steep slopes, and mature open spaces. With a strong base to work from, the City and its partners can be strategic about how to better connect and preserve natural areas so that the overall system is enhanced for future generations to enjoy.

Introduction

All land within the City of Auburn is assigned a land use designation, which builds off the past Comprehensive Plan Map, the existing land use

pattern, previously approved subarea plans, topography, natural features, and targeted goals for shifting the character of specified areas. This chapter provides a description for each designation, general criteria for how to assign the designation, and a series of policies that govern land use within each designation. The Comprehensive Plan Land Use Map contained in the Core Comprehensive Plan shows the location and boundaries for each designation. This map should be consulted together with the written policies of this Plan when decisions about zoning designations, land use activities, and development of public infrastructure are considered.

This Section of the document also explains the reasoning and intention behind the Plan Map's land use designations. This should be useful in:

- developing and implementing tools (such as zoning provisions)
- interpreting the Plan Map as it applies to specific regulatory decisions or development proposals
- adjusting or amending the Plan Map when changing conditions or land use markets warrant
- planning for public services and infrastructure

Finally, this chapter sets forth special policies intended to address the unique challenges and opportunities of specific locations within Auburn. These specific policies supplement the general goals, objectives and policies found elsewhere in this plan.

Residential Land Use Designations

Character Sketch

Residential uses will comprise a diverse arrangement of multiple densities. The pattern of one single density in a zone or neighborhood will evolve into increased and mixed densities in exchange for amenities that enhance quality of life. There will be greater connectivity and stronger spatial relationships between neighborhoods through strategic locations of roadway, trail, park, and neighborhood-serving businesses. These amenities will help create localized identity while also linking one area to another. The design and build quality of new construction and infill will be held to a high standard. The City will encourage projects to be unique, innovative, and provide the residents of Auburn true choice.

Values

Character: Residential neighborhoods will include amenities, features, and layouts that promote interaction amongst residents.

Wellness: The design of residential neighborhoods will emphasize safety and nonmotorized connectivity.

Service: Through outreach and engagement, individual residents and homeowners' associations are connected to and aware of municipal services, events, and activities.

Economy: Neighborhoods have a physical and personal connection to Auburn's commercial centers and attractions. People want to move to Auburn because of the commercial and recreational opportunities it has to offer.

Celebration: Districts and neighborhoods are identified, promoted, and celebrated.

Environment: The built environment will fit into the natural landscape in a way that protects and respects ecosystem function and that preserves native vegetation and soils.

Sustainability: Natural resources, economic prosperity, and cultural vibrancy are balanced in a way that builds and maintains a thriving and long-lasting community.

General Policies

LU-1 Regulations for new developments and infill should address the following elements:

a. Connectivity by multiple means to adjacent subdivisions, nearby commercial hubs, and parks and recreation facilities.

b. Relationship to nearby existing or future transit service.

c. Usable community amenities and spaces.

d. Environmental protection and preservation of natural features.

e. Preservation of areas that can support low-impact development techniques.

f. Promote the use of energy and water conservation measures

g. Efficient and effective delivery of utility service.

h. Innovative design.

i. Crime prevention through environmental design.

j. Long-term maintenance considerations.

LU-2 As the market and availability of utilities enable denser development to occur, standards should be developed to maximize density while preserving open space and critical areas.

LU-3 Programs should be implemented to improve the quality of low-income neighborhoods and encourage rehabilitation of deteriorating structures and facilities.

LU-4 Public and institutional uses may be permitted as a conditional use if designed in a manner that enhances the residential character of the area. Special care shall be given to ensuring adequate parking, landscaping, and traffic circulation to avoid conflict with residential uses.

LU-5 New residential development should contribute to the creation, enhancement, and improvement of the transportation system, health and human services, emergency services, school system, and park system. This may be accomplished through the development of level-of-service standards, mitigation fees, impact fees, or construction contributions.

LU-6 Cluster development is the preferred form of residential development in all residential designations with the goal of preserving natural areas, critical areas, and areas that support low-impact development. Where clustering accomplishes these objectives, it should not come at the expense of lost development potential. Variances to lot size, lot dimensions, building height, and other bulk or dimensional standards should be utilized in order to create incentives that promote preservation.

Residential Conservancy Designation

Description

This designation should consist primarily of low-density residential uses (one dwelling unit per four acres is allowed) and accessory agricultural uses in areas featuring environmental constraints or requiring special protection such as the Coal Creek Springs watershed area, low-lying areas along the Green River, and areas that are isolated from urban services. This designation will serve to both protect environmental features and hold areas for higher density development until such time public facilities become available.

Designation Criteria

1. Areas with significant environmental constraints, intrinsic value, or that may pose environmental hazards if developed, such as areas tributary to public water sources;

2. Affords greater protections to environmental features than existing designation;

3. Level of service for property consistent with adjacent residential conservancy properties; or

4. Location, size of properties, and character is consistent with a residential conservancy use.

Implementing Zoning Designations

Residential Conservancy

Policies

LU-7 Densities and activities shall be of a very low intensity and shall not compromise environmental and watershed resources.

LU-8 In addition to single-family homes, these larger properties can also be developed with garages, accessory dwelling units, barns, and other accessory outbuildings. Home occupations, agricultural uses, and other allowed nonresidential activities may

VOL. 1

operate out of any type of permitted building, subject to intensity and use limitations.

LU-9 Until these areas are served by public utilities (water, sewer, storm services), existing and new development is not expected to be served by public infrastructure, such as urban streets, curbs, gutters, sidewalks, street lighting, and landscaping.

LU-10 As the market and utility availability enable denser development to occur, standards should be developed to maximize density while preserving open space and critical areas.

LU-11 Small-scale agricultural uses are allowed and encouraged. Commercial activities that are directly related to and support agricultural uses may also be allowed. The procedural standards may vary depending upon the type and scale of agricultural uses and supporting commercial activities. Small-scale agricultural uses are allowed and encouraged.

LU-12 Land use standards should adequately limit and control excessive accumulation of debris. Where a permitted activity does allow outdoor storage, it should be adequately screened from adjacent properties and roads, as well as ensuring adequate soil and environmental protection.

LU-13 Public, institutional, and resource-extractive uses that are low-intensity and preserve the environment may be considered conditional uses.

Single-Family Residential Designation

Description

This designation is the predominant land use category in the City. Maintaining and creating a diverse arrangement of interconnected subdivisions, neighborhoods, and communities that have a mix of densities and housing types; linkages with other residential areas and commercial hubs through nonmotorized modes, such as pedestrian and bicycling, and vehicular modes will be encouraged.

Designation Criteria

1. Previously developed single-family residential areas;
2. Undeveloped areas that do not meet the designation criteria for other Residential, Commercial, Industrial, Institutional or Public/Quasi-Public designations; or
3. Residential Conservancy areas that contain limited critical areas, are served by public utilities (water, sewer, storm services), and meet the development parameters of the single-family designation.

Implementing Zoning Designations

R-1 Residential Zone (One Dwelling Unit Per Acre): All properties located within the Urban Separator Overlay are zoned R-1, as consistent with King County County-wide Planning Policies.

R-5 Residential Zone (Five Dwelling Units Per Acre): All properties not located within the Urban Separator Overlay may be zoned R-5.

R-7 Residential Zone (Seven Dwelling Units Per Acre): All properties not located within the Urban Separator Overlay may be zoned R-7.

Policies

LU-14 Accessory dwelling units should play an integral part of promoting infill development and affordable housing, and are therefore encouraged within this land use category.

LU-15 Home occupations, bed-and-breakfasts, day cares, and other appropriate uses should be encouraged as viable accessory uses.

LU-16 Manufactured homes shall be permitted on single-family lots provided they are sited and constructed in a manner that would blend with adjacent homes.

LU-17 Provide a variety of housing typologies to suit the needs of various potential residents.

LU-18 Density bonuses outside of the Urban Separator Overlay should be approved based on innovations in transportation, stormwater management, and public amenities proposed for the development or adjacent neighborhoods associated

with the request. The onus is on the developer to justify density above baseline. Examples of amenities and concepts that justify density bonuses include park space, art, enhanced landscaping, trails that connect to adjacent properties, neighborhood commercial property set asides, use of low-impact development techniques beyond the minimum code requirements, incorporation of CPTED concepts, and variation of architecture and housing typology.

Moderate Density Residential Designation

Description

Moderate Density Residential designated areas are planned to accommodate a variety of residential dwelling types. Varying intensities may be permitted to provide a transition between single-family residential and other more intensive uses or activities (such as arterial streets) based on adjacent density, intensity, and/or character. Appropriate densities in these areas generally range from 7 up to 20 dwelling units per acre. Dwelling types generally range from single-family dwelling to multiple-family dwellings, with larger structures allowed (within the density range) where offsetting community benefits can be identified.

Designation Criteria

1. Previously developed moderate-density residential areas; or
2. Areas that provide a transition between single-family and multifamily, single-family and nonresidential, multifamily and nonresidential zones or development that are adjacent and meet the development parameters of the Moderate Density Residential designation.

Implementing Zoning Designations

Residential Transition

R-10 Residential (Ten Dwelling Units Per Acre)

R-16 Residential (Sixteen Dwelling Units Per Acre)

Policies

LU-19 Density bonuses and flexible development standards should be considered an incentive for innovative neighborhood design.

LU-20 Carefully developed low-intensity office, or residentially related commercial uses (such as day care centers) can be compatible.

LU-21 Accessory dwelling units should play an integral part of promoting infill development and affordable housing and are therefore encouraged within this land use category.

Multiple-family Designation

Description

This category shall be applied to those areas that are either now developed or are reserved for multiple family dwellings. Densities may range from 20 to 24 units per acre. These communities are served by transit, have nonmotorized connections to surrounding amenities and services, or have access to on-site amenities.

Designation Criteria

1. Previously developed high-density residential or manufactured/mobile home parks; or
2. Properties that are connected to single-family and nonresidential designations by the Residential Transition designation and meet the development parameters of the Multifamily designation.

Implementing Zoning Designations

R-20 Residential Zone (Twenty Dwelling Units Per Acre): All Multiple-family designated land not previously developed as manufactured/mobile home parks are zoned R-20.

Manufactured/Mobile Home Park: All previously developed manufactured/mobile home parks are zoned RMHC.

Policies

LU-22 Development regulations should include density bonuses and flexible development standards that create incentives for innovative site and building design, incorporation of open space and public art, nonmotorized connectivity to parks and commercial areas, proximity to transit services,

supplemental natural resource protection, supplemental use of CPTED, and supplemental use of low-impact development techniques.

LU-23 Home occupations and shared housing should be allowed in this designation; however, given their high densities, it is appropriate to establish additional restrictions, procedures, and requirements in order to ensure that they are compatible with their surroundings and do not adversely affect the community.

LU-24 Live–work units are encouraged.

LU-25 Improve the quality of low-income neighborhoods and implement programs that encourage rehabilitation of deteriorating structures and facilities the downtown area, areas between lower-density residential uses and more intense nonresidential activities, and areas with high levels of transit service and available high-quality services.

LU-26 Multiple-family development should be subject to building and site design standards. These standards should address the appearance of buildings, compatibility with nearby uses, exterior lighting, connectivity with surrounding properties and uses, the relationship of ground floor spaces and entryways with the streetscape, and connectivity to nearby nonresidential hubs (shopping centers and schools).

LU-27 Provide a variety of housing typologies to suit the needs of various potential residents.

LU-28 Establish intensity limitations such as floor area ratios, density, building height, coverage ratios, setbacks, and other standards.

LU-29 Access to nearby amenities and health and human services should be considered when reviewing senior housing developments.

LU-30 Encourage development of permanent supportive housing to address the homeless population and those with special needs.

LU-31 Encourage adaptive reuse, particularly of historic properties.

Commercial Land Use Designations

Character Sketch

Commercial uses will be wide ranging in terms of scale and type. A mix of businesses – local, regional, and national – will be among the businesses in the various designations, and will be carefully located to create balance and maintain appropriateness based on adjacent uses. These commercial areas will be economically vibrant, unique, and active outside of traditional work hours. They will be accessible by foot, bike, car, and public transport.

Values

Character – Active gathering spaces, such as parks, plazas, cafes, concert venues, festivals and markets, will be distributed throughout the City; these spaces will be engaging and filled with people interacting, irrespective of culture, age, or income level.

Wellness: A variety of healthy food options will be physically and economically accessible to all members of the Auburn community.

Service: The City's resources and services are available and utilized by the business community. The business community finds the City approachable, empathetic, and responsive. An open and collaborative dialogue exists to help identify problems and find solutions.

Economy: A wide complement of retail, service, and dining options will cater to local needs, attract visitors, and encourage consistent patronage of local businesses.

Celebration: Auburn will have a thriving and expanding arts and culture community. There will be events, amenities, and attractions that draw people to congregate and socialize.

Environment: Local businesses benefit from Auburn's collection of natural resources and amenities because residents and visitors are choosing Auburn as their home or destination.

VOL. 1

Sustainability: Local businesses benefit from, and contribute to, a sustainable economy because Auburn is an easy location to start up, maintains opportunity for growth, and has a business friendly economic climate.

General Policies

LU-32 The commercial uses permitted must be carefully regulated in regards to performance criteria and design.

LU-33 Permitted uses would consist of local-serving and community-serving retail trade, offices, personal services, and eating establishments.

LU-34 Encourage uses that provide health and human services to the adjacent community.

LU-35 Encourage adaptive reuse, particularly of historic properties.

LU-36 Promote the use of energy and water conservation measures (PSRC 11/12/15)

LU-37 Ensure that legally established existing uses that may not conform with the underlying zone, but that are compatible with their surrounding uses, and are allowed to continue to evolve and operate without being classified as "nonconforming" uses.

Downtown Urban Center Designation

Description

This category should be applied exclusively in downtown Auburn. The area should be developed in a manner consistent with and conducive to pedestrian-oriented activities. The ambiance of the downtown should encourage leisure shopping, provide services to local residents and area employees, and provide amenities that attract regional visitors and shoppers.

Designation Criteria

1. Located within the Urban Center boundaries established by the King County Countywide planning policies or within Business Improvement Area boundaries.

Implementing Zoning Designations

Downtown Urban Center

Policies

LU-38 Vertical mixed-use should be encouraged; the location of retail sales and services should predominately be on the ground floor with residential or more retail or services above. However, small freestanding commercial spaces may be established as an accessory use to a larger vertical mixed-use development.

LU-39 Deviations of height, density or intensity limitations should be allowed when supplemental amenities are incorporated into site and building design. Examples of amenities include use of low-impact development, use of sustainable site and building techniques, public space and art, transit-oriented development, landscaping and lighting, and bike shelters - as well as the inclusion of affordable housing.

LU-40 Encourage a broad mix of uses within the downtown area. A wide range of consumer-oriented goods and services are compatible within this designation since creating an attractive shopping environment is a primary emphasis. Permitted uses include retail trade, offices, personal services, eating and drinking establishments, financial institutions, governmental offices, and similar uses. Legally established existing uses that do not fit within the range of desired new uses continue to be a valuable part of the downtown economy and character and should be allowed to evolve and operate in a manner that resembles listed permitted uses.

LU-41 Encourage multiple family dwellings, particularly within the upper stories of buildings.

LU-42 Drive-in windows should not be permitted to maintain the area's pedestrian environment.

LU-43 Parking standards within the downtown should reflect the pedestrian orientation of the area, but also consider parking's impact for economic development.

LU-44 Discourage uses that rely on direct access by vehicles or involve heavy truck traffic (other than for merchandise delivery).

LU-45 Unsightly outdoor storage and similar activities should be prohibited.

LU-46 The downtown should capitalize on opportunities for multimodal transportation.

LU-47 Encourage adaptive reuse, particularly of historic properties.

LU-48 As a designated VISION 2040 Regional Growth Center that contains a transit station, land use policies and regulations should encourage population and employment growth.

Neighborhood Commercial Designation

Description

Low-intensity, small-scale commercial services that meet the daily needs of and complement the quality of the residential neighborhoods they serve. Commercial uses need to be carefully located (if located within single-family residential neighborhoods) or should be buffered from single-family residential areas. These areas are characterized by lower traffic generation, fewer operating hours, smaller-scale buildings, and less signage than light commercial areas.

Designation Criteria

1. Located along arterial or collector streets;
2. Properties that are buffered from the single-family designation by landscaping, environmental features, or the Residential Transition designation; and
3. Meets the development parameters of the Neighborhood Commercial designation.

Implementing Zoning Designations

Neighborhood Commercial

Policies

LU-49 The commercial uses permitted must be carefully regulated in regards to performance criteria and design. Architectural style, building height and size, lighting, and signage should be consistent with the surrounding residential properties.

LU-50 Permitted uses would consist of small-scale local-serving and community-serving retail trade, offices, personal services, and non-drive-through eating establishments.

LU-51 Special emphasis will be directed at those accessory activities that can alter the character of these areas into heavier commercial areas. Examples include outdoor storage, location and screening of trash receptacles, loading and unloading zones, and parking lots. Regulations and permit conditions will employ techniques that mitigate light and noise impacts associated with surrounding residential properties.

LU-52 Encourage adaptive reuse of existing residential buildings and historic properties.

LU-53 Commercial uses will have an orientation that is directed toward adjacent public streets while also providing pedestrian and bike-oriented access.

LU-54 Upzone requests to the next zone should be approved based on the innovations in transportation and stormwater management and public amenities proposed for the development associated with the request.

Light Commercial Designation

Description

This category represents the prime commercial designation for small-to moderate-scale commercial activities. These commercial areas should be developed in a manner consistent with and attracts pedestrian-oriented activities. Such areas should encourage walkability, leisure shopping, engaging public space, and should provide other amenities conducive to attracting shoppers.

Designation Criteria

1. Previously developed light commercial areas buffered from more intense commercial or

industrial designations by landscaping or environmental features; or
2. Located along arterial or collector streets;
3. Properties that are buffered from the single-family designation by landscaping, environmental features, or the Residential Transition designation; and
4. Meets the development parameters of the Light Commercial designation.

Implementing Zoning Designations

Light Commercial

Policies

LU-55 A wide range of consumer-oriented goods and services are compatible within this designation since creating an attractive shopping environment is a primary emphasis. Permitted uses would consist of local-serving and community-serving retail trade, offices, personal services, eating establishments, financial institutions, governmental offices, and similar uses.

LU-56 Parking lots must be located and designed in a manner that softens their appearance from adjacent public roads. This is accomplished through landscaping, pedestrian spaces, and the location of buildings on the property. Where practicable, low-impact development techniques and landscaping should be used to promote on site stormwater infiltration and shading of hard surfaces. Minimum and maximum parking ratios must be established for each type of permitted use.

LU-57 Development incentives should be established that encourage the creation of electric car charging stations, use of sustainable building and/or operational practices, development of nonmotorized infrastructure, and proximity and connection to public transit.

LU-58 Multiple family dwellings are only allowed as part of mixed-use developments where they do not interfere with the shopping character of the area, such as within the upper stories of buildings.

LU-59 Drive in windows should only be allowed accessory to a permitted use, and only when carefully sited under the administrative use process, in order to ensure that an area's pedestrian environment is not compromised.

LU-60 Large-scale regional retail uses and uses that rely on direct access by vehicles or involve heavy truck traffic (other than for merchandise delivery) are not appropriate in this category.

LU-61 Unsightly outdoor storage and similar activities should be prohibited.

LU-62 Encourage adaptive reuse, particularly of historic properties.

LU-63 Upzone requests to the next zone should be approved based on the innovations in transportation and stormwater management and public amenities proposed for the development associated with the request.

Heavy Commercial Designation

Description

This category is intended to accommodate uses that would also accommodate a wide range of heavier commercial uses involving extensive storage or vehicular movement.

Designation Criteria

1. Previously developed heavy commercial areas; or
2. Located along major arterial streets;
3. Properties that are buffered from the single-family designation by landscaping, environmental features, or the Residential Transition designation and buffered from all other Residential designations; and
4. Meets the development parameters of the Heavy Commercial designation.

Implementing Zoning Designations

Heavy Commercial: All Heavy Commercial designated land not located within the Northeast Auburn Special Planning Area or located within the Northeast Auburn Special Planning Area,

VOL. 1

but incapable of meeting the C-MU zoning requirements.

Policies

LU-69 A wide variety of commercial-oriented services are appropriate within this category. This includes but is not limited to regional-scale retail and entertainment uses, commercial uses with outdoor sales areas, drive-in restaurant or other drive in commercial businesses, and commercial services with outdoor storage as an accessory use.

LU-70 Parking lots must be located and designed in a manner that softens their appearance from adjacent public roads. This is accomplished through landscaping, pedestrian spaces, and the location of buildings on the property. Where practicable, low-impact development techniques and landscaping should be used to promote on site stormwater infiltration and shading of hard surfaces. Minimum and maximum parking ratios must be established for each type of permitted use.

LU-71 Development incentives should be established that encourage the creation of electric car charging stations, use of sustainable building and/or operational practices, development of nonmotorized infrastructure, and proximity and connection to public transit.

Industrial Land Use Designations

Character Sketch

Industrial uses will become a more integrated part of the physical and social life of the City. Since so many people work in these areas and these companies contribute so much to the financial life of the city, it is important that they are connected through paths, roads and by public transportation. Locations that have access to rail and highways that also encourage intelligent growth patterns will be prioritized. Innovation will be a key requirement of new and infill projects as the City looks to mitigate impacts of production and limit damage to the environment.

Values

Character: Buildings, landscaping, and outdoor spaces will be attractive, interesting, well designed, and well maintained.

Wellness: Risk to life and property from all hazards will be minimized. Properties and businesses are connected to nonmotorized corridors that offers alternative means to commute.

Service: The city works closely with individuals and organizations to fully understand the demands, needs, and concerns of the industrial community so that the City can sponsor initiatives that help aid in their success.

Economy: Cornerstone institutions will strategically expand in regional prominence. As industry grows, land use policy will support efforts to grow within Auburn.

Celebration: The Community will be made aware of and celebrate the accomplishments of our local, regional and international leaders in manufacturing, warehousing, and distribution.

Environment: The built environment will fit into the natural landscape in a way that protects and respects ecosystem function. Natural resource protection will be supported and celebrated by City leadership and the community.

Sustainability: Industrial uses are contributing to, and supportive of, efforts to build and maintain a transportation system that ensures the people and goods move safely throughout the City and beyond.

General Policies

LU-72 A wide range of industrial uses may be permitted, subject to performance standards.

LU-73 Outside storage shall be permitted subject to performance criteria addressing its quantity and location.

LU-74 Development incentives should be established that encourage the creation of electric car charging stations, use of sustainable building and/or operational practices, development of nonmotorized

VOL. 1

infrastructure, and proximity and connection to public transit.

LU-75 Promote the use of energy and water conservation measures

Light Industrial Designation

Description

This category is intended to accommodate a wide range of industrial and commercial uses. This designation is intended to provide an attractive location for manufacturing, processing and assembling land use activities that contribute to quality surroundings. A wide variety of appropriate commercial uses in this designation benefit from the location, access, physical configuration, and building types of these properties. It is distinguished from heavier industrial uses by means of performance criteria. All significant activities shall take place inside buildings, and the processing or storage of hazardous materials shall be strictly controlled and permitted only as an incidental part of another use.

Designation Criteria

1. Previously developed light industrial areas; or
2. Located along high-visibility corridors;
3. Provides buffering for heavy industrial areas or is buffered from the single-family designation by landscaping, environmental features, or the Residential Transition designation and buffered from all other Residential designations; and
4. Meets the development parameters of the Light Industrial designation.

Implementing Zoning Designations

Light Industrial

Policies

LU-76 A wide range of industrial uses may be permitted, subject to performance standards. Heavy commercial uses that serve the needs of workers in light industries are also appropriate. These uses include indoor manufacturing, processing, and assembling of materials from previously prepared or raw materials and ancillary and necessary warehousing and distribution of finished goods associated with manufacturing and industrial uses.

LU-77 Parking lots must be located and designed in a manner that softens their appearance from adjacent public roads. This is accomplished through landscaping, pedestrian spaces, and the location of buildings on the property. Where practicable, low-impact development techniques and landscaping should be used to promote on site stormwater infiltration and shading of hard surfaces. Minimum and maximum parking ratios must be established for each type of permitted use.

LU-78 Landscaping, sidewalks, and bike paths will be integral parts of site design if a development is located on an impression corridor or located within or adjacent to an identified nonmotorized corridor.

LU-79 Outside storage shall be permitted subject to performance criteria addressing its quantity and location. This is to ensure compatibility with adjacent uses, so that such storage would not detract from the potential use of the area for light industry. In all cases, such storage shall be extensively screened.

LU-80 Where a light industrial use is located adjacent to a property with a less intense zoning designation, the light industrial use bears the burden of incorporating techniques that mitigate the visual, noise, dust, and odor impacts.

LU-81 Uses involving substantial storage or processing of hazardous materials, as well as substantial emissions, should not be permitted in these areas.

LU-82 A wide range of commercial activities may be allowed to provide increased opportunities for sales tax revenue.

LU-83 The Burlington Northern Santa Fe Railroad Auburn Yard located within the Railroad Special Plan Area is considered a compatible use at its current level of usage. It is not bound by the policies concerning outside storage under the existing light industrial designation

VOL. 1

as it was an existing use prior to the development of this policy. Should BNSF decide to reactivate its applications to upgrade the yard to an intermodal facility, the proposal will be subject to the essential public facility siting process as defined in the Capital Facilities Element.

LU-84 Upzone requests to the next zone should be approved based on the innovations in transportation and stormwater management and public amenities proposed for the development associated with the request.

Heavy Industrial Designation

Description

This designation allows the full range of industrial uses, as well as certain heavy commercial uses that serve the needs of workers in light industries are also appropriate.

Designation Criteria

1. Previously developed heavy industrial areas; or
2. Not located along high-visibility corridors;
3. Buffered by the Light Industrial Designation or otherwise buffered from all other compatible designations; and
4. Meets the development parameters of the Heavy Industrial designation.

Implementing Zoning Designations

Heavy Industrial

Policies

LU-85 While this zone should be reserved primarily for the heavier forms of industrial activities, a wide range of industrial activities may be permitted. These heavier forms of industrial activities may include outdoor or semi-enclosed manufacturing, processing, or assembling activities, significant outdoor storage, and uses involving substantial storage or processing of hazardous materials. Heavy commercial uses that serve the needs of workers in heavy industries are also appropriate.

LU-86 Parking lots must be located and designed in a manner that softens their appearance from adjacent public roads. This is accomplished through landscaping, pedestrian spaces, and the location of buildings on the property. Where practicable, low-impact development techniques and landscaping should be used to promote on site stormwater infiltration and shading of hard surfaces. Minimum and maximum parking ratios must be established for each type of permitted use.

LU-87 Landscaping, sidewalks, and bike paths will be integral parts of site design if a development is located on an impression corridor or located within or adjacent to an identified nonmotorized corridor.

LU-88 Where a heavy industrial use is located adjacent to a property with a less intense zoning designation, the heavy industrial use bears the burden of incorporating techniques that mitigate the visual, noise, dust, and odor impacts.

Public and Institutional Land Use Designations

Character Sketch

Public and institutional uses will occur in both low- and high-density environments. For passive uses, land and views will be protected; limited access to these areas will be typical. For more active uses, usability and accessibility will be key features and new development will be subject to standards reflecting programmed space and interconnectivity. These spaces will be varied in type, providing service to areas large and small, urban and more rural in character. Sustainable solutions and innovations that are responsive to the native ecology will be typical of public and institutional uses.

Values

Character: Community facilities and programs bring people together and connect residents and visitors to our natural resources.

Wellness: Multiple recreation options, and nearby trails, parks, activities, and events will be readily accessible to the entire community.

Service: Land use policy supports the provision of community, health and human services to all residents.

Economy: Residents and visitors seek Auburn as a residence or destination because of its natural resources, community events, and community pride.

Celebration: We utilize our open spaces and public facilities to promote who we are, our diversity, and our community pride.

Environment: Residents and visitors will enjoy open spaces and environmentally sensitive areas, while encouraging the appreciation of their importance and beauty. Impacts of new development on natural resources are considerate of their sensitivity and importance.

Sustainability: Public and private funds are used to make investments in land preservation, restoration and protection. Public investments in land and facilities are considered for their perpetual or generational value versus short-term motivations.

General Policies

LU-89 The primary purpose of this designation is to address public needs while taking advantage of synergies with the adjacent areas where they are sited.

LU-90 Innovative strategies to integrate the uses and sites into the areas where they are sited is encouraged. These strategies should maximize use of the site while minimizing fiscal impacts and impacts to adjacent areas.

LU-91 Increase visibility of resources through public information campaigns.

LU-92 Appropriate uses include low-intensity recreational uses, passive use open areas, protected environmental habitat, stormwater detention facilities, and similar low-intensity uses.

LU-93 Promote the use of energy and water conservation measures

Open Space Designation

Description

This category shall be applied to areas that are owned by a public entity and managed in a largely undeveloped character. It includes parks, watersheds, shoreline areas, significant wildlife habitats, storm drainage ponds, utility corridors with public access, and areas with significant development restrictions.

Designation Criteria

1. Passive parks or undeveloped Parks Department property;
2. Any site containing a significant developmental hazard; or
3. Any site containing open space value suitable for public protection without unduly encroaching on private property rights.

Implementing Zoning Designations

Open Space

Policies

LU-94 Active parks that provide sports field, activity and community centers, cemeteries, and public buildings should not be designated as open space.

LU-95 Open space lands are primarily designated to provide wildlife and aquatic habitat, flood detention, vegetation and soil preservation, and view shed protection. Land designated as open space may be used for public access to trails, interpretive centers, education opportunities, and other uses and facilities that support the purpose of their designation.

LU-96 Increase distribution of open space and increase access to open space amenities throughout Auburn.

LU-97 Enhance restoration, preservation and protection of natural resources and critical areas.

LU-98 Seek out opportunities to develop recreation and education opportunities on public lands or through public–private partnerships.

LU-99 Increase visibility of resources through public information campaigns. Continue to work with regional partners to develop and maintain trail systems that connect Auburn with regional destinations.

LU-100 Build on partnerships with school districts to expand public use of school facilities for recreation and exercise, and to improve public access to facilities for this purpose, as appropriate.

Public/Quasi-Public Designation

Description

This category includes those areas that are reserved for public or quasi-public uses. It is intended to include those of a significant extent, and not those smaller public uses that are consistent with and may be included in another designation. These public uses include public schools, developed parks, and uses of quasi-public character such as large churches and private schools. Public uses of an industrial character are included in the industrial designation, and small-scale religious institutions of a residential character are included in the residential designation. Streets, utilities, and other separate uses are not intended to be mapped separately as Public/Quasi-Public.

Designation Criteria

1. Previously developed institutional uses; or
2. Meets the development parameters of the Public/Quasi-Public designation.
3. Properties identified in the Airport Master Plan as Landing Field.

Implementing Zoning Designations

Institutional
Public Use
Landing Field

Policies

LU-101 A responsible management entity and the purpose for the public/quasi-public designation should be identified for each property interest within this designation. Management policies and plans are appropriate for all lands in this designation.

LU-102 Appropriate uses for this designation include facilities that serve the needs of the larger community such as public schools, active parks, city operated municipal facilities, large churches, and fire stations.

LU-103 This designation permits a wide array of uses that tend to be located in the midst of other dissimilar uses. For this reason, the following must be considered of new requests for this designation:

a. The impacts that the designation may have on the surrounding community.
b. Site-specific conditions that should be attached to new requests for this designation that are designed to mitigate impacts on the surrounding community.
c. Site-specific conditions that should be attached to development proposals that are designed to mitigate impacts on the surrounding community.

LU-104 Coordination with other public or institutional entities is essential in the implementation of this land use designation.

LU-105 Industrial and commercial uses that are affiliated with and managed by educational institutions for vocational educational purposes may be classified as an institutional use and permitted on a con¬ditional basis.

LU-106 For the Landing Field (LF) zone, an Airport Master Plan (AMP) should be developed that establishes the vision, policies, and implementation strategies that govern uses, management principles, and future planning efforts. The AMP shall be incorporated by reference in the Auburn Comprehensive Plan as an appendix.

LU-107 Auburn Municipal Airport is included in the federal airport system - the National Plan of Integrated Airport Systems (NPIAS). Participation in the NPIAS is limited to public use airports that meet specific FAA criteria. NPIAS airports are eligible for federal funding of improvements through FAA programs. To maintain eligibility for funding through FAA programs, the Airport Master Plan should be periodically updated as conditions change.

LU-108 Uses, activities, and operations within the LF Airport Landing Field District must be coordinated and consistent with the Airport Master Plan.

LU-109 Future expansions of the LF Airport Landing Field District, for the purpose of airport uses, activities, and operations, should be coordinated and consistent with the Airport Master Plan.

LU-110 While the industrially designated area east of the Airport is highly suited for airport related activities, other industrial type uses are now located here. Therefore, the City will encourage use in this area to take advantage of its proximity to the Airport.

LU-111 New commercial land uses in proximity to the airport should be air-related and/or complementary to the airport.

LU-112 To protect the viability of the Auburn Municipal Airport the City shall create an airport overlay that is consistent with FAA regulations and WSDOT guidance.

LU-113 The City's zoning ordinance and other appropriate regulatory measures shall enforce the airport overlay and the FAR Part 77 surfaces.

LU-114 The airport overlay shall protect the operations of the Auburn Municipal Airport by establishing controls on incompatible land uses and development.

LU-115 The airport overlay should be implemented to manage land uses and development around the airport to ensure compatibility into the future and prevent incompatible future uses. The regulations applied to properties surrounding the airport should encourage land uses that are related to, and benefit from, proximity to the airport but not restricted exclusively to only these.

LU-116 The impact of development on air safety shall be assessed through the City zoning ordinance, FAA regulations, SEPA review, input from the Auburn Municipal Airport, and relevant technical guidance. Appropriate mitigation measures shall be required by the City.

LU-117 Uses in proximity to the airport that may create potential operational (e.g. height or noise) conflicts shall be reviewed for their consistency to airport operations and conformance with the FAA regulations.

LU-118 The airport should be protected from nonconforming uses and structures that pose a safety concern to airport operations.

LU-119 The City shall determine whether nonconforming uses and structures affect airport operations and require their minimization or elimination, at cost to owner, based on individualized study of proposals, City regulations, input from the Auburn Municipal Airport, and relevant technical guidance.

Overlays, Urban Growth Area, and Special Planning Land Use Designations

Character Sketch

These areas help control growth, protect the environment, and prevent urban sprawl conditions in our City. For a variety of reasons, specific areas exist within the City that require further specificity or focus of land use planning, policy, regulation, or investment. Overlays, urban growth areas, and special planning areas may be designated that help further enumerate a purpose. These areas are to be designated through the Comprehensive Plan and treated as a component of the Land Use

VOL. 1

Element of the Plan.

Values

Each area designated as an overlay, urban growth area, or special planning area shall reflect the values identified in the Core Comprehensive Plan.

General Policies

LU-120 These land use designations must be consistent with the Growth Management Act, Puget Sound Regional Council, and countywide planning policies.

LU-121 Any proposed changes to these designations must be pursued in coordination with applicable State, Regional and County agencies.

Urban Separator Designation

Description

Urban separators are areas designated for low-density uses in the King County Countywide planning policies. They are intended to "protect Resource Lands, the Rural Area, and environmentally sensitive areas, and create open space and wildlife corridors within and between communities while also providing public health, environmental, visual, and recreational benefits." There are two primary areas of urban separators, one on Lea Hill and one on West Hill.

Designation Criteria

Areas designated through the process of annexation

Implementing Overlay Designations

Lea Hill Overlay
West Hill Overlay
Urban Separator Overlay

Policies

LU-122 The City is obligated to maintain (and not redesignate) until at least the year 2022, pursuant to countywide planning policies and an annexation agreement with King County.

LU-123 Urban separators are deemed to be both a regional as well as local concern and no modifications to development regulations governing their use may be made without King County review and concurrence. Therefore, the areas designated as "urban separator" on the Comprehensive Land Use map, will be zoned for densities not to exceed one dwelling unit per acre, with lot clustering being required if a subdivision of land is proposed.

Urban Growth Area and Potential Annexation Area Designation

Description

Urban growth areas and potential annexation areas are areas located outside of the municipal city limits of Auburn. They are areas that are anticipated to be incorporated into the City within 10 years of their designation.

Designation Criteria

Potential annexation areas are jointly developed by cities and the County in which they are located. They are based upon countywide growth projections that are divided among all urban growth areas within each respective County. Urban growth areas and potential annexation areas are distinguished from each other by whether they have been assigned to a City or not. Urban growth areas have been identified but have not been assigned to a City. Potential annexation areas are urban growth areas that have been assigned to a specific City.

Implementing Designations

Urban Growth Area
Potential Annexation Area

Policies

LU-124 Work with King and Pierce County, as well as nearby cities, to redesignate urban growth areas into potential annexation areas.

LU-125 Auburn's Potential Annexation Area is shown on the Comprehensive Plan Land Use Map (Map 1.1). Map 1.1 also depicts Growth Impact Areas. These Growth

VOL. 1

Impact Areas are generally adjacent cities or unincorporated County lands in which development that occurs potentially impacts the city of Auburn.

LU-126 The Auburn City Council may revise the boundaries of the Potential Annexation Area in the future, in response to:

a. Amendments to King and Pierce County Urban Growth Areas as specified in the King and Pierce County countywide policies
b. Discussions between Auburn and adjacent jurisdictions regarding POTENTIAL ANNEXATION AREA boundaries
c. Discussions with Pierce County concerning the designation of POTENTIAL ANNEXATION AREA boundaries
d. Changed circumstances relating to population and employment growth and projections, urban service feasibility, or similar factors.

LU-127 Develop strategies and agreements for the review of development and provision of utilities within potential annexation areas that have yet to be annexed.

LU-128 Prior to annexation, develop strategies and agreements that address the orderly transition of areas into the City such as transfer of permit authority, infrastructure financing, financing of fire and police services, and interim development regulations.

Transition Designation

Description

The Transition Designation following establishes policies and guidance are intended to provide a basis for future development of zoning and other regulatory tools to manage and reduce impacts from proximity of boundaries between sharper differences of intensity in land uses and is meant to apply city-wide.

Designation Criteria

The Designation should apply to areas that are located between single-family and multifamily land use designations; between multifamily and nonresidential land use designations; and between single-family and nonresidential land use designations.

Implementing Designations

The Designation and implementing zoning and other regulatory tools shall generally apply to the more intense land use designation.

Policies

LU-129 Between single-family and multifamily:

a. Where a multifamily use is proposed to be located adjacent to a single-family zone, the multifamily use will bear the burden of providing an adequate transition of land use. Mitigating measures that control light, noise, and dust should be incorporated into multifamily development proposals.
b. Provide non-motorized access through the site in order to connect the adjacent land uses.
c. Housing size, type, and orientation shall be utilized as a means of providing harmonious transition of the built environment.
d. Provide a mix of townhomes, duplexes, cottage housing and small-scale multifamily housing.

LU-130 Between multifamily and nonresidential

a. Where a non-residential use is proposed to be located adjacent to a multifamily zone, the non-residential use will bear the burden of providing an adequate transition of land use. Mitigating measures that control light, noise, and dust should be incorporated into nonresidential development proposals.
b. Provide non-motorized access through the site in order to connect the adjacent land uses.
c. Provide a mix of townhomes, duplexes, cottage housing and small-scale multifamily housing.

LU-131 Between single-family and nonresidential:

a. Where a non-residential use is proposed to be located adjacent to a single-family zone, the non-residential use will bear the burden of providing an adequate transition of land use. Mitigating measure that control light, noise, and dust should be incorporated into nonresidential development proposals.

b. Provide non-motorized access through the site in order to connect the adjacent land uses.

Critical Area Overlay Land Use

Description

Under the Growth Management Act cities and counties are required to identify, designate and protect critical areas. Critical areas include (a) wetlands, (b) areas with a critical recharging effect on aquifers used for potable water, (c) fish and wildlife habitat conservation areas, (d) frequently flooded areas, and (e) geologically hazardous areas.

Designation Criteria

Designation of critical areas includes both criteria that should be applied to the specific type of critical area as well as buffers and/or setbacks that are necessary for the protection of the critical area and/or life and property. Designation of critical areas is based on best available science as it applies to local conditions.

Implementing Designations

Wetlands
Critical Aquifer Recharge Areas
Fish and Wildlife Habitat Conservation Areas
Frequently Flooded Areas
Geologically Hazardous Areas

Policies

LU-132 Best available science will be utilized for the specific designation criteria and the associated adopted protection standards and development regulations.

LU-133 Reasonable use provisions will be included within the critical area regulations that ensure a property owner is not denied use of a preexisting parcel, lot or tract.

LU-134 Exemptions to the critical areas ordinance should be provided for very limited and justified circumstances such as maintenance of existing land uses, work within some types of human-made features, limited types of site investigation work, emergency activities, and certain types of invasive vegetation control.

LU-135 Critical area regulations will identify the process and standards for alteration of a critical area and criteria related to mitigation, performance, and monitoring.

Special Planning Area Designation

Description

"Special Planning Areas" consist of Districts, subareas, Impression Corridors, and Gateways within Auburn that warrant additional empha¬sis in planning, investments, and policy develop¬ment. Each may be recognized separately within the Comprehensive Plan, as an Element of the Comprehensive Plan, or as an subarea plan (dis¬cussed below). There are a variety of reasons for designating and distinguishing a special planning area, and once designated, a variety of poten¬tial outcomes. Reasons for designating a special planning area include:

- Areas of high visibility and traffic. These areas create an impression or image of Auburn. It is therefore particularly important to ensure that they are attractive and well maintained. Examples include Auburn Way South and as¬sociated major highway on- and off-ramps.
- Land use activities that warrant joint planning between the City and owner/operator. In ad¬dition to developing approaches and strat¬egies for the land use activity, there may be additional emphasis on ensuring compatibility with surrounding land uses. Examples include, Green River College, the Auburn Municipal Airport, and Emerald Downs Thoroughbred Horse Racetrack.

VOL. 1

- Neighborhoods in which a resident and mer¬chant live and conduct daily business and leisure. Neighborhoods may also be distin¬guished by physical setting, physical separa¬tions, and similarity over an area. Examples include downtown, Lea Hill, and Lakeland.
- Areas with a focused desire to create great¬er physical and economic cohesiveness. These may be large planned developments or clus¬ters. Examples include the Auburn North Business Area and Mt. Rainier Vista.
- Areas with an existing built environment or an existing regulatory framework that does not, in itself, meet the expectations of the seven val¬ues that underscore the Comprehensive Plan. Examples include the need for multimodal connections between West Hill and Lea Hill to north and downtown Auburn.

Designation Criteria

1. **Districts**: The geographic limit of districts and areas that make up this category of Special Planning Areas extends beyond an alignment with any particular street, trail, river, stream, or other linear corridor. Districts may contain other smaller Special Planning Areas, such as subareas. Additionally, districts are generally consistent with the geography of one of the eight "neighborhoods"[1] identified in the 2014 City of Auburn Community Vision Report. Generally speaking, districts are identified for the purpose of creating identity. This means that the land use designations and overarching policies and implementing regulations are not going to change from one district to the next. Instead, Districts are important for event planning, establishing park and open space level-of-service standards, and promoting community identity.

Districts (see Map 1.2)

- West Hill
- North Auburn
- Lea Hill
- Downtown
- South Auburn
- Plateau
- Lakeland
- Southeast Auburn

2. **Subareas**: Subareas are smaller in geography than a district. Though relatively large, multiple subareas may be located within a single district. Subareas allow for the refinement and recognition of existing unique characteristics within a district. Subareas are intended to anticipate, support, and guide long-term growth and redevelopment through planned development and a unique vision for how that area should look and function in the future. It can also be used to provide flexibility when there is uncertainty regarding how an area may be most appropriately developed in the future.

   Twenty-eight (28) subareas currently exist. These subareas are categorized into five different types of subareas:

- Identified Areas;
- Designatged Areas;
  - Economic Development Strategy Areas (a Designated Areas sub-category);
  - Areas of Concern (another Designated Areas sub-category; and
- Adopted Areas.

Uses, intensities, and infrastructure development determined for each subarea or planned area through individual planning processes. Connectivity throughout the planned area, and connections to multimodal transportation opportunities outside of the planned area are also emphasized through the individual planning process. The result of each individual planning process is the adoption of Comprehensive Plan element or subarea plan for the particular subarea by City Council. Each Plan element must be consistent with the general goals, objectives, and policies of the Comprehensive Plan, and once adopted, subarea plans are intended to guide the future development of each respectively adopted subarea.

VOL. 1

1. The eight "neighborhoods" are identified for comprehensive planning purposes only, as neither the City nor its neighborhoods have elected to officially designate the boundaries of City neighborhoods.

2a. Identified Areas: Identified areas are identified as a subarea within the Comprehensive Plan, but have not been established on the Comprehensive Plan Map. Therefore, the specific and detailed boundaries of an identified subarea have not been defined. Identification of a subarea within the Comprehensive Plan occurs by official action of the City Council.

Identified Areas

- Auburn Golf Course
- GSA/Boeing
- Green River College
- Mary Olsen Farm
- Les Gove Campus
- Emerald Downs
- Auburn High School

2b. Desginated Areas: Designated Areas have been designated on the Comprehensive Plan Map, which defines the specific and detailed boundaries of the area. Designation of an area on the Comprehensive Plan Map occurs by official action of the Auburn City Council. It is intended that future development of these areas will be guided by individual Plan element or subarea plan of the Comprehensive Plan. The future subarea plan will either supplement existing goals, policies, and implement strategies, or replace existing Comprehensive Plan designations and policies for the area within the specific and detailed boundary.

Designated Areas (see Map 1.3)

- Auburn Municipal Airport
- BNSF Rail Yard
- Stuck River Road
- Lakeview
- Mt. Rainier

2b(1). Designated Areas - Areas of Concern: Areas of Concern are a specific type (or subcategory) of designated area. Areas of Concern are established because they represent an area that features a lack in the infrastructure and services (e.g. municipal water and sewer service, urban roads, traffic demand, and storm water management) necessary to support increase in density or other development. These areas require a close assessment of and an emphasis on infrastructure development and planning to support further development. While this Plan may not fully represent the intensity of uses that could ultimately be supported in these areas (in part due to the current weakness of the City's infrastructure to support future growth). Development intensification within the Area of Concern needs to be coordinated with the necessary infrastructure and services to support growth.

Designated Areas - Areas of Concern (see Map 1.3):

- AWS/Auburn Black Diamond Rd.
- Pike Street NE
- 8th Street NE

2b(2). Designated Areas - Economic Development Strategy Areas: The Economic Development Strategy Areas are a specific type (or subcategory) of designated area. In 2005, City Council adopted six Economic Development Strategy Areas under Resolution No. 3944. These areas, initially identified by a focus group of diverse business and community interests, are targeted for population and employment growth within the planning horizon of the City's 20-year growth target (2031). By 2012, the City Council added three additional economic development strategy areas , bringing the total to nine (9) strategy areas.

During the City's 2015 update of the Comprehensive Plan the list of economic development strategy areas to reflect current conditions and status of these areas. As such, two of the original six economic development strategy areas was removed from the list. The Urban Center, one of the original six development strategy areas, was removed as it is no longer a designated area. The Urban Center, also known as "Downtown Auburn" or the "Downtown Urban Center" is an adopted area (since 2001) and features its own subarea plan. The Auburn Environmental Park (AEP)/Green Zone has also been removed as an economic development strategy area. The AEP/Green Zone economic development strategy area

was previously zoned EP, Environmental Park Zone. The intent of this zone was to encourage economic development in the form of medical, biotech and "green" technologies including energy conservation, engineering, water quality and similar uses. Through Ordinance No. 6660 City Council rezoned the AEP/Green Zone from EP, Environmental Park Zone to M-1, Light Industrial, hereby effectively removing the need to designate the AEP/Green Zone as an specific economic development strategy area.

The current economic development strategy areas are included below. The boundaries of the economic development strategy areas are incorporated as designated subareas "Designated Areas – Special Planning Areas" map of the Land Use Element.

Designated Areas -Economic Development Strategy Areas (see Map 1.3)

- A St SE (corridor)
- Auburn Way South (AWS) Corridor
- Auburn Way North (AWN) Corridor
- M St SE (between AWN and AWS)
- SE 312th/124th Ave
- NW Manufacturing Village
- 15th St SW/West Valley Hwy N

2c. Adopted Areas: Adopted Areas include an Adopted Subarea Plan incorporated into the Comprehensive Plan that establishes the purpose of its designation, goals and policies, and implementation strategies. Adoption of a subarea plan occurs by official action of the City Council. As an adopted document of the Comprehensive Plan, the subarea Plans are subject to a review, and if necessary, revision to address changes in conditions, issues, or even characteristics of the planned areas. The review and revision a subarea Plan will also include the review and, if necessary, a revision of zoning regulations and architectural design standards.

Adopted Areas (see Map 1.4)

- Downtown (Ordinance No. 5549)
- Auburn Adventist Academy (Resolution No. 2254)
- Auburn North Business Area (Resolution No. 2283)
- Lakeland Hills (Resolution No. 1851)
- Lakeland Hills South (County H.E. Case Z15/UP70)
- Northeast Auburn (Ordinance No. 6183)

3. **Impression Corridors**: Impression corridors are aligned with a particular street, trail, river, stream, or specific linear corridor. Some corridors may be part of a subarea, in which case the Impression Corridor policies are additive to a subarea plan. Impression corridors enhance the areas in which residents, businesses, visitors move throughout the City. The benefit of an impression corridor is twofold: residents know that the City is invested in the aesthetic of main thoroughfares and businesses can build off of the design and aesthetic provided by the impression corridor. Improvements or modification to impression corridors consist of aesthetic signage, landscaping, and monument features, and the rehabilitation or removal of existing buildings and property. Impression Corridor boundaries and policies are formally designated by adoption of the Comprehensive Plan. Priority is given to the impression corridors that are a part of a subarea. Priority impression corridors are the thoroughfares in which residents, businesses, visitors move throughout a specific subarea. The priority impression corridors are italicized below.

Impression Corridors (see Map 1.5)

- *Auburn Way North*
- *Auburn Way South*
- *Auburn Black Diamond Road*
- *A Street SE/Auburn Avenue*
- *C Street SW*
- *Division Street*
- *M Street/Harvey Road*
- *Main Street*
- *8th Street NE*
- *15th Street SW*
- *West Valley Highway*
- *15th Street NW/NE*
- 132nd Ave SE

VOL. 1

- SE 320th Street
- SE 312th Street
- SE 304th Street
- R Street
- Lake Tapps Pkwy SE
- Green River Road
- 37th Street NW
- S 277th Street
- Interurban Trail
- Green River
- White River
- Mill Creek

4. **Gateways**: Gateways are specific places, intersections, or blocks within the City. These essential locations are established because they constitute the first impression into of Auburn. Gateways are intended to create a "welcome" into distinct areas of the City or into the City itself. They are therefore highly important to plan, construct, maintain, and enhance their appearance and function. Gateway locations and policies are formally designated by adoption of the Comprehensive Plan. Priority is given to those gateways that are along an priority impression corridor. Priority gateways function as a entrance to an impression corridor. The priority gateways are italicized below.

Gateways (see Map 1.6)

- *Auburn Way North and Auburn Avenue (where the roads converge)*
- *East Main Street and M Street NE/ SE (at the intersection)*
- *Auburn Way South and 4th Street SE*
- *Auburn Way S and 6th Street SE*
- *West Main Street between C Street NW and B Street NW*
- All roads with an entry into the city
- Hwy 167 Off Ramps
- SR 18 Off Ramps

Implementing Designations

Planned Unit Development (PUD)
Master Plans

Policies

District Policies.

LU-123 Through regulation, capital investment, and community planning, identify, promote and market district identity.

Subarea Policies.

LU-124 Each subarea will contain its own vision, goals, policies and strategies.

LU-125 BNSF Rail Yard - This approximately 150 acre Special Planning Area is located in the south-central portion of the City and surrounded by SR-18 to the North, Ellingson Road to the South, C Street SW to the west and A Street SE to the East. The Special Planning Area should consider both sides of C Street and A Street. Consideration should be given to:

- The needs of Burlington Northern.
- Providing pedestrian, bicycle and vehicular access across the site to connect the southeast and southwest sides of the city.
- Providing a more visually appealing "entry corridor" into the City from the south along A and C Streets.
- Allowing for a mix of uses including single and multifamily development and commercial and industrial uses where appropriate.

LU-126 Stuck River Road - A portion of the Stuck River Road Special Planning Area is currently the site of a large sand and gravel mining operation. This area and other adjacent land comprising a total of approximately 664 acres has been designated as a long term resource area (mineral resource area), so development of the Special Area Plan for this area should be a low priority as mining is expected to continue on this site for as long as 30 years. The land uses for the Stuck River Road Special Planning Area will be determined through the subarea planning process and the City Council's adoption of the subarea plan. Potential land uses applied through the subarea planning process could include single-family

residential, multi-family residential, commercial, institutional, and recreational. Some light industrial uses may be appropriate for consideration and designation through the subarea planning process if the uses are "industrial or business park" in character, conducted entirely within an enclosed building, and exhibit a high degree of performance standards and are non-nuisance in nature and if appropriately limited in extent and location. A mix of housing types ranging from single family residential to multi-family residential is appropriate for this planning area. The subarea plan should be adopted taking into consideration the period during which mining is expected and the intent of the ultimate development of the area. An active permit has been processed by the City with respect to the mining activity on a portion (approximately 664 acres) of the mineral extraction operation. The permit process should continue, however, any permit for mining in the mineral resource area should be granted for the life of the resource, with reviews conducted periodically (every five years) to determine whether changes in the originally proposed mineral extraction operation have arisen and give rise to the need for additional or revised permit conditions to address the new impacts (if any) of any such changes. Any permit applications for additional acreage within the mineral resource area shall be processed by the City.

Development of this area should not occur until adequate public facilities are available to support the development consistent with City concurrency policy.

The City recognizes the potential for expanding the Stuck River Road Special Planning Area to include additional land east of Kersey Way and north of the Covington-Chehalis power line easement, and will consider a proposal by all affected property owners. If the area is expanded, the number of non-multiple family, non-manufactured home park dwellings units may be increased proportionate to the increase in acreage. Any such proposal shall specifically apportion the types and quantities of development to occur within each separate ownership.

LU-127 Lakeview - The Lakeview subarea is currently the site of two independent sand and gravel mining operations. While mining activity continues in the eastern operation, indications in 1995 are that the western operation has ceased. Activity in the western portion is now limited to a concrete batch plant and future site reclamation. Following reclamation, the area should be developed as a primarily single family residential neighborhood of low to moderate urban density. A planned development would be particularly appropriate for this approximately 235 acre site. The permitted development density of the site will depend heavily upon the ability of the transportation system near the site to handle the new uses. Consideration shall be given to the environmental, recreational and amenity value of White Lake, the historical and cultural significance, as well as tribal ownership and jurisdiction of the Muckleshoot Tribe in the development of the Lakeview Plan element. Permit applications have been accepted and are currently being processed by the City with respect to the mining activity on the eastern portion of the area. The permit process should continue, however, any permit for continued mining in this portion of the area should be limited to 10 years to encourage completion of the mining, and subsequent reclamation by the property owner in preparation for development. The Lakeview Plan element should be adopted prior to the City's acceptance or processing of any other permit applications for the mining operation in the Lakeview Special Planning Area. The environmental information and analysis included in the Final Environmental Impact Statement for Lakeview (November 1980), shall be considered in the development of the

Lakeview Plan element. While heavy commercial or industrial uses would not be appropriate as permanent uses of this area, conversion of the area now zoned for heavy industry to office commercial (or similar) uses would be appropriate.

LU-128 Mt. Rainier Vista - This 145 acre subarea is located south of Coal Creek Springs Watershed. Overall development of the Mt. Rainier Vista subarea plan shall be consistent with the following conditions:

1. Primary consideration in use and development of the property shall be given to protection of Coal Creek Springs' water quality. Development types, patterns and standards determined to pose a substantial risk to the public water source shall not be allowed.

2. The maximum number of dwelling units will be determined as part of any sub-area plan process. Dwelling units shall be located within portions of the property where development poses the least risk of contamination for Coal Creek Springs. Lands upon which any level of development would have a high risk for contaminating the water supply shall not be developed, but would be retained as open space. The development pattern shall provide for a logical transition between areas designated for rural uses and those designated for single family residential use. All dwelling units shall be served by municipal water and sanitary sewer service, and urban roads. If 53rd Street S.E. is the major access to serve the Special Planning Area, the developer will be responsible for developing the street to urban standards, from the property owners' eastern property line that abuts 53rd Street, west to the intersection of 53rd and Kersey Way.

3. Percolation type storm sewer disposal systems shall not be permitted. All surface water drainage shall be conveyed consistent with the City's current storm drainage standards. Treatment of stormwater shall occur prior to its discharge to any surface water body, consistent with standard public works or other requirements in general effect at the time of development.

4. The site shall be zoned temporarily, at one unit per four acres, until the sub-area plan is completed and the long-term urban zoning determined.

5. The Mt. Rainier Vista special planning area boundary may be modified through the development of the subarea plan.

6. The Mt. Rainier Vista and Stuck River Road Special Planning Areas shall be coordinated subarea plans.

Designated Areas - Areas of Concern Policies.

LU-129 AWS/Auburn Black Diamond Rd – The area between Auburn-Black Diamond Road and the Burlington Northern Railroad currently lacks urban facilities necessary to support urban development. Major development proposals shall be carefully assessed under SEPA to ensure that the development can be supported by the available facilities. Once property owners are able to demonstrate to the City that they can provide urban services (municipal water and sewer service, urban roads and storm water management) necessary to support the intensity of development proposed within the entire area, the Plan designation and zoning for this area should be changed to an urban residential or commercial classification. The appropriate classification(s) shall be determined after a review of the development proposal and the pertinent Comprehensive Plan policies.

LU-130 Pike Street NE – The area located north of 8th NE, east of Harvey Road, and south of 22nd NE is inadequately served by residential arterials. No increase in density or other development which would increase traffic demand in this area should be approved.

LU-131 8th Street NE – The areas paralleling 8th Street NE located between Auburn Way and M Street are designated for multiple

VOL. 1

family residential while 8th Street NE is designated as a minor arterial. However, the road is not currently constructed to this standard and is not able to support current traffic demand adequately. The Plan designation would greatly increase traffic volumes. Implementation of the Plan designations should not occur until 8th Street NE is constructed to the adequate arterial standard and water service is upgraded. Up zones should not be granted from current zoning until these stems are upgraded or guaranteed.

Designated Areas - Economic Development Strategy Ares Policies.

LU-132 The City should adopt a formal subarea plan for each of the seven economic development strategy areas (listed below) as an element of the Comprehensive Plan. Each economic development strategy area subarea plan should identify the uses, intensities, and infrastructure development necessary to support the types of business and activities that are most consistent with community aspirations. Each subarea plan should address and include policies regarding the expected level of housing density (or residential growth targets) and employment growth targets.

- Auburn Way South Corridor
- Auburn Way North Corridor
- NW Auburn Manufacturing Village
- 15th St. SW/C St. SW/W Valley Hwy. N
- A St. SE
- SE 312th St. /124th Ave SE
- M St. SE between Auburn Way N and Auburn Way S

Adopted Areas Policies.

LU-133 Adoption or revision of a subarea plan will be treated as a comprehensive plan amendment and will comply with the Growth Management Act, Countywide planning policies, Vision 2040, and the Core Comprehensive Plan.

LU-134 Adventist Academy - Adopted under Resolution No. 2254 on November 14, 1991. The Auburn Adventist Academy is Special Planning Area (Adopted Area) is a multi-use campus operated by the Western Washington Conference of Seventh-Day Adventists. The Campus plays a large role in the Western Washington Conference of Seventh-Day Adventists' private elementary and secondary education system in Washington and hosts many community events as well as an annual regional camp meeting for Adventists from Washington and around the world. The Campus previously housed Harris Pine Mill, a furniture manufacturer, for many years. The Mill provided financial benefit to the Academy's budget and provided employment opportunities, learning experiences, and vocational education for Academy students. The Academy continues to include in its plan industrial uses that support the mission of the school financially. The reuse of existing mill buildings and redevelopment of buildings lost to a fire in 1989 are the focal points of the current industrial development. In addition to institutional and industrial uses, the Academy is also operates a landing strip and associated aircraft hangars for student aviation and flight training. A single family subdivision is located to the south of the airstrip. In addition to these uses, the Academy wishes to allow development of uses such a multi-family and senior housing and assisted living and memory care which will generate perpetual revenue through a long-term land lease on a portion of the Campus lying generally north of Auburn Way South and south of 32nd Street S.E. that will directly aid its mission. The financial benefit from these uses will allow funding an endowment, subsidize student tuition, provide financial aid for students needing tuition assistance, for new educational programs, for additional faculty, facility maintenance and upgrades, and other needs. The plan focuses on provides predictability to planning, zoning, subdivision, and development decisions within the Special

VOL. 1

Planning Area (Adopted Area) made by the City.

LU-135 Auburn North Business Area - Adopted under Resolution No. 2283 on March 2, 1992. The Auburn North Business Area Special Planning Area Plan was the result of a comprehensive planning study due to increased development pressure north of the Central Business District. Since the Central Business District, which contains Downtown, the core of Auburn, is adjacent to these areas, future development in this area is crucial. A comprehensive and cohesive direction was also needed based on increased development proposals and rezone requests. In addition to development concerns, many of the considerable undeveloped parcels contain wetlands. All of these factors made development controls beyond zoning and development regulations advisable.

LU-136 Lakeland Hills - Adopted under Resolution No. 1851 on April 18, 1988. Lakeland Hills area lies between the Stuck River and the southern City limits of Auburn in the most southwestern part of the City. The area consists of planned residential and commercial subdivisions, and is predominately residential in nature, offering a range of housing types, including single family and multi-family dwellings. The Lakeland Hills Plan was intended to provide long-term predictability to both the City and potential developers. As a planned community, development and design must be consistent with the policy guidance of the Lakeland Hills Plan.

LU-137 Lakeland Hills South - Approved under Pierce County Hearing Examiner Case Z15/UP70.Lakeland Hills South lies south of the Lakeland Hills special plan area and is the most southwestern part of the City. The area is predominately residential, allowing for a range of housing types, with commercial uses, including Lakeland Town Center, in the center. Nonresidential uses, including civic, religious, and municipal services are allowed throughout the area through an Administrative Use Permit. Unlike Lakeland Hills, Lakeland Hills South was accepted into Auburn was a Planned Unit Development (PUD). The Lakeland Hills PUD, originally the Lakeland Hills South Planned Development District (PDD), was approved under Pierce County Hearing Examiner Case no Z15-UP70 in 1990. Lakeland Hills South PUD is intended to provide enhanced flexibility to develop a site through innovative and alternative development standards. As a PUD, specific development and design standards are prescribed.

LU-138 Auburn Downtown Plan (Urban Center) - Adopted under Ordinance No. 5549 on May 21, 2001. Downtown Auburn is the business, governmental, and cultural hub of Auburn, its physical and cultural heart. Many stores, restaurants, service providers, and small offices are well-represented throughout this district. Downtown hosts many community events and activities, such as the weekly Auburn International Farmers Market in the summer, Soundbites! Concert Series (in the City Hall Plaza) and the Veterans Day Parade. Downtown features public art that includes temporary installations such as Pianos on Parade and a permanent outdoor Downtown Sculpture Gallery with rotating pieces. This dynamism is possible because the district is a collection of uses that coexist in close proximity to one another. Due to the value, importance, and complexity of this district, The Auburn Downtown Plan identified four general needs to be addressed by the plan:

- Update of the existing plan in order to continue Downtown revitalization
- Concern over the reopening of Stampede Pass
- Multiple large projects proposed for Downtown

- Scarce private investment

In conjunction with project-based items, a regulatory element that emerged from the goals of the Auburn Downtown Plan was the Downtown Urban Center (DUC) zoning district, which was established in 2007. While the DUC zoning district is intended specifically to address the needs of downtown, though the implementation of policies identified by the Downtown Auburn Plan , many challenges related to public and private investment, development, and strategic planning have yet to be addressed as downtown has evolved.

LU-139 Northeast Auburn Special Plan Area – Adopted under Ordinance No. 6183 on June 5, 2008. The Plan was prepared in fulfillment of the policies included in the Comprehensive Plan for the area between Auburn Way North and the Green River, south of 277th Street (52nd Street NE) and north of approximately 37th Street NE in the City of Auburn (Map No. 14.2). The planning area was narrowed to an area covering approximately 120 acres, north of 45th Street NW and between Auburn Way North and the existing I Street NE right-of-way. The Northeast Auburn/ Robertson Properties Special Area Plan focuses on proposed develop of the Auburn Gateway project area, a 60-acre group of properties owned or under consideration for purchase by Robertson Properties Group, owners of the Valley 6 Drive-In Theater. The plan calls for a mix of office, retail, and multifamily development under a new zoning designation (C-4, Mixed Use Commercial) for the central portion of this planning area, created to accommodate mixed use development. The plan calls for phased development in coordination with the provision of new roads, stormwater and other utilities, and flood management measures.

Impression Corridor Policies.

LU-140 Create specific plans for each identified corridor, outlining development policies and regulations, necessary capital improvements, and implementation strategies. In the absence of any specific corridor plans, this section contains general policies that are to be applied within designated impression corridors.

LU-141 Coordinate corridor planning, design, construction, and maintenance with other agencies, such as BNSF, the Muckleshoot Indian Reservation, and the Washington State Department of Transportation. Where one agency may more effectively manage the corridor, management or ownership consolidation is appropriate.

LU-142 Promote the elimination or renovation of existing derelict or unmaintained structures, signs, fences, and properties along impression corridors through regulatory or enforcement mechanisms

LU-143 Work with private and public property owners to educate, create incentives, and enforce regulations that are intended to improve the overall appearance of identified corridors.

LU-144 Emphasize the design, orientation, construction materials, landscaping, and site layout for development proposals of new and existing buildings along impression corridors. New construction and the renovation of existing buildings create important opportunities for enhancing the appearance of impression corridors.

LU-145 Establish regulations that ensure coordinated, attractive commercial signage is of an appropriate size and quantity. Signage regulations along these corridors may be different than those in other areas.

LU-146 Take advantage of opportunities to provide informational signs, wayfinding signs, and traffic control signs that

are attractive, useful, and integrated into a larger citywide signage plan or policy.

LU-147 Outdoor storage of materials, inventory, and other goods and off-street surface parking should be located at the rear of the property. If outdoor storage cannot be located in the rear of the property, then it should be screened from view from adjacent rights-of-way.

LU-148 Design, construct, and enhance impression corridors to accommodate multimodal uses.

LU-149 Design and construct vehicular access points in a manner that consolidates access points serving multiple uses.

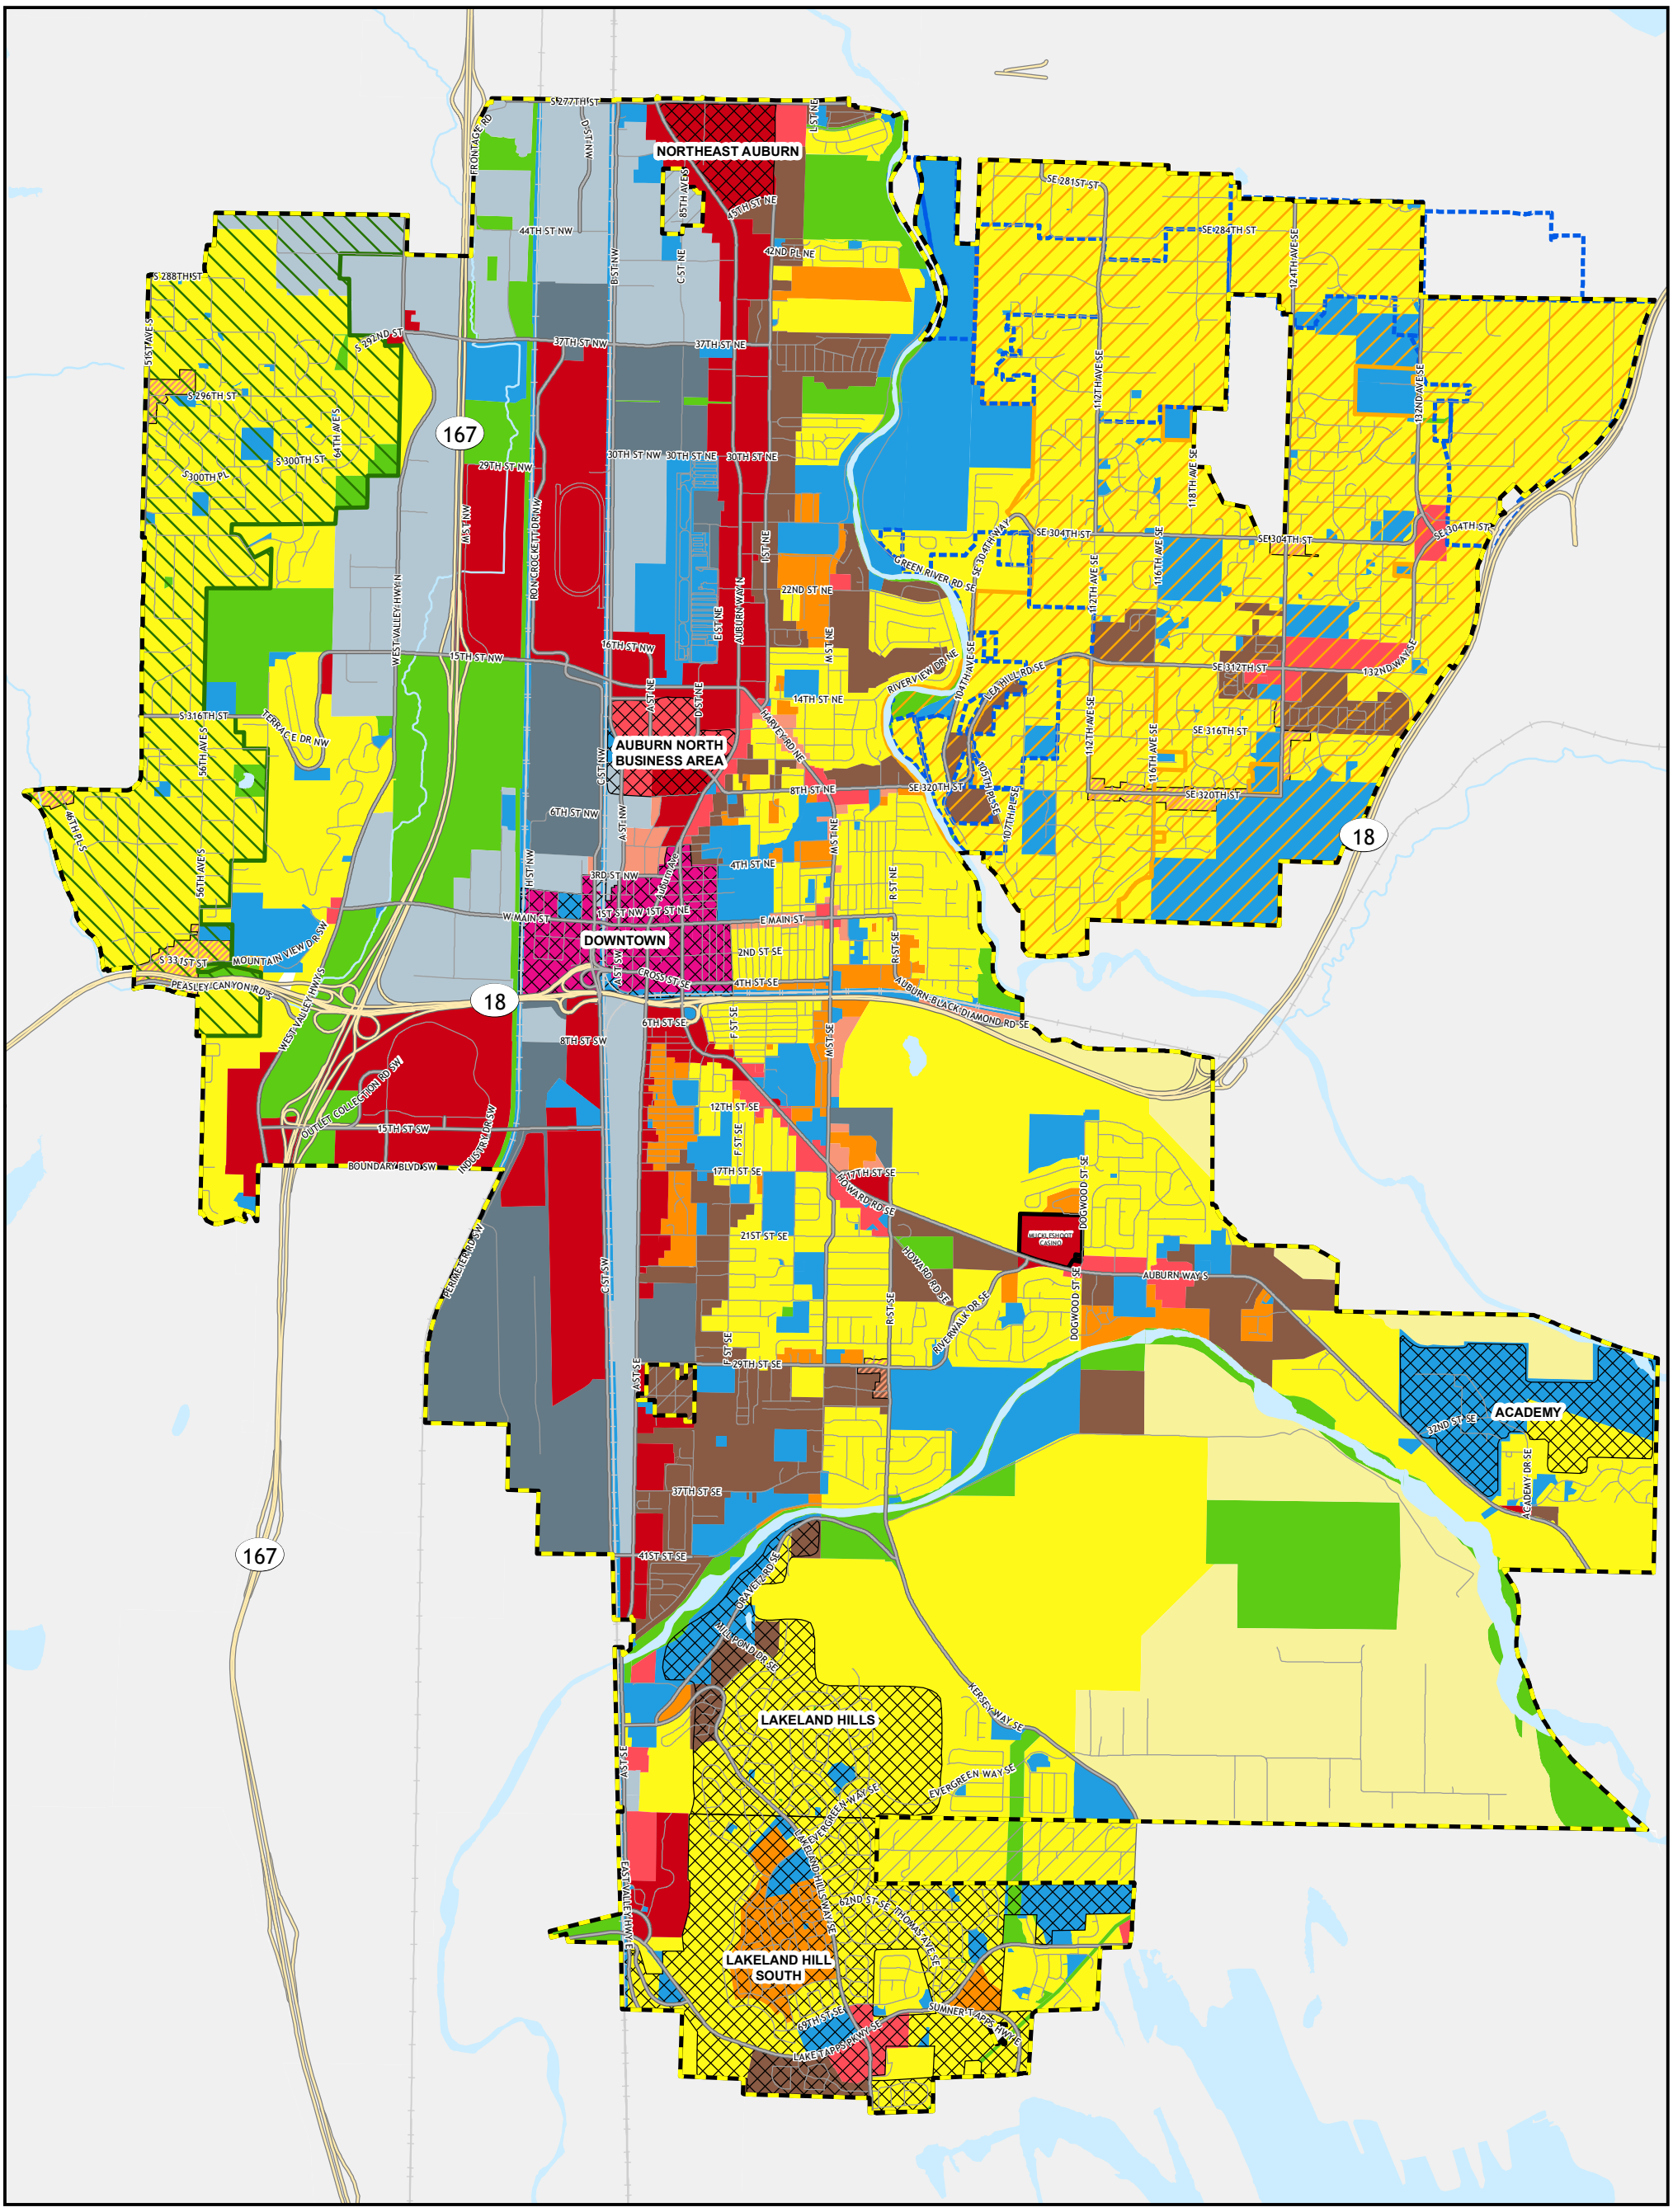
LU-150 Signage, landscaping, and monument features should be used to establish prominent access points.

LU-151 Discourage aerial utilities.

LU-152 Invest in impression corridors by acquiring rights-of-way, constructing and widening sidewalks, installing landscaping, building center medians, constructing parklets, providing street furniture, and constructing other improvements.

Gateway Policies.

LU-153 Prioritize by rank all gateways and develop potential opportunities and designs for each location.



LU-154 Develop land use regulations that incorporate gateway priorities and concepts into private development proposals that are located at identified gateways.

LU-155 Coordinate with the Washington State Department of Transportation to understand options and implement actions at gateway location. Many of the gateway locations are within the WSDOT right-of-way.

LU-156 Develop design layouts for gateway locations. Designs will identify key areas that greet residents and visitors as they enter the City or downtown center, opportunities for signage and monument features, and landscaping.

LU-157 Maintain established gateways.

APPENDIX F

SEPA CHECKLIST

SEPA[1] Environmental Checklist

Purpose of checklist

Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization, or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

Instructions for applicants

This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. **You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown.** You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to **all parts of your proposal**, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for lead agencies

Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals

For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B, plus the Supplemental Sheet for Nonproject Actions (Part D). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in "Part B: Environmental Elements" that do not contribute meaningfully to the analysis of the proposal.

[1] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/Checklist-guidance

A.Background

Find help answering background questions[2]

1. **Name of proposed project, if applicable:**

   City of Auburn, 2024 Comprehensive Sewer Plan

2. **Name of applicant:**

   City of Auburn, Public Works Department, Sewer Division

3. **Address and phone number of applicant and contact person:**

   City of Auburn
   Public Works Department
   25 West Main Street
   Auburn, WA 98001
   253-931-3010

   Robert Elwell, Sewer Utility Engineer
   253-931-4008

4. **Date checklist prepared:**

   June 17, 2024

5. **Agency requesting checklist:**

   City of Auburn

6. **Proposed timing of schedule (including phasing, if applicable):**

   The Comprehensive Sewer Plan is scheduled for adoption during 2024. It identifies near-term projects for the next six years, and long-term projects over the next twenty years. It also provides direction for inspection, maintenance, and operation of the utility. A public hearing was held regarding the adoption of the Plan at the June 4, 2024 Planning Commission meeting.

7. **Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.**

None beyond those discussed in this Comprehensive Sewer Plan The next comprehensive sewer plan update is proposed for the year 2032.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

Depending upon the scope of projects proposed in the plan, an individual environmental checklist and threshold determination would be completed as specified projects are proposed for construction. There are no environmental or background studies that have been completed for this sanitary sewer plan.

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

At this time, there are no known pending applications for general applicability related to the area covered by the sewer system. There may be applications pending related to improvements to the sewer system such as various on-going plats and developer extensions occurring within the sewer service area. The City plans to adopt the capital improvement plan outlined in this document as part of the City's six-year capital facilities plan.

10. List any government approvals or permits that will be needed for your proposal, if known.

The Comprehensive Sewer Plan must be approved by the City of Auburn City Council, the King County Council, and the Washington State Department of Ecology.

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page.

The proposed non-project action includes adoption of the Comprehensive Sewer Plan as an element of the City's Comprehensive Plan. The City of Auburn's 2024 Comprehensive Sewer Plan replaces the City of Auburn's 2016 Comprehensive Sewer Plan. The plan examines the existing sewer service area which includes both areas within the city limits and potential annexation areas for the City of Auburn. It addresses policies, design criteria, and recommends improvements to the sewer system and its service area. The plan analyzes the current level of service and identifies important projects necessary to meet City and State Standards regarding public health, facility efficiency, and operations and maintenance. The wide range of facility improvements includes repair and replacement, system improvements, facility evaluations, and extensions of the utility to meet future sewer demands. The Comprehensive Sewer Plan is an ongoing element of the city Comprehensive Plan and serves as a guide for the operation, maintenance and expansion of the utility within its Sewer Service Area, in accordance with local, County, and State requirements.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

The sewer service planning area as established in the plan is defined as the City of Auburn's existing city limits and potential annexation areas. The City of Auburn's service area has been modified by several interlocal agreements with neighboring sewer service providers. Those agreements are included in Appendix A of the Comprehensive Sewer Plan. The service area is shown on Figure 1.2 of the Comprehensive Sewer Plan and reflects those agreements.

B.Environmental Elements

1. Earth

Find help answering earth questions[3]

a. General description of the site:

The sewer service area is characterized by a relatively flat valley floor bordered by steep hillsides and upland plateaus overlooking the valley.

Circle or highlight one: Flat, rolling, hilly, steep slopes, mountainous, other:

b. What is the steepest slope on the site (approximate percent slope)?

The actual land slopes vary throughout the planning area. Steep slopes exist east and north of the Green River on Lea Hill, south of the White River, and west along the West Valley Highway toward the West Hill. The steepest slopes are close to 100 percent.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them, and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

The valley floor is made up primarily of soils of the Oridia, Renton, Snohomish, and Briscott series. These soils are poorly drained and formed in the alluvium (river

[3] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-earth

sediments) associated with the White and Green rivers. These are considered good agricultural soils, though in many areas, are not well-drained. There is no designated farmland within the City of Auburn.

The hillsides and plateaus are made up of primarily Alderwood associated soils and a small amount of Everett associated soils (U.S. Department of Agriculture, 1973). Alderwood soils are moderately well drained gravelly sandy loams 20-40 inches deep. Beneath these soils is glacial till with low permeability. Roots penetrate easily to the hardpan layer. Runoff potential is slow to medium. Erosion and slippage hazard is moderate, ranging to severe on steeper slopes. The Everett series consists of somewhat excessively drained soils that are underlain by very gravelly sand. These soils formed in very gravelly glacial outwash deposits under conifers. They are found on terraces and terrace fronts and are gently undulating to moderately steep.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

Some steep slopes, in the areas described earlier, are possible locations of unstable soils. Geologic hazard areas including volcanic, seismic, landslide, and erosion hazard areas are mapped in the City Comprehensive Plan and sensitive areas maps.

e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

Does not apply, since the proposed Comprehensive Sewer Plan is a non-project action. Sewer system construction projects identified in the plan will require excavation and grading of an undetermined quantity of material. Specific projects will be subject to individual environmental review prior to construction.

f. Could erosion occur because of clearing, construction, or use? If so, generally describe.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

Does not apply, since this non-project action does not involve site specific development proposals.

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any.

This is a non-project action, so no site specific erosion control is proposed. Specific projects described by the plan will be subject to individual environmental review

before implementation. Where applicable, erosion and sedimentation control measures together with best management practices per the 2019 Surface Water Management Manual will be used in all areas of potential erosion.

2. Air

Find help answering air questions[4]

a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

Does not apply to this non-project action. Specific projects, which are subject to environmental review, will be evaluated for their potential impact and corresponding mitigation measures prior to implementation.

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

Does not apply to this non-project action. Specific projects, which are subject to environmental review, will be evaluated for their potential impact and corresponding mitigation measures prior to implementation.

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation. However, standard emission controls for construction equipment will be utilized during construction of projects recommended by this plan.

3. Water

Find help answering water questions[5]

a. Surface:

Find help answering surface water questions[6]

1. Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

[4] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-Air
[5] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water
[6] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water/Environmental-elements-Surface-water

The major bodies of water within Auburn are the Green River, the White River, Mill Creek, Bowman Creek, and White Lake.

2. **Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation and compliance with the City's Shoreline Master Program.

3. **Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

4. **Will the proposal require surface water withdrawals or diversions? Give a general description, purpose, and approximate quantities if known.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

5. **Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.**

Several areas within Auburn lie within the 100-year floodplain of the Green or White River and Mill Creek. . Specific projects described by the plan which lie within these flood plains will be subject to individual environmental review before implementation and must comply with all applicable regulations.

6. **Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.**

No

b. Ground:

Find help answering ground water questions[7]

1. **Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate**

[7] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-3-Water/Environmental-elements-Groundwater

quantities withdrawn from the well. Will water be discharged to groundwater? Give a general description, purpose, and approximate quantities if known.

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

2. **Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (domestic sewage; industrial, containing the following chemicals…; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.**

Does not apply to this non-project action. No waste material will be discharged into the ground as a result of this Plan.

c. Water Runoff (including stormwater):

1. **Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

2. **Could waste materials enter ground or surface waters? If so, generally describe.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

3. **Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.**

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

4. Plants

Find help answering plants questions

a. Check the types of vegetation found on the site:

☒ **deciduous tree: alder, maple, aspen, other**

☒ **evergreen tree: fir, cedar, pine, other**

☒ **shrubs**

☒ **grass**

☒ **pasture**

☒ **crop or grain**

☒ **orchards, vineyards, or other permanent crops.**

☒ **wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other**

☒ **water plants: water lily, eelgrass, milfoil, other**

☒ **other types of vegetation**

Does not apply to this non-project action. A wide variety of plants exist across the Plan area. Specific projects described by the plan will be subject to individual environmental review before implementation.

b. What kind and amount of vegetation will be removed or altered?

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

c. List threatened and endangered species known to be on or near the site.

Does not apply to this non-project action. Any threatened or endangered species on or near the recommended projects of this Plan will be listed at the time of the environmental review process for each individual project.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

e. List all noxious weeds and invasive species known to be on or near the site.

Does not apply to this non-project action. Any noxious weeds or invasive species on or near the recommended projects of this plan will be listed at the time of environmental review process for each individual project.

5. Animals

Find help answering animal questions[8]

a. List any birds and other animals that have been observed on or near the site or are known to be on or near the site.

Examples include:

- **Birds: hawk, heron, eagle, songbirds, other: geese, ducks, crows**
- **Mammals: deer, beaver, other: urban animals such as dogs, cats, squirrels, rodents, opossums, raccoons, etc are also present.**
- **Fish: salmon, trout**

Does not apply to this non-project action. Adoption of the Comprehensive Sewer Plan does not involve a specific site. Many of the following species could be present within the project area. Specific projects will be subject to individual environmental review for the identification of species present before implementation.

b. List any threatened and endangered species known to be on or near the site.

The City of Auburn Comprehensive Plan identifies the presence of Great Blue Heron and Bald Eagles within the sewer service area. The Environmental Impact Statement for the Auburn Thoroughbred Racetrack indicates that peregrine falcons, bald eagles, and the Aleutian Canadian Goose have been seen in the Auburn area. Chinook Salmon have been listed as endangered by the National Marine Fisheries Service and Bull Trout have been listed as endangered by the US Fish and Wildlife Service. Chinook are known to use Mill Creek and the Green and White Rivers. Bull Trout may inhabit the Green and White Rivers.

c. Is the site part of a migration route? If so, explain.

Does not apply to this non-project action. Adoption of the Comprehensive Sewer Plan does not involve a specific site. Specific projects will be subject to individual environmental review before implementation. Auburn is a portion of the Pacific Flyway for migratory birds and the migration route of a threatened or endangered species on or near the location of recommended projects of this plan will be listed at the time of the environmental review process for that particular project.

d. Proposed measures to preserve or enhance wildlife, if any.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

[8] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-5-Animals

e. List any invasive animal species known to be on or near the site.

Does not apply to this non-project action. Any invasive animal species on or near the recommended projects of this Plan will be listed at the time of environmental review process for each individual project.

6. Energy and natural resources

Find help answering energy and natural resource questions[9]

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any.

Does not apply to this non-project action. Adoption of the Comprehensive Sewer Plan itself will not result in the direct reduction or control of energy impacts. The policies included in Chapter 2 of this plan do promote sustainability practices within the Sewer Utility.

7. Environmental health

Health Find help with answering environmental health questions[10]

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur because of this proposal? If so, describe.

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

[9] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-6-Energy-natural-resou
[10] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-7-Environmental-health

1. **Describe any known or possible contamination at the site from present or past uses.**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

2. **Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

3. **Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.**

-

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

4. **Describe special emergency services that might be required.**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

5. **Proposed measures to reduce or control environmental health hazards, if any.**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

b. Noise

1. **What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

2. **What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site)?**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

3. **Proposed measures to reduce or control noise impacts, if any:**

Does not apply to this non-project action. Specific projects will be subject to individual environmental review before implementation.

8. Land and shoreline use

Find help answering land and shoreline use questions[11]

a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

The sewer service area comprises various land uses including residential, industrial, commercial, open space, and public land uses.

b. Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses because of the proposal, if any? If resource lands have not been designated, how many acres in farmland or forest land tax status will be converted to nonfarm or nonforest use?

Much of Green and White River Valleys and the City of Auburn were used for agriculture at some time in the past. Over the last several decades, rapid growth in the area resulted in much of the agricultural land converting to urban uses. No land within the city is designated as agricultural, though some parcels continue as that type of use. No change in land use will result from the adoption of the Comprehensive Sewer Plan.

1. **Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how?**

No.

c. Describe any structures on the site.

Many types of structures exist in the sewer service area, including residential, commercial, institutional, manufacturing, and industrial buildings.

d. Will any structures be demolished? If so, what?

[11] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-8-Land-shoreline-use

Does not apply to this non-project action. Projects which are subject to environmental review will identify any structures proposed for demolition.

e. What is the current zoning classification of the site?

In general, the sewer service area contains various zoning districts in Auburn and Unincorporated King and Pierce Counties. In general, the zoning includes single-family and multi-family residential, light and heavy commercial, light and heavy industrial, public, and open spaces. Specific Comprehensive Plan Land Use designations will be identified along with each project's individual environmental review.

f. What is the current comprehensive plan designation of the site?

-
- *The sewer service area contains various Comprehensive Plan designations. The City of Auburn has jurisdiction over the majority of the service area. Several small portions of the service area, as shown on Figure 2-2, lie within King County or Pierce County. Those areas are subject to the land use designations of the King County and Pierce County Comprehensive Plans. Specific zoning designations will be identified along with each project's individual environmental review.*
-

g. If applicable, what is the current shoreline master program designation of the site?

Portions of the City along the Green and White Rivers fall under the Shoreline Master Program. Shorelines of the State are reflected in Auburn's Shorelines Master Program, and specific projects described by the plan will be required to comply with the program.

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

Lands classified as critical areas exist within the sewer service area, including wetlands and streams, geologic hazard areas, aquifer recharge, habitat areas, groundwater protection areas, and frequently flooded areas. Specific projects described by the plan will be subject to individual environmental review before implementation.

i. Approximately how many people would reside or work in the completed project?

Does not apply to this non-project action. No specific development is proposed

j. Approximately how many people would the completed project displace?

Does not apply to this non-project action. The Plan's programs and project are not intended to displace any people.

k. Proposed measures to avoid or reduce displacement impacts, if any.

Does not apply to this non-project action.

l. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any.

The Comprehensive Sewer Plan is written in accordance with all existing local, county, and state regulations. This includes the City Comprehensive Plan developed under the Growth Management Act policies, the King County Comprehensive Plan, the King County Regional Wastewater Services Plan, and the Pierce County Comprehensive Plan.

m. Proposed measures to reduce or control impacts to agricultural and forest lands of long-term commercial significance, if any:

The Comprehensive Sewer Plan includes policies consistent with King County and Pierce County policies to not extend sanitary sewer service to county rural zoned properties.

9. Housing

Find help answering housing questions[12]

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

Does not apply to this non-project action.

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

Does not apply to this non-project action.

[12] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-9-Housing

c. Proposed measures to reduce or control housing impacts, if any:

Does not apply to this non-project action.

10. Aesthetics

Find help answering aesthetics questions[13]

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

b. What views in the immediate vicinity would be altered or obstructed?

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

c. Proposed measures to reduce or control aesthetic impacts, if any:

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

11. Light and glare

Find help answering light and glare questions[14]

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

c. What existing off-site sources of light or glare may affect your proposal?

[13] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-10-Aesthetics
[14] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-11-Light-glare

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

d. Proposed measures to reduce or control light and glare impacts, if any:

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

12. Recreation

Find help answering recreation questions

a. What designated and informal recreational opportunities are in the immediate vicinity?

The City of Auburn provides a full range of parks and recreational facilities.

b. Would the proposed project displace any existing recreational uses? If so, describe.

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

13. Historic and cultural preservation

Find help answering historic and cultural preservation questions[15]

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers? If so, specifically describe.

Although this non-project action will not directly affect any of these structures, there are several such buildings located within the sewer service area within the City of Auburn. Policies concerning these sites are addressed in the Historic Preservation Element of the City's Comprehensive Plan.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

[15] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-13-Historic-cultural-p

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

14. Transportation

Find help with answering transportation questions[16]

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

Numerous streets and highways traverse the service area. State Highways 18 and 167 are the two major highways crossing the service area. The City is served by a network of streets classified as arterials, collectors, and local streets.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

Yes, the City of Auburn is served by Sound Transit, King County Metro, Pierce Transit, and Muckleshoot Tribal Transit.

c. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle, or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

[16] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-B-Environmental-elements/Environmental-elements-14-Transportation

d. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

Does not apply to this non-project action. Specific projects described by the plan will be subject to individual environmental review before implementation.

e. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?

Does not apply to this non-project action.

f. Will the proposal interfere with, affect, or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

Does not apply to this non-project action.

g. Proposed measures to reduce or control transportation impacts, if any:

Does not apply to this non-project action.

15. Public services

Find help answering public service questions[17]

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

Does not apply to this non-project action.

b. Proposed measures to reduce or control direct impacts on public services, if any.

Does not apply to this non-project action.

16. Utilities

Find help answering utilities questions[18]

a. Circle utilities currently available at the site: electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system, other: cable television.

[17] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-15-public-services
[18] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-b-environmental-elements/environmental-elements-16-utilities

Various levels of service are available throughout the service area.

b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

The recommended repairs, replacements, improvements, or extensions to sewer system facilities are required to meet the level of service criteria set forth by local, county, and state governments. The facilities include sewer mains, manholes, pump stations, force mains and related appurtenances. Each recommended project will be subject to its own environmental review process.

C.Signature

Find help about who should sign[19]

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

Signature: _____

Name of signee Robert Elwell

Position and Agency/Organization Sewer Utility Engineer, City of Auburn

Date Submitted: May 24, 2024

D.Supplemental sheet for nonproject actions

Find help for the nonproject actions worksheet[20]

Do not use this section for project actions.

Because these questions are very general, it may be helpful to read them in conjunction with the list of the elements of the environment.

When answering these questions, be aware of the extent the proposal, or the types of activities likely to result from the proposal, would affect the item at a greater intensity or at a faster rate than if the proposal were not implemented. Respond briefly and in general terms.

[19] https://ecology.wa.gov/Regulations-Permits/SEPA/Environmental-review/SEPA-guidance/SEPA-checklist-guidance/SEPA-Checklist-Section-C-Signature

[20] https://ecology.wa.gov/regulations-permits/sepa/environmental-review/sepa-guidance/sepa-checklist-guidance/sepa-checklist-section-d-non-project-actions

1. **How would the proposal be likely to increase discharge to water; emissions to air; production, storage, or release of toxic or hazardous substances; or production of noise?**

The proposed non-project action consists of adoption of the Comprehensive Sewer Plan, which will not itself increase discharge to water or air. Implementation of some elements of the Comprehensive Sewer Plan has the potential to result in discharges to water and air. For example construction projects identified in the Plan have the potential to result in increased noise and exhaust from construction equipment and dust from exposed soils.

- **Proposed measures to avoid or reduce such increases are:**

No specific mitigation is proposed for the Plan adoption. The potential for discharge to air or water will be minimized through the use of best management practices and through the design and construction and operation consistent with the applicable local, state, and federal laws. Proposed projects will be reviewed and addressed on an individual basis by the appropriate agencies prior to implementation.

2. **How would the proposal be likely to affect plants, animals, fish, or marine life?**

It is not anticipated that the proposed projects will have a significant impact upon fish or wildlife. Improvements to the system described by the plan are intended to increase reliability, thereby reducing the risk of environmental contamination, thereby reducing potential harmful effects on wildlife.

- **Proposed measures to protect or conserve plants, animals, fish, or marine life are:**

No such measures are proposed for the plan adoption. Proposed projects will be reviewed on an individual basis and addressed by the appropriate agencies as they commence.

3. **How would the proposal be likely to deplete energy or natural resources?**

It is not anticipated that any of the proposed projects will have significant impact on the use of or need for energy or natural resources. Specific projects described by the plan will reviewed for their potential impact to energy and resource use as part of individual environmental reviews prior to implementation.

- **Proposed measures to protect or conserve energy and natural resources are:**

None specifically, as this is a non-project action. However, the proposed Sewer Comprehensive Plan includes a policy to evaluate activities to emphasize "sustainability practices." Specific projects described by the plan will reviewed for their potential impact to energy and resource use as part of individual environmental reviews prior to implementation.

4. **How would the proposal be likely to use or affect environmentally sensitive areas or areas designated (or eligible or under study) for governmental protection, such as parks, wilderness, wild and scenic rivers, threatened or endangered species habitat, historic or cultural sites, wetlands, floodplains, or prime farmlands?**

It is not anticipated that the proposed projects will have a significant impact upon environmentally sensitive areas or areas designated for governmental protection. Improvements to the system described by the plan are intended to increase reliability, thereby reducing the risk of impacts to sensitive areas..

- **Proposed measures to protect such resources or to avoid or reduce impacts are:**

The Plan does not increase the ability of any person, company, or agency to develop projects that would affect sensitive areas. Proposed projects identified as part of the plan will be reviewed on an individual basis and addressed by the appropriate agencies prior to implementation. Conformance with the applicable local, state, and federal guidelines and regulations will be required.

5. **How would the proposal be likely to affect land and shoreline use, including whether it would allow or encourage land or shoreline uses incompatible with existing plans?**

The Comprehensive Sewer Plan does not allow or encourage uses incompatible with existing plans. Specific projects will be subject to individual environmental review before implementation.

- **Proposed measures to avoid or reduce shoreline and land use impacts are:**

None specifically, as this is a non-project action. However, specific projects described by the plan will reviewed for their potential impact to shoreline use and land use as part of individual environmental reviews prior to implementation.

6. **How would the proposal be likely to increase demands on transportation or public services and utilities?**

The proposal will not result in an increase in demands on transportation and public services. The Comprehensive Sewer Plan responds to growth by identifying the public facilities and improvement needed to address future growth addressed by the City Comprehensive Plan.

- **Proposed measures to reduce or respond to such demand(s) are:**

The Comprehensive Sewer Plan identifies sewer facilities required to accommodate growth. Any proposal to construct those facilities will be subject to environmental review which will identify specific impacts to transportation, public services or other utilities.

7. **Identify, if possible, whether the proposal may conflict with local, state, or federal laws or requirements for the protection of the environment.**

The Sewer Comprehensive Plan does not appear to present any conflict with local, state, or federal laws or requirements.

[Correction]

DETERMINATION OF NON-SIGNIFICANCE (DNS)
City of Auburn Comprehensive Plan Sewer Update
SEP24-0008

The City of Auburn is issuing a Notice of Application (NOA) and a Determination of Non-Significance (DNS) for the following described project. The permit applications and listed studies may be reviewed at the Auburn Department of Community Development at One E Main St., 2nd Floor, Customer Service Center, Auburn, WA 98001 and by visiting www.auburnwa.gov/landuse.

Proposal: The proposed non-project action includes adoption of the Comprehensive Sewer Plan as an element of the city's Comprehensive Plan. The City of Auburn's 2024 Comprehensive Sewer Plan replaces the City of Auburn's 2016 Comprehensive Sewer Plan. The plan examines the existing sewer service area which includes both areas within the city limits and potential annexation areas for the City of Auburn. It addresses policies, design criteria, and recommends improvements to the sewer system within its service area. The plan analyzes the current level of service and identifies important projects necessary to meet city and state standards regarding public health, facility efficiency, and operations and maintenance. The wide range of facility improvements includes repair and replacement, system improvements, facility evaluations, and extensions of the utility to meet future sewer demands. The Comprehensive Sewer Plan is an ongoing element of the city's Comprehensive Plan and serves as a guide for the operation, maintenance and expansion of the utility within the sewer service area, in accordance with the local, County, and State requirements.

Location: City-wide

Notice of Application:
Not Applicable.

APPENDIX G

RECLAIMED WATER CHECKLIST

For questions, call Kristina Westbrook,
King County Reclaimed Water Program Manager at (206) 296-5279
www.kingcounty.gov/reclaimedwater

King County

Water Reclamation Evaluation Checklist
For Systems with 1,000 or more Connections

The County and State recognize that changing conditions could initiate a need to respond in new ways to future water quality standards, wastewater discharge requirements, take advantage of advances in treatment technologies and/or allow our region to be positioned to respond to changes associated with climate change and population growth.

In 2003, Chapter 90.46 of the Revised Code of Washington (RCW) was amended to require public water systems serving 1,000 or more connections to evaluate opportunities for reclaimed water when completing their water system plans. Please use this checklist to meet King County consistency requirements in responding to this legislation.

Please use this checklist, including the inventory template, to ensure that your water system plan includes sufficient information about opportunities for reclaimed water and your system's efforts to develop those opportunities. If a question is not applicable or the information is unavailable, then answer, "unknown" or "n/a." King County will consider the checklist completed if each answer is filled in with the best available information, even if the utility states that it is not aware of any reclaimed water opportunities within its service area.

Water System Name: City of Auburn

PWS ID# 03350V
Contact: Senait Gebreeyesus

1. **Identifying Potential Future Demand for Reclaimed Water:** King County maintains a database and map of potential reclaimed water users for evaluating future projects. Please use the template below, or similar table, to provide information to assist King County in further researching these potential uses.
   - **Large Utility Water Users** (choose one):
     - ☐ Attached is an inventory of twenty large (above 20,000 gallons/month on average), non single-family residential, water users served by our utility that have a potential for reclaimed water use, or
     - ☑ Attached is an inventory of our utility's top twenty water users, or
     - ☐ The information requested is unknown or not available.
       Additional Comments: _____
   - **Large Self Suppliers** (choose one):
     - ☐ Attached is an inventory of large, self-supplied water users within our water utility's service boundaries - especially those near wastewater treatment plants, mainlines, outfalls, and pump stations or similar reclaimed water facilities), or
     - ☑ The information requested is unknown or not available.
       Additional Comments: _____
   - **Other** (choose one):
     - ☐ Attached is an inventory of other water users (such as those that are clustered near one another and could be served by a single system) that may be likely candidates for reclaimed water use, or
     - ☑ The information requested is unknown or not available.
       Additional Comments: _____

2. **Environmental Commitment**: Are you a city/town, or providing water service to a city/town, that has made commitments within resource management plans, salmon recovery plans, or other environmental initiatives for which there is a potential opportunity for using reclaimed water to assist in meeting commitments? (choose one)

☐ Yes, here are plans that have potential for reclaimed water use in our service area to meet the above commitments:

_____

_____

☑ The information requested is unknown, not available.
Additional Comments: _____

3. **Identifying Areas of Potential Use of Reclaimed Water for Environmental Benefit:**
Below are ***examples*** of uses of reclaimed water ***that comply with State, Federal and other reclaimed water environmental, health and safety standards***. All of these uses are currently in effect somewhere in Washington State. To the best of your knowledge, are any of these potential uses for reclaimed water applicable to your area?

River Augmentation (choose one):

☐ Yes, our water rights are limited by instream flows. For more information, King County may contact:

_____

_____

☑ The information requested is unknown, or not available.
Additional Comments: _____

Groundwater Recharge (choose one):

☐ Yes, we withdraw water from an aquifer that is in a groundwater management area, or from a declining aquifer, where water levels may need to be replenished or to maintain aquifer storage. For more information, King County may contact:

_____

☑ The information requested is unknown, or not available.
Additional Comments: _____

Water Rights Mitigation (choose one):

☑ Yes, our area is pursuing, or planning to pursue, new or additional water rights, and there may be an opportunity to use reclaimed water for mitigation of those new water rights. For more information, King County may contact:
Application G1-28404. Contact Ingrid Gaub, 253-804-3113

☐ The information requested is unknown, or not available.
Additional Comments: _____

Potential Areas of Environmental Need (choose one):

☐ Yes, parts of our service area include potential environmental enhancement locations, such as wetlands enhancement, aquifer recharge, stream flow augmentation, that might be candidates for reclaimed water use. For more information, King County may contact:

_____

☑ The information requested is unknown, or not available.
Additional Comments: _____

4. **Local Reclaimed Water Legislation**: If water reclamation is mandated for this water system through local government agreement, contract, local regulations, ordinances, or other mechanisms, please provide a copy of the governing mechanism (choose one).

   ☐ Yes, local legislation exists in our area in support of reclaimed water use. The following relevant legislation is attached (please list titles of documents):

   _____

   _____

   ☑ No water reclamation legislation exists, or is known to exist, at a local level in our service area.

5. **Coordination with Local Wastewater Utility:** Include a brief description of your interactions with any wastewater or reclaimed water utility (King County or other) adjacent to your service area to evaluate any potential opportunities to develop reclaimed water (choose one).

   ☑ Describe if applicable:
   The City of Auburn's policy is to coordinate with King County to explore potential opportunities for water reclamation.

   ☐ None. Additional Comments: _____

1. Introduction

This Comprehensive Storm Drainage Plan (Plan) for the City of Auburn, Washington, updates the previous plan that was completed in December 2015. The 2015 Plan is being updated for several reasons:

- The Washington State Growth Management Act (GMA) requires planning documents to be reassessed and updated periodically.
- Current and future regulatory and permitting requirements, such as those associated with the National Pollutant Discharge Elimination System (NPDES), need to be addressed. Since adoption of the 2015 Plan, the NPDES permit was updated and reissued in 2019 and will be updated again in August 2024.
- New compliance elements, such as the Stormwater Management Action Plan (SMAP) and the Source Control Inspection Program (SCIP) require new activities and regulatory responsibilities.
- Continued growth and system expansion via development, in addition to the 2024 annexed development area from the City of Kent, requires new and revised evaluations of the storm drainage system maintenance responsibilities and expanded service area.
- The storm drainage system inventory has been updated and is needed to manage utility assets and to update the analyses used for condition assessments and replacement planning.
- The capital improvements identified in the 2015 Plan needed reevaluation to account for completed projects, new compliance elements, changes in system conditions, new problem areas identified, and new development, as well as to incorporate new financial information.

In addition, expectations and changes to the stormwater program mission are evolving, which may include increasing coordination with land use and watershed planning, identifying proactive actions to update and retrofit the system, improving the maintenance programs and record-keeping, providing area-wide or basin stormwater control systems, and considering long-term retrofitting.

This Plan contains time frames that are the intended framework for future funding decisions and within which future actions and decisions are intended to occur. However, these time frames are estimates and, depending on factors involved in the processing of applications and project work and the availability of funding, the timing may change from the included time frames. The framework does not represent actual commitments by the City of Auburn, which may depend on funding resources available.

1.1 Purpose and Objectives

The purpose of this Plan is to guide the City's Storm Drainage Utility with respect to future activities and improvements. The Plan's objectives are to:

- Evaluate environmental, social, and regulatory drivers to update the system goals for capital facility infrastructure development, operation, maintenance, and other key elements of utility management.
- Perform hydraulic modeling analysis to evaluate system capacity, focusing on known problems and areas where data are available for model development and calibration. Incorporate those updates into the hydraulic models used for analyzing the system.
- Develop capital improvements that meet system needs and effectively manage risks.

- Document maintenance and operations (M&O) activities and develop recommendations for improving the M&O program.
- Review and document the condition of existing stormwater system assets and develop a prioritization system for inspecting critical system elements.
- List and describe Capital Improvement Projects (CIPs) to prioritize 6- and 20-year funding frameworks.
- Provide future-looking suggestions based on potential changing climate factors.
- Incorporate information and activities from current and anticipated NPDES compliance planning.
- Identify additional staffing needed based on NPDES requirements and future maintenance and operation activities.
- Coordinate the capital and operations plans to meet the anticipated revenue stream.
- Develop programmatic recommendations to address utility needs.

1.2 Approach and Document Organization

This Plan is organized to focus on the actions the utility will take to implement the Plan. In most cases, supporting documentation and background information is included in appendices rather than chapters of the Plan. The Plan is organized into the following chapters:

Chapter 1 Introduction: Describes the reasons for developing an updated Plan and states the purpose and objectives of the Plan.

Chapter 2 Background: Provides background information regarding the Storm Drainage Utility and regulatory drivers for developing system goals.

Chapter 3 System Goals and Policies: Specifies the system goals used to develop capital improvements and future M&O activities.

Chapter 4 Drainage System: Describes the existing conditions of the City's drainage system.

Chapter 5 Evolution of the Storm Drainage Utility: Describes methodologies used to evaluate existing problems and develop CIPs.

Chapter 6 Maintenance and Operations: Documents existing Storm Drainage Utility M&O activities.

Chapter 7 Capital Improvements: Describes recommended capital improvement projects, including cost estimates and conceptual figures.

Chapter 8 Implementation Plan: Prioritizes CIPs and lays out a future work plan.

Chapter 9 Finance: Identifies the total cost of providing stormwater drainage services and provides a program for the utility to remain viable during execution of the CIP.

Chapter 10 Limitations: Sets the limits of legal applications of this document.

Chapter 11 References: Lists documents referenced throughout the Plan.

2. Background

This chapter provides a brief description of the Storm Drainage Utility, organizational structure, and funding mechanisms, as well as an overview of the federal, state, and local regulations that can affect stormwater management in the City.

2.1 Storm Drainage Utility

2.1.1 Organizational Structure

The City's Storm Drainage Utility is organized under the larger umbrella of the Public Works Department (see Figure 2-1). The Public Works Department covers several areas of responsibility related to stormwater management:

- Utility Program.
- Transportation Program.
- M&O Program.
- Project Engineering.
- GIS (Asset Management).

Under these programs, the Public Works Department is responsible for the planning, design, construction, operations, and maintenance of the City's storm drainage. Management and construction of storm drainage CIPs is provided by Engineering Services, while maintenance of storm drainage facilities is provided by dedicated stormwater and vegetation divisions within M&O.

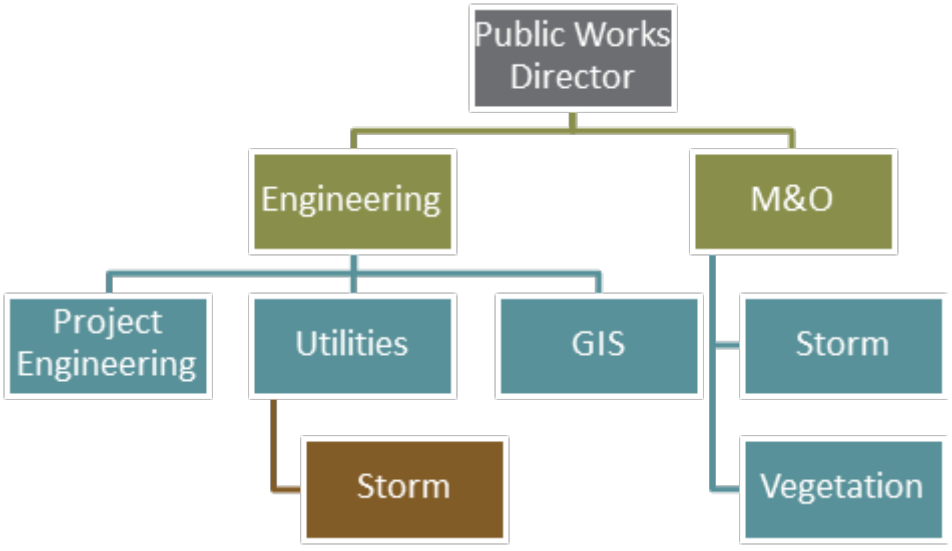

Figure 2-1. Public Works Department Staff Organizational Chart

2.1.2 Funding Mechanisms

The following section provides adapted text from Auburn City Code (ACC) Title 13: Water, Sewers and Public Utilities, Chapter 13.48, Storm Drainage Utility, §13.48.060, Authority to establish rates. Per the ACC, the City has established rate classifications, service charges, and various fees and charges to pay for the following costs:

- The development, adoption, and implementation of a Comprehensive Storm Drainage Plan.
- The debt service and related financing expenses of the design and construction of storm drainage and water quality facilities required for the management of stormwater and surface waters that benefit the service area.
- The operation, repair, maintenance, improvement, replacement, and reconstruction of storm drainage facilities that benefit the present service area (e.g., CIPs to increase system capacity in accordance with level of service [LOS] goals).
- The purchase of a fee or lesser interest, including easements, in land that may be necessary for the storm drainage system in the service area, including, but not limited to, land necessary for the installation and construction of storm drainage facilities and all other facilities that are reasonably required for proper and adequate management of stormwater for the benefit of the service area.
- The costs of monitoring, inspection, enforcement, and administration of the utility, including, but not limited to, water quality surveillance, private system maintenance inspection, construction inspection, and other activities that are reasonably required for the proper and adequate implementation of the City's stormwater and surface water policies and regulations.
- Preparing and implementing requirements for the City's municipal separated storm sewer system (MS4) permit.

2.1.2.1 Rates

The currently established rates for the storm drainage service are provided in Table 2-1 below, which lists rates for 2024 and 2025. Base rates are the monthly charge for service from the Storm Drainage Utility to recover costs incurred by the utility, such as administrative, billing, and collection. Equivalent service units (ESU) are used as a means for estimating the development or impervious surfaces[1] estimated to contribute an amount of runoff to the City's storm drainage system, which is approximately equal to that which is created by the average single-family residential parcel. Open, uncovered, retention/detention facilities shall not be considered as impervious surfaces for the purpose of ESU calculations. One ESU is equal to 2,600 square feet of impervious surface area or any portion thereof. Table 2-1 provides the current monthly charges, base rates, and ESU monthly rates for classifications used by the utility.

[1] An impervious surface is a hard surface area that prevents the entry of water into the soil mantle (see ACC Chapter 13.41). Common impervious surfaces include, but are not limited to rooftops, walkways, patios, concrete, or asphalt paving.

Table 2-1. 2024 and 2025 Utility Rates for Storm Drainage Service

	Effective as of January 1, 2024	Effective as of January 1, 2025
Single-family parcel types	Monthly charge, $	Monthly charge, $
Single-family residential parcels [a]	18.09	19.31
Two-family residential parcels [b]	19.25	19.31
Non-single-family (NSF) parcels	ESU rate per month, $	ESU rate per month, $
NSF [c]	18.09	19.31
NSF with detention [d]	15.57	16.62
NSF with retention [e]	13.04	13.92
NSF with water quality treatment [f]	16.64	17.76
NSF with detention and water quality treatment	4.12	15.07
NSF with retention and water quality treatment	11.59	12.37

[a.] Any parcel of land having on it a single detached dwelling unit that is designed for occupancy by one family or a similar group of people.
[b.] A building designed exclusively for occupancy by two families living independently of each other and containing two dwelling units.
[c.] Any parcel of developed land other than single-family or two-family (duplex) residential.
[d.] Detention is the temporary storage of stormwater and surface water runoff, with provisions for the controlled offsite surface release of the stored water.
[e.] Retention means the storage of stormwater and surface water runoff, with no provisions for off-site surface release of the stored water other than by evaporation and infiltration.
[f.] Water quality treatment means an engineered and approved facility to remove contaminants in the existing flow regime of stormwater generated from a developed parcel pursuant to applicable design standards in place at the time of approval.

Storm Drainage Utility rates are billed monthly. Storm drainage charges start from the day a water meter servicing the property is installed by the City. In cases where the property does not receive water service from the City, storm drainage charges start from the day that the storm drainage permit is finalized by the City. Payments received for utility bills are applied to expenses in the following order of priority: late charges, additional fees, stormwater, garbage, sewer, and water. Payment for stormwater drainage service charges is due and payable to the Finance Department office 15 days after the billing date that appears on the bill. Utility charges are constituted as a lien and thus can be applied to a lien upon the property from which such charges are due, superior to all other liens and encumbrances whatsoever, except for general taxes and local special assessments.

2.1.2.2 Connection Fees

Connection fees are comprised of a connection permit fee and a system development charge (SDC). Connection permit fees are applied to cover the planning, review, inspection, record drawings, and processing of permit information for new connections to the public storm drainage system. Other permit fees are assessed for inspection and permit processing for various repair, retrofit, and demolition activities.

A utility SDC is a charge imposed on new customers, or existing customers revising use of their property, in recognition of the previous investment of the City and its customers in the utility systems. The purpose of an SDC is to recover a fair share of the costs of providing existing utility system infrastructure to serve new customers or revised uses of existing customers and provide for future improvements to serve new customers. As with Storm Drainage Utility rates, SDCs are based on the relative amount of impervious surface added to the system. In 2024, SDCs were estimated to be $1,759 per ESU.

2.2 Development Code and Design Standards Updates

In compliance with the previous NPDES MS4 permit, the City has conducted updates to its development regulations and design standards and adopted a stormwater manual as required by the permit. Specifically, the City adopted the Washington State Department of Ecology (Ecology) 2019 Surface Water Management Manual for Western Washington (SWMMWW), with a City of Auburn Supplement (COA Supplement). The COA Supplement has received minor updates as needed—generally annually—to include new technologies and regulations. Ecology has recently adopted an update to the 2024 SWMMWW. The City has formally updated the standards to the revised manual as a condition of the NPDES MS4 permit.

In August 2024, Ecology issued an updated NPDES MS4 permit to comply with requirements of the federal Clean Water Act (CWA) when the current permit expires. The new permit would be effective through July 31, 2029.

Development regulations related to stormwater and drainage design standards will also be reviewed for potential revision consistent with current policies and LOS goals.

See the following section for an overview of the City's Stormwater Management Program (SWMP) and Chapter 8 for specific steps needed to maintain compliance with updated NPDES MS4 permit requirements.

2.3 Regulatory and Policy Considerations

Numerous federal, state, and local regulations govern stormwater management in the City. Other plans and programs provide additional guidance. Applicable regulations and policy guidance are summarized in Table 2-2.

Table 2-2. Federal, State, and City Regulations, Guidance, and Programs Relevant to the Auburn Storm Drainage Utility

Title	Regulation, Guidance, or Program	Application to the City
Federal		
Clean Water Act (CWA): §402 NPDES	Regulation	The National Pollutant Discharge Elimination System (NPDES) permit includes several requirements that affect stormwater management in the City. See Section 2.3.2 below.
CWA: §303(d) Impaired Waters and Total Maximum Daily Load (TMDL) Program	Regulation	In addition to existing TMDLs, new TMDLs could lead to more stringent stormwater quality controls in future NPDES permits.
CWA: §404 Permit Program	Regulation	Some stormwater Capital Improvement Projects (CIPs) can affect wetlands or other "waters of the U.S." §404 permitting and mitigation can increase CIP costs and schedules.
Endangered Species Act (ESA)	Regulation	Stormwater CIPs that involve federal permitting or funding could require consultation with federal agencies under §7 of the ESA. ESA consultation could increase project timelines and costs.

Table 2-2. Federal, State, and City Regulations, Guidance, and Programs Relevant to the Auburn Storm Drainage Utility (continued)

Title	Regulation, Guidance, or Program	Application to the City
National Flood Insurance Program	Program	The Plan could affect the City's rating under the Community Rating System, which affects flood insurance rates.
Governmental Accounting Standards Board (GASB) Statement 34	Program	Requires accurate inventory of City's stormwater infrastructure. See Section 2.3.3 below.
State		
State Environmental Policy Act (SEPA) (Washington Administrative Code [WAC] 197-11)	Regulation	Each CIP would require SEPA review prior to implementation unless that project is categorically exempt.
Water quality standards (WAC 173-201A)	Regulation	The NPDES MS4 permit does not authorize discharges that would violate State water quality standards. The State may establish TMDLs for water bodies that violate the standards. As noted above, the TMDLs can become NPDES permit requirements.
§401 water quality certification	Regulation	Individual projects that require §404 or other federal permits would also require a §401 certification from Ecology. A §401 certification could include site-specific mitigation measures, which could affect CIP design and cost estimates.
Puget Sound Water Quality Management Plan	Guidance	Plan recommendations should be consistent with the Puget Sound Water Quality Management Plan.
Puget Sound Partnership	Guidance	In 2007, the Washington State Legislature created a State agency for the purpose of developing and overseeing the implementation of a 2014/2015 "Action Agenda" to clean up, restore, and protect Puget Sound by 2020. The partnership's "Action Agenda" identified three priorities, one of which is to prevent pollution from urban stormwater runoff.
Growth Management Act (GMA) and City Comprehensive Plan	Regulation	This Plan is required by the GMA. GMA is discussed in Section 2.3.1 below.
State Hydraulic Code (Revised Code of Washington 77.55, WAC 220-660)	Regulation	CIPs that involve work in waters of the State would require a Hydraulic Project Approval (HPA) permit. HPA permitting and mitigation measures could affect CIP costs.
Archaeological and cultural coordination	Regulation	If any CIPs are planned for areas with known or suspected archaeological sites, the City will need to coordinate with the Department of Archaeology and Historic Preservation, local Indian tribes, and King County Historic Preservation.

Table 2-2. Federal, State, and City Regulations, Guidance, and Programs Relevant to the Auburn Storm Drainage Utility (continued)

Title	Regulation, Guidance, or Program	Application to the City
City		
Environmental review (Auburn City Code [ACC] Title 16.06)	Regulation	Each CIP would be subject to environmental review prior to permitting and construction as prescribed in ACC 16.06. This chapter of the ACC was adopted under the authority of SEPA.
Critical areas ordinance (ACC Title 16.10)	Regulation	The Plan should avoid CIPs in critical areas (e.g., wetlands, groundwater protection zones, or wildlife habitat). If a CIP must be sited in a critical area, the cost estimate should include costs for mitigation and permitting as prescribed in ACC 16.10.
Development regulations (ACC Title 18)	Regulation	The City's development regulations must be consistent with NPDES MS4 permit requirements.
Shoreline Master Program (ACC Title 16.08)	Regulation	Future projects should be located and designed to be consistent with the City shoreline regulations (ACC 16.08). Projects within designated shorelines could require permits and mitigation, which could affect project costs and schedules.

Most of the regulations listed in Table 2-2 primarily affect the implementation of specific measures recommended in the Plan. For example, CIPs that could affect wetlands would need to comply with City critical areas regulations and possibly federal CWA Section 404 regulations. However, three of the regulations listed in Table 2-2—the GMA, Ecology's Phase II NPDES Stormwater permit, and federal Governmental Accounting Standards Board (GASB) Statement 34—directly affect the LOS for this Plan.

These regulations are discussed in greater detail in Sections 2.3.1 through 2.3.3 below.

2.3.1 Growth Management Act

The Washington State Legislature enacted the GMA in 1990 in response to rapid population growth and concerns with suburban sprawl, environmental protection, quality of life, and related issues. The GMA is codified primarily in Revised Code of Washington (RCW) Chapter 36.70A.

The GMA provides a framework for regional coordination, and counties planning under the GMA are required to adopt countywide planning policies to guide plan adoption within the county and to establish urban growth areas. Local comprehensive plans must include the following elements: land use, housing, capital facilities, utilities, transportation, economic development, parks and recreation, and, for counties, a rural element. This Plan serves as a component of the utilities element for City-owned storm drainage assets.

2.3.2 Phase II Municipal Stormwater Permit

The NPDES MS4 permit program is a requirement of the federal CWA, which is intended to protect and restore waters for "fishable, swimmable" uses. The federal Environmental Protection Agency (EPA) has delegated permit authority to state environmental agencies, and these agencies can set

permit conditions in accordance with and in addition to the minimum federal requirements. In Washington, Ecology is the NPDES-delegated permit authority.

Phase I of the stormwater NPDES regulation applies to cities and counties that operate MS4s and had populations of 100,000 people or more according to the 1990 census. Phase II of the stormwater NPDES regulation applies to municipalities that operate MS4s and have populations of fewer than 100,000 people according to the 1990 census. Auburn is a Phase II permittee.

Ecology issued the current Western Washington Phase II Municipal Stormwater permit (the NPDES MS4 permit) in July 2024, with an effective date of August 2024. The NPDES MS4 permit term will last until July 2029.

The NPDES MS4 permit requires the City to submit a SWMP Plan by March 31 of each year, in which the City identifies activities to be completed in compliance with the permit requirements. The permit also requires submittal of an annual report that looks back on SWMP activities for the prior year. The NPDES MS4 permit and associated requirements are described in detail in the City's current SWMP Plan, which is available on the City's website.

The NPDES MS4 permit allows municipalities to discharge stormwater runoff from their municipal drainage systems into the state's water bodies (e.g., streams, rivers, lakes, and wetlands) as long as municipalities implement programs to protect water quality by reducing the discharge of "nonpoint source" pollutants to the "maximum extent practicable" (MEP) through application of permit-specified "best management practices" (BMPs). The stormwater management activities specified in the NPDES MS4 permit are collectively referred to as the SWMP and grouped under the following program components:

- SWMP administration.
- Public education and outreach.
- Public involvement and participation.
- Illicit discharge detection and elimination (IDDE).
- Control of runoff from new development, redevelopment, and construction sites.
- Municipal operations and maintenance.
- Monitoring and assessment.

The NPDES MS4 permit also requires compliance with established total maximum daily loads (TMDLs).[2] The current NPDES MS4 permit requires the City to monitor discharges to the White River, in association with the Puyallup River watershed fecal coliform TMDL. Additional actions required by the City to ensure compliance with TMDLs are listed in Appendix 2 of the NPDES MS4 permit (Appendix A of this Plan). Ecology has identified several other water bodies in the vicinity of Auburn that do not appear to meet the water quality standards, and additional TMDL requirements are possible in future permits.

[2] A total maximum daily load (TMDL) is a calculated maximum pollutant loading a water body can receive while still meeting water quality standards. Once a TMDL is established, the State determines how much each source must reduce its discharges of the pollutant in order to bring the water body back into compliance with the water quality standards. The federal CWA requires that TMDLs be established for all water bodies that do not meet water quality standards, and that TMDL requirements be included in the NPDES permits for dischargers into the affected water bodies.

2.3.3 Governmental Accounting Standards Board

Financial reporting by public utilities must adhere to requirements set by the GASB, the agency responsible for developing standards of state and local governmental accounting and financial reporting. Most prominent is GASB Statement 34, "Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments," which was issued in June 1999. The main objective of Statement 34's requirements is to have financial reports that are more comprehensive and are easier to understand by the public. Statement 34 consists of several components, which can be seen in full in paragraphs 3 to 166 of the GASB publications. In summary, Statement 34 requires that the basic financial statements and required supplementary information (RSI) for general purpose governments should consist of the following:

- Management's discussion and analysis. In sum, this requirement states that prior to the basic financial statements, a discussion providing an analytical overview of the government's financial activities is necessary.
- Basic financial statements, which should include:
  - → Government-wide financial statements that include information on net assets (e.g., storm drainage infrastructure) and a statement of activities.
  - → Fund financial statements that focus on information about the government's major governmental and enterprise funds (e.g., the City's Storm Drainage Utility), including its blended component units.
  - → Notes to the financial statements that will enable users to understand the basic financial statements.
- Required supplementary information. Budgetary comparison schedules should be presented as RSI along with other types of data, as required by previous GASB pronouncements.

Consequently, the City needs an accurate inventory of its stormwater infrastructure in order to comply with the GASB 34 requirements.

3. System Goals and Policies

This chapter describes a set of overarching goals for the City's Storm Drainage Utility and policies for complying with these goals.

3.1 City Comprehensive Plan Consistency

The City Comprehensive Plan is the City's growth management plan and contains policies for protecting critical areas and natural resource lands, designating urban growth areas, preparing comprehensive utility plans, and implementing them through capital investments and development regulations. Therefore, the City Comprehensive Plan provides a framework of policies for development, expansion, and maintenance of the Storm Drainage Utility reflected in this Storm Drainage Comprehensive Plan.

3.2 Storm Drainage Comprehensive Plan Policy Goals

The City's Storm Drainage Utility policies are grouped within goal statements that are headlined under the following categories:

- System Planning.
- Operations and Maintenance.
- Fiscal Responsibility.
- Environment and Regional Coordination.

Taken together with the City Comprehensive Plan and ACC these goals define how the Storm Drainage Utility shall be operated and maintained. Several policies have been developed within each goal, many of which are also based on the Washington Department of Ecology SWMMWW and the City's Phase II NPDES MS4 permit.

3.2.1 System Planning

Goal 1: Employ recognized best business practices resulting in creating a sustainable, efficient, and cost-effective operation of the Storm Drainage Utility.

POLICY 1.1 Incorporate the Comprehensive Storm Drainage Plan as an Element of the City's Comprehensive Plan.

POLICY 1.2 The City shall seek to manage stormwater runoff within the public Right Of Way (ROW):

- to provide access to and functionality of critical services.
- to preserve mobility on major transportation routes (i.e., arterial roads) and residential roads.
- to protect real property structures (e.g., residences and businesses).

POLICY 1.3 The City shall seek to provide pump redundancy and backup power generators or dual power feeds at City-owned and -operated drainage pump stations.

POLICY 1.4 The City shall routinely assess the performance of pumped systems with a focus on capacity and vulnerability. This review aims to ensure that these systems operate efficiently, meet their intended capacity, and remain resilient against potential risks.

POLICY 1.5 The City shall require the separation of sanitary and storm sewer facilities wherever combined sewers may be discovered.

POLICY 1.6 Establish, maintain, and update an asset database to be used in prioritizing asset maintenance and repair and replacement activities. The database will include asset age and material information and will be validated and updated through inspections, records review, and other available information.

POLICY 1.7 Review complaints/citizen reports and claims made against the City and create a list of operational and capital improvements to be implemented by the Plan.

POLICY 1.8 The City shall use the outcomes of future rainfall intensity data updates for informing the design of its stormwater systems. Specifically, the same design storms—such as the 25-year event for pipe capacity and the 100-year event for storage facilities—shall be employed using projected rainfall statistics. The City shall draw upon relevant studies, including those mentioned in the King County Surface Water Design Manual (KCSWDM) or other ongoing regional research once the results become available (King County DNR 2021).

3.2.2 Operations and Maintenance

Goal 2: Maintain existing infrastructure and ensure facilities are reliable and operational now and into the future.

POLICY 2.1 The City shall maintain or seek access to all City-owned facilities for necessary maintenance and operation. [ACC 13.48.440B]

POLICY 2.2 The City's Storm Drainage Utility shall be responsible for implementation, maintenance, and operation of the City's public storm drainage system. Storm systems serving City-owned properties managed by other departments and/or divisions of the City that are not part of the public storm drainage serving the public ROW (e.g., Parks, Arts & Recreation; Administration – Facilities; Public Works – Airport) shall be responsible for their own maintenance and upkeep.

POLICY 2.3 Drainage facilities constructed to serve private property shall be owned and maintained by the property owner. Drainage facilities constructed to serve public ROW shall be owned and maintained by the City.

POLICY 2.4 The City shall seek to maintain storm drainage infrastructure to ensure proper function of drainage facilities by performing scheduled maintenance in accordance with the NPDES permit. [ACC 13.48.180]

POLICY 2.5 The City shall seek to seasonally maintain storm drain inlets, conveyance, and outfalls to preserve design conveyance capacity.

POLICY 2.6 Employee safety will be a primary consideration in the design, construction, operation, and maintenance of storm drainage infrastructure.

POLICY 2.7 Investigate all customer service calls within 24 hours and record results in the computerized maintenance management system (CMMS.)

3.2.3 Fiscal Responsibility

Goal 3: Responsibly manage funds, employ best business practices, and operate the utility in a cost-effective manner.

POLICY 3.1 Appropriate rates and system development charges shall be assessed and periodically updated to fund the ongoing maintenance, operation, and capital expenditures of the utility. [ACC 13.48.060]

POLICY 3.2 Manage the Storm Drainage Utility funds and resources in a professional manner in compliance with applicable laws, regulations, and City financial policies, which requires ongoing monitoring of revenues and expenses in order to make prudent business decisions, and report to City officials, as needed, regarding the status of utility operations.

POLICY 3.3 The City shall require that developers evaluate off-site storm drainage systems, consider improvements needed to serve new development, and construct identified improvements prior to or simultaneously with such development.

POLICY 3.4 The City shall continue to prioritize asset management as a business practice and use it to plan for preventative maintenance, predict system depreciation and replacement costs, prioritize inspections for condition status to inform system risk, and prepare to minimize the occurrence and impact of system failures.

POLICY 3.5 The City will monitor capital project implementation by tracking schedule, budget accuracy, and overall efficiency.

POLICY 3.6 Consider replacing or upgrading storm facilities to current standards in the ROW whenever a street is to be substantially reconstructed or other significant utility work is to be completed, especially when storm improvements are specifically identified in the Plan. In addition, consider street and other utility improvement needs when replacing or upgrading storm facilities.

POLICY 3.7 Pursue opportunities to secure grants and other revenue partnerships to fund storm drainage program needs.

POLICY 3.8 The utility will not accept nonstandard, powered, or private facilities for ownership, operation, or maintenance by the utility.

3.2.4 Environment and Regional Coordination

Goal 4: Work to protect the natural environment within the City and contribute to the preservation of natural resources throughout the region.

POLICY 4.1 The Storm Drainage Utility shall work with other jurisdictions and agencies to address regional water quality issues.

POLICY 4.2 The City shall comply with all federal, state, and local regulations pertaining to stormwater management, facility maintenance, and pollution control.

POLICY 4.3 The City shall promote policies that preserve existing native vegetation and natural drainage courses while maintaining their conveyance capacity.

POLICY 4.4 Environmental issues, such as water quality and fish habitat protection, shall be considered in all new development applications and new storm drainage improvements. This policy includes consideration of new and emerging concerns, such as the chemical 6PPD-quinone in street runoff and the effects of climate change on stream temperatures.

POLICY 4.5 The City shall seek to minimize impacts to natural river systems by encouraging pretreatment of surface flows from new development and reintroduction into groundwater, where feasible.

POLICY 4.6 The City shall seek opportunities, where feasible, to reintroduce treated urban runoff back into the groundwater system as new development and redevelopment occurs in order to minimize urbanization impacts to the hydrology of natural river systems.

POLICY 4.7 The City shall evaluate the feasibility of improving the water quality of its existing discharges into river systems.

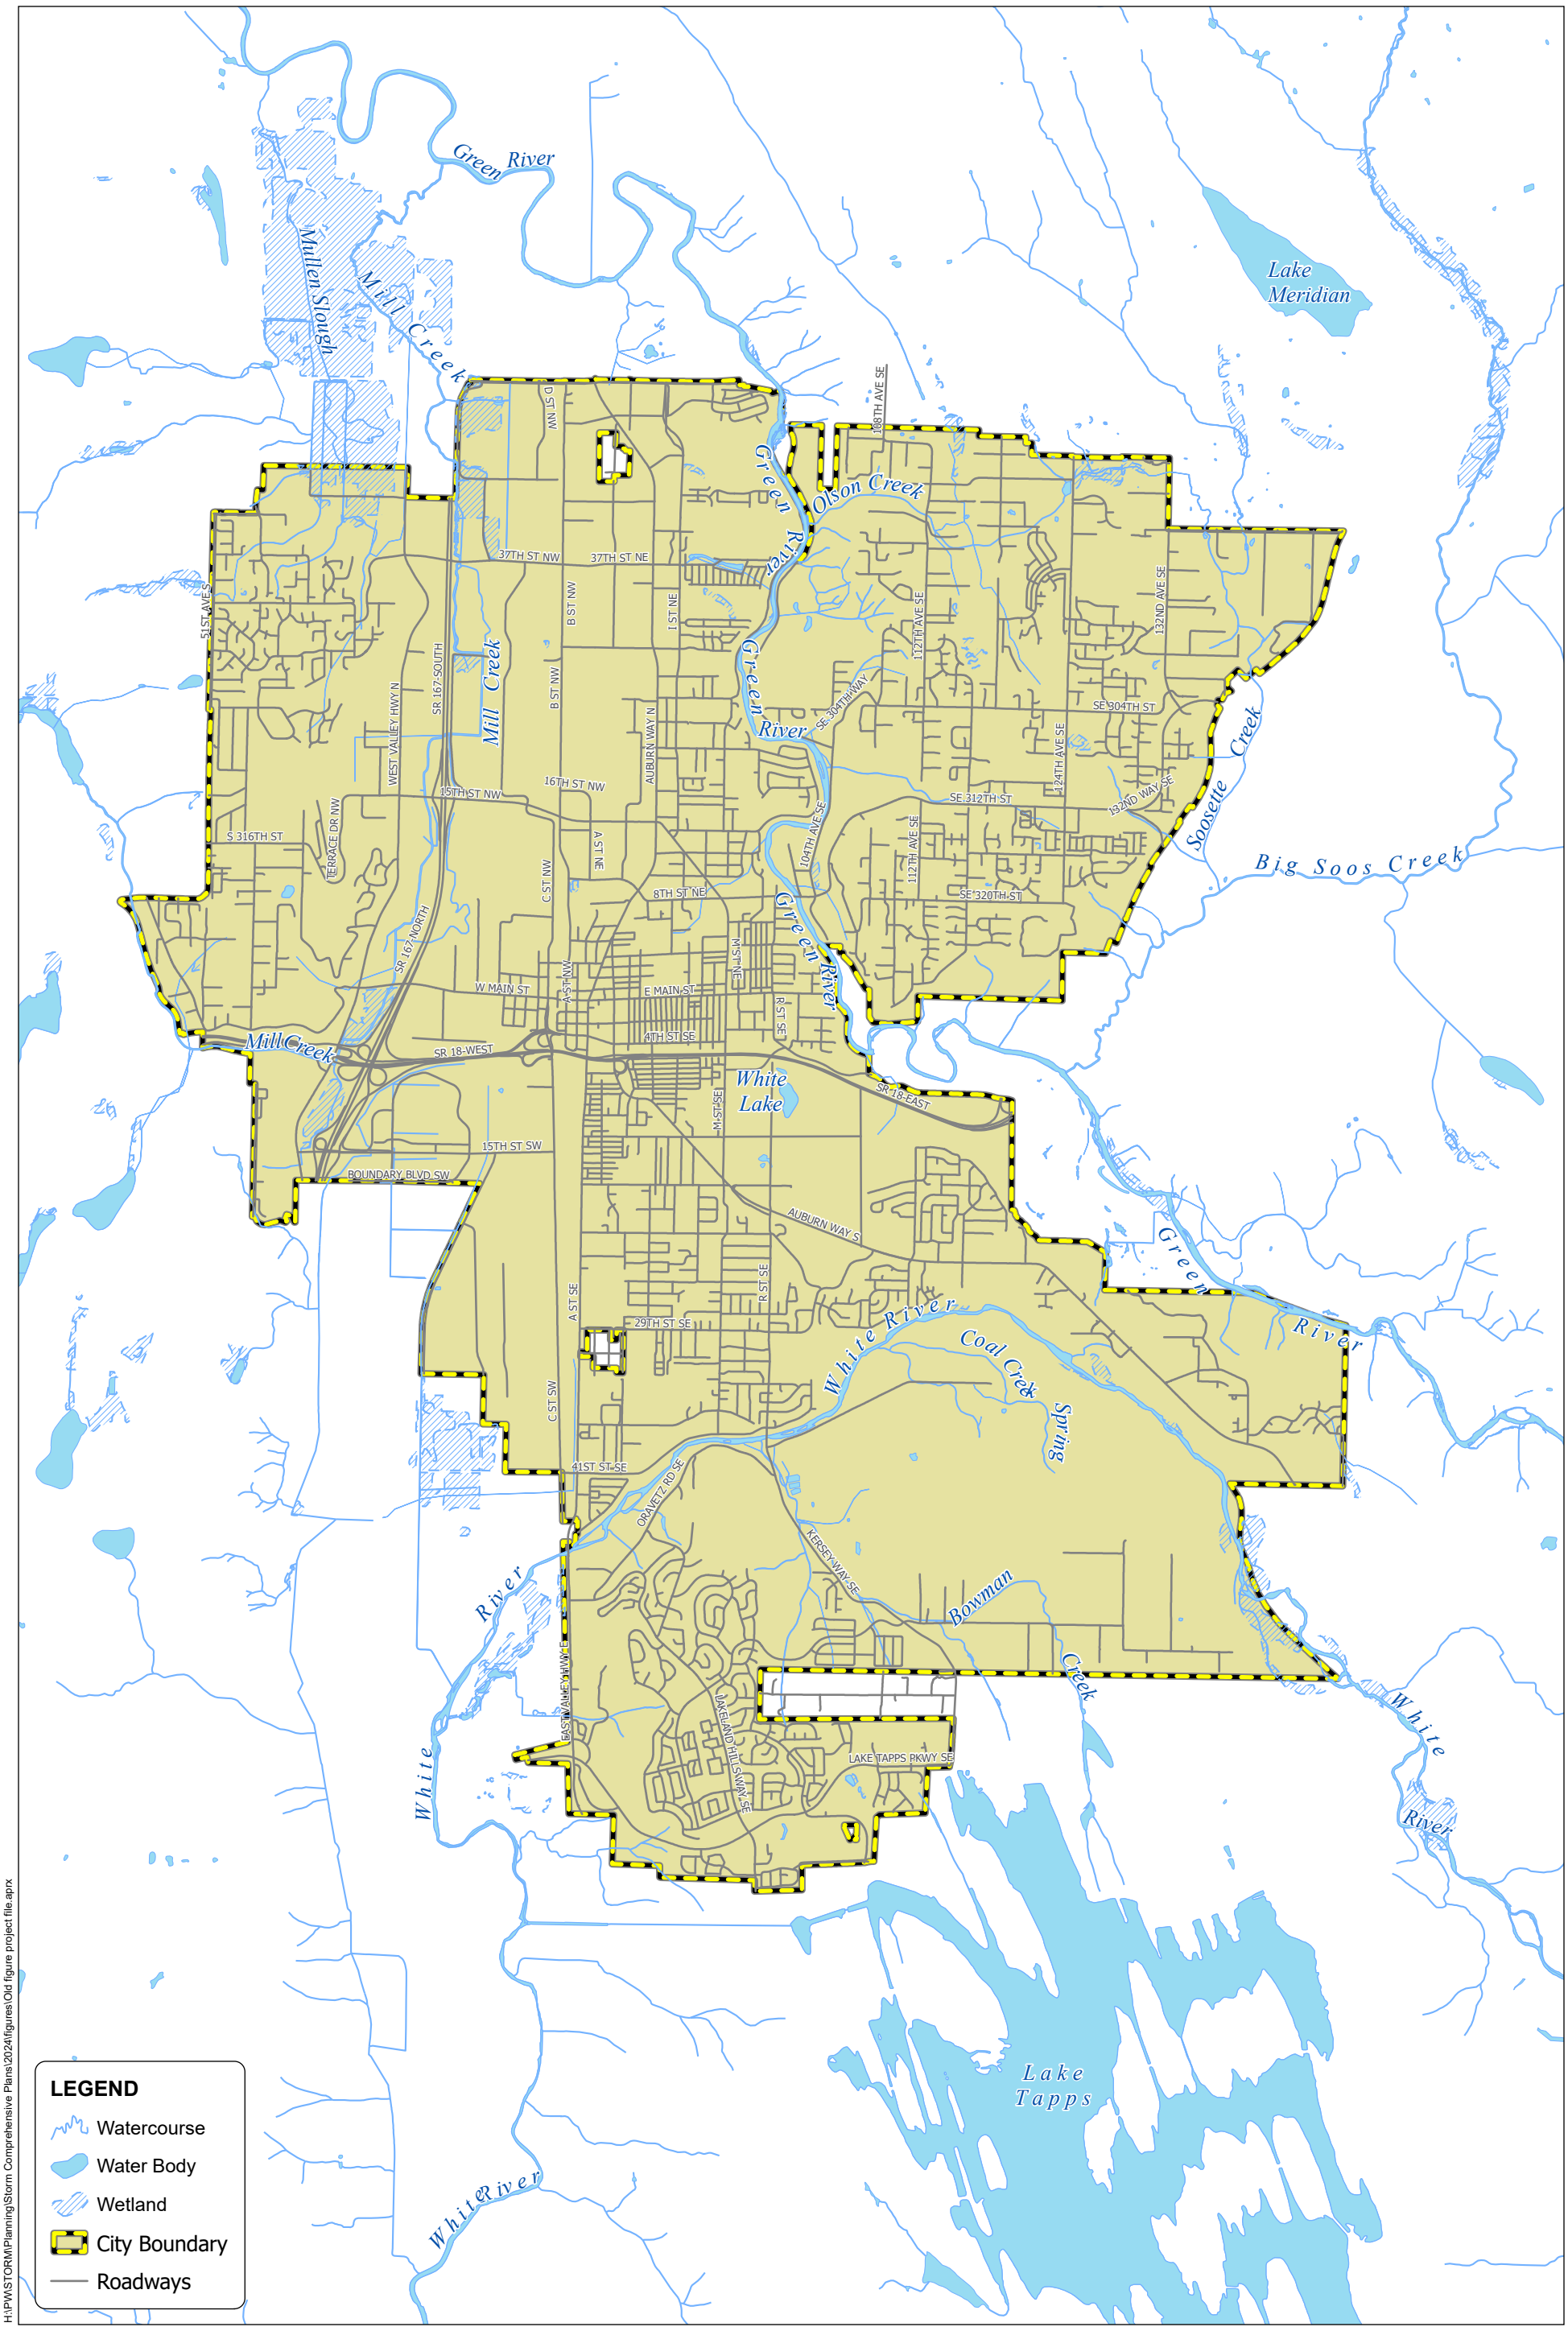
POLICY 4.8 The City shall seek to comply with all federal, state, and local regulations to reduce runoff volumes and pollutant loads associated with new development and redevelopment.

POLICY 4.9 The City shall seek to prevent erosion and landslides related to construction, operation, and maintenance of the publicly owned drainage system.

4. Drainage System

Chapter 4 develops a future work plan to collect and organize information describing the current conditions of the storm drainage system, which provides the basis for investigations (Chapter 5) designed to evaluate the Storm Drainage Utility performance relative to the system goals. This chapter provides an overview of the City's drainage system, including both natural (Section 4.1) and constructed (Section 4.2) drainage elements. It also summarizes key factors related to the storm drainage system, namely critical facilities (Section 4.3) and water quality (Section 4.4), and existing issues facing the Storm Drainage Utility (Section 4.5).

Figures presented in this chapter consist of several maps of the Storm Drainage Utility service, drainage and surrounding areas.



4.1 Natural Drainage

The City of Auburn encompasses approximately 30 square miles; the central portion of the City lies along the bottom of a valley, while the outer edges of the City extend into the surrounding hills (see Figure 4-1). In general, stormwater runoff from the City flows to one of three major receiving waters: the Green River, the White River, and Mill Creek. Other notable water features in the Auburn area include the following:

- Big Soos Creek, which drains southeast into the Green River.
- Soosette Creek (also known as Little Soos Creek), which drains south into Big Soos Creek.
- Mullen Slough, which drains along the northwest side of Mill Creek toward the Green River.
- Bowman Creek, which drains north into the White River.
- Olson Creek, which drains west into the Green River.
- Lake Tapps, which is located just south of the City.
- White Lake, which is located southeast of R Street SE and State Route (SR) 18.
- Coal Creek Springs, which drains north to the White River.

The City contains nearly 30 miles of rivers and streams and more than 1,000 acres of floodplain area associated with these water features. There are over 1,500 acres of wetlands, including forested/shrub and freshwater emergent wetlands.

The following section provides additional information on each of the three major receiving waters.

CITY OF AUBURN WASHINGTON
Figure 4-1
Natural Drainage Features
of the City of Auburn

4.1.1 Receiving Waters

4.1.1.1 Green River

The Green River flows over 93 miles, beginning on the west slope of the Cascade mountains and ending in the Duwamish Waterway, meandering through the northeast portion of Auburn along the east valley wall. Throughout the last century, the Green River was altered for the purpose of flood control, including the construction of levees and bank revetments and the diversion of the White River in the early 1900s. In 1962, the Howard A. Hanson Dam was built on the Green River to control flooding in the valley.

From 1960 to 2007, the City of Auburn participated in Green River flood management activities as part of the Green River Flood Control District. In 2007, the Green River Flood Control District was phased out because flood control and management efforts for the Green River are now included in the King County Flood Control District (KCFCD), which was established in 2007. These efforts are reflected in the 2006 King County Flood Hazard Management Plan. The KCFCD goals and objectives include maintaining and repairing levees and revetments and acquiring at-risk floodplain properties. Auburn elected officials and staff serve on advisory committees for the KCFCD.

4.1.1.2 White River

The White River originates on the slopes of Mount Rainier and flows generally northward and westward into the Puget Sound lowlands. Near Auburn, the White River flows north and then west through the southern portions of the City before it curves southward toward the Puyallup River. The White River is a very dynamic, sediment-laden river, which has led to changing channel morphology.

Prior to 1900, the White River flowed into the Green-Duwamish River; however, floodwaters from the White River drained to both the Green-Duwamish River and the Puyallup River. A flood in 1906 caused the White River to shift and flow into the old Stuck River channel, which leads to the Puyallup River. In 1907, a diversion wall was constructed in Game Farm Park to permanently direct the White River flow into the Puyallup River (USACE 2009a).

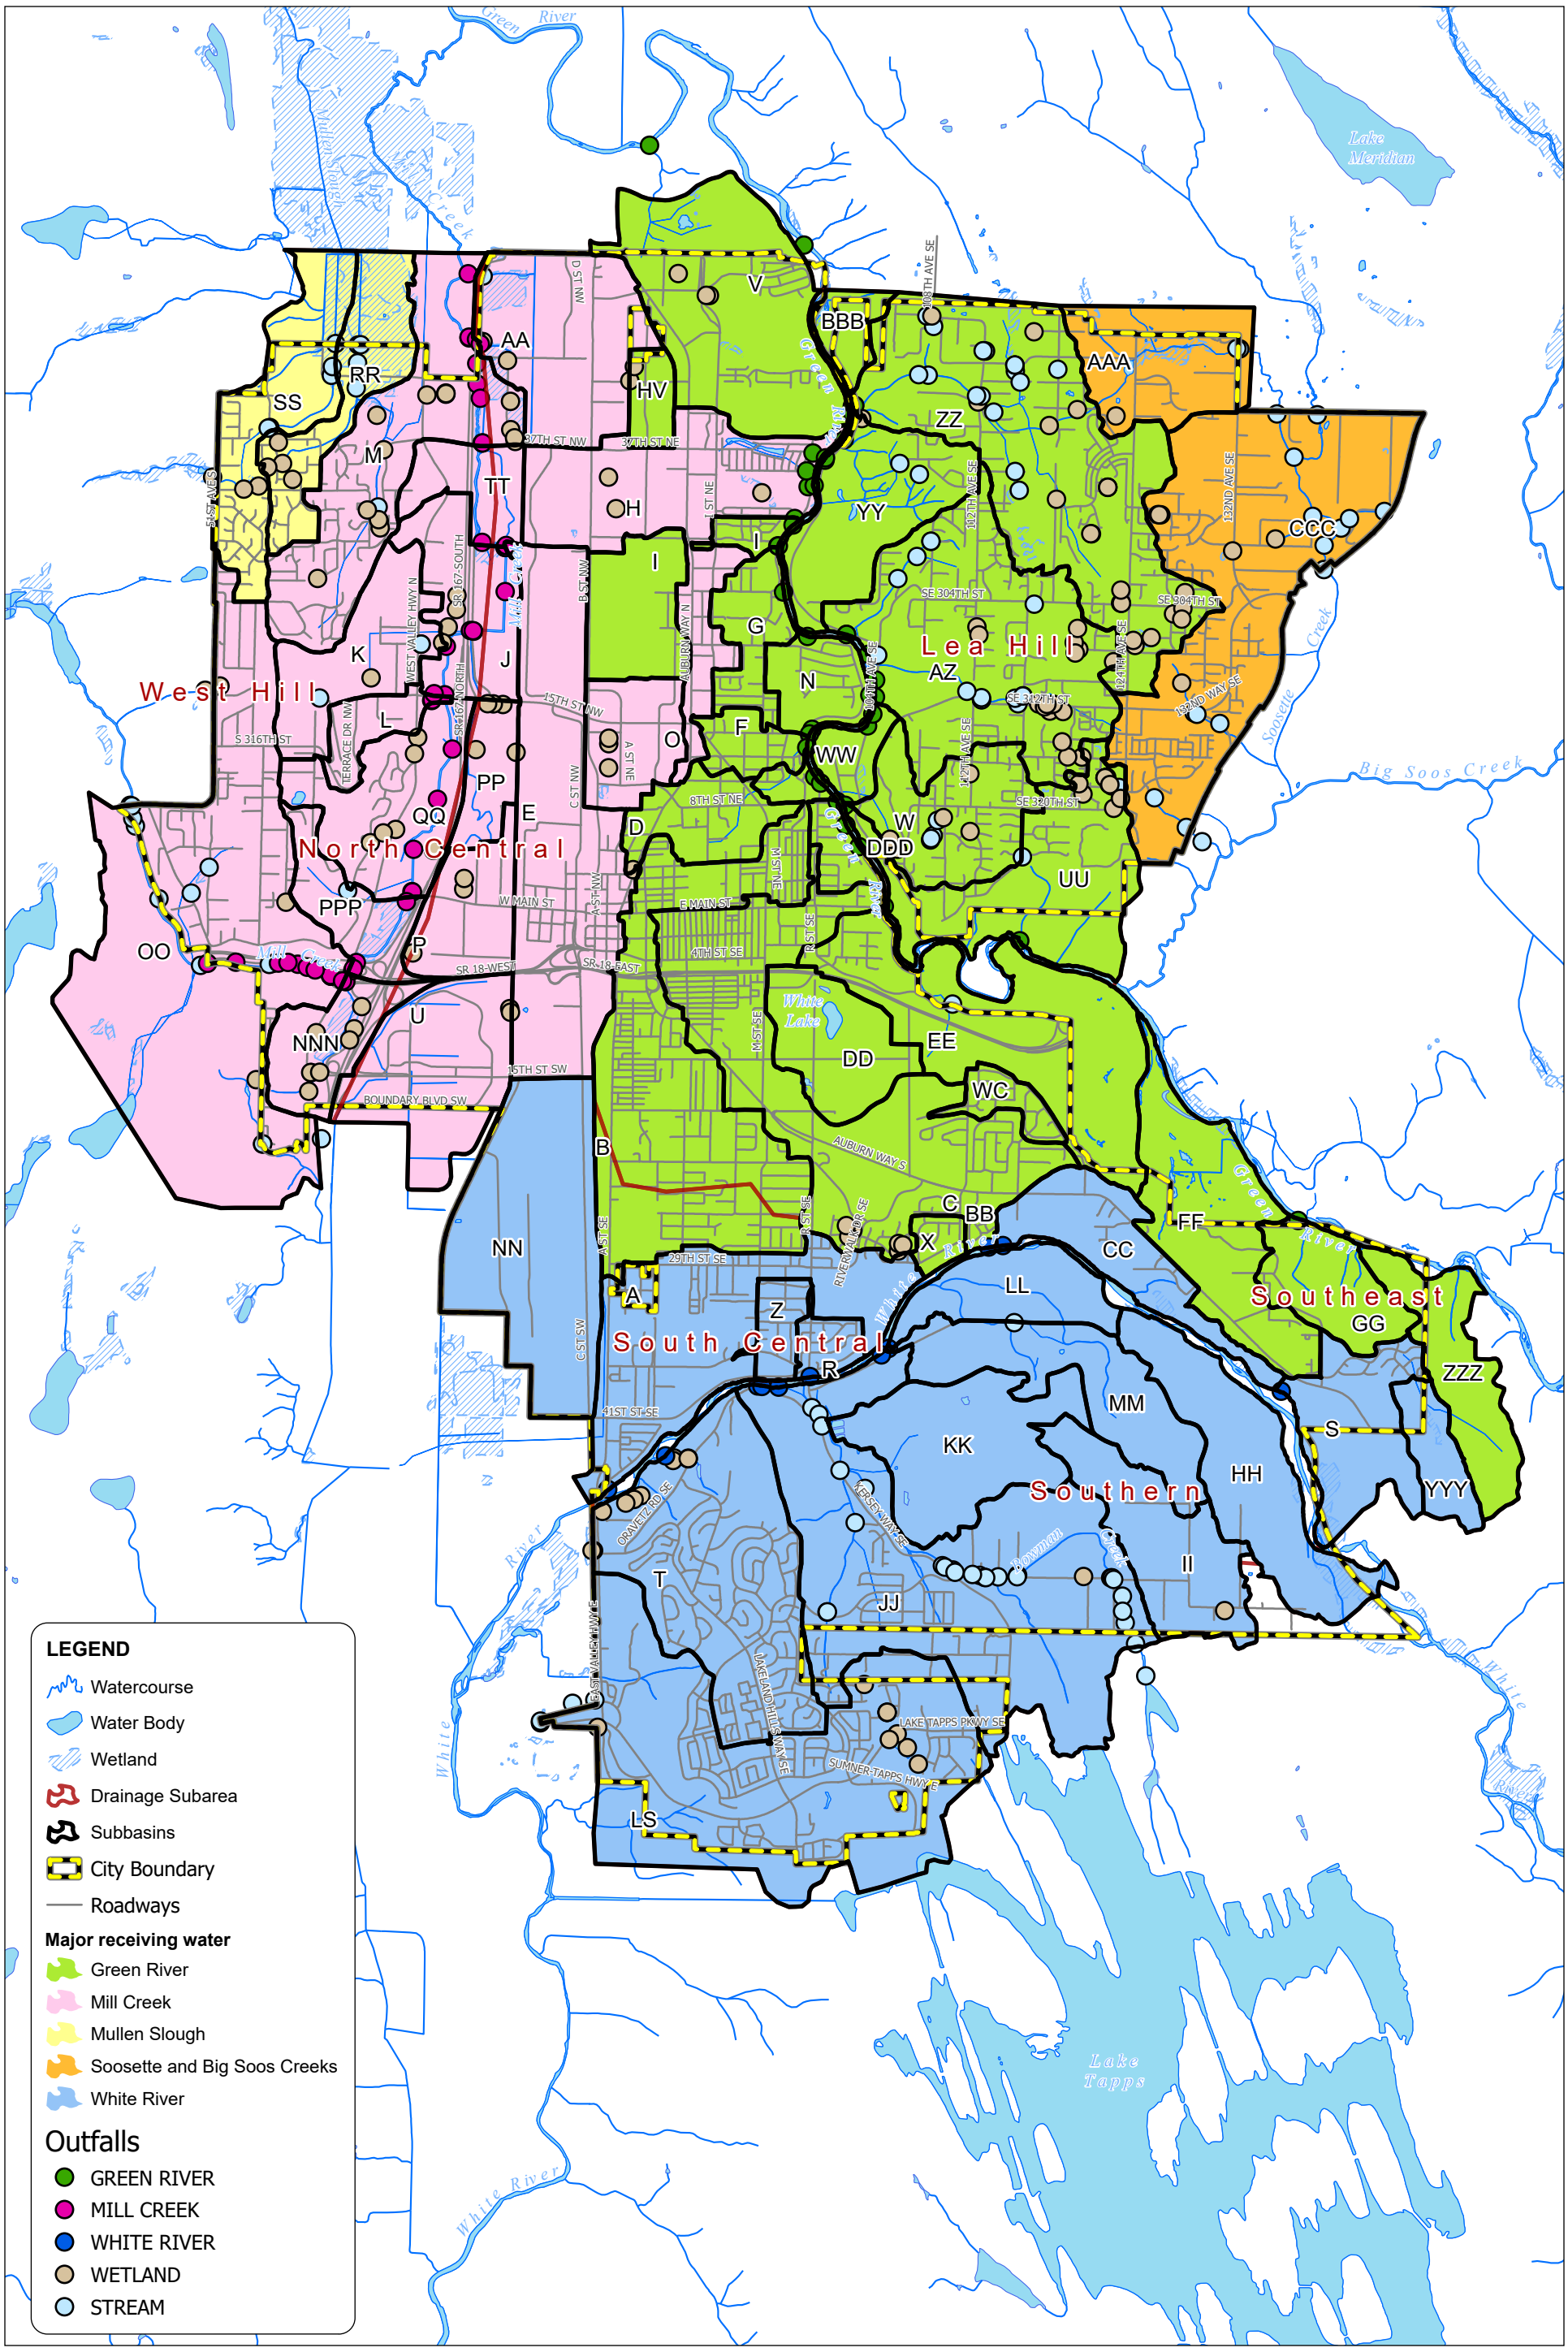
The shifting of floodwaters from the White River caused inter-jurisdictional conflicts between King and Pierce Counties. After attempts by the two counties to control flooding along the White River met with limited success, the U.S. Army Corps of Engineers (USACE) was engaged for help. In 1948, the USACE finished construction of the Mud Mountain Dam to control floods on the White River.

At the time Mud Mountain Dam was finished, White River channel capacity in Auburn was estimated to be 20,000 cubic feet per second. Since then, vegetation encroachment and sediment accumulation have reduced channel capacity (USACE 2009a). Reduced channel capacity causes higher river levels during large storm events, which can impact the City's gravity drainage outfalls along the White River.

4.1.1.3 Mill Creek

Mill Creek flows out of the hills on the west side of the valley near SR 18 and then turns northward along the western portion of the City, running adjacent to SR 167. It crosses under SR 167 several times as it flows through the valley floor. Approximately 1 mile north of the City boundary, Mill Creek discharges into the Green River.

Historically, Mill Creek served as vital habitat for migrating salmon and provided ideal conditions for rearing and storm refuge. However, increasing development has altered the natural flow pattern of Mill Creek, including the installation of diversions and culverts, channel straightening, degradation of water quality, and aggradation from increased stormwater inflows with high sediment loads. In many



areas the stream is straight and shallow and exhibits a lack of quality riparian habitat for Endangered Species Act (ESA)-listed species such as Chinook salmon and bull trout (USACE 2009b). Aggradation along Mill Creek has also contributed to flooding and drainage problems in the City. The City's drainage outfalls to Mill Creek can become submerged, thereby reducing the hydraulic capacity of the system.

4.1.2 Drainage Areas

The City's drainage can be described by dividing the City into six general subareas and their discharge location (Figure 4-2):

- Lea Hill lies northeast of the Green River. Most of the Lea Hill area drains west into the Green River. However, the eastern edge drains south and east out of the City into Soosette Creek and Big Soos Creek.
- West Hill lies west of Mill Creek. The West Hill area drains into several small tributaries to Mill Creek. The northern portion of West Hill drains to the northeast into steep ravines that discharge to Mullen Slough and other wetland areas on the valley floor.
- The southern portion of the City drains to the White River. The area west of Bowman Creek consists largely of single family residential developments, which drain to the White River to the west and north and Bowman Creek to the east, with a small portion draining south toward Lake Tapps. The area east of Bowman Creek consists of rural residential development. This area drains to Bowman Creek on the southwest and the White River on the northeast side.
- The southeast portion of the City lies along a narrow plateau between the Green and White Rivers. Runoff from this area drains to the Green River along the north side and the White River along the south side.
- The north central portion of the City lies along the valley floor and is located north of 27th Street SE. This is part of the central and most developed area of the City. The topography in this area is so flat that roadways and storm drainage infrastructure largely determine the receiving water to which runoff is diverted. Runoff from this area is generally split between Mill Creek and the Green River.
- The south central portion of the City also lies along the valley floor and is located south of 27th Street SE. This area is also part of the most developed area of the City. The topography in this area is so flat that roadways and storm drainage infrastructure largely determine the receiving water to which runoff is directed. This area features extensive infiltration into groundwater, but otherwise drains toward the White River.

The above-described areas can be divided into smaller drainage subbasins. The City maintains a mapping of the storm drainage basins and subbasins, with a total of 59 drainage subbasins. Each subbasin is identified by a series of one, two, or three letters (Figure 4-2).

4.1.3 Geology and Groundwater

Topography and geology in the Auburn region has been influenced largely by millions of years of advancing and retreating glaciers, most recently with the Vashon glaciation occurring approximately 12,000 to 18,000 years ago (Booth 1991). Following the retreat of the glacier, interglacial processes, such as landslides, mudflows, erosion, and alluvial deposition, have continued to shape the region. In general, the upland hills around the City's periphery comprise glacial and interglacial deposits, while the valley is filled with more recent deposits overlying glacial and older interglacial deposits.

Major geologic units of the White and Green River valley include undifferentiated glacial and interglacial deposits, Vashon recessional deltaic deposits, undifferentiated alluvium, Osceola mudflow, and White River alluvium. The undifferentiated glacial and interglacial deposits form the lowest layer in the valley consist of materials deposited during the glacial periods. As the glacier retreated, meltwater flowed into a water-filled embayment then occupying the present White and Green River valley area. This meltwater deposited sand and gravel known as the Vashon recessional deltaic deposits. After the end of the glacial period, the Green River deposited undifferentiated alluvium in the valley because of erosion of upland glacial deposits. Approximately 5,700 years ago, a massive volcanic mudflow from Mount Rainier, known as the Osceola mudflow, flowed down into the valley (Troost and Booth 2008). White River alluvium is the geologic unit nearest the surface and consists of alluvial deposits from the White and Green Rivers.

Bedrock is found approximately 1,280 feet beneath the valley floor. Surficial geologic mapping of the Auburn region is shown in Figure 4-3.

In general, groundwater flow systems in the Auburn area are characterized by upland recharge flowing toward the valley. The two major aquifers in the White and Green River valley are the modern alluvium aquifer and a deep deltaic valley aquifer; the latter is used for Auburn's water supply. The modern alluvium aquifer is the shallowest aquifer in the Auburn-Kent Valley, often lying 10 to 15 feet below the ground surface. Groundwater in the deep deltaic valley generally flows in a pattern parallel to the direction of the Green River in the north and the White River in the south.

CITY OF AUBURN WASHINGTON

Figure 4-3
Surface Geology in the Vicinity of the City of Auburn

4.1.4 Soils and Runoff Potential

Surface soils are classified by the Natural Resources Conservation Service (NRCS) into four hydrologic soil groups based on the soil's runoff potential: A, B, C, and D. Group A soils generally have the lowest runoff potential while Group D soils have the highest. Hydrologic soil groups are defined by NRCS (1986) as follows:

- Group A is sand, loamy sand, or sandy loam types of soils. It has low runoff potential and high infiltration rates, even when thoroughly wetted. It consists chiefly of deep, well- to excessively drained sands or gravels and has a high rate of water transmission.
- Group B is silt loam or loam. It has a moderate infiltration rate when thoroughly wetted and consists chiefly of moderately deep to deep, moderately well- to well-drained soils with moderately fine to moderately coarse textures.
- Group C is sandy clay loam. It has low infiltration rates when thoroughly wetted and consists chiefly of soils with a layer that impedes downward movement of water and soils with moderately fine to fine structure.
- Group D is clay loam, silty clay loam, sandy clay, silty clay, or clay. It has very low infiltration rates when thoroughly wetted and consists chiefly of clay soils with a high swelling potential, soils with a permanent high water table, soils with a claypan or clay layer at or near the surface, and shallow soils over nearly impervious material.

Areas in the valley floor is mostly Group D soils, which typically have very low infiltration rates and high runoff potential. The West Hill, Lea Hill, and Lakeland Hills areas are predominantly Group C soils, which have low infiltration rates and moderate to high runoff potential. The Southeast area, Bowman Creek area, and valley area located generally between SR 18 and the White River have Group A soils, which are characterized by high infiltration rates and low runoff potential. See the NRCS maps (http://www.nrcs.usda.gov/) for mapped soils within the City.

4.1.5 Land Use and Development

Land use and the intensity of development have considerable effects on the quality and quantity of stormwater runoff flowing into the drainage system and ultimately discharging to receiving waters. As the population of the City increases, new areas of the City are developed or existing areas are redeveloped at a higher density. These changes can result in increased stormwater runoff and greater water quality impacts to water bodies. However, development regulations and drainage design standards imposed by the City are intended to mitigate these impacts. The following sections describe expected growth and how development regulations and design standards are being updated to reduce impacts to stormwater runoff.

4.1.5.1 Recent Growth

Auburn's population has steadily increased since the 1950s. Auburn's population increased by an average of 8% per year from 1960 to 1980, then slowed to approximately 1.7% per year from 1980 to 1994. Auburn's population growth rate began to increase in 1998 and continued as the City annexed new areas, known locally as the Lea Hill, West Hill, and Lakeland Hills areas. The larger Lea Hill area annexations began in 2000 and continued to 2024. The West Hill area was annexed in 2007, while the Lakeland Hills area annexations occurred between 1998 and 2005. As of 2010, the population of Auburn increased to 70,180 and increased to 86,340 by 2020. The Washington State Office of Financial Management indicates that Auburn's population in 2023 was approximately 88,820 (approximately 78,760 in King County and 10,060 in Pierce County).

4.1.5.2 Future Growth

The City's goals, objectives, and policies for growth and development are described in detail in the 2025 Comprehensive Plan. These goals, objectives, and policies are applied to different areas of the City through land use designations (see Figure 4-4). The City also has developed special land use plans for certain areas of the City where specific land use goals have been identified. An important example is the City's downtown area; one of the goals described in the Comprehensive Plan is to encourage development and redevelopment in the downtown area to serve as an urban center for the community.

4.1.5.3 Development Regulations and Drainage Design Standards

The City implements state and federal stormwater regulations through the stormwater code, the COA Supplement, and related stormwater management programs and policies. City stormwater regulations contain specific requirements for managing stormwater quality and quantity in areas subject to new development and redevelopment. For example, the SWMMWW provides guidance for implementing low impact development (LID) measures that are designed both to improve water quality and to control peak flows and durations of runoff. The City reviews and updates its local development regulations and design standards as necessary to meet the NPDES MS4 permit requirements. The COA Supplement was last updated in 2022.

City stormwater regulations and development standards are intended to avoid substantial increases in stormwater discharges to the existing drainage system through the implementation of on-site stormwater controls. This would keep stormwater conveyance demands at or near existing levels.

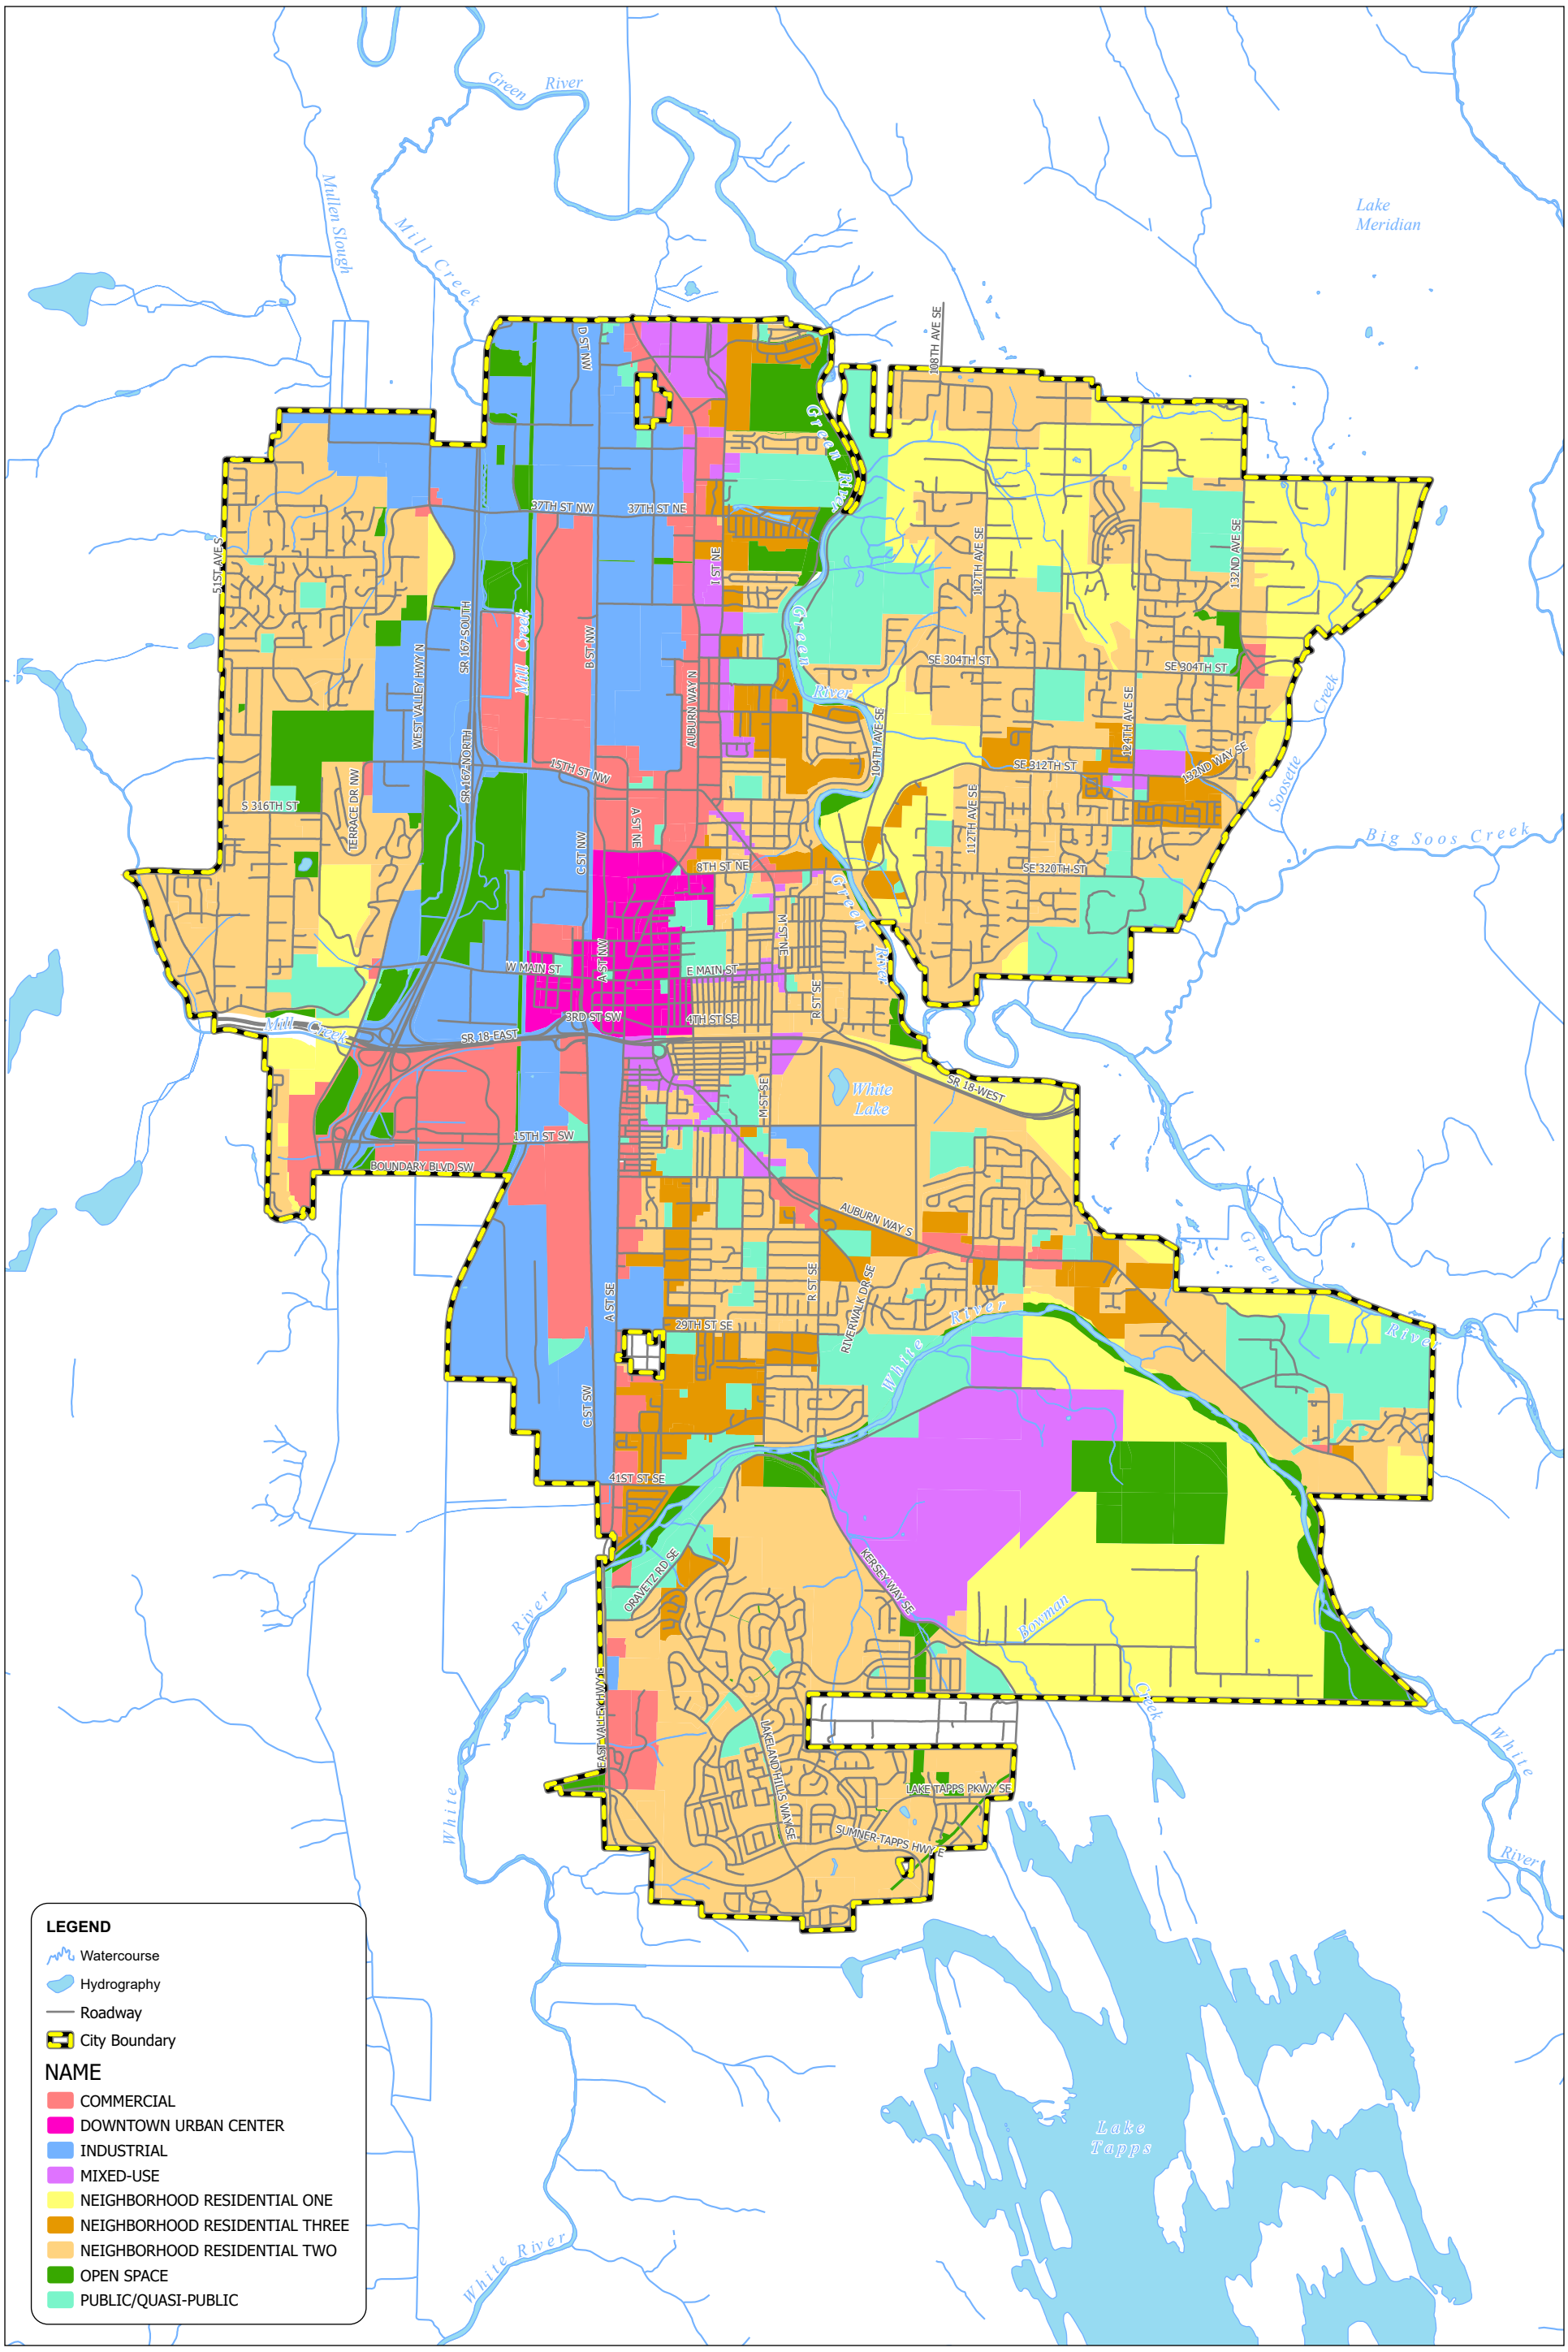

Figure 4-4
Land Use Designations for the City of Auburn

4.1.6 Flood Hazard Mapping

The City of Auburn is a participant in the National Flood Insurance Program (NFIP) administered through the Federal Emergency Management Agency (FEMA) to enable property owners to purchase insurance protection from the government against losses from flooding. Participation in the NFIP is based on an agreement between the City and the federal government, stating that if the City adopts and enforces a floodplain management ordinance to reduce future flood risks to new construction in areas designated as Special Flood Hazard Areas (SFHA), the federal government will make flood insurance available within the community as a financial protection against flood losses. The SFHAs and other risk premium zones applicable to each participating community are depicted on Flood Insurance Rate Maps (FIRMs).

FEMA established flood hazard zones from a Flood Insurance Study (FIS) for King County conducted in 2013, which examined flooding along several major rivers. Although the primary purpose of the FIS was to establish flood insurance rates, the flood mapping resulting from these studies is also used for floodplain management and flood hazard mitigation planning. Updates to the flood hazard zones are continually being made at local levels (King County and Pierce County) and represented in Preliminary FIRMs or Letters of Map Revision (LOMR). Preliminary FIRMs for all of King County were reissued on August 19, 2020. The most recent flood hazard mapping for Pierce County is presented in its Rivers Flood Hazard Management Plan adopted in 2023 and also in LOMR files located on the FEMA Map Service Center Web page (Pierce County 2023). Table 4-1 lists the FIRMs developed for areas within the City of Auburn.

4.1.7 Recent Climate and Precipitation Trends

Auburn's climate is typical of that in the Puget Sound lowlands of Western Washington, where the summers are cool and comparatively dry, while the winters are mild, wet, and cloudy (WRCC 2014). Mean annual precipitation in the Puget Sound lowlands varies from 32 inches (north Seattle) to approximately 47 inches (near Centralia, Washington).

The precipitation gauge at Auburn City Hall has been recording data since 1995. The mean annual precipitation recorded at that gauge (with missing data filled in from the nearby King County Lakeland Hills gauge) from 2015 to 2022 was approximately 39 inches. This is very similar to the mean annual precipitation recorded at the two nearest long-term gauges:

- Seattle-Tacoma Airport, which is part of the National Oceanic and Atmospheric Administration (NOAA) Cooperative Network (Station 457473), has a mean annual precipitation of approximately 38 inches based on 74 years of recorded data (WRCC 2014b). The Seattle-Tacoma Airport gauge is located approximately 8 miles northwest of Auburn.
- Kent, Washington (NOAA Co-op Station 454169) has a mean annual precipitation of approximately 39 inches based on 57 years of recorded data (WRCC 2014c). The Kent gauge is located approximately 7 miles north of Auburn.

Precipitation-frequency data for Washington are compiled in Volume 9 of NOAA Atlas 2 (Miller et al. 1973); precipitation-frequency estimates for Auburn, Washington, are listed in Table 4-2.

Table 4-2. Precipitation Frequency Data for Auburn, Washington, from NOAA Atlas 2

Frequency, duration	Precipitation (inches)
2-year, 6-hour	0.95
2-year, 24-hour	1.75
100-year, 6-hour	1.90
100-year, 24-hour	3.80

4.1.8 Anticipated Changes in Climate

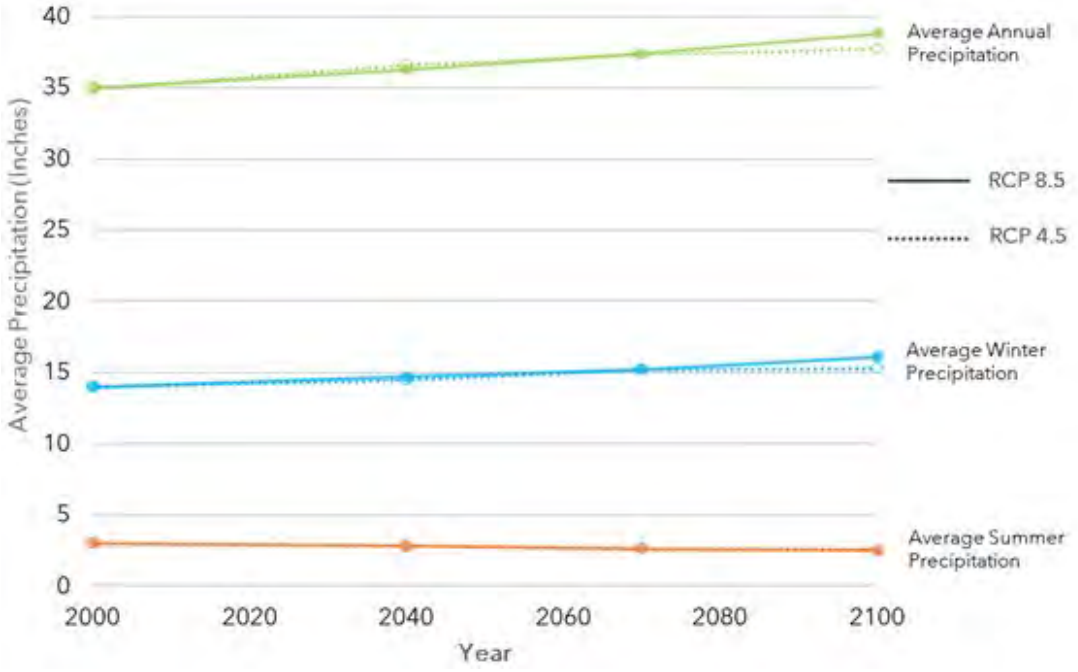
Changing climate will continue to be a key factor in the performance, operation, maintenance, and design of the City's stormwater system. According to the publication, *Climate Change Impacts and Adaptation in Washington State*, the state is projected to experience decreases in snowpack, increases in stream temperatures, changes in stream base flow, increased frequency of high rainfall intensity and magnitude, and changes in peak stormwater runoff, streamflow, and flooding frequency (Snover et al. 2013). This section provides an assessment and strategy for the City to address future changes and effects to the storm sewer and flood management systems while considering the range of uncertain climate projections.

The available information on future climate conditions will help guide decisions and investments, avert impending impacts on stormwater programs from climate change, and enhance the effectiveness and resilience of stormwater systems in the face of environmental uncertainties. Assessing future climate impact magnitude, risk, and uncertainty are critical to making appropriate decisions about physical attributes (size, location, elevation, capacity) and performance (service levels, acceptable impacts, failure scenarios) for stormwater programs.

The following future climate conditions are potentially impactful to the City's stormwater programs:

- **Precipitation:** Projected changes in precipitation show evidence for increased frequency of intense, large, or persistent rains in the future, mostly in the winter storm season. These increases could exceed the existing level of performance in the City's stormwater system.
- **System performance and flooding:** Increased frequency of larger or more intense storms could lead to increased stormwater runoff and thus more frequent flooding of existing storm drainage systems in the City. Pumped or other operated systems are typically more vulnerable to changing storms.
- **River and stream flooding:** Increased frequency of larger and longer duration storms could lead to increased local stream and river flooding, increased stages over known or mapped floodplains, and different flood control operations on the White and Green River dams.
- **Groundwater:** More frequent storms of higher magnitude have the potential for increased infiltration and thus rising groundwater table. This should be a consideration in infiltration facility design, subsurface excavations, and installation of stormwater structures such as vaults.
- **High temperature:** Average and extreme high temperatures in Auburn are expected to be higher in the future, causing effects like higher summer surface water temperatures that can be harmful to aquatic life and fisheries.

4.1.8.1 Uncertainty and Risk Management



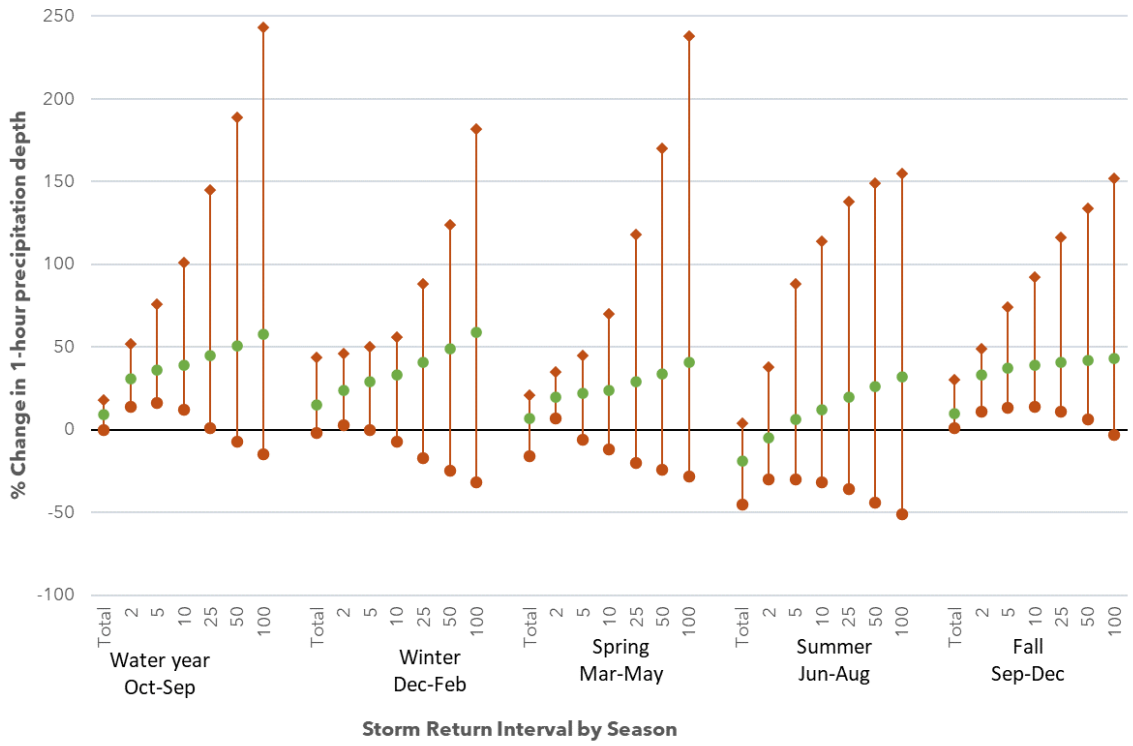
Addressing uncertainty in climate projections is an important aspect of climate research. Since future outcomes in climate conditions heavily rely on human activities and the Earth's climate system is extraordinarily complex, global climate models have an amount of uncertainty. All future climactic conditions are projections, not predictions. Ongoing research aims to reduce uncertainties by improving climate models, refining data collection methods, and enhancing our understanding of the Earth's climate system and its interactions with human activities.

When possible, this section uses locally refined, dynamic data to inform potential future climate scenarios. Because uncertainty is inherent in projections of climate change, the likelihood of a range of possibilities are presented.

Stormwater management is a risk-based practice, which means that standards are typically based on the likelihood or probability that an event will occur, and the level of protection needed is related to that possibility. Consequently, the approaches to applying recommendations in part consider the coincident events (e.g., sea level rise ranges plus event probability) with expected performance. No "reasonable" or applicable stormwater standards can apply to all possible events or outcomes, and extremes can exceed system capacity. An important consideration that is a core practice when establishing storm system criteria is to consider the consequences of failure, because all systems (unless designed for the probable maximum flood) can fail in any year.

4.1.8.2 Precipitation Projections

According to climate models, the region's average precipitation is expected to undergo minimal changes (Hegewisch et al. 2023). Figure 4-5 illustrates the projected alterations in average precipitation for two climate scenarios: Representation Concentration Pathway (RCP) 4.5 (low end) and RCP 8.5 (high end). When examining individual seasons, we observe a slight increase in total precipitation during the winter, an almost negligible loss of precipitation in the summer, a slight increase in precipitation in the fall, and a slight decrease in precipitation in the spring.



Modified from Hegewisch et al. 2023.

Figure 4-5. Projected Change in Average Precipitation for Seattle, Washington.

Although the City is not predicted to see a significant increase in overall precipitation, climate models predict an increase in the intensity of precipitation, specifically during the winter months. Heavy rain events in the Pacific Northwest are often caused by atmospheric rivers, where long, narrow regions of concentrated moisture are carried from lower latitudes (Morgan et al. 2021). Intensification of atmospheric rivers is projected to cause an increase in extreme winter precipitation frequency.

Figure 4-6 outlines the anticipated percentage change in extreme heavy rain events in SeaTac, Washington. The figure shows predicted changes in short duration storms (1 hour) across different return frequencies (ranging from 2 to 100 years) during the entire water year, as well as individual seasons (winter, spring, summer, and fall) for the 2080s (spanning from 2070 to 2099) relative to 1970 to 1999. Key details are summarized below:

- **Projection scope:** The total projection includes all precipitation occurring in a season or water year.
- **Return frequencies:** The 2- to 100-year return frequency projections represent the high- and low-end extremes, estimated based on only the largest value in each year.
- **Measurement:** All 2080 projections are expressed as the percent change in 1-hour precipitation depth relative to the climate normal period from 1970 to 1999, following the convention established by NOAA.
- **Climate scenarios:** The results are based on two greenhouse gas scenarios: RCP 8.5 (high end) and RCP 4.5 (low end).
- **Data presentation:** The data is organized by water year, season, total annual precipitation, and extremity.

*Green circles indicate model average, red diamonds represent the high model results,red circles represent the low model

Modified from Mauger et al. 2019

Figure 4-6. Projected Changes in 1-Hour Precipitation Statistics for the 2080s vs. 1970–1999

4.1.8.3 Implications

The increase in precipitation intensity will have several key implications or risks to the stormwater system. More frequent and intense winter storms are likely to exceed the capacity of the stormwater system more often than current conditions.

Impact

Stormwater structures are sized to meet system LOS objectives, considering the anticipated frequency of storm events. Historical rainfall data are collected and characterized by intensity (e.g., inches of rain per minute or hour) or magnitude over a certain time period (e.g., X-inches in 24 hours). The design storms are usually described in the likelihood of exceeding a certain depth. For instance, a 4% chance of occurrence may also be described by the "average" frequency of occurrence for that duration, such as a 25-year, 24-hour event (for a 4% exceedance event).

Future rainfall patterns are predicted to deviate from historic norms. Note that storms are not "increasing in size" (larger storms are possible any time without climate change), but rather the *frequency* of larger events is greater. For example, if a 3-inch, 24-hour storm has occurred every 25 years in the recent past, climate change can cause a 3-inch storm to occur more frequently in the future. The new 25-year, 24-hour storm could be 3.5 inches of rain or more at the same potential frequency. Storm intensity (the rate of rainfall depth per unit of time) follows the same pattern—the same extreme rates are more frequent.

For example, when a storm system is designed to convey water away from a roadway for a 25-year, 24-hour event, we assume that the system may fail, on average, once every 25 years. We accept this failure level because the impact may be modest and the cost of providing additional protection is high. However, with more frequent events of the same size, flooding could happen every 10 to 15 years, which may not be tolerable for safety, system disruption, or property damage. Consequently, returning to the same LOS would require a new drainage system to provide the same frequency of performance. However, floods could still occur that exceed that LOS. If a higher LOS is desired, careful consideration of a new, future design storm becomes necessary.

4.2 Stormwater Drainage Infrastructure

As part of the implementation of the City's NPDES MS4 permit, the City embarked on a substantial effort to update its inventory of drainage system infrastructure owned or operated by the Storm Drainage Utility. The citywide inventory is completed, but continued maintenance and new features will be ongoing. An up-to-date system inventory will assist the City in the following objectives:

- Help to meet regulatory requirements.
- Provide input for hydraulic models to analyze system conveyance capacity.
- Serve as a basis for an asset criticality database used to prioritize repair and replacement (R&R) activities.
- Support the City's M&O activities through the CMMS.

Table 4-3 provides a summary of stormwater infrastructure inventory.

Table 4-3. Stormwater Drainage Infrastructure Summary

Infrastructure element	Quantity [a]	Unit
Pipes, all sizes	1,310,937	Linear feet
Pipes, all sizes (excluding force mains)	15,259	Count
6–10 in. diameter	3,361	Count
	215,900	Linear feet
12–15 in. diameter	8,822	Count
	698,000	Linear feet
16–18 in. diameter	1,480	Count
	165,600	Linear feet
21–24 in. diameter	858	Count
	106,500	Linear feet
27–36 in. diameter	548	Count
	85,200	Linear feet
42–48 in. diameter	173	Count
	37,200	Linear feet
54–72 in. diameter	17	Count
	2,300	Linear feet
Force mains	35	Count
	4,400	Linear feet
Open channels	222,000 [b]	Linear feet
Culverts	1,164	Count
Manholes	3,172	Count
Catch basins	10,800	Count
Control structures	223	Count
Outfalls (to water courses, ditches, etc.)	124	Count
Detention ponds	156	Count
Infiltration ponds	14	Count
Vaults	8	Count
Pump stations	7	Count

[a.] Quantities are based on current inventory and have not yet been finalized.

[b.] Length has been approximated based on available data.

Most storm drainage infrastructure is in the City's core between Mill Creek and the Green River, where development densities are highest. Figure 4-7 shows an overview of the City's stormwater drainage infrastructure.

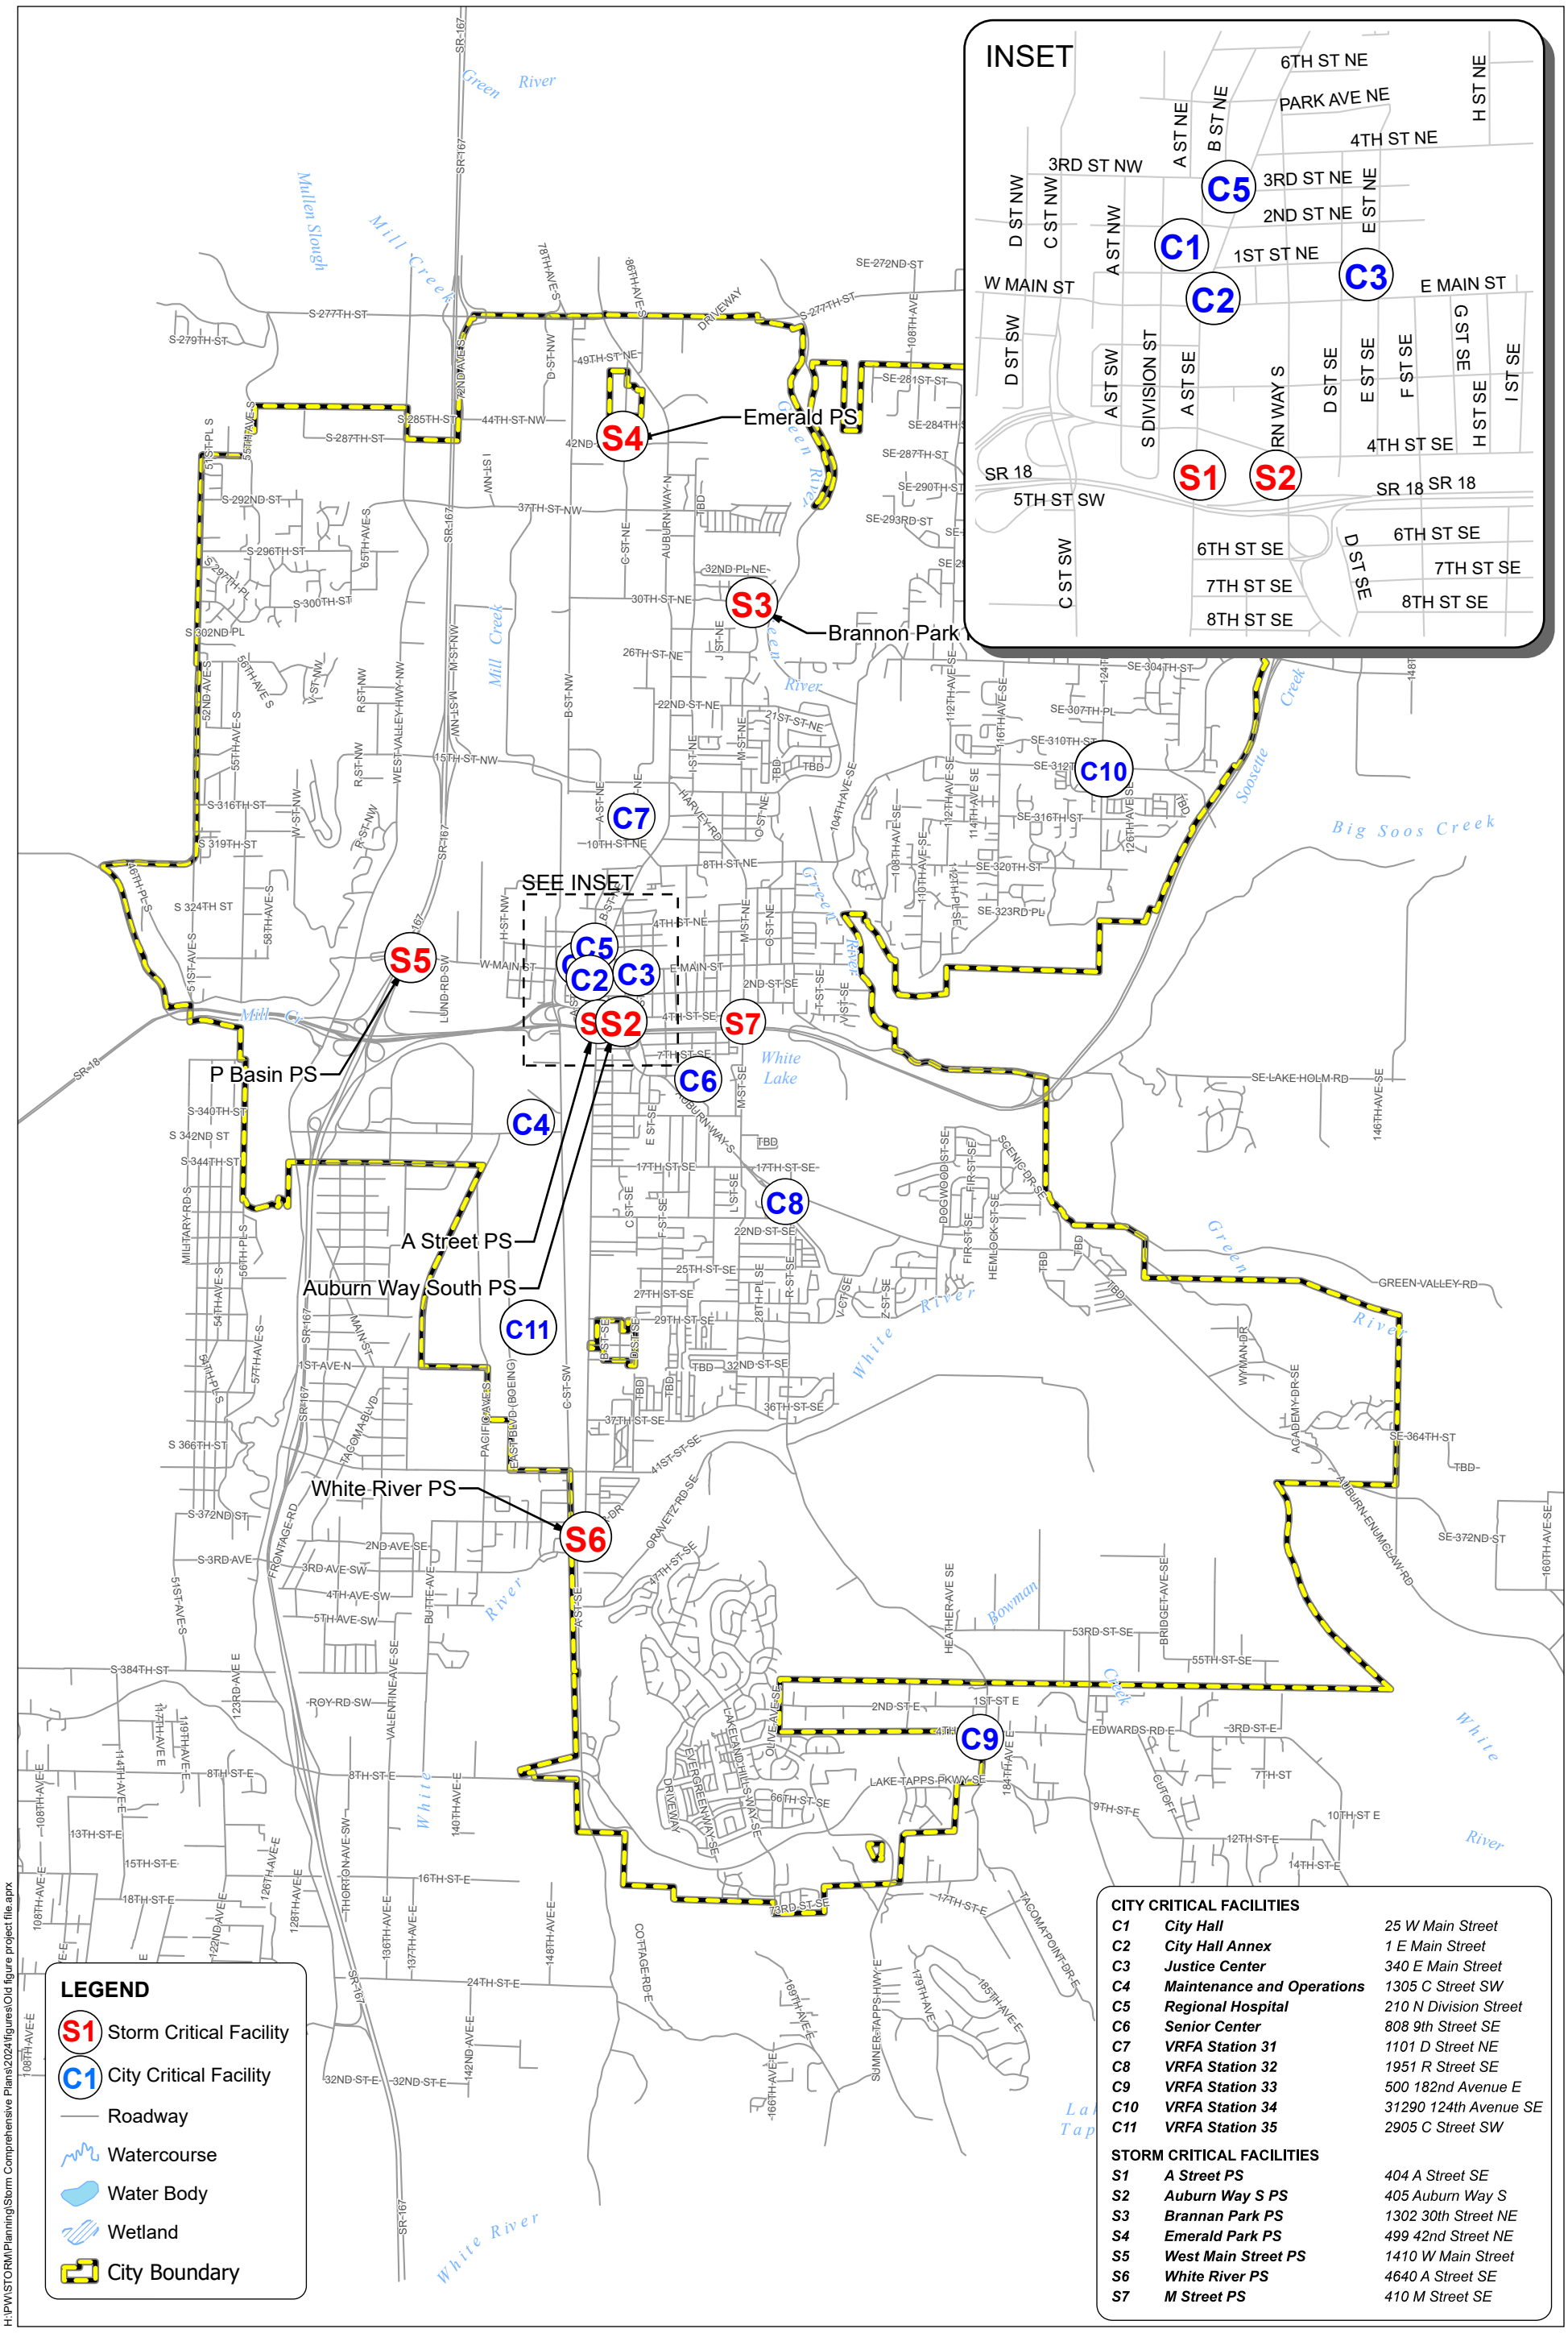
CITY OF AUBURN WASHINGTON

Figure 4-7
Drainage Infrastructure for the City of Auburn Storm Drainage Utility

4.3 Critical Facilities

Policies and system goals for managing the City's critical facilities and critical stormwater assets are described in Chapter 3, Section 3.2. Two groups of system goals and policies in particular focus on criticality. The first applies to critical facilities, stating that the City will manage stormwater runoff within the public ROW in the vicinity of critical facilities to allow access and ensure function of these facilities at all times (Policy 1.2). Ten critical facilities have been identified and included in Table 4-4.



The second group of policies relates to the management of the City's critical stormwater assets (Policies 1.4, 1.6, 2.4, 2.5, and 3.4). The City will modify its inspection and maintenance practices to prioritize active management of facilities with the highest combined risk and likelihood of failure (i.e., a criticality based maintenance program). Factors that impact likelihood of failure include the age of the asset, inspection or repair history of the asset, and condition of the asset. The consequences of a system failure impacting a hospital or school are considered more serious than one affecting a residence or unoccupied property and are thus assigned as critical assets. The City has identified 10 City facilities (Table 4-4) and seven stormwater pump stations (Table 4-5) as critical assets. The list of critical stormwater assets may expand as the City refines its criticality database by adding information (e.g., inspection and repair logs, asset age; see Policy 1.6). The locations of these critical facilities are shown in Figure 4-8.

CITY OF AUBURN WASHINGTON

Figure 4-8
City and Storm Drainage Critical Facilities for the City of Auburn

4.4 Water Quality

This section describes the existing water quality and regulatory conditions that affect surface water quality in Auburn and describes processes that are required to maintain compliance with the City's NPDES MS4 permit.

4.4.1 Existing Conditions

According to water resource inventories by Ecology, the main water bodies within the City's administrative boundaries include the Green River, Mill Creek, White Lake, White River, Bowman Creek, and Soosette Creek. Municipal storm sewers that discharge runoff to surface waters are not authorized to violate state water quality standards.

Appendix 2 of the NPDES MS4 permit (Appendix A of this Plan) describes water bodies that are impaired and have additional requirements based on established TMDLs. A fecal coliform TMDL for the Puyallup River watershed is included in the current NPDES MS4 permit. As part of the TMDL, Ecology has designated the basin as a high-priority basin for IDDE screenings. Details of the required activities are included in Appendix 2 to the NPDES MS4 permit.

The Green River has a TMDL for temperature that was approved by EPA in 2011. The TMDL report indicated a cumulative waste load allocation was developed for all the municipal stormwater permittees. However, the TMDL did not contain any additional TMDL-related actions for stormwater permittees (Ecology 2011).

Other TMDLs under development include the lower White River pH TMDL and the Soos Creek subbasin multiparameter (temperature, dissolved oxygen, bacteria, and fine sediment) TMDL, described in the following paragraphs.

The lower White River pH TMDL was approved by EPA on January 13, 2023, and additional stormwater actions are listed in the public comment draft of the 2024–2029 NPDES MS4 permit. These include outfall and tributary conveyance mapping, monthly IDDE screening for flow in the critical period of May 1 to October 31, soluble reactive phosphorus (SRP) testing of flow from outfalls in the watershed during the critical period under certain sampling conditions (preceding precipitation, stormwater flow, and river flow), and source control tracing for any flow with SRP values that exceed the specified limits. Phosphorus treatment BMPs for new development and redevelopment will be required in the watershed no later than June 30, 2027.

The Soos Creek TMDL is not expected to be complete in time for the 2024–2029 Municipal Stormwater Permit. The temperature, dissolved oxygen, and bacteria TMDL is expected to be finalized in 2026. The fine sediment portion has become a separate TMDL and development of the draft implementation plan began in 2023. The impairments in this TMDL have been identified as fine sediment, high peak flows during storm events, and issues related to habitat degradation.

Other waterbodies listed as impaired on the Ecology water quality map include Mill Creek for bacteria (fecal coliform and e. coli), dissolved oxygen, pH, and benthic macro invertebrates; Bowman Creek for dissolved oxygen, temperature, and fecal coliform; and Olson Creek for benthic macroinvertebrates. These impairments will be addressed through future TMDLs.

4.4.2 Regulatory Compliance

The City has a well-developed MS4 M&O program that employs and provides training on numerous processes and procedures to minimize water quality impacts from municipal operations. The City also actively implements stormwater management BMPs in its municipal activities. BMPs include activities, prohibitions of practices, maintenance procedures, and structural and/or managerial

practices that prevent or reduce the release of pollutants and other adverse impacts to waters of Washington State.

The current NPDES MS4 permit includes provisions for monitoring and assessment of water quality. Permittees have the option of paying annual fees to participate in statewide monitoring programs or developing individual monitoring programs to meet the requirement. The City notified Ecology in 2013 that it intends to participate in the statewide monitoring programs and has continued contributing the required funds every year since.

The City is in full compliance with its NPDES MS4 permit, with programs, codes, processes, and procedures that meet all of the requirements currently in effect. The City's SWMP Plan contains a summary of the NPDES MS4 permit requirements and descriptions of the City's current and planned activities for permit compliance.

The City will continue to make sundry changes to comply with updated requirements of the NPDES MS4 permit that phase in during the permit term. The City is conducting a process to identify and implement needed updates to codes, standards, and programs by the relevant due dates.

A schedule of relevant due dates to comply with updated NPDES MS4 permit requirements is provided in Chapter 8, Figure 8-2.

4.5 Existing Drainage Problems

Members of the City staff working within the Storm Drainage Utility are experienced and familiar with the condition of the drainage system. Existing drainage problems have been observed by the staff and are known to cause frequent flooding of roadways. The most apparent problems were identified for analysis (see Hydraulic Evaluation, Section 5.1). Existing drainage problems are described in Table 4-6 and locations are mapped in Figure 4-9. Problems were evaluated for potential inclusion in the capital improvement plan. CIPs developed to address these problems are described in Chapter 7.

Table 4-6. Existing Drainage Problems

No.	Priority	Location	Description	Approximate frequency or last noted occurrence
1	1	West Main Street dead end near SR 167	The dead-end portion of Old West Main Street near State Route (SR) 167 has a history of observed flooding. The City installed a temporary pump station to dewater the gravity pipe flowing on the south side of Old West Main Street in an effort to protect local businesses from flooding. Since its installation in 2008, the pump station has eliminated flooding at the observed location. The pump station, however, does not meet the City's level of service guidelines regarding pump redundancy and may be insufficient to convey the 25-year flow rate. The City's gravity pipe on the north side of Old West Main Street experiences flooding at one catch basin approximately once per year. High water persists even in summer months. The pump station and gravity pipe discharge to a Washington State Department of Transportation ditch along the east side of SR 167.	Catch basin flooding once per year and system surcharging
2	2	Auburn Way South	Auburn Way South/SR 18 Underpass – minor roadway flooding causes disruptions to traffic during periods of intense rainfall.	Every few years

Table 4-6. Existing Drainage Problems (continued)

No.	Priority	Location	Description	Approximate frequency or last noted occurrence
3	3	I St NE	The area between 33rd Street NE and 35th Street NE on the east side of I Street NE has reoccurring flooding when the river level is high.	Every few years
4	2	Auburn Way South and A Street Pump Stations	Two existing stormwater pumping stations are reliant on portable emergency power, increasing workflow and reducing system reliability at time of need.	
5	3	Storm Pipeline Extension[a]	There are areas within the City not served by the public storm system, such as paved alleys and residential streets where roadwork is not anticipated.	

[a] Drainage problem 5, Storm Pipeline Extension, is not depicted in Figure 4-9 because it applies to multiple areas across the City and does not pertain to a specific location.

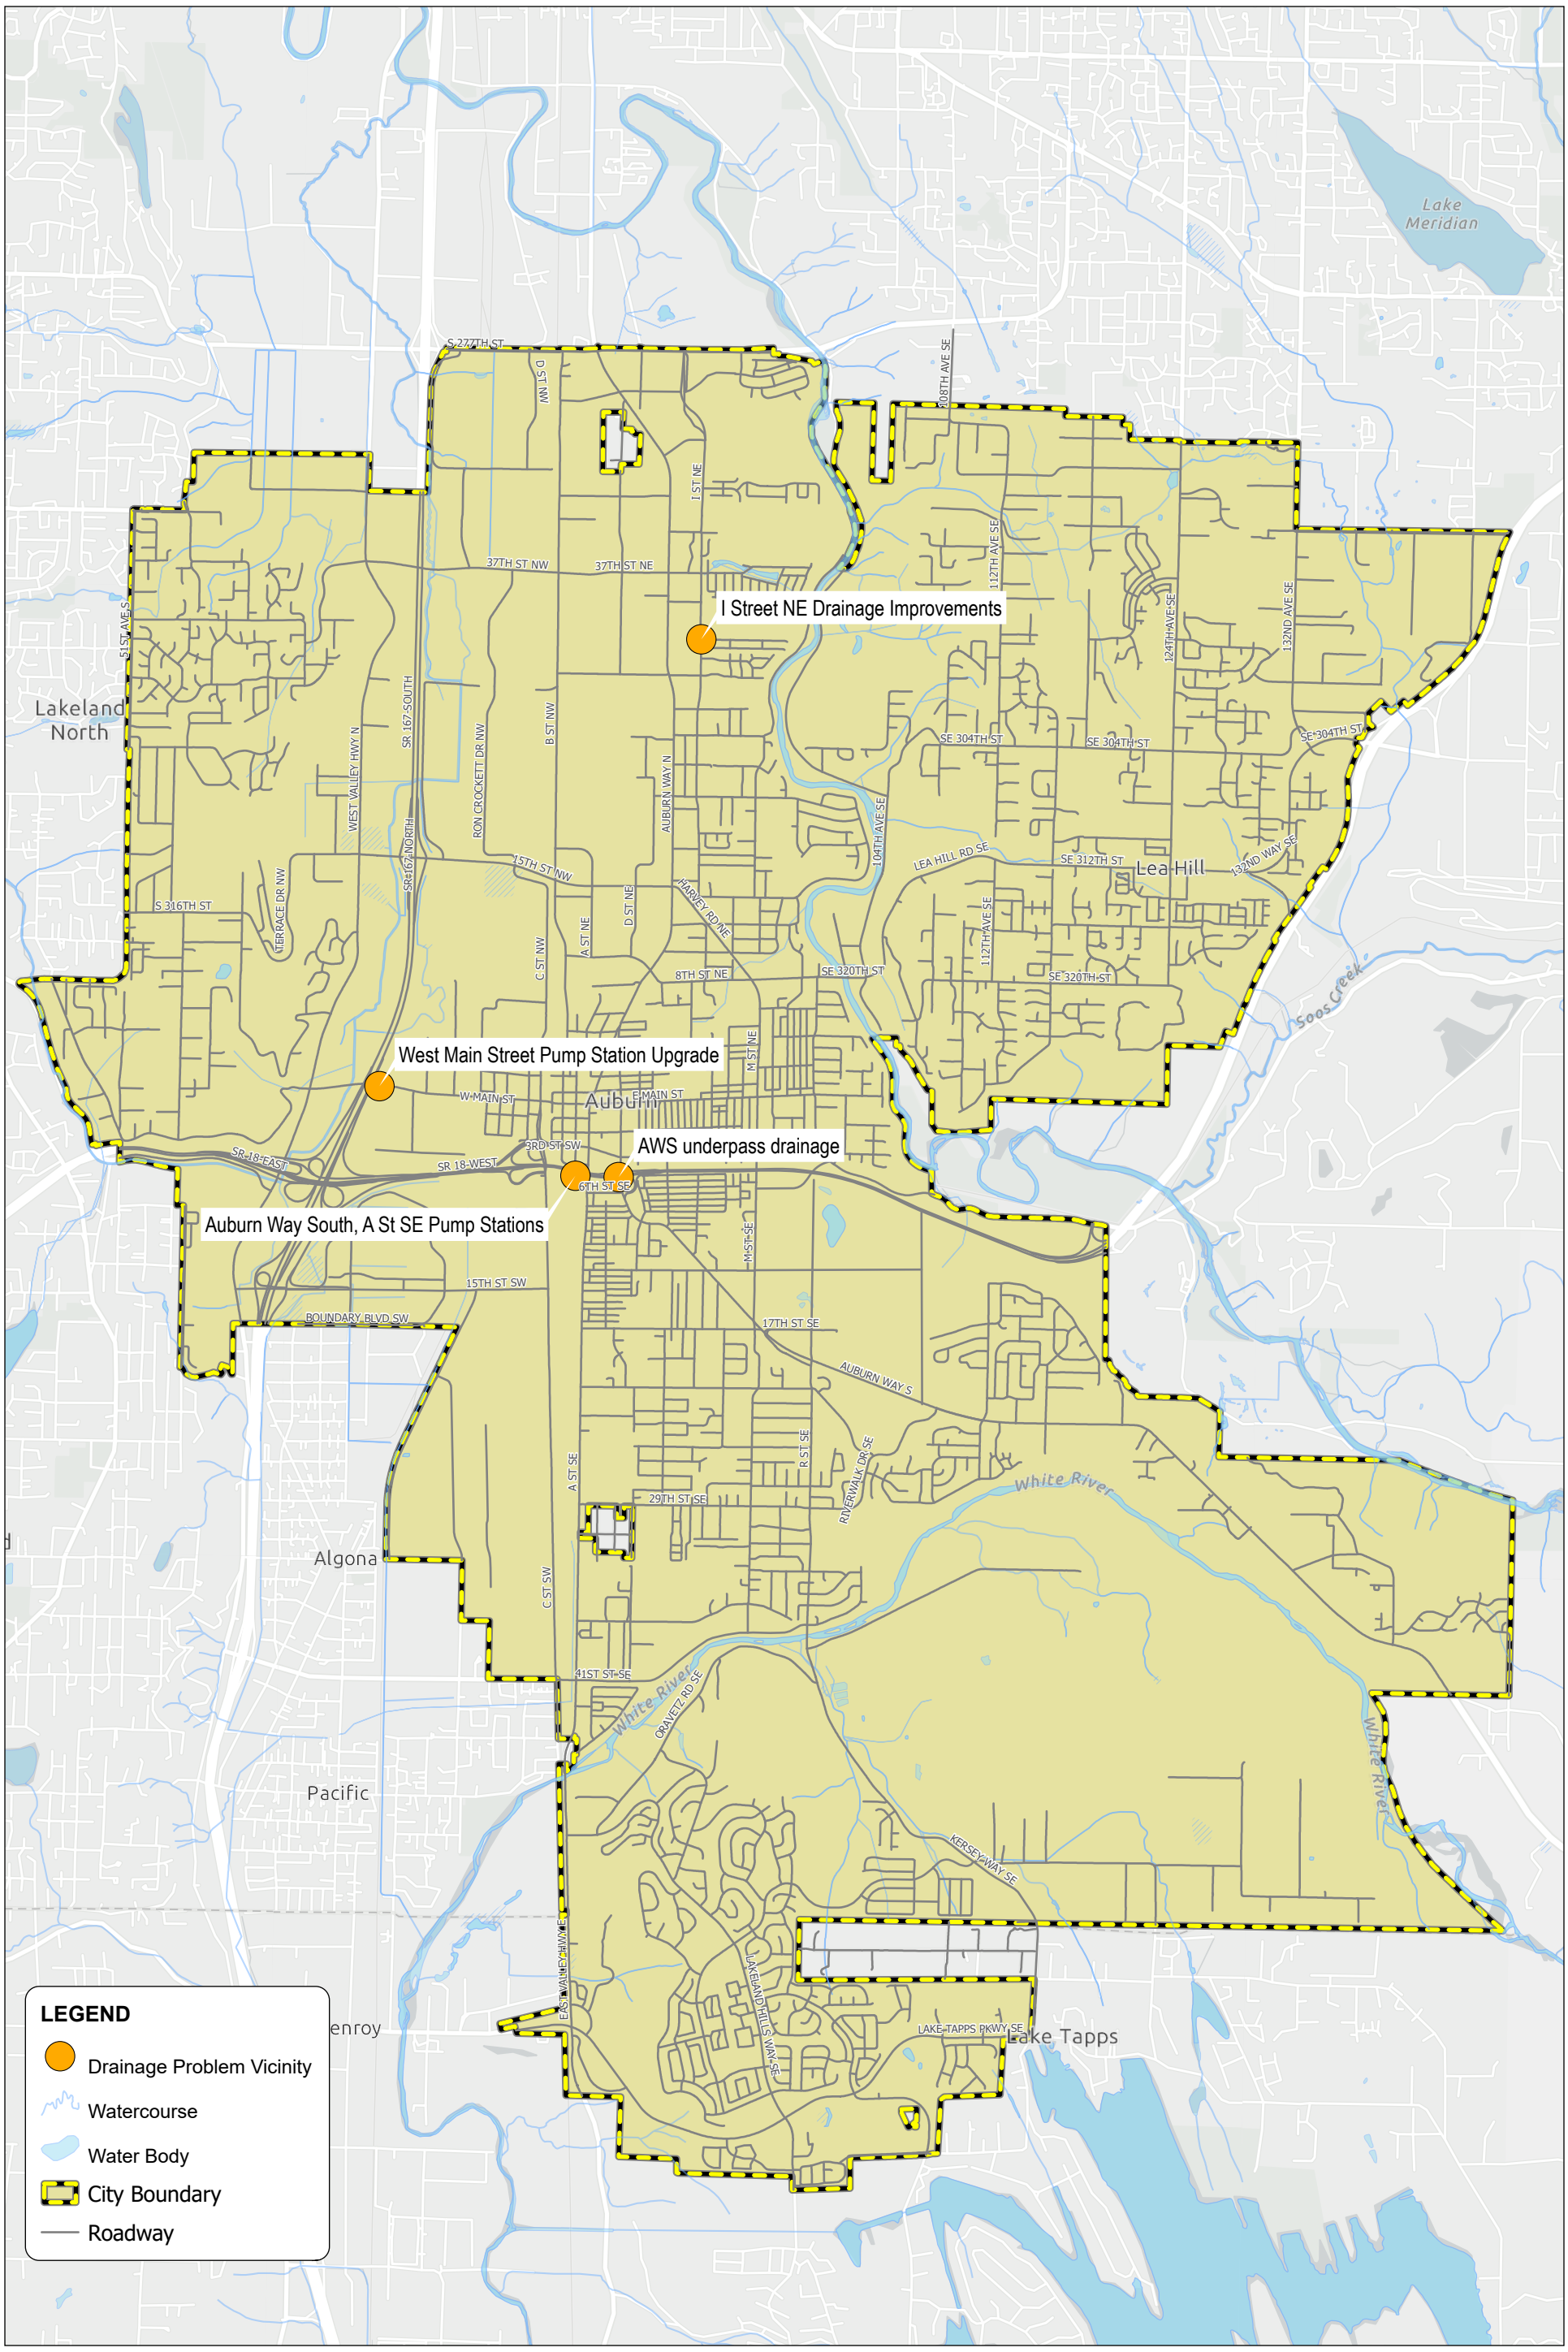

Figure 4-9
Drainage Problem Locations for the Storm Drainage Utility

5. Evaluation of the Storm Drainage Utility

This chapter presents analyses conducted to evaluate the Storm Drainage Utility and identify gaps between existing service levels and the system goals described in Section 3.2. The following types of evaluations were completed to identify Storm Drainage Utility future activities to address the range of system goals:

- Existing system deficiency and future service area expansion: Identified existing system deficiencies and future service areas in Chapter 4 and considered them in developing the capital improvement plan (Chapter 7). Did not evaluate improvements to address existing deficiencies and future expansion relative to policy and system goals as a part of this Plan.
- Hydraulic: Gathered system data, updated or developed computer models, assessed hydraulic performance, and developed CIPs with respect to associated system design criteria.
- Asset management: Reviewed existing asset system for data gaps, analyzed the adequacy of the condition assessment data being collected, established criteria for preparing criticality and risk analyses, developed the prioritization system to inspect critical system elements, developed the system requirements specification for integrating pipe criticality into the City's CMMS, estimated the funds needed for future asset repair and replacement, and included those estimates in the resource planning assessment (Chapter 6).
- Regulatory-driven improvements: Determined differences between the 2024–2029 permit and the previous NPDES MS4 permit and evaluated how the differences could affect City regulations, infrastructure, and activities; estimated the time and costs for NPDES MS4 permit compliance.
- Climate change analysis: Conducted a climate change analysis by reviewing the projected alterations in climate outlined in Chapter 4 and offered recommendations for effective mitigation measures.
- Maintenance and operations: Assessed process performance, equipment, and personnel with respect to service levels for M&O (covered in Chapter 6).

These evaluations were conducted to develop capital improvements for the 6- and 20-year horizons, as well as to identify future M&O needs. The following sections summarize the hydraulic, asset management, regulatory-driven improvements, and climate change evaluations. The existing system deficiency and future service area expansion are described in Chapter 4, and the M&O evaluations are described in Chapter 6.

5.1 Hydraulic Evaluation

As described in Chapter 4, the City of Auburn owns and operates a large system of stormwater drainage infrastructure to collect and convey stormwater runoff to nearby receiving waters.

Hydraulic modeling efforts for the 2024 Plan focused on updating models covering locations of proposed capital projects. The model updates were based on recent geographic information system (GIS) data, design drawings, and record drawings.

The City reviewed the remaining CIPs listed in the 2015 Plan and the recent proposed stormwater CIPs. Six projects are located within existing subbasins represented by hydrologic and hydraulic (H&H) subbasin models. Two of the projects were evaluated with associated H&H subbasins models

and were included in this Plan's CIP program. Appendix B provides a detailed description of the H&H model updates and CIP evaluation results.

The following sections describe the steps used to update existing models or develop new models.

5.1.1 Updating Existing Models

The hydraulic components of existing models were updated with recent GIS data. The following model data were verified against the GIS data:

- Pipe size.
- Pipe invert elevations.
- Pipe material (for estimating pipe roughness).
- Node rim elevation.
- System connectivity.

Where the GIS data did not accurately describe the existing system, technical reports, record drawings, or construction drawings were used to update the model. Where data were available, models were given more detail with respect to pump and storage facility information.

For model hydrology, subcatchment delineations within problem areas were reviewed and revised based on recent GIS data, topographic data, and 2024 aerial photography. For subbasins with significant changes in basin delineation, total impervious area was updated with the City's impervious area coverage. No existing models were calibrated or uncalibrated. If new and significant large infiltration facilities were constructed since the 2015 Plan, the percent impervious area was reduced based on an assumed contributing area by visual inspection of aerial photography.

5.1.2 Creating New Models

The following is a general description of steps followed to develop new Personal Computer Stormwater Management Models (PCSWMM)[3].

1. Infrastructure data from existing GIS databases were used to build drainage networks in problem areas. Drainage network models consist of catch basins, manholes, pipes, junctions, ditches, control structures, vaults, storage ponds, pump stations, and outfalls. GIS data were validated and augmented as necessary based on record drawings and City-conducted field investigations.
2. The drainage network was developed to a level of detail that is sufficient for analyzing conveyance on a subbasin-wide or problem-specific scale. In general, pipes 1 foot in diameter or greater were included. Smaller-diameter pipes and pipes that were part of private systems were generally not included in the model unless they provided an important link within the system.
3. Subbasin areas were divided into smaller drainage area delineations called subcatchments, which in the model are linked into the drainage network at specific nodes. Hydrologic parameters, such as area, slope, and percent impervious area, are developed for each subcatchment. Subcatchment slope was estimated as the average slope based on a digital elevation model (DEM). Total impervious area was estimated with the City's impervious area coverage.

[3] PCSWMM is a GIS-based hydraulic and hydrologic modeling platform developed by Computational Hydraulics International (CHI). The software fully supports the EPA SWMM5 hydrology and hydraulics engine, thus providing comparable computation between EPA SWMM and PCSWMM models. Information about PCSWMM software can be found at http://www.chiwater.com/Software/PCSWMM/index.asp.

For the purposes of this plan, there was no requirement to develop new models. Rather, the existing H&H models from the 2015 Plan underwent refinement and updates. Further information on these specific modifications is available in Appendix B.

5.1.3 Updating Precipitation Record and Flow Frequency

Auburn's H&H models use historical meteorological data to estimate stormwater flows and storage within the City's storm drainage system. The data consist of monthly evaporation and 15-minute precipitation volumes. As part of the Plan, the 15-minute precipitation record was extended to September 30, 2022, creating an approximate 74-year precipitation record.

Long-term simulations were performed using the extended precipitation record to determine the 2% and 4% exceedance storms (one in 50-year and one in 25-year flows, respectively) for the updated models. These storms were used as design storms to size capital improvements, which meet the water treatment standards and LOS (see Chapter 7 for a description of proposed capital improvements).

5.2 Asset Management Review

All utilities manage their assets in one way or another through maintenance practices, CIPs, and repair and replacement (R&R) activities. However, the ability to make an informed decision regarding where and how to direct limited resources is dependent on the quality of the utility's asset management. A comprehensive asset management framework includes building a thorough asset inventory, using that inventory to prioritize and document maintenance and inspection tasks, and tracking annual management expenses. An asset management framework developed in this way will demonstrate both the extent of the existing system, as well as aid in forecasting its useful life and the future costs of maintenance, reparation, and replacement.

Stormwater system assets fall into this framework but also exhibit unique characteristics regarding their service levels, failure risk and consequences, and asset response approaches. For example, the consequence of failure for a stormwater pipe is less significant than it would be for a water pipe, and this distinction is reflected in the asset management approach. The asset management plan for the City's stormwater system accounts for these considerations along with the current inventory and condition information while adopting a responsible approach to resource management of the assets.

5.2.1 Best Practices

The best practices for asset management involve methodically basing choices on an understanding of asset condition and performance, risks, and costs in the long term. Asset management best practices include the following:

- Establishing and maintaining a sustainable LOS that balances the performance goals of the utility, regulatory requirements, and consumer demand.
- Preparing and regularly updating an inventory and map of the system.
- Understanding the risk associated with managing a given asset (i.e., defining the asset's likelihood and consequence of failure).
- Implementing a prioritization process for work based on condition assessments and taking a life cycle approach to asset management planning.
- Establishing funding levels and rates to provide reliable, cost-effective service, and support ongoing infrastructure rehabilitation or replacement projects.

These best practices were followed in evaluating the management of the City's assets, as described below. System goals for the City's Storm Drainage Utility were established in Chapter 3 of this Plan.

5.2.2 Evaluation

For the Plan, the preliminary focus of the asset management evaluation was on the City's stormwater collection pipe network, the results of which may be used to inform the management plan for the other categories of assets within the City's Storm Drainage Utility system. The City uses Cartegraph as its CMMS to store and map its asset inventory, so all evaluations were performed on data exported from this source.

Data Gaps Analysis & Condition Assessment

The first step in the evaluation involved assessing the comprehensiveness of the asset inventory. To do so, a data gaps analysis and condition assessment was necessary to understand the completeness of the asset inventory and the availability of feature data for developing criticality and risk analyses. The results of these analyses demonstrated a pipe inventory that was incomplete. Several pipes were missing attribute data—namely installation date and material—critical for estimating risk of failure in the next step in the evaluation. See Figure 5-1 and Figure 5-2 for the availability of pipe attribute data relative to the total length of pipe in the system for reference.

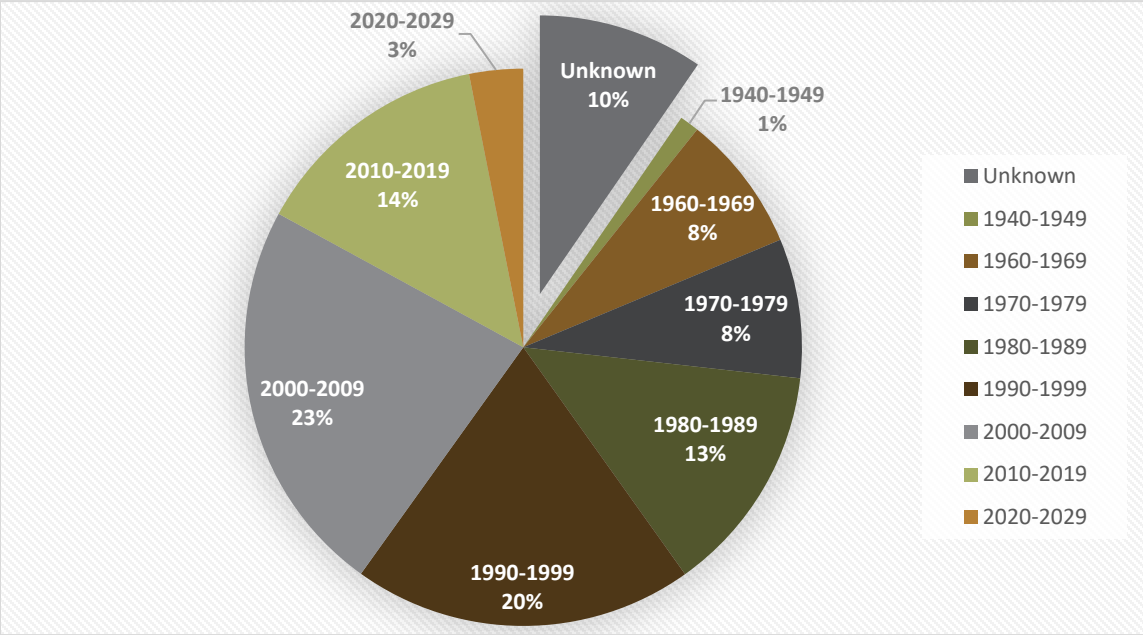

Figure 5-1. Pipe Installation Date Relative to Total Linear Feet of Pipe

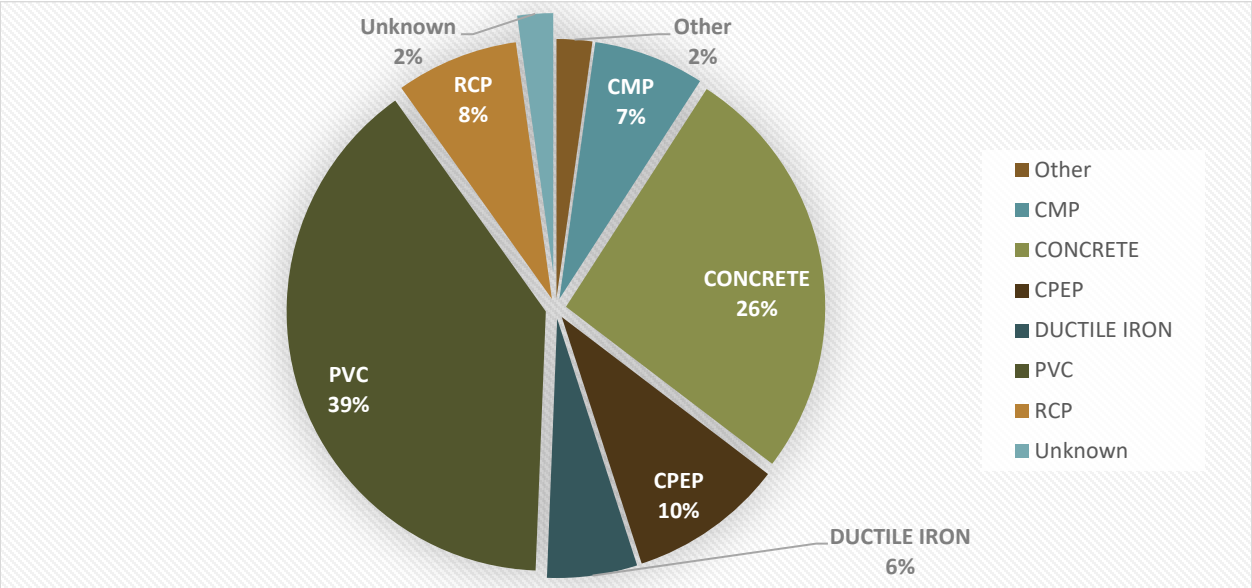

Figure 5-2. Pipe Material Relative to Total Linear Feet of Pipe

For the purposes of the risk evaluation, professional estimates were made to serve as placeholders for missing attribute data. A preliminary GIS-based assessment was performed to provide an estimate installation date based on adjacent infrastructure, parcel build-out years, and historical imagery as needed. Estimated inputs were added to a copy of the installation date attribute to ensure estimates could be distinguished from the original dataset. Further detail regarding the steps taken in the data gaps analysis and condition assessment is provided in Appendix C. There were critical data gaps in other stormwater asset inventories, namely culverts. Thus it could be beneficial to do a similar GIS-based assessment for other asset types to have a comprehensive starting point for prioritization of work. It is recommended that critical data gaps be addressed as part of the asset management program, as summarized in the following paragraphs.

Risk Determination

The next step in the evaluation involves determining the risk associated with managing each of the City's storm drainage assets. The exported pipe data from the City's Cartegraph database was used to build a risk assessment spreadsheet. The spreadsheet evaluates specified criteria to generate a score for likelihood of failure and criticality of failure for each asset. Within the spreadsheet, likelihood of failure is largely dependent on critical attributes specific to the feature, while criticality of failure is dependent on location-based factors.

For the City's pipe network, the attributes used to develop the likelihood of failure score include installation data and material. The installation date provides the age of the pipe, while the installation material is used to estimate the expected useful life. Combining these characteristics provides an estimate for the pipe's remaining useful life, which is the basis for the likelihood of failure score. In general, if a pipe had a negative remaining useful life, it had a high likelihood of failure (the highest score being 5), whereas if it had a positive remaining useful life, it had a low likelihood of failure (the lowest score possible is 1).

The criticality of failure score was developed by evaluating a pipe's proximity to critical facilities, high-priority roadways, and high-trafficked roadways. If a pipe is in close proximity to one of the aforementioned factors, this results in a higher criticality of failure score (the highest score being 5). Conversely, a pipe not in close proximity to any evaluated factors results in a low criticality of failure score (the lowest score being 1).

While the spreadsheet was developed solely for the City's pipe system, a similar process may be followed for the other asset types within the stormwater inventory. See Appendix C for the critical attributes recommended to use in determining the risk for the other types of stormwater assets.

Work Prioritization

The resulting failure scores allow for the City to rank different assets both on likelihood and criticality of failure. It is recommended to use this ranking strategy to develop an inspection program where inspections of different types of assets are prioritized based on their rank. The asset inspection program will serve to fill data gaps, update the likelihood of failure score based on field verification, and identify asset features requiring repair or replacement. After inspection data are input for an asset feature, the results of the inspection will supersede the use of estimated remaining useful life and installation date (where applicable) in calculating a likelihood of failure score. Using this system to prioritize maintenance allows resources to be used more efficiently and fills in data gaps resulting in a more robust asset inventory.

For the City's pipe system, the recommended program would prioritize inspection based on likelihood of failure and then criticality of failure. In this way, pipes with likelihood of failure scores greater than or equal to 4 (or a negative useful life estimate) will be inspected first. The next tier of inspections should address pipes with likelihood of failure scores equal to 3 and pipes with unknown installation dates. After pipes are inspected, they should be assigned a condition score, which will supersede the installation date and useful life expectancy in determining the likelihood of failure. The likelihood of failure for a pipe will increase over time, and this prioritization method will take this into account while integrating field inspection data. Since storm catch basins and storm manholes are related to pipes, it is recommended to inspect these at the same time as adjacent pipes.

The same inspection prioritization method is recommended for culverts as the failure consequences are similar. For storm pumps, it is recommended to closely evaluate their condition as their useful life nears the end (e.g., 5 or fewer years) and upgrade or replace them before probable failure. Stormwater control facilities should be routinely inspected and prioritized for inspection when critical feature data are unavailable. As mentioned previously, critical feature data for each asset type are listed in Appendix C. More detail regarding the inspection frequency and schedule for each type of stormwater asset is included in Chapter 6.

Life Cycle Estimation

A life cycle analysis was performed for pipes to demonstrate the expected depreciation rate of each asset and provide background for the recommended maintenance frequency of the entire system. To do so, the remaining useful life estimate for the City's pipe database was analyzed over time. This analysis was used to identify any spikes in development (and accordingly when spikes in R&R would be expected) and estimate the total linear feet of pipe "lost" (or whose projected remaining useful life becomes negative) per year. This rate of pipe loss may be used as a point of comparison for basing the resource planning recommendations in Chapter 6. A similar life cycle analysis could be beneficial for culverts.

As features are updated with field-verified data (during inspection or maintenance), the results of this life cycle analysis are expected to change. For this reason, the pipe depreciation analysis may be reconducted to evaluate the effect on the projected rate of pipe loss. The results of the pipe depreciation analysis can be found in Appendix C.

Cost Projection

A brief review of costs were included in the asset management evaluation for consideration in setting the R&R budget and resource planning goals in Chapter 6. Two options were contemplated in setting the R&R budget: investigating the prior use or need and evaluating the results of the life cycle estimation. The City's R&R spending in previous years was compiled to investigate the prior use. To evaluate the results of the life cycle estimation, the cost of replacing pipes based on the rate of depreciation was projected. The useful life of the system was also varied to observe the change in budgetary needs.

A comprehensive cost estimate was prepared for both pipe replacement and the replacement of catch basins and manholes within the City. Notably, the cost estimate for pipe replacement serves as a generic assessment for the City of Auburn rather than being tied to any specific project or geographical area. The primary calculations for cost estimation assume the replacement of 5,000 linear feet of pipe along with the associated conveyance structures, such as manholes and catch basins. To simplify these calculations, certain generalizations were made—including the assumption that all pipes are of uniform size, material, and depth—based on GIS averages for the City.

Furthermore, various scenarios were explored to assess how the cost of pipe replacement might vary based on location (downtown versus rural) and quantity (5,000 versus 10,000 linear feet). The resulting cost opinion is intentionally conservative, approximately $1,500 per linear foot, to account for the wide range of generalizations and assumptions inherent in the process. Notably, the analysis indicated that pipe replacement in rural areas is expected to be less costly than in the City center. Additionally, replacing a larger quantity of pipe is only marginally more cost-effective.

For detailed estimates and further information regarding the cost projection, please refer to Appendix C.

As a prudent practice, it is recommended to diligently track the costs associated with installation, repair, and replacement of asset features on an annual basis. This data serve as valuable reference information for future asset replacement budget planning. As additional data are collected, cost opinions can be updated to enhance accuracy.

5.2.3 Recommendations

Evaluations completed for this Plan consisted of developing a system requirements specification for implementing risk assessment using the data in the City's asset management system, Cartegraph. The spreadsheet's scoring methods may be integrated into Cartegraph so that, as the pipe inventory is updated, likelihood of failure and criticality of failure scores can be used to inform future R&R priorities. Currently, the spreadsheet only includes collection system piping scores. However, there is an opportunity to expand the scoring methods to include other asset features, as described in Appendix C.

The following are recommended to implement the asset management strategy:

- Train staff in asset inventory needs, capability, data collection, data quality objectives, and maintenance of system.
- Implement the likelihood of failure and criticality of failure scoring methods into Cartegraph.
- Implement the prioritized inspection and asset information update process to fill data gaps in the asset data and provide observation-based condition assessments.

- Develop a process for reviewing the asset inventory and a routine for updating when changes and inspections occur.
- Expand scoring methods to include asset types other than collection system piping and implement them similarly into Cartegraph and inspection prioritization techniques.
- Consider reconducting pipe depreciation analysis every 5 years to evaluate the effect of implementing the prioritization practice.
- Assess the inspection process in 5 years to assess the efficiency of the program and identify areas for improvement.

5.3 Regulatory-Driven Improvements Investigation

The federal Clean Water Act requires municipalities to help maintain fishable/swimmable waters through the NPDES MS4 permit program (see Section 2.3.2 and Appendix A), which requires municipalities to reduce the discharge of pollutants from their stormwater systems to the MEP by implementing municipal stormwater management programs. The City has an established municipal SWMP that complies with all NPDES MS4 permit requirements currently in effect. Updates to the City's codes, programs, and standards are being developed to comply with the requirements of the updated 2024 NPDES MS4 permit.

The City's SWMP plan identifies activities that will be implemented by the City to comply with NDPES MS4 permit requirements. The SWMP plan is updated annually to reflect new requirements that phase in during each year, including one-time and new ongoing activities. An updated SWMP is submitted to Ecology in March of each year. The City's current SWMP plan is accessible on the City website.

To plan for upcoming requirements of the new NPDES MS4 permit, the City formed a project team consisting of staff from the City Public Works department and Parametrix.

The project team reviewed Auburn's citywide stormwater management programs, codes, standards, processes, and documentation protocols in order to identify potential actions to comply with the NPDES MS4 permit conditions over the 5-year permit period. From these sources, the project team catalogued responsible City departments/entities, reference documents, and potential requirements for each updated section of the permit. Interviews were then conducted with appropriate staff (e.g., stormwater M&O staff) to discuss the potential implications of permit changes for existing City codes, programs, and standards. The information on existing City practices and programs was then compared to the updated permit requirements to identify potential compliance needs. Some policy issues and potential compliance strategies were also identified. This Plan was developed using the draft 2024 NPDES MS4 permit and updated as needed following the release of the final 2024 NPDES MS4 permit. A table summarizing the notable changes between the previous permit, the draft 2024 NPDES MS4 permit, and the final 2024 NPDES MS4 permit was developed and is included in Appendix D. Recommended future activities are summarized below and included in the implementation plan in Chapter 8.

5.3.1 New Permit Requirements and Recommendations

Table 5-1 summarizes the recommended actions to address regulatory driven stormwater program responsibilities.

Table 5-1. Recommended Actions Regarding New Permit Requirements

Permit Section	New Requirement	Recommended Action(s)
S5.C.1.c.iii	Adopt and implement tree canopy goals and policies to support stormwater management and water quality improvement in receiving waters.	Prepare an assessment of existing conditions. Draft a list of potential policies. Select and adopt policies.
S5.C.1.d.i	Complete a stormwater management action plan (SMAP) for at least one new high-priority catchment area or additional actions for the existing SMAP.	Identify a preferred catchment area for inclusion or enhancement. Prepare a new SMAP or update the existing SMAP.
S5.C.1.d.i.(a)	Consider implementing projects that address transportation-related runoff from high traffic areas.	Review the road system plan. Review high-priority roadways. Determine candidate sites for retrofitting using SMAPs, capital improvement projects, or other relevant plans. Select projects and include in capital improvement plan.
S5.C.2.a.i.(b)	Provide public education regarding source control best management practices (BMPs) for building materials to reduce pollution to stormwater, including stormwater pollution from materials containing polychlorinated biphenyls (PCBs).	Provide public education regarding source control BMPs for building materials.
S5.C.4.b.ii	Map permittee-owned or operated properties with tree canopy.	Begin mapping of permittee-owned or operated properties with tree canopy based on available, existing data.
S5.C.4.b.iii	Develop a map of discharge points that have stormwater treatment and flow control BMPs/facilities. Use to estimate the area managed by stormwater treatment and flow control BMPs/facilities.	Develop a methodology to map tributary basins to outfalls. Identify facilities to be mapped. Use a geographic information system (GIS) to prepare a map of catchment areas. Quantify the total managed or unmanaged acreage of treated or controlled City-owned facilities.
S5.C.4.b.iv	Map overburdened communities in relation to stormwater treatment and flow control BMPs/facilities, outfalls, discharge points, and tree canopy on permittee-owned or operated properties.	Overlay available data regarding overburdened communities with previously prepared maps of areas with stormwater treatment or flow control facilities and tree canopy.
S5.C.5.e.ii	Develop a management plan for per- and polyfluoroalkyl substances (PFAS).	Coordinate with firefighting agencies/departments to implement specific protocols regarding PFAS discharges into stormwater.
S5.C.7.c	Fully fund, start construction, or completely implement project(s) that meet the City's assigned equivalent acreage of 14.2 acres.	Prioritize projects developed in the SMAP that together meet the City's assigned 14.2 acres.
S5.C.9.e	Develop and implement a municipal street sweeping program to target high-priority areas.	Review and revise the existing sweeping program as needed. Include map of swept priority areas in annual report.

5.4 Climate Change Analysis

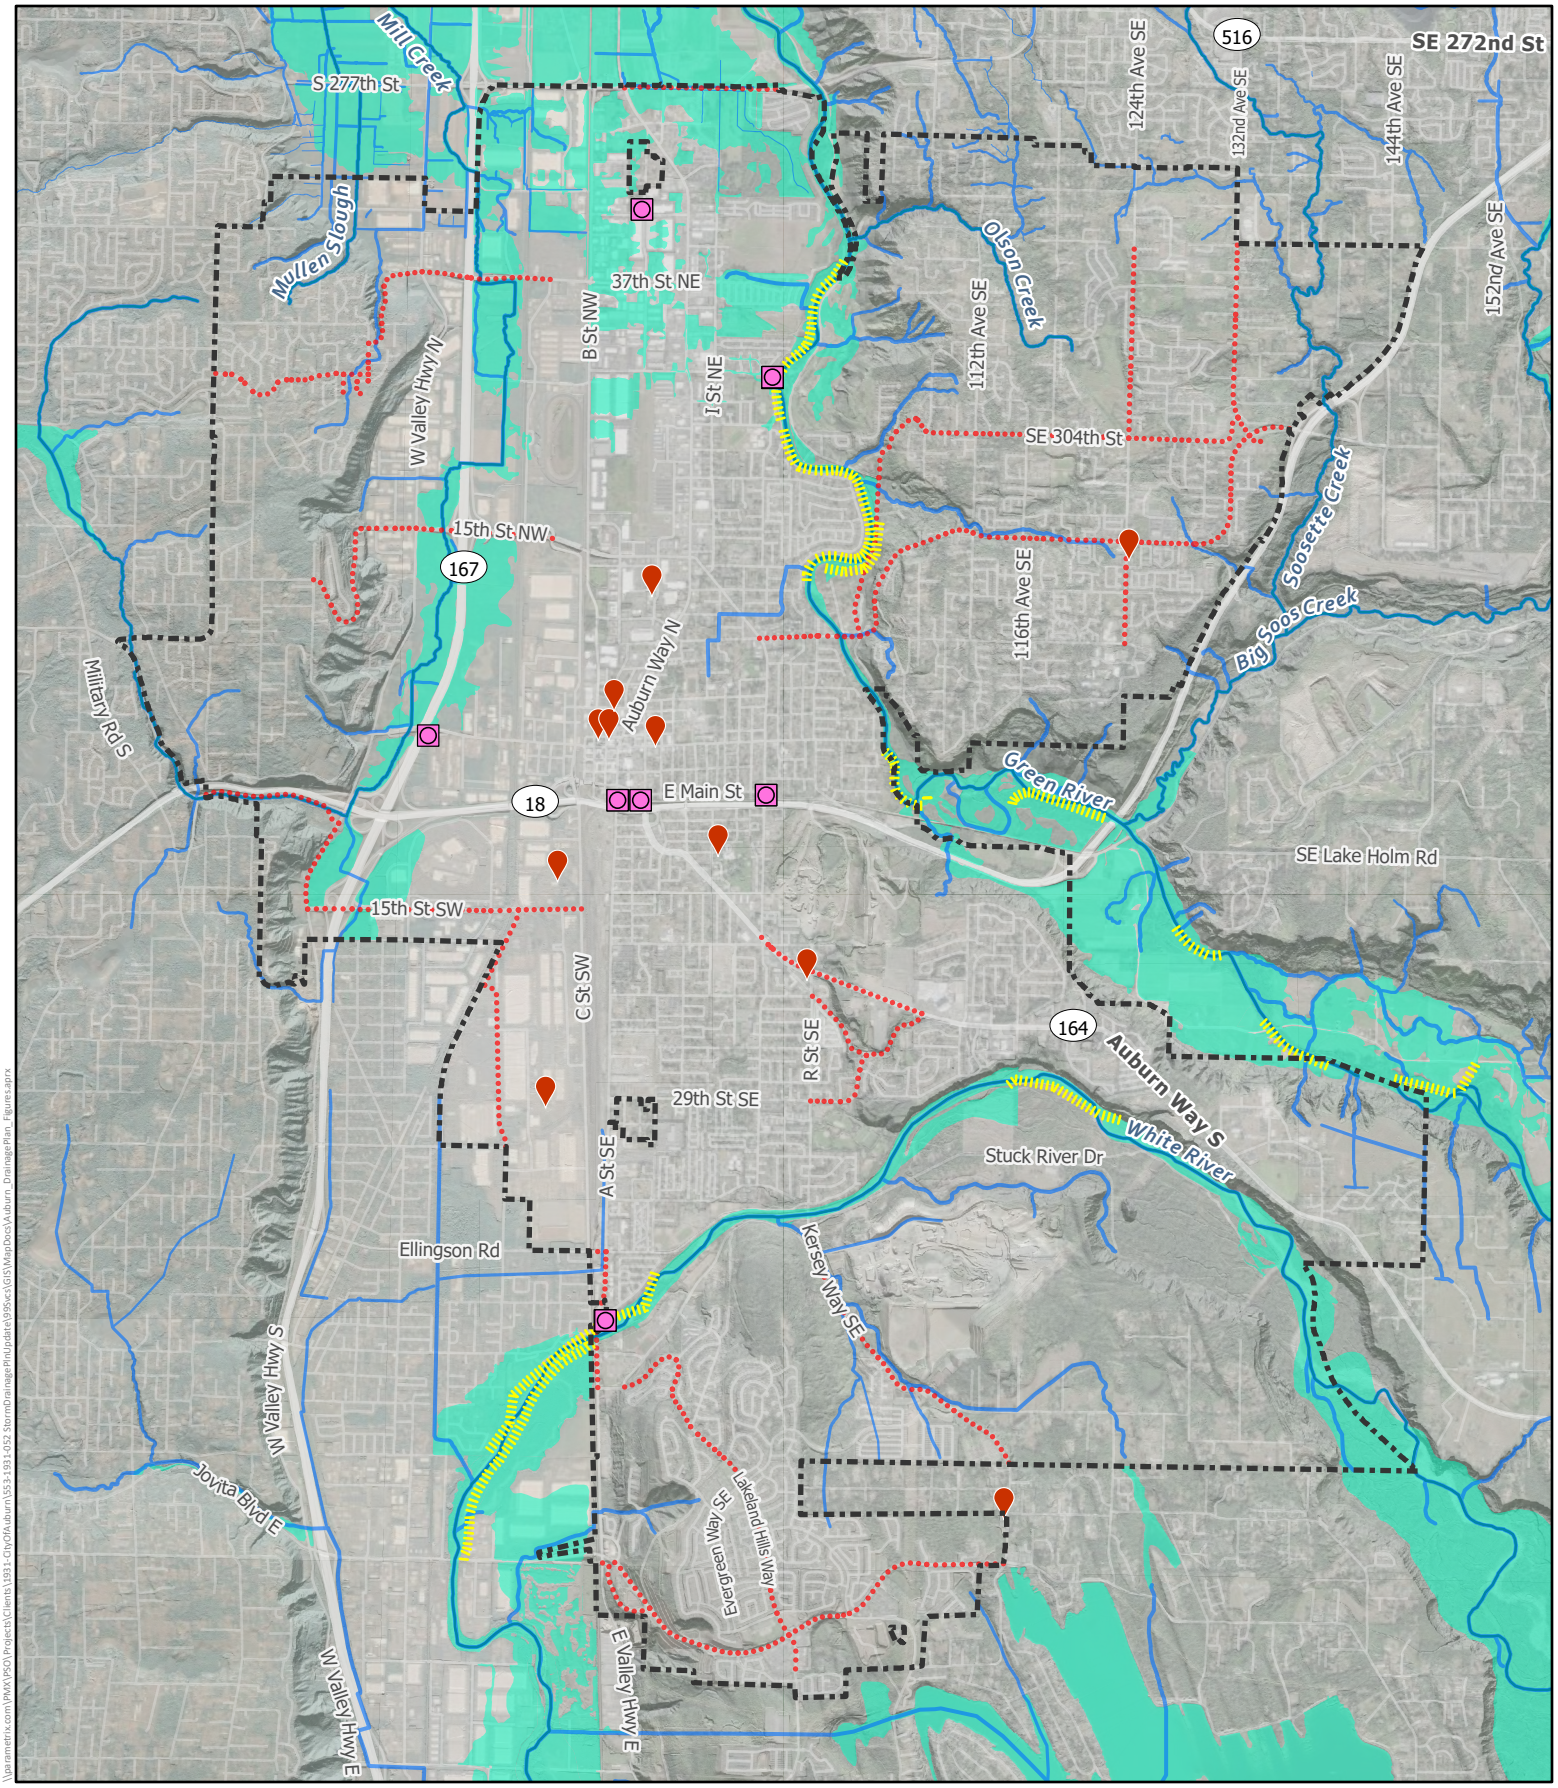
Section 4.1.8 reviewed the projected climate changes specific to the City. This section focuses on potential strategies to mitigate these changes and provides recommendations for effective implementation. By comprehending expected shifts in the environment, the City can proactively adapt its practices and policies to safeguard the community.

5.4.1 Discussion of Proposed Approaches

Although the City is not predicted to see a significant increase in overall precipitation, climate models predict an increase in the frequency of intense precipitation, specifically during the winter months (see Figure 4-5). Increased winter storm intensity frequency is most likely to push the stormwater system past the accepted LOS over time up to the projected time frame of the reported climate models.

Storm intensity (rate of rainfall for a unit of time, usually in inches per minute) tends to affect storm drainage systems differently than prolonged, atmospheric river systems. Storm sewers and local conveyance systems are generally designed for the peak runoff intensity (within a short or long event), whereas larger conveyance systems, streams and floodplains, and stormwater control facilities are designed using hydrographs for longer duration events. This would suggest, based on the predictions regarding total rainfall versus intense rainfall, that storm sewers, conveyance systems, and culverts will be more vulnerable to capacity exceedance and subsequent flooding.

One approach to addressing this potential service deficiency is to design with future projected storm patterns or to apply a larger design storm. This would address the greater flood frequency risk. However, it would not “prevent” flooding. This would increase the costs of all projects for both public and private development and would also impact the cost of housing impacting the affordability of future housing developments. Stormwater conveyance systems are designed to manage a specific LOS, usually the peak runoff rate from a 25-year, 24-hour storm. Performance is typically evaluated by hydraulic metrics, such as minimum freeboard in a channel, headwater depth on a culvert, or surcharging in a storm sewer that keeps water in the system and away from property. While a stormwater system may not be performing according to design, the impacts may not be flooding or property damage. In addition, storms larger than the design storm can and will occur, with adverse consequences.



It has generally been deemed to not meet cost-benefit metrics to build systems to address every likely storm outcome. An event exceeding the design capacity of a system could occur at any time; the “average” number of times it occurs is likely to increase with increased storm intensity frequency due to climate change. Another approach would be to address the *consequences* of the projected change on a site-by-site basis rather than a blanket change in service levels for future rainfall.

Stormwater flow control facilities are designed to manage changes to the landscape and resultant runoff to existing or predeveloped levels. The analyses use a historical rainfall record and projections of that record over an extended time period, all based on past rainfall patterns. The stormwater control standards require runoff changes to be matched to land conditions prior to development or existing conditions, typically a forested condition. One approach to new stormwater standards to address flow control under a changed climate with more frequent intense rains is to use projected rainfall patterns that are modified to add climate change projections. In addition, flow control evaluations are comparative, which means they evaluate the hydrologic changes due to development. This is different than considering the changes in hydrology from the site today with a site under future climate conditions (in addition to restoring existing hydrology to predevelopment

conditions). The comparative change (future climate to compare existing and future site development) may not be significant.

Another approach involves identifying the City's most vulnerable areas to the effects of climate change and using this information to make informed decisions about potential stormwater infrastructure improvements. Figure 5-3 highlights key areas of vulnerability. The extent of floodplains indicates where the City is most susceptible to flooding. Similarly, levee locations should be evaluated to determine if adjustments are necessary due to changes in flood levels. Pump stations should be assessed for capacity. Ensuring access to critical facilities and emergency routes is crucial; both the areas around these facilities and the routes to them should be evaluated for vulnerability. By assessing the stormwater infrastructure in these areas, the City can better understand the impact of potential infrastructure failures and make decisions to mitigate the most harmful consequences.

River and stream flooding could increase in frequency due to climate change. According to the stream flow projections shown in the publication, Effect of Climate Change on Flooding in King County Rivers, winter flow volumes are expected to rise due to an increase in the proportion of precipitation falling as rain over the course of the 21st century (Lee et al. 2018). This increase is anticipated despite the modest long-term projections for average annual rainfall shown in Figure 4-5. Smaller, local stream systems (e.g., Olson Creek, Mill Creek, Bowman Creek) are expected to have more frequent flooding (i.e., flow overflowing its confined banks), and extreme events are more likely to occur (i.e., the current 1% probability flood would have a higher percentage chance of occurring in the future). Storm drainage infrastructure that interfaces with these natural drainages should be reevaluated to consider negative consequences and resiliency (the ability to safely withstand critical service disruption).

5.4.2 Recommendations

Stormwater design guidelines will need to consider the possible changes in storms that are *informed* by future climate scenarios. The strategy aligns with the guidance for stormwater design and sizing recommended and approved by the Water and Land Resources Division of the King County Department of Natural Resources (King County DNR 2021). For example, the guidance provides direction for the design of new pipe systems with sufficient capacity to convey and contain (at minimum) the future predicted 25-year peak flow. Pipe system structures may overtop during runoff events that exceed the 25-year design capacity. However, this is permissible as long as the overflow resulting from a larger event (e.g., a 100-year runoff event) does not lead to severe flooding or erosion issues. Additional design guidelines for new flow control standards, conveyance standards, culverts, ditches, and canals are also included.

The recommended approach to mitigate effects due to climate change is described as follows.

Drainage System Performance. Because of likely changes in the frequency of intense rainfall, the following recommendations should be considered in the design of conveyance systems:

- Review and revise the hydraulic performance metrics related to freeboard, headwater depth, and surcharging. Evaluate the financial implications associated with enforcing strict hydraulic performance standards.
- Prepare a critical drainage review (CDR) process (as identified as a work order in Section 8) to evaluate the consequences of storm events exceeding the design parameters. Establish clear policies regarding safety, property protection, service continuity, and mitigation of nuisance flooding to make systems more resilient to infrequent but probable flooding. Ensure that the level of protection aligns with the associated costs and risk factors.
- Prioritize effective hydraulic performance and resilience measures for critical facilities during severe storm events that go beyond the intended design limits.
- Perform a vulnerability analysis of critical drainage and stormwater infrastructure to identify any areas where the effects of climate change may be intolerable. Prioritize these areas for capital improvement projects to minimize the adverse effects of flooding.

River and Stream Flooding. River and stream flooding frequency is expected to increase. The vulnerability of existing infrastructure in or near streams or floodplains has not been assessed in this Plan.

6. Maintenance and Operations

An evaluation of existing Storm Drainage Utility M&O activities was conducted in support of this Plan. This chapter documents existing Storm Drainage Utility M&O activities with the primary purpose of establishing a baseline understanding of the proactive and responsive maintenance procedures performed by City Storm Drainage Utility M&O staff. This baseline understanding is used herein to evaluate utility staffing, data collection and computerized record-keeping needs, and other utility needs necessary to continue to meet system goals.

The information provided in this chapter is a summary of information collected during City Storm Drainage Utility staff interviews, review of computerized records, and existing utility forms/checklists.

6.1 Utility Responsibility and Authority

This section provides an overview of the Storm Drainage Utility organization and basic information related to utility staffing, training, and education.

6.1.1 Organizational Structure

The City Storm Drainage Utility is operated as a utility enterprise under the direction of the director of public works. The Public Works Department is responsible for planning, design, construction, operation, maintenance, quality control, and management of the storm drainage system. The City has a mayor-council form of government; therefore, the director of public works reports to the mayor, with input from council through council study sessions and meetings. The mayor provides oversight for the implementation of policies, planning, and management for the Storm Drainage Utility. The City Council provides direction on policy and budget considerations.

The Engineering Services Department is the lead group for comprehensive storm drainage system planning, development of a CIP, and the design, construction, and inspection of projects related to the storm drainage system.

M&O Services is the lead group responsible for the day-to-day maintenance and operation of the storm drainage system. The storm drainage/sanitary sewer manager reports to the M&O Services general manager and oversees 11 total storm drainage employees (1 field supervisor and 10 maintenance workers, as shown in Table 6-1). The Vegetation Maintenance Division is responsible for mowing, tree trimming, and weed control of City ROW and storm facilities.

The overall Public Works Department organizational structure is shown in Figure 2-1.

6.1.2 Staffing Level

The Storm Drainage Utility currently includes 10 full-time M&O field staff, plus a field supervisor and a manager, who perform administrative duties. This chapter does not include an evaluation of utility management, which includes regulatory compliance, planning, and coordination with other City departments. Position titles and the primary functions of the M&O staff working within the Storm Drainage Utility are shown in Table 6-1.

Table 6-1. Storm Drainage Utility M&O Personnel

Position	Primary function(s)
Storm drainage/sanitary sewer manager	Management of sanitary sewer and storm drainage M&O staff
Storm field supervisor	Supervision of field staff
Maintenance worker	Ten full-time staff dedicated to field inspection and maintenance

M&O = Maintenance and Operations

In addition to the M&O field staff identified in Table 6-1, secondary staff support the following Storm Drainage Utility functions:

- Management and administration: A full-time manager performs administrative duties for both the Sanitary Sewer and Storm Divisions. Management and administrative tasks include general oversight of the Sanitary Sewer and Storm Drainage Utility M&O staff, regulatory compliance, planning, and coordination with other City departments. Field work is supervised by a full-time field supervisor.
- Vegetation maintenance: The Vegetation Maintenance Division consists of 10 full-time staff, a field supervisor, and a manager. These staff primarily support the Storm Drainage Utility M&O field staff (approximately 60% of total staff effort) with pond vegetative control, weed control and herbicide spraying, ROW and ditch mowing, tree trimming and removal, and leaf removal.
- Contracted services: The Storm Drainage Utility uses other City departments or external contractors for some services, as discussed in Section 6.3.

M&O activities routinely performed by Storm Drainage Utility staff are discussed in Section 6.2. The staffing plan presented in Section 6.6 considers M&O activities performed by Storm Drainage Utility and Vegetation Maintenance staff.

6.1.3 Level of Service

The Storm Drainage Utility operates in accordance with the system goals and policies outlined in Chapter 3 and internally adopted objectives integral to meeting those goals. These objectives are generally based on the current staffing level and tasks deemed most critical to the City and its residents. However, the existing staffing requirements discussed in Section 6.6 herein include near-term goals that may not be met by existing staff.

6.1.4 Training and Education

The City recognizes the value of having a knowledgeable and well-trained staff operating the storm drainage system and encourages employees to obtain the highest level of training available. At this time, the State of Washington does not require certification for stormwater maintenance operators, but the City would support any effort to establish certification for these positions. Seminars, conferences, and college coursework have become tools to advance knowledge for maintenance staff.

Many M&O staff are specialized in specific job functions, which can promote expertise through specialization but also has the potential to limit the ability of the utility to absorb absences due to vacation, sickness, retirement, resignation, and termination. To mitigate this limitation, the City has broadened the scope of the Storm Drainage Utility's education system by conducting cross-training programs.

6.2 Routine Operations Provided by the Storm Drainage Utility

This section discusses routine operations provided by the Storm Drainage Utility M&O staff shown in Table 6-1. Each subsection provides a brief description of the M&O activity, City goals with respect to proactive maintenance, and the estimated Storm Drainage Utility staff effort to achieve the proactive maintenance goal.

6.2.1 Catch Basin and Manhole Inspection, Cleaning, and Repair

The storm drainage system includes approximately 10,800 catch basins and 3,172 manholes. Catch basin and manhole maintenance includes initial inspection and potential follow-up cleaning and/or repair. Inspection is performed by a two-person crew using utility mapping to locate the targeted facilities. M&O staff use condition categories from the CMMS asset management system to identify which facilities require further cleaning or repair. The condition categories consider items such as observation of trash, debris, sediment, or vegetation blocking or within the catch basin/manhole; structural damage; evidence of contamination or pollution; and the integrity of catch basin grates, manhole covers, and ladders. Follow-up cleaning and maintenance work orders are generated based upon the results of initial inspection and typically include a two-person crew. Based upon recent maintenance history, approximately one in five catch basin and manhole inspections leads to further cleaning. The City assumes that a total of 5% of catch basins and manholes per year require an additional visit post inspection for some level of maintenance or repair. Catch basins and manholes requiring only minor maintenance tasks that can be performed during inspection are not included in this total.

Catch basin inspection is required as part of the City's NPDES MS4 permit, per the most recent permit, 2024–2029 issuance. The City is required to inspect and maintain all catch basin facilities every 2 years, with each 2-year cycle ending on December 31. To achieve this permit requirement, the City goal is to inspect 40 catch basins per day. Manhole inspection frequency is not mandated by the permit, but the City's goal is to complete inspection of all City manholes on a 4-year rotating schedule.

The City will use the CMMS software (see Section 6.5) to record and track results of catch basin inspection, cleaning, and maintenance efforts. In the future, if catch basin inspection records demonstrate that catch basins generally comply with maintenance standards and do not require inspection every 2 years, the City may be able to justify and suggest a less frequent inspection schedule for compliance with the Permit.

6.2.2 Stormwater Pipeline Cleaning

The storm drainage system includes approximately 250 miles of collection system piping. The City currently cleans its stormwater pipelines on an as-needed basis. Cleaning of the storm drainage system is performed using a City-owned Vactor/jet truck. Cleaning is typically performed from structure to structure (e.g., catch basin or manhole) by a two-person crew.

Jetting of stormwater pipelines is the principal means of removing debris or obstructions from the storm drainage system. A hose with a special end fitting is inserted into a pipe and high-pressure water (up to 2,500 pounds per square inch) is sent through the hose. The high-pressure water exits the small hole at the tip of the nozzle, breaking down and/or scouring obstructions. Debris is then removed via suction by the Vactor truck equipment at each manhole.

The City expects to clean 4% of its stormwater pipeline system per year. On average, a two-person crew can clean approximately 1,500 feet of pipe per day and inspect approximately 500 feet of pipe per day.

6.2.3 Stormwater Outfall Inspection, Cleaning, and Maintenance

The storm drainage system includes 124 outfalls or discharges from localized collection systems to the Green River, White River, or Mill Creek. Outfall maintenance includes initial inspection and potential follow-up corrective actions. Outfall inspections are performed to identify the following: excessive vegetative growth that could obstruct flow, outfall erosion protection, structural damage to the conveyance system itself, and abnormal discharge that might be indicative of contamination (as demonstrated by a color, sheen, or odor). Cleaning and minor maintenance tasks are performed during inspection. Necessary follow-up repairs or more intensive maintenance work orders are generated based upon the results of the initial inspection. The City goal is to inspect, clean, and perform minor maintenance tasks at each outfall twice per year. The City assumes that 5% of outfall inspections per year require an additional visit post-inspection for some level of maintenance/repair. For a two-person crew, it is anticipated that inspection, cleaning, and minor maintenance requires 2 hours per outfall, while follow-up maintenance or repairs requires 0.5 hour per outfall.

6.2.4 Drainage Ditch Maintenance and Restoration

The storm drainage system includes approximately 42 miles of drainage ditches (as shown in Figure 6-1). Drainage ditch maintenance is required to preserve the original line and grade, hydraulic capacity, and purpose of the ditch. Routine maintenance activities include regrading and removal of sediment; nuisance vegetation; and isolated obstructions, such as trash, trees, and accumulated debris. Because vegetation is important for erosion control, the City strives to minimize the removal of beneficial vegetation.

Up to six M&O staff are required for a single ditch maintenance crew to operate the City-owned excavator, control traffic (as necessary), and manually regrade or remove obstructions. On average, these crews can complete 200 feet of ditch maintenance per hour. This rate does not include mobilization and demobilization, equipment repair and other downtime, waste disposal, and administrative tasks, such as training and record keeping. Currently the ditch inventory is maintained on an as-needed basis, however the City has a target to maintain all ditches within the system on a 5-year cycle.

6.2.5 Stormwater Facility Inspection, Maintenance, and Restoration

Inspection of the approximate 300 City stormwater facilities is performed by a one-person crew using an inspection checklist to identify conditions that require correction. Facilities include stormwater ponds, swales, vaults, tanks, UIC, LID, and manufactured treatment devices. The checklist includes items such as observation of trash, debris, sediment, and animal or insect infestation that could impact function or future maintenance; structural damage or erosion; evidence of contamination or pollution; and the integrity and/or function of emergency overflow spillways (as applicable). The City goal is to inspect each facility once per year. On average, inspection activities require 0.75 hours for a one-person crew per location. This rate does not include mobilization and demobilization, equipment repair and other downtime, waste disposal, and administrative tasks, such as training and record keeping.

Maintenance and restoration of each facility type varies. The City has a goal of maintaining permeable pavement twice per year. On average, a four-person crew can maintain 0.3 miles of permeable pavement per hour. The maintenance of vaults, tanks, and underground injection control (UIC) wells are all accounted for under general facility maintenance in Section 6.2.9, Manufactured treatment devices are maintained by an outside contractor and included in Section 6.3.3.

Maintenance of ponds and swales (of which there are approximately 184) are performed as necessary, with the expectation of maintaining or restoring 20% of the system each year. A six-person stormwater pond crew is required for pond maintenance, while swales require a four-person crew. For the purposes

of the full-time equivalent (FTE) calculation, the expected maintenance of ponds and swales have been combined (as there are only two swales within the system). Follow-up maintenance and restoration is scheduled during the summer months. The City assigns a six-person stormwater pond/swale crew approximately 21 days per year (3 days per week for 3 out of 4 months in the summer).

After significant storms, it is recommended that some stormwater facilities be inspected to verify proper function and identify damage, if any. It is recommended that the City develop a list of facilities that should be inspected following these larger storm events.

6.2.6 Culvert Inspection and Cleaning

Culvert maintenance includes inspection and cleaning of the approximately 1,164 culverts within the storm drainage system. Culverts are typically inspected by a two-person crew, with corrective actions and cleaning performed during the inspection when possible. On average, inspection and cleaning activities require 1 hour per culvert for a two-person crew. Culvert inspection focuses on the assessment of free flow within the culvert and identifying any structural defects. Any debris that cannot be removed during the initial inspection or any noted structural concerns result in a work order for corrective action. The City goal is to inspect (and clean as necessary) each culvert once per year.

6.2.7 General Facility Maintenance and Other Field Tasks

Storm Drainage Utility M&O staff perform a number of field tasks that do not readily fall into the categories previously listed and often support other City departments. Examples of these additional storm drainage tasks include the following:

- General facility maintenance: Maintenance may include detention vault and tank cleaning and sediment removal, weir cleaning, filter inspection and cleaning, and maintenance of oil/water separators and UIC.
- Engineering support: Storm Drainage Utility M&O staff often provide facility inspection services for engineering projects and support Engineering through visual observation in the field. M&O staff also make small repairs such as replacing catch basins or failed culverts or minor drainage pipe replacement. See Section 6.7 for recommendations related to documenting M&O repair projects.

Identifying the FTE for each task identified above was not considered as a part of this Plan. Instead, the FTE for the above tasks have been combined into one group summarizing the general inspection and field tasks performed by the Storm Drainage Utility staff. The City may choose to identify the expected FTE for each task at a later date, if desired. FTE assumptions are summarized in Section 6.6.

6.2.8 Storm Drainage Utility Overhead

The Storm Drainage Utility is responsible for ensuring routine operations are carried out as described above. To do so, several tasks not readily assigned to any one of the routine operation categories must be performed. Examples of these tasks are listed below:

- Training: Staff must be trained in routine field operations as well as the general order of processes required before and after field operations
- Record keeping and map maintenance: The utility ensures the results of routine operations are recorded and updated with condition assessments and mapped appropriately. The utility also notes any other field observations that may require further investigation. Additional details regarding this topic are given in Section 6.5.

- Equipment repair: Staff must address equipment malfunctions and necessary repairs, as needed.
- Preparation: Time is needed to prepare for routine operations

These tasks are expected for each routine operation previously described, but they have not been allocated to the specific tasks. For the purposes of resource planning, overhead is expected to account for 10% of the available staffing time.

6.3 Routine Operations Provided to the Storm Drainage Utility

This section discusses routine operations performed by other City staff or by contracted services in support of the Storm Drainage Utility. Each subsection provides a brief description of the M&O activity. FTE efforts for these activities are funded by the Storm Drainage Utility. Because Vegetation Maintenance staff primarily support the Storm Drainage Utility (approximately 60% of total staff effort), these staff are included in the existing staffing requirements discussed in Section 6.6.

6.3.1 Vegetation Maintenance

Vegetation maintenance is performed by Vegetation Maintenance Division full-time and seasonal staff that support City Storm Drainage Utility M&O staff. Vegetation maintenance includes mowing, herbicide application, seeding and replanting, and removal of nuisance vegetation or vegetation that impairs the function of storm drainage facilities. In the fall, vegetation maintenance also includes removal of leaves that can accumulate and block flow to catch basins (performed as needed).

Full-time Storm Drainage Utility staff may also perform limited vegetation maintenance as part of the routine operations discussed in Section 6.2.

6.3.2 Stormwater Pump Station Maintenance

Maintenance of the seven pump stations within the City storm drainage system is performed by Sanitary Sewer Utility staff because they have pump specialists who perform all pump station maintenance. Sanitary ewer Utility staff perform scheduled weekly and monthly maintenance inspections, as described in the City of Auburn Sewer Comprehensive Plan Update and summarized below.

Pump station maintenance activities include both weekly and monthly inspections and include checking lubrication, seals, valves, and general cleanliness of pump stations, as well as cleaning out sumps and trash racks.

6.3.3 Manufactured Treatment Device Maintenance

As described in Section 6.2.5, manufactured treatment devices are inspected by city staff annually to identify conditions that require additional, unscheduled maintenance. Such conditions could include excess sediment accumulation, damaged piping, or vault and access cover damage. Manufactured treatment devices are serviced by City staff, as noted in the inspections. Some proprietary media or filter units are maintained by a private contractor, as needed.

6.4 Non-Routine and Emergency Operations

The intent of the routine inspection and maintenance activities discussed in Sections 6.2 and 6.3 is to minimize, through proactive management of the stormwater facilities, the potential for conditions that could lead to emergencies. This section discusses unscheduled activities performed by Storm Drainage Utility M&O staff and describes a response plan for emergency conditions.

6.4.1 Customer Service Requests

Customer service requests, typically related to a local drainage complaint, trigger creation of a work order to inspect the affected area or stormwater facility and identify potential solutions. In some cases, relatively simple solutions, such as removal of blockages, can alleviate the issue. However, other cases require coordination with Engineering or other City departments. On average, City Storm Drainage Utility staff respond to approximately five customer service/complaint-related work orders per week. The effort required to resolve these complaints varies considerably.

Good recordkeeping helps in complaint resolution by ensuring that all relevant data are gathered and by serving as a reminder to resolve the complaint and notify the complainant. When a complaint is received, the following information is recorded to the extent possible:

- Name and contact information of the person making the complaint.
- Brief description of the nature of the complaint.
- Time and date the complaint was received.
- Storm Drainage Utility staff assigned to respond.

Following initial response, the complaint record gets updated to include the results of inspections and any corrective actions taken. If the complaint cannot be resolved internally within the Storm Drainage Utility, the complaint record will be forwarded to Engineering for further investigation.

Notification of any system investigation and/or action is provided to the customer making the complaint.

6.4.2 Emergency Response Program

The Storm Drainage Utility, in conjunction with the other utility divisions, has prepared an Emergency Binder as a guide on how to handle emergency situations. While the guide is by no means all-inclusive for every type of disaster, it is a valuable tool for dealing with many of the emergency situations that municipalities face. Copies of the Emergency Binder are available at the M&O Building, and at City Hall Annex with the Director.

The primary objectives of the Utilities response is ensuring public safety, restoring essential services as quickly as possible, and providing assistance to other areas as required. There is also a master response program for the entire City, as documented in the City's Comprehensive Emergency Management Plan (CEMP). The material in the CEMP provides guidance for mitigation, preparedness, responsibilities, recovery operations, training, and community education activities. Copies of the CEMP are located in each City department, the M&O Building, and the VRFA.

The utility has implemented a standby program whereby one on-call employee is designated to be the first to receive after-hours emergency calls. Most storm drainage system problems that occur outside of normal working hours are reported through the City's 911 emergency response system or a non- emergency response number. An emergency callout list is provided to the emergency operator in order to contact utility staff in case of an emergency. The primary responder to those after-hours

calls is the on-call employee. Storm Drainage Utility M&O staff have been trained to respond to system emergencies. The contacted staff assesses the situation, contacts additional staff as necessary, and then responds in accordance with established emergency response procedures.

6.4.3 Source Control Inspection Program

Per the NPDES MS4 permit, the City must implement a program to prevent pollutant-laden runoff from existing development to its MS4. A source control inventory of publicly and privately owned institutional, commercial, and industrial sites with the potential to contribute pollutants to the MS4 was developed in 2022 and must be updated once every 5 years. The City is required to annually inspect 20% of the sites listed in its source control inventory to assess compliance with source control requirements, evaluate the effectiveness of existing BMPs (and provide recommendations), and ensure required BMPs and actions are enacted through enforcement (as needed).

The City has hired a full-time employee to handle the SCIP. As the program is only in its second year, the required time and resources are still being evaluated. It is recommended that the City document these aspects and evaluate after 5 years. This will allow the City to develop a more accurate estimate of the required FTE for implementation of the SCIP.

6.5 Data Collection and Record-Keeping

Data collection and record-keeping functions for the Storm Drainage Utility are performed using a CMMS system called Cartegraph, a web-based commercial software package provided by Cartegraph Inc. Cartegraph integrates GIS data with utility M&O records, providing managers with overview information about system and operational performance and field crews with information related to the condition and failure history of specific stormwater facilities. The City currently uses Cartegraph to plan field staff activities (work orders), record results of both routine and non-routine maintenance, and compare actual maintenance efforts to City goals. The City recently upgraded its Cartegraph system and plans to transition toward the use of Cartegraph as an asset management tool, through which the City would optimize staffing and capital resource planning.

In recent years, the City has made considerable progress in adding asset information to Cartegraph, specifically GIS data, physical information related to size and material, and installation dates. However, to fully utilize the asset management function of Cartegraph, additional information related to risk, asset criticality, and condition is also necessary. To assist the City's transition to an asset management program, as described in Chapter 5, the attributes listed below should be used within Cartegraph to define each of the City stormwater assets (catch basin, pipe segment, stormwater pond, etc.).

Asset-specific attributes. The following asset-specific attributes are related to the asset and remain relatively unchanged over time.

- Asset ID: The unique asset number that is used by all business systems to identify an asset.
- Location: Where the asset is located (GIS).
- Installation date: The date the asset was installed.
- In-service date: The date the asset was placed into service.
- Material: The material making up the composition of the asset's structure.
- Asset class: A group of assets that share the same characteristics (e.g., ponds, pipe segments). Asset class is used to estimate replacement costs and useful life of groups of assets.
- Nameplate information and asset specifications: Important information that is used to uniquely describe an asset, such as the manufacturer name, type of asset, serial number, size, material, etc. This information is used for asset identification, replacement, and repair.

Operation-specific attributes: The following attributes are related to routine operations (inspection and repair or replacement) for each asset and must be updated afterwards accordingly.

- Replacement cost: The cost to replace the asset.
- Replacement year: The year the replacement cost data were calculated.
- Inspection date: The date the asset was inspected.
- Overall condition rating (OCR): The condition rating of the asset assigned as a result of the inspection.
- Overall condition index (OCI): A numeric score describing the condition of the asset, assigned as a result of the inspection (related to OCR).

Post-processing attributes. The attributes listed below are generated using asset-specific and operation-specific attributes data for each asset. These attributes are not manually entered. They are calculated to determine the risk associated with each asset and prioritize future work accordingly (as previously described in Chapter 5, and detailed in Appendix C).

- Useful life: The average life expectancy of the asset (life expectancy estimates for the different asset types can be found in Appendix C).
- Remaining useful life: The age of the asset (installation year – current year) subtracted from its useful life.
- Asset criticality: A value assigned to each asset that indicates how essential it is to maintain a defined LOS. Typically it is defined as a combined score based on the consequence of failure and the likelihood of failure.
  - → Criticality of failure: A score assigned to an asset on the scale of 1 to 5 that communicates the social and economic cost if the asset fails, where a score of 1 would represent an asset not expected to have extreme consequences after failure, and a score of 5 would represent an asset that may have detrimental consequences after failure. This score will not be entered manually into Cartegraph; it is determined largely based on location-based factors and will be assigned using a GIS-based spatial analysis.
  - → Likelihood of failure (condition): A score assigned to an asset on a scale of 1 to 5 that communicates the estimated time until the asset fails, where a score of 1 would represent an asset in excellent condition, and a score of 5 would represent an asset on the brink of failure. This score will not be entered manually into Cartegraph. It is initially calculated based on critical attributes (as defined in Appendix C), but after the inspection date becomes available, the results of the inspection (OCI and OCR) will supersede the estimated rank based on critical attributes in assigning a likelihood of failure score.

M&O attributes. The following M&O attributes are captured as part of the operations, maintenance, and repair history associated with each asset:

- Asset ID: The unique asset number that is used by all business systems to identify an asset. Work orders should be associated with one or more assets.
- Issue, cause, action: These codes are used to classify historical M&O activities associated with corrective actions or unplanned maintenance.
  - → Issue: What is the problem observed in the field?
  - → Cause: What is the underlying cause of the problem?
  - → Action: What was done to address the cause?

- Target hours and actual hours: Recording the estimated hours and actual hours to complete a work order can help in determining efficiency, planning workloads, and assessing repair costs.
- Target start and stop dates and actual dates: Recording the estimated and actual start and stop dates for a work order can help in determining efficiency, planning workloads, and assessing repair costs.
- Work order costs: Work order costs include labor, parts, materials, and equipment and should be accurately recorded for each work order.
- Work order type: Work order types are used to group and compare different types of work activities. Typical work order types are as follows:
  - → Capital improvement: Work associated with a CIP.
  - → Corrective maintenance: Work associated with an unplanned repair.
  - → Preventive maintenance: Work associated with a planned preventive maintenance activity (or inspection).
  - → Predictive maintenance: Work associated with predictive measures (usually for critical assets).
- Warranty information: Helps to determine assets that are under warranty and the warranty maintenance requirements.

6.6 M&O Staffing Requirements

This section outlines existing and future staffing requirements for M&O staff.

6.6.1 Existing Staffing Requirements

Existing staffing requirements for M&O activities discussed in this chapter were compiled and evaluated to determine the M&O staffing level needed to efficiently operate, maintain, repair the storm drainage system and collect and report the information necessary to properly operate system. Table 6-2 and Table 6-3 evaluate Storm Drainage Utility and Vegetation Maintenance Division staff, respectively. Each table evaluates the estimated time to conduct storm drainage system M&O tasks in the manner currently performed. Calculated days for each M&O activity are for a single person performed over an 8-hour "day." Therefore, an activity that is performed quarterly and that requires 4 hours and two M&O staff to complete would result in an annual requirement of 4 days.

Table 6-2. Existing Storm Drainage System Maintenance and Staffing Requirements

Work activity	FTE days required annually	Assumptions/City goal
Catch basin and manhole inspection, cleaning, and repair		
Catch basin inspection	270	Inspect once every 2 years, total of 10,800 catch basins. Perform 40 inspections per day with 2-person crew.
Manhole inspection	79	Inspect once every 4 years, total of 3,172 manholes. Perform 20 inspections per day with 2-person crew.
Catch basin cleaning	68	1 cleaning is required for every 10 inspections. 2-person crew, 0.25 hour each.

Table 6-2. Existing Storm Drainage System Maintenance and Staffing Requirements (continued)

Work activity	FTE days required annually	Assumptions/City goal
Manhole cleaning	32	1 cleaning is required for every 10 inspections. 2-person crew, 0.4 hour each.
Catch basin/manhole repair	155	310 repairs (approximately 5% of all inspected) per year. 2-person crew, 0.5 hours each.
Stormwater pipeline cleaning		
Pipeline cleaning	67	City expects 50,688 ft per year (entire system in 25 years). 2-person crew can clean 1,500 ft of pipe per day.
Stormwater outfall inspection, cleaning, and maintenance		
Inspection/Cleaning	124	City goal is 2 times per year (124 total outfalls). 2-person crew, 2 hours each.
Maintenance	2	City expects 10% of annual outfall inspections to require an additional maintenance visit. 2-person crew, 0.5 hours each.
Maintenance and restoration of drainage ditches, stormwater ponds/swales, and permeable pavement		
Drainage ditch maintenance and restoration	166	City's goal is once every 5 years. 6-person crew, 200 ft per hour.
Stormwater pond and swale maintenance and restoration	28	6-person crew expected to maintain/restore 20% of the ponds and swales within the system per year.
Permeable pavement maintenance and restoration	9	City's goal is 2 times per year (approximately 89,000 square feet). 4-person crew, 0.3 miles per hour.
Stormwater facility inspection		
Stormwater facility inspection	28	City goal is once per year for each facility (approximately 300 total). Includes ponds, swales, vaults, tanks, UIC, LID, and manufactured treatment devices" 1-person crew, 0.75 hours each.
Culvert inspection and cleaning		
Culvert inspection and cleaning	291	City goal of once per year for each of 1,164 culverts. 2-person crew, 1 hour each.
Other stormwater M&O activities		
General facility maintenance and other field tasks	26	1 day per week. 2-person crew, 2 hours each.
Customer service requests/complaints	65	5 requests per week.[a] 2-person crew, 1 hour each.
Utility overhead for routine operations		
FTE total for Routine Operations	1410	
Overhead	141	Assumed 10% of FTE total.
Data entry	130	20 hours per week total (8 people at 0.5 hours per day).

Table 6-2. Existing Storm Drainage System Maintenance and Staffing Requirements (continued)

Work activity	FTE days required annually	Assumptions/City goal
SCIP		
Implementation of SCIP	260	FTE reflects the full-time employee who will be implementing the SCIP. 1 person, 52 weeks per year, 40 hours per week.
Subtotal	1,941	
Total	2,135	Assumes 10% unquantified work
Total number of working days available per FTE	221	365 minus weekends (104), holidays (12), vacation (15), sick (12) and training (1).
Number of FTEs required	9.7	2,135 days required divided by 221 days per FTE year.
Current funded FTEs	10.0	10 full-time staff dedicated to field inspection and maintenance.

Note: FTE = full-time equivalent. FTE days are defined as 8 hours.

a. Many customer service requests are related to maintenance needs for privately owned drainage systems.

Table 6-3. Existing Vegetation Maintenance and Staffing Requirements

Work activity	FTE days required annually	Assumptions/City goal
Pond/Vegetation Management		
Mowing	683	6-person crew, 40 hours per week for 7 months
Weeding/Spraying	152	4-person crew, 20 hours per week for 7 months
Weed Control/Herbicide Spraying		
Weed Control/Herbicide Spraying	59	2-person crew, 3 days per week for 6 months
ROW and Ditch Mowing		
Staff 1	137	40 hours per week for 9 months
Staff 2	49	2 days per week for 8 months
Tree Trimming and Removal		
Tree Trimming and Removal	173	4-person crew, 40 hours per week for 4 months
Leaf Removal		
Leaf Removal	390	2-person crew, 40 hours per week for 12 months
Total	1,641	
Total number of working days available per FTE	221	365 minus weekends (104), holidays (12), vacation (15), sick (12), and training (1).
Number of FTEs required	7.4	1,641 days required divided by 221 days per FTE year
Current funded FTEs	7.6	6.6 FTE 3 seasonal staff

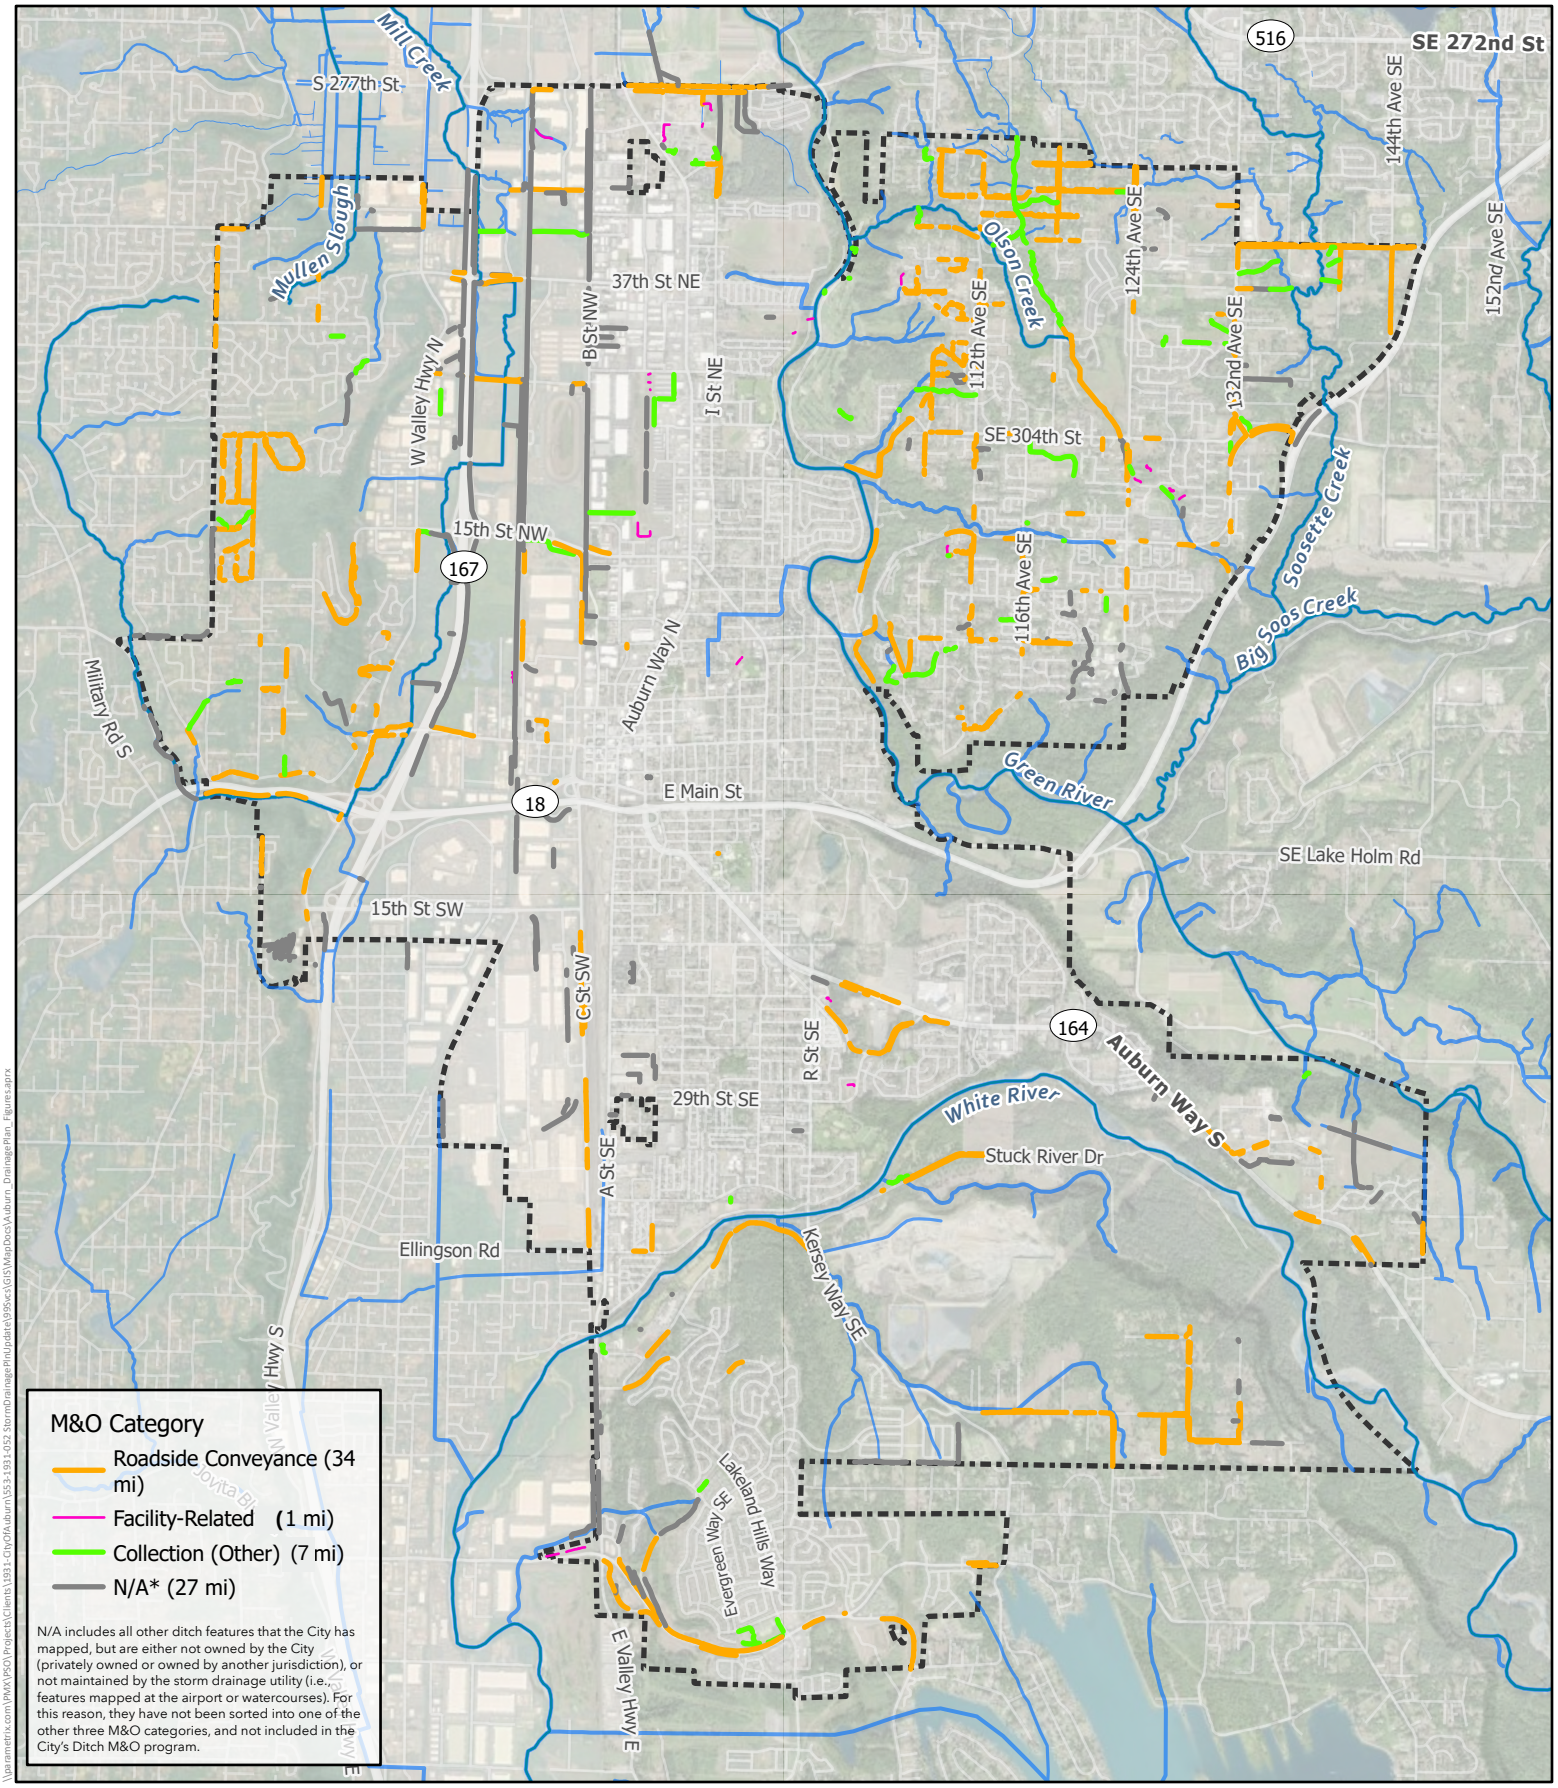
Note: FTE = full-time equivalent. FTE days are defined as 8 hours.

Table 6-2 shows that the Storm Drainage Utility meets the base level of staffing required with respect to meeting current City proactive goals for M&O activities. Additional staffing needs required to implement future regulatory requirements and recommended management activities are discussed in Section 6.6.2. Table 6-3 shows that there is adequate staffing to meet current vegetation maintenance needs of the Storm Drainage Utility.

6.6.2 Future Staffing Requirements and Equipment Needs

The M&O activities discussed in Section 6.2 and summarized in Table 6-2 are current efforts and do not include additional activities that will be required as part of the revised NPDES MS4 permit. In order to implement newly recommended asset management tasks with respect to drainage ditches and pipe inspection (see Table 6-4), additional staffing may be required. Future staffing requirements are summarized in the sections below.

6.6.2.1 Drainage Ditch Maintenance Program



The City's ditch maintenance program was reviewed by Parametrix on behalf of this Plan to determine if additional controls and resources are required to meet needs and address potential liabilities. As a result of the review, it is recommended that the City categorize ditches according to the anticipated M&O needs (roadside ditch, facility-related, and collection [other]) and incorporate inspection as a new aspect in the ditch maintenance program. Figure 6-1 shows the extent of the City's ditch inventory and the recommended categorization according to M&O needs.

Roadside ditches are expected to require constant maintenance. Additional or enhanced actions are not anticipated at this time but could be an outcome of an enhanced maintenance program that could be proposed or required under the NPDES MS4 permit. The collection ditches will require additional routine maintenance, such as annual mowing and sediment removal. Facility-related ditches are recommended to be maintained and inspected with the facilities they are related to. This will require adjusting the City's goal of maintenance frequency.

Inspection will involve field verifying the condition, updating the asset inventory with findings, and generating a work order (as needed). Work orders will ensure the appropriate staff are aware of the issue (M&O, vegetation, office staff, etc.). Features in need of action are prioritized, and that work is scheduled appropriately. The following items will require consideration in incorporating the proposed ditch maintenance program.

- How does inspection turn into a work order?
- How often should ditches be inspected?
- What are the thresholds for action?

Because the inspection process is new, it is expected to take time to understand the staff and time needed as well as to set an achievable goal for inspection of the entire system. To begin to understand the expectation of M&O staff, starting estimates were developed for consideration. For the purposes of this Plan, inspection is anticipated to require a one-person crew to inspect 500 feet of ditch per hour, and it is recommended to inspect all ditches within the program annually. Further, the frequency and resources needed for this program should be evaluated every 5 years.

Figure 6-1
City Drainage Ditch Inventory
Maintenance & Operations (M&O) Categorization
Stormwater Drainage Utility
Comprehensive Storm Drainage Plan

Parametrix | City of Auburn Washington

For the near-term future ditch program, additional analysis and resource streams have been identified. The proposed ditch inspection program and recordkeeping will be initiated. New protocols for finding, adding, mapping, and classifying ditches in the system are needed and should primarily focus on collector and facility ditches. Newly added ditches will require ownership and responsibility research and subsequent easements or purchase. The ditch inspections may reveal system failures that require minor capitol repairs or replacement. The projects should be added as a programmatic CIP. In addition, an assessment to consider ditch improvements for water quality improvement will be prepared, focused on roadside ditches.

The findings and recommendations of the drainage ditch maintenance program have been discussed in further detail in Appendix E.

Taking this into consideration, the City will need to increase the expectation of overall Storm Drainage Utility staffing in order to dedicate more staff to drainage ditch maintenance and restoration (see Table 6-4). It is recommended that the City consider adjusting from the current levels to a regulated biannual basis for maintaining the its ditch inventory. In addition, it would be recommended to inspect the ditch inventory annually to prioritize ditches for maintenance. In order to meet this goal, approximately 363 FTE days (with a six-person crew), or 1.6 FTE per year would be needed (see Table 6-4).

6.6.2.2 Stormwater Pipe Inspection

As explained in Chapter 5.2, the City has a goal to implement an inspection prioritization program for its stormwater pipe system. The program will prioritize inspection for pipes with the highest likelihood of failure scores, which are generally those that are older, have little to no critical attribute data on record, or have no recorded history inspection. As part of the inspection process, feature attributes will be added/updated to the CMMS system, resulting in a robust pipe inventory and a more efficient use of resources. In the beginning of the program, there will be a greater number of pipes with high likelihood of failure scores (approximately 52,000 feet of pipe) since there is a large amount of missing feature data, and approximately 15,000 feet of the City's pipe system per year is expected to have surpassed its expected useful life (see Appendix C).

They City will slowly expand its pipe inspection program as time and finances allow, beginning with periodic use of the Sanitary Sewer Utility's closed-circuit television (CCTV) equipment on an as-needed basis. Since the CCTV equipment will be used as-needed, it is not anticipated to require additional FTE days at this time and has not been included in Table 6-4. Dedicated equipment for the storm utility will be investigated and worked into future budget cycles.

"Lamping" inspections, where the camera is inserted into the manhole or catch basin but not advanced through the pipe system, are typically performed as a first step of the CCTV process. Although the visual range is limited, lamping can identify structures and piping that are in very good condition. In these cases, no additional CCTV inspection would be necessary. Lamping can be utilized in many areas to get a baseline and can be done with current equipment. It is not a full substitute for CCTV inspections but will help get the program going before additional equipment can be purchased.

6.6.2.3 Other M&O Activities

The NPDES MS4 permit requires the City to implement a municipal street sweeping program to target high-priority areas (see Section 5.3). The City will need to review the existing street sweeping program and ensure the permit requirements are addressed or revised, as necessary. The new requirements are not anticipated to require additional FTE days for sweeping crews.

Table 6-4. Future Storm Drainage System Maintenance and Staffing Requirements

Work activity	FTE days required annually	Assumptions/City goal
Drainage ditch maintenance program		
Drainage ditch inspection	55	1-person crew, 500 ft per hour. Inspection of the entire system (~220,000 ft) annually.
Roadside ditch maintenance and restoration	327	6-person crew, 200 ft per hour. Expect to maintain the entire category (79% of drainage ditch inventory) every 2 years.
Collector-ditch maintenance and restoration	79	6-person crew, 200 ft per hour. Expect to maintain the entire category (20% of drainage ditch inventory) every 2 years.
Facility-related ditch maintenance and restoration	20	6-person crew, 200 ft per hour. Expect to maintain (1% of drainage ditch inventory) at the same time as maintenance occurs for the related facility (annually).
Total	530	Assumes 10% unquantified work
Additional FTE required for ditch maintenance and restoration	363	Subtracting the existing staffing goal (166 FTE days) to understand the additional need.
Total number of working days available per FTE	221	365 minus weekends (104), holidays (12), vacation (15), sick (12), and training (1).
Number of FTEs required	1.6	363 days required divided by 221 days per FTE year.

Note: FTE = full-time equivalent

6.6.2.4 Equipment Considerations

The Storm Drainage Utility utilizes the Sanitary Sewer Utility's reallocated CCTV inspection equipment and truck. New equipment would allow for increased efficiency and inspection frequency. It is recommended that the City consider the benefit of acquiring a CCTV for the Storm Drainage Utility after the pipe inspection program has been in effect for 5 years.

6.7 Potential Improvement Opportunities and Capital Needs

The Storm Drainage Utility has a positive track record for M&O, as evidenced by the limited need for non-routine maintenance and few customer service complaints about the City's drainage system. Routine facility cleaning, regular inspections, experienced staff, and a well-planned storm drainage system contribute to that success. Additionally, significant increases to the drainage ditch maintenance and pipeline inspection program could be addressed by the City by adding to the current Storm Drainage Utility M&O staff. An additional 1.6 FTEs are required to achieve proactive City M&O goals (Table 6-4).

Based upon discussions with City staff and analysis of M&O activities discussed in this chapter, the following improvement opportunities are available to the Storm Drainage Utility. These opportunities are based on improving existing services, regulatory compliance, and improving work productivity:

- Continue to integrate asset management with existing utility management software (Cartegraph and GIS).
  - → Continue to add GIS attributes to known Storm Drainage Utility assets.
  - → Perform and document condition assessments. Use defined criteria (such as leaks/cracks observed, cleanliness, and other specific measures), and provide staff training to ensure assessment consistency.
  - → Use results of condition assessments to move toward risk-based maintenance to best utilize staff resources. For example, consistently high assessment scores would result in a lower risk or need for maintenance, allowing M&O staff to be diverted to more essential activities.
  - → Over time, demonstrate (through maintenance records) that a subset of City catch basins do not require inspection, cleaning, and maintenance every 2 years per the NPDES MS4 permit.
- Reevaluate the inspection frequency and expected effort for the pipe inspection and ditch maintenance programs to adjust as needed.
- Consider obtaining a CCTV inspection equipment for pipe inspection the following utility equipment to improve M&O efficiency.
- Consider aligning catch basin cleaning with stormwater pipeline cleaning and CCTV to ensure efficient use of available resources.
- All M&O repair projects should be constructed to established City engineering standards. It is recommended that the City develop a more formal procedure for tracking M&O repair projects to ensure that as-built and GIS records are updated when repairs are completed.
- Develop a list of facilities that should be inspected following major design storms and inspect accordingly to verify proper function and identify damage, if any.
- Document the time and resources required on behalf of the SCIP program. Evaluate the resource need of the program after 5 years. This will allow the City to develop a more accurate estimate of the required FTE for implementation of the SCIP.
- Continue to develop the ditch maintenance program as broken down in the steps below.
  - → Ditch mapping and classification: Develop protocols for finding, adding, mapping, and classifying ditches within the system. Focus primarily on collector and facility ditches. Accurate mapping and classification will help prioritize maintenance efforts.
  - → Adding new ditches: Consider the steps required when adding new ditches to the system. Elements to address include determining ownership, responsibility, and any necessary easements or land purchases. Having a clear plan in place ensures smooth integration of new ditches.
  - → System failures and CIP: Use the results of regular ditch inspections to identify system failures. System failures may include erosion, blockages, or other issues that require capital repair or replacement. Add a program to the CIP to address ditches with these system failures.

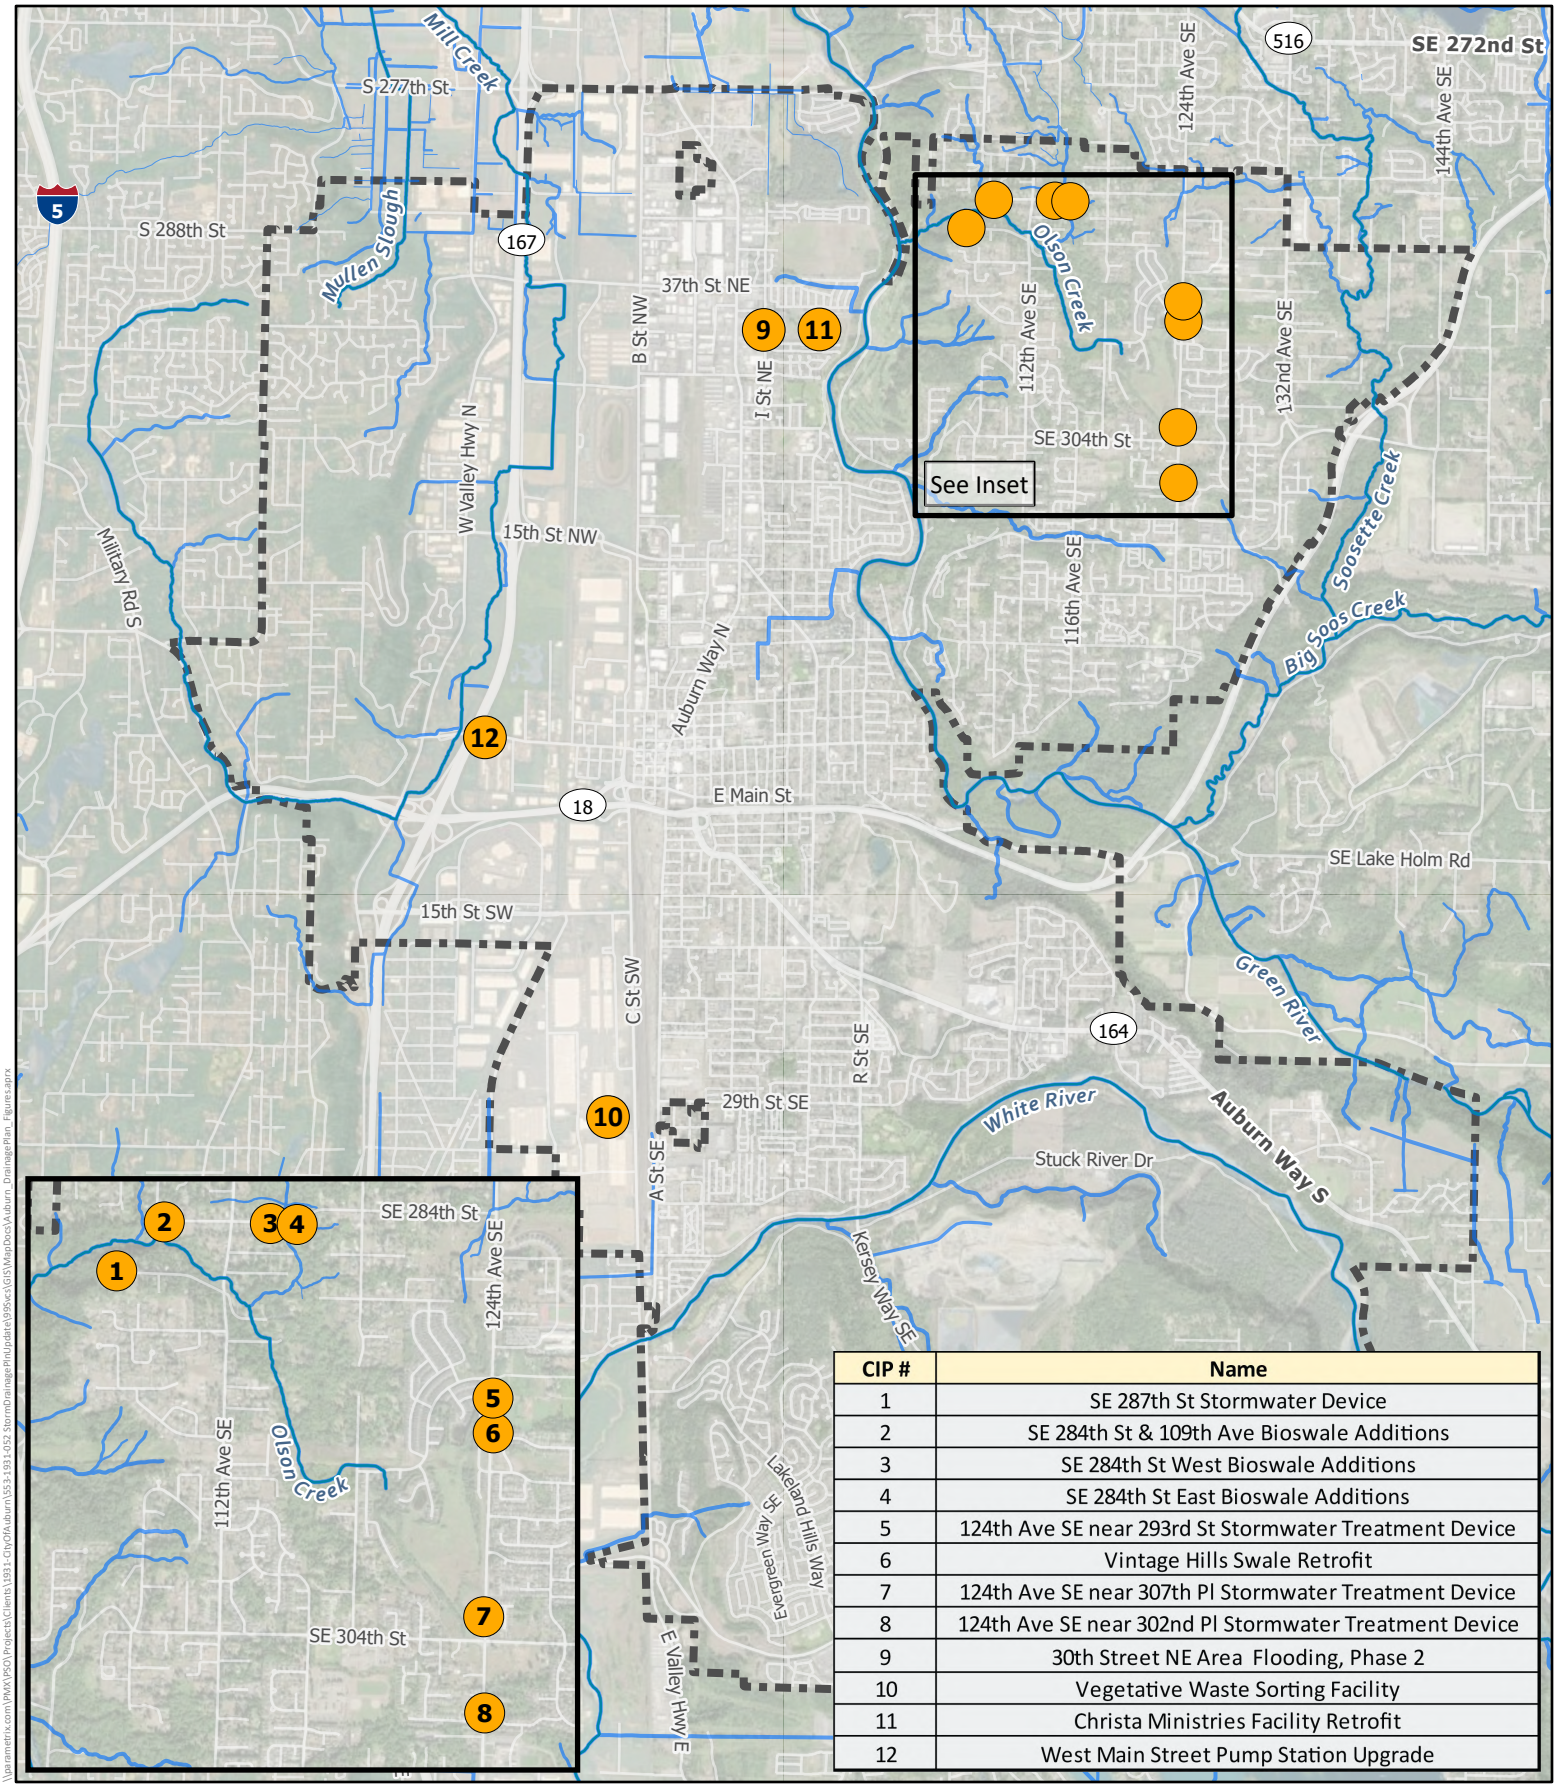
- → Water quality improvements: Implement a program that focuses on retrofitting ditches with water quality enhancements. Specifically target roadside ditches, which play a crucial role in managing runoff and pollutant removal.

- Coordinate with the Street division to review and revise the City's street sweeping plan, as needed.

7. Capital Improvements

This chapter describes the recommended capital improvement plan for the City of Auburn Storm Drainage Utility. Of the 12 CIPs described in this chapter, 4 are included in the 6-year plan (2025–2030) and 8 are included in the 20-year plan (2031–2044). The 6-year plan includes the highest priority CIPs that address existing drainage problems, address an ongoing waste disposal issue, and ensure compliance with NPDES MS4 permit deadlines. The 20-year plan addresses longer-term capital goals (see Chapter 8). This Plan contains timeframes that are the intended framework for future funding decisions and within which future actions and decisions are intended to occur. However, these time frames are estimates and, depending on factors involved in the processing of applications and project work and the availability of funding, the timing may change. The framework, which may depend on available funding resources, does not represent actual commitments by the City of Auburn.

In general, CIPs are modifications to stormwater drainage infrastructure designed to improve the condition and function of the drainage system so that it can meet the LOS goals established for the City's Storm Drainage Utility (see Chapter 3). CIPs may also be developed to ensure the utility is able to carry out routine operations and ensure compliance with permit requirements.



The CIPs presented in this chapter were identified and developed through focused investigations and by working collaboratively with City staff. This focused and collaborative approach was based on the practical consideration that the quantity and delivery of CIPs the City can implement is limited by existing revenue streams and staff availability. The intent is to produce an economical capital improvement plan that addresses the most salient issues in the near term, while still planning for the long-term ability of the Storm Drainage Utility to meet LOS goals. The following steps were used to develop the CIPs.

A list of potential projects was developed for further investigation. The list was developed by working closely with City staff to identify the delayed projects from the 2015 Plan that were still necessary or beneficial to the Utility, locate and characterize existing problems based on direct staff observations, recognize potential opportunities for enhancement, and address needs of the utility. Projects that were generated on behalf of the SMAP for Olsen Creek were also included in this list. Such observations are a valuable supplement to modeling analyses and, in this case, were used in conjunction with modeling activities to assist with model development.

For the potential projects that required H&H analyses, modeling was completed using PCSWMM, a software package that uses GIS technology to import and export data, allowing a seamless transition between the system inventories and modeling input files. Models used the historical event that most closely produced a once per 25-year flow rate (the specific event varied by basin). Results from historical events were used to assess the extent and severity of the drainage problem. Results from the design event were used to understand the feasibility of the potential project in mitigating the drainage problem.

Potential projects were developed and discussed with members of the City staff to identify the most viable alternative/solution. Potential projects were then evaluated based on their potential benefit and feasibility, and a final list was developed. Once the projects were defined, the project team developed concept-level cost estimates.

An overview of project locations is shown in Figure 7-1. Section 7.1 describes a tiered method for establishing project priorities. Section 7.2 presents detailed descriptions of CIPs. Section 7.3 describes programmatic drainage projects.

7.1 Project Prioritization

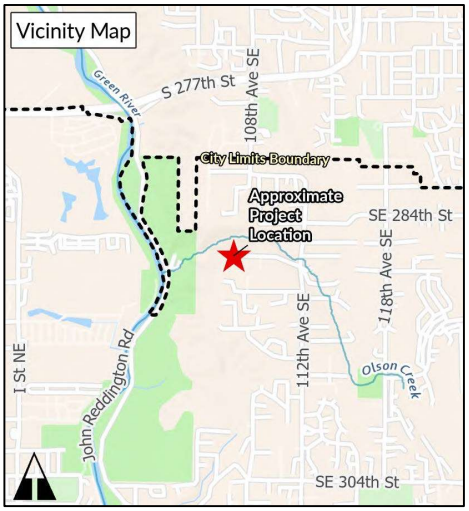
Storm Drainage Utility staff prioritized CIPs by grouping them into one of three tiers. Projects in the top tier, or highest priority, are classified as tier 1. Projects with medium priority are classified as tier 2. And projects with lowest priority relative to the other projects are considered tier 3.

The following items were considered when prioritizing the CIPs:

- The magnitude of the LOS gap that would be addressed by a CIP. For example, a project that rectifies an annual flooding problem would rank higher than a project in a different area that eliminates less frequent flooding.
- The reduction in risk and reduction in consequences associated with a CIP. For example, the consequence of flooding that occurs near critical facilities (e.g., hospital or fire station) or along major arterial streets may be larger than flooding along residential streets. A CIP that addresses a larger consequence would rank higher.
- The opportunity for coordination with ongoing City of Auburn street improvements or other utility or transportation projects. Coordinated projects that reduce the overall cost of a CIP would rank higher.
- The capital funding capacity of the Storm Drainage Utility. The overall list of project priorities attempts to balance the need for action with the funding and implementation capacity of the Storm Drainage Utility.
- The action deadlines necessary for compliance with the NPDES MS4 permit.
- Other considerations with the potential to improve water quality, reductions in maintenance, and increased reliability of the system.

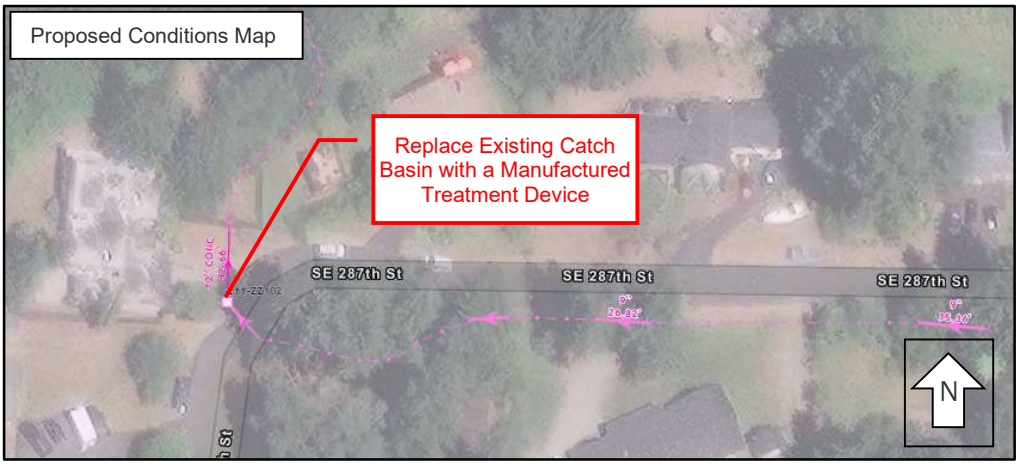
Priorities for each project are included in each project description in the following sections. Project priority and budgetary constraints were considered together in developing the year-by-year schedules for project implementation in the 6- and 20-year capital improvement plans (see Chapter 8).

7.2 Proposed Capital Improvement Projects



CIPs described in this section were developed as part of this Plan and are described in sufficient detail to allow the City to proceed with budgeting and design. Project descriptions are organized into summaries containing the following information:

- Project number: CIP numbers generally assigned to align with the number given in the SMAP (as applicable) for consistency.
- Project name: A short, descriptive name assigned to each project.
- Project type: A brief description of the specific type of project being undertaken, used to categorize and identify the purpose or focus of the project.
- Location: A simple description of the project location, such as the cross streets.
- Existing and proposed use: A summary of the existing and proposed site conditions.
- Drainage basin: The receiving water drainage basin where the project is situated.
- Tributary drainage area: Area (in acres) that drains to the project (as applicable).
- Total cost: The estimated cost of the project, based on the attached opinion (estimate) of probable cost.



- Project description: A description of the proposed project, including major project elements and sizes.
- Site opportunities: The anticipated opportunities and benefits of the project.
- Site challenges: The anticipated challenges in undertaking the project.
- Opinion (estimate) of probable cost: A list of estimated costs, including construction costs, engineering and administrative costs, taxes, and contingency costs. The estimate was developed based on the conceptual design, preliminary quantity take-offs, and estimated unit costs. Estimated unit costs were based on bids from the WSDOT Unit Bid Tab, vendor quotes, and escalated project costs from recent projects with similar components.
- Vicinity map: A figure showing the location of the project relative to the City of Auburn.
- Proposed conditions figures: Figures showing the conceptual design and location of project elements.

CIP summaries and cost opinions are presented on the following pages.

CIP 1 – SE 287th Street Stormwater Device
6-Year Capital Improvement Plan (Priority 1)

RETROFIT TYPE
Road retrofit
Manufactured treatment device

LOCATION
At the end of SE 287th Street

EXISTING USE
ROW

PROPOSED USE
ROW with enhanced runoff treatment

DRAINAGE BASIN
Olson Creek

TRIBUTARY DRAINAGE AREA
7.3 acres total
2.0 acres impervious

TOTAL COST (2024 DOLLARS)
$427,000

Project Description

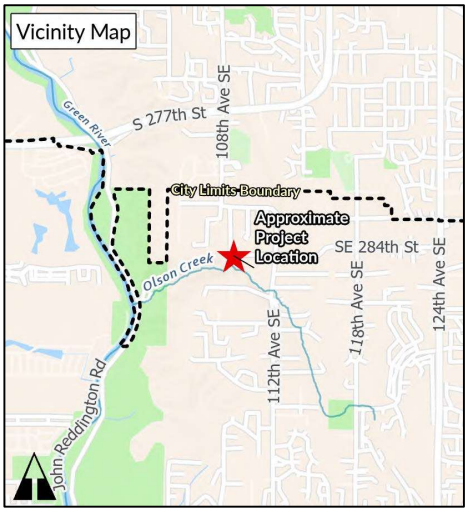
This project is proposing to replace the existing Type 1 catch basin with a stormwater treatment technology reviewed and certified by the Washington state Technology Assessment Protocol – Ecology (TAPE) program to provide 7.3 acres with enhanced water quality treatment. This project would provide treatment for approximately 700 linear feet of roadway. The catch basin replacement will likely be low complexity since there is existing infrastructure in place and traffic control needs will be low. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- Low traffic control requirements.

Site Challenges

- Water quality only, no flow control.
- Need site survey to confirm catch basin is located within City ROW.



Opinion (Estimate) of Probable Cost

CIP 2 – SE 284th Street & 109th Avenue SE Bioswale Additions

20-Year Capital Improvement Plan (Priority 3)

RETROFIT TYPE
Road retrofit
New bioswales

LOCATION
SE 284th Street and 109th Avenue SE

EXISTING USE
ROW (vegetated and gravel driveway)

PROPOSED USE
ROW with basic runoff treatment

DRAINAGE BASIN
Olson Creek

TRIBUTARY DRAINAGE AREA
20.6 acres total
3.0 acres impervious

TOTAL COST (2024 DOLLARS)
$143,000

Project Description

This project will retrofit a section of SE 284th Street by adding two bioswale ditch enhancements. The bioswales will provide basic water quality treatment to 20.6 acres, including approximately 2,300 linear feet of roadway. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- Treatment can be situated within ROW.
- Provides some flow control.

Site Challenges

- Clearing and grubbing required.

PROPOSED USE
ROW with enhanced runoff treatment

DRAINAGE BASIN
Olson Creek

TRIBUTARY DRAINAGE AREA
14.1 acres total
2.4 acres impervious

TOTAL COST (2024 DOLLARS)
$581,000

Project Description

This project will retrofit a section of 124th Avenue SE by replacing existing Type 1 catch basins with TAPE-approved manufactured treatment devices. The manufactured treatment devices will provide enhanced water quality treatment to 14.1 acres, including approximately 800 linear feet of roadway. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- Provides enhanced stormwater treatment for a high traffic roadway.

Site Challenges

- May be constrained by outlet height.
- Coordination with other utilities.

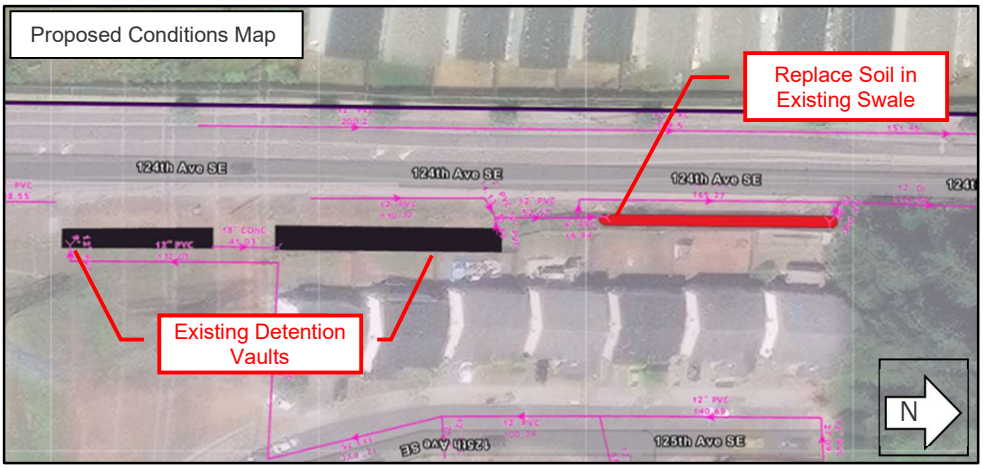
					TOTAL PROJECT COST	**$581,000**

CIP 6 – Vintage Hills Swale Retrofit
20-Year Capital Improvement Plan (Priority 1)

RETROFIT TYPE
Existing facility retrofit
Swale soil amendment

LOCATION
Along 124th Avenue SE



EXISTING USE
Bioswale

PROPOSED USE
Bioretention swale with enhanced treatment

DRAINAGE BASIN
Olson Creek

TRIBUTARY DRAINAGE AREA
5.0 acres total
1.1 acres impervious

TOTAL COST (2024 DOLLARS)
$264,000

Project Description

This project is proposing to amend the soil in the existing Vintage Hills swale. The soil will be replaced from conventional soil to bioretention soil to provide enhanced treatment for 5.0 acres. Rock check dams may be required throughout the length of the swale to ensure infiltration occurs to provide treatment. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- Upgrading vintage basic treatment to enhanced treatment.

Site Challenges

- Water quality only, no flow control (though flow control is provided by the detention vaults).

Opinion (Estimate) of Probable Cost

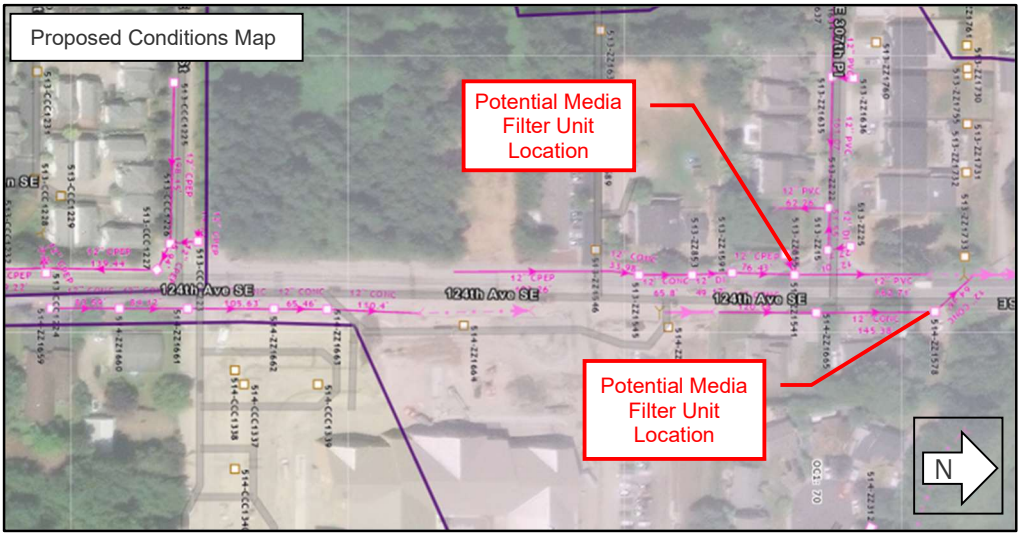
CIP 7 – 124th Avenue SE near SE 307th Place Stormwater Treatment Device

20-Year Capital Improvement Plan (Priority 2)

RETROFIT TYPE
Road retrofit
Manufactured treatment device

LOCATION
124th Avenue SE near SE 307th Place



EXISTING USE
Untreated ROW

PROPOSED USE
ROW with enhanced runoff treatment

DRAINAGE BASIN
Olson Creek

TRIBUTARY DRAINAGE AREA
5.9 acres total
1.4 acres impervious

TOTAL COST (2024 DOLLARS)
$531,000

Project Description

This project will retrofit a section of 124th Avenue SE by replacing existing Type 1 catch basins with TAPE-approved manufactured treatment devices. The manufactured treatment devices will provide enhanced water quality treatment to 5.9 acres, including approximately 1,200 linear feet of roadway. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- Provides enhanced stormwater treatment for a high traffic roadway.

Site Challenges

- May be constrained by outlet height.
- Coordination with other utilities.
- Traffic control requirements.

Opinion (Estimate) of Probable Cost

CIP 9 – 30th Street NE Area Flooding, Phase 2
20-Year Capital Improvement Plan (Priority 3)

RETROFIT TYPE
Road retrofit
Upgraded conveyance system

LOCATION
East of I Street NE between 32nd Street NE and 35th Street NE

EXISTING USE
Conveyance system

PROPOSED USE
New conveyance system and upgraded pipe

DRAINAGE BASIN
Mill Creek and Green River

TRIBUTARY DRAINAGE AREA
Unknown

TOTAL COST (2024 DOLLARS)
$1,186,000

NOTES
Cost, design, figures, and description completed by Brown & Caldwell in 2015. Cost and description updated by Parametrix per City comments

Project Description

The north-central area of Auburn has a history of surface flooding with street flooding occurring once every few years. The residential development east of I Street NE between 32nd Street NE and 35th Street NE discharges flows into a City-owned infiltration area. The infiltration area commonly experiences prolonged periods of standing water due to high groundwater from extended high flows in the Green River, which is adjacent to the infiltration area. The drainage system on I Street NE currently lacks infrastructure to collect and convey stormwater away from the infiltration area, as well as residential roadways and parking area. Ponding occurs within the parking areas of the developments and presents a nuisance and potential hazard to local residents.

This project is Phase 2 of a three-phased capital improvement project (Relieve 30th Street NE Area Flooding) from the 2015 Comprehensive Stormwater Drainage Plan. The goal of the 2015 CIP was to increase the capacity of the 30th Street NE system to reduce flooding along 30th Street NE and to provide capacity to connect other flooding drainage systems (C Street NE and I Street NE). The implementation of this CIP is occurring in phases, as funding, staff availability, and priorities allow. The first phase (30th Street NE Area Flooding, Phase 1) was scheduled for construction in 2015/2016. The next phase, referred to as CIP 9 in this Plan, is scheduled for the 2031–2044 timeframe.

This project would address the flooding adjacent to I Street NE. This project would locate a storm drain line to capture stormwater from the two residential developments currently discharging stormwater to the City's infiltration area. In addition, this project would construct a new storm drain within I Street NE southward to connect into the 42-inch-diameter storm drain (constructed as part of the 30th Street NE Area Flooding project, Phase I, from the 2015 Plan) near the intersection of I Street NE and 30th Street NE. The 42-inch-diameter line will have sufficient available capacity to convey the I Street NE flows.

Site Opportunities

- Public drainage infrastructure will be designed and maintained so that the annual chance of a flooding disruption that inundates the city roadways to an impassable level occurs no more than once every 25 years.
- Public drainage infrastructure will be designed and maintained so that the annual chance of occurrence of flooding (surface water from ROW runoff entering premises and damaging building structures) will occur no more than once every 50 years.

Opinion (Estimate) of Probable Cost

CIP 10 – Vegetative Waste Sorting Facility

6-Year Capital Improvement Plan (Priority 3)

RETROFIT TYPE
New waste sorting facility

LOCATION
GSA site

EXISTING USE
Shared open space

PROPOSED USE
Waste sorting facility for plant/organic material pulled from conveyance and treatment systems and facilities

DRAINAGE BASIN
White River

TRIBUTARY DRAINAGE AREA
N/A

TOTAL COST (2024 DOLLARS)
$200,000

NOTES
Cost, design, figures, and description completed by Brown & Caldwell. Cost and description updated by Parametrix per City comments.

Project Description

The Storm Drainage Utility is responsible for the M&O of the storm drainage system. Pond and drainage ditch maintenance and rehabilitation involves removal of plant material and sediments, which are considered non-hazardous and are suitable for recycling. During fall and winter, debris from storm cleanups also yield materials suitable for recycling. The Storm Drainage Utility currently uses the City-owned Jacobson Tree Farm property for storing and drying of these materials prior to hauling off-site for recycling. The property is owned by the Parks Department and is scheduled to be repurposed, precluding its use for ongoing M&O activities.

This project addresses the need for a new site to sort, dry, and store materials removed from drainage ditches, swales, and ponds during maintenance and restoration activities necessary to maintain the storm drainage system. The project property is being sourced from existing land owned by the City. The cost to develop the property and purchase equipment are represented in the project cost.

Site Opportunities

- The City shall seek to maintain storm drainage infrastructure to ensure proper function of drainage facilities in accordance with Ecology requirements.

Site Challenges

- Coordination with other users of the site.

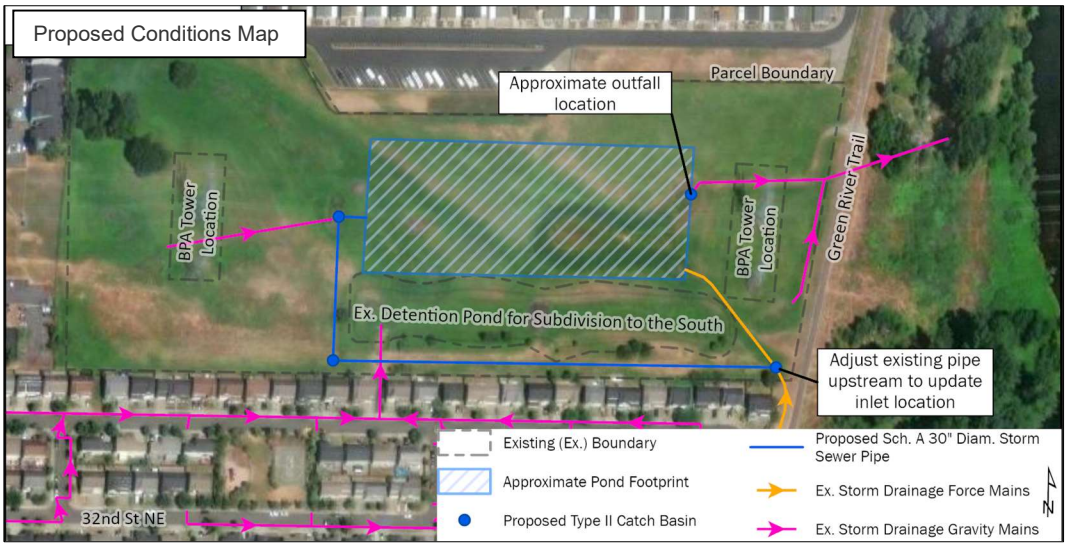
CIP 11 – Christa Ministries Facility Retrofit

20-Year Capital Improvement Plan (Priority 3)

RETROFIT TYPE
Existing facility retrofit
New water quality pond

LOCATION
Christa Ministries property



EXISTING USE
Bioswale

PROPOSED USE
Enhanced water quality treatment pond

DRAINAGE BASIN
Green River

TRIBUTARY DRAINAGE AREA
377 acres total
242 acres impervious

TOTAL COST (2024 DOLLARS)
$2,906,000

Project Description

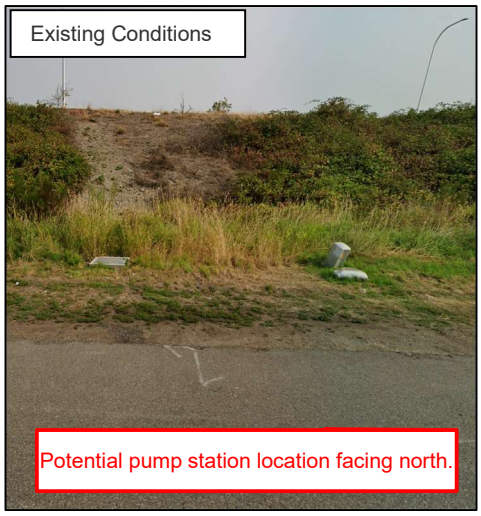
This project proposes retrofitting an existing stormwater swale to an enhanced water qualtiy treatment pond. The pond would be sized based on current enhanced treatment standards for 377 acres of contributing area before discharging into the Green River. Final size, placement, and configuration of the project components may be adjusted as the design progresses.

Site Opportunities

- The location may be suited to provide educational signage due to surrounding residential areas and the Green River Trail to the east.
- Provides enhanced water quality treatment of stormwater from large contributing drainage area based on current standards.

Site Challenges

- Adjacent utilities will likely require coordination (sewer, water, gas, and communications) and may constrain placement locations of the treatment systems.
- Field verification of stormwater infrastructure will be necessary to ensure project feasibility.
- Verification of inlet and outlet pipe elevations will need to be verified to determine feasibility.
- Coordination with BPA easement will be needed.
- A condition assessment of the existing storm pipe at the proposed outfall will be required to evaluate whether repair or replacement will be necessary.
- A wetland impact mitigation analysis will be needed.



Opinion (Estimate) of Probable Cost

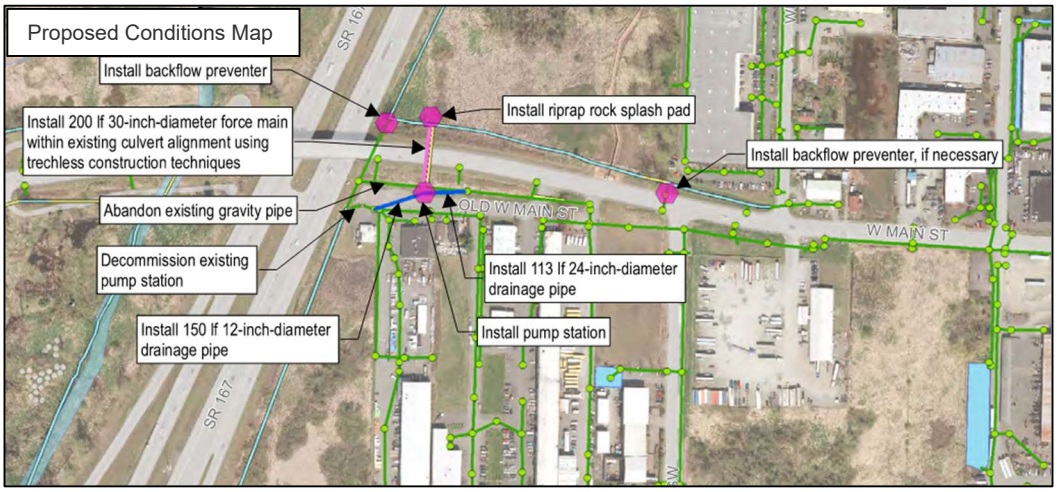
CIP 12 – West Main Street Pump Station Upgrade
6-Year Capital Improvement Plan (Priority 1)

RETROFIT TYPE
Existing facility retrofit
Pump station upgrade



LOCATION
South of West Main Street, east of the SR 167 overpass

EXISTING USE
Pump station

PROPOSED USE
Upgraded pump station

DRAINAGE BASIN
Mill Creek

TRIBUTARY DRAINAGE AREA
N/A

TOTAL COST (2024 DOLLARS)
$3,929,000

NOTES
Cost, design, figures, and description completed by Brown & Caldwell. Cost and description updated by Parametrix per City comments.

Site Opportunities

This project consists of building a new pump station sized to convey the peak 25-year flow rate with multiple pumps to meet the pump redundancy LOS. The new pump station would convey all flows from the gravity pipe on the north and south sides of Old West Main Street. The pump station and its associated area pipes will be reassessed for overall function and purpose. A new design for the pump station will be created that will allow for adequate pumping capacity and a new discharge location that will alleviate backflow flooding from Mill Creek and its drainage ditches.

Site Opportunities

- Meet pump redundancy LOS goal.
- Address history of local flooding.

Site Challenges

- May require post-construction monitoring to determine whether an additional backflow preventer is warranted.
- Discharges to WSDOT ditch may require additional coordination with WSDOT.

Opinion (Estimate) of Probable Cost

7.3 Programmatic Drainage Projects

To ensure an adequate level of utility funding in the future, the City must consider longer-range programmatic efforts to maintain and/or improve storm drainage service. Table 7-1 lists programmatic projects that should be included in the Storm Drainage Utility budget. These projects are not linked to any specific problem or location, but are included for budgetary purposes. By itemizing these activities, the Storm Drainage Utility can track actual costs to compare with budgeted costs and specifically track how these expenditures address the LOS goals listed in Chapter 3. The items listed in the table below are distributed between the 6- and 20-year CIPs in Chapter 8.

Table 7-1. Summary Programmatic Drainage Projects

Project Number	Program Name	Description	Priority	Total Project Cost (2024 dollars)
13	Street Utility Improvements	The Storm Drainage Utility will seek opportunities to incorporate drainage improvements into transportation and pavement projects on City roads. A significant portion of storm drainage costs related to projects make improvements to the street network are incurred by the City's Transportation Program.	2	$5,200,000
14	Frame & Grate Replacement	As manholes and catch basins age and their condition deteriorates, frame and grates can become loose and/or misoriented or, due to age, are no longer meeting standards. This annual project will replace approximately 50 storm manhole and catch basin frame and grates to maintain access to the storm system and decrease the likelihood of the manholes becoming road hazards. In some years, this replacement will be a stand-alone project, and in some years, many of these replacements will be in conjunction with other City projects.	2	$1,700,000
15	Storm Drainage Infrastructure Repair & Replacement Program	This program addresses the need to repair or replace storm drainage infrastructure, such as individual pipes, pump station repair and maintenance, and pond improvements. The long-term priorities for R&R should be developed by adhering to the City's system goals regarding the maintenance of a criticality database and the prioritized assessment of critical infrastructure.	1	$14,400,000
16	Storm Pipeline Extension Program	Program to extend stormwater infrastructure into areas lacking infrastructure or where known stormwater issues occur.	3	$7,450,000

Note: All costs are in 2024 dollars.

8. Implementation Plan

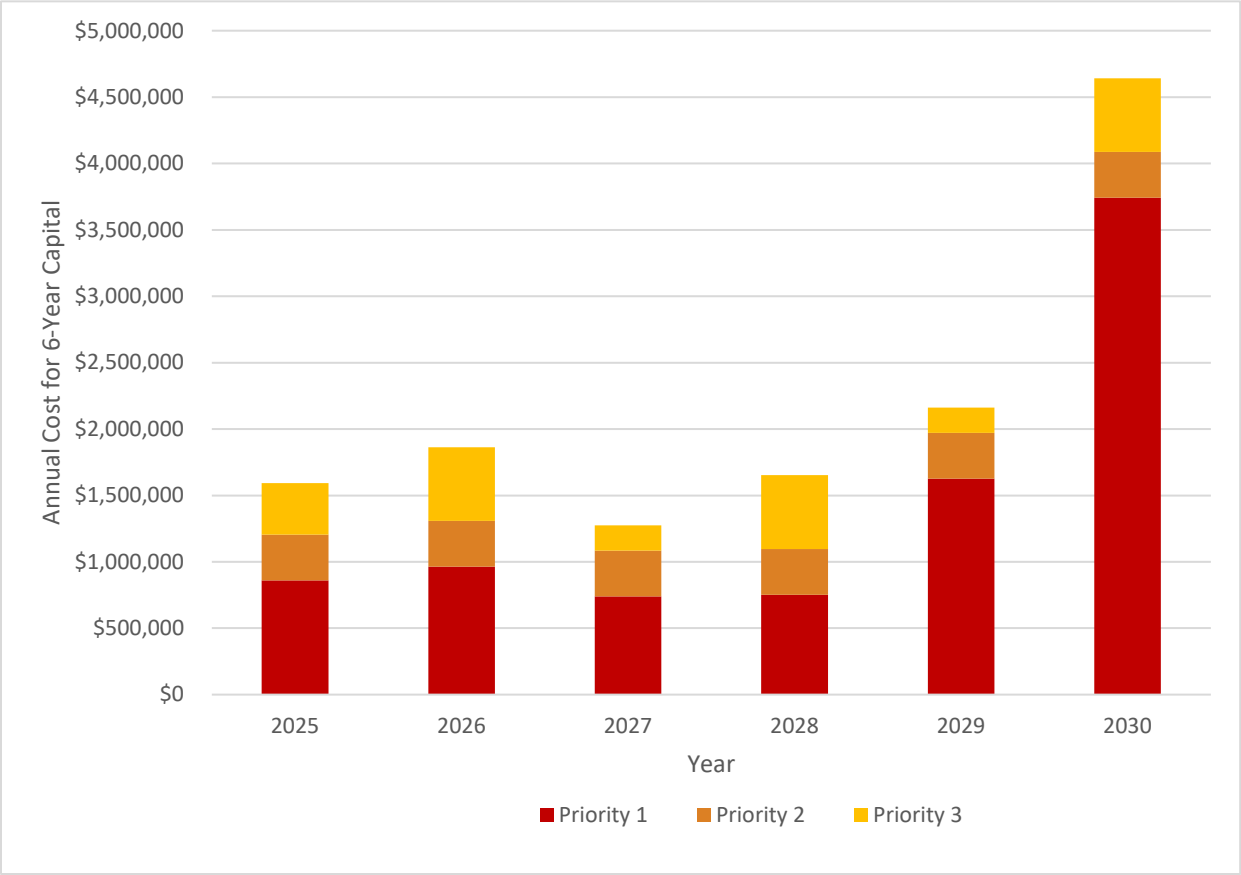
This chapter presents the implementation plan, which brings together information from the preceding chapters of this 2024 Comprehensive Storm Drainage Plan to form a work plan of future activities for the Storm Drainage Utility. The information in this chapter serves as a road map to the Storm Drainage Utility staff. This road map outlines the critical elements of plan implementation (e.g., capital improvement plan implementation, NPDES MS4 permit compliance, future staffing, asset management, drainage ditch maintenance program, climate change, etc.) and links them into a schedule of utility activities.

The implementation plan is divided into five main sections:

- Section 8.1 presents the capital improvement plan for both 6-year and 20-year time frames.
- Section 8.2 contains a summary of activities for NPDES MS4 permit compliance.
- Section 8.3 presents recommendations for future staffing and M&O activities.
- Section 8.4 summarizes the recommendations for continuing the implementation of best practices for asset management.
- Section 8.5 lists recommendations for additional activities that help the Storm Drainage Utility achieve the system goals.

The foldout chart (Figure 8-3) at the conclusion of this chapter shows the proposed implementation timeline. Appendix F provides the SEPA determination for the implementation plan.

8.1 6-Year and 20-Year Capital Improvement Program



The 6-year CIP contains near-term capital improvement projects focused on mitigating critical existing drainage problems that have been observed and are well understood by the City's staff, addressing an ongoing waste disposal issue and ensuring compliance with NPDES MS4 permit requirements. These projects are described in detail in Chapter 7. In addition to site-specific projects, the 6-year CIP contains ongoing programmatic efforts, such as the Storm Drainage Utility's participation in the Street Utility Improvement program, which is a program designed to complete storm repairs and replacements in conjunction with transportation projects. Table 8-1 lists the short-term capital improvement projects and programs described in Chapter 7 and lays out annual expenditures for the 6-year capital improvement time frame. Project timing is based on project priorities weighed with likely budgetary constraints such that costs are distributed somewhat evenly from year to year (see Table 8-1 and Figure 8-1).

Table 8-1. Annual Cost Summary for 6-Year Capital Improvement Plan

Project Number	Project Name	Priority	Repair/ Replacement	Upgrade/ Expansion	2025	2026	2027	2028	2029	2030	6-Year Cost
1	SE 287th Street Stormwater Device	1	0%	100%	$139,000	$243,000	$0	$0	$0	$0	$382,000
3	SE 284th Street West Bioswale Additions	1	0%	100%	$0	$0	$20,000	$32,000	$0	$0	$52,000
10	Vegetative Waste Sorting Facility	3	90%	10%	$200,000	$0	$0	$0	$0	$0	$200,000
12	West Main Street Pump Station Upgrade	1	25%	75%	$0	$0	$0	$0	$907,000	$3,022,000	$3,929,000
13	Street Utility Improvements	2	100%	0%	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$1,560,000
14	Frame & Grate Replacement	2	100%	0%	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$510,000
15	Storm Drainage Infrastructure Repair & Replacement Program	1	100%	0%	$720,000	$720,000	$720,000[a]	$720,000[a]	$720,000	$720,000	$4,320,000
16	Storm Pipeline Extension Program	3	0%	100%	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$2,235,000
	Total 6-year CIP cost for priority 1 projects/programs:				$859,000	$963,000	$740,000	$752,000	$1,627,000	$3,742,000	$8,683,000
	Total 6-year CIP cost for priority 2 projects/programs:				$345,000	$345,000	$345,000	$345,000	$345,000	$345,000	$2,070,000
	Total 6-year CIP cost for priority 3 projects/programs:				$390,000	$555,000	$190,000	$555,000	$190,000	$555,000	$2,435,000
	Total 6-year cost:				$1,594,000	$1,863,000	$1,275,000	$1,652,000	$2,162,000	$4,642,000	$13,188,000

Note: All costs are in 2024 dollars.

[a] Funding includes budget for implementing CIP 6 following updated requirements from the 2024 NPDES MS4 permit.

Note: All costs are in 2024 dollars.

Figure 8-1. Annual Costs for 6-Year Capital Improvement Plan

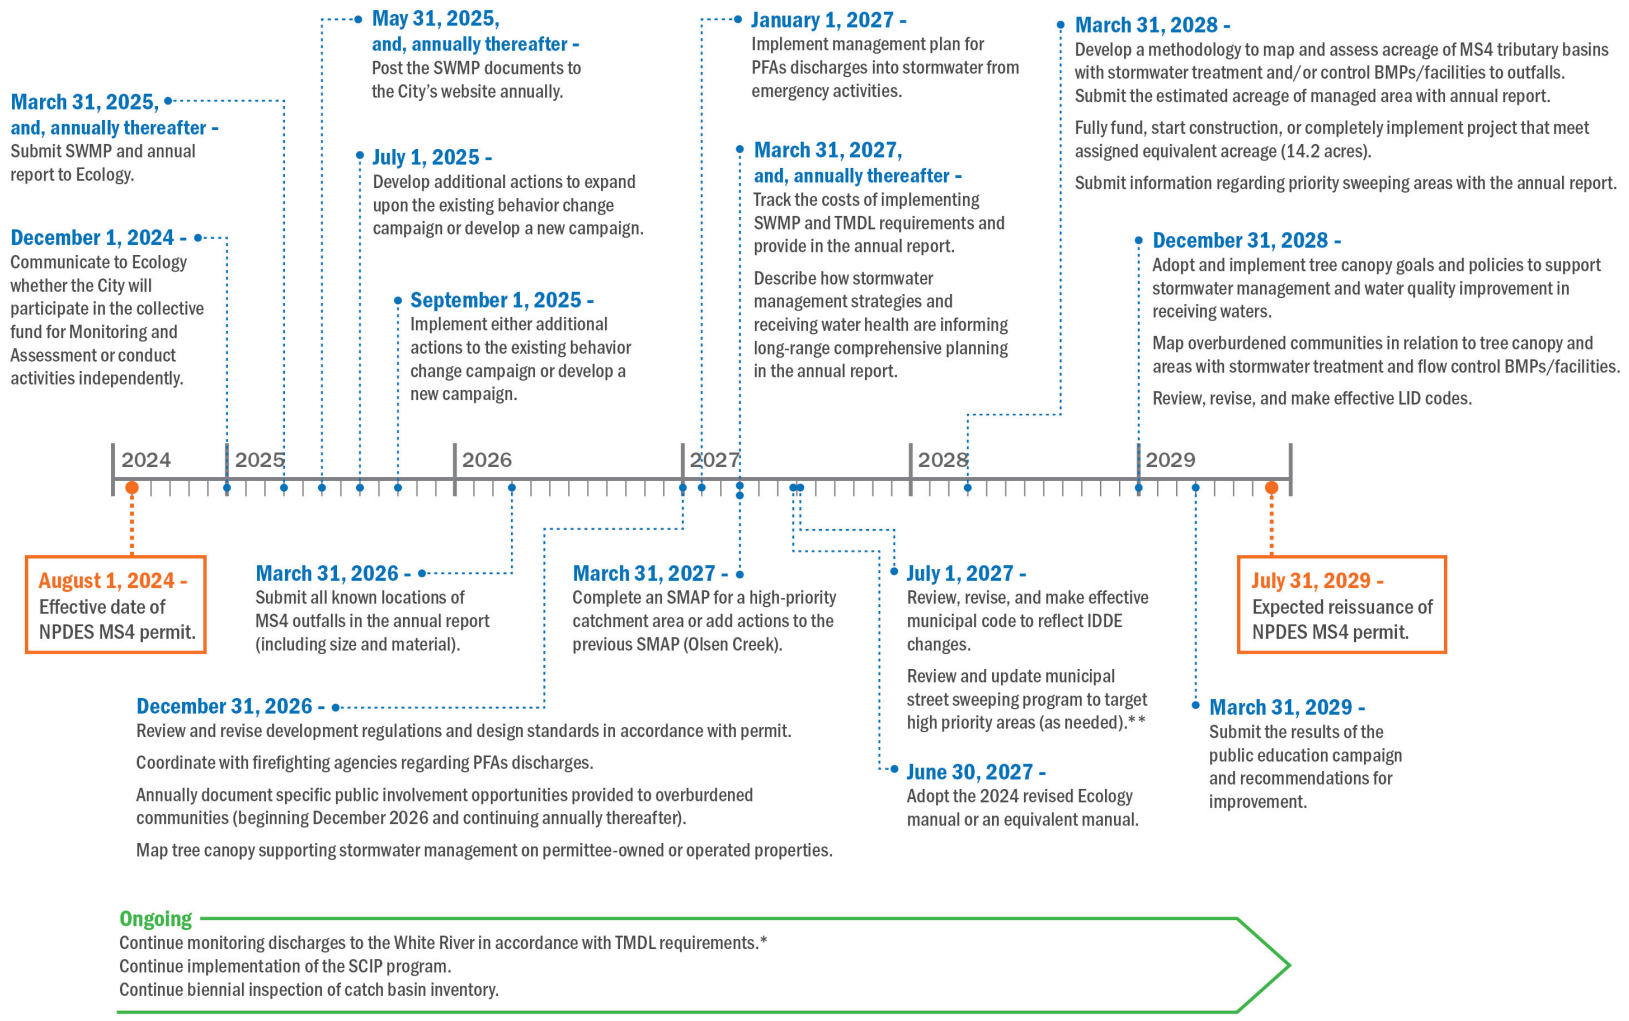
After high-priority drainage problems are addressed, the City will be able to focus on the remaining projects described in Chapter 7. In addition, the City will continue to emphasize the management of existing storm drainage assets to ensure that LOS goals are continuously met. Table 8-2 summarizes the program expenditures and forecasts total capital improvement costs for the years 2031 to 2044.

In addition to the identified projects and programs, the Storm Drainage Utility will be involved in several ongoing system updates and capital facilities plan (CFP) projects that will require the utility's time and expenditures. Additional detail regarding these items are provided in Section 8.5.

Table 8-2. Capital Improvement Cost Summary for 2031–2044

Project Number	Project Name	Priority	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	Cost for 2031–2044
2	SE 284th Street & 109th Avenue Bioswale Additions	3													$55,000	$88,000	$143,000
4	SE 284th Street East Bioswale Additions	3													$11,000	$17,000	$28,000
5	124th Avenue SE near SE 293rd Street Stormwater Treatment Device	2									$225,000	$356,000					$581,000
6	Vintage Hills Swale Retrofit	1	$95,000[a]	$169,000[a]													$264,000
7	124th Avenue SE near SE 307th Place Stormwater Treatment Device	2					$205,000	$326,000									$531,000
8	124th Avenue SE near SE 302nd Place Stormwater Treatment Device	2							$205,000	$326,000							$531,000
9	30th Street NE Area Flooding, Phase 2	3											$198,000	$988,000			$1,186,000
11	Christa Ministries Facility Retrofit	1			$774,000	$2,132,000											$2,906,000
13	Street Utility Improvements	2	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$260,000	$3,640,000
14	Frame & Grate Replacement	2	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$85,000	$1,190,000
15	Storm Drainage Infrastructure Repair & Replacement Program	1	$720,000[a]	$720,000[a]	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$10,080,000
16	Storm Pipeline Extension Program	3	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$5,215,000
Total 2031–2044 cost for priority 1 projects/programs:			$815,000	$889,000	$1,494,000	$2,852,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$720,000	$13,250,000
Total 2031–2044 cost for priority 2 projects/programs:			$345,000	$345,000	$345,000	$345,000	$550,000	$671,000	$550,000	$671,000	$570,000	$701,000	$345,000	$345,000	$345,000	$345,000	$6,473,000
Total 2031–2044 cost for priority 3 projects/programs:			$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$190,000	$555,000	$388,000	$1,543,000	$256,000	$660,000	$6,572,000
Total 2031–2044 cost for projects/programs:			$1,350,000	$1,789,000	$2,029,000	$3,752,000	$1,460,000	$1,946,000	$1,460,000	$1,946,000	$1,480,000	$1,976,000	$1,453,000	$2,608,000	$1,321,000	$1,725,000	$26,295,000

Note: All costs are in 2024 dollars.



[a] CIP 6 will be funded earlier (2027–2028) to comply with requirements from the 2024 NPDES MS4 permit. Projected cost to implement CIP 6 in 2027 and 2028 will be added back to the budget for the Storm Drainage Infrastructure Repair & Replacement Program in 2031 and 2032.

8.2 Programmatic Measures for NPDES Compliance

The City of Auburn is covered by the Western Washington Phase II Municipal Stormwater permit. The permit regulates stormwater discharges from the City's MS4 (see Section 2.3.2). The current version of the NPDES MS4 permit was issued in August 2024 and will remain in effect through July 2029, when a new version is due to be issued. A regulatory-driven improvements investigation was performed on behalf of this Plan and was discussed in Chapter 5.3. The recommended actions on behalf of this investigation have been summarized below.

- Update local development regulations and drainage standards in accordance with updated NPDES MS4 permit requirements.
- Review and revise municipal code to reflect IDDE changes, specifically concerning routine washdowns of structures likely to have PCB-containing materials.
- Carry out permit-required activities related to TMDLs (identified in Chapter 4.4.1).
- Develop and implement protocols with firefighting agencies regarding PFAS discharges into stormwater.
- Develop and implement tree canopy goals to support stormwater management and improve receiving water quality.
- Prepare an SMAP for a new high-priority catchment area or enhance the existing one for Olson Creek.
- Ensure the existing street sweeping plan covers the permit requirements.
- Reflect on the ongoing public outreach campaign and consider adding new actions or developing a new campaign.
- Map piped MS4 outfalls with flow control or stormwater treatment upstream to determine the amount of treated/untreated area within the MS4.
- Continue implementing the SCIP.

These actions have been further detailed and organized on a timeline in Figure 8-3. Additionally, the compliance-specific schedule for key requirements under the current NPDES MS4 permit is shown in Figure 8-2.

Note

*Important dates for other TMDL requirements (mandated by the NPDES MS4 permit) are shown in Figure 8-3.
**Only one sweeping event is required in 2027. Three sweeping events are required each year thereafter, with at least one event occurring between July and September.

Abbreviation Key

ACC: *Auburn City Code*
IDDE: *Illicit Discharge Detection and Elimination*
BMP: *Best Management Practice*
NPDES: *National Pollutant Discharge Elimination System*
SWMP: *Stormwater Management Program*
MS4: *Municipal Separate Storm Sewer System*
TMDL: *Total Maximum Daily Load*
PFAS: *Per- and Polyfluoroalkyl Substance*
SMAP: *Stormwater Management Action Plan*
LID: *Low Impact Development*
SCIP: *Source Control Improvement Program*

Figure 8-2. NPDES Compliance Schedule

8.3 Future Staffing and Equipment Needs

During this planning effort, current Engineering and M&O staffing were considered in light of future activities that will need to be performed to maintain compliance with the NPDES MS4 permit. M&O staffing and equipment were also reviewed, taking into account existing maintenance goals and future, additional M&O responsibilities. The following sections summarize the additional staffing, staffing responsibilities, and equipment needs for the Storm Drainage Utility.

8.3.1 Engineering Services

As part of this Plan, the City evaluated engineering staffing responsibilities required to address the revised NPDES MS4 permit and other storm drainage system deficiencies. The recommended actions in Figure 8-3 are expected to be managed by engineering staff.

8.3.2 Maintenance and Operation Services

The evaluation of M&O staffing for managing, operating, and maintaining the storm drainage system in Chapter 6 revealed that the Storm Drainage Utility is adequately staffed to meet current proactive City goals. However, additional staff and equipment may be necessary to fulfill NPDES MS4 permit requirements and anticipated future work (as outlined in Section 6.6.2). Although no immediate staffing additions are planned, ongoing monitoring of staffing levels will assess the need.

Support from M&O staff will be needed in the following actions (identified in Chapter 6 and summarized below):

- Asset management recommendations (Section 8.4):
  - → Prioritizing work using risk-based scoring methods.
  - → Documenting condition assessments and work orders in Cartegraph.
- Street Sweeping Plan (NPDES MS4 permit):
  - → Coordinating with the Street Division (as needed) to implement the required street sweeping plan.
- Ditch Maintenance Program (Section 8.5):
  - → Carrying out the recommended needs from the ditch maintenance program.

Additionally, based on discussions with City staff and analysis of M&O activities, the Storm Drainage Utility will consider obtaining CCTV inspection equipment for pipe inspection within five years.

8.4 Continue Implementation of Best Practices for Asset Management

As an integral part of this comprehensive plan, the City conducted a thorough review of its existing asset inventory and management practices, as discussed in Chapter 5.2. The recommended actions have been summarized below.

- System inventory:
  - → Continuously update the inventory with additional data collected during maintenance activities (e.g., condition assessment and frequency of maintenance).

- → Train staff on asset inventory needs, capability, data collection, data quality objectives, and maintenance processes.
- → Develop a process for reviewing and updating the asset inventory when changes and inspections occur (see Section 5.2.3).
- → Implement the prioritized inspection and asset information update process to address data gaps and provide observation-based condition assessments.

- Risk-based scoring in Cartegraph:
  - → Integrate scoring methods into Cartegraph.
  - → Populate critical feature attributes (used in risk calculations).
  - → Add scoring fields to calculate likelihood of failure and criticality of failure scores for each pipe in Cartegraph.
- Risk-based scoring improvements:
  - → Expand scoring methods to include asset types beyond collection system piping.
  - → Implement these improvements into Cartegraph and inspection prioritization techniques (see Appendix C for recommended attributes for other stormwater assets).
- Maintenance and R&R prioritization:
  - → Prioritize maintenance activities for assets with the highest risk.
  - → Assess the inspection process every 5 years to evaluate efficiency and identify areas for improvement.
  - → Consider reconducting pipe depreciation analysis periodically to assess the impact of prioritization practices.

8.5 Recommendations for Additional Activities

The following sections summarize recommendations for additional activities discussed during this Plan for the Storm Drainage Utility. Section 8.5 is divided into the following three sub-sections:

- Section 8.5.1 summarizes recommendations discussed in Section 5.4.2.
- Section 8.5.2 summarizes recommendations discussed in Section 6.6.2.1.
- Section 8.5.3 presents the ongoing system updates carried out by the Storm Drainage Utility and the CFP projects that will require coordination from the Utility.

8.5.1 Climate Change

As discussed in Chapter 5.4, climate change will need to be considered in developing and implementing stormwater design guidelines for future scenarios. The actions recommended on behalf of climate change are summarized below.

- Review and revise the hydraulic performance metrics related to freeboard, headwater depth, and surcharging. Evaluate the financial implications associated with enforcing strict hydraulic performance standards.
- Prepare a CDR process to evaluate the consequences of storm events exceeding the design parameters. Establish clear policies regarding safety, property protection, service continuity, and mitigation of nuisance flooding to make systems more resilient to infrequent but

probable flooding. Ensure that the level of protection aligns with the associated costs and risk factors.

- Prioritize effective hydraulic performance and resilience measures for critical facilities during severe storm events that go beyond the intended design limits.
- Perform a vulnerability analysis of stormwater infrastructure along critical roadways to identify any areas where the effects of climate change may be intolerable. Prioritize these areas for capital improvement projects to minimize the adverse effects of flooding.

8.5.2 Ditch Maintenance Program

A drainage ditch maintenance program was developed as a part of this Plan. See Chapter 6.6.2.1 for more details. The previously discussed recommendations have been summarized below.

- Develop protocols for finding, adding, mapping, and classifying ditches within the system.
- Consider the steps required when adding new ditches to the system.
- Use the results of regular ditch inspections to identify system failures.
- Implement a program that focuses on retrofitting ditches with water quality enhancements.

8.5.3 Ongoing System Updates and Capital Facilities Plan Projects

The City will be involved in several ongoing system updates throughout the period of 2031–2044. These updates and their projected costs and timelines have been listed in Table 8-3 below.

Table 8-3. Ongoing System Updates

Name	Description	2031–2044 Cost
Pump Station Level of Service Review	Program to review all pump stations for level of service. Specifically focus on A Street SE and Auburn Way S as an existing drainage issue has been identified there (see Section 4.5).	$400,000
Pump Station Update	Program to update the pump stations according to the results of the level of service review.	$2,000,000
Underground Injection Wells Retrofit Program	Retrofit program to map underground injection wells in the City with water quality treatment.	$975,000
	Total 2031–2044 cost:	$3,375,000

Note: All costs are in 2024 dollars.

In addition, there are several CFP projects that will require coordination from the Storm Drainage Utility from 2024–2026. These projects are listed in Table 8-4 below.

Table 8-4. Capital Facilities Plan Project Schedule 2024–2026

Name	2024 Cost	2025 Cost	2026 Cost	Cost for 2024–2026
R Street SE Widening - 22nd Street SE to 33rd Street SE		$303,850	$938,897	$1,242,747
Regional Growth Center Improvements	$100,000			$100,000
R Street SE Preservation	$320,000			$320,000
12th Street SE Water Main Improvements	$16,000			$16,000
Arterial Preservation	$215,000			$215,000
Jornada Park Access Improvements	$100,000			$100,000
C Street SW Preservation (W Main to GSA signal)	$50,000			$50,000
M Street NE Widening		$824,000		$824,000
Total project cost for 2024–2026:	$801,000	$1,127,850	$938,897	$2,867,747

Note: Costs shown in this table have been escalated as described in Section 9.

8.6 Implementation Plan

The recommended actions within this Plan have been organized in a timeline, as depicted in Figure 8-3. This timeline serves as a guide for implementing the actions in a structured manner.

Implementation Plan Activities Timeline

Chapter	Action	2024 Q1-Q4	2025 Q1	2025 Q2	2025 Q3	2025 Q4	2026 Q1	2026 Q2	2026 Q3	2026 Q4	2027 Q1	2027 Q2	2027 Q3	2027 Q4	2028 Q1	2028 Q2	2028 Q3	2028 Q4	2029 Q1	2029 Q2	2029 Q3	2029 Q4	2030 Q1	2030 Q2	2030 Q3	2030 Q4	2031-2044
CIP

7	Storm Drainage Infrastructure Repair & Replacement Program																										
System Goals and Policies																											
2	Review and update inventory of existing capital facilities.																										
2	Forecast capital facility needs for planning period. Consider reducing LOS or																										
2	Identify the proposed locations and capacity of expanded/new facilities.																										
2	Update the 6-year plan biennially.																										
3	Routinely assess performance of pumped systems.																										
3	Consider using future rainfall intensity data for designing stormwater systems.																										
4	Address the existing drainage problems through capital or otherwise.																										
NPDES MS4 permit Compliance																											
2	Review development regulations from new permit to ensure consistency with																										
2	Adopt the revised manual as required by NPDES MS4 permit.																										
	Review and revise municipal code to reflect IDDE changes.																										
2	Submit a SWMP plan to Ecology every year.																										
2	Submit an annual report to Ecology by March 31 every year.																										
2	Track the costs of implementing SWMP and TMDL requirements and provide in																										
2	By March 31, 2027, describe how stormwater management strategies and receiving water health are informing long-range comprehensive planning in the annual report.																										
2	Monitor discharges to the White River, in association with the Puyallup River																										
2	Routinely update and review asset inventory for accuracy.																										
4	Update development regulations and design standards in accordance with NPDES																										
4	Map all known piped MS4 outfalls to the Lower White River.																										
4	Screen all known piped MS4 outfalls to the Lower White River for illicit discharges.																										
4	Require phosphorus treatment BMPs for all new and redevelopment projects in the Lower White River implementation area.

9. Financial Plan

9.1 Introduction

This chapter was prepared by FCS Group to provide a financial program that allows the City of Auburn Storm Drainage Utility to remain financially viable during the planning period. This financial viability analysis considers the historical financial condition, current and identified future financial goals and policy obligations, M&O needs, and the financial impacts of the capital projects identified in this Comprehensive Storm Drainage Plan. Furthermore, this chapter provides a review of the Storm Drainage Utility's current rate structure with respect to rate adequacy and customer affordability.

9.2 Past Financial Performance

This section includes a historical summary of financial performance as reported by the City, including fund resources and uses arising from cash transactions.

9.2.1 Comparative Financial Statements

The City legally owns and operates the Auburn Storm Drainage Utility. Table 9-1 shows a summary of storm drainage fund resources and uses arising from cash transactions for the previous six years (2017 through 2022). The 2023 financial statements were not available at the time this chapter was developed. Table 9-2 shows a summary of assets and liabilities, with the difference between the two reported as "net position." Increases and decreases in net position are useful indicators of the financial position of the City's utility. Noteworthy findings and trends for the historical performance and condition of the City's Storm Drainage Utility are then discussed.

Table 9-1. Summary of Historical Fund Resources and Uses Arising from Cash Transactions

	2017	2018	2019	2020	2021	2022
OPERATING REVENUES						
Charges for Service	$ 9,778,102	$ 9,809,840	$ 10,110,490	$ 10,301,049	$ 10,591,890	$ 10,985,794
Other Operating Revenue	-	-	-	-	-	-
Total Operating Revenues	$ 9,778,102	$ 9,809,840	$ 10,110,490	$ 10,301,049	$ 10,591,890	$ 10,985,794
OPERATING EXPENSES						
Operations and Maintenance	$ 3,379,046	$ 3,568,600	$ 3,509,728	$ 3,360,404	$ 4,150,264	$ 4,135,306
Administration	3,372,935	3,326,599	3,230,505	3,144,182	3,109,673	3,835,875
Depreciation and Amortization	1,885,931	2,067,030	2,092,443	2,120,788	2,133,233	1,837,459
Other Operating Expenses	13,085	-	-	-	-	-
Total Operating Expenses	$ 8,650,997	$ 8,962,229	$ 8,832,676	$ 8,625,374	$ 9,393,170	$ 9,808,640
Operating Income (Loss)	$ 1,127,105	$ 847,611	$ 1,277,814	$ 1,675,675	$ 1,198,720	$ 1,177,154
NONOPERATING REVENUES (EXPENSES)						
Interest Revenue	$ 151,733	$ 327,884	$ 518,073	$ 162,516	$ (34,640)	$ 300,426
Other Non-Operating Revenue	78,397	165,136	81,307	125,963	102,214	132,440
Gain (Loss) on Sale of Capital Assets	-	-	-	-	-	-

Other Non-Operating Expense	-	(101,328)	-	(26,022)	-	(428,759)
Total Non-Operating Revenues (Expenses)	$ (98,842)	$ 80,876	$ 305,960	$ 132,986	$ (84,952)	$ (129,223)
Income (Loss) before Contributions and Transfers	$ 1,028,263	$ 928,487	$ 1,583,774	$ 1,808,661	$ 1,113,768	$ 1,047,931
Capital Contributions	$ 2,313,033	$ 995,853	$ 1,021,824	$ 1,546,772	$ 5,364,962	$ 1,408,167
Transfers In	300,000	125,000	-	-	-	-
Transfers Out	(672,122)	(332,589)	(138,357)	(137,399)	(155,972)	(133,555)
Change in Net Position	$ 2,969,174	$ 1,716,751	$ 2,467,241	$ 3,218,034	$ 6,322,758	$ 2,322,543
Net Position, January 1	$ 64,010,652	$ 66,979,826	$ 68,696,577	$ 71,163,818	$ 74,381,852	$ 80,704,610
Net Position, December 31	$ 66,979,826	$ 68,696,577	$ 71,163,818	$ 74,381,852	$ 80,704,610	$ 83,027,153
O&M Coverage Ratio	113.0%	109.5%	114.5%	119.4%	112.8%	112.0%
Net Operating Income as a % of Operating Revenue	11.5%	8.6%	12.6%	16.3%	11.3%	10.7%
Debt Service Coverage Ratio	3.75	3.63	4.21	5.59	4.92	4.46

9.2.1.1 Findings and Trends

- The City's storm drainage charges for services increased from $9.8 million in 2017 to $11.0 million in 2022. The average annual increase was approximately 2.4% per year, with a total increase of 12.4% from 2017 to 2022. Operating expenditures increased by $1.2million across the 6 years with an average annual increase of 2.5%. While operating expenditures increased across the 6 years, they fell in 2019 and 2020 before increasing by 8.9% in 2021. With growth in total operating revenues slightly below growth in operating expenses, operating income has remained positive in all years.
- The M&O coverage ratio (total operating revenues divided by total operating expenses) was 113% in 2017. With relatively balanced revenues and expenses, this metric has maintained its stability, ending 2022 at 112.0%. A ratio of 100% or greater shows that operating revenue will successfully cover operating expenses, and the utility has remained above this ratio for the past 6 years.
- Net operating income as a percentage of operating revenue was 11.5% in 2017, decreasing to 8.6% in 2018, before recovering back to 10.7% by 2022. Similar to the M&O coverage ratio, these trends show how successfully operating revenue actually covered operating expenses, with higher positive numbers being the best and negative numbers showing a need for improvement. In addition, these trends demonstrate the ability of the utility to invest in capital, whether through direct cash transfers or the issuance and servicing of debt.

- The debt service coverage ratio measures the amount of cash flow available to meet principal and interest payments. Typically, revenue bond debt service coverage requires a minimum factor of 1.25 during the life of the loans. This ratio is calculated by dividing cash or net operating income (operating revenues minus operating expenses) by annual revenue bond debt service. The debt service coverage ratio for all outstanding revenue bond debt ended 2017 at 3.8, decreasing to 3.6 in 2018, before increasing to 4.5 by 2022. The fact that this ratio has sustained levels higher than the minimum target of 1.25 indicates a stable capacity for new debt and will likely result in favorable terms when entering the bond market.

Table 9-2. Summary of Historical Comparative Statements of Net Position

Debt to Noncurrent Capital Assets Ratio	0.14	0.13	0.12	0.11	0.10	0.09

9.2.1.2 Findings and Trends

- The current ratio is calculated by dividing unrestricted current assets by current liabilities and measures an entity's ability to pay short-term obligations. This ratio ranges from a low of 12.9 in 2017, reaching a high of 20.5 in 2020, before ending at 17.5 in 2022. Anything above 2.0 for this liquidity ratio is good.
- The debt-to-net-position ratio compares total debt to total net position, which is the difference between current assets and liabilities. This ratio begins at 0.12 or 12% debt in 2017 and decreases to 0.07 or 7% by 2022. These results indicate the utility has ample borrowing capacity to address future capital improvement needs. For utilities, a ratio of 40% to 60% helps to moderate rate impacts by spreading costs over a longer period. Based on these results, the City may consider utilizing debt service for future capital investments, especially if it benefits system expansion.
- The debt-to-noncurrent-capital-asset ratio compares total debt to noncurrent capital assets, which are also known as property, plant, and equipment. This ratio begins at 0.14 or 14% debt to 86% noncurrent assets in 2017. Noncurrent capital assets increase by $5.2 million throughout the 6-year history, while debt decreases $2.5 million, and the ratio decreases to 0.09 or 9% by 2022. Similar to the debt-to-net position ratio, these results indicate the utility has ample borrowing capacity and may consider utilizing debt service for future capital investments, especially if it benefits system expansion. A ratio of 40% debt to 60% equity or below is a general industry target.

9.3 Financial Plan

The Storm Drainage Utility is responsible for generating sufficient revenue to meet all of its costs. The primary source of funding is derived from ongoing monthly service charges, with additional revenue coming from late fees, storm applications and investment interest. The City controls the level of user charges and, with City Council approval, can adjust user charges as needed to meet financial objectives.

The financial plan can only confirm financial feasibility if it considers the total system costs of providing storm drainage services, both operating and capital. To meet these objectives, the following elements have been completed.

1. Capital Funding Plan. Identifies the total capital improvement plan obligations of the planning period. The plan defines a strategy for funding the capital improvement plan, including an analysis of available resources from rate revenues, existing reserves, system development charges, debt financing, and any special resources that may be readily available (e.g., grants, developer contributions). The capital funding plan impacts the financial plan through the use of debt financing (resulting in annual debt service) and the assumed rate revenue made available for capital funding.
2. Financial Forecast. Identifies future annual non-capital costs associated with the operation, maintenance, and administration of the storm drainage system. Included in the financial plan is a reserve analysis that forecasts cash flow and fund balance activity, along with testing for satisfaction of actual or recommended minimum fund balance policies. The financial plan ultimately evaluates the sufficiency of utility revenues in meeting all obligations, including cash uses such as operating expenses, debt service, capital outlays, and reserve contributions, as well as any coverage requirements associated with long-term debt. The plan also identifies the future adjustments required to fully fund all utility obligations in the planning period.

9.3.1.1 Capital Funding Plan

To properly evaluate future capital funding needs, capital costs were escalated by 3% annually to the year of planned spending. The capital improvement plan developed for this Plan identifies $26.5 million in escalated project costs over the 10-year planning horizon from 2024 to 2033. The 20-year period through 2043 includes $61.7 million in total escalated project costs.

A summary of the 10-year and 20-year capital improvement plans are shown in Table 9-3. As shown, each year has varied capital cost obligations depending on construction schedules and infrastructure planning needs.

Table 9-3. 10-Year and 20-Year Capital Improvement Plans

Year	Unescalated $	Escalated $
2024	$ 2,531,000	$ 2,531,000
2025	3,498,220	3,603,167
2026	6,257,780	6,638,879
2027	1,282,000	1,400,876
2028	1,659,000	1,867,219
2029	1,255,000	1,454,889
2030	1,620,000	1,934,365
2031	1,352,000	1,662,789
2032	2,065,000	2,615,880
2033	2,104,000	2,745,243
10-Year Total	$ 23,624,000	$ 26,454,307
2034 - 2043	23,073,000	35,209,528
20-Year Total	$ 46,697,000	$ 61,663,835

Table 9-4 provides more detail for the 10-year capital improvement plan.

Table 9-4. 10-Year Capital Improvement Plan (Escalated $)

Project	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033

9.4 Available Funding Assistance and Financing Resources

Feasible long-term capital funding strategies must be defined to ensure that adequate resources are available to fund the capital improvement plan identified in this Plan. In addition to the City's resources, such as accumulated cash reserves, capital revenues, and rate revenues designated for capital purposes, capital needs can be met from outside sources, such as grants, low-interest loans, and bond financing. The following is a summary of the City's internal and external resources.

9.4.1 City Resources

Resources appropriate for funding capital needs include accumulated cash in the capital fund, rate revenues designated for capital spending purposes, developer contributions, and capital-related charges such as system development charges. The first two resources will be discussed in the Fiscal Policies section of the Financial Forecast. Capital-related charges are discussed below.

9.4.1.1 System Development Charges

A connection charge, such as the City's SDC, refers to a one-time charge imposed on new customers as a condition of connecting to the storm drainage system. The purpose of the SDC is two-fold: (1) to promote equity between new and existing customers and (2) to provide a source of revenue to fund capital projects necessary for meeting growth. This revenue can only be used to fund utility capital projects or to pay debt service incurred to finance those projects. In the absence of a connection charge, growth-related capital costs would be borne in large part by existing customers. In 2024, the City charged all new customers an SDC of $1,759 per ESU, which is defined as 2,600 square feet of impervious surface area.

9.4.1.2 Local Facilities Charge

A utility local improvement district (ULID) is another mechanism for funding infrastructure that assesses benefited properties based on the special benefit received by the construction of specific facilities. Most often used for local facilities, some ULIDs also recover related general facilities costs. Substantial legal and procedural requirements can make this a relatively expensive process, and there are mechanisms by which a ULID can be rejected.

9.4.2 Outside Resources

This section outlines various grant, loan, and bond opportunities available to the City through federal and state agencies to fund the capital improvement plan identified in the Plan.

9.4.2.1 Grants and Low-Cost Loans

Historically, federal and state grant programs were available to local utilities for capital funding assistance. However, these assistance programs have been mostly eliminated, substantially reduced in scope and amount, or replaced by loan programs. Remaining grant programs are generally lightly funded and heavily subscribed. Nonetheless, the benefit of low-interest loans makes the effort of applying worthwhile.

The State of Washington's Department of Commerce maintains a document currently entitled "Funding Programs for Drinking Water and Wastewater Projects; Updated 3-5-2024," which contains details on government programs, eligibility requirements, and contact information, should the City wish to inquire about program offerings and eligibility requirements.

9.4.2.2 Bond Financing

General Obligation Bonds – General obligation (G.O.) bonds are bonds secured by the full faith and credit of the issuing agency, committing all available tax and revenue resources to debt repayment. With this high level of commitment, G.O. bonds have relatively low interest rates and few financial restrictions. However, the authority to issue G.O. bonds is restricted in terms of the amount and use of the funds, as defined by the Washington constitution and statute. Specifically, the amount of debt that can be issued is linked to assessed valuation.

RCW 39.36.020 states:

> *(2)(a)(ii) Counties, cities, and towns are limited to an indebtedness amount not exceeding one and one-half percent of the value of the taxable property in such counties, cities, or towns without the assent of three-fifths of the voters therein voting at an election held for that purpose.*
>
> *(b) In cases requiring such assent counties, cities, towns, and public hospital districts are limited to a total indebtedness of two and one-half percent of the value of the taxable property therein.*

While bonding capacity can limit the availability of G.O. bonds for utility purposes, these can sometimes play a valuable role in project financing. A utility rate savings may be realized through two avenues: the lower interest rate and related bond costs and the extension of repayment obligation to all tax-paying properties (not just developed properties) through the authorization of an ad valorem property tax levy.

Revenue Bonds – Revenue bonds are commonly used to fund utility capital improvements. The debt is secured by the revenues of the issuing utility. With this limited commitment, revenue bonds typically bear higher interest rates than G.O. bonds and require security conditions related to the maintenance of dedicated reserves (a bond reserve) and financial performance (added bond debt service coverage). The City agrees to satisfy these requirements by resolution as a condition of bond sale.

Revenue bonds can be issued in Washington without a public vote. There is no bonding limit, except perhaps the practical limit of the utility's ability to generate sufficient revenue to repay the debt and provide coverage. In some cases, poor credit might make issuing revenue bonds problematic.

9.4.3 Capital Financing Strategy

An ideal capital financing strategy would include the use of grants and low-cost loans when debt issuance is required. However, these resources are very limited and competitive in nature and do not provide a reliable source of funding for planning purposes. It is recommended that the City pursue these funding avenues but assume revenue bond financing to meet the needs that can't be met by available cash resources. The capital financing strategy developed to fund the capital improvement plan identified in this Plan assumes the following funding resources:

- Accumulated cash reserves.
- Transfers of excess cash (over minimum balance targets) from the operating fund.
- System development charge revenues.
- King County Opportunity Fund grant revenues.
- Interest earned on capital fund balances.

The majority, 83%, of projects are funded through cash resources. The remaining 17% are funded through a combination of system development charges and grants. No new debt is anticipated in the next 10-year or 20-year planning periods. Table 9-5 presents the 10-year and 20-year capital financing strategy.

Table 9-5. 10-Year and 20-Year Capital Financing Strategy

Year	Capital Expenditures Escalated	System Development Charge Revenue	Grant Funding	Cash / Reserve Funding	Total Financial Resources
2024	$ 2,531,000	$ 375,000	$ -	$ 2,156,000	$ 2,531,000
2025	3,603,167	362,335	-	3,240,832	3,603,167
2026	6,638,879	374,698	500,000	5,764,181	6,638,879
2027	1,400,876	387,482	-	1,013,394	1,400,876
2028	1,867,219	400,703	-	1,466,516	1,867,219
2029	1,454,889	414,375	-	1,040,514	1,454,889
2030	1,934,365	428,514	-	1,505,851	1,934,365
2031	1,662,789	443,135	-	1,219,655	1,662,789
2032	2,615,880	458,255	-	2,157,626	2,615,880
2033	2,745,243	473,890	-	2,271,353	2,745,243
Subtotal	$ 26,454,307	$ 4,118,387	$ 500,000	$ 21,835,920	$ 26,454,307
2034 - 2043	35,209,528	5,725,752	-	29,483,776	35,209,528
Total	$ 61,663,835	$ 9,844,139	$ 500,000	$ 51,319,696	$ 61,663,835

9.5 Financial Forecast

The financial forecast, or revenue requirement analysis, forecasts the amount of annual revenue that needs to be generated by storm drainage service rates. The analysis incorporates operating revenues, M&O expenses, debt service payments, rate-funded capital needs, and any other identified revenues or expenses related to operations. The objective of the financial forecast is to evaluate the sufficiency of the current level of rates. In addition to annual operating costs, the revenue needs also include debt covenant requirements and specific fiscal policies and financial goals of the City.

For this analysis, two revenue sufficiency tests have been developed to reflect the financial goals and constraints of the City—cash needs must be met, and debt coverage requirements must be realized. In order to operate successfully with respect to these goals, both tests of revenue sufficiency must be met.

Cash Test – The cash flow test identifies all known cash requirements for the City in each year of the planning period. Typically, these include M&O expenses, debt service payments, rate-funded system reinvestment funding or directly funded capital outlays, and any additions to specified reserve balances. The total annual cash needs of the City are then compared to projected cash revenues using the current rate structure. Any projected revenue shortfalls are identified, and the rate increases necessary to make up the shortfalls are established.

Coverage Test – The coverage test is based on a commitment made by the City when issuing revenue bonds and some other forms of long-term debt. For the purposes of this analysis, revenue bond debt is assumed for any needed debt issuance. As a security condition of issuance, the City would be required per covenant to agree that the revenue bond debt would have a higher priority for payment (a senior lien) compared to most other expenditures; the only outlays with a higher lien are M&O expenses. Debt service coverage is expressed as a multiplier of the annual revenue bond debt service payment. For example, a 1.00 coverage factor would imply that no additional cushion is required. A 1.25 coverage factor means revenue must be sufficient to pay M&O expenses, annual revenue bond debt service payments, and an additional 25% of annual revenue bond debt service payments. The excess cash flow derived from the added coverage, if any, can be used for any purpose, including funding capital projects. Targeting a higher coverage factor can help the City achieve a better credit rating and provide lower interest rates for future debt issues.

In determining the annual revenue requirement, both the cash and coverage sufficiency tests must be met, and the test with the greatest deficiency drives the level of needed rate increase in any given year.

9.5.1 Current Financial Structure

The City maintains a fund structure and implements financial policies that target management of a financially viable and fiscally responsible storm drainage system.

9.5.1.1 Fiscal Policies

A summary of the key financial policies employed by the City, as well as those recommended and incorporated in the financial program, are discussed below.

Operating Fund – Operating reserves are designed to provide a liquidity cushion to ensure that adequate cash working capital will be maintained to deal with significant cash balance fluctuations, such as seasonal fluctuations in billings and receipts, unanticipated cash expenses, or lower than expected revenue collections. Like other types of reserves, operating reserves also serve another purpose: they help smooth rate increases over time. Target funding levels for an operating reserve are generally expressed as a certain number of days of M&O expenses, with the minimum requirement varying with the expected revenue volatility. Industry practice for utility operating reserves ranges from 30 days (8%) to 120 days (33%) of M&O expenses, with the lower end more appropriate for utilities with stable revenue streams and the higher end more appropriate for utilities with significant seasonal or consumption-based fluctuations.

This financial plan targets a minimum balance in the Storm Drainage Utility operating fund equal to 60 days of M&O expenses.

Capital Fund – A utility capital contingency reserve is an amount of cash set aside in case of an emergency should a piece of equipment or a portion of the utility's infrastructure fail unexpectedly. The reserve could also be used for other unanticipated capital needs, including capital project cost overruns. Industry practices range from maintaining a balance equal to 1% to 2% of fixed assets, an amount equal to a 5-year rolling average of capital improvement plan costs, or an amount determined sufficient to fund equipment failure (other than catastrophic failure). The final target level should balance industry standards with the risk level of the City.

This financial plan targets a minimum balance in the Storm Drainage Utility capital fund equal to 1% of fixed assets.

Rate Stabilization Fund - A rate stabilization reserve is a restricted fund balance intended to be available to offset specific variations in revenues or expenses. For rate modeling, planned deposits into the fund would appear as an expense, and use of the reserve would rarely appear in rate

planning (only when analyzing adverse conditions). The reserve is established with specific rules and restrictions regarding contributions, withdrawals, and replenishment. These rules are generally constructed to minimize or mitigate rate impacts.

The City currently maintains a rate stabilization reserve for the Storm Drainage Utility but does not have a formal rate stabilization reserve policy. For modeling purposes, the study does not assume additional reserves are funded. Rather, the City will maintain the reserve at its current level.

System Reinvestment – System reinvestment funding promotes system integrity through ongoing repair and replacement of system infrastructure. Ideally, a detailed asset management plan would guide the level of rate funded system reinvestment. However, in absence of this level of effort, annual depreciation expense is commonly used as a measure of the decline in asset value associated with routine use of the system. Particularly for utilities that do not already have an explicit system reinvestment policy in place, implementing a funding level based on full depreciation expense could significantly impact rates. An alternative benchmark is annual depreciation expense net of debt principal payments on outstanding debt. This approach recognizes that customers are still paying for certain assets through the debt component of their rate and intends to avoid simultaneously charging customers for an asset and its future replacement. The specific benchmark used to set system reinvestment funding targets is a matter of policy that must balance various objectives, including managing rate impacts, keeping long-term costs down, and promoting "generational equity" (i.e., not excessively burdening current customers with paying for facilities that will serve a larger group of customers in the future).

The City is currently phasing in system reinvestment funding and is forecast to reach 67% of annual depreciation levels by 2033. With this phase-in strategy in place, the City is forecast to fund an average of $1.1 million in capital costs annually through rate revenues within the 10-year forecast period.

Debt Management – It is prudent to consider policies related to debt management as part of a broader utility financial policy structure. Debt management policies should be evaluated and formalized, including the level of acceptable outstanding debt, debt repayment, bond coverage, and total debt coverage targets. The City has two outstanding storm drainage revenue bonds, one of which will be fully repaid in 2030, with the second fully repaid by 2032. This forecast meets or exceeds the required revenue bond debt service coverage of 1.25.

9.5.2 Financial Forecast

The financial forecast is primarily based upon the City's budget through 2024 and takes into consideration other key factors and assumptions needed to develop a complete portrait of the City's annual Storm Drainage Utility financial obligations. The following is a list of the key revenue and expense factors and assumptions used to develop the financial forecast.

- Growth – Rate revenue is escalated utilizing a 0.4% growth rate developed based on actual historical trends within the City.
- Revenue – The City has two general revenue sources: (1) storm drainage service charges (rate revenue) and (2) miscellaneous (non-rate) revenue. In the event of a forecasted annual shortfall, rate revenue can be increased to meet the annual revenue requirement. For the purpose of this financial forecast, rate revenues are forecasted to increase with customer growth. Non-rate revenues are held constant throughout the forecast period, with the exception of interest earnings, which are calculated based on projected balances, assumed investment rates, and senior rebates, which increase with customer growth assumptions.

- System Development Charge Revenue – The existing system development charges are applied to the projected new connections to forecast revenue. Connection charges are forecasted to generate an average of $412,000 annually from 2024 through 2033. This equates to an average of 204 new ESUs per year. Connection charge revenue is directed towards annual capital needs.
- Expenses – M&O expense projections are based on the City's budget through 2024 with general cost inflation increases of 3%, labor cost inflation of 5% for 2025 and 2026, decreasing to 3% thereafter and benefit cost inflation increases of 12.5% for 2025 and 2026, decreasing to 5.5% per year thereafter. Budget figures were used for taxes through 2024. Future taxes are calculated based on forecasted revenues and prevailing tax rates.
- Facilities GO Bond - In order to construct a new facility for M&O for the City, the Storm Drainage Utility will fund part of a G.O. bond totaling approximately $38 million. Beginning in 2025, the Storm Drainage Utility's proportionate share of the bond is forecasted at $333,000 annually for the remainder of the 20-year forecast.
- Existing Debt – The Storm Drainage Utility has two outstanding revenue bond debt issues. The 2020 refunding bond has annual payments of $314,000 that end after 2030, with the 2013 revenue bond carrying payments of $343,000 annually, ending after 2032. The total annual existing debt service obligations begin 2024 at $659,000 and are completely repaid by 2033.
- Future Debt – No new debt is anticipated in the 10-year and 20-year forecast periods.
- Transfers to Capital – Operating fund balance above the minimum requirement is assumed to be available to fund capital projects and projected to be transferred to the capital fund each year, if needed. In total, the utility is forecast to fund $13 million in capital projects from excess operating fund cash within the 10-year forecast period.

Although the financial plan is completed through 2043, the rate strategy focuses on the shorter-term planning period of 2024 through 2033. It is recommended that the City revisit the proposed rates every 2 to 3 years to ensure that the rate projections developed remain adequate. Any significant changes should be incorporated into the financial plan and future rates should be adjusted as needed.

Table 9-6 summarizes the annual revenue requirements based on the forecast of revenues, expenditures, fund balances, and fiscal policies.

Table 9-6. 10-Year Financial Forecast

Revenue Requirement	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033
Revenues										
Rate Revenues Under Existing Rates	$ 12,458,782	$ 12,508,618	$ 12,558,652	$ 12,608,887	$ 12,659,322	$ 12,709,959	$ 12,760,799	$ 12,811,843	$ 12,863,090	$ 12,914,542
Non-Rate Revenues	262,900	291,876	206,130	181,367	181,869	182,399	182,953	183,531	184,135	184,766
Total Revenues	$ 12,721,682	$ 12,800,494	$ 12,764,782	$ 12,790,254	$ 12,841,191	$ 12,892,359	$ 12,943,752	$ 12,995,373	$ 13,047,225	$ 13,099,308
Expenses										
Cash Operating Expenses	$ 10,828,608	$ 11,812,282	$ 12,353,297	$ 12,714,570	$ 13,093,018	$ 13,485,879	$ 13,893,762	$ 14,317,305	$ 14,757,174	$ 15,214,068
Existing Debt Service	659,447	659,311	657,169	657,253	658,401	656,328	655,274	342,972	342,888	-
New Debt Service	-	-	-	-	-	-	-	-	-	-
Rate Funded System Reinvestment	1,000,000	903,142	717,190	782,323	838,652	899,000	958,051	1,330,768	1,388,178	1,790,229
Total Expenses	$ 12,488,055	$ 13,374,736	$ 13,727,656	$ 14,154,146	$ 14,590,070	$ 15,041,207	$ 15,507,087	$ 15,991,045	$ 16,488,240	$ 17,004,297
Total Surplus (Deficiency)	$ 233,628	$ (574,242)	$ (962,874)	$ (1,363,891)	$ (1,748,878)	$ (2,148,849)	$ (2,563,335)	$ (2,995,672)	$ (3,441,016)	$ (3,904,990)
Annual Rate Adjustment		6.75%	3.00%	3.00%	3.00%	3.00%	3.00%	3.00%	3.00%	3.00%
Cumulative Annual Rate Adjustment		6.75%	9.95%	13.25%	16.65%	20.15%	23.75%	27.47%	31.29%	35.23%
Rate Revenues After Rate Increase	$ 12,458,782	$ 13,352,949	$ 13,808,552	$ 14,279,700	$ 14,766,923	$ 15,270,770	$ 15,791,809	$ 16,330,626	$ 16,887,827	$ 17,464,039
Additional Taxes from Rate Increase	-	97,098	143,738	192,143	242,374	294,493	348,566	404,660	462,845	523,192
Net Cash Flow After Rate Increase	$ 233,628	$ 172,992	$ 143,288	$ 114,778	$ 116,348	$ 117,469	$ 119,109	$ 118,451	$ 120,876	$ 121,315
Coverage After Rate Increases	4.84	5.87	5.21	4.90	4.99	5.11	5.22	10.15	10.36	n/a

The financial forecast indicates that at existing rate levels the utility will become deficient in 2025 as growth in expenses outpaces growth in revenues and the utility phases in rate funded system reinvestment levels, reaching 67% of annual depreciation by 2033. The City has adopted a 6.75% increase for 2025, in order to resolve the remaining projected deficiency, rates will need to increase by 3% annually from 2026 through 2033.

9.5.2.1 City Funds and Reserves

Table 9-7 shows a summary of the projected operating fund and capital fund ending balances through 2033 based on the rate forecasts presented above. The operating fund is maintained at a minimum of 60 days of M&O expenses, and the capital fund balance continues to meet or exceed the minimum target of 1% of fixed assets in every year of the forecast.

Table 9-7. Ending Cash Balance Summary

Ending Fund Balances	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033
Operating Fund	$ 1,804,768	$ 1,968,714	$ 2,058,883	$ 2,119,095	$ 2,182,170	$ 2,247,646	$ 2,315,627	$ 2,386,218	$ 2,459,529	$ 2,535,678
Capital Fund	20,694,062	18,986,240	14,372,092	14,339,309	13,908,111	13,957,671	13,600,577	13,895,557	13,312,629	13,009,799
Total	$ 22,498,830	$ 20,954,954	$ 16,430,975	$ 16,458,404	$ 16,090,281	$ 16,205,318	$ 15,916,204	$ 16,281,774	$ 15,772,158	$ 15,545,477

9.6 Current and Projected Rates

9.6.1 Current Rates

The existing storm drainage rate is a monthly flat rate that is charged to each customer per ESU. Each single-family customer is considered one ESU. All non-single-family customers are charged based on the total amount of impervious surface area on-site. The average single family residential lot has 2,600 square feet of impervious surface area, so the total impervious surface area for a non-residential lot is divided by 2,600 to calculate the number of ESUs for that site. Table 9-8 shows the existing City of Auburn storm drainage rate schedule.

Table 9-8. Existing Schedule of Rates

Description	2024 Existing
Per ESU Rate	
Single Family	$ 18.09
Non-Single Family (NSF)	18.09
NSF w/Detention	15.57
NSF w/Retention	13.04
NSF w/Water Quality	16.64
NSF w/Detention & Water Quality	14.12
NSF w/Retention & Water Quality	11.59

9.6.2 Projected Rates

The financial forecast discussed above indicates the need for annual rate adjustments in order to satisfy all forecasted financial obligations. The City has adopted a 6.75% rate increase for 2025, with annual 3% increases forecasted from 2026 through 2033. Table 9-9 shows the projected rates with increases applied uniformly to all storm drainage classes.

Table 9-9. Proposed Storm Drainage Rates

Description	Existing	Proposed								
		2025	2026	2027	2028	2029	2030	2031	2032	2033
	Per ESU Rate									
Single Family	$ 18.09	$ 19.31	$ 19.89	$ 20.49	$ 21.10	$ 21.73	$ 22.38	$ 23.05	$ 23.74	$ 24.45
Non-Single Family (NSF)	18.09	19.31	19.89	20.49	21.10	21.73	22.38	23.05	23.74	24.45
NSF w/Detention	15.57	16.62	17.12	17.63	18.16	18.70	19.26	19.84	20.44	21.05
NSF w/Retention	13.04	13.92	14.34	14.77	15.21	15.67	16.14	16.62	17.12	17.63
NSF w/Water Quality	16.64	17.76	18.29	18.84	19.41	19.99	20.59	21.21	21.85	22.51
NSF w/Detention & Water Quality	14.12	15.07	15.52	15.99	16.47	16.96	17.47	17.99	18.53	19.09
NSF w/Retention & Water Quality	11.59	12.37	12.74	13.12	13.51	13.92	14.34	14.77	15.21	15.67

9.6.3 Affordability

A common affordability metric used by the EPA to measure the relative financial impact storm drainage rates have on a community as a whole considers whether rates exceed 2.5% of a community's median household income. The average median household income for the City was $87,406 between 2018 and 2022 according to the U.S. Census Bureau. The 2022 value is escalated based on the actual rate of inflation in 2023 of 4.31% and the 3% inflation rate used in the financial forecast to project the median household income in future years. Table 9-10 presents the City's monthly storm drainage bill, projected to 2033 and tested against the 2.5% monthly affordability threshold.

Table 9-10. Community Affordability Test

Year	Inflation	Median HH Income	2.5% Monthly Threshold	Projected Monthly Bill	% of Median HH Income
2022		$ 87,406			
2023	4.31%	91,173			
2024	3.00%	93,908	$ 195.64	$ 18.09	0.23%
2025	3.00%	96,726	201.51	19.31	0.24%
2026	3.00%	99,627	207.56	19.89	0.24%
2027	3.00%	102,616	213.78	20.49	0.24%
2028	3.00%	105,695	220.20	21.10	0.24%
2029	3.00%	108,866	226.80	21.73	0.24%
2030	3.00%	112,132	233.61	22.38	0.24%
2031	3.00%	115,495	240.62	23.05	0.24%
2032	3.00%	118,960	247.83	23.74	0.24%
2033	3.00%	122,529	255.27	24.45	0.24%

Applying the 2.50% test, the City's rates are forecasted to remain within the indicated affordability range through 2033.

9.7 Conclusion

The results of this analysis indicate that at existing rate levels the utility will be deficient beginning in 2025. To keep pace with expenses and continue to phase in rate-funded system reinvestment towards depreciation levels, the City has adopted a 6.75% rate increase in 2025. Forecasting into the future, a 3% annual rate increase will be required from 2026 through 2033. It is recommended that the City regularly review and update the key underlying assumptions that compose the multiyear financial plan to ensure that adequate revenues are collected to meet the City's total financial obligations.

10. Limitations

This document was prepared solely for the City of Auburn in accordance with professional standards at the time the services were performed and in accordance with the contract between City of Auburn and Parametrix dated March 16, 2022. This document is governed by the specific scope of work authorized by the City of Auburn; it is not intended to be relied upon by any other party except for regulatory authorities contemplated by the scope of work. We have relied on information or instructions provided by the City of Auburn and other parties and, unless otherwise expressly indicated, have made no independent investigation as to the validity, completeness, or accuracy of such information.

Appendix A

Western Washington Phase II NPDES MS4 Permit

Issuance Date:	July 1, 2024
Effective Date:	August 1, 2024
Expiration Date:	July 31, 2029

WESTERN WASHINGTON PHASE II MUNICIPAL STORMWATER PERMIT

National Pollutant Discharge Elimination System and
State Waste Discharge General Permit for discharges from
Small Municipal Separate Storm Sewer Systems
In Western Washington

State of Washington
Department of Ecology
Olympia, WA 98504-7600

In compliance with the provisions of
The State of Washington Water Pollution Control Law
Chapter 90.48 Revised Code of Washington
and
The Federal Water Pollution Control Act
(The Clean Water Act)
Title 33 United States Code, Section 1251 *et seq*.

Until this Permit expires, is modified, or revoked, Permittees that have properly obtained coverage under this Permit are authorized to discharge to waters of the State in accordance with the special and general conditions which follow.

Vincent McGowan, P.E.
Water Quality Program Manager
Washington State Department of Ecology

SPECIAL CONDITIONS

S1. PERMIT COVERAGE AREA AND PERMITTEES

A. Geographic Area of Permit Coverage

This Permit is applicable to owners or operators of regulated small Municipal Separate Storm Sewer Systems (MS4s) located west of the eastern boundaries of the following counties: Whatcom, Skagit, Snohomish, King, Pierce, Lewis, and Skamania.

1. For all cities required to obtain coverage under this Permit, the geographic area of coverage is the entire incorporated area of the city.
2. For all counties required to have coverage under this Permit, the geographic area of coverage is the urban areas and urban growth areas associated with permitted cities under the jurisdictional control of the county. The geographic area of coverage also includes any urban growth area contiguous to permitted urban areas under the jurisdictional control of the county.
3. For Whatcom County, the geographic area of coverage also includes the unincorporated Birch Bay urban growth area.

   For Thurston County, the geographic area of coverage also includes the unincorporated Yelm urban growth area.
4. For Secondary Permittees required to obtain coverage under this Permit, the minimum geographic area of coverage is all areas identified under S1.A.1 and S1.A.2. At the time of Permit coverage, the Washington State Department of Ecology (Ecology) may establish a geographic area of coverage specific to an individual Secondary Permittee.
5. All regulated small MS4s owned or operated by the Permittees named in S1.D.2.a(i), and (ii), and S1.D.2.b and located in another city or county area requiring coverage under this Permit, or the *Phase I Municipal Stormwater Permit* or the *Eastern Washington Phase II Municipal Stormwater Permit*, are also covered under this Permit.

B. Regulated Small Municipal Separate Storm Sewer Systems (MS4s)

All operators of regulated small MS4s are required to apply for and obtain coverage under this Permit or be permitted under a separate individual permit, unless waived or exempted in accordance with Section S1.C.

1. A regulated small MS4:
   a. Is a "Small MS4" as defined in the *Definitions and Acronyms* section at the end of this Permit; and
   b. Is located within, or partially located within, an urban area as defined by the latest decennial census conducted by the U.S. Census Bureau, or designated by Ecology pursuant to 40 CFR 123.35(b) or 40 CFR 122.26(f); and
   c. Discharges stormwater from the MS4 to a surface water of Washington State; and
   d. Is not eligible for a waiver or exemption under S1.C, below.
2. All other operators of MS4s, including special purpose districts, which meet the criteria for a regulated small MS4 shall obtain coverage under this Permit. Other operators of small MS4s may include, but are not limited to: flood control, or diking and drainage districts; schools, including universities; and correctional facilities that own or operate a small MS4 serving non-agricultural land uses.
3. Any other operators of small MS4s may be required by Ecology to obtain coverage under this Permit or an alternative NPDES permit if Ecology determines the small MS4 is a significant source of pollution to surface waters of the State. Notification of Ecology's determination that permit coverage is required will be through the issuance of an Administrative Order issued in accordance with Chapter 90.48 RCW.
4. The owner or operator of a regulated small MS4 may obtain coverage under this Permit as a Permittee, Co-Permittee, or Secondary Permittee as defined in S1.D.1, below.
5. Pursuant to 40 CFR 122.26(f), any person or organization may petition Ecology to require that additional small MS4s obtain coverage under this Permit. The process for petitioning Ecology is:
   a. The person or organization shall submit a complete petition in writing to Ecology. A complete petition shall address each of the relevant factors for petitions outlined on Ecology's website.
   b. In making its determination on the petition, Ecology may request additional information from either the petitioner or the entity that is the subject of the petition.
   c. Ecology will make a final determination on a complete petition within 180 days of receipt of the petition and inform both the petitioner and the MS4 of the decision, in writing.

d. If Ecology's final determination is that the candidate MS4 will be regulated, Ecology will issue an order to the operator of the MS4 requiring them to obtain coverage under this Permit. The order will specify:

   i. The geographic area of permit coverage for the MS4.

   ii. Any modified dates or deadlines for developing and implementing this Permit, as appropriate to the MS4, and for submitting their first annual report.

   iii. A deadline for the operator of the MS4 to submit a complete Notice of Intent (NOI, provided on Ecology's website) to Ecology.

C. Permit Waivers

Owners and operators of an otherwise regulated small MS4 are not required to obtain coverage under this Permit if:

1. The small MS4 is operated by:

   a. A federal entity, including any department, agency, or instrumentality of the executive, legislative, and judicial branches of the Federal government of the United States.

   b. Federally recognized Indian Tribes located within Indian Country, including all trust or restricted lands within the 1873 Survey Area of the Puyallup Tribe of Indians.

   c. The Washington State Department of Transportation.

Or

2. The portions of the small MS4 located within the census defined urban area(s) serve a total population of less than 1000 people ***and*** a, b, and c, below ***all*** apply:

   a. The small MS4 is not contributing substantially to the pollutant loadings of a physically interconnected MS4 that is regulated by the NPDES stormwater program.

   b. The discharge of pollutants from the small MS4 has not been identified as a cause of impairment of any water body to which the MS4 discharges.

   c. In areas where an EPA approved TMDL has been completed, stormwater controls on the MS4 have not been identified as necessary to meet wasteload allocations established in the TMDL that address the pollutant(s) of concern.

In determining the total population served, both resident and commuter populations shall be included. For example:

- For publicly operated school complexes including universities and colleges, the total population served would include the sum of the average annual student enrollment plus staff.
- For flood control, diking, and drainage districts, the total population served would include residential population and any non-residents regularly employed in the areas served by the small MS4.

D. Obtaining Coverage Under this Permit

All operators of regulated small MS4s are required to apply for and obtain coverage in accordance with this Section, unless waived or exempted in accordance with Section S1.C.

1. Unless otherwise noted, the term "Permittee" shall include a city, town, or county Permittee, New Permittee, Co-Permittee, Secondary Permittee, and New Secondary Permittee as defined below:
   a. "Permittee" is a city, town, or county owning or operating a regulated small MS4 applying and receiving a permit as a single entity.
   b. "New Permittee" is a city, town, or county that is subject to *the Western Washington Phase II Municipal Stormwater General Permit* and was not subject to the Permit prior to August 1, 2024.
   c. "Co-Permittee" is any owner or operator of a regulated small MS4 that is applying in a cooperative agreement with at least one other applicant for coverage under this Permit. Co-Permittees own or operate a regulated small MS4 located within or in proximity to another regulated small MS4.
   d. A "Secondary Permittee" is an operator of a regulated small MS4 that is not a city, town, or county. Secondary Permittees include special purpose districts and other MS4s that meet the criteria for a regulated small MS4 in S1.B, above.
   e. "New Secondary Permittee" is a Secondary Permittee that is covered under a Municipal Stormwater General Permit and was not covered by the Permit prior to August 1, 2024.
2. Operators of regulated small MS4s have submitted, or shall submit, to Ecology either a Notice of Intent (NOI) for Coverage under National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater General Permit or a Duty to Reapply - NOI provided on Ecology's Water Quality Permitting Portal (WQWebPortal).

a. The following Permittees and Secondary Permittees submitted a Duty to Reapply - NOI to Ecology prior to February 1, 2024:

   i. **Cities and towns:** Aberdeen, Algona, Anacortes, Arlington, Auburn, Bainbridge Island, Battle Ground, Bellevue, Bellingham, Black Diamond, Bonney Lake, Bothell, Bremerton, Brier, Buckley, Burien, Burlington, Camas, Centralia, Clyde Hill, Covington, Des Moines, DuPont, Duvall, Edgewood, Edmonds, Enumclaw, Everett, Federal Way, Ferndale, Fife, Fircrest, Gig Harbor, Granite Falls, Issaquah, Kelso, Kenmore, Kent, Kirkland, Lacey, Lake Forest Park, Lake Stevens, Lakewood, Longview, Lynden, Lynnwood, Maple Valley, Marysville, Medina, Mercer Island, Mill Creek, Milton, Monroe, Mountlake Terrace, Mount Vernon, Mukilteo, Newcastle, Normandy Park, Oak Harbor, Olympia, Orting, Pacific, Port Orchard, Port Angeles, Poulsbo, Puyallup, Redmond, Renton, Sammamish, SeaTac, Sedro-Woolley, Shelton, Shoreline, Snohomish, Snoqualmie, Steilacoom, Sumner, Tukwila, Tumwater, University Place, Vancouver, Washougal, and Woodinville.

   ii. **Counties:** Cowlitz, Kitsap, Thurston, Skagit, and Whatcom.

   iii. **Secondary Permittees:** Bainbridge Island School District #303, Bellingham School District, Bellingham Technical College, Cascadia College, Central Kitsap School District, Centralia College, Clark College, Consolidated Diking Improvement District #1 of Cowlitz County, Edmonds Community College, Evergreen College, Highline Community College, Kelso School District, Kent School District, Longview School District, Lower Columbia College, Port of Anacortes, Port of Bellingham, Port of Everett, Port of Olympia, Port of Skagit County, Port of Vancouver, Skagit Valley College, University of Washington Bothell, Washington State University Vancouver, Washington State Department of Enterprise Services (Capitol Campus), Washington Department of Corrections (Larch Corrections Center, Monroe Correctional Complex, Washington Corrections Center for Women, and Washington State Penitentiary), Western Washington University, and Whatcom Community College.

b. Operators of regulated small MS4s have submitted or shall submit to Ecology a "Notice of Intent (NOI) for Coverage under National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater General Permit" provided on Ecology's website before the effective date of this Permit, with the following exceptions:

   i. Operators of regulated small MS4s located in the Cities of Ridgefield and Yelm, and Sound Transit shall submit a NOI, or application, to Ecology no later than 30 days after the effective date of this Permit.

ii. Operators of regulated small MS4s listed in S1.D.2.a do not need to submit a new application to be covered under this Permit.

c. For operators of regulated small MS4s listed in S1.D.2.a, coverage under this Permit is automatic and begins on the effective date of this Permit, unless the operator chooses to opt out of this General Permit. Any operator of a regulated small MS4 that is opting out of this Permit shall submit an application for an individual MS4 permit in accordance with 40 CFR 122.33(b)(2)(ii) no later than the effective date of this Permit.

d. Operators of regulated small MS4s which want to be covered under this Permit as Co-Permittees shall each submit a NOI to Ecology.

e. Operators of regulated small MS4s which are relying on another entity to satisfy all of their permit obligations shall submit a NOI to Ecology.

f. Operators of small MS4s designated by Ecology pursuant to S1.B.3 of this Permit shall submit a NOI to Ecology within 120 days of receiving notification from Ecology that permit coverage is required.

3. Application Requirements

a. For NOIs submitted after the issuance date of this Permit, the applicant shall include a certification that the public notification requirements of WAC 173-226-130(5) have been satisfied. Ecology will notify applicants in writing of their status concerning coverage under this Permit within 90 days of Ecology's receipt of a complete NOI.

b. Each Permittee applying as a Co-Permittee shall submit a NOI provided on Ecology's website. The NOI shall clearly identify the areas of the MS4 for which the Co-Permittee is responsible.

c. Permittees relying on another entity or entities to satisfy one or more of their permit obligations shall notify Ecology in writing. The notification shall include a summary of the permit obligations that will be carried out by another entity. The summary shall identify the other entity or entities and shall be signed by the other entity or entities. During the term of the Permit, Permittees may terminate or amend shared responsibility arrangements by notifying Ecology, provided this does not alter implementation deadlines.

d. Secondary Permittees required to obtain coverage under this Permit, and the *Phase I Municipal Stormwater Permit* or the *Eastern Washington Phase II Municipal Stormwater Permit*, may obtain coverage by submitting a single NOI.

S2. AUTHORIZED DISCHARGES

A. Stormwater Discharges

This Permit authorizes the discharge of stormwater to surface waters and to groundwaters of the State from MS4s owned or operated by each Permittee covered under this Permit, in the geographic area covered pursuant to S1.A. These discharges are subject to the following limitations:

1. Discharges to groundwaters of the State through facilities regulated under the Underground Injection Control (UIC) program, Chapter 173-218 WAC, are not authorized under this Permit.
2. Discharges to groundwaters not subject to regulation under the federal *Clean Water Act* are authorized in this Permit only under state authorities, Chapter 90.48 RCW, the *Water Pollution Control Act*.

B. Non-Stormwater Discharges

This Permit authorizes discharges of non-stormwater flows to surface waters and to groundwaters of the State from MS4s owned or operated by each Permittee covered under this Permit, in the geographic area covered pursuant to S1.A, only under one or more of the following conditions:

1. The discharge is authorized by a separate NPDES or State Waste Discharge permit.
2. The discharge is from emergency firefighting activities. See Special Conditions S5.C.5, S6.D.3 to address non-stormwater discharges (e.g., discharges associated with cleanup after the emergency).
3. The discharge is from another illicit or non-stormwater discharge that is managed by the Permittee as provided in Special Condition S5.C.5 or S6.D.3.

These discharges are also subject to the limitations in S2.A.1 and S2.A.2, above.

C. Responsibilities and Liabilities

This Permit does not relieve entities that cause illicit discharges, including spills of oil or hazardous substances, from responsibilities and liabilities under state and federal laws and regulations pertaining to those discharges.

D. Compliance with State and Local Authorizations

Discharges from MS4s constructed after the effective date of this Permit shall receive all applicable state and local permits and use authorizations, including compliance with Chapter 43.21C RCW (the *State Environmental Policy Act*).

E. Indian Country

This Permit does not authorize discharges of stormwater to waters within Indian Country as defined in 18 U.S.C. §1151, or to waters subject to water quality standards of Indian Tribes, including portions of the Puyallup River and other waters on trust or restricted lands within the 1873 Survey Area of the Puyallup Tribe of Indians Reservation, except where authority has been specifically delegated to Ecology by the U.S. Environmental Protection Agency. The exclusion of such discharges from this Permit does not waive any rights the State may have with respect to the regulation of the discharges. Indian Country includes:

1. All land within any Indian Reservation notwithstanding the issuance of any patent and including rights-of-way running through the reservation. This includes all federal, tribal, and Indian and non-Indian privately owned land within the reservation.
2. All off-reservation Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.
3. All off-reservation federal trust lands held for Native American Tribes.

   Puyallup Exception: Following the "Puyallup Tribes of Indians Land Settlement Act of 1989," 25 USC §1773; the permit does apply to land within the Puyallup Reservation except for discharges to surface water on land held in trust by the federal government.

S3. RESPONSIBILITIES OF PERMITTEES

A. Compliance with Conditions

Each Permittee covered under this Permit is responsible for compliance with the terms of this Permit for the regulated small MS4s that they own or operate. Compliance with (1) or (2) below is required as applicable to each Permittee, whether the Permittee has applied for coverage as a Permittee, Co-Permittee, or Secondary Permittee.

1. All city, town, and county Permittees are required to comply with all conditions of this Permit, including any appendices referenced therein, except for Special Condition S6 – *Stormwater Management Program for Secondary Permittees*.
2. All Secondary Permittees are required to comply with all conditions of this Permit, including any appendices referenced therein, except for Section S5 – *Stormwater Management Program for Cities, Towns, and Counties* and S8 – *Monitoring and Assessment*.

B. Reliance on Another Entity

Permittees may rely on another entity to satisfy one or more of the requirements of this Permit. Permittees that are relying on another entity to satisfy one or more of their permit obligations remain responsible for permit compliance if the other entity fails to implement permit conditions. Permittees may rely on another entity provided all the requirements of 40 CFR 122.35(a) are satisfied including, but not limited to:

1. The other entity, in fact, implements the Permit requirements.
2. The other entity agrees to take on responsibility for implementation of the Permit requirement(s) on the Permittee's behalf. This shall be indicated on the NOI or Annual Report.

S4. COMPLIANCE WITH STANDARDS

A. Prohibition of Discharge of Toxicants

In accordance with RCW 90.48.520, the discharge of toxicants to waters of the State of Washington which would violate any water quality standard, including toxicant standards, sediment criteria, and dilution zone criteria is prohibited. The required response to such discharges is defined in Section S4.F, below.

B. Compliance with Standards

This Permit does not authorize a discharge which would be a violation of Washington State *Surface Water Quality Standards* (Chapter 173-201A WAC), *Groundwater Quality Standards* (Chapter 173-200 WAC), *Sediment Management Standards* (Chapter 173-204 WAC), or human health-based criteria in the *National Toxics Rule* (40 CFR 131.45). The required response to such discharges is defined in Section S4.F, below.

C. MEP Standard

The Permittee shall reduce the discharge of pollutants to the Maximum Extent Practicable (MEP).

D. AKART Standard

The Permittee shall use All Known, Available, and Reasonable methods of prevention, control, and Treatment (AKART) to prevent and control pollution of waters of the State of Washington.

E. Responsibilities of Permittees

In order to meet the goals of the *Clean Water Act*, and comply with S4.A, S4.B, S4.C, and S4.D, each Permittee shall comply with all of the applicable requirements of this Permit as identified in S3 – *Responsibilities of Permittees*.

F. Violations of Water Quality Standards and Adaptive Management

A Permittee remains in compliance with S4 despite any discharges prohibited by S4.A or S4.B, when the Permittee undertakes the following response toward long-term water quality improvement:

1. A Permittee shall notify Ecology in writing within 30 days of becoming aware, based on credible site-specific information that a discharge from the MS4 owned or operated by the Permittee is causing or contributing to a known or likely violation of Water Quality Standards in the receiving water. Written notification provided under this subsection shall, at a minimum, identify the source of the site-specific information, describe the nature and extent of the known or likely violation in the receiving water, and explain the reasons why the MS4 discharge is believed to be causing or contributing to the problem. For ongoing or continuing violations, a single written notification to Ecology will fulfill this requirement.
2. In the event that Ecology determines, based on a notification provided under S4.F.1 or through any other means, that a discharge from an MS4 owned or operated by the Permittee is causing or contributing to a violation of Water Quality Standards in a receiving water, Ecology will notify the Permittee in writing that an adaptive management response, outlined in S4.F.3, below, is required, unless:
    a. Ecology also determines that the violation of Water Quality Standards is already being addressed by a Total Maximum Daily Load (TMDL) or other enforceable water quality cleanup plan; or
    b. Ecology concludes the MS4 contribution to the violation will be eliminated through implementation of other permit requirements.
3. Adaptive Management Response
    a. Within 60 days of receiving a notification under S4.F.2, or by an alternative date established by Ecology, the Permittee shall review its Stormwater Management Program (SWMP) and submit a report to Ecology. The report shall include:
        i. A description of the operational and/or structural BMPs that are currently being implemented to prevent or reduce any pollutants that are causing or contributing to the violation of Water Quality Standards, including a qualitative assessment of the effectiveness of each Best Management Practice (BMP).
        ii. A description of potential additional operational and/or structural BMPs that will or may be implemented in order to apply AKART on a site-specific basis to prevent or reduce any pollutants that are causing or contributing to the violation of Water Quality Standards.

iii. A description of the potential monitoring or other assessment and evaluation efforts that will or may be implemented to monitor, assess, or evaluate the effectiveness of the additional BMPs.

iv. A schedule for implementing the additional BMPs including, as appropriate: funding, training, purchasing, construction, monitoring, and other assessment and evaluation components of implementation.

b. Ecology will, in writing, acknowledge receipt of the report within a reasonable time and notify the Permittee when it expects to complete its review of the report. Ecology will either approve the additional BMPs and implementation schedule or require the Permittee to modify the report as needed to meet AKART on a site-specific basis. If modifications are required, Ecology will specify a reasonable time frame in which the Permittee shall submit, and Ecology will review the revised report.

c. The Permittee shall implement the additional BMPs, pursuant to the schedule approved by Ecology, beginning immediately upon receipt of written notification of approval.

d. The Permittee shall include with each subsequent annual report a summary of the status of implementation and the results of any monitoring, assessment or evaluation efforts conducted during the reporting period. If, based on the information provided under this subsection, Ecology determines that modification of the BMPs or implementation schedule is necessary to meet AKART on a site-specific basis, the Permittee shall make such modifications as Ecology directs. In the event there are ongoing violations of water quality standards despite the implementation of the BMP approach of this Section, the Permittee may be subject to compliance schedules to eliminate the violation under WAC 173-201A-510(4) and WAC 173-226-180 or other enforcement orders as Ecology deems appropriate during the term of this Permit.

e. A TMDL or other enforceable water quality cleanup plan that has been approved and is being implemented to address the MS4's contribution to the Water Quality Standards violation supersedes and terminates the S4.F.3 implementation plan.

f. Provided the Permittee is implementing the approved adaptive management response under this Section, the Permittee remains in compliance with Special Condition S4, despite any on-going violations of Water Quality Standards identified under S4.A or B, above.

g. The adaptive management process provided under Section S4.F is not intended to create a shield for the Permittee from any liability it may face under 42 U.S.C. 9601 et seq. or Chapter 70.105D RCW.

G. Revoke and Reissue Permit

Ecology may modify or revoke and reissue this General Permit in accordance with G14 – *General Permit Modification and Revocation*, if Ecology becomes aware of additional control measures, management practices, or other actions beyond what is required in this Permit that are necessary to:

1. Reduce the discharge of pollutants to the MEP;
2. Comply with the state AKART requirements; or
3. Control the discharge of toxicants to waters of the State of Washington.

S5. STORMWATER MANAGEMENT PROGRAM FOR CITIES, TOWNS, AND COUNTIES

A. Stormwater Management Program General Requirements

Each Permittee shall develop and implement a Stormwater Management Program (SWMP). A SWMP is a set of actions and activities comprising the components listed in S5 and any additional actions necessary to meet the requirements of applicable TMDLs pursuant to S7 – *Compliance with Total Maximum Daily Load Requirements* and S8 – *Monitoring and Assessment*. This Section applies to all cities, towns, and counties covered under this Permit (termed as "Permittee," including cities, towns, and counties that are Co-Permittees).

New Permittees subject to this Permit, as described in S1.D.1.b, shall fully meet the requirements in S5 as modified in footnotes below or as specified in an alternate schedule as a condition of coverage by Ecology. Permittees obtaining coverage after the issuance date of this Permit shall fully meet the requirements in S5 as specified in an alternate schedule as a condition of coverage by Ecology.

1. At a minimum, the Permittee's SWMP shall be implemented throughout the geographic area subject to this Permit as described in S1.A.[2]
2. Each Permittee shall prepare written documentation of the SWMP, called the SWMP Plan. The SWMP Plan shall be organized according to the program components in S5.C, or a format approved by Ecology and shall be updated at least annually for submittal with the Permittee's annual reports to Ecology (see S9 – *Reporting Requirements*). The SWMP Plan shall be written to inform the public of the planned SWMP activities for the upcoming calendar year, and shall include a description of:
    a. Planned activities for each of the program components included in S5.C.
    b. Any additional planned actions to meet the requirements of applicable TMDLs pursuant to S7– *Compliance with Total Maximum Daily Load Requirements*.
    c. Any additional planned actions to meet the requirements of S8 – *Monitoring and Assessment*.
3. The SWMP shall include an ongoing program for gathering, tracking, maintaining, and using information to evaluate SWMP development, implementation, and permit compliance and to set priorities.

[2] New Permittees shall fully develop and implement the SWMP in accordance with the schedules contained in this Section no later than March 31, 2029.

a. Each Permittee shall track the cost or estimated cost of development and implementation of each component of the SWMP and sources of funding. This information shall be provided with each Annual Report, no later than March 31, 2027. Permittees shall provide annual average costs (or estimates) to implement the SWMP and TMDL requirements.[3]

b. Each Permittee shall track the number of inspections, follow-up actions because of inspections, official enforcement actions, and types of public education activities as required by the respective program component. This information shall be included in the annual report.

4. Permittees shall continue implementation of existing stormwater management programs until they begin implementation of the updated stormwater management program in accordance with the terms of this Permit, including implementation schedules.

5. Coordination among Permittees

a. Coordination among entities covered under municipal stormwater NPDES permits may be necessary to comply with certain conditions of the SWMP. The SWMP shall include, when needed, coordination mechanisms among entities covered under a municipal stormwater NPDES permit to encourage coordinated stormwater-related policies, programs, and projects within adjoining or shared areas, including:

i. Coordination mechanisms clarifying roles and responsibilities for the control of pollutants between physically interconnected MS4s covered by a Municipal Stormwater Permit.

ii. Coordinating stormwater management activities for shared water bodies, or watersheds among Permittees to avoid conflicting plans, policies, and regulations.

b. The SWMP shall include coordination mechanisms among departments within each jurisdiction to eliminate barriers to compliance with the terms of this Permit. Permittees shall include a written description of internal coordination mechanisms in the Annual Report due no later than March 31, 2026.

[3] New Permittees shall begin cost tracking as required in S5.A.3.a, no later than January 1, 2026.

B. Stormwater Management Program Standards

The SWMP shall be designed to reduce the discharge of pollutants from regulated small MS4s to the MEP, meet state AKART requirements, and protect water quality.

C. Stormwater Management Program Components

The SWMP shall include the components listed below. To the extent allowable under state or federal law, all components are mandatory for city, town, or county Permittees covered under this Permit.

1. Stormwater Planning

Each Permittee shall implement a Stormwater Planning program to inform and assist in the development of policies and strategies as water quality management tools to protect receiving waters.

The minimum performance measures are:

a. Each Permittee shall continue to convene an inter-disciplinary team to inform and assist in the development, progress, and influence of this program.[4]

b. Coordination with long-range plan updates.

   i. Each Permittee shall describe how stormwater management needs and protection/improvement of receiving water health are (or are not) informing the long-range or comprehensive planning update processes and influencing policies and implementation strategies in their jurisdiction in the Annual Report, due March 31, 2027. The Annual Report shall describe the water quality and watershed protection policies, strategies, codes, and other measures intended to protect and improve local receiving water health through planning, considering stormwater management needs or limitations.

c. Low Impact Development (LID) code-related requirements.

   i. Permittees shall continue to require LID Principles and LID BMPs when updating, revising, and developing new local development-related codes, rules, standards, or other enforceable documents, as needed.

      The intent shall be to make LID the preferred and commonly used approach to site development. The local development-related codes, rules, standards, or other enforceable documents shall be designed to

[4] New Permittees shall convene an interdisciplinary team no later than August 1, 2025.

minimize impervious surfaces, native vegetation loss, and stormwater runoff in all types of development situations, where feasible.

(a) Annually, each Permittee shall assess and document any newly identified administrative or regulatory barriers to implementation of LID Principles or LID BMPs since local codes were updated in accordance with the 2013 Permit, and the measures developed to address the barriers. If applicable, the report shall describe mechanisms adopted to encourage or require implementation of LID principles or LID BMPs.

ii. By December 31, 2028, New Permittees shall review, revise, and make effective their local development-related codes, rules, standards, or other enforceable documents to incorporate and require LID principles and LID BMPs. New Permittees shall conduct a similar review and revision process, and consider the range of issues, outlined in the following document: *Integrating LID into Local Codes: A Guidebook for Local Governments* (Puget Sound Partnership, 2012).

New Permittees shall submit a summary of the results of the review and revision process with the annual report due no later than March 31, 2029. This summary shall be in the required format described in Appendix 5 and include, at a minimum, a list of the participants (job title, brief job description, and department represented), the codes, rules, standards, and other enforceable documents reviewed, and the revisions made to those documents which incorporate and require LID principles and LID BMPs. The summary shall include existing requirements for LID principles and LID BMPs in development-related codes. The summary shall be organized as follows:

(a) Measures to minimize impervious surfaces;

(b) Measures to minimize loss of native vegetation; and

(c) Other measures to minimize stormwater runoff.

iii. No later than December 31, 2028, adopt and implement tree canopy goals and policies to support stormwater management. Permittees shall consider how existing or future tree canopy can support stormwater management and water quality improvements in receiving waters. Establish a long-term (e.g. 5, 10 year or longer) goal of canopy, existing or future projection, to be used for stormwater management that is appropriate to the jurisdiction. Specific considerations for canopy for

stormwater management on Permittee-owned or operated lands shall include (but are not limited to):

(a) Maintaining or increasing canopy in overburdened communities.

(b) Maintaining existing mature canopy.

Document considerations, reasoning, and rationale for goals and policies.

d. Stormwater Management Action Planning (SMAP).[5] Permittees shall conduct a similar process and consider the range of issues outlined in the *Stormwater Management Action Planning Guidance* (Ecology, 2024; Publication no. 24-10-027) for one new priority catchment or additional actions for an existing SMAP.[6] A purpose of the SMAP is to support implementation in the Stormwater Management for Existing Development (SMED) Program with the identification of strategic investments through the identification of projects and actions.

i. Stormwater Management Action Plan (SMAP). No later than March 31, 2027, Permittees shall complete and submit a SMAP for at least one new high priority catchment area, or additional actions for an existing SMAP, that identifies all of the following:

(a) A description of the stormwater facility retrofits needed for the area, including the BMP types and preferred locations. Include projects that address transportation-related runoff from high traffic areas.

(b) Land management/development strategies and/or actions identified for water quality management.

(c) Focused, enhanced, or customized implementation of stormwater management actions related to Permit sections within S5, including:

- IDDE field screening;
- Prioritization of Source Control inspections;
- O&M inspections or enhanced maintenance; or
- Public Education and Outreach behavior change programs.

Identified actions shall support other specifically identified stormwater management strategies and actions for the basin overall, or for the catchment area in particular.

[5] New Permittees are exempt from S5.C.1.d. for this Permit term.
[6] City of Shelton shall follow the SMAP requirements outlined in Appendix 14.

(d) If applicable, identification of changes needed to local long-range plans to address SMAP priorities.

(e) A proposed implementation schedule and budget sources for:

- Short-term actions (i.e., actions to be accomplished within six years); and
- Long-term actions (i.e., actions to be accomplished within seven to 20 years).

(f) Actions in the SMAP that may benefit overburdened communities, including specifically vulnerable populations and highly impacted Communities.

(g) A process and schedule to provide future assessment and feedback to improve the planning process and implementation of procedures or projects.

2. Public Education and Outreach

The SWMP shall include an education and outreach program designed to:

- Build general awareness about methods to address and reduce impacts from stormwater runoff;
- Effect behavior change to reduce or eliminate behaviors and practices that cause or contribute to adverse stormwater impacts; and
- Create stewardship opportunities that encourages community engagement in addressing the impacts from stormwater runoff.

Permittees may choose to meet these requirements individually or as a member of a regional group. Regional collaboration on general awareness or behavior change programs, or both, includes Permittees developing a consistent message, determining best methods for communicating the message, and when appropriate, creating strategies to effect behavior change. If a Permittee chooses to adopt one or more elements of a regional program, the Permittee should participate in the regional group and shall implement the adopted element(s) of the regional program in the local jurisdiction.

The minimum performance measures are:

a. Each Permittee shall implement an education and outreach program. The program design shall be based on local or regional (or a combination of both) water quality information and priority audience characteristics to identify high priority audiences, subject areas, and/or BMPs. Based on the priority

audience's demographic, the Permittee shall consider delivering its selected messages in language(s) other than English, as appropriate to the priority audience.[7]

i. ***General awareness.*** To build general awareness, Permittees shall annually select, at a minimum, one priority audience and one subject area from either (a) or (b):

(a) *Priority audiences:* General public (including overburdened communities, school age children, college/university, or trade students) or businesses (including home-based, or mobile businesses). Subject areas:

- General impacts of stormwater on surface waters, including impacts from impervious surfaces.
- Low impact development (LID) principles and LID BMPs.

(b) *Priority audiences:* Engineers, contractors, developers, property owners/managers, or land use planners. Subject areas:

- Technical standards for stormwater site and erosion control plans.
- LID principles and LID BMPs.
- Stormwater treatment and flow control BMPs/facilities.
- Source control BMPs for building materials to reduce pollution to stormwater, including but not limited to stormwater pollution from PCB-containing materials.

(c) Permittees shall provide subject area information to the priority audience on an ongoing or strategic schedule.

ii. ***Behavior change.*** To affect behavior change, Permittees shall select, at a minimum, one priority audience and one BMP.

(a) *Priority Audiences:* Residents, landscapers, property managers/owners, developers, school age children, college/university, trade students, or businesses (including home-based or mobile businesses).

BMPs:

[7] New Permittees shall begin implementing the requirements of S5.C.2.a no later than August 1, 2027.

- Use and storage of: pesticides, fertilizers, and/or other household chemicals.
- Use and storage of: automotive chemicals, hazardous cleaning supplies, carwash soaps, and/or other hazardous materials.
- Prevention of illicit discharges.
- Yard care techniques protective of water quality.
- Carpet cleaning.
- Repair and maintenance BMPs for: vehicles, equipment, and/or home/buildings.
- Pet waste management and disposal.
- LID Principles and LID BMPs.
- Stormwater facility maintenance, including LID facilities.
- Dumpster and trash compactor maintenance.
- Litter and debris prevention.
- Sediment and erosion control.
- (Audience specific) Source control BMPs (refer to S5.C.8).
- (Audience specific) Locally important, municipal stormwater-related subject area.

(b) Social marketing campaign development. Based on the recommendation from 2024 evaluation and report, no later than July 1, 2025, each Permittee shall follow social marketing practices and methods and develop a campaign that is tailored to the community, including development of a program evaluation plan. Each Permittee shall:[8]

1. Develop a strategy and schedule to implement the existing campaign more effectively; or
2. Develop a strategy and schedule to expand the existing campaign to a new priority audience or BMPs; or

[8] No later than August 1, 2025, New Permittees shall follow social marketing practices and methods to develop a behavior change program that is tailored to the community per S5.C.2.a.ii(b).

3. Develop a strategy and schedule for a new priority audience and BMP behavior change campaign.

(c) Behavior change campaign implementation. No later than September 1, 2025, begin to implement the strategy developed in S5.C.2.a.ii.(b).[9]

(d) Behavior change campaign evaluation. No later than March 31, 2029, evaluate and submit report on:

1. The changes in understanding and adoption of behaviors resulting from the implementation of the strategy; and

2. Any planned or recommended changes to the campaign to be more effective; describe the strategies and process to achieve the results.

(e) Behavior change campaign adaptive management. Permittees shall use results of the evaluation to continue to direct effective methods and implementation of the ongoing behavior change program.

iii. ***Stewardship.*** Each Permittee shall provide, partner with, or promote stewardship opportunities to encourage residents or businesses to participate in activities or events planned and organized within the community, such as: stream teams, storm drain marking, volunteer monitoring, riparian plantings, and watershed habitat improvement. Permittees may provide, partner with, or promote stewardship opportunities created or organized by existing organizations (including non-Permittees).[10]

3. Public Involvement and Participation

Permittees shall provide ongoing opportunities for public involvement and participation through advisory councils, public hearings, watershed committees, participation in developing rate-structures or other similar activities. Each Permittee shall comply with applicable state and local public notice requirements when developing elements of the SWMP and SMAP.

The minimum performance measures are:

a. Permittees shall create opportunities for the public, including overburdened communities, to participate in the decision-making processes involving the development, implementation, and update of the Permittee's SMAP and

[9] No later than October 1, 2025, New Permittees shall begin to implement the strategy developed in S5.C.2.a.ii(b).
[10] New Permittees shall implement the stewardship requirements according to S5.C.2.a.iii no later than August 1, 2027.

SWMP.[11] Permittees shall document specific outreach measures for overburdened communities.

i. Annually, document specific public involvement and participation opportunities provided to overburdened communities and specifically, highly impacted communities.

ii. No later than December 31, 2026, document methods used to identify overburdened communities.

b. Each Permittee shall post on their website their SWMP Plan and the Annual Report, required under S9.A, no later than May 31 each year. All other submittals shall be available to the public upon request.

4. MS4 Mapping and Documentation

The SWMP shall include an ongoing program for mapping and documenting the MS4.[12]

The minimum performance measures are:

a. *Ongoing Mapping:* Each Permittee shall maintain mapping data for the features listed below:

i. Known MS4 outfalls and known MS4 discharge points.

(a) Map outfall size and material, where known.

ii. Receiving waters, other than groundwater.

iii. Stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee.

iv. Geographic areas served by the Permittee's MS4 that do not discharge stormwater to surface waters.

v. Tributary conveyances to all known outfalls and discharge points with a 24-inch nominal diameter or larger, or an equivalent cross-sectional area for non-pipe systems. The following features or attributes (or both) shall be mapped:

(a) Tributary conveyance type, material, and size where known.

(b) Associated drainage areas.

[11]New Permittees shall develop and begin to implement requirements according to S5.C.3.a no later than August 1, 2025. New Permittees are exempt from SMAP this permit term.

[12]New Permittees shall meet the requirements to map the MS4 according to S5.C.4 no later than March 31, 2029, except where otherwise noted in this Section.

(c) Land use.

vi. Connections between the MS4 owned or operated by the Permittee and other municipalities or public entities.

vii. All connections to the MS4 authorized or allowed by the Permittee after February 16, 2007. [13,14]

viii. All known connections from the MS4 to a privately owned stormwater system.

b. *New Mapping.* Each Permittee shall:

i. No later than March 31, 2026, submit locations of all known MS4 outfalls according to the standard templates and format provided in the Annual Report. Report the size and material of the outfalls, where known.

ii. No later than December 31, 2026, using available, existing data, map tree canopy to support stormwater management on Permittee-owned or operated properties. Permittees shall develop and follow a methodology to intentionally identify canopy for stormwater management purposes, which may be updated annually or as needed.

iii. No later than March 31, 2028, implement a methodology to map and assess acreage of MS4 tributary basins to outfalls with a 24-inch nominal diameter or larger, or an equivalent cross-sectional area for non-pipe systems that have stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee. Submit with the March 31, 2028 Annual Report a map(s) (.pdf) and table (.xlsx) with a breakdown of the MS4 tributary basins quantifying estimated acres managed or unmanaged by stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee.

iv. No later than December 31, 2028, using available, existing data map overburdened communities in relation to stormwater treatment and flow control BMPs/facilities, outfalls, discharge points, and tree canopy on Permittee-owned or operated properties.

c. The required format for mapping is electronic (e.g. Geographic Information System, CAD drawings, or other software that can map and store points,

[13]New Permittees shall meet the requirements of S5.C.4.a.vii after August 1, 2024, for all connections to the MS4 authorized after August 1, 2024.

[14]Permittees do not need to map the following residential connections: individual driveways, sump pumps, or roof downspouts.

lines, polygons, and associated attributes), with fully described mapping standards.

d. To the extent consistent with national security laws and directives, each Permittee shall make available to Ecology, upon request, available maps depicting the information required in S5.C.4.a through c, above.

e. Upon request, and to the extent appropriate, Permittees shall provide mapping information to federally recognized Indian Tribes, municipalities, and other Permittees. This Permit does not preclude Permittees from recovering reasonable costs associated with fulfilling mapping information requests by federally recognized Indian Tribes, municipalities, and other Permittees.

5. Illicit Discharge Detection and Elimination

The SWMP shall include an ongoing program designed to prohibit, prevent, detect, characterize, trace, and eliminate illicit connections and illicit discharges into the MS4.[15]

The minimum performance measures are:

a. The program shall include procedures for reporting and correcting or removing illicit connections, spills, and other illicit discharges when they are suspected or identified. The program shall also include procedures for addressing pollutants entering the MS4 from an interconnected, adjoining MS4.

Illicit connections and illicit discharges shall be identified through, but not limited to, field screening, inspections, complaints/reports, construction inspections, maintenance inspections, source control inspections, and/or monitoring information, as appropriate.

b. Permittees shall inform public employees, businesses, and the public of hazards associated with illicit discharges and improper disposal of waste.

c. Each Permittee shall implement an ordinance or other regulatory mechanism to effectively prohibit non-stormwater, illicit discharges into the Permittee's MS4 to the maximum extent allowable under state and federal law. The ordinance or other regulatory mechanism in effect as of the effective date of this Permit shall be revised, if necessary, to meet the requirements of this Section no later than July 1, 2027.

[15]New Permittees shall meet the requirements of S5.C.5 no later than August 1, 2026 except where otherwise noted in this Section.

i. *Allowable Discharges:* The regulatory mechanism does not need to prohibit the following categories of non-stormwater discharges:

(a) Diverted stream flows

(b) Rising groundwaters

(c) Uncontaminated groundwater infiltration (as defined at 40 CFR 35.2005(b)(20))

(d) Uncontaminated pumped groundwater

(e) Foundation drains

(f) Air conditioning condensation

(g) Irrigation water from agricultural sources that is commingled with urban stormwater

(h) Springs

(i) Uncontaminated water from crawl space pumps

(j) Footing drains

(k) Flows from riparian habitats and wetlands

(l) Non-stormwater discharges authorized by another NPDES or State Waste Discharge permit

(m) Non-stormwater discharges from emergency firefighting activities in accordance with S2 Authorized Discharges

ii. *Conditionally allowable discharges:* The regulatory mechanism may allow the following categories of non-stormwater discharges only if the stated conditions are met:

(a) Discharges from potable water sources, including but not limited to water line flushing, hyperchlorinated water line flushing, fire hydrant system flushing, and pipeline hydrostatic test water. Planned discharges shall be dechlorinated to a total residual chlorine concentration of 0.1 ppm or less, pH-adjusted, if necessary, and volumetrically and velocity controlled to prevent re-suspension of sediments in the MS4.

(b) Discharges from lawn watering and other irrigation runoff, including from reclaimed water sources. These discharges shall be minimized

through, at a minimum, public education activities and water conservation efforts.

(c) Discharges from swimming pools, spas, and hot tubs. The discharges shall be dechlorinated/debrominated to a total residual concentration of 0.1 ppm or less, free from sodium chloride, pH-adjusted, and reoxygenated if necessary, volumetrically and velocity controlled to prevent re-suspension of sediments in the MS4. Discharges shall be thermally controlled to prevent an increase in temperature of the receiving water. Swimming pool cleaning wastewater and filter backwash shall not be discharged to the MS4.

(d) Street and sidewalk wash water and water used to control dust. The Permittee shall reduce these discharges through, at a minimum, public education activities and/or water conservation efforts. To avoid washing pollutants into the MS4 Permittees shall minimize the amount of street wash and dust control water used.

(e) Routine external building washdown that does not use detergents for buildings built or renovated before 1950 and after 1980. These discharges shall be reduced through, at minimum, public education activities and water conservation efforts.

Commercial, industrial, and multi-story residential structures constructed or renovated between the years 1950 and 1980 (i.e. those most likely to have PCB-containing building materials), shall be assessed for PCB-containing materials consistent with *How to find and address PCBs in building materials* (Ecology, 2024, Publication No. 22-04-024) prior to routine building washdown to the MS4. Structures confirmed or suspected to have PCB-containing materials shall not discharge washdown to the MS4.

Single-family residential buildings are exempt from PCB assessment prior to building washdown, for the purposes of this section. Structures built or renovated between 1950-1980 and determined to be without PCB-containing materials may conduct routine building washdown (without detergents) as described above.

(f) Other non-stormwater discharges. The discharges shall be in compliance with the requirements of a pollution prevention plan reviewed by the Permittee which addresses control of such discharges.

iii. The Permittee shall further address any category of discharges in (i) or (ii), above if the discharges are identified as significant sources of pollutants to waters of the State.

iv. The ordinance or other regulatory mechanism shall include escalating enforcement procedures and actions.

d. Each Permittee shall implement an ongoing program designed to detect and identify non-stormwater discharges and illicit connections into the Permittee's MS4.[16] The program shall include the following components:

i. Procedures for conducting investigations of the Permittee's MS4, including field screening and methods for identifying potential sources. These procedures may also include source control inspections.

The Permittee shall implement a field screening methodology appropriate to the characteristics of the MS4 and water quality concerns. Screening for illicit connections may be conducted using *Illicit Connection and Illicit Discharge Field Screening and Source Tracing Guidance Manual* (Herrera Environmental Consultants, Inc.; May 2020), or another methodology of comparable or improved effectiveness. The Permittee shall document the field screening methodology in the Annual Report.

(a) All Permittees shall complete field screening for an average of 12% of the MS4 each year.[17]

ii. A publicly listed and publicized hotline or other telephone number for public reporting of spills and other illicit discharges.

iii. An ongoing training program for all municipal field staff who, as part of their normal job responsibilities, might come into contact with or otherwise observe an illicit discharge and/or illicit connection to the MS4, on the identification of an illicit discharge and/or connection, and on the proper procedures for reporting and responding to the illicit discharge and/or connection. Follow-up training shall be provided, as needed, to address changes in procedures, techniques, requirements, or staffing. Permittees shall document and maintain records of the trainings provided and the staff trained.[18]

[16]New Permittees shall fully implement the requirements of S5.C.5.d no later than August 1, 2028.

[17]New Permittees shall complete S5.C.5.d.i requirements for field screening covering at least 40% of the MS4 within the Permittee's coverage area no later than December 31, 2028, and on average 12% each year thereafter.

[18]New Permittees shall develop and begin implementing the ongoing training program described in S5.C.5.d.iii no later than March 31, 2026.

e. Each Permittee shall implement an ongoing program designed to address illicit discharges, including spills and illicit connections, into the Permittee's MS4.[19] The program shall include:

i. Procedures for characterizing the nature of, and potential public or environmental threat posed by, any illicit discharges found by or reported to the Permittee. Procedures shall address the evaluation of whether the discharge must be immediately contained and steps to be taken for containment of the discharge.

ii. Procedures for the post-emergency clean-up of firefighting activities:

(a) No later than December 31, 2026, the Permittee shall coordinate with firefighting agencies/departments that serve the areas that discharge to the MS4 to be notified when PFAS-containing AFFFs are used during emergency firefighting activities.

(b) No later than January 1, 2027, Permittee shall update and implement procedures to minimize discharges to the MS4 during post-emergency clean-up and disposal activities including, but not limited to, the immediate clean-up in all situations where PFAS-containing AFFFs have been used, diversions, and other measures that prevent discharges to the MS4. The Permittee is not expected to deploy control measures during an emergency.

iii. Procedures for tracing the source of an illicit discharge; including visual inspections and, when necessary, opening manholes, using mobile cameras, collecting and analyzing water samples, and/or other detailed inspection procedures.

iv. Procedures for eliminating the discharge including notification of appropriate authorities (including owners or operators of interconnected MS4s), notification of the property owner, technical assistance, follow-up inspections, and use of the compliance strategy developed pursuant to S5.C.5.c.iv, including escalating enforcement and legal actions if the discharge is not eliminated.

v. Compliance with the provisions in (i)-(iv) above shall be achieved by meeting the following timelines:

[19]New Permittees shall fully develop and implement the requirements of S5.C.5.e no later than August 1, 2028.

(a) Immediately respond to all illicit discharges, including spills, which are determined to constitute a threat to human health, welfare, or the environment, consistent with General Condition G3.

(b) Investigate (or refer to the appropriate agency with the authority to act) within 7 days, on average, any complaints, reports, or monitoring information that indicates a potential illicit discharge.

(c) Initiate an investigation within 21 days of any report or discovery of a suspected illicit connection to determine the source of the connection, the nature and volume of discharge through the connection, and the party responsible for the connection.

(d) Upon confirmation of an illicit connection, use the compliance strategy in a documented effort to eliminate the illicit connection within 6 months. All known illicit connections to the MS4 shall be eliminated.

f. Permittees shall train staff who are responsible for identification, investigation, termination, cleanup, and reporting of illicit discharges, including spills, and illicit connections, to conduct these activities. Follow-up training shall be provided as needed to address changes in procedures, techniques, requirements, or staffing. Permittees shall document and maintain records of the training provided and the staff trained.[20]

g. Recordkeeping: Each Permittee shall track and maintain records of the activities conducted to meet the requirements of this Section. In the Annual Report, each Permittee shall submit data for the illicit discharges, spills, and illicit connections including those that were found by, reported to, or investigated by the Permittee during the previous calendar year. The data shall include the information and format specified in Appendix 13 and WQWebIDDE. Each Permittee may either use their own system or WQWebIDDE for recording this data.

[20]New Permittees shall meet the requirements of S5.C.5.f no later than March 31, 2026.

6. Controlling Runoff from New Development, Redevelopment, and Construction Sites

Each Permittee shall implement and enforce a program to reduce pollutants in stormwater runoff to a regulated small MS4 from new development, redevelopment, and construction site activities. The program shall apply to private and public development, including transportation projects.[21]

The minimum performance measures are:

a. Implement an ordinance or other enforceable mechanism that addresses runoff from new development, redevelopment, and construction site projects.

   No later than June 30, 2027, each Permittee shall adopt and make effective a local program, that meets the requirements of S5.C.6.b(i) through (iii), below, and shall apply to all applications[22] submitted:

   i. On or after July 1, 2027.

   ii. Prior to January 1, 2017, that have not started construction[23] by July 1, 2022.[24]

   iii. Prior to July 1, 2022, that have not started construction by July 1, 2027.

   iv. Prior to July 1, 2027, that have not started construction by July 1, 2032.

b. The ordinance or other enforceable mechanism shall include, at a minimum:

   i. The Minimum Requirements, thresholds, and definitions in Appendix 1, or the 2019 Appendix 1 amended to include the changes identified in Appendix 10, or Phase I program approved by Ecology and amended to include Appendix 10, for new development, redevelopment, and construction sites. Adjustment and exceptions criteria equivalent to those in Appendix 1 shall be included. More stringent requirements may

[21]For continuing Permittees, this means continuing to implement existing programs developed under previous permits until updates are made to meet the schedules defined. *New Permittees shall meet the requirements of S5.C.6 no later than June 30, 2027, except where otherwise specified in this Section.*

[22]In this context, "application" means, at a minimum a complete project description, site plan, and, if applicable, SEPA checklist. Permittees may establish additional elements of a completed application.

[23]In this context "started construction" means the site work associated with, and directly related to the approved project has begun. For example: grading the project site to final grade or utility installation. Simply clearing the project site does not constitute the start of construction. Permittees may establish additional requirements related to the start of construction.

[24]**For Lynden, Snoqualmie S5.C.6.a.ii is replaced with these dates**: Prior to January 1, 2018, that have not started construction by January 1, 2023. **For Aberdeen S5.C.6.a.ii is replaced with these dates**: Prior to July 1, 2018, that have not started construction by June 30, 2023. **Shelton S5.C.6.a.ii and iii is replaced with these dates:** Prior to January 1, 2023, which have not started construction by January 1, 2028.

be used, and/or certain requirements may be tailored to local circumstances through the use of Ecology-approved basin plans or other similar water quality and quantity planning efforts. Such local requirements and thresholds shall provide equal protection of receiving waters and equal levels of pollutant control to those provided in Appendix 1.

ii. The local requirements shall include the following requirements, limitations, and criteria that, when used to implement the minimum requirements in Appendix 1 (or program approved by Ecology under the 2024 Phase I Permit), will protect water quality, reduce the discharge of pollutants to the MEP, and satisfy the State requirement under Chapter 90.48 RCW to apply AKART prior to discharge:

(a) Site planning requirements;

(b) BMP selection criteria.

(c) BMP design criteria.

(d) BMP infeasibility criteria.

(e) LID competing needs criteria.

(f) BMP limitations.

Permittees shall document how the criteria and requirements will protect water quality, reduce the discharge of pollutants to the MEP, and satisfy the state AKART requirements.

Permittees who choose to use the requirements, limitations, and criteria above in the *Stormwater Management Manual for Western Washington*, or a Phase I program approved by Ecology, may cite this choice as their sole documentation to meet this requirement.

iii. The legal authority, through the approval process for new development and redevelopment, to inspect and enforce maintenance standards for private stormwater facilities approved under the provisions of this Section that discharge to the Permittee's MS4.

c. The program shall include a permitting process with site plan review, inspection, and enforcement capability to meet the standards listed in (i) through (iv) below, for both private and public projects, using qualified personnel (as defined in *Definitions and Acronyms*). At a minimum, this program shall be applied to all sites that meet the minimum thresholds adopted pursuant to S5.C.6.b.i, above.

i. Review of all stormwater site plans for proposed development activities.

ii. Inspect, prior to clearing and construction, all permitted development sites that have a high potential for sediment transport as determined through plan review based on definitions and requirements in Appendix 7 – *Determining Construction Site Sediment Damage Potential*. As an alternative to evaluating each site according to Appendix 7, Permittees may choose to inspect all construction sites that meet the minimum thresholds adopted pursuant to S5.C.6.b.i, above.

iii. Inspect all permitted development sites during construction to verify proper installation and maintenance of required erosion and sediment controls. Enforce, as necessary, based on the inspection.

iv. Each Permittee shall manage maintenance activities to inspect all stormwater treatment and flow control BMPs/facilities, and catch basins, in new residential developments at least twice per 12-month period with no less than 4 months between inspections, until 90% of the lots are constructed (or when construction has stopped and the site is fully stabilized), to identify maintenance needs and enforce compliance with maintenance standards as needed.

v. Inspect all permitted development sites upon completion of construction and prior to final approval or occupancy to ensure proper installation of permanent stormwater facilities. Verify that a maintenance plan is completed and responsibility for maintenance is assigned for stormwater treatment and flow control BMPs/facilities. Enforce, as necessary, based on the inspection.

vi. Compliance with the inspection requirements in (ii) through (v), above, shall be determined by the presence and records of an established inspection program designed to inspect all sites. Compliance shall be determined by achieving at least 80% of required inspections annually. The inspections may be combined with other inspections provided they are performed using qualified personnel.

vii. The program shall include a procedure for keeping records of inspections and enforcement actions by staff including inspection reports, warning letters, notices of violations, and other enforcement records. Records of maintenance inspections and maintenance activities shall be maintained.

viii. An enforcement strategy shall be implemented to respond to issues of non-compliance.

d. The program shall make available to representatives of proposed new development and redevelopment, as applicable: the link to the online *Construction Stormwater General Permit* Notice of Intent (NOI) form for construction activity, a link to the online *Industrial Stormwater General Permit* NOI form for industrial activity, and a link to the online registration requirements for Underground Injection Control (UIC) wells. Permittees shall continue to enforce local ordinances controlling runoff from sites that are also covered by stormwater permits issued by Ecology.[25]

e. Each Permittee shall ensure that all staff whose primary job duties are implementing the program to Control Stormwater Runoff from New Development, Redevelopment, and Construction Sites, including permitting, plan review, construction site inspections, and enforcement, are trained to conduct these activities. Follow-up training shall be provided as needed to address changes in procedures, techniques, or staffing. Permittees shall document and maintain records of the training provided and the staff trained.[26]

7. Stormwater Management for Existing Development

Each Permittee shall implement a Program to control or reduce stormwater discharges to waters of the State from areas of existing development.[27] The Program shall aim to focus on strategic stormwater investments over longer planning timeframes.

The minimum performance measures are:

a. Permittees shall implement stormwater facility retrofits, or tailored SWMP actions that meet the criteria described in Appendix 12, using one or a combination of the following:

   i. Strategic stormwater investments identified in Stormwater Management Action Plan(s) (SMAPs, S5.C.1.d.), or similar stormwater planning process; and/or

   ii. Opportunistic stormwater investments identified by leveraging projects outside of SMAP areas to improve stormwater management and infrastructure.

[25]New Permittees shall meet the requirements of S5.C.6.d beginning no later than August 1, 2024.
[26]New Permittees shall meet the requirements of S5.C.6.e no later than December 31, 2027.
[27] New Permittees are exempt from this permit section.

b. With each Annual Report, each Permittee shall provide a list of planned, individual projects scheduled for funding or implementation during this Permit term for the purpose of meeting the assigned equivalent acreage in Appendix 12. This list shall include at a minimum the information and use the formatting specified in Appendix 12 (.xlsx file format).

c. No later than March 31, 2028, Permittees shall fully fund, start construction, or completely implement project(s) that meet the assigned equivalent acreage and submit documentation with the Annual Report (due on March 31, 2028) as described in Appendix 12.[28]

   i. Projects that started construction on or after January 1, 2023, may be included towards achieving the acres required.

   ii. Permittees may contribute to meeting an overall regional goal to satisfy this permit requirement as described in S5.C.7.d.

   iii. Permittees that completely implement stormwater facility retrofit projects by the expiration date of this Permit that will exceed the area required for this Permit term may apply the excess as a credit to be used for the next Permit term (e.g. 2029-2034 Permit term), not to exceed 50% of the next Permit's requirement.

   iv. Permittees shall report which projects may provide Tribal benefits and benefits to overburdened communities including specifically Vulnerable Populations and Highly Impacted Communities.

d. Permittees may collaborate to meet a regional goal.

   i. Each Permittee is required to manage at least 0.5 equivalent acres within their own jurisdiction but may receive acreage credit for contributing to meeting an overall regional goal outside their defined MS4 Permit coverage area. For Permittees assigned 0.5 acres, participation and in-kind services to regional collaboration projects may count as the contribution for this Permit term if there is regional agreement on the strategy.

   ii. Permittees may contribute to a regional goal, that is the sum of Phase II partners assigned acreage from Appendix 12. Projects may be implemented outside of Permit coverage areas to meet their individual requirement as part of a regional goal where benefits to receiving waters within the Permit coverage areas are identified and anticipated.

[28] See Appendix 12 for descriptions of project status types: fully fund, start construction, and completely implement.

e. Permittees shall report the amount of estimated or projected equivalent acres managed by stormwater facility retrofits for the next Permit term (e.g. 2029-2032). This report shall be submitted to Ecology no later than March 31, 2028.

8. Source Control Program for Existing Development

The Permittee shall implement a program to prevent and reduce pollutants in runoff from areas of existing development that discharge to the MS4. The program shall include application of source control BMPs, inspections, and enforcement.

The minimum performance measures are:

a. Permittees shall enforce ordinance(s), or other enforceable documents, requiring the application of source control BMPs for pollutant generating sources associated with existing land uses and activities (see Appendix 8 to identify pollutant generating sources). [29]

Permittees shall update and make effective the ordinance(s), or other enforceable documents, as necessary to meet the requirements of this Section no later than August 1, 2027.

The requirements of this subsection are met by using the source control BMPs in the SWMMWW, or a Phase I Program approved by Ecology. In cases where the manual(s) lack guidance for a specific source of pollutants, the Permittee shall work with the owner/operator to implement or adapt BMPs based on the best professional judgement of the Permittee.

Applicable operational source control BMPs shall be required for all pollutant generating sources. Structural source control BMPs, or treatment BMPs/facilities, or both, shall be required for pollutant generating sources if operational source control BMPs do not prevent illicit discharges or violations of surface water, groundwater, or sediment management standards because of inadequate stormwater controls. Implementation of source control requirements may be done through education and technical assistance programs, provided that formal enforcement authority is available to the Permittee and is used as determined necessary by the Permittee, in accordance with S5.C.8.d., below.

[29] No later than August 1, 2026, New Permittees shall adopt and make effective ordinance(s), or other enforceable documents, requiring the application of source control BMPs for pollutant generating sources associated with existing land uses and activities (see Appendix 8 to identify pollutant generating sources).

b. Permittees shall implement a program to identify publicly and privately owned institutional, commercial, and industrial sites which have the potential to generate pollutants to the MS4.[30] Permittees shall update the inventory at least once every 5 years. The inventory shall include:

   i. Businesses and/or sites identified based on the presence of activities that are pollutant generating (refer to Appendix 8); and

   ii. Other pollutant generating sources, based on complaint response, such as: home-based businesses and multi-family sites.

c. Permittees shall implement an inspection program, performed by qualified personnel, for sites identified pursuant to S5.C.8.a.i., above.[31]

   i. All identified sites with a business address shall be provided information about activities that may generate pollutants and the source control requirements applicable to those activities. This information shall be provided by mail, telephone, electronic communications, or in person. This information may be provided all at one time or spread out over the Permit term to allow for tailoring and distribution of the information during site inspections.

   ii. The Permittee shall annually complete the number of inspections equal to 20% of the businesses and/or sites listed in their source control inventory to assess BMP effectiveness and compliance with source control requirements. The Permittee may count follow-up compliance inspections at the same site toward the 20% inspection rate. The Permittee may select which sites to inspect each year and is not required to inspect 100% of sites over a 5-year period. Sites may be prioritized for inspection based on their land use category, potential for pollution generation, proximity to receiving waters, or to address an identified pollution problem within a specific geographic area or sub-basin.

   iii. Each Permittee shall inspect 100% of sites identified through credible complaints.

   iv. Permittees may count inspections conducted based on complaints, or when the property owner denies entry, to the 20% inspection rate.

[30] No later than August 1, 2027, New Permittees shall establish an inventory that follows this permit section.
[31] No later than January 1, 2028, New Permittees shall implement an inspection program for sites identified.

v. Annual Reporting of inspections shall be organized by business type or activities with potential to generate pollutants to the MS4. Standard Industrial Code (SIC), Major Group, and NAICS numbers may be provided for reference as noted in Appendix 8.

d. Permittees shall implement a progressive enforcement policy that requires sites to comply with stormwater requirements within a reasonable time period as specified below:[32]

i. If the Permittee determines, through inspections or otherwise, that a site has failed to adequately implement required BMPs, the Permittee shall take appropriate follow-up action(s), which may include phone calls, reminder letters, emails, or follow-up inspections.

ii. When a Permittee determines that a site has failed to adequately implement BMPs after a follow-up inspection(s) the Permittee shall take enforcement action as established through authority in its municipal codes or ordinances, or through the judicial system.

iii. Each Permittee shall maintain records, including documentation of each site visit, inspection reports, warning letters, notices of violations, and other enforcement records demonstrating an effort to bring sites into compliance. Each Permittee shall also maintain records of sites that are not inspected because the property owner denies entry.

iv. A Permittee may refer non-emergency violations of local ordinances to Ecology, provided, the Permittee also makes a documented effort of progressive enforcement. At a minimum, a Permittee's enforcement effort shall include documentation of inspections and warning letters or notices of violation.

v. Application and enforcement of local ordinances at sites identified pursuant to S5.C.8.a.i., including sites with discharges authorized by a separate NPDES permit.

[32] No later than January 1, 2028, New Permittees shall implement a progressive enforcement policy as described in this permit section.

e. Permittees shall train staff who are responsible for implementing the source control program to conduct these activities.[33] The ongoing training program shall cover the legal authority for source control, source control BMPs and their proper application, inspection protocols, lessons learned, typical cases, and enforcement procedures. Follow-up training shall be provided as needed to address changes in procedures, techniques, requirements, or staff. Permittees shall document and maintain records of the training provided and the staff trained.

9. Operations and Maintenance

Each Permittee shall implement and document a program to regulate maintenance activities and to conduct maintenance activities by the Permittee to prevent or reduce stormwater impacts.[34]

The minimum performance measures are:

a. Each Permittee shall implement maintenance standards that are as protective, or more protective, of facility function than those specified in the *Stormwater Management Manual for Western Washington,* or a Phase I program approved by Ecology. For facilities which do not have maintenance standards, the Permittee shall develop a maintenance standard. No later than June 30, 2027, Permittees shall update their maintenance standards as necessary to meet the requirements of this Section.

   i. The purpose of the maintenance standard is to determine if maintenance is required. The maintenance standard is not a measure of the facility's required condition at all times between inspections. Exceeding the maintenance standard between inspections and/or maintenance is not a Permit violation.

   ii. Unless there are circumstances beyond the Permittee's control, when an inspection identifies an exceedance of the maintenance standard, maintenance shall be performed:

      - Within 1 year for typical maintenance of facilities, except catch basins.
      - Within 6 months for catch basins.
      - Within 2 years for maintenance that requires capital construction of less than $25,000.

[33] New Permittees shall develop and implement a training program no later than December 31, 2027.
[34] New Permittees shall develop and implement the requirements of S5.C.9 no later than June 30, 2027 except where otherwise noted in this Section.

Circumstances beyond the Permittee's control include denial or delay of access by property owners, denial or delay of necessary Permit approvals, and unexpected reallocations of maintenance staff to perform emergency work. For each exceedance of the required timeframe, the Permittee shall document the circumstances and how they were beyond their control.

b. Maintenance of stormwater treatment and flow control BMPs/facilities regulated by the Permittee:

i. The program shall include provisions to verify adequate long-term O&M of stormwater treatment and flow control BMPs/facilities that are permitted and constructed pursuant to S5.C.6.c and shall be maintained in accordance with S5.C.9.a.

The provisions shall include:

(a) Implementation of an ordinance or other enforceable mechanism that:

- Clearly identifies the party responsible for maintenance in accordance with maintenance standards established under S5.C.9.a.
- Requires inspection of facilities in accordance with the requirements in (b), below.
- Establishes enforcement procedures.

(b) Annual inspections of all stormwater treatment and flow control BMPs/facilities that discharge to the MS4 and were permitted by the Permittee according to S5.C.6.c, including those permitted in accordance with requirements adopted pursuant to the 2007-2024 Ecology municipal stormwater permits, unless there are maintenance records to justify a different frequency. Inspections shall be conducted by qualified personnel or a qualified third party.

Permittees may reduce the inspection frequency based on maintenance records of double the length of time of the proposed inspection frequency. In the absence of maintenance records, the Permittee may substitute written statements to document a specific less frequent inspection schedule. Written statements shall be based on actual inspection and maintenance experience and shall be certified in accordance with G19 – *Certification and Signature*.

ii. Compliance with the inspection requirements in (b), above, shall be determined by the presence and records of an established inspection program designed to inspect all facilities, and achieving at least 80% of required inspections annually.

iii. The program shall include a procedure for keeping records of inspections and enforcement actions by staff, qualified personnel, and qualified third parties, including inspection reports, warning letters, notices of violations, and other enforcement records. Records of maintenance inspections and maintenance activities shall be maintained.

c. Maintenance of stormwater facilities owned or operated by the Permittee:

i. Each Permittee shall implement a program to annually inspect all municipally owned or operated stormwater treatment and flow control BMPs/facilities. Permittees shall implement appropriate maintenance action(s) in accordance with the adopted maintenance standards. The inspection program shall be implemented by qualified personnel.

Permittees may reduce the inspection frequency based on maintenance records of double the length of time of the proposed inspection frequency. In the absence of maintenance records, the Permittee may substitute written statements to document a specific less frequent inspection schedule. Written statements shall be based on actual inspection and maintenance experience and shall be certified in accordance with G19 – *Certification and Signature*.

ii. Each Permittee shall spot check potentially damaged stormwater treatment and flow control BMPs/facilities after major storm events (24-hour storm event with a 10 year or greater recurrence interval). If spot checks indicate widespread damage/maintenance needs, inspect all stormwater treatment and flow control BMPs/facilities that may be affected. Conduct repairs or take appropriate maintenance action in accordance with maintenance standards established above, based on the results of the inspections.

iii. Each Permittee shall continue to inspect all catch basins and inlets owned or operated by the Permittee by December 31, 2025 and every two years after.[35] Clean catch basins if the inspection indicates cleaning is needed to comply with maintenance standards established in the *Stormwater Management Manual for Western Washington.* Decant water shall be disposed of in accordance with Appendix 6 – *Street Waste Disposal*.

The following alternatives to the standard approach of inspecting all catch basins every two years may be applied to all or portions of the system:

(a) The catch basin inspection schedule of every two years may be changed as appropriate to meet the maintenance standards based on maintenance records of double the length of time of the proposed inspection frequency. In the absence of maintenance records for catch basins, the Permittee may substitute written statements to document a specific, less frequent inspection schedule. Written statements shall be based on actual inspection and maintenance experiences and shall be certified in accordance with G19 – *Certification and Signature*.

(b) Inspections every two years may be conducted on a "circuit basis" whereby 25% of catch basins and inlets within each circuit are inspected to identify maintenance needs. Include an inspection of the catch basin immediately upstream of any MS4 outfall, discharge point, or connections to public or private storm systems, if applicable. Clean all catch basins within a given circuit for which the inspection indicates cleaning is needed to comply with maintenance standards established under S5.C.9.a, above.

(c) The Permittee may clean all pipes, ditches, and catch basins and inlets within a circuit once during the Permit term. Circuits selected for this alternative must drain to a single point.

iv. Compliance with the inspection requirements in S5.C.9.c.i-iii, above, shall be determined by the presence of an established inspection program achieving at least 95% of required inspections.

[35] New Permittees shall inspect and, if needed, clean all catch basins and inlets owned or operated by the Permittee in accordance with the requirements of S5.C.7.c once during the permit term, to be completed no later than December 31, 2028 and every two years after.

d. Implement practices, policies, and procedures to reduce stormwater impacts associated with runoff from all lands owned or maintained by the Permittee, and road maintenance activities under the functional control of the Permittee. No later than December 31, 2027, document the practices, policies, and procedures. Lands owned or maintained by the Permittee include but are not limited to: streets; parking lots; roads; highways; buildings; parks; open space; road rights-of-way; maintenance yards; and stormwater treatment and flow control BMPs/facilities.

   The following activities shall be addressed:

   i. Pipe cleaning.

   ii. Cleaning of culverts that convey stormwater in ditch systems.

   iii. Ditch maintenance.

   iv. Street cleaning.

   v. Road repair and resurfacing, including pavement grinding.

   vi. Snow and ice control.

   vii. Utility installation.

   viii. Pavement striping maintenance.

   ix. Maintaining roadside areas, including vegetation management.

   x. Dust control.

   xi. Application of fertilizers, pesticides, and herbicides according to the instructions for their use including reducing nutrients and pesticides and using alternatives that minimize environmental impacts.

   xii. Sediment and erosion control.

   xiii. Landscape maintenance and vegetation disposal.

   xiv. Trash and pet waste management.

   xv. Building exterior cleaning and maintenance.

      (a) For Permittee-owned buildings built or renovated between 1950-1980, update policies, practices, or procedures to include Source Control BMPs to minimize PCBs from entering the MS4. Permittees shall not discharge washdown water to the MS4 if the building is confirmed or suspected to have PCB-containing materials.

   xvi. Preparing Permittee-owned buildings for renovation or demolition.

(a) Update policies, practices, or procedures to include Source Control BMPs for building materials to prevent PCBs from entering the MS4 in preparation for and during demolition and renovations.

e. No later than July 1, 2027, develop and implement a municipal street sweeping program to focus on priority areas and times during the year that would reasonably be expected to result in the maximum water quality benefits to receiving waters. The following program elements shall be included:

i. Priority areas: Apply street sweeping program to curbed municipal streets that discharge to outfalls and meet any of the following criteria:

(a) High traffic streets, such as arterials or collectors.

(b) Streets that serve commercial or industrial land use areas.

ii. Program timing: Sweep priority areas at least once between July and September each year and at least two additional times a year as determined by the Permittee to provide additional water quality benefits. For calendar year 2027, only one sweeping event is required between July and December.

(a) Compliance during this Permit term shall be determined by records of a sweeping program designed to sweep all priority areas identified and sweeping at least 90% of priority areas each sweeping event.

(b) Permittee may document reasoning for alternative sweeping timing and frequency based on local conditions (e.g., climate) and estimated pollutant deposition quantities. Documentation shall also be based on actual maintenance experience and be certified in accordance with G19 – *Certification and Signature*.

iii. Operational Procedures: Procedures to follow equipment design performance specifications to ensure that street sweeping equipment is operated at the proper design speed with appropriate verification, and that it is properly maintained.

iv. Street Waste Disposal: Dispose of sweeper waste material in accordance with Appendix 6 – *Street Waste Disposal*.

v. Reporting: No later than March 31, 2028, submit with the Annual Report the following information about the priority areas:

(a) Priority areas swept identified on a map (i.e. streets that are considered high traffic (estimated number of vehicles served/or arterials or collectors, and streets serving commercial or industrial land use).

(b) Sweeping date(s).

(c) Sweeping frequency.

(d) Type of sweeper.

(e) Total curb miles of priority areas and curb miles swept.

(f) Approximation of street waste solids removed for each sweeping event (indicate unit of measurement and wet or dry weight, where available).

f. Implement a Stormwater Pollution Prevention Plan (SWPPP) for all heavy equipment maintenance or storage yards and material storage facilities owned or operated by the Permittee in areas subject to this Permit that are not required to have coverage under the *Industrial Stormwater General Permit* or another NPDES permit that authorizes stormwater discharges associated with the activity. SWPPPs shall include the following information, at a minimum:

i. A detailed description of the operational and structural BMPs in use at the facility and a schedule for implementation of additional BMPs when needed. BMPs selected shall be consistent with the *Stormwater Management Manual for Western Washington*, or a Phase I program approved by Ecology. The SWPPP shall be updated as needed to maintain relevancy with the facility.

ii. At minimum, annual inspections of the facility, including visual observations of discharges, to evaluate the effectiveness of the BMPs, identify maintenance needs, and determine if additional or different BMPs are needed. The results of these inspections shall be documented in an inspection report or check list.

iii. An inventory of the materials and equipment stored on-site, and the activities conducted at the facility which may be exposed to precipitation or runoff and could result in stormwater pollution.

iv. A site map showing the facility's stormwater drainage, discharge points, and areas of potential pollutant exposure.

v. A plan for preventing and responding to spills at the facility which could result in an illicit discharge.

g. Implement an ongoing training program for employees of the Permittee whose primary construction, operations, or maintenance job functions may impact stormwater quality. The training program shall address the importance of protecting water quality, operation and maintenance standards, inspection procedures, relevant SWPPPs, selecting appropriate BMPs, street sweeper operation, ways to perform their job activities to prevent or minimize impacts to water quality, and procedures for reporting water quality concerns. Follow-up training shall be provided as needed to address changes in procedures, techniques, requirements, or staffing. Permittees shall document and maintain records of training provided. The staff training records to be kept include dates, activities or course descriptions, and names and positions of staff in attendance.

h. Maintain records of the activities conducted to meet the requirements of this Section.

S6. STORMWATER MANAGEMENT PROGRAM FOR SECONDARY PERMITTEES

A. Secondary Permittees and New Secondary Permittees Coverage

This Section applies to all Secondary Permittees and all New Secondary Permittees, whether coverage under this Permit is obtained individually or as a Co-Permittee with a city, town, county, or another Secondary Permittee.

New Secondary Permittees subject to this Permit shall fully meet the requirements of this Section as modified in the footnotes in S6.D below, or as established as a condition of coverage by Ecology.

1. To the extent allowable under state, federal or local law, all components are mandatory for each Secondary Permittee covered under this Permit, whether covered as an individual Permittee or as a Co-Permittee.
2. Each Secondary Permittee shall develop and implement a Stormwater Management Program (SWMP). A SWMP is a set of actions and activities comprising the components listed in S6 and any additional actions necessary to meet the requirements of applicable TMDLs pursuant to S7 – *Compliance with Total Maximum Daily Load Requirements*. The SWMP shall be designed to reduce the discharge of pollutants from regulated small MS4s to the MEP and protect water quality.
3. Unless an alternate implementation schedule is established by Ecology as a condition of Permit coverage, the SWMP shall be developed and implemented in accordance with the schedules contained in this Section and shall be fully developed and implemented no later than four and one-half years from the initial Permit coverage date. Secondary Permittees that are already implementing some or all of the required SWMP components shall continue implementation of those components.
4. Secondary Permittees may implement parts of their SWMP in accordance with the schedule for cities, towns, and counties in S5, provided they have signed a memorandum of understanding or other agreement to jointly implement the activity or activities with one or more jurisdictions listed in S1.D.2.a or S1.D.2.b and submitted a copy of the agreement to Ecology.
5. Each Secondary Permittee shall prepare written documentation of the SWMP, called the SWMP Plan. The SWMP Plan shall be updated annually to include a description of program activities for the upcoming calendar year and shall be submitted with the Annual Report.

B. Coordination

Secondary Permittees shall coordinate stormwater-related policies, programs, and projects within a watershed and interconnected MS4s. Where relevant and appropriate, the SWMP shall coordinate among departments of the Secondary Permittee to ensure compliance with the terms of this Permit.

C. Legal Authority

To the extent allowable under state law and federal law, each Secondary Permittee shall be able to demonstrate that they can operate pursuant to legal authority which authorizes or enables the Secondary Permittee to control discharges to and from MS4s owned or operated by the Secondary Permittee.

This legal authority may be a combination of statutes, ordinances, permits, contracts, orders, interagency agreements, or similar instruments.

D. Stormwater Management Program for Secondary Permittees

The SWMP for Secondary Permittees shall include the following components:

1. Public Education and Outreach

Each Secondary Permittee shall implement the following stormwater education strategies:

a. Storm drain inlets owned or operated by the Secondary Permittee that are located in maintenance yards, in parking lots, along sidewalks, and at pedestrian access points shall be clearly labeled with a message similar to "Dump no waste – Drains to waterbody."[36]

   As identified during visual inspection and regular maintenance of storm drain inlets per the requirements of S6.D.3.d and S6.D.6.a.i, below, or as otherwise reported to the Secondary Permittee, any inlet having a label that is no longer clearly visible and/or easily readable shall be re-labeled within 90 days.

b. Each year beginning no later than three years from the initial date of Permit coverage, public ports, colleges, and universities shall distribute educational information to tenants and residents on the impact of stormwater discharges on receiving waters, and steps that can be taken to reduce pollutants in stormwater runoff. Distribution may be by hard copy or electronic means. Appropriate topics may include:

[36]New Secondary Permittees shall label all inlets as described in S6.D.1.a no later than four years from the initial date of permit coverage.

i. How stormwater runoff affects local water bodies.

ii. Proper use and application of pesticides and fertilizers.

iii. Benefits of using well-adapted vegetation.

iv. Alternative equipment washing practices, including cars and trucks that minimize pollutants in stormwater.

v. Benefits of proper vehicle maintenance and alternative transportation choices; proper handling and disposal of vehicle wastes, including the location of hazardous waste collection facilities in the area.

vi. Hazards associated with illicit connections and illicit discharges.

vii. Benefits of litter control of pet waste.

viii. Source control BMPs for building materials to reduce pollution to stormwater including, but not limited to, stormwater pollution from PCB-containing materials.

2. Public Involvement and Participation

Each year, no later than May 31, each Secondary Permittee shall:

a. Make the annual report available on the Permittee's website; and

b. Make available on the Permittee's website, the latest updated version of the SWMP Plan.

3. Illicit Discharge Detection and Elimination

Each Secondary Permittee shall:

a. From the initial date of Permit coverage, comply with all relevant ordinances, rules, and regulations of the local jurisdiction(s) in which the Secondary Permittee is located that govern non-stormwater discharges.

b. Implement appropriate policies prohibiting illicit discharges,[37] and an enforcement plan to ensure compliance with illicit discharge policies.[38] These policies shall address, at a minimum: illicit connections, non-stormwater discharges, including spills of hazardous materials, and improper disposal of pet waste and litter. Policies shall be revised, if necessary, to meet the requirements of this Section no later than July 1, 2027.

   i. *Allowable discharges*: The policies do not need to prohibit the following categories of non-stormwater discharges:

      (a) Diverted stream flows

      (b) Rising groundwaters

      (c) Uncontaminated groundwater infiltration (as defined at 40 CFR 35.2005(b)(20))

      (d) Uncontaminated pumped groundwater

      (e) Foundation drains

      (f) Air conditioning condensation

      (g) Irrigation water from agricultural sources that is commingled with urban stormwater

      (h) Springs

      (i) Uncontaminated water from crawl space pumps

      (j) Footing drains

      (k) Flows from riparian habitats and wetlands

      (l) Discharges from emergency firefighting activities in accordance with S2 – *Authorized Discharges*

      (m) Non-stormwater discharges authorized by another NPDES or State Waste Discharge Permit

[37]New Secondary Permittees shall develop and implement appropriate policies prohibiting illicit discharges and identify possible enforcement mechanisms as described in S6.D.3.b no later than one year from the initial date of permit coverage.

[38]New Secondary Permittees shall develop and implement an enforcement plan as described in S6.D.3.b no later than 18 months from the initial date of permit coverage.

ii. *Conditionally allowable discharges*: The policies may allow the following categories of non-stormwater discharges only if the stated conditions are met and such discharges are allowed by local codes:

(a) Discharges from potable water sources including, but not limited to, water line flushing, hyperchlorinated water line flushing, fire hydrant system flushing, and pipeline hydrostatic test water. Planned discharges shall be dechlorinated to a total residual chlorine concentration of 0.1 ppm or less, pH-adjusted if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments in the MS4.

(b) Discharges from lawn watering and other irrigation runoff, including from reclaimed water sources. These discharges shall be minimized through, at a minimum, public education activities and water conservation efforts conducted by the Secondary Permittee and/or the local jurisdiction.

(c) Discharges from swimming pools, spas, and hot tubs. The discharges shall be dechlorinated/debrominated to a total residual concentration of 0.1 ppm or less, free from sodium chloride, pH-adjusted and reoxygenated if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments in the MS4. Discharges shall be thermally controlled to prevent an increase in temperature of the receiving water. Swimming pool cleaning wastewater and filter backwash shall not be discharged to the MS4.

(d) Street and sidewalk wash water, water used to control dust. The Secondary Permittee shall reduce these discharges through, at a minimum, public education activities and/or water conservation efforts conducted by the Secondary Permittee and/or the local jurisdiction. To avoid washing pollutants into the MS4, the Secondary Permittee shall minimize the amount of street wash and dust control water used.

(e) Routine external building washdown that does not use detergents for buildings built before 1950 and after 1980. These discharges shall be reduced through, at minimum, public education activities or water conservation efforts, or both.

Commercial, industrial, and multi-story residential structures constructed or renovated between the years 1950 and 1980 (i.e. those most likely to have PCB containing building materials), shall be assessed for PCB-containing materials consistent with *How to Find PCBs in Building Materials* (Ecology, 2024; Publication No. 22-040-024) prior to routine building washdown to the MS4. Structures confirmed or suspected to have PCB-containing materials shall not discharge washdown water to the MS4. Structures built between 1950-1980, without PCB-containing materials, may proceed with routine building washdown (without detergents) as described above.

(f) Other non-stormwater discharges shall be in compliance with the requirements of a pollution prevention plan reviewed by the Permittee which addresses control of such discharges.

iii. The Secondary Permittee shall address any category of discharges in (i) or (ii), above, if the discharge is identified as a significant source of pollutants to waters of the State.

c. Maintain a storm sewer system map showing the locations of all known MS4 outfalls and discharge points, labeling the receiving waters (other than groundwater) and delineating the areas contributing runoff to each outfall and discharge point. Make the map (or completed portions of the map) available on request to Ecology and to the extent appropriate to other Permittees.

i. No later than December 31, 2026, the required format for mapping is an electronic format with fully described mapping standards.[39]

ii. No later than March 31, 2027, Permittees shall submit locations of all known MS4 outfalls according to the standard templates and format provided in the Annual Report. This reporting shall include the size and material of the outfalls.

d. Conduct field inspections and visually inspect for illicit discharges at all known MS4 outfalls and discharge points. Visually inspect at least one third (on average) of all known outfalls and discharge points each year beginning no later than two years from the initial date of Permit coverage. Implement procedures to identify and remove any illicit discharges. Keep records of inspections and follow-up activities.

[39]New Secondary Permittees shall meet the requirements of S6.D.3.c no later than four and one-half years from the initial date of permit coverage.

e. Implement a spill response plan that includes coordination with a qualified spill responder.[40]

f. No later than two years from initial date of Permit coverage, provide staff training or coordinate with existing training efforts to educate staff on proper BMPs for preventing illicit discharges, including spills. Train all Secondary Permittee staff who, as part of their normal job responsibilities, have a role in preventing such illicit discharges.

4. Construction Site Stormwater Runoff Control

From the initial date of Permit coverage, each Secondary Permittee shall:

a. Comply with all relevant ordinances, rules, and regulations of the local jurisdiction(s) in which the Secondary Permittee is located that govern construction phase stormwater pollution prevention measures.

b. Ensure that all construction projects under the functional control of the Secondary Permittee which require a construction stormwater permit obtain coverage under the NPDES *Construction Stormwater General Permit* or an individual NPDES permit prior to discharging construction related stormwater.

c. Coordinate with the local jurisdiction regarding projects owned or operated by other entities which discharge into the Secondary Permittee's MS4, to assist the local jurisdiction with achieving compliance with all relevant ordinances, rules, and regulations of the local jurisdiction(s).

d. Provide training or coordinate with existing training efforts to educate relevant staff in erosion and sediment control BMPs and requirements or hire trained contractors to perform the work.

e. Coordinate, as requested, with Ecology or the local jurisdiction to provide access for inspection of construction sites or other land disturbances which are under the functional control of the Secondary Permittee during land disturbing activities and/or construction period.

[40]New Secondary Permittees shall develop and implement a spill response plan as described in S6.D.3.e no later than four and one-half years from the initial date of permit coverage.

5. Post-Construction Stormwater Management for New Development and Redevelopment

From the initial date of Permit coverage, each Secondary Permittee shall:

a. Comply with all relevant ordinances, rules, and regulations of the local jurisdiction(s) in which the Secondary Permittee is located that govern post-construction stormwater pollution prevention measures.

b. Coordinate with the local jurisdiction regarding projects owned or operated by other entities which discharge into the Secondary Permittee's MS4 to assist the local jurisdiction with achieving compliance with all relevant ordinances, rules, and regulations of the local jurisdiction(s).

6. Pollution Prevention and Good Housekeeping for Municipal Operations

Each Secondary Permittee shall:

a. Implement a municipal operation and maintenance (O&M) plan to minimize stormwater pollution from activities conducted by the Secondary Permittee. The O&M Plan shall include appropriate pollution prevention and good housekeeping procedures for all of the following operations, activities, and/or types of facilities that are present within the Secondary Permittee's boundaries and under the functional control of the Secondary Permittee.[41] The O&M Plan Shall be updated, as needed, no later than July 1, 2027.

   i. *Stormwater collection and conveyance systems* including catch basins, stormwater pipes, open channels, culverts, and stormwater treatment and flow control BMPs/facilities. The O&M Plan shall address, at a minimum: scheduled inspections and maintenance activities including cleaning and proper disposal of waste removed from the system. Secondary Permittees shall properly maintain stormwater collection and conveyance systems owned or operated by the Secondary Permittee and annually inspect and maintain all stormwater facilities to ensure facility function.

   Secondary Permittees shall establish maintenance standards that are as protective or more protective of facility function than those specified in the *Stormwater Management Manual for Western Washington*. Secondary Permittees shall review their maintenance standards to ensure they are consistent with the requirements of this Section.

[41]New Secondary Permittees shall develop and implement the operation and maintenance plan described in S6.D.6.a no later than three years from initial date of permit coverage.

Secondary Permittees shall conduct spot checks of potentially damaged permanent stormwater treatment and flow control BMPs/facilities following major storm events (24-hour storm event with a 10-year or greater recurrence interval).

ii. *Roads, highways, and parking lots*. The O&M Plan shall address, at a minimum: deicing, anti-icing, and snow removal practices; snow disposal areas; material (e.g., salt, sand, or other chemical) storage areas; and all-season BMPs to reduce road and parking lot debris and other pollutants from entering the MS4.

iii. *Vehicle fleets*. The O&M Plan shall address, at a minimum: storage, washing, and maintenance of Secondary Permittee vehicle fleets; and fueling facilities. Secondary Permittees shall conduct all vehicle and equipment washing and maintenance in a self-contained covered building or in designated wash and/or maintenance areas.

iv. *External building maintenance*. The O&M Plan shall address, at a minimum: building exterior cleaning and maintenance including cleaning, washing, painting; maintenance and management of dumpsters; and other maintenance activities. For buildings owned by the Secondary Permittee and built or renovated between 1950 and 1980, the O&M Plan shall include building material assessment for PCBs consistent with *How to Find and Address PCBs in Building Materials* guidance (Ecology, 2024; Publication No. 22-040-024) prior to exterior building washdown to the MS4. Structures confirmed or suspected to have PCB-containing materials shall not discharge washdown water to the MS4.

v. *Preparing Permittee-owned buildings for renovation or demolition.* The O&M Plan shall address Source Control BMPs for building materials to prevent PCBs from entering the MS4 in preparation for and during demolition and renovations.

vi. *Parks and open space*. The O&M Plan shall address, at a minimum: proper application of fertilizer, pesticides, and herbicides; sediment and erosion control; BMPs for landscape maintenance and vegetation disposal; and trash and pet waste management.

vii. *Material storage facilities and heavy equipment maintenance or storage yards*. Secondary Permittees shall develop and implement a Stormwater Pollution Prevention Plan to protect water quality at each of these facilities owned or operated by the Secondary Permittee and not covered under the *Industrial Stormwater General Permit* or under another NPDES

permit that authorizes stormwater discharges associated with the activity.

viii. *Other facilities* that would reasonably be expected to discharge contaminated runoff. The O&M Plan shall address proper stormwater pollution prevention practices for each facility.

b. From the initial date of Permit coverage, Secondary Permittees shall also have permit coverage for all facilities operated by the Secondary Permittee that are required to be covered under the *Industrial Stormwater General Permit* or another NPDES permit that authorizes discharges associated with the activity.

c. The O&M Plan shall include sufficient documentation and records as necessary to demonstrate compliance with the O&M Plan requirements in S6.D.6.a(i) through (viii), above.

d. No later than three years from the initial date of Permit coverage, Secondary Permittees shall implement a program designed to train all employees whose primary construction, operations, or maintenance job functions may impact stormwater quality. The training shall address:

i. The importance of protecting water quality.

ii. The requirements of this Permit.

iii. Operation and maintenance requirements.

iv. Inspection procedures.

v. Ways to perform their job activities to prevent or minimize impacts to water quality.

vi. Procedures for reporting water quality concerns, including potential illicit discharges (including spills).

S7. COMPLIANCE WITH TOTAL MAXIMUM DAILY LOAD REQUIREMENTS

The following requirements apply if an applicable TMDL is approved for stormwater discharges from MS4s owned or operated by the Permittee. Applicable TMDLs are TMDLs which have been approved by EPA on or before the issuance date of this Permit or prior to the date that Ecology issues coverage under this Permit, whichever is later.

A. TMDL Specific Requirements

1. For applicable TMDLs listed in Appendix 2, affected Permittees shall comply with the specific requirements identified in Appendix 2. Each Permittee shall keep records of all actions required by this Permit that are relevant to applicable TMDLs within their jurisdiction. The status of the TMDL implementation shall be included as part of the annual report submitted to Ecology. Each annual report shall include a summary of relevant SWMP and Appendix 2 activities conducted in the TMDL area to address the applicable TMDL parameter(s).
2. For applicable TMDLs not listed in Appendix 2, compliance with this Permit shall constitute compliance with those TMDLs.

S8. MONITORING AND ASSESSMENT

A. Regional Status and Trends Monitoring

1. All Permittees that chose S8.A.2 Regional Status and Trends Monitoring Option in the *Phase II Western Washington Municipal Stormwater Permit*, August 1, 2019 – July 31, 2024, shall make a one-time payment into the Stormwater Action Monitoring (SAM) collective fund to implement regional small streams and marine nearshore areas status and trends monitoring in Puget Sound or, urban streams in the Lower Columbia River basin. This payment is due on or before December 1, 2024. Submit payment amount according to Section S8.D, below.
2. All City and County Permittees covered under the *Phase II Western Washington Municipal Stormwater Permit*, August 1, 2019 – July 31, 2024, except the Cities of Aberdeen and Centralia, shall notify Ecology in writing which of the following two options for regional status and trends monitoring (S8.A.2.a or S8.A.2.b) the Permittee chooses to carry out during this Permit term. The written notification with G19 signature is due to Ecology no later than December 1, 2024. Either option will fully satisfy the Permittee's obligations under this Section (S8.A.2). Each Permittee shall select a single option for this Permit term.

a. Make annual payments into a Stormwater Action Monitoring (SAM) collective fund to implement regional receiving water status and trends monitoring of either: small streams and marine nearshore areas in Puget Sound, or urban streams in Clark and Cowlitz Counties in the Lower Columbia River basin, depending on the Permittee's location. The annual payments into the collective fund are due on or before August 15 each year beginning in 2025. Submit payments according to Section S8.D, below.

Or

b. Conduct stormwater discharge monitoring per the requirements in Section S8.C.

B. Stormwater Management Program (SWMP) Effectiveness and Source Identification Studies

1. All Permittees that chose S8.B Effectiveness Studies Option in the *Phase II Western Washington Municipal Stormwater Permit,* August 1, 2019 – July 31, 2024, shall make a one-time payment into the collective fund for Stormwater Action Monitoring (SAM) to implement effectiveness studies and source identification studies. The payment is due on or before December 1, 2024. Submit payment according to Section S8.D, below.
2. All City and County Permittees covered under the *Phase II Western Washington Municipal Stormwater Permit*, August 1, 2019 – July 31, 2024, shall notify Ecology in writing which of the following two options (S8.B.2.a or S8.B.2.b) for effectiveness and source identification studies the Permittee chooses to carry out during this Permit term. The written notification with G19 signature is due to Ecology no later than December 1, 2024. Either option will fully satisfy the Permittee's obligations under this Section (S8.B.2). Each Permittee shall select a single option for this Permit term.

   a. Make annual payments into a SAM collective fund to implement effectiveness and source identification studies. The annual payments into the collective fund are due on or before August 15 each year beginning in 2025. Submit payments according to Section S8.D, below.

   Or

   b. Conduct stormwater discharge monitoring per the requirements in Section S8.C.

3. All Permittees shall provide information as requested for effectiveness and source identification studies that are under contract with Ecology as active Stormwater Action Monitoring (SAM) projects. These requests will be limited to records of SWMP activities and associated data tracked and/or maintained in accordance with S5 – *Stormwater Management Program for Cities, Towns, and Counties* and/or S9 – *Reporting Requirements*. A maximum of three requests during the Permit term from the SAM Coordinator will be transmitted to the Permittee's permit coordinator via Ecology's regional permit manager. The Permittee shall have 90 days to provide the requested information.

C. Stormwater Discharge Monitoring.

1. This Section applies only to Permittees who choose to conduct stormwater discharge monitoring per S8.A.2.b and/or S8.B.2.b in lieu of participation in the regional status and trends monitoring and/or effectiveness and source identification studies. These Permittees shall conduct monitoring in accordance with Appendix 9 and an Ecology-approved Quality Assurance Project Plan (QAPP) as follows:

   a. Permittees who choose the option to conduct stormwater discharge monitoring for either S8.A.2 or S8.B.2 shall monitor three independent discharge locations.

      Permittees who choose the option to conduct stormwater discharge monitoring for both S8.A.2 and S8.B.2 shall conduct this monitoring at a total of six locations; at least four locations shall be independent (one location may be nested in another basin).

   b. No later than February 1, 2025, each Permittee shall submit to Ecology a draft stormwater discharge monitoring QAPP for review and approval. The QAPP shall be prepared in accordance with the requirements in Appendix 9. The final QAPP shall be submitted to Ecology for approval as soon as possible following finalization, and before August 15, 2025 or within 60 days of receiving Ecology's comments on the draft QAPP (whichever is later).

   c. Flow monitoring shall begin no later than October 1, 2025, or within 30 days of receiving Ecology's approval of the final QAPP (whichever is later). Stormwater discharge monitoring shall be fully implemented no later than October 1, 2026.

   d. Data and analyses shall be reported annually in accordance with the Ecology-approved QAPP. Each Permittee shall enter into the Department's Environmental Information Management (EIM) database all water and solids concentration data collected pursuant to Appendix 9.

i. Within 60 days of completing the study, or no later than March 31, 2029, publish a final report with the results of the study and recommended future actions based on findings, include a summary of results.

D. Payments into the Stormwater Action Monitoring Collective Fund.

1. This Section applies to all Permittees who choose to make annual payments into the SAM collective funds for S8.A *Regional Status and Trends Monitoring* and/or S8.B *Effectiveness and Source Identification Studies*.
2. Permittees submitting payment for S8.A.1. or S8.B.1., payment amounts are listed in Appendix 11 of the WWA Phase II Municipal Stormwater Permit, August 1, 2019– July 31, 2024.
3. Each Permittee's S8.A.2.a and S8.B.2.a payment amounts are listed in Appendix 11 and in the invoices that will be sent to the Permittee approximately three months in advance of each payment due date. Mail payments according to the instructions in the invoice.

S9. REPORTING & RECORDKEEPING REQUIREMENTS

A. Annual Report Submittal

1. No later than March 31 of each year beginning in 2025, each Permittee shall submit an Annual Report. The reporting period for the first Annual Report will be from January 1, 2024, through December 31, 2024. The reporting period for all subsequent Annual Reports will be the previous calendar year unless otherwise specified.
2. Permittees shall submit Annual Reports electronically using Ecology's Water Quality Permitting Portal (WQWebPortal) available on Ecology's website.

B. Records Retention

Each Permittee is required to keep all records related to this Permit and the SWMP for at least five years after the expiration date of this Permit.

C. Records Available to the Public

Each Permittee shall make all records related to this Permit and the Permittee's SWMP available to the public at reasonable times during business hours. The Permittee will provide a copy of the most recent annual report to any individual or entity, upon request.

1. A reasonable charge may be assessed by the Permittee for making photocopies of records.
2. The Permittee may require reasonable advance notice of intent to review records related to this Permit.

D. Annual Report for Cities, Towns, and Counties

Each annual report shall include the following:

1. A copy of the Permittee's current Stormwater Management Program Plan (SWMP Plan), as required by S5.A.2.
2. Submittal of the annual report form as provided by Ecology pursuant to S9.A, describing the status of implementation of the requirements of this Permit during the reporting period.

3. Attachments to the annual report form including summaries, descriptions, reports, and other information as required, or as applicable, to meet the requirements of this Permit during the reporting period, or as a required submittal. Refer to Appendix 3 for annual report questions.[42]
4. If applicable, notice that the MS4 is relying on another entity to satisfy any of the obligations under this Permit.
5. Certification and signature pursuant to G19.D, and notification of any changes to authorization pursuant to G19.C.
6. A notification of any annexations, incorporations or jurisdictional boundary changes resulting in an increase or decrease in the Permittee's geographic area of Permit coverage during the reporting period.

E. Annual Report for Secondary Permittees

Each annual report shall include the following:

1. A copy of the Permittee's current Stormwater Management Program Plan (SWMP Plan), as required by S6.A.2.
2. Submittal of the annual report form as provided by Ecology pursuant to S9.A, describing the status of implementation of the requirements of this Permit during the reporting period.
3. Attachments to the annual report form including summaries, descriptions, reports, and other information as required, or as applicable, to meet the requirements of this Permit during the reporting period. Refer to Appendix 4 for annual report questions.
4. If applicable, notice that the MS4 is relying on another entity to satisfy any of the obligations under this Permit.
5. Certification and Signature pursuant to G19.D, and notification of any changes to authorization pursuant to G19.C.
6. A notification of any jurisdictional boundary changes resulting in an increase or decrease in the Secondary Permittee's geographic area of Permit coverage during the reporting period.

[42]New Permittees refer to Appendix 5 for annual report questions.

GENERAL CONDITIONS

G1. DISCHARGE VIOLATIONS

All discharges and activities authorized by this Permit shall be consistent with the terms and conditions of this Permit.

G2. PROPER OPERATION AND MAINTENANCE

The Permittee shall, at all times, properly operate and maintain all facilities and systems of collection, treatment, and control (and related appurtenances) which are installed or used by the Permittee for pollution control to achieve compliance with the terms and conditions of this Permit.

G3. NOTIFICATION OF DISCHARGE, INCLUDING SPILLS

If a Permittee has knowledge of a discharge, including spills, into or from a MS4 which could constitute a threat to human health, welfare, or the environment, the Permittee shall:

A. Take appropriate action to correct or minimize the threat to human health, welfare and/or the environment.

B. Notify the Ecology regional office and other appropriate spill response authorities immediately but in no case later than within 24 hours of obtaining that knowledge.

C. Immediately report spills or other discharges which might cause bacterial contamination of marine waters, such as discharges resulting from broken sewer lines and failing onsite septic systems, to the Ecology regional office and to the Washington State Department of Health, Shellfish Program.

D. Immediately report spills or discharges of oils or hazardous substances to the Ecology regional office and to the Washington Emergency Management Division at 1-800-258-5990.

G4. BYPASS PROHIBITED

The intentional bypass of stormwater from all or any portion of a stormwater treatment BMP whenever the design capacity of the treatment BMP is not exceeded, is prohibited unless the following conditions are met:

A. Bypass is: (1) unavoidable to prevent loss of life, personal injury, or severe property damage; or (2) necessary to perform construction or maintenance-related activities essential to meet the requirements of the *Clean Water Act* (CWA); and

B. There are no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated stormwater, or maintenance during normal dry periods.

"Severe property damage" means substantial physical damage to property, damage to the treatment facilities which would cause them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass.

G5. RIGHT OF ENTRY

The Permittee shall allow Ecology, or an authorized representative of Ecology (including an authorized contractor acting as a representative of Ecology), upon the presentation of credentials and such other documents as may be required by law, to:

A. Enter upon the Permittee's premises where a regulated facility or activity is located or conducted, or where records shall be kept under the conditions of this Permit;

B. To have access to, and copy at reasonable cost and at reasonable times, any records that shall be kept under the terms of the Permit;

C. To inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Permit;

D. Sample or monitor at reasonable times, for the purposes of assuring Permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

G6. DUTY TO MITIGATE

The Permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this Permit which has a reasonable likelihood of adversely affecting human health or the environment.

G7. PROPERTY RIGHTS

This Permit does not convey any property rights of any sort, or any exclusive privilege.

G8. COMPLIANCE WITH OTHER LAWS AND STATUTES

Nothing in the Permit shall be construed as excusing the Permittee from compliance with any other applicable federal, state, or local statutes, ordinances, or regulations.

G9. MONITORING

A. Representative Sampling

Samples and measurements taken to meet the requirements of this Permit shall be representative of the volume and nature of the monitored discharge, including representative sampling of any unusual discharge or discharge condition, including bypasses, upsets, and maintenance-related conditions affecting effluent quality.

B. Records Retention

The Permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original recordings for continuous monitoring instrumentation, copies of all reports required by this Permit, and records of all data used to complete the application for this Permit, for a period of at least five years. This period of retention shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the Permittee or when requested by the Ecology. On request, monitoring data and analysis shall be provided to Ecology.

C. Recording of Results

For each measurement or sample taken, the Permittee shall record the following information: (1) the date, exact place and time of sampling; (2) the individual who performed the sampling or measurement; (3) the dates and times the analyses were performed; (4) who performed the analyses; (5) the analytical techniques or methods used; and (6) the results of all analyses.

D. Test Procedures

All sampling and analytical methods used to meet the monitoring requirements in this Permit shall conform to the *Guidelines Establishing Test Procedures for the Analysis of Pollutants* contained in 40 CFR Part 136, unless otherwise specified in this Permit or approved in writing by Ecology.

E. Flow Measurement

Appropriate flow measurement devices and methods consistent with accepted scientific practices shall be selected and used to ensure the accuracy and reliability of measurements of the volume of monitored discharges. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurements is consistent with the accepted industry standard for that type of device. Frequency of calibration shall be in conformance with manufacturer's recommendations or at a minimum frequency of at least one calibration per year. Calibration records should be maintained for a minimum of three years.

F. Lab Accreditation

The Permittee shall ensure all monitoring data that it is required to submit to Ecology under this Permit is prepared by a laboratory registered or accredited under the provisions of Accreditation of Environmental Laboratories, Chapter 173-50 WAC. Flow, temperature, and settleable solids are exempt from this requirement. Conductivity, turbidity, and pH are also exempt from this requirement, unless the laboratory must be registered or accredited for any other parameter. Quick methods of field detection of pollutants are exempted from this requirement when the purpose of the sampling is identification and removal of a suspected illicit discharge.

G. Additional Monitoring

Ecology may establish specific monitoring requirements in addition to those contained in this Permit by administrative order or Permit modification.

G10. REMOVED SUBSTANCES

With the exception of decant from street waste vehicles, the Permittee shall not allow collected screenings, grit, solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of stormwater to be resuspended or reintroduced to the MS4 or to waters of the State. Decant from street waste vehicles resulting from cleaning stormwater facilities may be reintroduced only when other practical means are not available and only in accordance with the *Street Waste Disposal* guidelines in Appendix 6. Solids generated from maintenance of the MS4 may be reclaimed, recycled, or reused when allowed by local codes and ordinances. Soils that are identified as contaminated pursuant to Chapter 173-350 WAC shall be disposed at a qualified solid waste disposal facility (see Appendix 6).

G11. SEVERABILITY

The provisions of this Permit are severable, and if any provision of this Permit, or the application of any provision of this Permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this Permit shall not be affected thereby.

G12. REVOCATION OF COVERAGE

The director may terminate coverage under this General Permit in accordance with Chapter 43.21B RCW and Chapter 173-226 WAC. Cases where coverage may be terminated include, but are not limited to the following:

A. Violation of any term or condition of this General Permit;

B. Obtaining coverage under this General Permit by misrepresentation or failure to disclose fully all relevant facts;

C. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;

D. A determination that the permitted activity endangers human health or the environment, or contributes significantly to water quality standards violations;

E. Failure or refusal of the Permittee to allow entry as required in RCW 90.48.090; and

F. Nonpayment of permit fees assessed pursuant to RCW 90.48.465.

Revocation of coverage under this General Permit may be initiated by Ecology or requested by any interested person.

G13. TRANSFER OF COVERAGE

This Permit is not transferable to any person except after notice to the Director. The Director may require modification or revocation and reissuance of the Permit to change the name of the Permittee and incorporate such other requirements as may be necessary under the Clean Water Act.

G14. GENERAL PERMIT MODIFICATION AND REVOCATION

This General Permit may be modified, revoked and reissued, or terminated in accordance with the provisions of WAC 173-226-230. Grounds for modification, revocation and reissuance, or termination include, but are not limited to, the following:

A. A change occurs in the technology or practices for control or abatement of pollutants applicable to the category of dischargers covered under this General Permit;

B. Effluent limitation guidelines or standards are promulgated pursuant to the CWA or Chapter 90.48 RCW, for the category of dischargers covered under this General Permit;

C. A water quality management plan containing requirements applicable to the category of dischargers covered under this General Permit is approved;

D. Information is obtained which indicates that cumulative effects on the environment from dischargers covered under this General Permit are unacceptable; or

E. Changes in state law that reference this Permit.

G15. REPORTING A CAUSE FOR MODIFICATION OR REVOCATION

A Permittee who knows or has reason to believe that any activity has occurred, or will occur, which would constitute cause for modification or revocation and reissuance under General Condition G12, G14, or 40 CFR 122.62 shall report such plans, or such information, to Ecology so that a decision can be made on whether action to modify, or revoke and reissue, this Permit will be required. Ecology may then require submission of a new or amended application. Submission of such application does not relieve the Permittee of the duty to comply with this Permit until it is modified or reissued.

G16. APPEALS

A. The terms and conditions of this General Permit, as they apply to the appropriate class of dischargers, are subject to appeal within thirty days of issuance of this General Permit in accordance with Chapter 43.21B RCW, and Chapter 173-226 WAC.

B. The terms and conditions of this General Permit, as they apply to an individual discharger, are appealable in accordance with Chapter 43.21B RCW within thirty days of the effective date of coverage of that discharger. Consideration of an appeal of General Permit coverage of an individual discharger is limited to the General Permit's applicability or non-applicability to that individual discharger.

C. The appeal of General Permit coverage of an individual discharger does not affect any other dischargers covered under this General Permit. If the terms and conditions of this General Permit are found to be inapplicable to any individual discharger(s), the matter shall be remanded to Ecology for consideration of issuance of an individual permit or permits.

D. Modifications of this Permit are appealable in accordance with Chapter 43.21B RCW and Chapter 173-226 WAC.

G17. PENALTIES

40 CFR 122.41(a)(2) and (3), 40 CFR 122.41(j)(5), and 40 CFR 122.41(k)(2) are hereby incorporated into this Permit by reference.

G18. DUTY TO REAPPLY

If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee shall apply for and obtain a new permit. The Permittee shall apply for permit renewal at least 180 days prior to the specified expiration date of this Permit.

G19. CERTIFICATION AND SIGNATURE

All formal submittals to Ecology shall be signed and certified.

A. All permit applications shall be signed by either a principal executive officer or ranking elected official.

B. All formal submittals required by this Permit shall be signed by a person described, above, or by a duly authorized representative of that person. A person is a duly authorized representative only if:

1. The authorization is made in writing by a person described, above, and submitted to Ecology; and

2. The authorization specifies either an individual or a position having responsibility for the overall development and implementation of the stormwater management program. A duly authorized representative may thus be either a named individual or any individual occupying a named position.

C. Changes to authorization. If an authorization under condition G19.B.2 is no longer accurate because a different individual or position has responsibility for the overall development and implementation of the stormwater management program, a new authorization satisfying the requirements of condition G19.B.2 shall be submitted to Ecology prior to or together with any reports, information, or applications to be signed by an authorized representative.

D. Certification. Any person signing a formal submittal under this Permit shall make the following certification:

"I certify, under penalty of law, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that Qualified Personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering information, the information

submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for willful violations."

G20. NON-COMPLIANCE NOTIFICATION

In the event a Permittee is unable to comply with any of the terms and conditions of this Permit, the Permittee shall:

A. Notify Ecology of the failure to comply with the permit terms and conditions in writing within 30 days of becoming aware that the non-compliance has occurred. The written notification shall include all of the following:

1. A description of the non-compliance, including dates.
2. Beginning and end dates of the non-compliance, and if the compliance has not been corrected, the anticipated date of correction.
3. Steps taken or planned to reduce, eliminate, or prevent reoccurrence of the non-compliance.

B. Take appropriate action to stop or correct the condition of non-compliance.

G21. UPSETS

Permittees shall meet the conditions of 40 CFR 122.41(n) regarding "Upsets." The conditions are as follows:

A. ***Definition***. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the Permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

B. ***Effect of an upset***. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology-based permit effluent limitations if the requirements of paragraph (C) of this condition are met. Any determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, will not constitute final administrative action subject to judicial review.

C. ***Conditions necessary for demonstration of upset***. A Permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed contemporaneous operating logs, or other relevant evidence that:

1. An upset occurred and that the Permittee can identify the cause(s) of the upset;
2. The permitted facility was at the time being properly operated;
3. The Permittee submitted notice of the upset as required in 40 CFR 122.41(l)(6)(ii)(B) (24-hour notice of noncompliance); and
4. The Permittee complied with any remedial measures required under 40 CFR 122.41(d) (Duty to Mitigate).

D. ***Burden of proof***. In any enforcement proceeding the Permittee seeking to establish the occurrence of an upset has the burden of proof.

G22. DUTY TO PROVIDE INFORMATION

The Permittee shall furnish to Ecology, within a reasonable time, any information which the Ecology may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to the Ecology upon request, copies of records required to be kept by this permit.

G23. OTHER INFORMATION

Where the Permittee becomes aware that it failed to submit any relevant facts in a permit application or submitted incorrect information in a permit application or in any report to the Ecology, it shall promptly submit such facts or information.

G24. OTHER REQUIREMENTS OF 40 CFR

The other requirements of 40 CFR Part 122.41 and 40 CFR Part 122.42 are incorporated in this permit by reference.

DEFINITIONS AND ACRONYMS

This Section includes definitions for terms used in the body of the Permit and in all the appendices except Appendix 1. Terms defined in Appendix 1 are necessary to implement requirements related to Appendix 1.

40 CFR means Title 40 of the Code of Federal Regulations, which is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the federal government.

AKART means All Known, Available, and Reasonable methods of prevention, control, and Treatment. See also state *Water Pollution Control Act*, RCW 90.48.010 and RCW 90.48.520.

All Known, Available and Reasonable Methods of Prevention, Control and Treatment (AKART) refers to the state *Water Pollution Control Act*, RCW 90.48.010 and RCW 90.48.520.

Applicable TMDL means a TMDL which has been approved by EPA on or before the issuance date of this Permit, or prior to the date that Ecology issues coverage under this Permit, whichever is later.

Aqueous Film-Forming Foam (AFFF) is a type of foam used to fight liquid-fueled fires (i.e., those started by oil, gasoline, or other flammable liquids).

Beneficial Uses means uses of waters of the State which include, but are not limited to: use for domestic, stock watering, industrial, commercial, agricultural, irrigation, mining, fish and wildlife maintenance and enhancement, recreation, generation of electric power and preservation of environmental and aesthetic values, and all other uses compatible with the enjoyment of the public waters of the State.

Best Management Practices are the schedules of activities, prohibitions of practices, maintenance procedures, and structural and/or managerial practices approved by Ecology that, when used singly or in combination, prevent or reduce the release of pollutants and other adverse impacts to waters of Washington State.

BMP means Best Management Practice.

Bypass means the diversion of stormwater from any portion of a stormwater treatment facility.

Circuit means a portion of a MS4 discharging to a single point or serving a discrete area determined by traffic volumes, land use, topography, or the configuration of the MS4.

Component or **Program Component** means an element of the Stormwater Management Program listed in S5 - *Stormwater Management Program for Cities, Towns, and Counties*, S6 – *Stormwater Management Program for Secondary Permittees*, S7 – *Compliance with Total Maximum Daily Load Requirements*, or S8 – *Monitoring and Assessment*, of this Permit.

Conveyance System means that portion of the municipal separate storm sewer system designed or used for conveying stormwater.

Co-Permittee means an owner or operator of an MS4 which is in a cooperative agreement with at least one other applicant for coverage under this Permit. A Co-Permittee is an owner or operator of a regulated MS4 located within or in proximity to another regulated MS4. A Co-Permittee is only responsible for permit conditions relating to discharges from the MS4 the Co-Permittee owns or operates. See also 40 CFR 122.26(b)(1).

CWA means the federal *Clean Water Act* (formerly referred to as the federal *Water Pollution Control Act* or federal *Water Pollution Control Act Amendments of 1972*) Pub.L. 92-500, as amended Pub. L. 95-217, Pub. L. 95-576, Pub. L. (6-483 and Pub. L. 97-117, 33 U.S.C. 1251 et seq.).

Director means the Director of the Washington State Department of Ecology, or an authorized representative.

Discharge Point means the location where a discharge leaves the Permittee's MS4 through the Permittee's MS4 facilities/BMPs designed to infiltrate.

Entity means a governmental body, or a public or private organization.

EPA means the U.S. Environmental Protection Agency.

Fully Stabilized means the establishment of a permanent vegetative cover, or equivalent permanent stabilization measures (such as riprap, gabions, or geotextiles) which prevents erosion.

General Permit means a permit which covers multiple dischargers of a point source category within a designated geographical area, in lieu of individual permits being issued to each discharger.

Groundwater means water in a saturated zone or stratum beneath the surface of the land or below a surface water body. Refer to Chapter 173-200 WAC.

Hazardous Substance means any liquid, solid, gas, or sludge, including any material, substance, product, commodity, or waste, regardless of quantity, that exhibits any of the physical, chemical, or biological properties described in WAC 173-303-090 or WAC 173-303-100.

Heavy Equipment Maintenance or Storage Yard means an uncovered area where any heavy equipment, such as mowing equipment, excavators, dump trucks, backhoes, or bulldozers are washed or maintained, or where at least five pieces of heavy equipment are stored on a long-term basis.

Highway means a main public road connecting towns and cities.

Hydraulically Near means runoff from the site discharges to the sensitive feature without significant natural attenuation of flows that allows for suspended solids removal. See Appendix 7- *Determining Construction Site Sediment Damage Potential* for a more detailed definition.

Hyperchlorinated means water that contains more than 10 mg/Liter chlorine.

Illicit Connection means any infrastructure connection to the MS4 that is not intended, permitted or used for collecting and conveying stormwater or non-stormwater discharges allowed as specified in this Permit (S5.C.5 and S6.D.3). Examples include sanitary sewer connections, floor drains, channels, pipelines, conduits, inlets, or outlets that are connected directly to the MS4.

Illicit Discharge means any discharge to a MS4 that is not composed entirely of stormwater or of non-stormwater discharges allowed as specified in this Permit (S5.C.5 and S6.D.3).

Impervious Surface means a non-vegetated surface area that either prevents or retards the entry of water into the soil mantle as under natural conditions prior to development. A non-vegetated surface area which causes water to run off the surface in greater quantities or at an increased rate of flow from the flow present under natural conditions prior to development. Common impervious surfaces include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or stormwater areas, concrete or asphalt paving, gravel roads, packed earthen materials, and oiled, macadam or other surfaces which similarly impede the natural infiltration of stormwater.

Land Disturbing Activity means any activity that results in a change in the existing soil cover (both vegetative and non-vegetative) and/or the existing soil topography. Land disturbing activities include, but are not limited to clearing, grading, filling and excavation. Compaction that is associated with stabilization of structures and road construction shall also be considered land disturbing activity. Vegetation maintenance practices, including landscape maintenance and gardening, are not considered land disturbing activity. Stormwater facility maintenance is not considered land disturbing activity if conducted according to established standards and procedures.

LID means Low Impact Development.

LID BMP means Low Impact Development Best Management Practices.

LID Principles means land use management strategies that emphasize conservation, use of on-site natural features, and site planning to minimize impervious surfaces, native vegetation loss, and stormwater runoff.

Low Impact Development (LID) means a stormwater and land use management strategy that strives to mimic pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation and transpiration by emphasizing conservation, use of on-site natural features, site planning, and distributed stormwater management practices that are integrated into a project design.

Low Impact Development Best Management Practices (LID BMP) means distributed stormwater management practices, integrated into a project design, that emphasize pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation and transpiration. LID BMPs include, but are not limited to, bioretention, rain gardens, permeable pavements, roof downspout controls, dispersion, soil quality and depth, vegetated roofs, minimum excavation foundations, and water re-use.

Material Storage Facilities means an uncovered area where bulk materials (liquid, solid, granular, etc.) are stored in piles, barrels, tanks, bins, crates, or other means.

Maximum Extent Practicable refers to paragraph 402(p)(3)(B)(iii) of the federal *Clean Water Act* which reads as follows: Permits for discharges from municipal storm sewers shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques, and system, design, and engineering methods, and other such provisions as the Administrator or the State determines appropriate for the control of such pollutants.

MEP means Maximum Extent Practicable.

MS4 means Municipal Separate Storm Sewer System.

Municipal Separate Storm Sewer System means a conveyance, or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels, or storm drains):

1. Owned or operated by a state, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to state law) having jurisdiction over disposal of wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under Section 208 of the CWA that discharges to waters of Washington State.
2. Designed or used for collecting or conveying stormwater.
3. Which is not a combined sewer.
4. Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

5. Which is defined as "large" or "medium" or "small" or otherwise designated by Ecology pursuant to 40 CFR 122.26.

National Pollutant Discharge Elimination System means the national program for issuing, modifying, revoking, and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 402, 318, and 405 of the federal *Clean Water Act*, for the discharge of pollutants to surface waters of the State from point sources. These permits are referred to as NPDES permits and, in Washington State, are administered by the Washington State Department of Ecology.

Native Vegetation means vegetation comprised of plant species, other than noxious weeds, that are indigenous to the coastal region of the Pacific Northwest, and which reasonably could have been expected to naturally occur on the site. Examples include trees such as Douglas Fir, western hemlock, western red cedar, alder, big-leaf maple; shrubs such as willow, elderberry, salmonberry, and salal; and herbaceous plants such as sword fern, foam flower, and fireweed.

New Development means land disturbing activities, including Class IV General Forest Practices that are conversions from timber land to other uses; structural development, including construction or installation of a building or other structure; creation of hard surfaces; and subdivision, short subdivision and binding site plans, as defined and applied in Chapter 58.17 RCW. Projects meeting the definition of redevelopment shall not be considered new development. Refer to Appendix 1 for a definition of hard surfaces.

New Permittee means a city, town, or county that is subject to the Western Washington Municipal Stormwater General Permit and was not subject to the permit prior to August 1, 2024.

New Secondary Permittee means a Secondary Permittee that is covered under a Municipal Stormwater General Permit and was not covered by the permit prior to August 1, 2024.

NOI means Notice of Intent.

Notice of Intent (NOI) means the application for, or a request for coverage under, a General Permit pursuant to WAC 173-226-200.

Notice of Intent for Construction Activity means the application form for coverage under the *Construction Stormwater General Permit*.

Notice of Intent for Industrial Activity means the application form for coverage under the *Industrial Stormwater General Permit*.

NPDES means National Pollutant Discharge Elimination System.

Outfall means a point source as defined by 40 CFR 122.2 at the point where a discharge leaves the Permittee's MS4 and enters a surface receiving waterbody or surface receiving waters. Outfall does not include pipes, tunnels, or other conveyances which connect segments of the same stream or other surface waters and are used to convey primarily surface waters (i.e., culverts).

Overburdened Community means a geographic area where vulnerable populations face combined, multiple environmental harms and health impacts, and includes, but is not limited to, highly impacted communities.

> "Vulnerable populations" means population groups that are more likely to be at higher risk for poor health outcomes in response to environmental harms, due to:
>
> (i) Adverse socioeconomic factors, such as unemployment, high housing and transportation costs relative to income, limited access to nutritious food and adequate health care, linguistic isolation, and other factors that negatively affect health outcomes and increase vulnerability to the effects of environmental harms; and
>
> (ii) Sensitivity factors, such as low birth weight and higher rates of hospitalization.
>
> "Vulnerable populations" includes, but is not limited to:
>
> - Racial or ethnic minorities;
> - Low-income populations;
> - Populations disproportionately impacted by environmental harms; and
> - Populations of workers experiencing environmental harms.
>
> "Highly impacted community" means a community designated by the Department of Health based on cumulative impact analyses or a community located in census tracts that are fully or partially on "Indian country" as defined in 18 U.S.C. Sec. 1151.

PCBs means Polychlorinated biphenyls.

Permittee unless otherwise noted, the term "Permittee" includes city, town, or county Permittee, Co-Permittee, New Permittee, Secondary Permittee, and New Secondary Permittee.

PFAS means Per and Polyfluoroalkyl Substances

Physically Interconnected means that one MS4 is connected to another storm sewer system in such a way that it allows for direct discharges to the second system. For example, the roads with drainage systems and municipal streets of one entity are physically connected directly to a storm sewer system belonging to another entity.

Project site means that portion of a property, properties, or rights-of-way subject to land disturbing activities, new hard surfaces, or replaced hard surfaces. Refer to Appendix 1 for a definition of hard surfaces.

QAPP means Quality Assurance Project Plan.

Qualified Personnel means someone who has professional training in the aspects of stormwater management for which they are responsible and are under the functional control of the Permittee. Qualified Personnel may be staff members, contractors, or trained volunteers with professional certification. Permittees may train and certify volunteers.

Qualified Third Party means someone who has professional training in the aspects of stormwater management for which they are responsible but are hired by private entities and not under the functional control of the Permittee. Qualified Third Parties may be contractors, or consultants.

Quality Assurance Project Plan means a document that describes the objectives of an environmental study and the procedures to be followed to achieve those objectives.

RCW means the Revised Code of Washington State.

Receiving Waterbody or **Receiving Waters** means naturally and/or reconstructed naturally occurring surface water bodies, such as creeks, streams, rivers, lakes, wetlands, estuaries, and marine waters, or groundwater, to which a MS4 discharges.

Reclaimed water means water derived in any part from a wastewater with a domestic wastewater component that has been adequately and reliably treated to meet the requirements of Chapter 173-219 WAC, so that it can be used for beneficial purposes. Reclaimed water is not considered a wastewater**.**

Redevelopment means, on a site that is already substantially developed (i.e., has 35% or more of existing hard surface coverage), the creation or addition of hard surfaces; the expansion of a building footprint or addition or replacement of a structure; structural development including construction, installation or expansion of a building or other structure; replacement of hard surface that is not part of a routine maintenance activity; and land disturbing activities. Refer to Appendix 1 for a definition of hard surfaces.

Regulated Small Municipal Separate Storm Sewer System means a Municipal Separate Storm Sewer System which is automatically designated for inclusion in the Phase II stormwater permitting program by its location within an Urban Area, or by designation by Ecology and is not eligible for a waiver or exemption under S1.C.

Runoff is water that travels across the land surface and discharges to water bodies either directly or through a collection and conveyance system. See also "**Stormwater**."

SAM means Stormwater Action Monitoring.

Secondary Permittee is an operator of a regulated small MS4 which is not a city, town or county. Secondary Permittees include special purpose districts and other public entities that meet the criteria in S1.B.

Sediment/Erosion-Sensitive Feature means an area subject to significant degradation due to the effects of construction runoff, or areas requiring special protection to prevent erosion. See Appendix 7 *Determining Construction Site Sediment Damage Potential* for a more detailed definition.

Shared Water Bodies means water bodies, including downstream segments, lakes and estuaries that receive discharges from more than one Permittee.

Significant Contributor means a discharge that contributes a loading of pollutants considered to be sufficient to cause or exacerbate the deterioration of receiving water quality or instream habitat conditions.

Small Municipal Separate Storm Sewer System means an MS4 that is not defined as "large" or "medium" pursuant to 40 CFR 122.26(b)(4) & (7) or designated under 40 CFR 122.26 (a)(1)(v).

Source Control BMP means a structure or operation that is intended to prevent pollutants from coming into contact with stormwater through physical separation of areas or careful management of activities that are sources of pollutants. The SWMMWW separates source control BMPs into two types. Structural Source Control BMPs are physical, structural, or mechanical devices, or facilities, that are intended to prevent pollutants from entering stormwater. Operational BMPs are non-structural practices that prevent or reduce pollutants from entering stormwater.

Stormwater means runoff during and following precipitation and snowmelt events, including surface runoff, drainage or interflow.

Stormwater Action Monitoring (SAM) is the regional stormwater monitoring program for Washington State. This means a stormwater-focused monitoring and assessment program consisting of these components: status and trends monitoring in small streams and marine nearshore areas, stormwater management program effectiveness studies, and source identification projects. The priorities and scope for SAM are set by a formal stakeholder group that selects the studies and oversees the program's administration.

Stormwater Associated with Industrial and Construction Activity means the discharge from any conveyance which is used for collecting and conveying stormwater, which is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant, or associated with clearing, grading and/or excavation, and is required to have an NPDES permit in accordance with 40 CFR 122.26.

Stormwater Facility Retrofits means both: projects that retrofit existing treatment and/or flow control facilities; and new flow control or treatment facilities or BMPs that will address impacts from existing development.

Stormwater Management Program (SWMP) means a set of actions and activities designed to reduce the discharge of pollutants from the MS4 to the MEP and to protect water quality, and comprising the components listed in S5 (for cities, towns, and counties) or S6 (for Secondary Permittees) of this Permit and any additional actions necessary to meet the requirements of applicable TMDLs pursuant to S7 –*Compliance with TMDL Requirements*, and S8– *Monitoring and Assessment*.

Stormwater Treatment and Flow Control BMPs/Facilities means detention facilities, permanent treatment BMPs/facilities; and bioretention, vegetated roofs, and permeable pavements that help meet Appendix 1 Minimum Requirements #6 (treatment), #7 (flow control), or both.

Surface Waters includes lakes, rivers, ponds, streams, inland waters, salt waters, and all other surface waters and water courses within the jurisdiction of the State of Washington.

SWMMWW or ***Stormwater Management Manual for Western Washington*** means the technical manual published by the Department of Ecology in 2024 (Publication No. 24-10-013, 2024*).*

SWMP means Stormwater Management Program.

TMDL means Total Maximum Daily Load.

Total Maximum Daily Load (TMDL) means a water cleanup plan. A TMDL is a calculation of the maximum amount of a pollutant that a water body can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and nonpoint sources. The calculation must include a margin of safety to ensure that the water body can be used for the purposes the state has designated. The calculation must also account for seasonable variation in water quality. Water quality standards are set by states, territories, and tribes. They identify the uses for each water body, for example, drinking water supply, contact recreation (swimming), and aquatic life support (fishing), and the scientific criteria to support that use. The *Clean Water Act*, Section 303, establishes the water quality standards and TMDL programs.

Tributary Conveyance means pipes, ditches, catch basins, and inlets owned or operated by the Permittee and designed or used for collecting and conveying stormwater.

UGA means Urban Growth Area.

Urban Growth Area (UGA) means those areas designated by a county pursuant to RCW 36.70A.110.

Urban Area means urban areas with a population of 50,000 or more people. Urban Areas are designated by the U.S. Census Bureau based on the most recent decennial census.

Vehicle Maintenance or Storage Facility means an uncovered area where any vehicles are regularly washed or maintained, or where at least 10 vehicles are stored.

Water Quality Standards means *Surface Water Quality Standards*, Chapter 173-201A WAC, *Groundwater Quality Standards*, Chapter 173-200 WAC, and *Sediment Management Standards*, Chapter 173-204 WAC.

Waters of the State includes those waters as defined as "waters of the United States" in 40 CFR Subpart 122.2 within the geographic boundaries of Washington State and "waters of the State" as defined in Chapter 90.48 RCW which includes lakes, rivers, ponds, streams, inland waters, underground waters, salt waters and all other surface waters and water courses within the jurisdiction of the State of Washington.

Waters of the United States refers to the definition in 40 CFR 122.2.

Errata for 2024-2029 Municipal Stormwater Permits

Permits Issued on July 1, 2024 |Effective August 1, 2024

Phase I, and WWA Phase II Permit:

Appendix 11 was missing the label for Mount Vernon on page 3, in the row that displayed their population and costs for SAM contributions. The appendix was updated to include the city's name for clarity.

EWA Phase II Permit:

Appendix 8 was missing the label for Mount Vernon on page 4, in the row that displayed their population and costs for SAM contributions. The appendix was updated to include the city's name for clarity.

WWA Phase II Permit:

- Permit section S5.C.8.c and S5.C.8.d.v reference to "S5.C.8.a.i." should reference "S5.C.8.b."
- Permit Section S5.C.7.e refers to "(e.g.2029-2032)" this should reference "(e.g. 2029-2034)."
- Appendix 3, Question 31 references "(S5.C.2.b.iv)" this should be "(S5.C.4.b.iv)."

Issued 7/3/24; 7/17/24

APPENDIX 1 - Minimum Technical Requirements for New Development and Redevelopment

Section 1. Exemptions

The purpose of this section is to identify activities whose resulting surfaces may be considered "exempt" from the Minimum Requirements, even though those surfaces, per the definitions in **Section 2. Definitions Related to Minimum Requirements**, would be considered replaced hard surfaces or land disturbed.

Unless otherwise indicated in this section, the surfaces that result from the activities described below are exempt from the Minimum Requirements. Exempt surfaces do not need to be included when evaluating the Project Level Thresholds or TDA Level Thresholds as described in **Section 3. Applicability of the Minimum Requirements**.

The following list further defines how these exemptions may be used:

- A project may combine different types of exempt activities. If the project includes only exempt activities, then the whole project is exempt.
- If the "exempt" activity is part of, directly related to, or caused by a new development or redevelopment project, then it is not considered an exempt activity. It is considered part of the new development or redevelopment project.
- If an exempt activity requires making an ADA update per the federal Americans with Disabilities Act requirements, then the ADA update is considered part of the exempt activity, and the exemption applies to the surfaces disturbed for the ADA update. Note that this exemption does not extend to additional work, such as extending a sidewalk beyond what is necessary for the ADA update.

Forest Practice Activities

Forest practices regulated under Title 222 WAC, except for Class IV-General forest practices that are conversions from timberland to other uses, are exempt from the provisions of the Minimum Requirements.

Commercial Agriculture Activities

Commercial agriculture activities involving working the land for production are generally exempt. However, the conversion from timberland to agriculture, and the construction of impervious surfaces are not exempt.

Oil and Gas Field Activities

Construction of drilling sites, waste management pits, and access roads, as well as construction of transportation and treatment infrastructure such as pipelines, natural gas treatment plants, natural gas pipeline compressor stations, and crude oil pumping stations are exempt. Operators are encouraged to implement and maintain Best Management Practices (BMPs) to minimize erosion and control sediment during and after construction activities to help ensure protection of surface water quality during storm events.

Pavement Maintenance Activities

Pavement maintenance activities include only targeted pavement repairs or maintenance. The limits of the exempt surfaces include only the area that must be disturbed to repair or maintain the pavement.

Pavement maintenance activities do not:

- change the characteristics of a roadway (e.g. changing a four-way intersection to a roundabout).
- increase the traffic capacity of a roadway or parking area (e.g. include restriping to add lanes or parking spaces).
- expand the area of coverage (i.e. add new hard surfaces).

The following pavement maintenance activities are exempt from all Minimum Requirements:

- pothole patching, square cut patching, or other targeted preservation work,
- overlaying (including grinding and overlaying, so long as base course is not exposed) existing asphalt or concrete pavement. Examples of overlay materials include bituminous surface treatment (BST or “chip seal”), asphalt, or concrete,
- shoulder grading,
- reshaping/regrading drainage systems (including adding curb/gutter and/or wedge curbs),
- crack sealing, and
- vegetation maintenance associated with the road right-of-way.

The following are not pavement maintenance activities, and are not exempt:

- Removing and replacing a pavement to base course or lower, or repairing the pavement base (except for pothole or square cut patching): These are considered replaced hard surfaces.
- Extending the pavement edge, or paving graveled shoulders: These are

considered new hard surfaces.

- Upgrading from dirt to gravel, a bituminous surface treatment ("chip seal"), asphalt, concrete, or permeable pavement; upgrading from gravel to chip seal, asphalt, concrete, or permeable pavement; or upgrading from chip seal to asphalt, concrete, or permeable pavement: These are considered new hard surfaces.

Underground Utility Activities

Underground utility activities include installing, maintaining, and/or upgrading an underground utility. The limits of the exempt surfaces include only the area disturbed by the trench work necessary for the underground utility work (including any over-excavating necessary for the utility trench).

For an underground utility activity to be exempt, it cannot be part of, directly related to, or caused by a new development or redevelopment project.

Underground utility activities must replace the ground surface with in-kind material or materials with similar runoff characteristics.

Underground utility activities are subject to only **4.2 Minimum Requirement #2: Construction Stormwater Pollution Prevention Plan (SWPPP)**.

Section 2. Definitions Related to Minimum Requirements

ADT

Average Daily Traffic

Arterial

A road or street primarily for through traffic. The term generally includes roads or streets considered collectors. It does not include local access roads which are generally limited to providing access to abutting property. See also RCW 35.78.010, RCW 36.86.070, and RCW 47.05.021.

Bioretention BMPs

Engineered stormwater facilities that provide Runoff Treatment by passing the stormwater through a specified soil profile (Bioretention Soil Mix, or BSM), and typically either retain or detain the treated stormwater for Flow Control. Bioretention facilities include a variety of plant material including trees, shrubs, grasses, and/or other herbaceous plants adapted to the local climate and soil moisture conditions. Bioretention is typically implemented as an LID practice, and

as such is typically sited to receive stormwater runoff from a small contributing area.

Certified Erosion and Sediment Control Lead (CESCL)

An individual who has current certification through an approved erosion and sediment control training program that meets the minimum training standards established by Ecology (see **BMP C160: Certified Erosion and Sediment Control Lead**). A CESCL is knowledgeable in the principles and practices of erosion and sediment control. The CESCL must have the skills to assess site conditions and construction activities that could impact the quality of stormwater and, the effectiveness of erosion and sediment control measures used to control the quality of stormwater discharges. Certification is obtained through an Ecology approved erosion and sediment control course. Course listings are provided online at Ecology's website.

Commercial agriculture

Those activities conducted on lands defined in RCW 84.34.020(2), and activities involved in the production of crops or livestock for commercial trade. An activity ceases to be considered commercial agriculture when the area on which it is conducted is proposed for conversion to a nonagricultural use or has lain idle for more than five years, unless the idle land is registered in a federal or state soils conservation program, or unless the activity is maintenance of irrigation ditches, laterals, canals, or drainage ditches related to an existing and ongoing agricultural activity.

Common plan of development or sale

A site where multiple separate and distinct construction activities may be taking place at different times on different schedules and/or by different contractors, but still under a single plan. Examples include:

1. phased projects and projects with multiple filings or lots, even if the separate phases or filings/lots will be constructed under separate contract or by separate owners (e.g. a development where lots are sold to separate builders);
2. a development plan that may be phased over multiple years, but is still under a consistent plan for long-term development;
3. projects in a contiguous area that may be unrelated but still under the same contract, such as construction of a building extension and a new parking lot at the same facility; and
4. linear projects such as roads, pipelines, or utilities.

If the project is part of a common plan of development or sale, the disturbed area of the entire plan must be used in determining permit requirements.

Converted vegetation (areas)

The surfaces on a project site where native vegetation, pasture, scrub/shrub, or unmaintained non-native vegetation (e.g., Himalayan blackberry, scotch broom) are converted to lawn or landscaped areas, or where native vegetation is converted to pasture.

Effective impervious surface

Those impervious surfaces that are connected via sheet flow or discrete conveyance to a drainage system. Impervious surfaces are considered ineffective if:

1. the runoff is fully dispersed in accordance with **BMP T5.30: Full Dispersion**;
2. residential roof runoff is infiltrated in accordance with **BMP T5.10A: Downspout Full Infiltration**; or
3. all runoff from the impervious surface is infiltrated (i.e. approved continuous runoff modeling methods indicate that the entire runoff file is infiltrated).

Erodible or leachable materials

Wastes, chemicals, or other substances that measurably alter the physical or chemical characteristics of runoff when exposed to rainfall. Examples include erodible soils that are stockpiled, uncovered process wastes, manure, fertilizers, oily substances, ashes, kiln dust, and garbage dumpster leakage.

Hard surface

An impervious surface, a permeable pavement, or a vegetated roof.

Highway

A main public road connecting towns and cities.

Impervious surface

A surface area which either prevents or retards the entry of water into the soil mantle as under natural conditions prior to development. A surface area which causes water to run off the surface in greater quantities or at an increased rate of flow from the flow present under natural conditions prior to development. Common impervious surfaces include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel roads, packed earthen materials, and oiled, macadam or other surfaces which similarly impede the natural infiltration of stormwater.

- For purposes of determining whether the thresholds for application of Minimum Requirements are exceeded, open, uncovered retention or detention BMPs shall not be considered as impervious surfaces. Open, uncovered retention or detention BMPs shall be considered impervious surfaces for the purposes of runoff modeling.

- When an underdrain (not intended to infiltrate) is used below an artificial turf surface, that surface shall be considered (and modeled) as impervious surface.

Land disturbing activity

Any activity that results in a change in the existing soil cover (both vegetative and nonvegetative) and/or the existing soil topography. Land disturbing activities include, but are not limited to clearing, grading, filling, and excavation. Compaction that is associated with stabilization of structures and road construction shall also be considered a land disturbing activity. Vegetation maintenance practices, including landscape maintenance and gardening, are not considered land-disturbing activity. Stormwater facility maintenance is not considered land disturbing activity if conducted according to established standards and procedures.

Low impact development (LID)

A stormwater and land use management strategy that strives to mimic pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation, and transpiration by emphasizing conservation, use of on-site natural features, site planning, and distributed stormwater management practices that are integrated into a project design.

Low Impact Development Best Management Practices (LID BMPs)

Distributed stormwater management practices, integrated into a project design, that emphasize pre-disturbance hydrologic processes of infiltration, filtration, storage, evaporation, and transpiration. LID BMPs include, but are not limited to:

- **BMP T7.30: Bioretention**,
- **BMP T5.14: Rain Gardens**,
- **BMP T5.15: Permeable Pavements**,
- **BMP T5.10A: Downspout Full Infiltration**,
- **BMP T5.10B: Downspout Dispersion Systems**,
- **BMP T5.10C: Perforated Stub-out Connections**
- **BMP T5.30: Full Dispersion**,
- **BMP T5.13: Post-Construction Soil Quality and Depth**,
- **BMP T5.19: Minimal Excavation Foundations**,
- **BMP T5.17: Vegetated Roofs**, and
- **BMP T5.20: Rainwater Harvesting**.

Low Impact Development (LID) Principles

Land use management strategies that emphasize conservation, use of on-site natural features, and site planning to minimize impervious surfaces, native vegetation loss, and stormwater runoff.

Maintenance

Repair and maintenance includes activities conducted on currently serviceable structures, facilities, and equipment that involves no expansion or use beyond that previously existing and results in no significant adverse hydrologic impact. It includes those usual activities taken to prevent a decline, lapse, or cessation in the use of structures and systems. Those usual activities may include replacement of dysfunctional facilities, including cases where environmental permits require replacing an existing structure with a different type of structure, if the functioning characteristics of the original structure are not changed. One example is the replacement of a collapsed, fish blocking, round culvert with a new box culvert under the same span, or width, of roadway. Regarding stormwater facilities, maintenance includes assessment to ensure ongoing proper operation, removal of built-up pollutants (i.e. sediments), replacement of failed or failing treatment media, and other actions taken to correct defects as identified in the BMP design guidance within Volume V of the SWMMWW. See also Pavement Maintenance exemptions in **Section 1. Exemptions**.

Native vegetation

Vegetation comprised of plant species, other than noxious weeds, that are indigenous to the coastal region of the Pacific Northwest and which reasonably could have been expected to naturally occur on the site. Examples include trees such as Douglas fir, western hemlock, western red cedar, alder, big-leaf maple, and vine maple; shrubs such as willow, elderberry, salmonberry and salal; and herbaceous plants such as sword fern, foam flower, and fireweed.

New development

Land disturbing activities, including Class IV-general forest practices that are conversions from timberland to other uses; structural development, including construction or installation of a building or other structure; creation of hard surfaces; and subdivision, short subdivision and binding site plans, as defined and applied in Chapter 58.17 RCW. Projects meeting the definition of redevelopment shall not be considered new development.

New hard surface

A surface that is:

- upgraded from dirt to gravel, a bituminous surface treatment ("chip seal"), asphalt, concrete, permeable pavement, a structure with a vegetated roof, or an impervious structure; or
- upgraded from gravel to chip seal, asphalt, concrete, permeable pavement, a structure with a vegetated roof, or an impervious structure; or
- upgraded from chip seal to asphalt, concrete, permeable pavement, a structure with a vegetated roof, or an impervious structure.

  Note that if asphalt or concrete has been overlaid by a chip seal, the existing condition should be considered as asphalt or concrete.

New impervious surface

A surface that is:

- changed from a pervious surface to an impervious surface (e.g. resurfacing by upgrading from dirt to gravel, a bituminous surface treatment ("chip seal"), asphalt, concrete, or an impervious structure); or
- upgraded from gravel to chip seal, asphalt, concrete, or an impervious structure; or
- upgraded from chip seal to asphalt, concrete, or an impervious structure.

  Note that if asphalt or concrete has been overlaid by a chip seal, the existing condition should be considered as asphalt or concrete.

On-site stormwater management BMPs

Development and mitigation techniques that serve to infiltrate, disperse, and retain stormwater runoff on a project site. As used in this appendix, a synonym for Low Impact Development BMPs.

Permeable pavement

Pervious concrete, porous asphalt, permeable pavers, or other forms of pervious or porous paving material intended to allow passage of water through the pavement section. It often includes an aggregate base that provides structural support and acts as a stormwater reservoir.

Pervious surface

Any surface material that allows stormwater to infiltrate into the ground. Examples include lawn, landscape, pasture, native vegetation areas, and permeable pavements.

Pollution-generating hard surface (PGHS)

Those hard surfaces considered to be a significant source of pollutants in stormwater runoff. See the listing of surfaces under pollution-generating impervious surface.

Pollution-generating impervious surface (PGIS)

Those impervious surfaces considered to be a significant source of pollutants in stormwater runoff. Such surfaces include those which are subject to any of the following:

- vehicular use (as further defined in this section).
- industrial activities (as further defined in the glossary of the SWMMWW).
- storage of erodible or leachable materials, wastes, or chemicals, and which receive direct rainfall or the run-on or blow-in of rainfall.
- metal roofs unless they are coated with an inert, non-leachable material (e.g. baked-on enamel coating).
- roofs that are subject to venting significant amounts of dusts, mists, or fumes from manufacturing, commercial, or other indoor activities.

Pollution-generating pervious surface (PGPS)

Any pervious surface subject to any of the following:

- vehicular use (as further defined in this glossary).
- industrial activities (as further defined in the glossary of the SWMMWW).
- storage of erodible or leachable materials, wastes or chemicals, and that receive direct rainfall or run-on or blow-in of rainfall.
- use of pesticides and fertilizers.
- loss of soil.

Artificial turf is also considered to be PGPS.

Typical PGPS include permeable pavement subject to vehicular use, lawns and landscaped areas including: golf courses, parks, cemeteries, and sports fields (natural and artificial turf).

Pre-developed condition

The native vegetation and soils that existed at a site prior to the influence of Euro-American settlement. The pre-developed condition shall be assumed to be forested land cover unless reasonable, historic information is provided that indicates the site was prairie prior to settlement.

Project

Any proposed action to alter or develop a site; or the proposed action of a permit application or an approval that requires drainage review.

Project site

That portion of a property, properties, and right-of-way subject to land disturbing activities, new hard surfaces, or replaced hard surfaces.

Rain garden

A non-engineered shallow landscaped depression, with compost-amended native soils and adapted plants. The depression is designed to pond and temporarily store stormwater runoff from adjacent areas, and to allow stormwater to pass through the amended soil profile. See **BMP T5.14: Rain Gardens**.

Receiving waterbody or receiving waters

Naturally and/or reconstructed naturally occurring surface water bodies, such as creeks, streams, rivers, lakes, wetlands, estuaries, and marine waters, or groundwater, to which a MS4 discharges.

Redevelopment

On a site that is already substantially developed (i.e. has 35% or more of existing hard surface coverage), the creation or addition of hard surfaces; the expansion of a building footprint or addition or replacement of a structure; structural development including construction, installation, or expansion of a building or other structure; replacement of hard surface that is not part of a routine maintenance activity; and land disturbing activities.

Replaced hard surface

For structures, the removal down to (i.e. exposing the top of) the foundation and replacement. For other hard surfaces, the removal down to (i.e. exposing the top of) bare soil or base course and replacement.

Replaced impervious surface

For structures, the removal down to (i.e. exposing the top of) the foundation and replacement. For other impervious surfaces, the removal down to (i.e. exposing the top of) bare soil or base course and replacement.

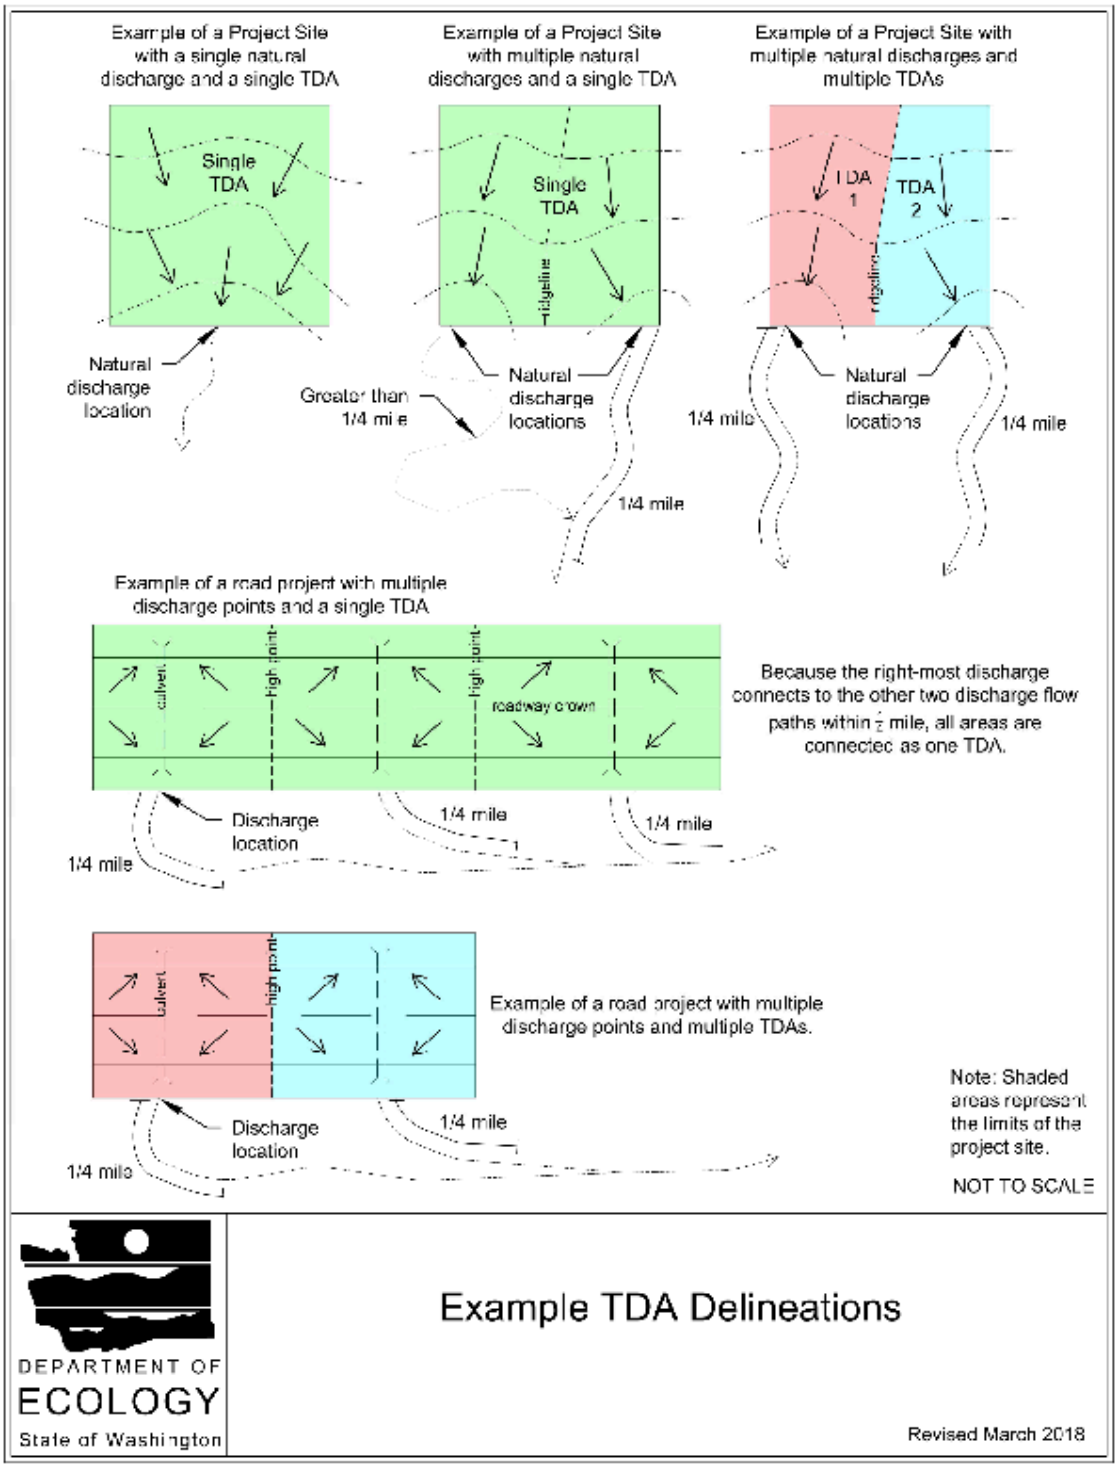
Site

The area defined by the legal boundaries of a parcel or parcels of land that is (are) subject to new development or redevelopment. For road projects, the length of the project site and the right-of-way boundaries define the site.

A Site may include multiple parcels and/or sections of right-of-way, if multiple parcels and/or sections of right-of-way are subject to the new development or redevelopment project.

Source control BMP

A structure or operation intended to prevent pollutants from coming into contact with stormwater through physical separation of areas or careful management of activities that are sources of pollutants. The SWMMWW separates source control BMPs into two types: structural and operational.



- *Structural Source Control BMPs* are physical, structural, or mechanical devices or facilities that are intended to prevent pollutants from entering stormwater.
- *Operational Source Control BMPs* are non-structural practices that prevent or reduce pollutants from entering stormwater.

Threshold Discharge Area

An area within a project site draining to a single natural discharge location or multiple natural discharge locations that combine within one-quarter mile downstream (as determined by the shortest flowpath). The examples in **Figure 1: Example TDA Delineations** below illustrate this definition. The purpose of this definition is to clarify how the thresholds of this appendix are applied to project sites with multiple discharge points.

If the project site does not currently discharge at the natural location and is such that it is impractical (as determined by the local jurisdiction) to return the discharge to the natural location, then the TDA delineation would be based on the discharge(s) at the existing location(s). An example of this case is a site in an ultra-urban environment, where fully built-out conveyance systems exist and are not in the natural (i.e. historic) locations.

Figure 1: Example TDA Delineations

Vehicular use

Regular use of an impervious or pervious surface by motor vehicles. The following are subject to regular vehicular use:

- roads,
- un-vegetated road shoulders,
- bike lanes within the traveled lane of a roadway,
- driveways,
- parking lots,
- unrestricted access fire lanes,
- vehicular equipment storage yards,
- railway lines, including light rail elevated and non-elevated guideways/tracks, and
- airport runways and other surfaces intended for movement and/or storage of aircraft.

The following are not considered subject to regular vehicular use:

- sidewalks not subject to drainage from roads for motor vehicles,
- paved bicycle pathways separated from and not subject to drainage from roads for motor vehicles,
- restricted access fire lanes, and
- infrequently used maintenance access roads.

Wetlands

Those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from non-wetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from non-wetland areas to mitigate the conversion of wetlands.

Section 3. Applicability of the Minimum Requirements

3.1 Minimum Requirement Thresholds

Not all the Minimum Requirements apply to every new development or redevelopment project. The applicability varies depending on the project type and size. This section identifies thresholds that determine the applicability of the Minimum Requirements to projects. Use the flow charts in **Figure 2: Flow Chart for Determining Whether the Permittee Must Regulate the Project**, **Figure 3: Flow Chart for Determining Requirements for New Development**, and **Figure 4: Flow Chart for Determining Requirements for Redevelopment** to determine which of the Minimum Requirements apply. The Minimum Requirements themselves are presented in **Section 4. Minimum Requirements**.

Use the thresholds in **sections 3.2 and 3.3** at the time of application for a subdivision, plat, short plat, building permit, or other construction permit. The plat or short plat approval shall identify all stormwater BMPs that are required for each lot. For projects involving only land disturbing activities, (e.g. clearing or grading), the thresholds apply at the time of application for the permit allowing or authorizing that activity. Note the exemption in **Section 1. Exemptions** for forest practices other than Class IV General.

For projects that are implemented in incremental stages or phases as part of a common plan of development or sale, the thresholds below must be considered for the complete project at full build-out.

The Permittee may allow the Minimum Requirements to be met for an equivalent (flow and pollution characteristics) area. The equivalent area may be within the same TDA. If the equivalent area is outside the TDA, or off-site, the equivalent area must drain to the same receiving water and the guidance for equivalent facilities using in-basin transfers must be followed, as detailed in ***I-D.6 Regional Facility Area Transfers*** in the SWMMWW. The Permittee is responsible for maintaining tracking records for all area transfers approved by the Permittee.

Figure 2: Flow Chart for Determining Whether the Permittee Must Regulate the Project

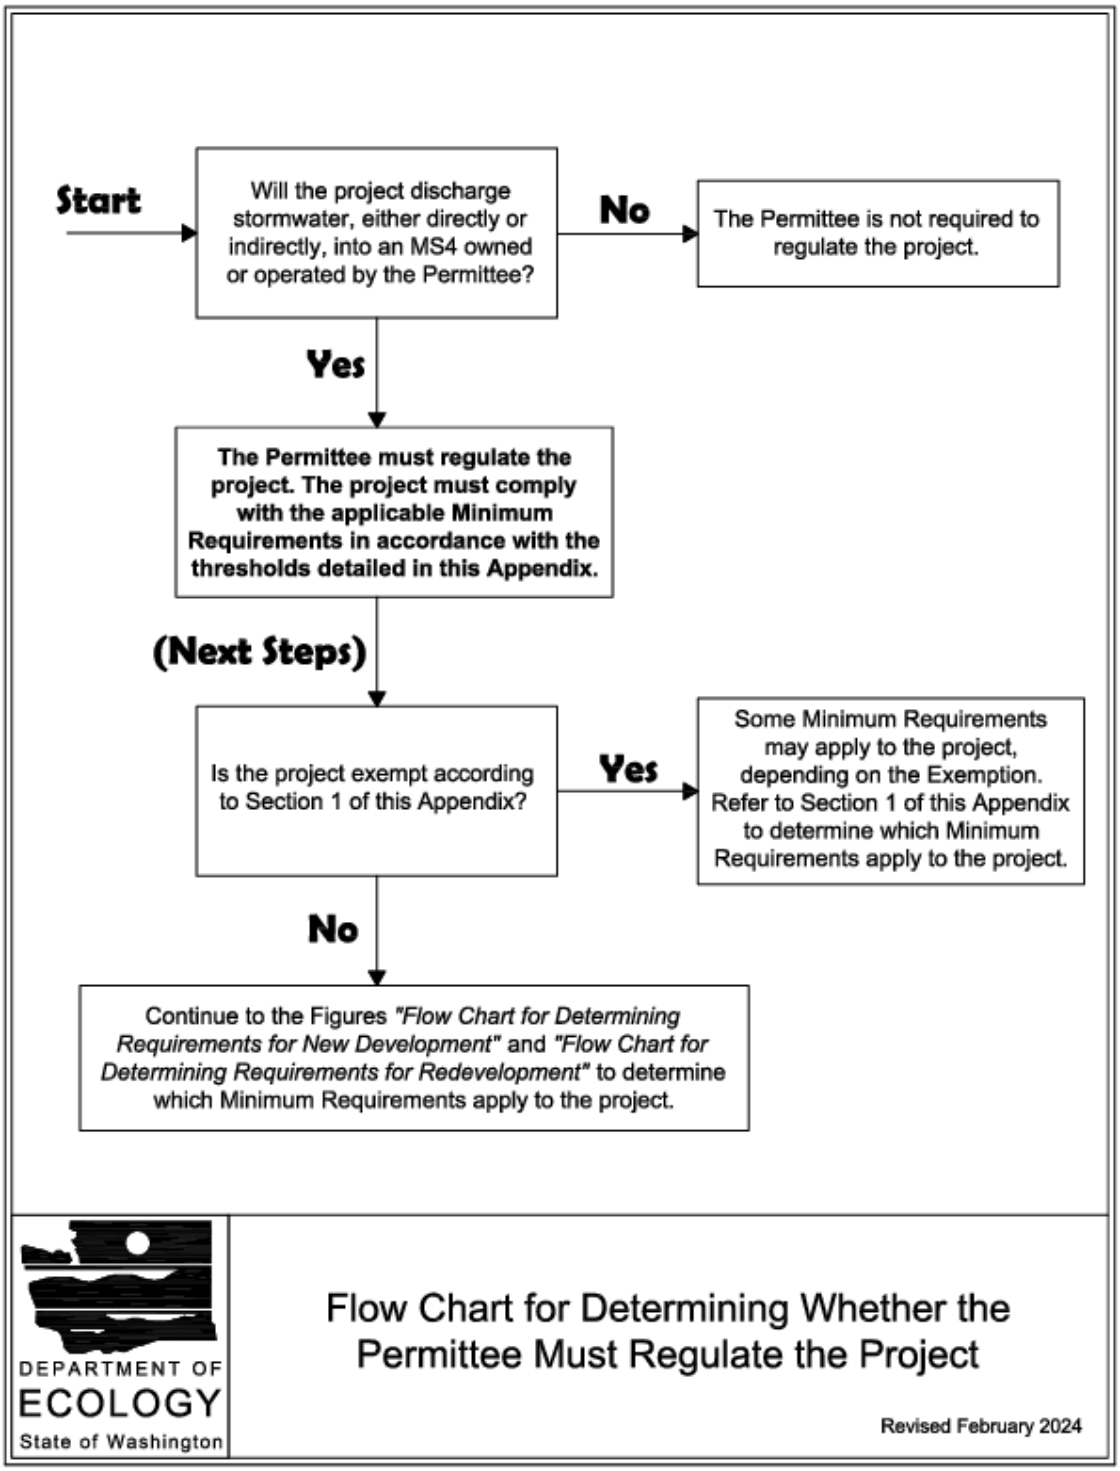


Figure 3: Flow Chart for Determining Requirements for New Development

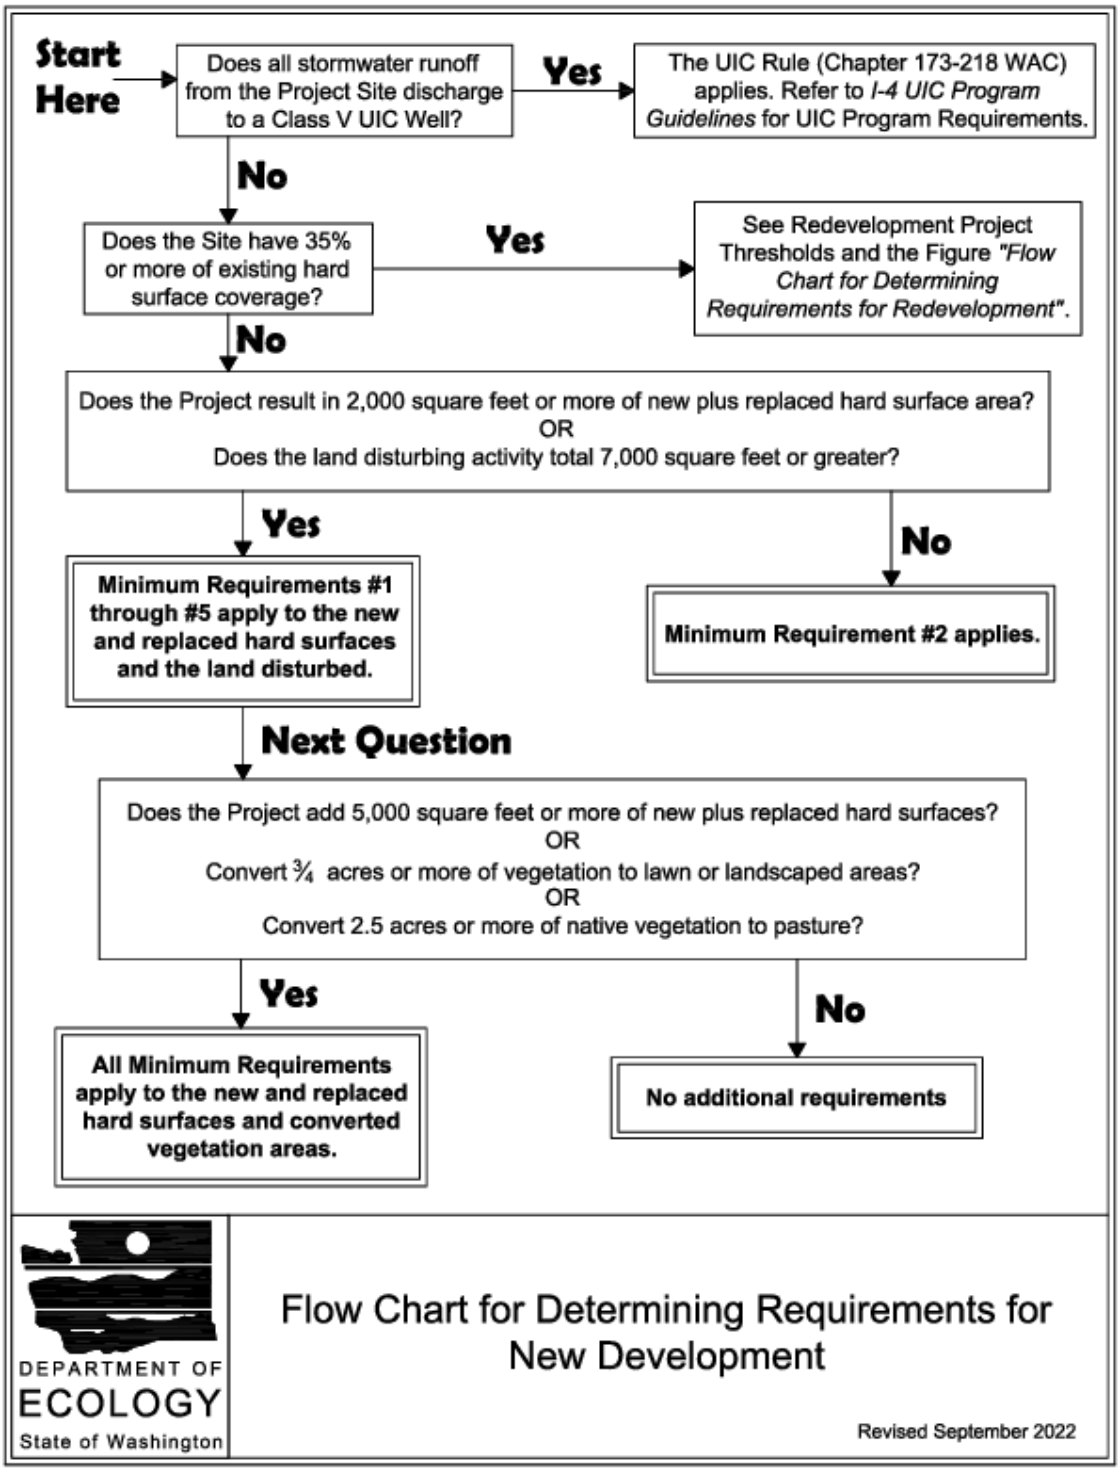

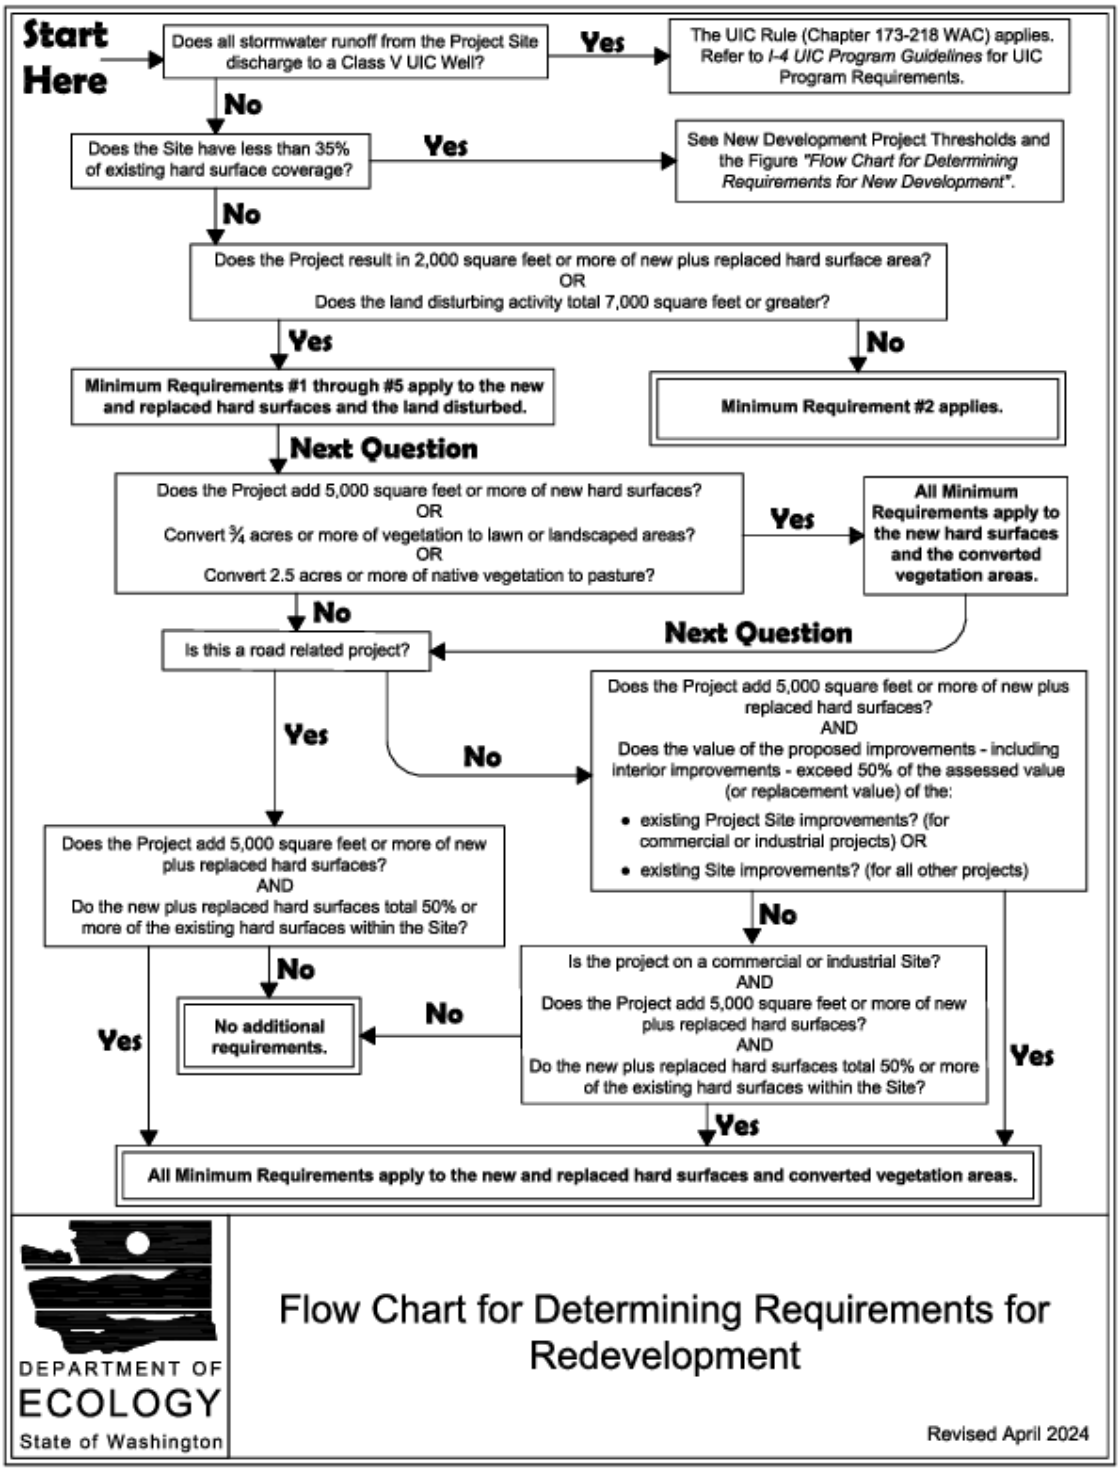

Figure 4: Flow Chart for Determining Requirements for Redevelopment

3.2 New Development Project Thresholds

All new development shall be required to comply with Minimum Requirement #2.

The following new development shall comply with Minimum Requirements #1 through #5 for the new and replaced hard surfaces and the land disturbed:

- Results in 2,000 square feet, or greater, of new plus replaced hard surface area, or
- Has land disturbing activity of 7,000 square feet or greater.

The following new development shall comply with all Minimum Requirements for the new and replaced hard surfaces and the converted vegetation areas:

- the Project adds 5,000 square feet, or more, of new plus replaced hard surface area, or
- Converts ¾ acres, or more, of vegetation to lawn or landscaped areas, or
- Converts 2.5 acres, or more, of native vegetation to pasture.

3.3 Redevelopment Project Thresholds

All redevelopment shall be required to comply with Minimum Requirement #2.

The following redevelopment shall comply with Minimum Requirements #1 through #5 for the new and replaced hard surfaces and the land disturbed:

- Results in 2,000 square feet, or more, of new plus replaced hard surface area, or
- Has land disturbing activity of 7,000 square feet or greater.

The following redevelopment shall comply with all Minimum Requirements for the new hard surfaces and converted vegetation areas:

- Adds 5,000 square feet or more of new hard surfaces or,
- Converts ¾ acres, or more, of vegetation to lawn or landscaped areas, or
- Converts 2.5 acres, or more, of native vegetation to pasture.

3.4 Additional Requirements for Redevelopment

Road-related projects shall comply with all Minimum Requirements for the new and replaced hard surfaces and the converted vegetation areas if:

- the Project adds 5,000 square feet or more of new plus replaced hard surfaces, and
- the new plus replaced hard surfaces total 50% or more of the existing hard surfaces within the Site.

Other types of redevelopment projects shall comply with all the Minimum Requirements for the new and replaced hard surfaces and the converted vegetation areas if either of the two thresholds below are crossed:

- Threshold 1:
  - the Project adds 5,000 square feet or more of new plus replaced hard surfaces, and
    - For commercial or industrial projects: the valuation of the proposed improvements, including interior improvements, exceeds 50% of the assessed value of the existing Project Site improvements.
    - For all other projects: the valuation of the proposed improvements, including interior improvements, exceeds 50% of the assessed value of the existing Site improvements.
- Threshold 2 (for commercial or industrial sites only):
  - the Project adds 5,000 square feet or more of new plus replaced hard surfaces, and
  - the new plus replaced hard surfaces total 50% or more of the existing hard surfaces within the Site.

The Permittee may exempt or institute a stop-loss provision for redevelopment projects from compliance with Minimum Requirement #5, #6, #7, and/or #8 as applied to the replaced hard surfaces if the Permittee has adopted a plan and a schedule that fulfills those requirements in regional facilities.

Section 4. Minimum Requirements

This Section describes the Minimum Requirements for stormwater management for new development projects and redevelopment projects. **Section 3. Applicability of the Minimum Requirements** should be consulted to determine which of the Minimum Requirements apply to any given project. **Figure 3: Flow Chart for Determining Requirements for New Development** and **Figure 4: Flow Chart for Determining Requirements for Redevelopment** should be consulted to determine whether the Minimum Requirements apply to new surfaces, replaced surfaces, or new and replaced surfaces.

4.1 Minimum Requirement #1: Preparation of a Stormwater Site Plan

All projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall prepare a Stormwater Site Plan for local jurisdiction review. Stormwater Site Plans shall use site-appropriate development principles, as required, and encouraged by local development codes, to retain native vegetation and minimize impervious surfaces to the extent feasible. Stormwater Site Plans shall be prepared in accordance with the guidance in ***III-3 Stormwater Site Plans*** in the SWMMWW.

4.2 Minimum Requirement #2: Construction Stormwater Pollution Prevention Plan (SWPPP)

Permittees may choose to allow compliance with this Minimum Requirement to be achieved for an individual site if the site is covered under and fully implementing the requirements of Ecology's *CONSTRUCTION STORMWATER GENERAL PERMIT - National Pollutant Discharge Elimination System (NPDES) and State Waste Discharge General Permit for Stormwater Discharges Associated with Construction Activity*.

All new development and redevelopment projects are responsible for preventing erosion and discharge of sediment and other pollutants into receiving waters.

Minimum Requirement Thresholds

Compliance requirements for this Minimum Requirement are as follows:

- Projects that meet either of the following thresholds must prepare a Construction Stormwater Pollution Prevention Plan (SWPPP) for local jurisdiction review:
    - result in 2,000 square feet or more of new plus replaced hard surface area, or
    - disturb 7,000 square feet or more of land,
- Projects below those thresholds (listed directly above) are not required to prepare a Construction SWPPP but must consider all of the Construction SWPPP Elements (listed below) and develop controls for all Construction SWPPP Elements that pertain to the project site.

General Requirements

The Construction SWPPP shall include a narrative and drawings. All BMPs shall be clearly referenced in the narrative and marked on the drawings. The Construction SWPPP narrative shall include documentation to explain and justify the pollution prevention decisions made for the project. Each of the 13 Construction SWPPP Elements (listed below) must be considered and included in the Construction SWPPP unless site conditions render the Element unnecessary and the exemption from that Element is clearly justified in the narrative of the SWPPP.

Clearing and grading activities for developments shall be allowed only if conducted pursuant to an approved site development plan (e.g. subdivision approval) that establishes permitted areas of clearing, grading, cutting, and filling. These permitted clearing and grading areas and any other areas required to preserve critical or sensitive areas, buffers, native growth protection easements, or tree retention areas (as may be required by local jurisdictions), shall be delineated on the site plans and the development site.

The Construction SWPPP shall be implemented beginning with initial land disturbance and until final stabilization. Sediment and Erosion control BMPs shall be consistent with the BMPs contained in ***II-4 Construction Stormwater BMPs*** in the SWMMWW.

Seasonal Work Limitations: From October 1 through April 30, land disturbing activities shall only be permitted if shown to the satisfaction of the local jurisdiction that turbid water will be prevented from leaving the site through a combination of the following:

1. Site conditions including existing vegetative coverage, slope, soil type and proximity to receiving waters; and
2. Limitations on activities and the extent of disturbed areas; and
3. Proposed erosion and sediment control measures.

Based on the information provided and/or local weather conditions, the local jurisdiction may expand or restrict the seasonal work limitations.

The following activities are exempt from the seasonal work limitations:

1. Routine maintenance and necessary repair of erosion and sediment control BMPs,
2. Routine maintenance of public facilities or existing utility structures that do not expose the soil or result in the removal of the vegetative cover to soil, and
3. Activities where there is one hundred percent infiltration of stormwater runoff within the site in approved and installed erosion and sediment control facilities.

If erosion and sediment control requirements are not being met (i.e. turbid water is leaving the site), then the local jurisdiction shall require that the contractor maintain the existing BMPs or implement other BMPs as appropriate.

Construction SWPPP Elements

Element 1: Preserve Vegetation / Mark Clearing Limits

a. Before beginning land disturbing activities, including clearing and grading, clearly mark all clearing limits, sensitive areas and their buffers, and trees that are to be preserved within the construction area.
b. Retain the duff layer, topsoil, and natural vegetation in an undisturbed state to the maximum degree practicable.

Element 2: Establish Construction Access

a. Limit construction vehicle access and exit to one route, if possible.
b. Stabilize access points with a pad of quarry spalls, crushed rock, or other equivalent BMPs, to minimize tracking of sediment onto roads.
c. Locate wheel wash or tire baths on site if the stabilized construction entrance is not effective in preventing tracking sediment onto roads.
d. If sediment is tracked off site, clean the affected roadway(s) thoroughly at the end of each day, or more frequently as necessary (for example, during wet weather). Remove sediment from roads by shoveling, sweeping, or picking up and transporting the sediment to a controlled sediment disposal area.
e. Conduct street washing only after sediment is removed in accordance with 2.d (above).
f. Control street wash wastewater by pumping back on site, or otherwise prevent it from discharging into systems tributary to waters of the State.

Element 3: Control Flow Rates

a. Protect properties and waterways downstream of construction sites from erosion and the associated discharge of turbid waters due to increases in the velocity and peak volumetric flow rate of stormwater runoff from the project site.
b. Where necessary to comply with 3.a (above), construct stormwater infiltration or detention BMPs as one of the first steps in grading. Ensure that detention BMPs function properly before constructing site improvements (e.g. impervious surfaces).
c. If permanent infiltration BMPs are used for temporary flow control during construction, protect these BMPs from sedimentation during the construction phase.

Element 4: Install Sediment Controls

Design, install, and maintain effective erosion controls and sediment controls to minimize the discharge of pollutants. At a minimum:

a. Construct sediment control BMPs (sediment ponds, traps, filters, etc.) as one of the first steps in grading. These BMPs must be functional before other land disturbing activities take place.
b. Minimize sediment discharges from the site. The design, installation and maintenance of erosion and sediment controls must address factors such as the amount, frequency, intensity and duration of precipitation, the nature of resulting stormwater runoff, and soil characteristics, including the range of soil particle sizes expected to be present on the site.
c. Direct stormwater runoff from disturbed areas through **BMP C241: Sediment Pond (Temporary)** or other appropriate sediment removal BMP, before the runoff leaves a construction site or before discharge to an infiltration facility. Runoff from fully stabilized areas may be discharged without a sediment removal BMP but must control flow rates per **Element 3: Control Flow Rates**.
d. Locate BMPs intended to trap sediment on site in a manner to avoid interference with the movement of juvenile salmonids attempting to enter off-channel areas or drainages.
e. Provide and maintain natural buffers around surface waters, direct stormwater to vegetated areas to increase sediment removal and maximize stormwater infiltration, unless infeasible.
f. Where feasible, design outlet structures that withdraw impounded stormwater from the surface to avoid discharging sediment that is still suspended lower in the water column.

Element 5: Stabilize Soils

a. Stabilize exposed and unworked soils by application of effective BMPs that prevent erosion. Applicable BMPs include but are not limited to: temporary and permanent seeding, sodding, mulching, plastic covering, erosion control fabrics and matting, soil application of polyacrylamide (PAM), the early application of gravel base on areas to be paved, and dust control.
b. Control stormwater volume and velocity within the site to minimize soil erosion.
c. Control stormwater discharges, including both peak flow rates and total stormwater volume, to minimize erosion at outlets and to minimize downstream channel and stream bank erosion.

d. Soils must not remain exposed and unworked for more than the time periods set forth below to prevent erosion:
    - During the dry season (May 1 - September 30): 7 days
    - During the wet season (October 1 - April 30): 2 days
e. Stabilize soils at the end of the shift before a holiday or weekend if needed based on the weather forecast.
f. Stabilize soil stockpiles from erosion, protect with sediment trapping measures, and where possible, locate away from storm drain inlets, waterways, and drainage channels.
g. Minimize the amount of soil exposed during construction activity.
h. Minimize the disturbance of steep slopes.
i. Minimize soil compaction and, unless infeasible, preserve topsoil.

Element 6: Protect Slopes

a. Design and construct cut-and-fill slopes in a manner to minimize erosion. Applicable practices include, but are not limited to, reducing continuous length of slope with terracing and diversions, reducing slope steepness, and roughening slope surfaces (for example, track walking).
b. Divert off-site stormwater (run-on) or groundwater away from slopes and disturbed areas with interceptor dikes, pipes and/or swales. Off-site stormwater should be managed separately from stormwater generated on site.
c. At the top of slopes, collect drainage in pipe slope drains or protected channels to prevent erosion. Temporary pipe slope drains must be sized to convey the flow rate calculated by one of the following methods:
    - Single Event Hydrograph Method: The peak volumetric flow rate calculated using a 10-minute time step from a Type 1A, 10-year, 24-hour frequency storm.

      OR
    - Continuous Simulation Method: The 10-year peak flow rate, as determined by an approved continuous runoff model with a 15-minute time step.

    The hydrologic analysis must use the existing land cover condition for predicting flow rates from tributary areas outside the project limits. For tributary areas on the project site, the analysis must use the temporary or permanent project land cover condition, whichever will produce the highest flow rates. If using the Western Washington Hydrology Model (WWHM) to predict flows, bare soil areas should be modeled as "lawn" area.

d. Place excavated material on the uphill side of trenches, consistent with safety and space considerations.

e. Place check dams at regular intervals within constructed channels that are cut down a slope.

Element 7: Protect Drain Inlets

a. Protect all storm drain inlets made operable during construction so that stormwater runoff does not enter the conveyance system without first being filtered or treated to remove sediment.

b. Clean or remove and replace storm drain inlet protection devices when sediment has filled one-third of the available storage (unless a different standard is specified by the product manufacturer).

Element 8: Stabilize Channels and Outlets

a. Design, construct, and stabilize all on-site conveyance channels to prevent erosion from the flow rate calculated by one of the following methods:

- Single Event Hydrograph Method: The peak volumetric flow rate calculated using a 10-minute time step from a Type 1A, 10-year, 24-hour frequency storm.

  OR

- Continuous Simulation Method: The 10-year peak flow rate, as determined by an approved continuous runoff model with a 15-minute time step.

The hydrologic analysis must use the existing land cover condition for predicting flow rates from tributary areas outside the project limits. For tributary areas on the project site, the analysis must use the temporary or permanent project land cover condition, whichever will produce the highest flow rates. If using the Western Washington Hydrology Model (WWHM) to predict flows, bare soil areas should be modeled as "lawn" area.

b. Provide stabilization, including armoring material, adequate to prevent erosion of outlets, adjacent stream banks, slopes, and downstream reaches at the outlets of all conveyance systems.

Element 9: Control Pollutants

Design, install, implement, and maintain effective pollution prevention measures to minimize the discharge of pollutants. The project proponent must:

a. Handle and dispose of all pollutants, including waste materials and demolition debris that occur on site, in a manner that does not cause contamination of stormwater.

b. Provide cover, containment, and protection from vandalism for all chemicals, liquid products, petroleum products, and other materials that have the potential to pose a threat to human health or the environment. Minimize storage of hazardous materials on-site. Safety Data Sheets (SDS) should be supplied for all materials stored. Chemicals should be kept in their original labeled containers. On-site fueling tanks must include secondary containment. Secondary containment means placing tanks or containers within an impervious structure capable of containing 110% of the volume of the largest tank within the containment structure. Double-walled tanks do not require additional secondary containment.

c. Conduct maintenance, fueling, and repair of heavy equipment and vehicles using spill prevention and control measures. Clean contaminated surfaces immediately following any spill incident.

d. Discharge wheel wash or tire bath wastewater to:
   - a separate on-site treatment system that prevents discharge to surface water, or
   - to the sanitary sewer, with local sewer district approval.

e. Apply fertilizers and pesticides in a manner and at application rates that will not result in loss of chemical to stormwater runoff. Follow manufacturers' label requirements for application rates and procedures.

f. Use BMPs to prevent contamination of stormwater runoff by pH-modifying sources. The sources for this contamination include, but are not limited to bulk cement, cement kiln dust, fly ash, new concrete washing and curing waters, recycled concrete stockpiles, waste streams generated from concrete grinding and sawing, exposed aggregate processes, dewatering concrete vaults, concrete pumping and mixer washout waters.

g. Adjust the pH of stormwater if necessary to prevent violations of water quality standards.

h. Ensure that washout of concrete trucks is performed off-site or in designated concrete washout areas only. Do not wash out concrete truck drums onto the ground, or into storm drains, open ditches, streets, or streams. Washout of small concrete handling equipment may be disposed of in a formed area awaiting

concrete where it will not contaminate surface or groundwater. Do not dump excess concrete on site, except in designated concrete washout areas. Concrete spillage or concrete discharge directly to groundwater or surface waters of the State is prohibited. At no time shall concrete be washed off into the footprint of an area where an infiltration BMP will be installed.

i. Obtain written approval from Ecology before using chemical treatment other than CO_2, dry ice, or food grade vinegar to adjust pH.

j. Uncontaminated water from water-only based shaft drilling for construction of building, road, and bridge foundations may be infiltrated provided the wastewater is managed in a way that prohibits discharge to surface waters. Prior to infiltration, water from water-only based shaft drilling that comes into contact with curing concrete must be neutralized until pH is in the range of 6.5 to 8.5 (su).

Element 10: Control Dewatering

a. Discharge foundation, vault, and trench dewatering water, which have similar characteristics to stormwater runoff at the site, into a controlled conveyance system before discharge to:
    i. A sediment control BMP (e.g. **BMP C240: Sediment Trap** or **BMP C241: Sediment Pond (Temporary)**);
    ii. Infiltration;
    iii. Transport off site in a vehicle, such as a vacuum flush truck, for legal disposal in a manner that does not pollute state waters;
    iv. Ecology-approved on-site chemical treatment or other suitable treatment technologies;
    v. Sanitary or combined sewer discharge with local sewer district approval, if there is no other option; or
    vi. Use of a sedimentation bag that discharges to a ditch or swale for small volumes of localized dewatering.

b. Discharge clean, non-turbid dewatering water, such as well-point groundwater, to systems tributary to, or directly into surface waters of the State, as specified in **Element 8: Stabilize Channels and Outlets**, provided the dewatering flow does not cause erosion or flooding of receiving waters. Do not route clean dewatering water through stormwater sediment BMPs. Note that "surface waters of the State" may exist on a construction site as well as off site; for example, a creek running through a site.

c. Handle highly turbid or otherwise contaminated dewatering water separately from stormwater.

Element 11: Maintain BMPs

a. Maintain and repair all temporary and permanent erosion and sediment control BMPs as needed to ensure continued performance of their intended function in accordance with BMP specifications.
b. Remove all temporary erosion and sediment control BMPs within 30 days after achieving final site stabilization or after the temporary BMPs are no longer needed.

Element 12: Manage the Project

a. Phase development projects to the maximum degree practicable and consider seasonal work limitations.
b. Inspect, maintain, and repair all BMPs as needed to ensure continued performance of their intended function.
c. Maintain, update, and implement the Construction SWPPP.
d. Projects that disturb one or more acres must have site inspections conducted by a Certified Erosion and Sediment Control Lead (CESCL). Project sites disturbing less than one acre may have a CESCL or a person without CESCL certification conduct inspections. By the initiation of construction, the Construction SWPPP must identify the CESCL or inspector, who must be present on site or on-call at all times.

Element 13: Protect Infiltration BMPs

The project proponent must protect existing and proposed infiltration BMPs during construction. The primary purpose of On-Site Stormwater Management (often referred to as Low Impact Development, or LID) is to reduce the disruption of the natural site hydrology through infiltration. BMPs used to meet **4.5 Minimum Requirement #5: On-Site Stormwater Management** (often called LID BMPs) are permanent facilities.

a. Protect all infiltration BMPs from sedimentation through installation and maintenance of erosion and sediment control BMPs on portions of the site that drain into the infiltration BMPs. Restore the BMPs to their fully functioning condition if they accumulate sediment during construction. Restoring the BMP must include removal of sediment and any sediment-laden soils within the BMP and replacing the removed soils with soils meeting the design specification.
b. Prevent compacting infiltration BMPs by excluding construction equipment and foot traffic. Protect completed lawn and landscaped areas from compaction due to construction equipment.

c. Control erosion and avoid introducing sediment from surrounding land uses onto **BMP T5.15: Permeable Pavement**. Do not allow muddy construction equipment on the base material or pavement. Do not allow sediment-laden runoff onto permeable pavements.
d. Permeable pavement fouled with sediments or no longer passing an initial infiltration test must be cleaned using procedures from the local stormwater manual or the manufacturer's procedures.
e. Keep all heavy equipment off existing soils under infiltration BMPs that have been excavated to final grade to retain the infiltration rate of the soils.

4.3 Minimum Requirement #3: Source Control of Pollution

Following construction, all new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall apply all known, available, and reasonable Source Control BMPs.

Source Control BMPs shall be selected, designed, and maintained in accordance with ***III-1.1 Choosing Your Source Control BMPs*** and **Volume IV** of the SWMMWW.

4.4 Minimum Requirement #4: Preservation of Natural Drainage Systems and Outfalls

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall preserve and maintain natural drainage patterns to the maximum extent practicable at the site. Discharges from the Project Site shall occur at the natural location, to the maximum extent practicable.

The manner by which runoff is discharged from the Project Site must not cause a significant adverse impact to downstream receiving waters and downgradient properties, and should be addressed as part of the off-site analysis described in the SWMMWW.

All concentrated discharge locations (i.e. discharges from pipe systems, culverts, and ditches) must address energy dissipation. A project proponent who believes that energy dissipation should not be required must provide justification in the project's stormwater site plan.

4.5 Minimum Requirement #5: On-Site Stormwater Management

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall apply Stormwater Management BMPs in accordance with the following thresholds, standards, and lists to infiltrate, disperse, and retain stormwater runoff on site to the extent feasible without causing flooding or erosion impacts.

Compliance Options by Project Type

All projects that require Minimum Requirement #5 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) must employ Stormwater Management BMPs as detailed below. The compliance options for the project depend on the amount of improvements proposed, the location of the project, the size of the parcel the project is on, and whether or not the project is Flow Control exempt.

Each project must use a single compliance option (either the List Approach or the LID Performance Standard and **BMP T5.13: Post-Construction Soil Quality and Depth**). Use of both compliance options on a single project is not allowed.

Projects that Trigger Only Minimum Requirements #1 - #5

Projects that are not Flow Control exempt that trigger only Minimum Requirements #1 through #5 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) shall either:

- Use the LID BMPs from List #1 for all surfaces within each type of surface in List #1;

  or

- Use any Flow Control BMP(s) desired to achieve the LID Performance Standard and apply **BMP T5.13: Post-Construction Soil Quality and Depth** (if feasible).

Projects that Trigger Minimum Requirements #1 - #9

Projects that are not Flow Control exempt that trigger Minimum Requirements #1 through #9 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) have the compliance options shown in **Table 1: Minimum Requirement #5 Compliance Options for Projects Triggering Minimum Requirements #1 - #9**.

Table 1: Minimum Requirement #5 Compliance Options for Projects Triggering Minimum Requirements #1 - #9

Project Location and Parcel Size	Minimum Requirement #5 Compliance Options
Projects inside the UGA, on any size parcel	• Use the LID BMPs from List #2 for all surfaces within each type of surface in List #2; or • Use any Flow Control BMPs desired to achieve the LID Performance Standard and apply **BMP T5.13: Post-Construction Soil Quality and Depth** (if feasible).
Projects outside the UGA, on a parcel smaller than 5 acres	
Projects outside the UGA, on a parcel 5 acres or larger	Use any Flow Control BMPs desired to achieve the LID Performance Standard and apply **BMP T5.13: Post-Construction Soil Quality and Depth** (if feasible).
Note: This text refers to the Urban Growth Area (UGA) as designated under the Growth Management Act (GMA) (Chapter 36.70A RCW) of the State of Washington. If the project is located in a county that is not subject to planning under the GMA, the city limits shall be used instead.	

Flow Control Exempt Projects

Projects qualifying as Flow Control exempt in accordance with the **TDA Exemption** in **4.7 Minimum Requirement #7: Flow Control** shall either:

- Use the LID BMPs from List #3 for all surfaces within each type of surface in List #3;

  or

- Use any Flow Control BMP(s) desired to achieve the LID Performance Standard and apply **BMP T5.13: Post-Construction Soil Quality and Depth** (if feasible).

If the project has multiple TDAs, all TDAs must be Flow Control exempt per the **TDA Exemption** in **4.7 Minimum Requirement #7: Flow Control** for the project to use the options listed here.

Compliance Methods

LID Performance Standard

The LID Performance Standard compliance method for Minimum Requirement #5 requires modeling the proposed Flow Control BMPs to demonstrate the flow reduction as described below.

Stormwater discharges shall match developed discharge durations to pre-developed durations for the range of pre-developed discharge rates from 8% of the 2-year peak flow to 50% of the 2-year peak flow. Refer to the **Flow Control Performance Standard** section in **4.7 Minimum Requirement #7: Flow Control** for information about the assignment of the pre-developed condition. Project sites that must also meet **4.7 Minimum Requirement #7: Flow Control** must match flow durations between 8% of the 2-year flow through the full 50-year flow.

Designers selecting this option cannot use **BMP T5.14: Rain Gardens** to achieve the LID Performance Standard. They may choose to use BMP T7.30: Bioretention to achieve the LID Performance Standard.

The List Approach

The List Approach compliance method for Minimum Requirement #5 requires evaluating the BMPs in **Table 2: The List Approach for MR5 Compliance**.

For each surface, evaluate the feasibility of the BMPs in the order listed for that type of surface, and use the first BMP that is considered feasible. The designer must document the site conditions and infeasibility criteria used to deem BMPs infeasible. Once a BMP is deemed feasible and used for a surface, no other BMP from the list is necessary for that surface.

If all BMPs in the list are infeasible, then the designer must document the site conditions and infeasibility criteria used to deem each BMP infeasible. This documentation will demonstrate compliance with Minimum Requirement #5.

Feasibility shall be determined by evaluation against:

- Design criteria, limitations, and infeasibility criteria identified for each BMP in **Volume V** of the SWMMWW; and
- Competing Needs Criteria as listed in ***I-3.4.5 MR5: On-Site Stormwater Management*** in the SWMMWW.

Table 2: The List Approach for MR5 Compliance

2. When the designer encounters BMP T5.15: Permeable Pavement in the List Approach, it is not a requirement to pave these surfaces. Where pavement is proposed, it must be permeable to the extent feasible unless BMP T5.30: Full Dispersion is employed.</td></tr>
</table>

4.6 Minimum Requirement #6: Runoff Treatment

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall apply Runoff Treatment BMPs in accordance with the following thresholds, standards, and requirements to remove pollutants from stormwater runoff.

TDA Thresholds

Each TDA within a project that requires Minimum Requirement #6 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) must be reviewed to determine if Runoff Treatment BMPs are required for the TDA to be in compliance with Minimum Requirement #6.

Note that it is possible for a project that triggers the thresholds for Minimum Requirement #6, per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements,** to not need Runoff Treatment BMP(s) in one or more individual TDAs to be in compliance with Minimum Requirement #6. If a TDA does not trigger either of the TDA thresholds for Runoff Treatment BMPs, then the designer must document the areas within the TDA used to determine that neither of the TDA thresholds are met. This documentation will demonstrate compliance with Minimum Requirement #6 for the TDA.

When assessing a TDA against the following thresholds, only consider the types of surfaces (e.g. new hard surfaces, replaced hard surfaces, converted vegetation areas) that are subject to Minimum Requirement #6, per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**.

The following TDAs require construction of Runoff Treatment BMPs. If a TDA meets either of the following thresholds, Runoff Treatment BMPs are required. The project proponent must demonstrate that the TDA does not meet either of the following thresholds for Runoff Treatment BMPs to not be required for that TDA.

- TDAs that have a total of 5,000 square feet or more of pollution-generating hard surface (PGHS), or
- TDAs that have a total of 3/4 of an acre or more of pollution-generating pervious surfaces (PGPS) – not including permeable pavements, and from which there will be a surface discharge in a natural or man-made conveyance system from the site.

Runoff Treatment Performance Goal Thresholds

1. Oil Control

Oil Control BMPs are required for areas that typically generate high concentrations of oil due to high traffic turnover or the frequent transfer of oil. These types of areas include:

- An area of a commercial or industrial site subject to an expected average daily traffic (ADT) count equal to or greater than 100 vehicles per 1,000 square feet of gross building area, or 300 total trip ends per day.
- An area of a commercial or industrial site subject to petroleum storage and transfer in excess of 1,500 gallons per year, not including routinely delivered heating oil.
- An area of a commercial or industrial site subject to parking, storage, or maintenance of 25 or more vehicles that are over 10 tons gross weight (trucks, buses, trains, heavy equipment, etc.).
- A road intersection with a measured ADT count of 25,000 vehicles or more on the main roadway and 15,000 vehicles or more on any intersecting roadway, excluding projects proposing primarily pedestrian or bicycle use improvements.

2. Phosphorus Treatment

Phosphorus Treatment BMPs are required for projects (or portions of projects) within watersheds that have been determined by the local jurisdiction (e.g. through a lake management plan), Ecology (e.g. through a TMDL waste load allocation), or the USEPA to be sensitive to phosphorus and are being managed to control phosphorus. The following are examples of sources that the local jurisdiction can use for determining whether a water body is sensitive to phosphorus:

- Those waterbodies reported under section 303(d) of the Clean Water Act, where designated uses are not supported due to phosphorous or other water quality criteria related to excessive phosphorus. This information can be viewed on Ecology's Water Quality Atlas at the following web address:

  https://apps.ecology.wa.gov/waterqualityatlas/wqa/map

- Those listed in Washington State's Nonpoint Source Assessment required under section 319(a) of the Clean Water Act due to nutrients.
- A locally adopted plan that contains requirements, recommendations, or policies indicating that a particular receiving water is sensitive to phosphorus

3. Metals Treatment

Metals Treatment BMPs are required for the types of project sites listed below that:

a. discharge directly to fresh waters designated for aquatic life use or that have an existing aquatic life use; or
b. discharge to conveyance systems that are tributary to fresh waters designated for aquatic life use or that have an existing aquatic life use; or
c. infiltrate stormwater within ¼ mile of a fresh water designated for aquatic life use or that has an existing aquatic life use.

The types of project sites are:

- Sites subject to industrial activities,
- Commercial project sites,
- Multifamily residential project sites, and
- High ADT roads as follows:
    - Within Urban Growth Areas:
        - Roads with an ADT of 7,500 or greater.
    - Outside of Urban Growth Areas:
        - Roads with an ADT of 15,000 or greater
- Light rail elevated and non-elevated guideways/tracks
- Other project sites that are anticipated to generate a high pollutant loading, including:
    - Parking areas as follows:
        - Commercial or industrial areas: All on-street parking areas.
        - Areas other than commercial or industrial areas: On-street parking areas on streets with an expected total ADT of ≥ 7,500.
        - Parking areas with an expected trip end count ≥ 40 vehicles per 1,000 sf of gross building area.
        - Parking areas with ≥ 100 expected trip ends per day.
    - Fueling stations
    - Transit center bus stops

The following areas of the above-listed project sites do not require Metals Treatment BMPs:

- Areas that discharge directly, or indirectly through a municipal separate storm sewer system, to a water listed in ***Appendix III-A: Basic Treatment Receiving Waters*** in the SWMMWW.

- Landscaped areas of industrial, commercial, and multi-family project sites that do not involve any other pollution-generating sources (e.g. industrial activities, customer parking, storage of erodible or leachable material, wastes, or chemicals).
- Parking lots of industrial and commercial project sites, dedicated solely to parking of employees' private vehicles that do not involve any other pollution-generating sources (e.g. industrial activities, customer parking, storage of erodible or leachable material, wastes, or chemicals).

For TDAs with a mix of land use types, Metals Treatment BMPs are required when the runoff from the areas subject to the Metals Treatment Performance Goal comprises 50% or more of the total runoff from the TDA.

4. Basic Treatment

Areas that must provide Phosphorus Treatment BMPs or Metals Treatment BMPs do NOT have to provide additional Basic Treatment BMPs to meet the Basic Treatment Performance Goal.

If Phosphorus Treatment BMPs or Metals Treatment BMPs are not provided, Basic Treatment BMPs are required.

Runoff Treatment BMP Sizing

Size Runoff Treatment BMPs for the entire area that drains to them, even if some of those areas are not pollution-generating or were not included in the Project Thresholds decisions (see **Section 3. Applicability of the Minimum Requirements**) or the TDA Thresholds decisions of this Minimum Requirement.

Runoff Treatment BMPs are sized by using either a volume (the Water Quality Design Volume) or a flow rate (the Water Quality Design Flow Rate), depending on the Runoff Treatment BMP selected. Refer to the selected Runoff Treatment BMP to determine whether the BMP is sized based on a volume or a flow rate. See below for details about the Water Quality Design Volume and the Water Quality Design Flow Rate used to size Runoff Treatment BMPs.

Water Quality Design Volume

The Water Quality Design Volume may be calculated by either of the following methods:

- *Continuous Simulation Method:* Using an approved continuous runoff model, the Water Quality Design Volume shall be the simulated daily volume that represents the upper limit of the range of daily volumes that accounts for 91% of the entire runoff volume over a multi-decade period of record.
- *Single Event Hydrograph Method:* The Water Quality Design Volume shall be the volume of runoff predicted by the Natural Resource Conservation Service (NRCS) curve number equations (as detailed in ***III-2.3 Single Event Hydrograph Method*** in the SWMMWW). The precipitation depth used in the equations shall be as predicted from a 24-hour storm with a 6-month return frequency (a.k.a., 6-month, 24-hour storm).

Water Quality Design Flow Rate

The Water Quality Design Flow Rate is dependent on the location of the Runoff Treatment BMP relative to Detention BMP(s):

- *Upstream of Detention BMPs or when there are no Detention BMPs:* The Water Quality Design Flow Rate shall be the flow rate at or below which 91% of the total runoff volume, as estimated by an approved continuous runoff model, will be treated.

  Ecology has assigned design criteria for Runoff Treatment BMPs to achieve the BMP's Runoff Treatment Performance Goal (e.g. Basic Treatment Performance Goal, Metals Treatment Performance Goal, etc.) at the Water Quality Design Flow Rate. At a minimum, 91% of the total runoff volume, as estimated by an approved continuous runoff model, must pass through Runoff Treatment BMP(s) at or below the approved hydraulic loading rate for the BMP(s).

- *Downstream of Detention BMPs:* The Water Quality Design Flow Rate shall be the full 2-year release rate from the Detention BMP.

Runoff Treatment BMP Selection, Design, and Maintenance

Runoff Treatment BMPs shall be:

- Selected in accordance with the process identified in ***III-1.2 Choosing Your Runoff Treatment BMPs*** in the SWMMWW,
- Designed in accordance with the design criteria in **Volume V** of the SWMMWW, and

- Maintained in accordance with the maintenance criteria in **Volume V** of the SWMMWW.

Additional Requirements

The (direct or indirect) discharge of untreated stormwater from pollution-generating hard surfaces to groundwater must not be authorized by the Permittee, except for infiltration or dispersion of runoff through LID BMPs per **The List Approach** in **4.5 Minimum Requirement #5: On-Site Stormwater Management**.

4.7 Minimum Requirement #7: Flow Control

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall apply Flow Control BMPs in accordance with the following thresholds, standards, and requirements to reduce the impacts of stormwater runoff from hard surfaces and land cover conversions.

TDA Exemption

Flow Control is not required for TDAs that discharge directly to, or indirectly through an MS4 to a water listed in ***Appendix I-A: Flow Control Exempt Receiving Waters*** in the SWMMWW, subject to all of the following restrictions:

- Direct discharge to the exempt receiving water does not result in the diversion of drainage from any perennial stream classified as Types 1, 2, 3, or 4 in the State of Washington Interim Water Typing System, or Types “S”, “F”, or “Np” in the Permanent Water Typing System, or from any category I, II, or III wetland.
- If flow splitters or conveyance elements are applied to route natural runoff volumes from the TDA to any downstream Type 5 stream or category IV wetland, then:
    - Design of the flow splitters or conveyance elements must be based on approved continuous simulation modeling analysis. The design must assure that flows delivered to Type 5 stream reaches will approximate, but in no case exceed, durations ranging from 50% of the 2-year to the 50-year peak flow.
    - Flow splitters or conveyance elements that deliver flow to category IV wetlands must also be designed using approved continuous simulation modeling to preserve pre-project wetland hydrologic conditions unless specifically waived or exempted by regulatory agencies with permitting jurisdiction.
- The TDA must be drained by a conveyance system that is comprised entirely of manmade conveyance elements (e.g. pipes, ditches, outfall protection).

- The conveyance system must extend to the ordinary high-water mark of the exempt receiving water (or the mean higher high-water mark for tidally influenced exempt receiving waters). To avoid construction activities in sensitive areas, an alternative to extending the conveyance system to the ordinary high-water mark is to ensure that flows are properly dispersed before reaching the buffer zone of the sensitive or critical area.
- The conveyance system between the TDA and the exempt receiving water shall have sufficient hydraulic capacity (per local jurisdiction conveyance sizing requirements) to convey discharges from future build-out conditions (under current zoning) from contributing areas of the Site, and the existing condition from contributing off-site areas.
- Any erodible elements of the manmade conveyance system must be adequately stabilized to prevent erosion under the conditions noted above.

Note that Ecology does not consider newly constructed or reconstructed stream channels to be manmade conveyance elements.

Permittees may petition Ecology to exempt projects in additional areas. A petition must justify the proposed exemption based upon a hydrologic analysis that demonstrates that the potential stormwater runoff from the exempted area will not significantly increase the erosion forces on the stream channel nor have near field impacts. See ***Appendix I-A: Flow Control Exempt Receiving Waters*** in the SWMMWW for details

TDA Thresholds

Each TDA within a project that requires Minimum Requirement #7 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) must be reviewed to determine if Flow Control BMPs are required for the TDA to be in compliance with Minimum Requirement #7.

Note that it is possible for a project that triggers the thresholds for Minimum Requirement #7, per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements,** to not need Flow Control BMP(s) in one or more individual TDAs to be in compliance with Minimum Requirement #7. If a TDA does not trigger any of the TDA thresholds for Flow Control BMPs, then the designer must document the areas within the TDA used to determine that none of the TDA thresholds are met. This documentation will demonstrate compliance with Minimum Requirement #7 for the TDA.

When assessing a TDA against the following thresholds, only consider the types of surfaces (e.g. new hard surfaces, replaced hard surfaces, converted vegetation areas) that are subject to Minimum Requirement #7, per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**.

The following TDAs require construction of Flow Control BMPs to achieve the Flow Control Performance Standard. If a TDA meets any of the following thresholds, Flow Control BMPs are required. The project proponent must demonstrate that the TDA does not meet any of the following thresholds for Flow Control BMPs to not be required for that TDA.

- TDAs that have a total of 10,000 square feet or more of effective impervious surfaces, or
- TDAs that convert ¾ acres or more of native vegetation, pasture, scrub/shrub, or unmaintained non-native vegetation to lawn or landscape, or convert 2.5 acres or more of native vegetation to pasture, and from which there is a surface discharge in a natural or man-made conveyance system from the TDA, or
- TDAs that through a combination of effective hard surfaces and converted vegetation areas cause a 0.15 cubic feet per second (cfs) or greater increase in the 100-year flow frequency as estimated using an approved continuous simulation model and 15-minute time steps.

  The 0.15 cfs increase should be a comparison of the post project runoff to the existing condition runoff. For the purpose of applying this threshold, the existing condition is either the pre-project land cover, or the land cover that existed prior to the first issue date of the Municipal Stormwater Permit to the local jurisdiction.

Flow Control Performance Standard

Stormwater discharges shall match developed discharge durations to pre-developed durations for the range of pre-developed discharge rates from 50% of the 2-year peak flow up to the full 50-year peak flow. The pre-developed condition to be matched shall be a forested land cover unless:

- Reasonable, historic information is provided that indicates the site was prairie prior to settlement (modeled as pasture in the approved continuous simulation model); or,
- The drainage area of the immediate stream and all subsequent downstream basins have had at least 40% total impervious area (TIA) since 1985. ***Figure I-3.4: Basins with 40% Total Impervious Area as of 1985*** in the SWMMWW depicts those areas which meet this criterion.

  In this case, the pre-developed condition to be matched shall be the existing land cover condition. Where basin-specific studies determine a stream channel to be unstable, even though the above criterion is met, the pre-developed condition assumption shall be the “historic” land cover condition, or a land cover condition commensurate with achieving a target flow regime identified by an approved basin study.

Alternative Flow Control Performance Standard

An alternative Flow Control Performance Standard may be established through application of watershed-scale hydrologic modeling and supporting field observations. Possible reasons for an alternative Flow Control Performance Standard include:

- Establishment of a stream–specific threshold of significant bedload movement other than the assumed 50% of the 2-year peak flow;
- Zoning and Land Clearing Ordinance restrictions that, in combination with an alternative Flow Control Performance Standard, maintain or reduce the naturally occurring erosive forces on the stream channel; or
- A duration control standard is not necessary for protection, maintenance, or restoration of designated and existing beneficial uses or Clean Water Act compliance.

See the SWMMWW for details on how an Alternative Flow Control Performance Standard may be established.

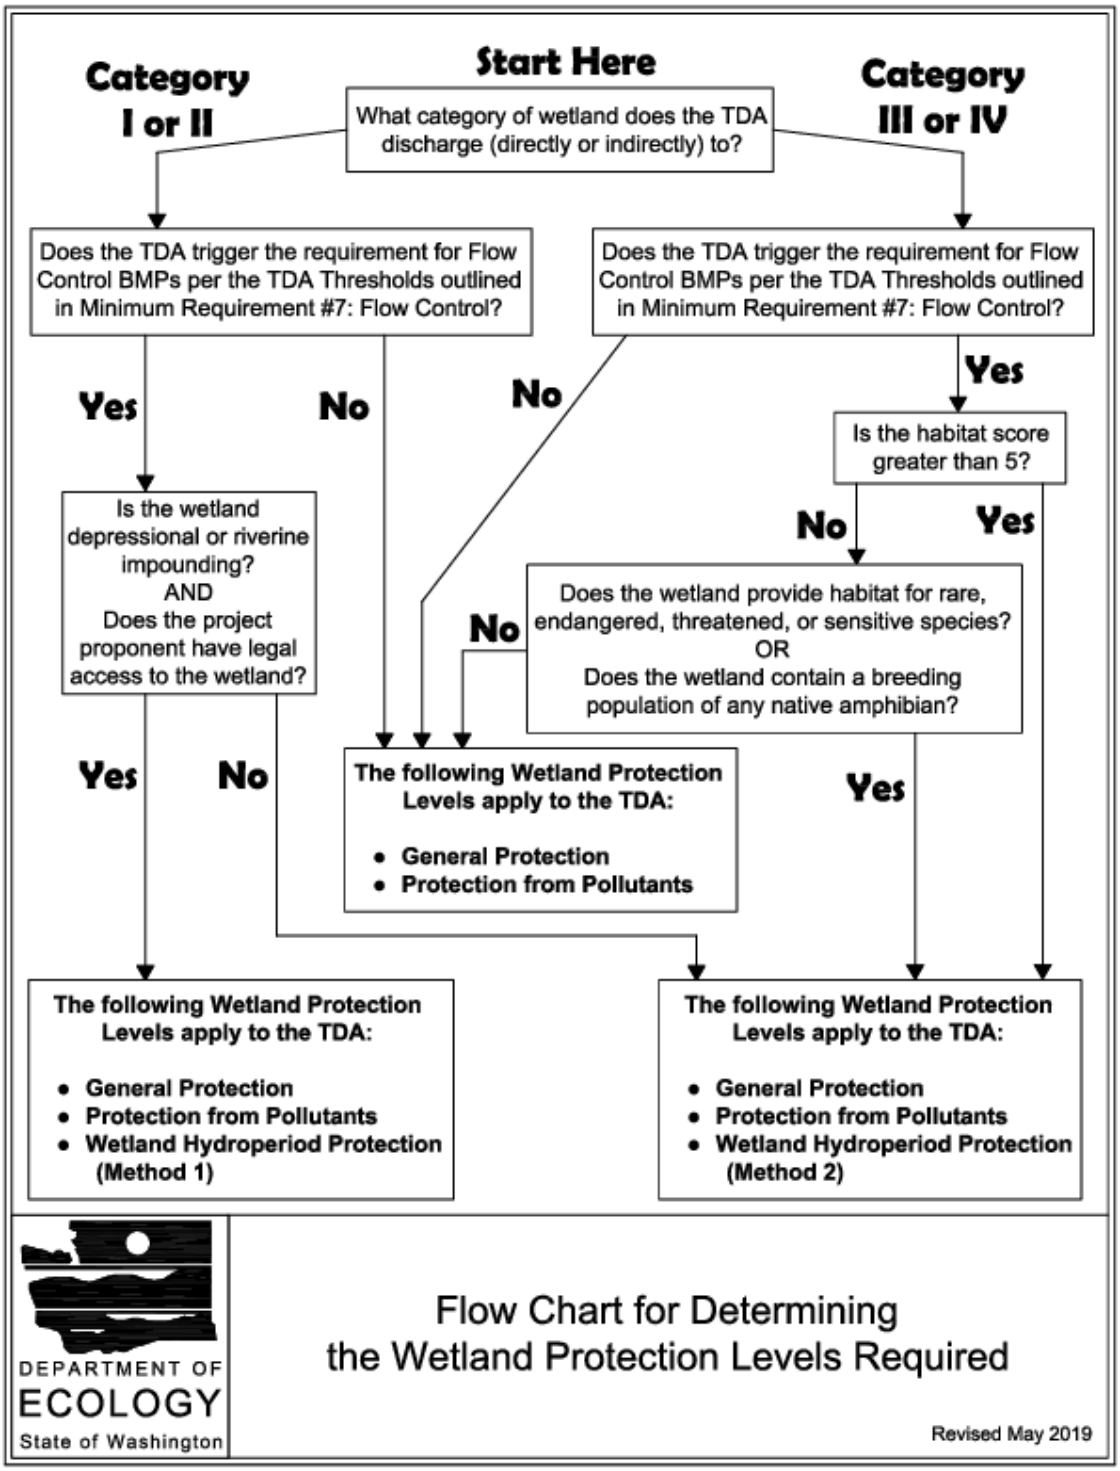
Additional Requirement

Flow Control BMPs shall be selected in accordance with ***III-1.3 Choosing Your Flow Control BMPs*** and designed and maintained in accordance with **Volume V** of the SWMMWW.

4.8 Minimum Requirement #8: Wetlands Protection

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall include Stormwater Management BMPs in accordance with the following thresholds, standards, and requirements to reduce the impacts of stormwater runoff to wetlands.

TDA Thresholds



This Minimum Requirement applies only to TDAs whose stormwater discharges into a wetland, either directly or indirectly through a conveyance system.

Each TDA within a project that requires Minimum Requirement #8 (per the Project Thresholds in **Section 3. Applicability of the Minimum Requirements**) must be reviewed to determine what Level(s) of Wetland Protection must be applied to the TDA to comply with Minimum Requirement #8. The Level(s) of Wetland Protection that must be applied are dependent upon:

- The category of wetland that the TDA is discharging to,
- Whether or not the TDA triggers the requirement for Flow Control BMPs per the **TDA Thresholds** in **4.7 Minimum Requirement #7: Flow Control**,
- Whether or not the wetland is a depressional or impounded wetland,
- Whether or not the project proponent has legal access to the wetland,
- The wetland habitat score,
- Whether or not the wetland provides habitat for rare, endangered, threatened, and/or sensitive species, and
- Presence of a breeding population of native amphibians.

Refer to **Figure 5: Flow Chart for Determining Wetland Protection Level Requirements** to determine what Level(s) of Wetland Protection must be applied to comply with Minimum Requirement #8.

Figure 5: Flow Chart for Determining Wetland Protection Level Requirements

Levels of Wetland Protection

The following Levels of Wetland Protection are further explained in ***Appendix I-C: Wetland Protection Guidelines*** in the SWMMWW.

General Protection

General Protection includes general practices that benefit wetlands of all types.

Protection from Pollutants

Protection from Pollutants includes measures to protect the wetland from pollutants in stormwater runoff. Measures of protection include Construction Stormwater BMPs, Source Control BMPs, LID practices and principles, and Runoff Treatment BMPs.

Wetland Hydroperiod Protection

Wetland Hydroperiod Protection includes measures to avoid excessive hydrologic alteration of existing wetlands from development. There are two methods within Wetland Hydroperiod Protection:

- Method 1: Monitoring and Wetland Stage Modeling

  This method requires data collection specific to the wetland, as well as continuous simulation modeling to demonstrate that the proposed project will not negatively alter the wetland hydrology.

- Method 2: Site Discharge Modeling

  This method requires continuous simulation modeling of the runoff from the TDA to demonstrate that the changes in total discharge volume to the wetland will remain similar to the pre-development condition.

Additional Requirements

Stormwater Management BMPs shall not be built within a wetland or its buffer, except for:

- Necessary conveyance systems as approved by the Permittee; or
- As allowed in ***I-C.6 Compensatory Mitigation of Wetlands*** in the SWMMWW.

4.9 Minimum Requirement #9: Operation and Maintenance

All new development and redevelopment projects meeting the Project Thresholds in **Section 3. Applicability of the Minimum Requirements** shall create an operation and maintenance (O&M) manual for all BMPs used to meet **4.6 Minimum Requirement #6: Runoff Treatment**, **4.7 Minimum Requirement #7: Flow Control**, and/or **4.8 Minimum Requirement #8: Wetlands Protection**.

The O&M manual shall identify:

- Maintenance requirements that are consistent with the provisions in **Volume V** of the SWMMWW, and
- The party (or parties) responsible for the operation, maintenance, and long-term funding source(s).

For private facilities approved by the Permittee, a copy of the O&M manual shall be retained on site or within reasonable access to the site and shall be transferred with the property to the new owner. For public facilities, a copy of the O&M manual shall be retained in the appropriate department.

A log of maintenance activity that indicates what actions were taken shall be kept and be available for inspection by the local government.

Section 5. Adjustments

Adjustments to the Minimum Requirements may be granted by the Permittee provided that written findings of fact are prepared that address the following:

- The adjustment provides substantially equivalent environmental protection.
- Based on sound Engineering practices, the objectives of safety, function, environmental protection, and facility maintenance are met.

Section 6. Exceptions

Exceptions to the Minimum Requirements may be granted by the Permittee following legal public notice of an application for an exception, legal public notice of the Permittee's decision on the application, and written findings of fact that document the Permittee's determination to grant an exception. Permittees shall keep records, including the written findings of fact, of all local exceptions to the Minimum Requirements.

The Permittee may grant an exception to the Minimum Requirements if such application imposes a severe and unexpected economic hardship. To determine whether the application imposes a severe and unexpected economic hardship on the project applicant, the Permittee must consider and document, with written findings of fact, the following:

- The current (pre-project) use of the Site, and
- How the application of the Minimum Requirement(s) restricts the proposed use of the Site compared to the restrictions that existed prior to the adoption of the Minimum Requirements; and
- The possible remaining uses of the Site if the exception were not granted; and
- The uses of the Site that would have been allowed prior to the adoption of the Minimum Requirements; and
- A comparison of the estimated amount and percentage of value loss as a result of the Minimum Requirements versus the estimated amount and percentage of value loss as a result of requirements that existed prior to adoption of the Minimum Requirements; and
- The feasibility for the owner to alter the project to apply the Minimum Requirements.

In addition, any exception must meet the following criteria:

- The exception will not increase risk to the public health and welfare, nor be injurious to other properties in the vicinity and/or downstream, and to the quality of waters of the state; and
- The exception is the least possible exception that could be granted to comply with the intent of the Minimum Requirements.

Section 7. Altering the Minimum Requirements with Basin Plans

Basin Plans provide a mechanism by which the performance standards in the Minimum Requirements can be evaluated and refined based on an analysis of a basin or watershed. Basin Plans may be used to develop control strategies to address impacts from future development and to correct specific problems whose sources are known or suspected. Basin Plans can be effective at addressing both long-term cumulative impacts of pollutant loads and short-term acute impacts of pollutant concentrations, as well as hydrologic impacts to streams, wetlands, and groundwater resources.

Basin Plans may be used by the Permittee to revise the default standards of the following Minimum Requirements:

- **4.5 Minimum Requirement #5: On-Site Stormwater Management**,
- **4.6 Minimum Requirement #6: Runoff Treatment**,
- **4.7 Minimum Requirement #7: Flow Control**, and/or
- **4.8 Minimum Requirement #8: Wetlands Protection**.

For a Basin Plan to serve as a means of revising the standards of one or more of the Minimum Requirements listed above, the following conditions must be met:

- The Basin Plan must be formally adopted by all jurisdictions with responsibilities under the plan; and
- All ordinances or regulations called for by the Basin Plan must be in effect; and
- The Basin Plan must be reviewed and approved by Ecology.

Basin Plans may also be used to demonstrate an equivalent level of Runoff Treatment, Flow Control, and/or wetland protection through the construction and use of regional stormwater facilities.

Basin Plans will require the use of continuous runoff computer models and field work to verify and support the models. Permittees who are considering the use of Basin Plans to revise the default standards of one or more of the Minimum Requirements are encouraged to contact Ecology early in the planning stage.

Some examples of how Basin Plans can alter the Minimum Requirements are given in within the guidance for each Minimum Requirement in the SWMMWW. See ***I-3.4 Minimum Requirements (MRs)*** in the SWMMWW.

Name of TMDL	WRIA 1 - NOOKSACK RIVER WATERSHED BACTERIA TMDL
Document(s) for TMDL	*Nooksack River Watershed Bacteria Total Maximum Daily Load*, June 2000, Ecology Publication No. 00-10-036. https://fortress.wa.gov/ecy/publications/publications/0010036.pdf *Nooksack River Watershed Bacteria Total Maximum Daily Load Detailed Implementation Plan,* January 2002, Ecology Publication No. 01-10-060. https://fortress.wa.gov/ecy/publications/publications/0110060.pdf
Location of Original 303(d) Listings	WA-01-1010, WA-01-1012, WA-01-1014, WA-01-1015, WA-01-1016, WA-01-1110, WA-01-1111, WA-01-1115, WA-01-1116, WA-01-1117, WA-01-1118, WA-01-1119, WA-01-1120, WA-01-1125, AR42TO, BX84LO, UZ70KA, LLPL
Area Where TMDL Requirements Apply	TMDL coverage includes areas served by an MS4 draining to the Nooksack River and its tributaries, Fishtrap Creek, Bertrand Creek, Double Ditch drain, Duffner Ditch, Bender road ditch, between Nugents Corner and Marine Drive.
Parameter(s)	Fecal Coliform
EPA Approval Date	August 8, 2000
MS4 Permittee	Phase II Permit: City of Ferndale WAR04-5552 Phase II Permit: City of Lynden WAR04-5719

CITY OF FERNDALE

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach:

Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance:

Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater**.**

Illicit Connection/Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources when at the drainage circuit's most downstream sampling location if there is water flow. For the purposes of IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be annually documented in TMDL reporting in the Annual Report.

CITY OF LYNDEN

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach:

Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance:

Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources when at the drainage circuit's most downstream sampling location if there is water flow. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be annually documented in TMDL reporting in the Annual Report.

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that

a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach:

Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance:

Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

All permanent stormwater treatment facilities/BMPs within the TMDL area that treat phosporus shall be inspected and maintained in accordance with the requirements of S5.C.9.b and S5.C.9.c; reduced inspection frequency options do not apply.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources when at the drainage circuit's most downstream accessible sampling location if there is water flow. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be annually documented in TMDL reporting in the Annual Report.

Administration

a. By March 31, 2028, the City and the County shall submit a draft update of the "Lake Whatcom Implementation" tasks as developed under the previous permit term. The updated draft will include actions for the next permit term that build upon 2024-2029 implementation tasks. The City and the County shall finalize the Lake Whatcom Implementation tasks for 2029-2034 and submit with the March 31, 2029 Annual Report.

b. Include in the Annual Report the phosphorus reduction activities based on the current accepted TMDL reassessment model and the 2024-2029 "Lake Whatcom Implementation" tasks.

Parameter	Fecal Coliform
EPA Approval Date	August 9, 2001
MS4 Permittee	Phase I Permit: Snohomish County Phase II Permit: Granite Falls, Lake Stevens, Monroe, Snohomish, Marysville, Arlington, Everett

SNOHOMISH COUNTY

Actions Required

Business Inspections:

Each Permittee shall continue their ongoing inspection programs for facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities). If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, each Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement actions.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Targeted Illicit Connection and Illicit Discharge Detection and Elimination:

During each permit term, Permittees shall use their available data (such as land use data, age of infrastructure, information on type of business activities, and water quality sampling results) to identify at least one high priority area (such as a tributary or a stream segment) that will be the target of a bacteria focused IC/IDDE effort. Sampling of stormwater shall be conducted as part of the Permittee's Targeted IC/IDDE efforts to focus investigations on municipal stormwater contributions of bacteria to receiving waters. For the purposes of Targeted IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4, and/or outfalls. Permittees shall annually screen for bacteria sources by inspecting and taking grab samples (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

No later than December 31, 2025, each Permittee shall have a written plan and include documentation of how the high priority area was selected and include a preliminary sampling schedule and locations. For Permittees with multiple TMDL areas, the plan may include rationale for staggering the implementation in the identified high priority areas. Documentation shall be submitted with the Annual Report due by March 31, 2026. Begin implementing the plan and schedule no later than January 1, 2026, and implement annually within the high priority area through December 31, 2028. For Permittees implementing a staggered schedule, implementation may be extended to June 30, 2029. Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, all

sampling locations, and sampling results shall be annually documented in TMDL reporting in the Annual Report. Sampling methodology must include collecting grab samples (or documenting no flow) during the critical period if a critical period is identified in the TMDL.

CITY OF GRANITE FALLS, LAKE STEVENS, MONROE, SNOHOMISH, MARYSVILLE, EVERETT AND ARLINGTON

Actions Required

***Business Inspections**:*

Each Permittee shall continue their ongoing inspection programs for facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities). If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, each Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement actions.

***Public Education and Outreach**:* Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources when at the drainage circuit's most downstream accessible sampling location if there is water flow. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining and processing a grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be annually documented in TMDL reporting as required in the Permittees' Annual Report.

Name of TMDL	WRIA 8 - NORTH CREEK
EPA Approved Document(s) for TMDL	*North Creek Watershed: Total Maximum Daily Load Evaluation for Fecal Coliform Bacteria*, June 2001, Ecology Publication No. 01-03-020. https://fortress.wa.gov/ecy/publications/summarypages/0103020.html *North Creek Fecal Coliform Total Maximum Daily Load Submittal Report*, June 2002, Ecology publication No. 02-10-020. https://fortress.wa.gov/ecy/publications/summarypages/0210020.html *North Creek Fecal Coliform Bacteria Total Maximum Daily Load: Detailed Implementation Plan*, October 2003, Ecology Publication No. 03-10-047. https://fortress.wa.gov/ecy/publications/SummaryPages/0310047.html
Location of Original 303(d) Listings	WA-08-1065
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittees' municipal stormwater permit and draining to the portion of the WASWIS segment SM74QQ starting at the confluence with the Sammamish River and including all upstream tributaries contributing to the North Creek segment of WASWIS SM74QQ.
Parameter	Fecal Coliform
EPA Approval Date	August 2, 2002
MS4 Permittee	Phase I Permit: Snohomish County Phase II Permit: Everett, Bothell, Mill Creek

SNOHOMISH COUNTY & EVERETT, BOTHELL & MILL CREEK

Actions Required

Business Inspections: Each Permittee shall continue their ongoing inspection programs for facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities). If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement actions.

***Public Education and Outreach**:* Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (e.g., dog and horse) use and the potential for pollution to stormwater.

***Targeted Illicit Connection and Illicit Discharge Detection and Elimination (IDDE)**:* During each permit term, Permittees shall use their available data (such as land use data, age of infrastructure, information on type of business activities, and water quality sampling results) to identify at least one high priority area (such as a tributary or a stream segment) that will be the focus of a bacteria targeted IC/IDDE effort. Sampling of stormwater shall be conducted as part of the Permittee's Targeted IDDE to focus investigations on municipal stormwater contributions of bacteria to receiving waters. For the purposes of Targeted IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4 and/or outfalls. Annually Permittees shall screen for bacteria sources by taking grab samples (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow the Permittee's own adopted IDDE Procedures to conduct source tracing if bacteria levels and/or observations trigger a response (see IDDE annual for bacteria trigger levels).

No later than December 31, 2025, each Permittee shall prepare a written plan and include documentation of how the high priority area was selected and include a preliminary sampling schedule and locations. For Permittees with multiple TMDL areas, the plan may include rationale for staggering the implementation in the identified high priority areas. Documentation shall be submitted with the Annual Report due by March 31, 2026. Permittees shall begin implementing the plan and schedule no later than January 1, 2026. Targeted IC/IDDE shall be implemented annually within the high priority area through December 31, 2028. For Permittees implementing a staggered schedule, implementation may be extended to June 30, 2029. Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be documented annually in TMDL reporting as required in the Permittee's Annual Report. Sampling methodology must include collecting grab samples (or document no flow) during the critical period, if a critical period is identified in the TMDL.

Name of TMDL	WRIA 8 - SWAMP CREEK
EPA Approved Document(s) for TMDL	*Swamp Creek Fecal Coliform Bacteria Total Maximum Daily Load: Water Quality Improvement Report and Implementation Plan*, June 2006, Ecology Publication No. 06-10-021. https://fortress.wa.gov/ecy/publications/publications/0610021.pdf
Location of Original 303(d) Listings	WA-08-1060
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittees municipal stormwater permit and draining to the portion of the WASWIS segment SM74QQ starting at the confluence with the Sammamish River and including all upstream tributaries contributing to the Swamp Creek segment of WASWIS GJ57UL.
Parameter	Fecal Coliform
EPA Approval Date	August 16, 2006
MS4 Permittee	Phase I Permit: Snohomish County Phase II Permit: Everett, Bothell, Lynnwood, Brier, Mountlake Terrace, Kenmore

SNOHOMISH COUNTY & CITY OF EVERETT, BOTHELL, LYNWOOD, BRIER, MOUNT LAKE TERRACE & KENMORE

Actions Required

Business Inspections: Each Permittee shall continue their ongoing inspection programs for facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities). If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement actions.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (e.g., dog and horse) use and the potential for pollution to stormwater.

Targeted Illicit Connection and Illicit Discharge Detection and Elimination*:* During each permit term, Permittees shall use their available data (such as land use data, age of infrastructure, information on type of business activities, and water quality sampling results) to identify at least one high priority area (such as a tributary or a stream segment) that will be the focus of a targeted IC/IDDE effort. Sampling of stormwater shall be conducted as part of the Permittee's Targeted IC/IDDE efforts to focus investigations on municipal stormwater contributions of bacteria to receiving waters. For the purposes of Targeted IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4 and/or outfalls. Permittees shall screen for bacteria sources annually by inspecting and taking grab samples (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

No later than December 31, 2025, each Permittee shall prepare a written plan and include documentation of how the high priority area was selected and include a preliminary sampling schedule and locations. For Permittees with multiple TMDL areas, the plan may include rationale for staggering the implementation in the identified high priority areas. Documentation shall be submitted with the Annual Report due by March 31, 2026. Permittees shall begin implementing the plan and schedule no later than January 1, 2026. Targeted IC/IDDE shall be implemented annually within the high priority area through December 31, 2028. For Permittees implementing a staggered schedule, implementation may be extended to June 30, 2029. Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be documented annually in TMDL reporting as required in the Permittee's Annual Report. Sampling methodology must include collecting grab samples (or document no flow) during the critical period, if a critical period is identified in the TMDL.

Name of TMDL	WRIA 8 - BEAR-EVANS WATERSHED
Document(s) for TMDL	*Bear-Evans Watershed Fecal Coliform Bacteria Total Maximum Daily Load, Water Quality Improvement Report*, June 2008, Ecology Publication No. 08-10-026. https://fortress.wa.gov/ecy/publications/documents/0810026.pdf *Bear-Evans Watershed Temperature, Dissolved Oxygen and Fecal Coliform Bacteria Total Maximum Daily Load, Water Quality Implementation Plan*, March 2011, Ecology Publication No. 11-10-024. https://fortress.wa.gov/ecy/publications/documents/1110024.pdf
Location of Original 303(d) Listings	Bear Creek (EW54VY, BA64JJ, WR69YU)) Cottage Lake Creek (NO74J5) Unnamed Tributary to Bear Creek (EU47RU) Evans Creek (MI67EG)
Area Where TMDL Requirements Apply	Bear Creek and Evans Creek watersheds (includes Cottage Lake watershed)
Parameter	Fecal Coliform
EPA Approval Date	August 11, 2008
MS4 Permittee	Phase I: King County Phase II: No actions identified for Phase II Permittees

KING COUNTY

Actions Required

Business Inspections: The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach: The Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: The Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (e.g., dog and horse) use and the potential for pollution to stormwater.

Illicit Discharge Detection and Elimination: When conducting IDDE field screening during normal course of business (as required by S5.C.9.c for Phase I Permittees) in a TMDL area, the Permittee shall obtain a grab sample to screen for bacteria sources at the drainage circuit's most downstream sampling location if there is water flow. For the purposes of IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. The Permittee shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be documented annually in TMDL reporting in the Annual Report.

Name of TMDL	WRIA 8 - ISSAQUAH CREEK BASIN WATER CLEANUP PLAN FOR FECAL COLIFORM BACTERIA
EPA Approved Document(s) for TMDL	*Issaquah Creek Basin Water Cleanup Plan for Fecal Coliform Bacteria: Total Maximum Daily Load Submittal Report*, June 2004, Ecology Publication No. 04-10-055. https://fortress.wa.gov/ecy/publications/documents/0410055.pdf
Location of Original 303(d) Listings	Issaquah Creek, TF310B (WA-08-1110) North Fork Issaquah Creek, CZ80NC (WA-08-1110) Tibbetts Creek, MB51QQ, EA48LQ (WA-08-1115)
Area Where TMDL Requirements Apply	These requirements apply to areas served by MS4s within the TMDL coverage area.
Parameter(s)	Fecal Coliform Bacteria
EPA Approval Date	October 1, 2004
MS4 Permittee:	Phase I Permit: King County Phase II Permit: City of Issaquah, WAR04-5518

KING COUNTY & CITY OF ISSAQUAH

Actions Required

Business Inspections: Each Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (e.g., dog and horse) use and the potential for pollution to stormwater.

Illicit Discharge Detection and Elimination: When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees and IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources at the drainage circuit's most downstream sampling location if there is water flow. For the purposes of IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be documented annually in TMDL reporting as required in the Permittees' Annual Report.

Name of TMDL	WRIA 8 - LITTLE BEAR CREEK FECAL COLIFORM WATER QUALITY IMPROVEMENT PROJECT
Document(s) for TMDL	*Little Bear Creek Fecal Coliform Total Maximum Daily Load (Water Cleanup Plan),* May 2005, Ecology Publication No. 05-10-034. https://fortress.wa.gov/ecy/publications/publications/0510034.pdf
Location of Original 303(d) Listings	Little Bear Creek, UT96KR (WA-08-1085).
Area Where TMDL Requirements Apply	These requirements apply to areas served by MS4s within the TMDL coverage area.
Parameter(s)	Fecal coliform bacteria
EPA Approval Date	July 1, 2005
MS4 Permittee:	Phase I Permit: Snohomish County Phase II Permit: City of Woodinville, WAR04-5545

SNOHOMISH COUNTY & CITY OF WOODINVILLE

Actions Required

Business Inspections: Each Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (e.g., dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/Illicit Discharge Detection and Elimination: When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees shall obtain a grab sample to screen for bacteria sources at the drainage circuit's most downstream sampling location if there is water flow. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining and processing grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results (including documenting no flow) shall be documented annually in TMDL reporting in the Annual Report.

Name of TMDL	WRIA 10 – LOWER WHITE RIVER PH TMDL
Document(s) for TMDL	*Lower White River (LWR) pH Total Maximum Daily Load – Technical Analysis and TMDL Allocations*, Ecology Publication No. 2-10-011 https://apps.ecology.wa.gov/publications/documents/2210011.pdf
Location of Original 303(d) Listings	White River, multiple locations 7524, 7525, 7526
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	pH[1]
EPA Approval Date	January 2023
MS4 Permittees	Phase I Permit: King County, Pierce County Phase II Permit: Auburn, Algona, Buckley, Enumclaw, Pacific, Sumner

KING AND PIERCE COUNTIES AND ASSOCIATED CITIES

Actions Required

1. MS4 Mapping: No later than March 31, 2029:
    a. The Permittee shall ensure all known piped MS4 outfalls that they own or operate, which discharge to the Lower White River or its primary tributaries within the TMDL implementation area, are mapped and documented.[2, 3]
    b. The Permittee shall map all tributary conveyances to their piped MS4 outfalls identified in (1)(a), if not already mapped.
2. Illicit Discharge Detection and Elimination:

[1] This TMDL sets soluble reactive phosphorus (SRP) allocations in order to limit periphyton growth and meet the numeric water quality criteria for pH in the White River.

[2] The screening program is limited to "piped outfalls" owned or operated by the Permittee, which means only MS4 outfalls that are made of pipe material (e.g., corrugated metal, concrete, etc.) require screening; it does not include open pervious outfalls, such as ditches.

[3] The TMDL implementation area is the contributing drainage area to the White River between RM 3.6 and RM 28 where phosphorus management practices are necessary to meet allocations for discharges to the river and the TMDL load capacity of the river itself. Primary tributaries to the Lower White River within the TMDL area include Boise Creek, Second Creek, Pussyfoot Creek, Bowman Creek, and Government Canal.

a. No later than October 31, 2028, the Permittee shall screen all known piped MS4 outfalls that they own or operate, which discharge to the Lower White River and its primary tributaries, within the TMDL implementation area.
    i. For at least one dry season within this permit cycle, the Permittee shall screen piped MS4 outfalls once a month, from May 1st – October 31st, for the presence of a discharge. All piped MS4 outfalls may be screened within the same year or divided into groups and screened over multiple years.
    ii. Document MS4 outfall screening results. If no discharge is found during outfall screening by October 31, 2028, the Permittee may plan to reduce this screening to once in May and again once in October, or as close to these months as practicable, during low flow tier conditions (i.e. <900 cfs), for future permit cycles.
    iii. Actively controlled stormwater discharges (e.g., pump stations, batch treatment systems) are included in the screening program, but they have slightly different sampling requirements as described in (2)(b)(iii).
b. If a discharge at the piped MS4 outfall is present and estimated to be more than 2.24 gallons per minute, the Permittee shall collect an end-of-pipe sample for soluble reactive phosphorus (SRP) analysis.
    i. Sampling is restricted to May 1st - October 31st when there is little to no rain locally (<0.2" rainfall in past 48 hours).
    ii. Sampling is restricted to when the daily average flow in the White River is lower than 2000 cfs (USGS gage 12100490 at R Street near Auburn).
    iii. For all actively controlled municipal stormwater discharges (e.g., pump stations, batch treatment systems), no later than October 31, 2028, monthly sample events must be scheduled for dates/times when discharge is known to occur within the May 1-October 31 period. If monthly sampling meets any of the SRP requirements in section (2)(d)(i) through (iv) in the one season sampled during this permit cycle, the Permittee may plan to reduce screening to once in May and once in October, or as close to these months as practicable, for future permit cycles.
c. If any stormwater outfall samples collected during the critical period and analyzed for SRP concentrations exceed the values in (2)(c)(i) and (ii) below, the Permittee shall begin source tracing for SRP sources to the MS4[4]. Any sample exceedances of the SRP values in (2)(c)(i) and (ii) below are not a violation of this Permit. Analytical methods should follow approved methods as listed in this Permit's Appendix 9, Stormwater Discharge Monitoring, and 40 CFR Section 136.3 for ortho-phosphate (parameter #44 in Table 1B). Standard Method 4500-P G-2011 (for ortho-phosphate) is recommended for obtaining reporting limits needed for (c)(i) and (ii) below.

[4] WLAs apply during the critical period from May 1st to October 31st.

i. 7.5 ug/L of SRP (when the daily average White River flow is less than 900 cfs at USGS gage 12100490) or,
ii. 79 ug/L of SRP (when the daily average river flow is between 900 cfs and 2000 cfs at USGS gage 12100490) or,
iii. The load of SRP is less than the WLA assigned to the Permittee.

d. Permittees are meeting TMDL requirements, and no additional source tracing is required, if MS4 outfall screening and sampling results find any one of the following:

i. There is no discharge or, where it is not feasible to measure flow, there is no visible or measurable surface velocity (i.e., stagnant water).
ii. The flow of any discharge is less than 0.005 cfs (2.24 gallons per minute).
iii. The flow of any discharge is less than 0.9 cfs (400 gpm) and the concentration of discharge is less than 7.5 ug/L of SRP (when the daily average White River flow is less than 900 cfs at USGS gage 12100490) or less than 79 ug/L of SRP (when the daily average river flow is between 900 cfs and 2000 cfs at USGS gage 12100490) during the critical period.
iv. The flow of any discharge is greater than 0.9 cfs (400 gpm) and the load of SRP is less than the WLAs as assigned to the Permittee. The Permittee may calculate a load only if none of the above (2)(d)(i) through (iii) conditions apply.

e. The Permittee may discontinue MS4 outfall screening and sampling at outfalls where the following applies:

i. The Permittee screens all known piped MS4 outfalls owned or operated by the Permittee as described in section (2)(a) every month within the dry season, for two consecutive years in a row, and both years show these MS4 outfalls meeting requirements in section (2)(d).

3. Controlling runoff from new development and redevelopment:
   a. No later than July 1, 2026, Pierce and King Counties shall require Phosphorus Treatment BMPs as described in Ecology's Stormwater Management Manual for Western Washington or an equivalent manual approved by Ecology for all new development and redevelopment projects within the TMDL implementation area that require Minimum Requirement #6, Runoff Treatment.
   b. No later than June 30, 2027, the cities of Auburn, Algona, Buckley, Enumclaw, Pacific and Sumner shall require Phosphorus Treatment BMPs as described in Ecology's Stormwater Management Manual for Western Washington or an equivalent manual approved by Ecology for all new development and redevelopment projects within the TMDL implementation area that require Minimum Requirement #6, Runoff Treatment.

Name of TMDL	WRIA 10 - PUYALLUP WATERSHED WATER QUALITY IMPROVEMENT PROJECT
Document(s) for TMDL	*Puyallup River Watershed Fecal Coliform Total Maximum Daily Load – Water Quality Improvement Report and Implementation Plan*, June 2011, Ecology Publication No. 11-10-040. https://fortress.wa.gov/ecy/publications/publications/1110040.pdf
Location of Original 303(d) Listings	Puyallup River 16712, 7498, White River 16711, 16708, 16709, Clear Creek 7501, Swan Creek 7514, Boise Creek 16706, Deer Creek 45616, Salmon Creek 45601, Unnamed Creek (Tributary to the Puyallup River) 45688
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform
EPA Approval Date	September 2011
MS4 Permittee	Phase I Permit: King County, Pierce County Phase II Permit: Auburn, Bonney Lake, Edgewood, Enumclaw, Puyallup, Sumner

CITY OF AUBURN

Actions Required

Business Inspections:

Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach:

Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance:

Permittee shall maintain pet waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Discharge Detection and Elimination

Designate areas discharging via MS4 to the TMDL area as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

CITY OF BONNEY LAKE

Actions Required

- Designate areas discharging via MS4 to Fennel Creek as high priority areas for illicit discharge detection and elimination.
- No later than July 31, 2029, complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins, and implement the schedule and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Fennel Creek.
- The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

CITY OF EDGEWOOD

Actions Required

- Designate areas discharging via the MS4 to Jovita Creek as high priority areas for illicit discharge detection and elimination.
- Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges

found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Jovita Creek.

- The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

CITY OF ENUMCLAW

Actions Required

- Designate areas discharging via the MS4 to:
  - Boise Creek from creek mile 1.7 to 1.0.
  - The flume and laterals approximately 1 mile north of the confluence with the mainstem, north of SE 456th Street, between Highway 410 to the west and Watson Street N. to the east.

  These locations are high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. Investigation must include activities for both the dry season (May through September) and the wet season (October through April). IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to the abovementioned receiving waters.

  The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.
- Permittee shall inspect commercial animal handling areas and commercial composting facilities to ensure implementation of source control BMPs for bacteria. Commercial animal handling areas are associated with Standard Industrial Code (SIC) 074 and 075 and include veterinary and pet care/boarding services, animal slaughtering, and support activities for animal production. Facilities where the degradation and transformation of organic solid waste takes place under controlled conditions designed to promote aerobic decomposition are considered composting facilities (definition in accordance with Chapter 173-350 WAC). Implement an ongoing inspection program to re-inspect facilities or areas with bacteria source control problems at least every three years.
- Conduct public education and outreach activities to increase awareness of bacterial pollution problems and promote proper pet waste management behavior.
- Install and maintain animal waste education signage and/or pet waste bag dispenser stations at municipal parks and other Permittee owned and operated lands reasonably expected to have substantial domestic animal (dog and horse) use and where stormwater runoff can enter the MS4.

KING COUNTY

Actions Required

Business Inspections:

Permittee shall continue their ongoing inspection programs for facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities). If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement actions.

Public Education and Outreach:

Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance:

Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution of stormwater.

Illicit Discharge Detection and Elimination

When conducting IDDE-related field screening under S5.C.9 of the Phase I Permit, King County shall screen for bacteria sources in any MS4 sub-basins which discharge to surface waters in the TMDL area. Implement the schedules and activities identified in S5.C.9 of the Phase I Permit for response to any illicit connections and illicit discharges found. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

PIERCE COUNTY

Actions Required

- Designate areas discharging via the MS4 to Swan Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city

owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Swan Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

- Designate areas discharging via the MS4 to Salmon Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Salmon Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.
- Designate areas discharging via the MS4 to Alderton Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Alderton Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.
- Designate areas discharging via the MS4 to Fennell Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Fennell Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

CITY OF PUYALLUP

Action Required

Designate areas discharging via the MS4 to Deer Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Deer Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

CITY OF SUMNER

Action Required

Designate areas discharging via the MS4 to Salmon Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible drainage access point that discharge to Salmon Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and stormwater sampling results.

Name of TMDL	WRIA 10 - CLARKS CREEK FECAL COLIFORM TMDL
Document(s) for TMDL	*Clarks Creek Watershed Fecal Coliform Bacteria Total Maximum Daily Load (Water Quality Improvement Report)*, May 2008, Ecology Publication No. 07-10-110. https://fortress.wa.gov/ecy/publications/documents/0710110.pdf *Clarks Creek Watershed Fecal Coliform Bacteria Total Maximum Daily Load (Water Quality Implementation Plan)*, December 2009, Ecology Publication No. 09-10-081. https://apps.ecology.wa.gov/publications/documents/0910081.pdf
Location of Original 303(d) Listings	Clarks Creek 7497, 7501, Meeker Creek 7508, 7507
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform
EPA Approval Date	June 4, 2008
MS4 Permittee	Phase II Permit: Puyallup

CITY OF PUYALLUP

Actions Required

- **Education and Outreach**: No later than July 1, 2026, conduct public education and outreach activities to increase awareness of proper pet waste management and other fecal bacterial pollution problems, such as the negative impacts of waterflow feeding.
- **IDDE**: Designate areas discharging via MS4 to Meeker Creek and Clarks Creek as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for bacteria sources in 100% of these MS4 sub-basins by July 31, 2029, and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit connections and illicit discharges found. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible

drainage access point that discharge to Meeker and Clarks Creeks. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

- **Operations and Maintenance**:
    - No later than June 30, 2027, install and maintain pet waste education signage and bag dispenser stations at municipal parks and other Permittee owned and operated lands reasonably expected to have substantial dog use and where stormwater runoff can enter the MS4 and discharge to surface waters.
    - If a concentrated waterfowl presence is found at a city-owned stormwater pond during routine inspection, the Permittee shall implement waterfowl deterrence measures where appropriate (e.g., signage to discourage feeding, landscaping to discourage waterfowl presence). If a city-owned stormwater pond has a concentrated Canada geese presence, where feasible and as needed, periodically pick up and dispose of geese droppings in the garbage during routine facility maintenance completed per S5.C.9.c of this Permit.

Name of TMDL	WRIA 10 - CLARKS CREEK DISSOLVED OXYGEN AND SEDIMENT TOTAL MAXIMUM DAILY LOAD
Document(s) for TMDL	*Clarks Creek Dissolved Oxygen and Sediment Total Maximum Daily Load – Water Quality Improvement Report and Implementation Plan*, December 2014, Ecology Publication No. 14-10-030. https://ecology.wa.gov/Water-Shorelines/Water-quality/Water-improvement/Total-Maximum-Daily-Load-process/Directory-of-improvement-projects/Clarks-Creek

Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Dissolved Oxygen and Sediment
EPA Approval Date	May 27, 2015
MS4 Permittee	Phase I Permit: Pierce County Phase II Permit: Puyallup

PIERCE COUNTY

Actions Required

1. The Permittee shall operate, inspect, and maintain the water quality improvement projects (WQIPs) prescribed in the Permittee's TMDL Restoration Plan (hereafter, the July 2022 Plan).[5] The July 2022 Plan estimated that existing WQIPs reduce the annual average sediment load by approximately 38.8 tons per year (29 percent of the TMDL target) and treat or remove approximately 13.7 million gallons (MG) of stormwater runoff per year based on the critical (October 21, 2003) storm event (46 percent of the TMDL target).[6] The Permittee shall apply crediting methodologies described in the July 2022 Plan, or an Ecology accepted updated Plan, to estimate the annual sediment load removal and the annual stormwater volume treated or removed by each WQIP. Any updates to the July 2022 Plan shall comply with the WLAs in the TMDL and align with previous Ecology Plan approvals.

[5] "TMDL Restoration Plan" means Pierce County's Clarks Creek Restoration Plan, July 2022 Update. Ecology reviewed and accepted the municipal stormwater permit components of the TMDL Restoration Plan, as revised in 2022, as communicated in our letter dated August 2, 2022, Re: Clarks Creek Restoration Plan, Updated July 1, 2021.

[6] Existing WQIPs are stormwater treatment facilities/BMPs constructed and operational after October 21, 2003. These include treatment facilities/BMPs implemented through retrofit or redevelopment.

2. Permittee shall operate, inspect, and maintain existing WQIPs in the updated five-year Plan (2024-2029); and construct, operate, inspect, and maintain new WQIPs in this updated Plan. The updated 2024-2029 Plan takes effect when Ecology accepts it. Ecology reserves the right to require changes to the updated Plan. The Permittee shall implement a project delivery program to meet the estimated annual average sediment load reduction and stormwater volume treated or reduced targets identified in this updated Plan. The municipal stormwater permit components and WQIPs in the July 2022 Plan remain in effect until Ecology accepts these components and WQIPs in the Permittee's 2024-2029 Plan.

3. No later than November 1, 2028, the Permittee shall submit an updated Plan (2029-2034) that includes existing and proposed WQIPs for the next five-year TMDL reporting period estimated to begin August 1, 2029. The updated Plan shall include sediment load reduction and stormwater volume treated or removed credit estimated for each WQIP, and it shall identify the 75 percent compliance milestone for the sediment WLA and the 75 percent compliance milestone for the stormwater volume treated/removed credit estimates for all existing and proposed WQIPs. Estimates of sediment load reduction and stormwater volumes treated or removed by each stormwater BMP and facility shall be consistent with the TMDL WLAs for Dissolved Oxygen Deficit (DOD) and sediment. The Permittee shall include anticipated project schedules, construction timelines, estimated costs, and funding strategies, where available, for proposed WQIPs in their updated Plan (2029-2034). Ecology reserves the right to require changes to the updated Plan.

4. The Permittee shall submit a reporting ledger to Ecology that quantifies the annual sediment load reduction (tons) credits and stormwater volume treated or removed (MG) credits awarded to all operational WQIPs during calendar years (CYs) 2023 and 2024 by March 31, 2025. The Permittee shall submit an updated reporting ledger annually thereafter by March 31st for CYs 2025 through 2028. This ledger serves as the reporting instrument to track each year's WLA compliance credits as they relate to the Permittee's assigned numeric WLAs. Stormwater retrofit or redevelopment projects constructed since October 21, 2003, may receive sediment reduction (tons) and stormwater volume treated/removed (MG) credits for each year the project was inspected, maintained, and determined to be operational. All WQIPs must be inspected, maintained, and determined to be operational to receive annual sediment load reduction and stormwater volume treated or removed credits.

5. The Permittee shall inspect WQIPs annually at a minimum during May, June, or July to assess whether the facilities are functioning as designed. If the Permittee's inspection records show a stormwater facility or BMP is in functional disrepair and is not operational, then the Permittee has 90 days from the time of the inspection to complete the corrective actions necessary to restore the BMP's functionality to receive annual pollution reduction credit for that facility/BMP for the reporting year. The Permittee will not receive sediment load reduction and stormwater volume treated or removed credit for a facility or BMP that has not received the corrective actions necessary to restore functionality within 90 days of the inspection. The Permittee's BMP inspection pertains to the calendar year for which the BMP credits are awarded. WQIPs/BMPs that exceed maintenance standards must perform required maintenance in accordance with schedules identified under S5.C.10.

6. Public Education and Outreach: The Permittee shall conduct public education and outreach activities that increase awareness among residents of the sources of polluted runoff affecting Clarks Creek and its tributaries.

CITY OF PUYALLUP

Actions Required

1. The Permittee shall operate, inspect, and maintain the water quality improvement projects (WQIPs) prescribed in the Permittee's TMDL Retrofit Plan (hereafter, the December 2022 Plan).[7] The December 2022 Plan estimated the existing and new WQIPs to be implemented by July 31, 2024, will reduce the annual average sediment load by approximately 52.95 tons per year (32 percent of the TMDL target) and treat or remove approximately 22.75 million gallons (MG) of stormwater runoff per year based on the critical (October 21, 2003) storm event (98 percent of the TMDL target).[8] The Permittee shall apply crediting methodologies described in the December 2022 Plan, or an Ecology accepted updated Plan, to estimate the annual sediment load removal and the annual stormwater volume treated or removed by each WQIP. Any updates to the December 2022 Plan shall comply with the WLAs in the TMDL and align with previous Ecology Plan approvals.

2. The Permittee shall operate, inspect, and maintain existing WQIPs in the updated five-year Plan (2024-2029); and construct, operate, inspect, and maintain new WQIPs in this updated Plan. The updated 2024-2029 Plan takes effect when Ecology accepts it. Ecology reserves the right to require changes to the updated Plan. The Permittee shall implement a project delivery program to meet the estimated annual average sediment load reduction and stormwater volume treated or reduced targets identified in this updated Plan. The municipal stormwater permit components and WQIPs in the December 2022 Plan remain in effect until Ecology accepts these components and WQIPs in the Permittee's 2024-2029 Plan.

3. No later than November 1, 2028, the Permittee shall submit an updated Plan (2029-2034) that includes existing and proposed WQIPs for the next five-year TMDL reporting period estimated to begin August 1, 2029, and the sediment load reduction and stormwater volume treated or removed credit estimated for each WQIP. Estimates of sediment load reduction and stormwater volumes treated or removed by each stormwater BMP and facility shall be consistent with the TMDL WLAs for Dissolved Oxygen Deficit (DOD) and sediment. The goal is to achieve TMDL reductions needed to meet WLAs by 2034. The Permittee shall include anticipated project schedules, construction timelines, estimated costs, and funding strategies, where available, for proposed WQIPs in their updated Plan (2029-2034). Ecology reserves the right to require changes to the updated Plan.

---

[7] "TMDL Retrofit Plan" means the Clarks Creek Retrofit Plan Update, Prepared for City of Puyallup, WA, Revised December 2022, by Brown and Caldwell. Ecology reviewed and accepted the municipal stormwater permit components of the TMDL Retrofit Plan in December 2022, as conditioned in our letter dated December 19, 2022, Re: Clarks Creek Retrofit Plan, Revised December 2022.

[8] Existing WQIPs are stormwater treatment facilities/BMPs constructed and operational after October 21, 2003. These include treatment facilities/BMPs implemented through retrofit or redevelopment.

4. The Permittee shall submit a reporting ledger to Ecology that quantifies the annual sediment load reduction (tons) credits and stormwater volume treated or removed (MG) credits awarded to all operational WQIPs during calendar years (CYs) 2023 and 2024 by March 31, 2025. The Permittee shall submit an updated reporting ledger annually thereafter by March 31st for CYs 2025 through 2028. This ledger serves as the reporting instrument to track each year's WLA compliance credits as they relate to the Permittee's assigned numeric WLAs. Stormwater retrofit or redevelopment projects constructed since October 21, 2003, may receive sediment reduction (tons) and stormwater volume treated/removed (MG) credits for each year the project was inspected, maintained, and determined to be operational. All WQIPs must be inspected, maintained, and determined to be operational to receive annual sediment load reduction and stormwater volume treated or removed credits.

5. The Permittee shall inspect WQIPs annually at a minimum during May, June, or July to assess whether the facilities are functioning as designed. If the Permittee's inspection records show a stormwater facility or BMP is in functional disrepair and is not operational, then the Permittee has 90 days from the time of the inspection to complete the corrective actions necessary to restore the BMP's functionality to receive annual pollution reduction credit for that facility/BMP for the reporting year. The Permittee will not receive sediment load reduction and stormwater volume treated or removed credit for a facility or BMP that has not received the corrective actions necessary to restore functionality within 90 days of the inspection. The Permittee's BMP inspection pertains to the calendar year for which the BMP credits are awarded. WQIPs/BMPs that exceed maintenance standards must perform required maintenance in accordance with schedules identified under S5.C.9.

6. Street Sweeping Program: The Permittee can only include sediment load reduction credit for its street sweeping program under an Ecology-approved QAPP.[9] The Permittee shall not credit sediment removal from sweeping until their pilot study on sweeping is completed and their updated 2024-2029 Plan takes effect.

7. Public Education and Outreach: The Permittee shall conduct public education and outreach activities that increase awareness among residents of the sources of polluted runoff affecting Clarks Creek and its tributaries.

[9] Ecology approved the City of Puyallup's Clarks Creek Street Sweeping Study Quality Assurance Project Plan (QAPP), Prepared by Brown and Caldwell on January 20, 2022.

Name of TMDL	WRIA 10 - SOUTH PRAIRIE CREEK WATER QUALITY IMPROVEMENT PROJECT
Document(s) for TMDL	*South Prairie Creek Bacteria and Temperature Total Maximum Daily Load (Water Cleanup Plan): Submittal Report*, June 2003, Ecology Publication No. 03-10-055. https://fortress.wa.gov/ecy/publications/publications/0310055.pdf *South Prairie Creek Bacteria and Temperature Total Maximum Daily Load (Water Cleanup Plan): Detailed Implementation Plan*, July 2006, Ecology Publication No. 06-10-018. https://fortress.wa.gov/ecy/publications/documents/0610018.pdf

Parameter	Fecal Coliform
EPA Approval Date	August 6, 2003
MS4 Permittee	Phase I Permit: Pierce County Phase II Permit: Buckley

PIERCE COUNTY

Actions Required

- Designate areas discharging via the MS4 to Tributary 1 upstream of SR162 as high priority areas for illicit discharge detection and elimination. No later than July 31, 2029, complete IDDE screening for bacteria sources in 100% of these sub-basins and implement the schedules and activities identified in S5.C.9 of the Phase I Permit in response to any illicit connections and illicit discharges found. Investigation must include activities for both the dry season (May through September) and the wet season (October through April). IDDE screening for bacteria sources includes the inspection of county owned MS4 outfalls that are safely accessible, or the next safely accessible upstream drainage access point that

discharge to creeks in the TMDL area. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

- Designate areas discharging via the MS4 upstream of SR165 along Spiketon Road, Mundy Loss Road, and Spiketon Ditch Road as high priority areas for illicit discharge detection and elimination. No later than July 31, 2029, complete IDDE screening for bacteria sources in 100% of these sub-basins and implement the schedules and activities identified in S5.C.9 of the Phase I Permit, in response to any illicit connections and illicit discharges found. Investigation must include activities for both the dry season (May through September) and the wet season (October through April). IDDE screening for bacteria sources includes the inspection of county owned MS4 outfalls that are safely accessible, or the next safely accessible upstream drainage access point that discharge to creeks in the TMDL area. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

CITY OF BUCKLEY

Action Required

Designate areas discharging via the MS4 to Spiketon Creek as high priority areas for illicit discharge detection and elimination. No later than July 31, 2029, complete IDDE screening for bacteria sources in 100% of these sub-basins and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit, in response to any illicit connections and illicit discharges found. Investigation must include activities for both the dry season (May through September) and the wet season (October through April). IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible upstream drainage access point that discharge to Spiketon Creek. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

Name of TMDL	WRIA 11 - NISQUALLY RIVER BASIN WATER QUALITY IMPROVEMENT PROJECT
EPA Approved Document(s) for TMDL	*Nisqually Watershed Bacteria and Dissolved Oxygen Total Maximum Daily Load (Water Cleanup Plan): Submittal Report*, May 2005, Ecology Publication No. 05-10-040. https://fortress.wa.gov/ecy/publications/documents/0503002.pdf *Nisqually River Basin Fecal Coliform Bacteria and Dissolved Oxygen Total Maximum Daily Load: Water Quality Implementation Plan (WQIP)*, June 2007, Ecology Publication No. 07-10-016. https://fortress.wa.gov/ecy/publications/documents/0710016.pdf

Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform, Dissolved Oxygen
EPA Approval Date	August 5, 2005
MS4 Permittee	Phase I Permit: Pierce County Phase II Permit: Thurston County

PIERCE COUNTY

Action Required

- Designate areas discharging via the MS4 to Ohop Creek and Lynch Creek as high priority areas for illicit discharge detection and elimination. No later than July 31, 2029, complete IDDE screening for bacteria sources in 100% of these sub-basins and implement the schedules and activities identified in S5.C.9 of the Phase I Permit in response to any illicit connections and illicit discharges found. Investigation must include activities for both the dry season (May through September) and the wet season (October through April). IDDE screening for bacteria sources includes the inspection of county owned MS4 outfalls that

are safely accessible, or the next safely accessible upstream drainage access point that discharge to Ohop and Lynch Creeks. The results of all bacterial screening conducted in these sub-basins shall be included in the annual reports submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.

THURSTON COUNTY

Action Required

- Annually implement the following best management practices for reducing fecal coliform bacteria in areas discharging to the Nisqually Reach and McAllister Creek via the MS4 in accordance with S5.C.2 and S5.C.9 of the Western Washington Phase II Permit:
    - Reach households in the targeted watersheds through mailings, door hangers, etc. to increase awareness of the sources of bacteria pollution.
    - Adequately maintain vegetation around stormwater facilities, ditches, and ponds.
    - Install and maintain pet waste education signage and bag dispenser stations at municipal parks and other Permittee owned and operated lands reasonably expected to have substantial dog use, and where stormwater runoff can enter the MS4 and discharge to surface waters and/or marine shorelines.
    - Distribute pet waste stations (i.e., bag dispensers and educational signage) for installation in residential neighborhood locations where people commonly walk their dogs and stormwater runoff can enter the MS4 and discharge to surface waters and/or marine shorelines.

Name of TMDL	WRIA 13 - HENDERSON INLET WATERSHED FECAL COLIFORM BACTERIA WATER QUALITY IMPROVEMENT PROJECT
Document(s) for TMDL	*Henderson Inlet Watershed Fecal Coliform Bacteria, Dissolved Oxygen, pH, and Temperature Total Maximum Daily Load Study*, March 2006, Ecology Publication No. 06-03-012. https://fortress.wa.gov/ecy/publications/documents/0603012.pdf *Henderson Inlet Watershed Fecal Coliform Bacteria, Dissolved Oxygen, and pH Total Maximum Daily Load: Water Quality Improvement Report Implementation Strategy*, October 2006, Ecology Publication No. 06-10-058. https://fortress.wa.gov/ecy/publications/documents/0610058.pdf *Henderson Inlet Watershed Fecal Coliform Bacteria Total Maximum Daily Load: Water Quality Implementation Plan*, July 2008, Ecology Publication No. 08-10-040. https://fortress.wa.gov/ecy/publications/documents/0810040.pdf
Location of Original 303(d) Listings	Henderson Inlet (WA-13-0010), Dobbs Creek (WA-13-1400), Sleepy Creek (WA-13-1700), Woodard Creek (WA-13-1600), Woodland Creek (WA-13-1500)
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform, Dissolved Oxygen, pH, Temperature
EPA Approval Date	January 8, 2007
MS4 Permittee	Phase II Permit: Lacey, Olympia, Thurston County

THURSTON COUNTY

Actions Required

1. Annually implement the following best management practices in areas discharging to the Henderson Inlet via the MS4 in accordance with S5.C.6 of the Western Washington Phase II Permit:

a. Require phosphorus control for new and redevelopment projects that discharge via the MS4 to Woodard Creek and meet the project thresholds in Appendix 1, Minimum Requirement #6: Runoff Treatment of the Western Washington Phase II Permit.

2. Annually implement the following best management practices for reducing fecal coliform in areas discharging to the Henderson Inlet via the MS4 in accordance with S5.C.2 of the Western Washington Phase II Permit.

   a. Continue offering public education and outreach efforts for fecal coliform reduction such as brochures, signage, and pet waste stations to homeowner associations.

3. Annually produce a report that details all actions completed as part of Appendix 2 requirements.

CITY OF LACEY

Actions Required

1. Annually implement the following best management practices in areas discharging to the Henderson Inlet via the MS4 in accordance with S5.C.2 of the Western Washington Phase II Permit:

   a. Continue the Private Stormwater Facilities Maintenance Program, providing commercial and residential stormwater facility/BMP owners educational resources for facility function and maintenance requirements.

   b. Offer bacteria pollution reduction brochures, signage, and pet waste stations to homeowners associations.

   c. Maintain pet waste bag dispenser units in city parks.

   d. Install educational signage at City facilities/property.

   e. Submit a summary of actions completed with each annual report.

2. Implement the Fecal Coliform Bacteria Wet Weather Sampling Program for the College Regional Stormwater Facility in accordance with the illicit discharge detection and elimination efforts and activities identified in S5.C.5 of the Western Washington Phase II Permit.

   a. Continue to use the Fecal Coliform Wet Weather Sampling Plan. The sampling program shall establish a regularly scheduled sampling schedule (at least two times per year), during the wet season (November through April), specific sampling locations, sampling protocols, parameters, analytical methods, and timelines for implementation.

   b. If sampling results indicate potential illicit discharges, conduct an investigation in accordance with S5.C.5 of the Western Washington Phase II Permit.

   c. Submit a summary of sampling and investigations with each annual report.

3. Continue to communicate with the City of Olympia to monitor and reduce fecal coliform bacteria discharges from the Fones/Taylor wetland treatment facilities by December 31, 2024, in accordance with S5.C.5 of the Western Washington Phase II Permit.
    a. If sampling results indicate potential illicit discharges, conduct an investigation in accordance with S5.C.5 of the Western Washington Phase II Permit.
    b. Submit a summary of efforts with sampling, investigation, and enforcement actions taken with the annual reports.
4. Annually implement the following best management practices in areas discharging to the Henderson Inlet via the MS4 in accordance with S5.C.9 of the Western Washington Phase II Permit:
    a. Continue re-vegetation and nuisance vegetation management along Woodland Creek and its tributaries. Submit a summary of actions completed with each annual report.

CITY OF OLYMPIA

Actions Required

1. Annually implement the following BMPs in areas discharging to the Henderson Inlet via the MS4 in accordance with S5.C.6 of the Western Washington Phase II Permit:
    a. Require phosphorus control for new and redevelopment projects that discharge via MS4 to Woodard Creek and meet the project thresholds in Appendix 1, Minimum Requirement #6: Runoff Treatment of the Western Washington Phase II Permit.
2. Continue to communicate with the City of Lacey to monitor and reduce fecal coliform bacteria discharges from the Fones/Taylor wetland treatment facilities by December 31, 2024 in accordance with S5.C.5 Illicit Discharge Detection and Elimination of the Western Washington Phase II Permit.
    a. Continue fecal coliform sampling. The sampling program shall require at least one sampling event during the wet season (November through April) in each of Year 1 and Year 3 of the permit cycle. The sampling program shall also require specific sampling locations, sampling protocols, parameters, analytical methods, and timelines for implementation.
    b. If sampling results indicate potential illicit discharges, conduct an investigation in accordance with S5.C.5 of the Western Washington Phase II Permit.
    c. Submit a summary of efforts with sampling, investigation and enforcement actions taken with each annual report.

Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Dissolved Oxygen
EPA Approval Date	Approved:December 16, 2022
MS4 Permittee	Phase II Permit: Thurston County, Olympia, Lacey, Tumwater

CITY OF OLYMPIA, LACEY, TUMWATER, & THURSTON COUNTY

Actions required

- No later than March 31, 2025, annually report on municipal stormwater BMPs implemented (in addition to those already required by S5 of the permit) since the effective date of this permit (August 1, 2024) to help control nutrients for areas discharging to Budd Inlet via the MS4.
- No later than December 31, 2027, begin using existing data to conduct spatial analysis of nutrient loading from the MS4. This analysis shall consider land use sources of nutrients, existing municipally owned/operated BMPs, and privately owned BMPs regulated by the Permit that provide management of nutrients and which drain to and are discharged from the MS4.
- No later than August 1, 2028, develop and implement priority BMPs to minimize the transport of nutrients via the MS4.
- Designate areas discharging via the MS4 to Budd Inlet as high priority areas for illicit discharge detection and elimination. Complete IDDE screening for nutrient sources in 100% of these areas by July 31, 2029, and implement the schedules and activities

identified in S5.C.5 of the Western Washington Phase II Permit in response to any illicit discharges found.

- For the actions described above, prioritize work and implementation actions within areas identified as priorities by the TMDL that are within the applicable jurisdiction, including East Bay Drive, West Bay Drive and Deschutes Parkway, tributaries draining directly to Budd Inlet, with extra emphasis on Schneider Creek, Ellis Creek, Mission Creek, Moxlie Creek, Percival Creek, Black Lake, and Black Lake Ditch.

Name of TMDL	**WRIA 14 - OAKLAND BAY, HAMMERSLEY INLET, AND SELECTED TRIBUTARIES FECAL COLIFORM TMDL**
Document(s) for TMDL	*Oakland Bay, Hammersley Inlet, and Selected Tributaries Fecal Coliform Bacteria Total Maximum Daily Load (Water Quality Improvement Report)*, June 2011, Ecology Publication No. 11-10-039. https://apps.ecology.wa.gov/publications/SummaryPages/1110039.html
Location of Original 303(d) Listings	Campbell Creek 24239 7596 Uncle John Creek 40618 Malaney Creek 24237 Goldsborough Creek 6659 Shelton Creek 6660 Inner Shelton Harbor 6658 Oakland Bay 39857 39861 39862 39872 45159 45215 53164 Hammersley Inlet/mouth of Mill Creek 39800 Hammersley Inlet 39801 39803 39804 39810 45220 45915 53178
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform
EPA Approval Date	August 18, 2011
MS4 Permittee	Phase II Permit: Shelton

CITY OF SHELTON

Actions Required

- Designate areas discharging via MS4 to Goldsborough Creek, Inner Shelton Harbor, and Oakland Bay as high priority areas for illicit discharge detection and elimination and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit. IDDE screening for bacteria sources includes the inspection of city owned MS4 outfalls that are safely accessible, or the next safely accessible upstream drainage access point that discharge to Goldsborough Creek, Inner Shelton Harbor, and Oakland Bay. Bacterial screening results shall be included in annual reporting submitted to Ecology. Each annual report's TMDL summary shall include, where applicable, qualitative, and quantitative information about IDDE field screening activities for bacteria sources, including source identification and elimination activities and sampling results.
- Conduct public education and outreach activities to increase awareness of bacterial pollution problems and promote proper pet waste management behavior.
- Install and maintain animal waste education signage and/or pet waste bag dispenser stations at municipal parks and other Permittee owned and operated lands reasonably expected to have substantial domestic animal (dog and horse) use where stormwater runoff can enter the MS4 and discharge to surface waters and/or marine shorelines.

Name of TMDL	WRIA 15 - SINCLAIR AND DYES INLETS FECAL COLIFORM BACTERIA TOTAL MAXIMUM DAILY LOAD
Document(s) for TMDL	*Sinclair and Dyes Inlets Fecal Coliform Bacteria Total Maximum Daily Load (TMDL) Water Quality Implementation Plan*, In Draft, Ecology Publication No. 11-10-051. https://fortress.wa.gov/ecy/publications/publications/1110051.pdf
Location of Original 303(d) Listings	Dyes Inlet & Port Washington Narrows (WA-15-0020) Gorst Creek (WA-15-4000) Blackjack Creek (WA-15-4200) Annapolis Creek (WA-15-4400) Beaver Creek (WA-15-4900) Clear Creek (WA-15-5000) Barker Creek (WA-15-5100) Sinclair Inlet (WA-15-0040)
Area Where TMDL Requirements Apply	These requirements apply to areas served by MS4s listed below within the TMDL coverage area.
Parameter(s)	Fecal coliform bacteria
EPA Approval Date	July 5, 2012
MS4 Permittee	Phase II Permit: City of Bainbridge Island, WAR04-5503; City of Bremerton, WAR04-5507; City of Port Orchard, WAR04-5536; Kitsap County, WAR04-5546

CITY OF BAINBRIDGE ISLAND

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

***Public Education and Outreach**:* Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees are shall screen for bacteria sources when at the drainage circuit's most downstream sampling location. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be annually documented in TMDL reporting as required in the Permittees' Annual Report.

CITY OF BREMERTON

Actions Required

***Business Inspections**:*

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

***Public Education and Outreach**:* Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees are shall screen for bacteria sources when at the drainage circuit's most downstream sampling location. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be annually documented in TMDL reporting as required in the Permittees' Annual Report.

CITY OF PORT ORCHARD

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees are shall screen for bacteria sources when at the drainage circuit's most downstream sampling location. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct

source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be annually documented in TMDL reporting as required in the Permittees' Annual Report.

KITSAP COUNTY

Actions Required

Business Inspections:

The Permittee shall inspect facilities with SIC Industry Group no. 074, 075, including NAICS Major Group 1152xx, and NAICS 325315 (composting facilities) as part of their ongoing inspection program identified in S5.C.8. If the Permittee determines, through inspections or otherwise, that a facility has failed to adequately implement BMPs to prevent bacteria source potential, the Permittee shall re-inspect the facility at least once more during the permit term to verify compliance, and/or initiate enforcement action.

Public Education and Outreach: Each Permittee shall include public education and outreach activities that increase awareness of bacterial pollution problems and promote proper pet waste management as a BMP under General Awareness.

Operations and Maintenance: Each Permittee shall maintain Pet Waste collection stations at Permittee owned or operated lands that are reasonably expected to have domestic animal (dog and horse) use and the potential for pollution to stormwater.

Illicit Connection/ Illicit Discharge Detection and Elimination:

When conducting IDDE field screening during normal course of business (as required by S5.C.5.d for Phase II Permittees, and IC/IDDE as required by S5.C.9.c for Phase I Permittees) in a TMDL area, Permittees are shall screen for bacteria sources when at the drainage circuit's most downstream sampling location. For the purposes of IC/IDDE, stormwater quality sampling is defined as obtaining grab samples of stormwater within the conveyance system of the MS4, at discharge points, and/or outfalls (if there is flow) at each drainage circuit's most downstream accessible sampling location. Permittees shall follow their adopted IDDE Procedures to conduct source tracing efforts if bacteria levels and/or observations trigger a response (see IDDE guidance manual for bacteria trigger levels).

Qualitative and quantitative information about the source identification and elimination activities, including procedures followed, sampling locations, and results shall be annually documented in TMDL reporting as required in the Permittees' Annual Report.

Name of TMDL	WRIA 22 - GRAYS HARBOR/CHEHALIS WATERSHED FECAL COLIFORM BACTERIA TOTAL MAXIMUM DAILY LOAD
Document(s) for TMDL	*Grays Harbor/Chehalis Watershed Fecal Coliform Bacteria Total Maximum Daily Load Submittal Report*, December 2001, Ecology Publication No. 01-10-025. https://fortress.wa.gov/ecy/publications/documents/0110025.pdf *Quality Assurance Project Plan: Grays Harbor Fecal Coliform Bacteria Monitoring to Characterize Water Quality in Urban Stormwater Drains*, October 2010, Ecology Publication No. 10-10-066. https://fortress.wa.gov/ecy/publications/documents/1010066.pdf
Location of Original 303(d) Listings	Outer Grays Harbor (WA-22-0020), Inner Grays Harbor (WA-22-030), Inner Grays Harbor (WA-22-0030), Chehalis River (WA-22-4040)
Area Where TMDL Requirements Apply	Requirements apply in all areas regulated under the Permittee's municipal stormwater permit and discharging to water bodies listed within the specific requirement in this TMDL section.
Parameter	Fecal Coliform
EPA Approval Date	December 2002
MS4 Permittee	Phase II Permit: Aberdeen

CITY OF ABERDEEN

Actions Required

1. Implement the schedules and activities identified in S5.C.2 of the Western Washington Phase II Permit. Continue to implement the Public Education and Outreach and Involvement Plan (Plan). The Plan shall target the reduction of fecal coliform pollution by increasing public awareness, effecting behavior changes and shall include: goals, target audiences, messages, format, distribution, and evaluation methods.
    a. The Plan shall include at least the following elements:
        i. Target the residents of the three high priority water bodies identified under the 2024-2029 Permit.

ii. Reach households in targeted watersheds through mailings, door hangers, or similar outreach tools.

iii. Reach 4-6th grade students.

b. Continue program which notifies residents, in a timely manner, when bacteria pollution that poses a public health concern (such as a wastewater overflow) reaches the MS4.

c. Conduct two public education surveys gauging 4-6th grade student knowledge of general stormwater knowledge, the sources of bacteria and preventing bacteria pollution. One survey should measure resident's knowledge of bacteria pollution before outreach and the other should measure knowledge and likelihood of action after outreach.

d. Continue to implement the City's stream team program and work cooperatively with Grays Harbor Stream Team.

e. Maintain pet waste bag dispenser units and explanatory signs in public areas with dog usage.

f. Maintain an inventory of sources that have potential for bacteria runoff such as manure-composting facilities, stables, and kennels.

i. Continue to use the City's targeted manure management educational plan for such facility owners. Send one letter annually that outlines compliance requirements. Maintain a resource webpage on the City's website. Submit a summary of actions completed with each annual report.

2. Designate areas discharging to the MS4 urban drains identified in the TMDL, as the highest priority areas for illicit discharge detection and elimination routine field screening efforts and implement the schedules and activities identified in S5.C.5 of the Western Washington Phase II Permit. Field screening and source tracing methodology (see S5.C.5.d) must be consistent with the *Quality Assurance Project Plan: Grays Harbor Fecal Coliform Bacteria Monitoring to Characterize Water Quality in Urban Stormwater Drains,* October 2010.

a. Enforce the City's regulatory mechanism to control pet waste.

b. Designate areas discharging via MS4 to the following discharge points: 501-ABDN, 510-MST, and 514-MST as high priority areas for illicit discharge detection and elimination efforts.

i. Complete field screening and implement the schedules and priority area for illicit discharge detection and elimination field screening identified in S5.C.5 of the Western Washington Phase II Permit. Investigation must include activities for both the dry season (May through October) and the wet season (November through April).

ii. Conduct twice monthly wet weather sampling of the discharge points 501-ABDN, 510-MST, and 514-MST to determine if specific discharges from Aberdeen's MS4 exceed the water quality criteria for fecal coliform bacteria.

- Data shall be collected for two wet seasons.
- Data shall be collected in accordance with an Ecology-approved QAPP.
- Samples must be analyzed using an Ecology accredited lab.
- If sampling results indicate potential illicit discharges, conduct an investigation in accordance with S5.C.5 – *Illicit Discharge Detection and Elimination* of the Western Washington Phase II Permit.
- Data shall be submitted to Ecology in an approved format with the annual reports.

APPENDIX 3 - Annual Report Questions for Cities, Towns, and Counties

Permittees are required to submit the following information in an online annual report form, or an alternative format provided by Ecology if requested, pursuant to Special Condition S9.

Reporting Requirements and SWMP

1. **Attach** a map of any annexations, incorporations, or boundary changes resulting in an increase or decrease in the Permittee's geographic area of permit coverage during the reporting period, per S9.D.6.
2. **Attach** updated annual Stormwater Management Program Plan (SWMP Plan). (S5.A.2)
3. Implemented an ongoing program to gather, track, and maintain information per S5.A.3, including costs or estimated costs of implementing the SWMP.
    a. What was the annual expenditure or estimate to develop and implement the SWMP this reporting period?
    b. What was the annual expenditure or estimate to develop and implement Appendix 2 TMDL requirements, if applicable?
    c. What were your source(s) of funding for the stormwater program?
4. Continued to coordinate among departments within the jurisdiction for permit compliance. (S5.A.5.b)
    a. **Attach** a written description of internal coordination mechanisms. (S5.A.5.b) no later than March 31, 2026
5. If applicable, identify other entities relied on to satisfy any of the obligations under the Permit. (S9.D.4)

Stormwater Planning

6. Continue to convene an interdisciplinary team to inform and assist in the development, progress, and influence of the stormwater planning program? (S5.C.1.a.)

Coordination with long-range plan updates

7. List the relevant land use planning efforts that have taken place in your jurisdiction (land use plans that are used to accommodate growth, stormwater management, or transportation). (S5.C.1.b.i. – Required by March 31, 2027.)
8. List of stormwater capital projects (currently in or slated for future design and construction) that resulted from this planning. (S5.C.1.b.i. – Required by March 31, 2027.)

9. Describe watershed protection measures associated with stormwater management and land use planning actions that resulted from this planning. (S5.C.1.b.i. – Required by March 31, 2027.)

10. Were land acquisitions identified (or are planning ahead for) that are useful for stormwater facilities to: accommodate growth or to better serve an existing developed area? (S5.C.1.b.i. – Required by March 31, 2027.)

    a. If yes, for what purpose?

11. Updates to goals and policies related to investment in stormwater management facilities/BMPs? (yes/no) (S5.C.1.b.i. – Required by March 31, 2027)

    a. If yes, briefly describe.

Low impact development code-related requirements

12. Continue to design and implement local development-related codes, rules, standards, or other enforceable documents to minimize impervious surfaces, native vegetation loss, and stormwater runoff, where feasible? See S5.C.1.c.i. (Required annually)

13. From the assessment described in S5.C.1.c.i.(a), did you identify any administrative or regulatory barriers to implementation of LID Principles or LID BMPs? (Required annually)

    a. If yes, describe the barrier(s) and the measures taken to address them**.** (S5.C.1.c.i.(a))

14. Adopted and implemented tree canopy goals and policies to support stormwater management. (S5.C.1.c.iii; December 31, 2028)

    a. **Attach** goals and policies and documented considerations, reasoning, and rationale for tree canopy goals and policies.

Stormwater Management Action Planning

15. Shelton Only: Developed a watershed inventory as outlined in Appendix 14? (Submitted by March 31, 2027)

    a. **Attach** watershed inventory as described in S5.C.1.d.i.

16. Shelton Only: Developed a receiving water prioritization method and process as described in Appendix 14? (Required by June 30, 2027)

    a. **Attach** receiving water priority ranking process as described in Appendix 14.

17. Shelton Only: Developed a Stormwater Action Plan (SMAP) for at least one high priority area? (Appendix 14, March 31, 2028)

    a. **Attach** SMAP(s).

18. Developed a Stormwater Management Action Plan (SMAP) for at least one new high priority area or additional actions for an existing SMAP? (S.5.C.1.d.i; Required by March 31, 2027)

- **a. Attach** SMAP(s).

Education and Outreach

19. Did you choose to adopt one or more elements of a regional program? (S5.C.2)

- **a.** If yes, list the elements, and the regional program.

20. **Attach** a description of general awareness efforts conducted, including your priority audiences and subject areas, per S5.C.2.a.i.

21. Developed a behavior change campaign that is tailored to the community in accordance with S5.C.2.a.ii(b)? (Required no later than July 1, 2025)

- **a. Attach** the strategy and schedule developed in accordance with S5.C.2.a.ii.(b).

22. Began implementing strategy outlined in S.5.C.2.a.ii(b). (S5.C.2.a.ii(c)) – Required by September 1, 2025)

23. **Attach** the report developed in accordance with S5.C.2.a.ii.(d), which evaluated the changes in understanding and adoption of targeted behaviors resulting from the implementation of the strategy and any planned or recommended changes to the program in order to be more effective. (Required to submit no later March 31, 2029)

24. Provided, partnered, or promoted stewardship opportunities to encourage resident participation in activities such as those described in S5.C.2.a.iii.

- **a. Attach** a list of stewardship opportunities.

Public Involvement and Participation

25. Describe in *Comments* field the opportunities created for the public to participate in the decision-making processes involving the development, implementation, and updates of the Permittee's SWMP and the SMAP.

- **a.** Describe specific public involvement and participation opportunities provided to overburdened communities and specifically, highly impacted communities. (S5.C.3.a.i)
- **b.** Document methods used to identify overburdened communities. (No later than December 31, 2026, S5.C.3.a.ii)

26. Posted the updated SWMP Plan and latest annual report on your website no later than May 31 of each year? (S5.C.3.b)

a. List the website address in *Comments* field.

MS4 Mapping and Documentation

27. Maintained an electronic map of the MS4 including the requirements listed in S5.C.4.?

28. **Attach** file with all known outfall locations, size, and materials no later than March 31, 2026, in accordance with S5.C.4.b.i. The data shall be in one of the following formats:

- ESRI file geodatabase template[1] (feature class in a .gdb).
- Shapefile template[2]
- ArcGIS Online template (sharing template a or b via ArcGIS Online).
- Excel template[3]

29. No later than December 31, 2026, mapped tree canopy to support stormwater management on Permittee-owned or operated properties, using available, existing data (S5.C.4.b.ii).

30. Mapped and assessed acreage of MS4 tributary basins to 24-inch outfalls (or equivalent) that have stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee per S5.C.4.b.iii (no later than March 31, 2028).

a. **Attach** map of the MS4 tributary basins (.pdf file format).

b. **Attach** a table with a breakdown of MS4 tributary basins quantifying estimated acres managed or unmanaged by stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee (.xlsx file format).

31. No later than December 31, 2028, use available, existing data to map overburdened communities in relation to stormwater treatment and flow control BMPs/facilities, outfalls, discharge points, and tree canopy on Permittee-owned or operated properties. (S5.C.2.b.iv)

Illicit Discharge Detection and Elimination

32. Informed public employees, businesses, and the general public of hazards associated with illicit discharges and improper disposal of waste. (S5.C.5.b)

a. Describe actions in *Comments* field. (S5.C.5.b)

[1] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.gdb.zip
[2] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.shape.zip
[3] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.excel.xlsx

33. Continued to implement an ordinance or other regulatory mechanism to effectively prohibit stormwater, illicit discharges, as described in S5.C.5.c.

34. Updated an ordinance or other regulatory mechanism, if necessary, to effectively prohibit non-stormwater, illicit discharges, as described in S5.C.5.c. Required no later than July 1, 2027.

35. Implemented procedures for conducting illicit discharge investigations in accordance with S5.C.5.d.i.

- **a.** Cite field screening methodology in *Comments* field.

36. Percentage of MS4 coverage area screened in the reporting year per S5.C.5.d.i.(a). (Required to screen 12% on average each year.)

- **a.** Cite field screening techniques used to determine percent of MS4 screened.

37. Describe how you publicized a hotline telephone number for public reporting of spills and other illicit discharges in the *Comments* field (S5.C.5.d.ii).

38. Implemented an ongoing illicit discharge training program for all municipal field staff, per S5.C.5.d.iii.

39. Implemented an ongoing program to characterize, trace, and eliminate illicit discharges, including spills and illicit discharges, into the MS4, per S5.C.5.e.

- **a.** No later than December 31, 2026, coordinated with firefighting agencies/departments to be notified when PFAS-containing AFFFs are used, per S5.C.5.e.ii.(a)?
- **b.** No later than January 1, 2027, updated procedures to minimize discharge of PFAS-containing AFFFs during post-emergency clean-up, per S5.C.5.e.ii.(b)?

40. Implemented an ongoing illicit discharge training program for all staff responsible for implementing the procedures and program described in S5.C.5.f.

41. **Attach** a report with data describing the actions taken to characterize, trace, and eliminate each illicit discharge reported to, or investigated by, the Permittee, as described in S5.C.5.g. The submittal must include all of the applicable information and must follow the instructions, timelines, and format described in Appendix 13.

Controlling Runoff from New Development, Redevelopment, and Construction Sites

42. Continued to implement an ordinance or other enforceable mechanism to effectively address runoff from new development, redevelopment, and construction sites, per the requirements of S5.C.6.b.i-iii.

43. Updated ordinance or other enforceable mechanism to effectively address runoff from new development, redevelopment, and construction sites, per the requirements of S5.C.6.b.i-iii. (Required no later than June 30, 2027)

- **a.** Cite code reference in *Comments* field.

44. Does the ordinance or other enforceable mechanism follow a Phase I program approved by Ecology (S5.C.6.b.i)?

- **a.** If yes, state the title of the Stormwater Management Manual and which Phase I Program.

45. Number of adjustments granted to the Minimum Requirements in Appendix 1. (S5.C.6.b.i and Section 5 of Appendix 1)

- **a.** Number of adjustments granted to Minimum Requirement #5?

46. Number of exceptions granted to the Minimum Requirements in Appendix 1. (S5.C.6.b.i and Section 6 of Appendix 1)

- **a.** Number of exceptions granted to the Minimum Requirements #5?

47. Reviewed *Stormwater Site Plans* for all proposed development activities that meet the thresholds adopted pursuant to S5.C.6.b.i. (S5.C.6.c.i)

- **a.** Number of site plans reviewed during the reporting period.

48. Inspected, prior to clearing and construction, permitted development sites, per S5.C.6.c.ii

49. Inspected permitted development sites during construction to verify proper installation and maintenance of required erosion and sediment controls, per S5.C.6.c.iii.

- **a.** Number of construction sites inspected, per S5.C.6.c.iii.
- **b.** Inspected stormwater treatment and flow control BMPs/facilities and catch basins in new residential developments at least twice per 12-month period with no less than 4 months between inspections, per S5.C.6.c.iv?

50. Inspected all permitted development sites upon completion of construction and prior to final approval or occupancy to ensure proper installation of permanent stormwater facilities. (S5.C.6.c.v)

51. Verified a maintenance plan is completed and responsibility for maintenance is assigned for stormwater treatment and flow control BMPs/facilities prior to final approval and occupancy being granted. (S5.C.6.c.v)

52. Number of enforcement actions taken during the reporting period (based on construction phase inspections at new development and redevelopment projects, per S5.C.6.c.ii-iv). (S5.C.6.c.viii)

53. Achieved at least 80% of scheduled construction-related inspections. (S5.C.6.c.vi)

54. Made online links to Ecology's *Construction Stormwater General Permit* Notice of Intent, the *Industrial Stormwater General Permit* Notice of Intent, and the registration requirements for Underground Injection Control (UIC) available to representatives of proposed new development and redevelopment? (S5.C.6.d)

55. All staff whose primary job duties are implementing the program to control stormwater runoff from new development, redevelopment, and construction sites including permitting, plan review, construction site inspections, and enforcement are trained to conduct these activities. (S5.C.6.e)

Stormwater Management for Existing Development

56. **Attach** a list of projects that are fully funded, started, completed and/or scheduled for implementation during this permit term for the purpose of meeting S5.C.7.b, with the information and formatting specified in Appendix 12. **Attach** an updated list annually. (S5.C.7.b,)

Source Control Program for Existing Development

57. Updated inventory to identify institutional, commercial and industrial properties which have the potential to generate pollutants to the Permittee's MS4 per S5.C.8.b? (Required at least once every five years)

- **a.** Number of total sites identified for the inventory.

58. **Attach** a summary of actions taken to implement the source control program, per S5.C.8.a-d.

59. **Attach** a list of inspections, per S5.C.8.c.v, organized by the business category, noting the number of times each business was inspected and if enforcement actions were taken, per S5.C.8.d.

60. Implemented an ongoing source control training program, per S5.C.8.e?

Operations and Maintenance

61. Implemented maintenance standards that are as protective, or more protective, of facility function than those specified in the *Stormwater Management Manual for Western Washington,* or a Phase I program approved by Ecology, per S5.C.9.a.?

62. Updated maintenance standards specified in *Stormwater Management Manual for Western Washington,* or a Phase I program approved by Ecology, per S5.C.9.a? (Required no later than June 30, 2027)

63. Applied a maintenance standard for a facility or facilities which do not have maintenance standards specified in the *Stormwater Management Manual for Western Washington*?

- **a.** If so, note in the *Comments* field what kinds of facilities are covered by this alternative standard. (S5.C.9.a)

64. Verified that maintenance was performed per the schedule in S5.C.9.a.ii, when an inspection identified an exceedance of the maintenance standard.

- **a.** **Attach** documentation of maintenance time frame exceedances that were beyond the Permittee's control.

65. Implemented an ordinance, or other enforceable mechanisms, to verify long-term operation and maintenance of stormwater treatment and flow control BMPs/facilities regulated by the Permittee per S5.C.9.b.i(a)?

66. Inspected stormwater treatment and flow control BMPs/facilities regulated by the Permittee, per S5.C.9.b.i(b).

- **a.** Are you using a reduced stormwater treatment and flow control BMPs/facilities inspection frequency?
- **b.** If using a reduced inspection frequency on stormwater facilities regulated by the Permittee for the first time during this permit cycle, **attach** documentation per S5.C.9.b.i.(b).

67. Achieved at least 80% of required inspections to verify adequate long-term O&M. (S5.C.9.b.ii)

68. Annually inspected municipally owned or operated stormwater treatment and flow control BMPs/facilities, as per S5.C.9.c.i.

- **a.** Number of known stormwater treatment and flow control BMPs/facilities owned or operated by the Permittee.
- **b.** Number of facilities inspected during the reporting period.
- **c.** Number of facilities for which maintenance was performed during the reporting period.

69. If using a reduced inspection frequency, **attach** documentation per S5.C.9.c.i.

70. Conducted spot checks and inspections of potentially damaged stormwater facilities after major storms as per S5.C.9.c.ii.

71. Inspected catch basins owned or operated by the Permittee every two years or used an alternative approach? (S.5.C.9.c.iii)

- **a.** Number of known catch basins and inlets?
- **b.** Number of catch basins and inlets inspected during the reporting period?
- **c.** Number of catch basins and inlets cleaned during the reporting period?

72. **Attach** documentation of alternative catch basin inspection approach for those owned or operated by the Permittee, if used, per S5.C.9.c.iii.

73. Implemented practices, policies, and procedures to reduce stormwater impacts associated with runoff from all lands owned or maintained by the Permittee, and road maintenance activities under the functional control of the Permittee. (S5.C.9.d)

74. Updated documented practices, policies, and procedures to reduce stormwater impacts associated with runoff from all lands owned or maintained by the Permittee, and road maintenance activities under the functional control of the Permittee. (S5.C.9.d –No later than December 31, 2027)

- **a.** Cite documentation in *Comments.*

75. No later than July 1, 2027, developed and implemented a municipal street sweeping program to focus on priority areas and times during the year that would reasonably be expected to result in the maximum water quality benefits to receiving waters (S5.C.9.e, required to report beginning March 31, 2028).

76. **Attach** documentation if implementing an alternative sweeping timing and frequency based on local conditions. (S5.C.9.e.ii.b.)

77. Document the following information for the sweeping program's priority areas (S5.C.9.e.v, Beginning no later than March 31, 2028):

- **a.** **Attach** priority areas swept on a map
- **b.** Sweeping dates
- **c.** Sweeping frequency
- **d.** Type of sweeper
- **e.** Total curb miles of priority areas and curb miles swept
- **f.** Approximation of street waste solids removed for each sweeping event, with unit of weight and wet or dry weight, where available.

78. Disposed of sweeper waste material in accordance with Appendix 6- *Street Waste Disposal* (S5.C.9.e.iv)?

79. Implemented a *Stormwater Pollution Prevention Plan* (SWPPP) for all heavy equipment maintenance or storage yards, and material storage facilities owned or operated by the Permittee in areas subject to this Permit that are not required to have coverage under an NPDES permit that covers stormwater discharges associated with the activity. (S5.C.9.f)

80. Implemented an ongoing training program for Permittee employees whose primary construction, operations or maintenance job functions may impact stormwater quality. (S5.C.9.g)

Compliance with Total Maximum Daily Load Requirements

81. Complied with the Total Maximum Daily Load (TMDL)-specific requirements identified in Appendix 2. (S7.A)

- **a**. List any requirements that were not met.

82. For TMDLs listed in Appendix 2: **Attach** a summary of relevant SWMP and Appendix 2 activities to address the applicable TMDL parameter(s). (S7.A)

Monitoring and Assessment

83. Submitted payment for cost-sharing for Stormwater Action Monitoring (SAM) status and trends monitoring no later than December 1, 2024 (S8.A.1); and no later than August 15 of each subsequent year. (S8.A.2.a)

84. Notified Ecology in writing by December 1, 2024, which option you selected: S8.A.2.a, or S8.A.2.b.

85. Submitted payment for cost-sharing for SAM effectiveness and source identification studies no later than December 1, 2024 (S8.B.1); and no later than August 15 of each subsequent year. (S8.B.3.a)

86. Notified Ecology by December 1, 2024, which option you selected: S8.B.2.a, or S8.B.2.b.

87. If conducting stormwater discharge monitoring in accordance with S8.C.1, submitted a QAPP to Ecology no later than February 1, 2025? (S8.C.1.b and Appendix 9)

88. If conducting stormwater discharge monitoring in accordance with S8.C.1, **attach** a data and analysis report, per S8.C.1.d and Appendix 9. (Due annually beginning March 31, 2026)

General Conditions and Compliance with Standards

89. Notified Ecology in accordance with G3 of any discharge into or from the Permittee's MS4 which could constitute a threat to human health, welfare, or the environment. (G3)

90. Took appropriate action to correct or minimize the threat to human health, welfare, and/or the environment, per G3.A.

91. Notified Ecology within 30 days of becoming aware that a discharge from the Permittee's MS4 caused or contributed to a known or likely violation of water quality standards in the receiving water. (S4.F.1)

92. If requested, submitted an *Adaptive Management Response* report in accordance with S4.F.3.a.

93. **Attach** a summary of the status of implementation of any actions taken pursuant to S4.F.3 and the status of any monitoring, assessment, or evaluation efforts conducted during the reporting period. (S4.F.3.d)

94. Notified Ecology of the failure to comply with permit terms and conditions within 30 days of becoming aware of the non-compliance. (G20)

95. Number of non-compliance notifications (G20) provided in reporting year. List permit conditions described in non-compliance notification(s) in *Comments* field.

This page intentionally left blank

APPENDIX 4 – Annual Report Questions for Secondary Permittees

Permittees are required to submit annual reports online or in a format provided by Ecology, upon request, pursuant to Permit condition S9.

S6.D Stormwater Management Program

1. **Attach** a map of any jurisdictional boundary changes resulting in an increase or decrease in the Secondary Permittee's geographic area of coverage during the reporting period. (Required annually, S9.E.6)
2. **Attach** updated annual Stormwater Management Program Plan (SWMP Plan). (S6.A.2)
3. If applicable, identify other entities relied on to satisfy any of the obligations under the Permit. (S9.E.4)

S6.D.1 Public Education and Outreach

4. Labeled all storm drain inlets owned or operated by the Secondary Permittee that are located in maintenance yards, in parking lots, along sidewalks, and at pedestrian access points. (New Secondary Permittees – Required no later than four years from initial date of Permit coverage, S6.D.1.a)
5. Re-labeled all storm drain inlets with labels when no longer clearly visible and/or easily readable within 90 days. (Required no later than four years from initial date of Permit coverage, S6.D.1.a)
6. (***Public ports, colleges, and universities only***) Distributed educational information to tenants and residents about the impact of stormwater discharges on receiving waters and steps that can be taken to reduce pollutants in stormwater runoff. (Required no later than three years from initial date of Permit coverage, S6.D.1.b)

S6.D.2 Public Involvement and Participation

7. Made the annual report and SWMP Plan available on website. (Required annually no later than May 31, S6.D.2.a and b.)

S6.D.3 Illicit Discharge Detection and Elimination

8. Complied with all relevant ordinances, rules, and regulations of the local jurisdiction(s) that govern non-stormwater discharges. (Required after initial date of Permit coverage, S6.D.3.a)

9. Implemented policies to prohibit illicit discharges and identified enforcement mechanisms. (New Secondary Permittees – Required no later than one year from initial date of Permit coverage, S6.D.3.b)

10. Updated policies to prohibit illicit discharges and identified enforcement mechanisms. (Required no later than July 1, 2027, S6.D.3.b)

11. Implemented an enforcement plan to ensure compliance with policies to prohibit illicit discharges. (New Secondary Permittees – Required no later than 18 months from initial date of Permit coverage, S6.D.3.b)

12. Developed and maintained a map of the storm sewer system showing all known storm drain outfalls, receiving waters, and areas contributing runoff to each outfall. (New Secondary Permittees – Required no later than four and one half years from initial date of Permit coverage, S6.D.3.c)

13. Maintained an electronic map of the MS4 showing all known storm drain outfalls, receiving waters, and areas contributing runoff to each outfall. Made the map available on request to Ecology or others. (Required by December 31, 2026; S6.D.3.c)

14. Submitted locations of all known MS4 outfalls, including size and material, (S5.D.3.c.ii. March 31, 2027). The data shall be in one of the following formats and templates:

- ESRI file geodatabase template[1] (feature class in a .gdb)
- Shapefile template[2]
- ArcGIS Online template (sharing template a or b via ArcGIS Online)
- Excel template[3]

15. Conducted field inspections and visually inspected for illicit discharges at approximately one third of all known MS4 outfalls. (Required no later than two years from initial date of Permit coverage, S6.D.3.d)

16. Implemented procedures to identify and remove illicit discharges. (Required no later than two years from initial date of Permit coverage, S6.D.3.d)

17. **Attach** a summary of each illicit discharge discovered and actions taken to eliminate each of the discharges. (S6.D.3.d).

[1] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.gdb.zip
[2] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.shape.zip
[3] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.excel.xlsx

18. Implemented a spill response plan that includes coordination with a qualified spill responder. (Required no later than four and one-half years from initial date of Permit coverage, S6.D.3.e)

19. Provided staff training or coordinated with existing training to educate staff on proper BMPs for preventing illicit discharges, including spills, as described in S6.D.3.f. (Required no later than two years from initial date of Permit coverage)

S6.D.4 Construction Site Stormwater Control

20. Complied with all relevant ordinances, rules, and regulations of the local jurisdiction(s) that govern construction phase stormwater pollution prevention activities, if applicable. (Required after initial date of Permit coverage, S6.D.4.a)

21. Ensured that all applicable construction projects under the functional control of the Secondary Permittee obtained NPDES Permit coverage. (Required after initial date of Permit coverage, S6.D.4.b)

22. Coordinated with local jurisdictions on construction projects owned or operated by other entities that discharge into Secondary Permittee's MS4, as per S6.D.4.c. (Required after initial date of Permit coverage)

23. Provided training for relevant staff in erosion and sediment control BMPs and requirements or hired trained contractors to perform the work for all construction projects owned and operated by the Secondary Permittee. (Required after initial date of permit coverage, S6.D.4.d)

24. Provided access, as requested, for inspection of construction sites under the control of the Secondary Permittee during the land disturbing activity and/or construction period. (Required after initial date of Permit coverage, S6.D.4.e)

S6.D.5 Post-Construction Stormwater Management for New Development and Redevelopment

25. Complied with all relevant ordinances, rules, and regulations of the local jurisdiction(s) that govern post-construction stormwater pollution prevention activities, including proper operation and maintenance of the MS4. (Required after initial date of Permit coverage, S6.D.5.a)

26. Coordinated with local jurisdiction regarding projects owned or operated by other entities which discharge into the Secondary Permittee's MS4. (Required after initial date of Permit coverage, S6.D.5.b)

S6.D.6 Pollution Prevention and Good Housekeeping for Municipal Operations

27. Implemented an Operation and Maintenance program. (New Secondary Permittees – Required no later than three years from initial date of Permit coverage, S6.D.6.a)

28. Updated O&M Plan, as needed, no later than July 1, 2027 (S6.D.6.a).

29. Established and implemented maintenance standards for stormwater collection and conveyance systems, as described in S6.D.6.a.i. (New Secondary Permittees – Required no later than three years from initial date of Permit coverage.)

30. Conducted spot checks of potentially damaged stormwater treatment and flow control BMPs/facilities after major storms. (New Secondary Permittees – Required no later than three years from initial date of Permit coverage, S6.D.6.a.i)

31. Developed and implemented a Stormwater Pollution Prevention Plan (SWPP) for material storage areas, heavy equipment maintenance or storage yards not covered by another NPDES Permit that authorizes stormwater discharges associated with the activity. (New Secondary Permittees – Required no later than three years from initial date of Permit coverage, S6.D.6.a.viii)

32. Have NPDES Permit coverage for *Industrial Stormwater General Permit* for all applicable industrial facilities operated by the Permittee, or another NPDES Permit that authorizes surface water discharges associated with the activity. (Required after initial date of Permit coverage, S6.D.6.b)

33. Implemented a program designed to train staff to carry out the Operations and Maintenance plan as described in S6.D.6.d. (Required no later than three years from initial date of Permit coverage)

S7. Compliance with Total Maximum Daily Load Requirements

34. Is there an approved Total Maximum Daily Load (TMDL) applicable to stormwater discharges from a MS4 owned or operated by the Permittee? (S7)

35. Complied with the specific requirements identified in Appendix 2. (S7.A)

36. **Attach** status report of TMDL implementation. (S7.A)

General Conditions

37. Notified Ecology of the failure to comply with the Permit terms and conditions within 30 days of becoming aware of the non-compliance. (G20)

38. Notified Ecology immediately in cases where the Permittee becomes aware of a discharge into or from the Permittee's MS4 which may constitute a threat to human health, welfare, or the environment. (G3)

39. Took appropriate action to correct or minimize discharges into or from the MS4 which could constitute a threat to human health, welfare, or the environment. (G3.A)

S4 Compliance with Standards

40. If applicable, **attach** a summary of the status of implementation of any actions taken pursuant to S4.F, and the status of any monitoring, assessment, or evaluation efforts conducted during the reporting period. (S4.F.3.d)

This page intentionally left blank

APPENDIX 5 – Annual Report Questions for New Permittees

New Permittees that are Cities, Towns, or Counties are required to submit the following information in an online annual report form, or an alternative format provided by Ecology, upon request, pursuant to Special Condition S9.

Reporting Requirements and SWMP

1. **Attach** annual Stormwater Management Program Plan (SWMP). (Required no later than March 31, 2029, S5.A.2)
2. **Attach** a notification of any annexations, incorporations, or boundary changes resulting in an increase or decrease in the Permittee's geographic area of Permit coverage during the reporting period per S9.D.6.
3. Implemented an ongoing program to gather, track, and maintain information per S5.A.3, including costs or estimated costs of developing and implementing the SWMP. (Required to begin no later than January 1, 2026)
4. Provide a breakdown of average annual costs (or estimates) to implement the SWMP and permit programs (S5.A.3.a, required to be submitted no later than March 31, 2027):
    a. What was the annual expenditure or estimate to develop and implement the SWMP this reporting period?
    b. What was the annual expenditure or estimate to develop and implement Appendix 2 TMDL requirements, if applicable?
    c. What were your source(s) of funding for the stormwater program?
5. Coordinated among departments within the jurisdiction to eliminate barriers to Permit compliance. (S5.A.5.b)
    a. **Attach** a written description of internal coordination mechanisms. (Required no later than March 31, 2026, S5.A.5.b)
6. If applicable, identify other entities relied on to satisfy any of the obligations under the Permit. (S9.D4).

Stormwater Planning

7. Have you convened an interdisciplinary team to inform and assist in the development, progress, and influence of the stormwater planning program? (Required by August 1, 2025, S.5.C.1.a)

Coordination with Long-range Plan Updates

8. List the relevant land use planning efforts that have taken place in your jurisdiction (i.e., land use plans that are used to accommodate growth, stormwater management, or transportation). (S5.C.1.b.i.- Required by March 31, 2027)

9. List of stormwater capital projects (currently in or slated for future design and construction) that resulted from this planning. (S5.C.1.b.i – Required by March 31, 2027)

10. Describe watershed protection measures associated with stormwater management and land use planning actions that resulted from this planning. (S5.C.1.b.i– Required by March 31, 2027)

11. Were land acquisitions identified (or are planning ahead for) that are useful for stormwater facilities to accommodate growth or to better serve an existing developed area? (S5.C.1.b.i– Required by March 31, 2027,)

- **a.** If yes, for what purpose?

12. Updates to goals and policies related to investment in stormwater management facilities/BMPs? (yes/no) (S5.C.1.b.i– Required by March 31, 2027)

- **a.** If yes, briefly describe in *Comments*.

Low Impact Development Code-related Requirements

13. Reviewed, revised and made effective the low impact development-related enforceable documents per S5.C.1.c.ii. (Required by December 31, 2028)

- **a.** **Attach** a summary of the LID review and revision process that includes the requirements listed in S.5.C.1.c.ii. (Required no later than March 31, 2029)

14. Adopted and implemented tree canopy goals and policies to support stormwater management and water quality improvement in receiving waters. (S5.C.1.c.iii; December 31, 2028)

Education and Outreach

15. **Attach** a description of general awareness efforts conducted per S5.C.2.a.i, including what, if any, regional program you are participating in. (Required to begin no later than August 1, 2027)

16. Developed a behavior change program that is tailored to the community in accordance with S5.C.2.a.ii.(c)? (Required no later than August 1, 2025)

a. **Attach** the strategy and schedule developed in accordance with S5.C.2.a.ii(c).

17. Began implementing strategy outlined in S.5.C.2.a.ii.(c). (Required by October 1, 2025)

18. Provided stewardship opportunities (or partnered with others) to encourage resident participation. (Required to begin no later than August 1, 2027, S5.C.2.a.iii)

Public Involvement and Participation

19. Describe in *Comments* field the opportunities created for the public, including overburdened communities, to participate in the decision-making processes involving the development, implementation, and updates of the Permittee's SWMP. (Required to begin no later than August 1, 2025, S5.C.3.a)

20. Describe specific public involvement opportunities provided to overburdened communities. (S5.C.3.a.i)

21. Document methods used to identify overburdened communities. (No later than December 31, 2026, S5.C.3.a.ii)

22. Posted the updated SWMP Plan and latest annual report on your website no later than May 31. List the website address in *Comments* field. (Required to begin posting no later than May 31, 2026, S5.C.3.b)

MS4 Mapping and Documentation

23. Developed a map of the MS4 that includes the requirements listed in S5.C.4. (Required no later than March 31, 2029)

24. Met the requirements of S5.C.4.a.vii for all connections to the MS4 authorized after August 1, 2024. (Required to begin no later than August 1, 2024)

25. No later than March 31, 2027, submitted locations of all known MS4 outfalls, including size and material, in accordance with S5.D.4.b.i. The data shall be in one of the following formats:

- ESRI file geodatabase template[1] (feature class in .gdb)
- Shapefile template[2]
- ArcGIS Online template (sharing template a or b via ArcGIS Online)
- Excel template[3]

Illicit Discharge Detection and Elimination

26. Informed public employees, businesses, and the general public of hazards associated with illicit discharges, per S.5.C.5.b? (Required no later than August 1, 2026)

27. Adopted and implemented an ordinance or other regulatory mechanism to effectively prohibit illicit discharges, per the requirements in S5.C.5.c.i-iv. (Required no later than August 1, 2026)

a. Cite reference for ordinance or other regulatory mechanism to meet this requirement in *Comments* field.

28. Developed and implemented procedures for conducting illicit discharge investigations in accordance with S5.C.5.d.i? Cite methodology used in the *Comments* sections. (Required no later than August 1, 2028)

29. Screened the MS4 within coverage area each year in accordance with S5.C.5.d.i.(a) (Required to screen 40% no later than December 31, 2028; 12% on average each year, thereafter)

30. How are you publicizing your hotline? (Required to be available no later than August 1, 2026, S5.C.5.d.ii)

31. Developed and implemented an ongoing illicit discharge training program for all municipal field staff per S5.C.5.d.iii. (Required to begin no later than March 31, 2026)

32. Developed and implemented a program to characterize, trace, and eliminate illicit discharges into the MS4 found by or reported to the Permittee. (Required no later than August 1, 2028, S5.C.5.e)

33. Trained municipal illicit discharge detection staff to conduct illicit discharge detection and elimination activities referenced in S5.C.5.f. (Required no later than March 31, 2026)

[1] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.gdb.zip
[2] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.shape.zip
[3] https://fortress.wa.gov/ecy/ezshare/wq/permits/MS4GP.Mapoutfall.prelim.excel.xlsx

34. **Attach** a report with data describing the actions taken to characterize, trace, and eliminate each illicit discharge reported to, or investigated by, the Permittee, as described in S5.C.5.g. The submittal must include all of the applicable information and must follow the instructions, timelines, and format described in Appendix 13.

Controlling Runoff from New Development, Redevelopment and Construction Sites

35. Developed and implemented a program to reduce pollutants in stormwater runoff to the MS4 from new development, redevelopment and construction site activities. (Required no later than June 30, 2027, S5.C.6)

36. Adopted and implemented an ordinance or other enforceable mechanism to address runoff from new development, redevelopment and construction sites per the requirements of S5.C.6.a. (Required no later than June 30, 2027)

- **a.** Cite the jurisdiction code reference used to meet this requirement in *Comments* field.

37. Number of exceptions granted to the minimum requirements in Appendix 1. (Required March 31, 2028, S5.C.6.b.i and Section 6 of Appendix 1)

38. Number of adjustments granted to the minimum requirements in Appendix 1. (Required March 31, 2028, S5.C.6.b.i and Section 6 of Appendix 1)

39. Reviewed Stormwater Site Plans for all proposed development activities that meet the thresholds adopted pursuant to S5.C.6.b.ii. (Required no later than June 30, 2027, S5.C.6.c.i)

- **a**. Number of site plans reviewed during the reporting period.

40. Inspected, prior to clearing and construction, all permitted development sites, per S5.C.6.c.ii. (Required no later than June 30, 2027)

41. Inspected all permitted development sites during construction to verify proper installation and maintenance of required erosion and sediment controls. (Required no later than June 30, 2027, S5.C.6.c.iii)

- **a.** Inspected new residential stormwater treatment and flow control BMPs/facilities and catch basins at least twice per 12-month period, with no less than 4 months between inspections, per S5.C.6.c.iv, to identify maintenance needs and enforce compliance with maintenance standards.

42. Number of enforcement actions taken during the reporting period based on construction phase inspections at new development and redevelopment projects. (Required no later than June 30, 2027, S5.C.6.c.ii-iv)

43. Inspected all permitted development sites upon completion of construction and prior to final approval or occupancy to ensure proper installation of stormwater facilities. (Required no later than June 30, 2027, S5.C.6.c.v)

44. Verified a maintenance plan is completed, and responsibility for maintenance is assigned for projects. (Required no later than June 30, 2027, S5.C.6.c.v)

45. Achieved at least 80% of scheduled construction-related inspections. (Required no later than June 30, 2027, S5.C.6.c.vi)

46. Made Ecology's Construction Stormwater General Permit *Notice of Intent* and Industrial Stormwater General Permit *Notice of Intent* available to representatives of proposed new development and redevelopment? (Required no later than August 1, 2024, S5.C.6.d)

47. All staff whose primary job duties are implementing the program to control stormwater runoff from new development, redevelopment, and construction sites are trained to conduct these activities? (Required no later than December 31, 2027, S5.C.6.e)

Source Control Program for Existing Development

48. Adopted ordinance(s), or other enforceable documents, requiring the application of source control BMPs for pollutant generating sources associated with existing land uses and activities, per S.5.C.8.a. (Required by August 1, 2026)

- **a**. Cite ordinance in *Comments* field.

49. Established an inventory per S5.C.8.b. (Required by August 1, 2027)

- **a.** Number of total sites identified for the inventory.

50. Implemented an inspection program, per S5.C.8.c. (Required by January 1, 2028)

51. Implemented a progressive enforcement policy, per S5.C.8.d. (Required by January 1, 2028)

52. **Attach** a summary of actions taken to implement the Source Control program, per S5.C.8.d.iii (March 31, 2029)

- **a.** **Attach** a list of inspections, per S5.C.8.d, organized by the business category, noting the amount of times each business was inspected, and if enforcement actions were taken.

53. Implemented a Source Control training program, per S5.C.8.e. (December 31, 2027)

Operation and Maintenance

54. Developed and implemented maintenance standards as protective, or more protective, of facility function as those specified in the *Stormwater Management Manual for Western Washington*. (Required no later than June 30, 2027, S5.C.9.a)

55. Applied a maintenance standard for a facility or facilities which do not have maintenance standards specified in the *Stormwater Management Manual for Western Washington*. (Required to report, if applicable, no later than June 30, 2027, S5.C.9.a)

- **a**. Note in the *Comments* field what kinds of facilities are covered by this alternative maintenance standard.

56. Verified that maintenance was performed per the schedule in S5.C.9.a.ii when an inspection identified an exceedance of the maintenance standard. (June 30, 2027)

- **a.** **Attach** documentation of any maintenance delays.

57. Implemented an ordinance or other enforceable mechanisms to verify long-term operation and maintenance of stormwater treatment and flow control BMPs/facilities regulated by the Permittee, per S5.C.9.b.i?

58. Annually inspected stormwater treatment and flow control BMPs/facilities regulated by the Permittee, per S5.C.9.b.i(b).

- **a.** If using reduced inspection frequency for the first time during this permit cycle, **attach** documentation, per S5.C.9.b.i(b).

59. Achieved at least 80% of scheduled inspections to verify adequate long-term O&M. (S5.C.9.b.ii)

60. Annually inspected all municipally owned or operated permanent stormwater treatment and flow control BMPs/facilities. (Required no later than June 30, 2027, S5.C.9.c.i)

- **a.** Number of municipally owned or operated stormwater treatment and flow control BMPs/facilities.
- **b.** Number of facilities inspected during the reporting period.
- **c**. Number of facilities for which maintenance was performed during the reporting period.

61. **Attach** documentation of a reduced stormwater treatment and flow control BMPs/facilities inspection frequency as per S5.C.9.c.i. (Required, if applicable)

62. Conducted spot checks and inspections of potentially damaged stormwater facilities after major storms. (Required no later than June 30, 2027, S5.C.9.c.ii)

63. Inspected all municipally owned or operated all catch basins and inlets owned or operated by the Permittee at least once every two years, or used an alternative approach. (Required no later than December 31, 2028, S5.C.9.c.iii)

a. Number of known catch basins.

b. Number of catch basins inspected.

c. Number of catch basins cleaned.

64. **Attach** documentation of alternative catch basin inspection approach, if used. (Required, if applicable, S5.C.9.c.iii)

65. Developed and implemented practices, policies, and procedures to reduce stormwater impacts associated with runoff from all lands owned or maintained by the Permittee, and road maintenance activities under the functional control of the Permittee. (Required no later than December 31, 2027, S5.C.9.d)

66. No later than July 1, 2027, developed and implemented a municipal street sweeping program to focus on priority areas and times during the year that would reasonably be expected to result in the maximum water quality benefits to receiving waters (S5.C.9.e, required to report beginning March 31, 2028).

67. Attach documentation if implementing an alternative sweeping timing and frequency, based on local conditions (S5.C.9.e.ii.b.)

a. **Attach** priority areas swept on a map
b. Sweeping dates
c. Sweeping frequency
d. Type of sweeper
e. Total curb miles of priority areas and curb miles swept
f. Approximation of street waste solids removed for each sweeping event, with unit of weight and wet or dry weight, where available.

68. Disposed of sweeper waste material in accordance with Appendix 6- Street Waste Disposal (S5.C.9.e.iv)?

69. Developed and implemented a Stormwater Pollution Prevention Plan (SWPPP) for all heavy equipment maintenance or storage yards, and material storage facilities owned or operated by the Permittee in areas subject to this Permit, as described in (Required no later than June 30, 2027, S5.C.9.f)

70. Developed and implemented an ongoing training program for Permittee employees whose primary construction, operations or maintenance job functions may impact stormwater quality. (Required no later than June 30, 2027, S5.C.9.g)

Compliance with Total Maximum Daily Load Requirements

71. Complied with the Total Maximum Daily Load (TMDL) - specific requirements identified in Appendix 2, if applicable. (S7.A)

a. List and requirements that were not met.

72. For TMDLs listed in Appendix 2, **attach** a summary of relevant SWMP and Appendix 2 activities to address the applicable TMDL parameter. (S7.A.1)

General Conditions and Compliance with Standards

73. Notified Ecology in accordance with G3 of any discharge into or from the Permittee's MS4 which could constitute a threat to human health, welfare, or the environment. (G3)

74. Took appropriate action to correct or minimize the threat to human health, welfare, and/or the environment, per G3.A.

75. Notified Ecology within 30 days of becoming aware that a discharge from the Permittee's MS4 caused or contributed to a known or likely violation of water quality standards in the receiving water. (S4.F.1)

76. If requested, submitted an *Adaptive Management Response* report in accordance with S4.F.3.a.

77. **Attach** a summary of the status of implementation of any actions taken pursuant to S4.F.3 and the status of any monitoring, assessment, or evaluation efforts conducted during the reporting period? (S4.F.3.d)

78. Notified Ecology of the failure to comply with the permit terms and conditions within 30 days of becoming aware of the non-compliance? (G20)

79. Number of non-compliance notifications (G20s) provided in reporting year. List Permit conditions described in non-compliance notification(s) in *Comments* field.

This page intentionally left blank

APPENDIX 6 – Street Waste Disposal

Street Waste Liquids General Procedures

Street waste collection should emphasize retention of solids in preference to liquids. Street waste solids are the principal objective in street waste collection and are substantially easier to store and treat than liquids.

Street waste liquids require treatment before their discharge. Street waste liquids, which include, but are not limited to, eductor and street sweeping truck decant and drainage from piles and containers, usually contain high amounts of suspended and total solids and absorbed metals. Treatment requirements depend on the discharge location.

Discharges to sanitary sewer and storm sewer systems must be approved by the entity responsible for operation and maintenance of the system. Ecology will not generally require waste discharge permits for discharge of stormwater decant to sanitary sewers or to stormwater treatment BMPs constructed and maintained in accordance with Ecology's *Stormwater Management Manual for Western or Eastern Washington,* as appropriate.

The following order of preference, for disposal of liquid from collection of street waste and water removed from stormwater treatment BMPs, is ***required***.

1. **Discharge of street waste decant liquids to a municipal sanitary sewer connected to a Publicly Owned Treatment Works (POTW) is the *preferred disposal option*.** Discharge to a municipal sanitary sewer requires the approval of the sewer authority. Approvals for discharge to a POTW will likely contain pretreatment, quantity, and location conditions to protect the POTW.

2. **Discharge of street waste decant liquids may be allowed into a Basic or Metals Runoff Treatment BMP, if option 1 is not available.** Street waste liquid may be discharged back into the storm sewer system under the following conditions only when ***all*** of the following apply:
   - The preferred disposal option of discharge to sanitary sewer is not reasonably available;
   - The liquid comes from street waste only. Do not send liquids decanted from sanitary wastes to stormwater BMPs;
   - The discharge is to a Basic or Metals Runoff Treatment BMP. If pretreatment does not remove visible sheen from oils, the Runoff Treatment BMP must be able to prevent the discharge of oils causing a visible sheen;

- The discharge from the eductor or sweeper truck is as near to the inlet of the Runoff Treatment BMP as is practical, to minimize contamination or recontamination of the collection system;
- The storm sewer system owner/operator has granted approval and has determined that the Runoff Treatment BMP will accommodate the increased loading. Pretreatment conditions to protect the Runoff Treatment BMP may be issued as part of the approval process. Following local pretreatment conditions is a requirement of this Permit; and
- Ecology must approve in advance flocculants for the pretreatment of street waste liquids. The liquids must be non-toxic under the circumstances of use. If the owner/operator adds flocculants to street waste liquids, they must follow the requirements of BMP C250/C250E: Construction Stormwater Chemical Treatment and BMP C251/251E: Construction Stormwater Filtration.

The reasonable availability of sanitary sewer discharge will be determined by the Permittee, by evaluating such factors as distance, time of travel, load restrictions, and capacity of the Runoff Treatment BMP.

3. **Operators may temporarily place portable tanks (e.g. Baker Tanks) near where sweeping is taking place to temporarily hold water and solids from the sweeper**. Transfer this water/solid mixture to the decant facility at a later time.
4. **Operators may discharge liquids removed from the street while sweeping during rain events, if the designated decant facility is a distance away (i.e., travel time would significantly impact the amount of sweeping).** When sweeping during rain events, the sweeper will fill with water quickly.

   Discharge to Wastewater Collection System: Operators may discharge water from eductor or sweeper trucks to the wastewater collection system through manholes located in the street that is swept with approval from the Sewer Authority. The method used to move water from the sweeper to the wastewater collection system should be developed by the Sewer Authority.

   Discharge to Stormwater Collection System: Operators may discharge clear decanted water to the stormwater collection system for the roadway being swept when all of the conditions listed below apply. Operators cannot deposit decanted water into a collection system different from the system for the roadway being swept. Conditions to discharge:

   - The catch basin receiving the decanted water already receives runoff from the swept street.
   - The water entering the sweeper storage tank is runoff from the street and not water placed on the street by a water truck or the sweeper during the sweeping operation.

- The sweeper stays in place for a minimum of 15 minutes at the discharge location to allow solids to settle prior to decanting the water from the storage tank.
- The operator places an appropriately sized catch basin filter in the catch basin or a filter sock attached to the end of the outlet hose allowing for a slow release of water. Remove the catch basin filter or filter sock following its use.
- The operator stops discharging liquids to the catch basin when there is a concentration of solids leaving the tank.
- The storm sewer system owner/operator shall approve the discharge.

5. **Operators may return water removed from stormwater ponds, vaults, and oversized catch basins to the storm sewer system.** Stormwater ponds, vaults, and oversized catch basins contain substantial amounts of liquid, which hampers the collection of solids and poses problems if the removed waste must be hauled away from the site. Water removed from these facilities may be discharged back into the pond, vault, or oversized catch basin provided:
   - Clear water removed from a stormwater treatment structure may be discharged directly to a down gradient cell of a treatment pond or into the storm sewer system.
   - Turbid water may be discharged back into the structure it was removed from if:
     - The removed water has been stored in a clean container (eductor truck, Baker tank, or other appropriate container or facility used specifically for handling stormwater or clean water); ***and***
     - There will be no discharge from the pond, vault, or oversized catch basin for at least 24 hours.
   - The discharge must be approved by the storm sewer system owner/operator.

Street Waste Solids

Soils generated from maintenance of the MS4 may be reclaimed, recycled or reused when allowed by local codes and ordinances. Street Wastes are defined in Chapter 173-350 WAC[1]. Soils that are identified as contaminated, pursuant to Chapter 173-350 WAC, shall be disposed of at a qualified solid waste disposal facility.

Typically, the County Health Department produces permits for disposal of solid waste and not Ecology. Ecology's authority does not extend to actual disposal of street waste material.

APPENDIX 7 – Determining Construction Site Sediment Damage Potential

The following rating system allows objective evaluation of a particular development site's potential to discharge sediment. Permittees may use the rating system below or develop alternative process designed to identify site-specific features which indicate that the site must be inspected prior to clearing and construction. Any alternative evaluation process must be documented and provide for equivalent environmental review.

Step 1 is to determine if there is a sediment/erosion sensitive feature downstream of the development site. If there is such a site downstream, complete Step 2, assessment of hydraulic nearness. If there is a sediment/erosion sensitive feature and it is hydraulically near the site, go to Step 3 to determine the construction site sediment transport potential.

STEP 1 – Sediment/Erosion Sensitive Feature Identification

Sediment/erosion sensitive features are areas subject to significant degradation due to the effect of sediment deposition or erosion. Special protection must be provided to protect them. Sediment/erosion sensitive features include but are not limited to:

i. Salmonid bearing fresh water streams and their tributaries or freshwater streams that would be Salmonid bearing if not for anthropogenic barriers;
ii. Lakes;
iii. Category I, II, and III wetlands;
iv. Marine near-shore habitat;
v. Sites containing contaminated soils where erosion could cause dispersal of contaminants; and
vi. Steep slopes (25% or greater) associated with one of the above features.

Identify any sediment/erosion sensitive features, and proceed to Step 2. If there are none, the assessment is complete.

STEP 2 – Hydraulic Nearness Assessment

Sites are hydraulically near a feature if the pollutant load and peak quantity of runoff from the site will not be naturally attenuated before entering the feature. The conditions that render a site hydraulically near to a feature include, but are not limited to, the following:

i. The feature or a buffer to protect the feature is within 200 feet downstream of the site.
ii. Runoff from the site is tight-lined to the feature or flows to the feature through a channel or ditch.

A site is not hydraulically near a feature if one of the following takes place to provide attenuation before runoff from the site enters the feature:

i. Sheet flow through a vegetated area with dense ground cover
ii. Flow through a wetland not included as a sensitive feature
iii. Flow through a significant shallow or adverse slope, not in a conveyance channel, between the site and the sensitive feature.

Identify any of the sediment/erosion sensitive features from Step 1 that are hydraulically near the site, and proceed to Step 3. If none of the sediment/erosion sensitive features are hydraulically near the site, the assessment is complete.

STEP 3 – Construction Site Sediment Transport Potential

Using the worksheet below, determine the total points for each development site. Assign points based on the most critical condition that affects 10% or more of the site.

If soil testing has been performed on site, the results should be used to determine the predominant soil type on the site. Otherwise, soil information should be obtained from the county soil survey to determine Hydrologic Soil Group (Table of Engineering Index Properties for step 1.D) and Erosion Potential (Table of Water Features for step 1.E).

When using the county soil survey, the dominant soil type may be in question, particularly when the site falls on a boundary between two soil types or when one of two soil types may be present on a site. In this case, the soil type resulting in the most points on the rating system will be assumed unless site soil tests indicate that another soil type dominates the site.

Use the point score from Step 3 to determine whether the development site has a high potential for sediment transport off of the site.

Total Score	**Transport Rating**
<100	Low
≥100	High

A high transport rating indicates a higher risk that the site will generate sediment contaminated runoff.

Construction Site Sediment Transport Potential Worksheet

A. Existing slope of site (average, weighted by aerial extent): Points

2% or less 0

>2-5% 5

>5-10% 15

>10-15% 30

>15% 50

B. Site Area to be cleared and/or graded:

<5,000 sq. ft. 0

5,000 sq. ft. – 1 acre 30

>1 acres 50

C. Quantity of cut and/or fill on site:

<500 cubic yards 0

500 – 5,000 cubic yards 5

>5,000 – 10,000 cubic yards 10

>10,000 – 20,000 cubic yards 25

>20,000 cubic yards 40

D. Runoff potential of predominant soils (Soil Conservation Service):

Hydrologic soil group A 0

Hydrologic soil group B 10

Hydrologic soil group C 20

Hydrologic soil group D 40

E. Erosion Potential of predominant soils (Unified Classification System):

GW, GP, SW, SP soils 0

Dual classifications (GW-GM, GP-GM, GW-GC,

GP-GC, SW-SM, SW-SC, SP-SM, SP-SC) 10

GM, GC, SM, SC soils 20

ML, CL, MH, CH soils 40

F. Surface or Groundwater entering site identified and intercepted1:

Yes 0

No 25

G. Depth of cut or height of fill >10 feet:

Yes 25

No 0

H. Clearing and grading will occur in the wet season (October 1 – May 1):

Yes 50

No 0

TOTAL POINTS ..... _____

[1] If no surface or ground water enters the site, assign 0 points.

APPENDIX 8 – Businesses and Activities that are Potential Sources of Pollutants

Use this appendix to help identify businesses and/or activities with potential outdoor pollutant-generating sources that discharge to the MS4 and should be included in the Permittee's source control inventory, developed pursuant to S5.C.8.b.ii. The Standard Industrial Code (SIC), Major Group, and NAICS numbers are provided for reference. Permittees may include additional outdoor pollutant-generating sources that are located within their jurisdictions.

Group Description	SIC Major Group	SIC Industry Group No.	NAICS Major Group
Support Activities for Animal Production		074, 075	1152xx,
Construction of Buildings	15		236
Heavy and Civil Engineering Construction	16		237
Specialty Trade Contractors	17		238
Beverage, Food, and Tobacco Manufacturing	20		311, 312
Wood Product Manufacturing	24		321
Paper Manufacturing	26		3221xx, 3222xx
Printing and Related Support Activities	27		323

APPENDIX 9 – Stormwater Discharge Monitoring

This Appendix applies to Phase I and II Permittees with requirements pursuant to Special Condition S8.C – Stormwater Discharge Monitoring.

Stormwater discharge monitoring is intended to characterize stormwater runoff quantity and quality at a limited number of locations in a manner that allows analysis of loadings and changes in conditions over time and generalization across the Permittee's jurisdiction.

QAPP PREPARATION

Permittees shall prepare a Quality Assurance Project Plan (QAPP). The QAPP shall be developed by qualified staff or contractors with experience in applying Ecology or U.S. Environmental Protection Agency (EPA) QAPP Guidelines. General Ecology guidelines can be found at https://ecology.wa.gov/ and in the *Quality Assurance Project Plan Guidance*, Special Condition S8.D, *Phase I Municipal Stormwater Permit,* December 2010 (Ecology Publication no. 10-10-075, https://apps.ecology.wa.gov/publications/documents/1010075.pdf).

A stormwater discharge monitoring QAPP shall be submitted to Ecology in accordance with the deadlines in S8.C. The QAPP shall describe field collection methods and sample preparation methods appropriate to each group of analytes, reporting limits, and field conditions.

Permittees are responsible for maintaining an up-to-date approved QAPP for stormwater discharge monitoring. Significant changes shall be reviewed by Ecology and reflected in a revised QAPP. Significant changes include, but are not limited to:

- Land disturbing activities over 10 acres in size within the sampled drainage area;
- Relocating a monitoring station;
- Introducing new sampling equipment;
- Unanticipated back water conditions, base flow, or tidal influences; and
- Changes in laboratories, analytical methods, or reporting limits.

Permittees continuing their stormwater monitoring discharge programs from prior permits are required to update their QAPP to reflect the changes of this Appendix and extend the timeframe. Locations, methodology, and laboratory techniques previously approved by Ecology should be discussed in the QAPP.

DISCHARGE MONITORING LOCATION SELECTION

Stormwater monitoring discharge monitoring locations shall have mapped tributary conveyance systems and drainage areas and be suitable for permanent installation and operation of flow-weighted composite sampling equipment. Additional monitoring location selection guidance and information about how to estimate a rainfall to runoff relationship is available in *Standard Operating Procedure for Automatic Sampling for Stormwater Monitoring*, WQP002, https://apps.ecology.wa.gov/publications/SummaryPages/1810024.html.

Permittees may identify a discharge monitoring location upstream in the conveyance system (*i.e.*, up- gradient of the outfall) in order to achieve the desired land use, to accommodate the installation of sampling equipment, and/or to avoid or minimize back water or tidal interference.

The QAPP shall describe each stormwater discharge monitoring location and associated drainage basin in detail. The QAPP must describe how each discharge monitoring location was selected, the size of the drainage basin, and the percentage of area in the drainage basin representing the following land uses: high density residential, low density residential, commercial, industrial, agriculture, and transportation right-of-way. Table A9-1, below, provides characteristics to consider for some of these land uses. However, density definitions can vary from jurisdiction to jurisdiction and may be defined locally in codes and comprehensive plans. Report the residential density definitions used if they differ from these.

Table A9-1 Land Use Selection Characteristics

Land use category	Characteristics
High density residential	4 dwelling units per acre or greater
Medium to high density residential	2 to 4 dwelling units per acre
Low density residential	1 to 2 dwelling units per acre
Commercial	Includes multi-family residential
Industrial	Not predominated by one facility with a few operators

FLOW MONITORING

Discharge monitoring locations must be evaluated for a rainfall to runoff relationship in order to ensure that the discharge monitoring location will receive enough runoff for sufficient sample volume. This rainfall to runoff relationship will also assist in programming the automatic sampling equipment. In order to establish the rainfall to runoff relationship, one year of continuous flow recording (including base flow and all storm events) is necessary.

MONITORING FREQUENCY

Permittees shall sample each stormwater discharge monitoring location according to the frequency described below. Documented good faith efforts with good professional practice by the Permittee which do not result in collecting a successful sample for the full number of required storms may be considered as contributing toward compliance with this requirement.

For each location, the Permittee shall sample and analyze a minimum of eleven (11) qualifying storm events per water year. Qualifying storm event sampling must be distributed throughout the year, approximately reflecting the distribution of rainfall between the wet and dry seasons (with a goal of 60- 80% of the samples collected during the wet season and a goal of 20-40% of the samples collected in the dry season).

Ecology may approve a reduced sampling frequency if the Permittee provides a statistical analysis demonstrating that monitoring and reporting goals can be met with fewer samples.

QUALIFYING STORM EVENT CRITERIA

The wet season is from October 1 through April 30. A qualifying wet season storm event is defined as follows when all of these conditions apply:

- Rainfall volume: 0.20” minimum, no fixed maximum;
- Rainfall duration: No fixed minimum or maximum;
- Antecedent dry period: Less than or equal to 0.05” rain in the previous 6 hours, unless more time is needed to return to baseflow at the sampling point; and
- Inter-event dry period: 6 hours.

The dry season is from May 1 through September 30. A qualifying dry season storm event is defined as follows when all of these conditions apply:

- Rainfall volume: 0.20” minimum, no fixed maximum;
- Rainfall duration: No fixed minimum or maximum;
- Antecedent dry period: less than or equal to 0.02” rain in the previous 24 hours; and
- Inter-event dry period: 6 hours.

TYPES OF SAMPLING

Storm events shall be sampled using flow-weighted composite sampling techniques. Automatic samplers shall be programmed to begin sampling as early in the runoff event as practical and to continue sampling past the longest estimated time of concentration for the tributary area. Refer to *Standard Operating Procedure for Automatic Sampling for Stormwater Monitoring,* WQP002, https://apps.ecology.wa.gov/publications/SummaryPages/1810024.html.

For storm events lasting less than 24 hours, samples shall be collected for at least 75% of the storm event hydrograph. For storm events lasting longer than 24 hours, samples shall be collected for at least 75% of the hydrograph of the first 24 hours of the storm.

Each composite sample shall be targeted to contain at least 10 aliquots. Composite samples with 7 to 9 aliquots are acceptable if they meet the other sampling criteria and help achieve a representative balance of wet season/dry season events and storm sizes.

Continuous flow recording of all storm events (not just sampled storm events) is necessary for at least one complete water year to establish a baseline rainfall/runoff relationship. Ongoing continuous flow monitoring is required for each of the sampled storm events as necessary to properly conduct the flow- weighted composite sampling. Precipitation data shall be collected from the nearest rain gauge reporting at least hourly rainfall amounts.

Grab samples are necessary for some parameters (Table A9-2) and shall be collected early in the storm event. Refer to *Standard Operating Procedure for Grab Sampling for Stormwater Monitoring,* WQP001, https://apps.ecology.wa.gov/publications/SummaryPages/1810023.html.

Stormwater solids samples shall be collected twice per water year at each stormwater discharge monitoring location, or in the vicinity of each stormwater monitoring location. Ecology may approve reducing this requirement to a once per year frequency if the Permittee provides evidence demonstrating that insufficient material is present in the conveyance. In-line conveyance system locations are the target for stormwater solids sampling (e.g., catch basin sumps), not receiving waters nor BMPs where soils could be inadvertently sampled. Use of in-line traps or similar collection system is needed for stormwater solids sampling; refer to *Standard Operating Procedure for Collection of Stormwater Solids using In-Line Traps,* WQP003*,* https://apps.ecology.wa.gov/publications/SummaryPages/1810025.html. The QAPP will need to specify the sampling approach for the selected sampling sites.

PARAMETERS

Flow-weighted composite samples shall be analyzed for the following parameters utilizing an Ecology- or EPA-accredited laboratory and the methods and reporting limits as provided in table A9-2 or otherwise approved by Ecology.

- Conventional parameters;
- Methylene blue activating substances (MBAS);
- Nutrients;
- Metals; and
- Organics:
  - Polycyclic aromatic hydrocarbons (PAHs)
  - Pesticides
  - Phthalates

If the volume of the stormwater sample collected from a qualifying storm is insufficient to allow analysis for all of the parameters listed above, the sample shall be analyzed for as many parameters as possible in the following priority order: (1) metals and hardness; (2) conductivity; (3) TSS; (4) nutrients; (5) organics: PAHs, phthalates, insecticide, and herbicides; (6) BOD_5; and (7) remaining conventional parameters. If insufficient sample exists to run the next highest priority pollutant, that analysis may be bypassed, and analyses run on lower priority pollutants in accordance with the remaining priority order to the extent possible. Parameters that are below reporting limits after two years of data may be dropped from the analysis.

Grab samples shall be analyzed for the following parameters utilizing an Ecology- or EPA-accredited laboratory and the methods and reporting limits listed in Table A9-2 at the end of this Appendix.

- Fecal coliform bacteria; and
- Total petroleum hydrocarbons – diesel fraction

Stormwater solids samples shall be analyzed for the following parameters utilizing an Ecology- or EPA- accredited laboratory and the methods and reporting limits listed in table A9-3 or otherwise approved by Ecology.

- Conventional parameters;
- Metals;
- Organics:
    - Pesticides
    - PAHs
    - Phthalates
    - Phenolics
    - Polychlorinated biphenyls (PCBs)
    - Polybrominated diphenyl ethers (PBDEs)
    - Total petroleum hydrocarbon – diesel fraction (TPH-Dx)

If the stormwater solids sample volume is insufficient to analyze for all of the parameters listed below, the sample shall be analyzed for as many parameters as possible in the following priority order: (1) conventional parameters; (2) metals; (3) TPH-Dx; (4) Phenolics; (5) PAHs and phthalates; (6) pesticides; (7) PBDEs; and (8) PCBs. If insufficient sample exists to run the next highest priority pollutant, that analysis may be bypassed, and analyses run on lower priority pollutants in accordance with the remaining priority order to the extent possible. Additional samples shall be collected if insufficient sample exists from a single sample to run all of the organic pollutants listed above. A visual, qualitative determination of grain size shall be reported for all stormwater solids samples (in addition to the quantitative analysis for all samples with sufficient volume). Parameters that are below reporting limits after two years of data may be dropped from the analysis.

RECORDKEEPING AND REPORTING

An "Annual Stormwater Discharge Monitoring Report" shall be submitted with each Annual Report beginning in 2025. Each report shall summarize all monitoring data collected during the preceding water year (October 1 – September 30). The first annual monitoring report submitted will include data from a partial water year. Each report shall integrate data from earlier years into the analysis of results, as appropriate. Permittees continuing their stormwater monitoring discharge programs at the same locations will continue summarizing data from prior permit periods.

ANNUAL MONITORING REPORTS

Annual Stormwater Discharge Monitoring Reports shall provide all monitoring data collected during the preceding water year (October 1 – September 30). Concentration data shall be provided in the same units that are specified for Reporting Limits in Tables A9-2 and A9-3. Flow data shall be provided in gallons per minute. Loading data for each water year shall be provided in total pounds and in pounds per acre. Annual Stormwater Discharge Monitoring Reports shall consist of a narrative report, an Excel spreadsheet with concentration data (summary statistics: minimum, maximum, mean, median and standard deviation), pollutant loading calculations, and a submittal to Ecology's Environmental Information Management (EIM) database for applicable data. For the Annual Stormwater Discharge Monitoring Report to be considered on time, the EIM data submission process must be initiated before April 1 of each relevant year and completed by June 15 of each relevant year.

The report shall include:

- A brief summary of each monitored drainage basin (full details of the monitoring drainage basin shall be in the QAPP), including any changes within the contributing drainage area or changes to the monitoring station that could affect hydrology and/or pollutant loading.
- A description of each flow-weighted composite and grab sampled storm event, including:
    - General summary about storm event criteria, including:
        - Precipitation data (in inches) including antecedent dry period and rainfall distribution throughout the event;
        - Flow and hydrograph data including sampled and total runoff time periods and volumes;
        - Total number of qualifying storm events captured and analyzed at each monitoring location;
        - Distribution of storms collected between wet and dry seasons (permit goals include 60-80% of storms during the wet season and 20-40% of storms during the dry season); and
        - Logistical problems associated with any storm event criterion.
    - A hyetograph and a hydrograph for each sampled storm event. Include properly labeled graphs that display the following:
        - Date of the storm event;

        - Time of day versus precipitation information;
        - Time versus flow rate (in gallons per minute);
        - Time versus aliquot collection; and
        - Display the total duration of the storm event, not just the duration when samples were collected (remember your pollutant load calculation must include flow for the entire storm event, not just the water quality sampled portion).
    - A summary of (or in the graph) the total runoff volume in gallons.
    - A rainfall/runoff relationship table used to estimate the un-sampled storm events (when water quality samples were not collected). This is used for future estimations of annual and seasonal loads.
    - Whether or not any chemicals were removed from the list of analysis due to two years of non-detect data.
    - A brief summary with storm event dates where insufficient volumes were collected. Include the parameters analyzed.
- A description of the stormwater solids sampling event, including:
    - Timeframe for the sampling event.
    - A summary of stormwater solids sampling (including dates) where insufficient volumes were collected. Include the parameters analyzed.
    - Whether or not any chemicals were removed from the list of analysis due to two years of non-detect data.
- Event Mean Concentrations (EMCs).
- The wet and dry season pollutant loads and annual pollutant load based on water year for each discharge monitoring location expressed in total pounds, and pounds per acre. The loadings must take into account potential pollutant load from base flow. Loadings shall be calculated following *Standard Operating Procedure for Calculating Pollutant Loads for Stormwater Discharges, WQP004* https://apps.ecology.wa.gov/publications/SummaryPages/1810026.html. Pollutant loading calculations and reporting are required only for the nutrients, metals, and organics parameters in stormwater. Include the following:
    - For storm events where water quality samples were collected, the load in pounds per day for each parameter for each sampled storm event, include date of storm events.
    - An estimated seasonal pollutant load for each parameter at each discharge monitoring location. This is calculated using all storm events (when water quality samples were collected and when samples were not collected).
    - A total annual pollutant load (wet season load + dry season load) for each parameter (include estimated events).
    - The rainfall/runoff relationship including your pollutant load estimates for un-sampled events.
    - Note that if any data is unavailable to effectively estimate your rainfall to runoff relationship due to an incomplete water year, submit this information in the next year's stormwater monitoring report.

- Quality Assurance/Quality Control information for each successfully sampled qualifying storm event at each discharge monitoring location and solids sample collection event at each discharge monitoring location, including:
  - A narrative summary of your field and laboratory verification, validation results and quality control checks performed.
  - A narrative analysis of your field and laboratory quality control sample results and how they compare with your data quality objectives/indicators in your QAPP.
  - Corrective actions reported/taken.
- An explanation and discussion of results from each successfully sampled qualifying storm event at each discharge monitoring location and solids sample collection event collected at each discharge monitoring location, including:
  - A statistical analysis of the event means concentrations for each parameter and a narrative description of significant findings from this analysis.
  - Any conclusions based on data from this study including analyses of previously collected data from these discharge monitoring locations.
- A description of activities currently taking place or planned within the monitoring station's drainage area that may have affected or may potentially affect future monitoring results.

If the Permittee monitors any pollutant more frequently at the stormwater discharge monitoring locations, the results of this monitoring shall be included in the annual monitoring report reflecting the water year in which the monitoring occurred.

After three (3) water years of data, the Annual Monitoring Report shall include:

- Trend analyses;
- An evaluation of the data as it applies to the Stormwater Management Program (SWMP); and
- Any stormwater management activities the Permittee has identified that can be implemented or adjusted to respond to this data.

LABORATORY METHODS

The Permittee's stormwater discharge monitoring program shall use the following analytical methods or other methods approved by the U.S. Environmental Protection Agency or Ecology with similar reporting limits unless alternative methods are approved by Ecology. Any alternative method proposed by a Permittee must have a similar reporting limit, or must be justified as adequate for the likely, expected range of concentrations. Permittees are not guaranteed approval of alternative methods or reporting limits.

In cases where smaller volumes of water are expected to be collected, or to save analytical costs, Permittees may propose that some of the analyses be optimized for specific parameters or groups. The Permittee must, in consultation with a qualified chemist, define the exact volumes and optimization steps and include them in the QAPP.

The QAPP shall identify Ecology- or EPA-approved methods with appropriate reporting limits. An individual sample that could not be run at a reporting limit because of matrix interference or other such reasons would not be called into question for compliance purposes. All results shall be reported. This includes positive detections between the method detection limit (MDL) and the reporting limit (RL), with the appropriate lab qualifier, and the non-detected concentrations at the value of the MDL or lower limit of quantitation (LLOQ) with the appropriate lab qualifier of "U" for undetected at that concentration. Non-detections must be reported and analyzed in the dataset. Results must be evaluated and censored for blank contamination (e.g., organic parameters should consider a censor threshold of less than 5x the laboratory blank contamination). All data gathering and data handling approaches should be explained in the QAPP.

Table A9-2 Analytical Procedures in Stormwater

Analyte	Method in Water	Method Detection Limit Target[a]	Reporting Limit or Lower Limit of Quantitation (LLOQ)[b]
Conventional Parameters			
Total suspended solids[c]	SM2540B or SM2540D		1.0 mg/L
Turbidity	EPA Method 180.1 or SM2130B		± 0.2 NTU
Conductivity	EPA Method 120.1 or SM2510B		± 1 µmhos/cm
Chloride	EPA Method 300.0, EPA Method 325.2, or SM4110B or SM4500 Cl-B, SM4500 Cl-C, SM4500 Cl-D, SM4500 Cl- EPAHS		0.2 mg/L
BOD5	SM5210B		2.0 mg/L
pH	EPA Method 150.2 or SM4500H+ B		0.2 units
Hardness as CaCO3	EPA Method 200.7, SM2340B(ICP), SM2340C (titration), or SM3120B		1.0 mg/L
Methylene blue activated substances (MBAS)	CHEMetrics Colorimetric or SM5540C		0.025 mg/L
Bacteria			
Fecal Coliform	SM9221E		Specified in method -

Analyte	Method in Water	Method Detection Limit Target[a]	Reporting Limit or Lower Limit of Quantitation (LLOQ)[b]
			sample aliquot dependent
E.coli (freshwater)	SM9221 B, SM9221 F, SM9223 B		Specified in method - sample aliquot dependent
Enterococci (marine)	EPA Method 1600, SM9230 B, SM9230 C, SM9230D		Specified in method - sample aliquot dependent
Nutrients			
Orthophosphate as P	EPA Method 365.3, EPA Method 365.1, SM4500-P E, SM4500-P F, or SM4500- P G	0.003 mg/L	0.01 mg/L
Total phosphorus as P	EPA Method 365.3, EPA Method 365.4, or SM4500-P-B followed by SM4500-P E or P F	0.003 mg/L	0.01 mg/L
Total Kjeldahl nitrogen as N or Total Nitrogen	EPA Method 351.2, EPA Method 351.1, SM4500 Norg-B, SM4500 Norg-C, SM4500 NH3-D, SM4500 NH3-G, SM4500 NH3-E, SM4500 NH3-F, SM4500 NH3-G, SM4500 NH3-H, SM4500 N-B, SM4500 N-C, SM4500 N-E		0.3 mg/L
Ammonia as N	SM4500 NH3-D, SM4500 NH3-G, SM4500 NH3-E, SM4500 NH3-F, SM4500 NH3-G, or SM4500 NH3-H		0.02 mg/L
Nitrate-Nitrite as N	EPA Method 353.2, SM4500 -$NO3^-$ E, SM4500 -$NO3^-$ F, or SM4500 -$NO3^-$ H		0.1 mg/L
Metals			

Analyte	Method in Water	Method Detection Limit Target[a]	Reporting Limit or Lower Limit of Quantitation (LLOQ)[b]
Total zinc	EPA Method 200.8 or SM 3125B		5.0 µg/L
Dissolved zinc	EPA Method 200.8 or SM 3125B		1.0 µg/L
Total lead, copper and cadmium	EPA Method 200.8 or SM 3125B		0.1 µg/L, 0.5 µg/L, and 0.2 µg/L
Dissolved lead, copper, and cadmium	EPA Method 200.8 or SM 3125B	0.05, 0.02, and 0.03 µg/L	0.1 µg/L
Organics			
PAHs[d]	EPA Method 8270D SIM or EPA 8270E SIM		0.1 µg/L
Pesticides: Bifenthrin (pyrethroid insecticide) and dichlobenil (herbicide)	EPA Method 8270D SIM, EPA 8270E SIM, or EPA Method 625.1	0.02 µg/L	0.05 µg/L
Phthalates[e]	EPA Method 8270D SIM or EPA 8270E SIM	0.5 µg/L	1 µg/L
Petroleum Hydrocarbons			
NWTPH-Dx (diesel, heavy oil, and summed total)	Ecology, 1997	0.1 mg/L	0.25-0.5 mg/L

NA – Not applicable
SM – Standard Methods
SIM – Selective Ion Monitoring mode

a. If a value is not present in this column, then the target MDL is not published or not different from reporting limit target.
b. The QAPP shall identify Ecology- or EPA-approved methods with appropriate reporting limits. An individual sample that could not be run at a reporting limit because of matrix interference or other such reasons would not be called into question for compliance purposes.
c. Research results indicate that errors may be introduced by decanting a subsample, care and use of tools like a funnel splitter may help.
d. Polycyclic aromatic hydrocarbons (PAH), total and these individual compounds: acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(ghi)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, pyrene, and retene. Report the individual compound concentrations, and their summed total.
e. Phthalates, total and these individual compounds: bis(2-ethylhexyl)phthalate, butyl benzyl phthalate, di-n-octyl phthalate, dibutyl phthalate, and diethyl phthalate. Report the individual compound concentrations, and their summed total.

Table A9-3 Analytical Procedures in Stormwater Solids

Analyte	Method for Solid/Sediment	Reporting Limit or LLOQ[a]
Conventional Parameters		
Percent solids	SM 2540G	0.1 %
Total organic carbon	Puget Sound Estuary Protocols (PSEP 1997), SM5310B, SM5310C, SM5310D, or EPA Method 9060	0.1%
Grain size	Sieve and Pipette (ASTM 1997), ASTM F312-97, ASTMD422, or PSEP 1986/2003	Not Applicable
Total phosphorus	EPA Method 365.3, EPA Method 365.4, SM4500 P E, or SM4500 P F	0.01 mg/kg
Total volatile solids	EPA Method 160.4 or SM2540G	0.1%
Analyte	**Method for Solid/Sediment**	**Reporting Limit or LLOQ[a]**
Metals, dry weight		
Total zinc	EPA Method 200.8, EPA Method 6010D, EPA Method 6020B, or SM3125B	5.0 mg/kg
Total lead	EPA Method 200.8, EPA Method 6010D, EPA Method 6020B, or SM 3125B	0.1 mg/kg
Total copper	EPA Method 200.8, EPA Method 6010D, EPA Method 6020B, or SM 3125B	0.1 mg/kg
Total cadmium	EPA Method 200.8, EPA Method 6010D, EPA Method 6020B, or SM 3125B	0.1 mg/kg
Organics, dry weight		
Pesticides: Bifenthrin and dichlobenil	EPA Method 8270D, EPA 8270E, or EPA Method 1660	1.0 µg/kg
PAHs[b]	EPA Method 8270D or EPA 8270E SIM	70 µg/kg
Phthalates[c]	EPA Method 8270D or EPA 8270E SIM	70 µg/kg Except di-n-octlyphthalate (250 µg/kg)
Phenolics[d]	EPA Method 8270D or EPA 8270E SIM	660 µg/kg

PCBs[e]	EPA Method 608.3 or EPA Method 8082A	0.195 µg/kg or 5-20 ng/kg
PBDEs[f]	EPA Method 1614	5-10 ng/kg Except PBDE 209: (200 ng/kg)
Petroleum Hydrocarbons		
TPH-Dx (diesel, heavy oil, and summed total)	Ecology, 1997 or EPA Method 8015B	25-100 mg/kg

NA – Not applicable

SM – Standard Methods

SIM – Selective Ion Monitoring mode

a. The QAPP shall identify Ecology- or EPA-approved methods with appropriate reporting limits. An individual sample that could not be run at a reporting limit because of matrix interference or other such reasons would not be called into question for compliance purposes.
b. Polycyclic aromatic hydrocarbon (PAH) compounds, total and these individual compounds: acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(ghi)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, pyrene, and retene. Report the individual compound concentrations, and their summed total.
c. Phthalates: bis(2-ethylhexyl)phthalate, butyl benzyl phthalate, di-n-octyl phthalate, dibutyl phthalate, and diethyl phthalate. Report the individual compound concentrations, and their summed total.
d. Phenolics: pentachlorophenol, p-cresol, and o-cresol. Report the individual compound concentrations.
e. PCBs. EPA Methods 608.3 or EPA Method 8082A for Aroclors: 1016, 1221, 1232, 1242, 1248, 1254, 1260, 1262, 1268 are suitable starting points for stormwater solids characterization. If a more sensitive congener analysis is conducted (EPA Method 8082A or EPA Method 1668C) then those individual compound concentrations should also be reported in the annual report.
f. Polybrominated diphenyl ethers (PBDEs): congener numbers 47, 49, 66, 71, 99, 100, 138, 153, 154, 183, 184, 191, and 209. Report the individual compound concentrations, and their summed total.

APPENDIX 10 – Equivalent Programs for Runoff Controls for New and Redevelopment and Construction Sites

Ecology determined that the following list shall be used to amend any enforceable documents, including codes, ordinances, director's rules, public rules and/or manuals, to be functionally equivalent to Appendix I in the *Western Washington Phase II Municipal Stormwater Permit* (effective August 1, 2024) and the required portions of Ecology's 2024 *Stormwater Management Manual for Western Washington.*

1. **Redevelopment Project Level Thresholds:** The "Project Level" thresholds for applying the Minimum Requirements to redevelopment projects have been updated.

    - Project Level - Redevelopment Thresholds / Road Related Projects

      The updated threshold for road related projects states that all Minimum Requirements apply to the new and replaced hard surfaces and converted vegetation areas if the project adds 5,000 square feet of new plus replaced hard surfaces AND the new plus replaced hard surfaces total 50% or more of the existing hard surfaces on the Site (underline shows the new language).
    - Project Level - Redevelopment Thresholds / Commercial or Industrial Projects

      The updates include a new threshold for commercial or industrial Sites. The new threshold states that all Minimum Requirements apply to the new and replaced hard surfaces and converted vegetation areas if the Project adds more than 5,000 square feet of new plus replaced hard surfaces AND the new plus replaced hard surfaces total 50% or more of the existing hard surfaces within the Site.

    See **Section 3** of Appendix 1.

2. **Project Exemptions:** The text describing the exemptions from Minimum Requirements has been updated to ensure that the project scope does not exceed the intention of these limited exemptions.

    See **Section 1** of Appendix 1.

3. **Wetland Hydroperiod Protection Method 2:** The hydroperiod protection requirements for Criteria 2 in Method 2 have been updated. The updates include an increase from 15% to 20% allowable monthly discharge volume deviations during October, November, and December, and an "allowable exception" for summer months.

    See **I-C.4 Wetland Hydroperiod Protection** in the 2024 SWMMWW.

4. **Definitions Related to Minimum Requirements:** Multiple definitions related to the Minimum Requirements have been updated for statewide consistency and/or to reflect updated requirements.

An example of a term with an updated definition to reflect an updated requirement is "vehicular use". The definition for "vehicular use" has been updated to identify Light Rail tracks (both elevated and non-elevated) as a pollution generating impervious surface.

See **Section 2** of Appendix 1.

5. **Runoff Treatment Performance Goal Thresholds:** Some thresholds for Runoff Treatment BMP types (i.e. basic, metals, oil, and/or phosphorus) have been updated for statewide consistency and/or to reflect updated requirements.

   An example of an edit to the Runoff Treatment Performance Goal Thresholds that reflects an updated requirement is identifying Light Rail guideways as a Site type that requires metals treatment.
   See **Section 4.6** of Appendix 1.

6. **Source Control BMPs - PCB Edits:** The following Source Control BMPs have been updated to include guidance for preventing pollution from PCBs in building materials:

   - S424 BMPs for Roof / Building Drains at Manufacturing and Commercial Buildings
   - S431 BMPs for Washing and Steam Cleaning Vehicles / Equipment / Building Structures
   - S438 BMPs for Construction Demolition
   - S451 BMPs for Building Repair, Remodeling, Painting, and Construction

   See **Volume IV** in the 2024 SWMMWW.

7. **Bioretention:** The guidance within **BMP T7.30: Bioretention** has been updated to include the option to use the High Performance Bioretention Soil Mix (HPBSM). The design guidance was also updated to clarify the design infiltration rate to use for all three bioretention soil mix options.

   See **BMP T7.30: Bioretention** in the 2024 SWMMWW.

Appendix 11 - Annual contribution amounts for Stormwater Action Monitoring Collective Funds

Western Washington

Permittee *Permittees are grouped by County and listed alphabetically*	**Population used for cost allocation** [1]	**Annual amount for S8.A**	**Annual amount for S8.B**

*Mount Vernon name added 7/3/24 .

Permittee *Permittees are grouped by County and listed alphabetically*	**Population used for cost allocation** [1]	**Annual amount for S8.A**	**Annual amount for S8.B**
Totals	5,302,795	$ 1,419,123[3]	$1,976,984

[1] Populations are based on Office of Financial Management data for 2022, accessed in April 2023. The derivation of the populations used to calculate the cost allocations for Phase II counties, Ports of Seattle and Tacoma, and WSDOT are explained in the permit fact sheet.

[2] The first S8.A and S8.B payments are not due until the second year of permit (2025) for Shelton in Mason County. These were new permittees/permit coverage areas in the 2019- 2024 Western Washington Phase II permit.

[3] The total annual S8.A amount for Lower Columbia is $198,993 and the total annual S8.A amount for Puget Sound is $1,220,130. These pooled funding contributions will be managed in separate accounts.

Eastern Washington

Permittee *Permittees are grouped by County and listed alphabetically*	**Population used for cost allocation** [1]	**Annual amount for S8.B**
Asotin County		
Unincorporated	20,000	$7,400
Asotin	1,220	$451
Clarkston	7215	$2,670

APPENDIX 12 –Stormwater Management for Existing Development Program Reporting

Each Permittee shall implement a Stormwater Management for Existing Development (SMED) Program to control or reduce stormwater discharges to waters of the state from areas of existing development.[1] The Program shall aim to focus on strategic stormwater investments over longer planning timeframes.

This Appendix describes project criteria, assigned area required to be managed by Permittees, and reporting SMED requirements associated with Permit Section S5.C.7.

Permittee Assignment of Equivalent Acres

Permittees are required to fully fund, start construction, or completely implement projects that meet the assigned equivalent acres listed in Table 1. Equivalent acres are calculated as described below and is intended to be a measure that compares the project area and BMPs with Appendix 1 standards for LID, flow control, or runoff treatment BMPs where appropriate.

Table 1: Assigned Equivalent Acres according to population for Phase II Permittees.

SMED Stormwater Investments

Permit section S5.C.7.a states:

Permittees shall implement stormwater facility retrofits, or tailored SWMP actions that meet the criteria described in Appendix 12, using one or a combination of the following:

i. *Strategic stormwater investments identified in Stormwater Management Action Plan(s) (SMAPs, S5.C.1.d.), or similar stormwater planning process; and/or*

ii. *Opportunistic stormwater investments identified by leveraging projects outside of SMAP areas to improve stormwater management and infrastructure.*

The following describes the eligible project types for SMAP and Opportunistic stormwater investment to be used to meet the assigned acreage in Table 1, how to calculate credit to project types, and a standard reporting method.

Stormwater Management Action Plan - background

During the 2019 Permit term, where applicable, Permittees were required to develop a Stormwater Management Action Plan (SMAP) for a high priority catchment area.

The SMAP is required to identify:

1. A description of the stormwater facility retrofits needed for the area, including the BMP types and preferred locations.
2. Land management/development strategies and/or actions identified for water quality management.
3. Focused, enhanced, or customized implementation of stormwater management actions related to permit sections within S5, including:
    a. IDDE field screening,
    b. Prioritization of Source Control inspections,
    c. O&M inspections or enhanced maintenance, or
    d. Public Education and Outreach behavior change programs.

Identified actions shall support other specifically identified stormwater management strategies for the basin overall, or for the catchment area in particular.

- If applicable, identification of changes needed to local long-range plans, to address SMAP priorities.
- A proposed implementation schedule and budget sources for:
    - Short-term actions (i.e., actions to be accomplished within six years), and
    - Long-term actions (i.e., actions to be accomplished within seven to 20 years).
- A process and schedule to provide future assessment and feedback to improve the planning process and implementation of procedures or projects.

Opportunistic stormwater investments – background

Aimed at encouraging eligible project types to improve stormwater management infrastructure. These projects do not need to be included in an SMAP to help address the stormwater runoff issues in the area. This is intended to drive stormwater investment wherever feasible and needed. This provision is modeled after the Phase I SMED Program (formerly named Structural Stormwater Control (SSC)), including the list of eligible project types. Opportunistic projects are stormwater projects planned or leveraged outside of the SMAP planning area that meet project eligibility as described below.

SMAP Project Types

Stormwater Facility Retrofits

Stormwater facility retrofits means both projects that retrofit existing treatment and/or flow control facilities and new flow control or treatment facilities or BMPs that will address impacts from existing development. SMAPs were intended to identify the needed flow control or runoff treatment BMP types and preferred locations. BMPs or project types included in this section match the Opportunistic Project types for stormwater facility retrofits:

New Flow Control Facilities

Flow control facilities need not be regional. These facilities do not have to meet the "standard flow control requirement" (refer to Appendix 1, Section 4.7) but they shall be new facilities designed to control stormwater flow from existing development. Project proponents that don't follow design criteria from the SWMMWW, or equivalent manual, should be prepared to provide additional project details at Ecology's request to support calculations for equivalent area. Qualifying projects in this category will be compared against the Flow Control Standard (Minimum Requirement #7).

New Runoff Treatment Facilities

Runoff treatment facilities include facilities that provide oil control, phosphorus treatment, enhanced (dissolved metals) treatment, and basic treatment. Facilities in this category do not have to meet runoff treatment requirements (e.g., treat 91% of the average annual runoff) but they shall be new facilities that provide a treatment benefit for existing development. Project proponents that don't follow design criteria from the SWMMWW, or equivalent manual, should be prepared to provide additional project details at Ecology's request to support calculations for equivalent area. Qualifying

projects in this category will be compared against the Runoff Treatment Standard (Minimum Requirement #6).

New LID BMPs

These facilities are consistent with the lists of On-Site Stormwater Management BMPs of Minimum Requirement 5 and reduce the volume of runoff by infiltrating runoff from the small, more frequent storms. Qualifying new LID BMP projects result in the reduction or prevention of hydrologic changes through use of on-site (e.g., infiltration, dispersion, evapotranspiration, rainwater harvesting) stormwater management BMPs. Qualifying projects in this category will be compared against the LID Performance Standard (Minimum Requirement #5).

Retrofitting of Existing Treatment and/or Flow Control Facilities

Retrofitting is expected to occur on previously constructed stormwater facilities that, if modified, would provide additional hydrologic or runoff treatment benefits. For example, Ecology considers the retrofit of a stormwater pond to provide a settling area and more storage, a retrofit to a stormwater facility.

Land Management/Development Strategies

SMAPs may include identification of lands to protect or conserve from impervious surface conversions or native vegetation removal, and the strategic means for providing the needed protection, which could be addressed via purchase or zoning or land use policy changes, to name a few options. SMAP may also include other zoning or land use policy changes deemed necessary to prevent the water body from maintaining its current designated uses.

Focused, Enhanced, or Customized Stormwater Management Actions

SMAP may include implementation of focused, enhanced, or customized implementation of stormwater management actions related to the following Permit provisions within S5.C in addition to the other required SMAP actions:

- Focused or more frequent IDDE field screening;
- Prioritization of Source Control inspections;
- O&M inspections or enhanced maintenance of facilities you own or operate;
- Maintenance that requires capital construction of more than $25,000; and/or
- Public Education and Outreach behavior change programs to support SMAP actions for the receiving water overall, or for the catchment area in particular.

Opportunistic Stormwater Investments

Below is a listing of eligible opportunistic project types, outside of SMAPs, that Permittees may implement to receive credits toward managed acres. Project types listed as 2-8 are non-structural BMPs that will receive limited credit for this permit term.

Project Types

(1) Stormwater facility retrofits (as described above):

a. New flow control facility

b. New runoff treatment facility (or treatment and flow control facility)

c. New LID BMPs

d. Retrofit of existing treatment and/or flow control facility

(2) Maintenance with capital construction costs ≥ $25,000

This project type applies to maintenance or repair projects that improve the hydrologic or treatment performance of stormwater facilities. This project type is directly related to Operations and Maintenance Program requirements at S5.C.9.a.ii. which reflects that maintenance projects, including repairs, which require capital construction ≥ $25,000 are not subject to the required 2-year window for completing the maintenance. These projects typically compete with the other types of retrofit projects for limited capital construction funding. Ecology intends that these projects be reflected in the SMED program to provide a comprehensive view of MS4 maintenance activities and requirements. Permittees may develop criteria for identifying maintenance projects that reach the capital construction cost threshold on an area-wide or system-wide basis as part of the project prioritization process. A maintenance project that removes sediment from an existing pond to re-establish the original design volume, will qualify under this project type.

(3) Property Acquisition for Water Quality and/or Flow Control Benefits

This category excludes the purchase of property for the siting of a stormwater facility. Instead, purchase of a likely development site to permanently prevent it from being developed would qualify under this category. This category includes forest protection and conservation easements. Riparian habitat acquisition qualifies under this project type. Property used for dispersion does not qualify under this project type; it is considered a New LID BMP.

(4) Restoration of Riparian Buffers

This project type describes planting and restoring of riparian buffers above the ordinary high watermark that can reduce the discharge of pollutants and reduce impacts to waters of the state by protecting or restoring hydrologic capacity.

(5) Restoration of Forest Cover

This project type describes planting and restoring of forest cover that can reduce the discharge of pollutants and reduce impacts to waters of the state by protecting or restoring hydrologic capacity.

(6) Floodplain Reconnection Projects on Water Bodies That Are Not Flow Control Exempt Per Appendix 1

Qualifying floodplain reconnection projects will provide flow reduction and runoff treatment benefits.

(7) Permanent Removal of Impervious Surfaces

This project type describes permanent removal of impervious surfaces and replacement with pervious vegetated surfaces meeting BMP T5.13 or trees that promote infiltration, dispersion, and uptake by plants or reduce the amount of pollution generating impervious surfaces.

(8) Sweeping and line cleaning

Sweeping and line cleaning shall be documented to be in addition to the requirements established in S5.C.9 Operation and Maintenance.

Non-Qualifying Project Types

1. Projects that do not have a nexus with the current MS4 or do not prevent future MS4 impacts.
2. Projects that occur within the receiving water do not qualify, including but not limited to:
    a. In-channel habitat and stream restoration
    b. Fish barrier removal
    c. Stabilization of down cutting
    d. In-stream culvert replacement
    e. Mitigation projects otherwise required to compensate for problems caused by excessive stormwater runoff peak flows and geomorphologically significant flows

How to Calculate Equivalent Acres

Use this section to determine how to credit project types to meeting the assigned Equivalent Acres in Table 1. Counties may implement projects outside of Permit coverage areas to meet their assignment where benefits to receiving waters within the Permit coverage are identified and anticipated.

Stormwater Facility Retrofits

Use the following procedures to calculate the areas managed by stormwater facility retrofits. These may be SMAP or Opportunistic projects. A single project may be eligible to gain equivalent area credit for LID, Runoff Treatment, and Flow Control, based on the water quality benefits provided by the project.

How to Calculate Area for Small Projects under 1 Acre

Small stormwater facility retrofit projects can receive equivalent acres through a simpler calculation, by determining the total area (in acres) draining to the project.

This procedure only applies to projects whose total basin area is one (1.0) acre or less. Projects with basin areas larger than 1 acre must follow the Equivalent Area Calculation process for each appropriate BMP type.

LID Performance Standard Equivalent Area Process

1. Determine the total area (in acres) draining to the project. This is called the "full basin" in these steps.
2. Run the Western Washington Hydrology Model (WWHM, 2012), or other approved continuous simulation model, to determine if the BMP meets the LID Performance Standard for the full basin area.
    - If the project meets the LID Performance Standard, the Equivalent Area equals the area draining to the BMP.
    - If the project uses Full Dispersion functionally equivalent to BMP T 5.30 in Chapter 5 of Volume V of the *Stormwater Management Manual for Western Washington*, the Equivalent Area equals the area draining to the BMP.
3. If the project does not meet the LID Performance Standard for the full basin use the Western Washington Hydrology Model (WWHM 2012), or other approved continuous simulation model to calculate the infiltration area of the BMP required to meet the LID Performance Standard Requirement (refer to Permit Appendix 1, Section 4.5) (e.g., match developed discharge durations to applicable pre-developed durations for the range of pre-developed discharge rates from 8% of the 2-year peak flow up to 50% of the 2-year peak flow). Identify the area available for infiltration in the new facility. This is the "required" New/Redevelopment infiltration area for a new BMP project, or the "required" area added through a project that retrofits an existing BMP.
4. Determine the infiltration area provided by the project under consideration. This is the "actual" infiltration area.
5. Divide the actual infiltration area (4) by required New/Redevelopment infiltration area (3) to get the LID Benefit ratio.
6. Multiply the LID Benefit ratio (5) by the full basin area (1) to get LID Equivalent area. The equivalent area cannot be greater than the full basin area.

Runoff Treatment Equivalent Area Process

1. Determine the total area (in acres) draining to the project. This is called the "full basin" in these steps.
2. Use an approved continuous simulation model to determine the required New/Redevelopment Runoff Treatment flow (cfs) or Volume (ac-ft) for the full basin using WWHM 2012.
3. Determine the flow rate or volume provided by the project. This is the "actual" runoff treatment flow rate or volume of a new BMP project, or the "actual" flow rate or volume added through a project that retrofits an existing BMP.
4. Divide the actual flow rate or volume (3) by the full basin required flow rate or volume (2) to get the Runoff Treatment Benefit ratio.

5. Multiply the Runoff Treatment Benefit ratio (4) by the full basin area (1) to get the MR #6 Runoff Treatment Equivalent area. The equivalent area cannot be greater than the full basin area.

Flow Control Equivalent Area Process

1. Determine the total area (in acres) draining to the project. This is called the "full basin" in these steps. This area can include basins upstream of the new pond that are upstream of other retention/detention facilities if there is a series of facilities that work together to control stormwater flows.
2. Use an approved continuous simulation model, to calculate the amount of retention/detention storage required to meet the Standard Flow Control Requirement (refer to Permit Appendix 1, Section 4.7) (e.g., match developed discharge durations to applicable pre-developed durations for the range of pre-developed discharge rates from 50% of the 2-year peak flow up to the full 50-year peak flow) for the full basin.
3. Identify the volume of retention/detention at the overflow installed for the project (ac-ft). This is the "actual" retention/detention volume of a new BMP project, or the "actual" volume added through a project that retrofits an existing BMP.
4. Divide the actual retention/detention volume (3) by the full basin required New/Redevelopment retention/detention volume (2) to get the Flow Control Benefit ratio. If the ratio is greater than 1.0, use 1.0 as your Flow Control Benefit ratio.
5. Multiply the Flow Control Benefit ratio (4) by the full basin area (1) to get the Flow Control Equivalent area. The equivalent area cannot be greater than the full basin area.

SMAP: Land Management/Development Strategies and Focused, Enhanced, Custom SWMP (Non-structural BMPs)

Permittees that continue to engage in or complete these project types may receive 25% of their assigned equivalent acres from Table 1 by implementing one or both project types. For each of these project types, Permittees shall document actions taken, planned, and estimated/anticipated stormwater benefits of actions each reporting year.

For land management or development strategies, Permittees must document the process to develop, adopt or implement (or both) the strategy. Permittees must describe and document the public process, meetings, and method of implementation.

Focused, Enhanced, Custom SWMP actions shall be actions applied to the SMAP area and exceeds the requirements described in the respective program Permit section. For example, a behavior change program applied to the SMAP area must be in addition to another behavior change campaign being implemented during the same permit term.

Opportunistic project types (non-structural)

Permittees that implement these project types may receive up to 25% of the assigned equivalent acres. Actions above the 25% may still be reported, but will not receive credit. For these project types, the total project area is multiplied by the factor shown below.

Table 2: Non-structural project type multipliers

Project type	Project type factor
Maintenance with capital construction costs ≥ $25,000	0.5 times the acres served by the maintenance activity
Property acquisition	0.5 times acres acquired
Restoration of riparian buffer	0.35 times acres restored
Restoration of forest cover	0.25 times acres restored
Floodplain reconnection projects	0.10 times acres reconnected
Removal of impervious surfaces	1.0 times sq. ft of impervious surface removed
Sweeping and line cleaning	0.1 times curb miles swept 0.01 times the linear feet of lines cleaned

Street Sweeping Programs – Permittees may include street sweeping area, only if they are above and beyond the sweeping requirements in S5.C.9 Operations and Maintenance. They must be designed, executed, and documented to have the following characteristics:

- Only using a high efficiency sweeper.
- Only street sweeping routes from applicable MS4 service areas can be used to support runoff treatment benefit calculations.
- Qualifying street sweeping program is based on curb miles or acres swept (as documented through broom use and tracking of parked cars, vegetation, and other conditions that prevent the sweeper from reaching the edge of the roadway) and frequency of sweeping that is in addition to the street sweeping requirements in S5.C.9 Operations and Maintenance Program.

Stormdrain Line Cleaning Programs – Equivalent Area is based solely on linear-feet cleaned during the specified time. Line cleaning of the same section of stormwater conveyance pipe within a 5-year permit cycle does not qualify. Portions of lines that were inaccessible during line cleaning cannot be included in the calculation. If line cleaning is used to comply with S5.C.9 Catch Basin Inspection Alternative (c), it cannot be counted here.

How to Calculate Credit for Regional Collaboration

If a regional collaborative project reaches a cross-jurisdictional agreement or committed funding stage (but doesn't yet meet 'fully funded'), Phase II permittees may receive up to 25 percent of their assigned acreage credit from these collaborative projects. Once a project is complete, the Permittee will receive credit for their individual assignment. Document actions taken, planned, and estimated/anticipated stormwater benefits.

Instructions for Appendix 12 Reporting

Each year, City and County Permittees must submit an updated list of SMED projects to Ecology with their Annual Reports. The submittal shall be in .xlsx (Excel) file and include the information in this Appendix. This section provides additional information and instructions for Permit section S5.C.7.

Annual Reporting of projects provides the opportunity to track and report progress. Fill in all values as completely as possible each year. In subsequent years, Permittees should update the values for each project and add projects to new rows, as needed. You may remove projects that are cancelled or otherwise will not be used toward achieving the defined level of effort (as expressed in equivalent acres as shown in Table 1). Projects that were started on or after January 1, 2023, and are fully funded, started construction, completed, or regional collaboration by March 31, 2028, may be included.

Enter project status of stormwater facility retrofits on separate lines.

Report the following:

Project List & Project Name

Permittees shall assign each project its own row. Project names may change over time. If a project name changes, include a note or parenthetical that ties the new name to the old name. Maintenance actions with a recurring event frequency over multiple years must be named uniquely for each year (*e.g.*, Sweeping for WQ 2025).

Project Type

Project type shall be reported as described in this Appendix, distinguish between SMAP and opportunistic project types, stormwater facility retrofit type or non-structural project type.

SMAP land management/development strategies or Focused, Enhanced, or Customized SWMP actions must be fully described, including completed and anticipated actions.

Transportation-related Project Type

Describe how a project is transportation related and addressing high traffic areas. Describe in Comments how high traffic is determined locally. Note here whether the project is managing stormwater from road surfaces or other transportation-related surfaces.

Status

Report the status of the project type as follows:

- Fully Funded is for stormwater facility retrofit projects that are at or beyond design report stage and there is a documented source of funding and commitment to complete the project during the next permit cycle by March 31, 2028. Design Report Stage means project feasibility is established, BMP(s) are selected and their location(s) identified, site lay-out established, project cost developed, and proposed schedule is created.

- The started construction stage is for stormwater retrofit facilities that have begun a construction activities.
- Complete/Implementation stage is for completed stormwater facility retrofit projects, for SMAP land management/development strategies or Focused, enhanced, or customized SWMP actions, fully executed property purchases, implemented maintenance actions (as described herein), and completed restoration projects. A restoration project is not considered completed until any maintenance warranty times established with the construction contract have been completed, or vegetation establishment can be verified.
- For tracking purposes, update the status of projects for each yearly submittal.

Latitude/Longitude

If your project has multiple locations, include a Lat/Long for each location and describe the reason why in an explanatory note. Report Lat/Long in decimal degrees to six decimal places, and include the Geographic Coordinate System (e.g., WGS84). Maintenance actions that cover a geographic area shall provide zip codes for the area addressed and attach a map with the final reporting period.

Receiving Waterbody Name

List the waterbody to which the stormwater from the project discharges. If a receiving water body is unnamed, also include the name of the water body that the unnamed creek/lake is a tributary. Also indicate if the stormwater from the project is infiltrated wholly or partially to groundwater.

Cost Estimate

Estimate total project costs and update costs over the course of the project where known.

Where known, include local/state/federal funding sources by percentage in the 'Comments' field. Once a project is complete, the comments should reflect the accurate funding source distribution. For projects still underway, you may want to include an explanatory note to distinguish between funding sources that are secured and funding sources that you estimate.

Basin Area

Enter the total area served by the stormwater retrofit facility project (e.g., the full basin area). For stormwater facilities, this is the catchment area contributing runoff to the facility, including upstream facilities working as a system.

If the project serves an area under one acre, enter the total area for the basin. There are more detailed instructions in the "How to Calculate Area for Small Projects Under One Acre".

LID Equivalent Area

For each stormwater retrofit facility project that you expect to result in a hydrologic benefit for small storms, use the LID Performance Standard Equivalent Area process described in the section titled 'How to Calculate Equivalent Area.'

Runoff Treatment (RT) Equivalent Area

For each stormwater retrofit facility project that you expect to result in a runoff treatment benefit (e.g., TSS, dissolved Copper, dissolved Zinc, or Total Phosphorus), calculate Runoff Treatment Equivalent Area as described in the section titled, "How to Calculate Equivalent Area."

Flow Control (FC) Equivalent Area

For each stormwater retrofit facility project that you expect to result in a hydrologic benefit for larger storms, use the Flow Control Equivalent Area process described in the section titled 'How to Calculate Equivalent Area'.

Non-structural or Regional Collaboration Project Area

For opportunistic non-structural project types, that are not a stormwater retrofit facility, report the area for the relevant project type, up to 25% of assigned acreage:

- The area purchased or otherwise conserved or restored.
- For line cleaning projects, this is the line miles cleaned.
- For street sweeping projects, enter the amount for curb miles or acres swept.

Specify the units used for any area. For street sweeping, one curb mile for an 8.25 ft wide sweep from the curb would cover an area equal to one acre. If you use curb miles as the unit, but your sweeper width is different than this, specify the sweeper width.

For non-structural SMAP projects, report 25% of assigned acreage if implementing SMAP: Land Management/Development Strategies and/or Focused, Enhanced, Custom SWMP actions.

Permittees may receive a maximum of 50% of their assigned acreage for implementing opportunistic and SMAP non-structural project types this permit term.

For regional collaboration, report 25% of assigned acreage when a regional collaborative project reaches a cross-jurisdictional agreement, or committed funding stage, but doesn't yet meet 'fully funded.' This may only be applied one time per permit term.

Tribal benefits

Identify Project types that intend to provide stormwater management benefits to tribal waters or resources.

Overburdened Communities

Identify Project types that intend to provide stormwater management benefits to overburdened communities including specifically Vulnerable Populations and Highly Impacted Communities.

Total Equivalent Acres

Provide the calculated value of the Equivalent Acres for each Project type. For Project types receiving a percentage of the assigned acres, provide the total acres based on the calculation.

If the project provides benefits for standard flow control and/or runoff treatment, and/or LID, calculate equivalent areas for each benefit. **The Equivalent Acres for LID, runoff treatment, and flow control can be totaled.** For example, a bioretention facility would get equivalent acres for LID, based on the LID performance standard, Runoff Treatment Equivalent Acres for the amount that infiltrates through the bioretention soil media, and Flow Control Equivalent Acres based on the amount that does not overflow.

Opportunistic non-structural projects in addition to 25% (acreage, and project type)

Report opportunistic non-structural project which exceeds the 25% limit. These projects will not receive credit but may still be reported.

Completed Stormwater Facility Retrofit Acreage in excess to be applied for next permit term

Stormwater facility retrofit projects which are completely implemented by the expiration date of this Permit that will exceed the area required for this Permit term may apply the excess as a credit to be used for the next Permit term (e.g. 2029-2034 Permit term), not to exceed 50% of the next Permit's requirement.

Stormwater facility retrofits planning and projections

Report the amount of estimated or projected equivalent acres managed by stormwater facility retrofits for the next Permit term (e.g. 2029-2032).

Comments

This section can also be used to note any other information you feel is relevant, that is not addressed in other columns.

This page intentionally left blank

APPENDIX 13 – IDDE Reporting Data and Format

Permittees are required to submit the following information with the online annual report form, pursuant to Special Condition S9.A.

This is the complete list of information that all Permittees are required to report for each IDDE incident found, reported to, or investigated by the Permittee. Each Permittee may use either their own system or the WQWebIDDE form for recording this data.

The form is *required* for reporting, unless you are using your own tracking system.

If using your own tracking system, this information must be provided in an electronic format that follows the data schema provided at the end of this document and is easily transferred to a database. For annual reports due on March 31, 2025, a .xml submittal that follows the schema is required.

A complete report will include a separate entry (even if left blank) for every line below and must use the precise verbiage and spelling below. For all incidents where the answer to #6 is no, #7-12 are not required. All dates are in MM/DD/YYYY format.

1. Jurisdiction name and permit number
2. Date incident discovered or reported to you
3. Date of beginning your response
4. Date of end of your response
5. How was the incident discovered or reported to you? *(select **all** that apply)*
    - Pollution hotline (phone, web, app)
    - Direct report to your staff
    - Staff referral
    - Other agency referral
    - ERTS referral
    - Business inspection
    - Construction inspection
    - MS4 inspection or screening
    - Other *(Explanation required)*

6. Discharge to MS4? *(select **one**)*

- Yes – notified Ecology
- Yes – notified DOH and Ecology
- Yes – did not notify
- Yes – allowable or conditionally allowable
- No – none found
- No – cleaned up before reached MS4
- No – discharge to Underground Injection Control (UIC) well
- Unknown
- Other *(Explanation required)*

7. Incident Location

- Address/Intersection
- City
- Zip *(optional)*

And/Or

- Latitude
- Longitude

8. Pollutants Identified *(select **all** that apply)*

- Unconfirmed, unspecified, or not identified
- Fuel and/or vehicle related fluids
- Food-related oil/grease
- Sediment/soil
- Solid waste/trash
- Sewage/septage/pet waste/human waste
- Other wastewater
- Paint
- Firefighting foam
- Soap or cleaning chemicals
- Other *(Explanation required)*

9. Source or Cause *(select **all** that apply)*

- Unconfirmed, unspecified, or not identified
- Vehicle-related business
- Food-related business
- Landscape-related business
- Mobile business
- Construction activity
- Other commercial/industrial activity
- Vehicle collision
- Other accident/spill
- Intentional dumping
- Illicit connection
- Other *(Explanation required)*

10. Source tracing approach(es) used *(select **all** that apply)*

- Not applicable
- Observation (color/sheen/turbidity/floatables/odor)
- Map analysis
- Dye, smoke, or pressure testing
- Field indicator measurements
- Analytical laboratory indicators
- Other *(Explanation required)*

11. Correction/elimination methods used *(select **all** that apply)*

- Clean-up
- Education/technical assistance
- Add or modify operational source control BMP
- Add or modify structural source control BMP
- Add or modify treatment BMP
- Enforcement
- Referred to other agency or department
- Other *(Explanation required)*

12. Field notes, explanations, and/or other comments

IDDE XML Schema Document (IDDE.xsd)

        <xs:annotation>

          <xs:documentation>

            No Question: Incident ID

          </xs:documentation>

          <xs:documentation>

            This is a unique ID code for all IDDEs on your permit, but not globally
unique.  The usual sequence counting from 1 works very well.

            WQWebIDDE uses the time and username to create this value (ex:
190702174507842WQWebPortal) when an IDDE is started.

            If omitted, IDDE processing can't identify IDDEs to update and will
simply insert all IDDEs as fresh records for reporting.

APPENDIX 14 – Stormwater Management Action Planning for New Permittees

Stormwater Management Action Planning[1] (SMAP). Permittees shall conduct a similar process and consider the range of issues outlined in the *Stormwater Management Action Planning Guidance* (Ecology, 2024; Publication no. 24-10-027). Permittees may rely on another jurisdiction to meet all or part of SMAP requirements at a watershed-scale, provided a SMAP is completed for at least one priority catchment located within the Permittee's jurisdiction.

1. **Receiving Water Assessment**. Permittees shall document and assess existing information related to their local receiving waters and contributing area conditions to identify which receiving waters are most likely to benefit from stormwater management planning.

   By March 31, 2027, Permittees shall submit a watershed inventory and include a brief description of the relative conditions of the receiving waters and the contributing areas. The watershed inventory shall be submitted as a table with each receiving water name, its total watershed area, the percent of the total watershed area that is in the Permittee's jurisdiction, and the findings of the stormwater management influence assessment for each basin. Indicate which receiving waters will be included in the prioritization process. Include a map of the delineated basins with references to the watershed inventory table.

   a) Identify which basins are expected to have a relatively low Stormwater Management Influence for SMAP. See the guidance document for definition and description of this assessment. Basins having relatively low expected Stormwater Management Influence for SMAP do not need to be included in 2-3.

2. **Receiving Water Prioritization**. Informed by the assessment of receiving water conditions in 1), above, and other local and regional information, Permittees shall develop and implement a prioritization method and process to determine which receiving waters will receive the most benefit from implementation of stormwater facility retrofits, tailored implementation of SWMP actions, and other land/development management actions (different than the existing new and redevelopment requirements). The retrofits and actions shall be designed to:

   a) conserve, protect, or restore receiving waters through stormwater and land management strategies that act as water quality management tools,

   b) reduce pollutant loading, and

   c) address hydrologic impacts from existing development as well as planned for and expected future buildout conditions.

[1] New Permittees are exempt from S5.C.1.d. for this permit term.

No later than June 30, 2027, document the prioritized and ranked list of receiving waters.

d) The Permittee shall document the priority ranking process used to identify high priority receiving waters. The Permittee may reference existing local watershed management plan(s) as source(s) of information or rationale for the prioritization.

e) The ranking process shall include the identification of high priority catchment area(s) for focus of the Stormwater Management Action Plan (SMAP) in (3), below.

3. **Stormwater Management Action Plan (SMAP)**. No later than March 31, 2028, Permittees shall develop a SMAP for at least one high priority catchment area from (2), above, that identifies all of the following:

   a) A description of the stormwater facility retrofits needed for the area, including the BMP types and preferred locations. Include projects that address transportation-related runoff from high traffic areas.

   b) Land management/development strategies and/or actions identified for water quality management.

   c) Focused, enhanced, or customized implementation of stormwater management actions related to permit sections within S5, including:

      (1) IDDE field screening,
      (2) Prioritization of Source Control inspections,
      (3) O&M inspections or enhanced maintenance, or
      (4) Public Education and Outreach behavior change programs.
      (5) Identified actions shall support other specifically identified stormwater management strategies and actions for the basin overall, or for the catchment area.

   d) If applicable, identification of changes needed to local long-range plans, to address SMAP priorities.

   e) A proposed implementation schedule and budget sources for:

   f) Short-term actions (i.e., actions to be accomplished within six years), and

   g) Long-term actions (i.e., actions to be accomplished within seven to 20 years).

4. Actions in the SMAP that may benefit overburdened communities, including specifically Vulnerable Populations and Highly Impacted Communities.

5. A process and schedule to provide future assessment and feedback to improve the planning process and implementation of procedures or projects.

Section 1: Introduction

As part of the City of Auburn (City) 2024 Comprehensive Storm Drainage Plan (Plan) update, Brown and Caldwell (BC) performed hydrologic and hydraulic (H&H) modeling analysis to evaluate existing drainage problems and capital solutions. BC performed the analysis with updated existing models and an extended meteorological time series.

The City initiated an extensive drainage system data inventory and H&H modeling effort to support the 2009 and 2015 Comprehensive Storm Drainage Plans (2009 Plan and 2015 Plan, respectively). After the 2009 and 2015 Plans, the City refined and developed new H&H models. As a result, 16 storm drainage system models have been created or refined for areas throughout the City. Each model is identified by the lettered subbasin drainage area(s) covered with the model extent. For example, the GHI model covers three subbasins: G, H, and I. Two of the 16 models (BCDF and GHI) were calibrated as part of the 2015 Plan and then updated after the 2015 Plan with new stormwater infrastructure, refined subbasin delineations, and refined calibration with monitored flow data.

The City reviewed the projects from the 2015 Plan and other more recent potential projects considered on behalf of this Plan. Of these, six potential projects were chosen for H&H modeling to evaluate whether they should be included as capital improvement projects (CIP) in the 2024 Plan.

Table B-1 summarizes the potential projects modeled as part of the 2024 Plan.

Table B-1. 2024 Plan Potential Project Modeling Summary

2024 Project ID [a]	Project Name	Subbasin Model Name	Project Description and Status
CP2116	R Street SE Widening - 22nd Street SE to 33rd Street SE	BCDF, AZ, and R	Stormwater capacity project evaluated as part of a comprehensive roadway improvement project. Currently at 60% design.
9	30th Street NE Area Flooding, Phase 2	GHI	Stormwater capacity capital improvement project (CIP) identified in the 2015 Plan (2015 Plan CIP ID is 4A). Minor piping improvements in 2018 may have reduced flooding problem.
-	30th Street NE Area Flooding, Phase 3	GHI	Stormwater capacity CIP previously identified in the 2015 Plan (2015 Plan CIP ID is 4B).
-	West Hills Drainage Improvements near S 314th Street & 54th Avenue S	No model	Relocate stormwater flows to public conveyance. CIP was previously identified in 2015 Drainage Plan (2015 Plan CIP ID is 5B).
11	Christa Ministries Facility Retrofit	GHI	New water quality improvement CIP identified as part of the 2024 Plan.
-	17th Street Pond Capacity	BCDF	New stormwater system capacity improvement project identified as part of the 2024 Plan.

[a] If the project was selected to carry forward as one of the capital improvement projects (CIP) within the 2024 Plan, it was given a numerical ID ranging from 1-16. Projects that were included within the City's capital facilities plan (CFP) follow the format of CPXXXX for their project IDs, where the Xs represent numeric placeholders. Line items with neither a CIP ID on behalf of the 2024 Plan, nor a CFP ID were evaluated as part of the modeling effort but were not chosen to carry forward as a 2024 CIP or within the CFP.

Section 2: Input Data and Model Updates

This section describes updates to the precipitation record and H&H models used to evaluate the potential projects listed in Table B-1.

2.1 Precipitation Record Extension

Auburn's H&H models use historical meteorological data to estimate stormwater flows and storage within the City's storm drainage system. The data consists of monthly evaporation and 15-minute precipitation depth. As part of the 2024 Plan, BC extended the 15-minute precipitation record to September 30, 2022, creating a 75-year precipitation record.

The Auburn precipitation record used for modeling is a composite from several rain gauges. The preferred rain gauge is located at Auburn City Hall and is maintained and operated by King County (King County 2022). Rainfall is used from other gauges when the City Hall gauged data is not available. Table B-2 summarizes the data sources for the composite precipitation record.

Table B-2. Auburn Composite Precipitation Record Summary

Source	Period	Notes
SeaTac Rainfall from WWHM2012	10/01/1948 00:00 to 11/30/2007 23:45	
Lakeland Hills	12/01/2007 00:00 to 12/06/2007 23:45	SeaTac 15-minute data not representative of Auburn hourly data.
SeaTac Rainfall from WWHM2012	12/07/2007 00:00 to 12/31/2009 23:45	
City of Auburn 15-minute rainfall	01/01/2010 00:00 to 12/31/2010 23:45	
City of Auburn aggregated 5-minute	01/01/2011 00:00 to 11/14/2012	
Lakeland Hills	11/14/2012 to 12/05/2012	City Hall rain gauge error (rain gauge top blew off).
City of Auburn aggregated 5-minute	12/05/2012 00:00 to 09/30/2022 23:45	

WWHM2012 = Western Washington Hydrology Model

2.2 Model Refinement

Auburn's H&H models have been updated and refined since the calibration efforts performed on behalf of the 2015 Plan. Updates include refining basin delineation and adding storm drainage features (conveyance and structures) from recently constructed projects. Four subbasin models were updated as part of the 2024 Plan or under a separate modeling contract, GHI, BCDF, AZ, and R. The model updates are described below. Figure B-1 shows the four subbasin models updated as part of the 2024 Plan relative to the City extent.

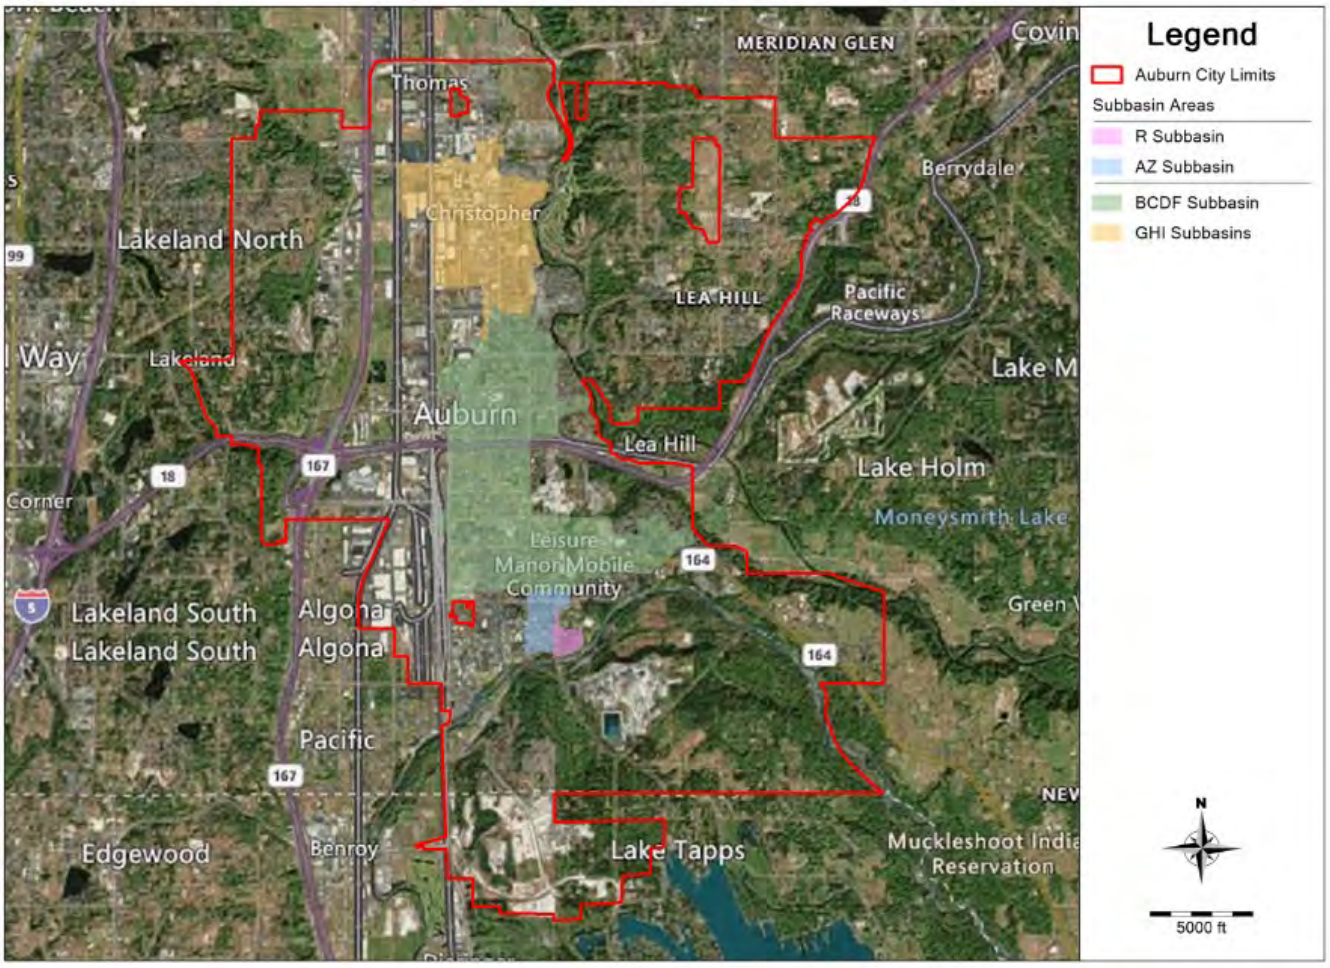

Figure B-1. Subbasin Models Updated on Behalf of Auburn's 2024 Comprehensive Storm Drainage Plan

2.2.1 GHI Subbasin Model

Since the 2015 Plan, BC has updated the calibrated GHI subbasin model with new stormwater projects at the City of Auburn Airport and used updated geographic information system (GIS) data to refine subbasin boundaries in the vicinity of the Brannan Park pump station.

Airport Area Updates. Model updates at the airport include those associated with CP1516 Runway 16-34 Extension and Change Order #2 and CP2118 North Airport Stormwater Improvements Phase 2. Key model updates from these projects included:

- Adding new impervious area, refining subbasin boundaries, and adding ChamberMaxx stormwater detention for the 16-34 runway extension.
- Isolating Pond I and the low elevation area (north hangar area) on airport property from the stormwater system in 30th Street NE so that high flows in the 30th Street NE system do not backwater to the pond and flood the low north hangar area.
- Making better use of storage in Pond I by reconfiguring connecting airport property stormwater pipes.
- Filling in Pond F and routing the Corporate Park Pump Station flows to Pond G.

Brannan Park Pump Station Area Updates. BC refined the GHI model in the vicinity of Brannan Park Pump Station. Upstream of the pump station near I Street NE and 32nd Place NE, new storm pipe was added that routes roadway runoff to the main trunk line in 30th Street NE. Downstream of the pump station, the model was updated from a simplified outfall to a force main connection to the outfall at Reddington wet biofiltration swale.

2.2.2 BCDF Subbasin Model

BC updated the calibrated BCDF model to reflect recent or imminent stormwater conveyance projects.

- **CP1726–2019 Local Street Reconstruction As-Builts** (M Street between 25th Street SE and 29th Street SE, and 28th Street SE between M Street SE and T Street SE). This project was part of a street improvement project that helped improve conveyance capacity. The project included new pipe alignments and changes to the drainage basin delineation adding 7 acres to the B subbasin from the adjacent AZ subbasin.
- **CP1614–2017 Local Street Reconstruction and Preservation As-Builts** (R Street from 28th Street SE to 25th Street SE, 28th Street SE from R Street SE to T Street SE and portions of T Street SE, U Street SE, 27th Street SE and 26th Street SE). This project was part of a street improvement project that helped improve conveyance capacity. The project resulted in a new pipe alignment and changes to the drainage basin delineation. In addition, approximately 1.9 acres of the CIP1614 project is routed to infiltration facilities. The effective impervious area of the model was reduced by the amount of area routed to infiltration pipes and facilities.
- **CP2125–D Street SE and 23rd Street SE Storm Improvements 90% Submittal**. This project, identified as Project 7 and Project 8 in the 2015 Plan, will improve system capacity by constructing new conveyance in D Street SE (Project 7) from 27th Street SE to 21st Street SE, in 21st Street SE near D Street SE and in 25th Street SE near D Street SE. Improvements in 23rd Street SE and K Street SE (Project 8) were included in the plan set but may not be included in the imminent bid set. However, Project 8 improvements were included in the model update to reflect ultimate post-project conditions. These include conveyance improvements in 23rd Street SE near F Street SE and in K Street SE between 23rd Street SE and 21st Street SE.

2.2.3 AZ Subbasin Model

BC updated the uncalibrated AZ model to reflect recent improvements associated with CP1726 and CP1614 projects described above.

2.2.4 R Subbasin Model

BC updated the uncalibrated R basin model conveyance, hydrologic parameters, and basin delineation to be current with other adjacent models (AZ subbasin model). The City has not used the R Basin for any existing or proposed condition evaluations since the subbasin model was developed as part of the 2009 Plan.

2.3 Flow Frequency and Design Storms

After the basin models were updated to reflect existing and imminent CIP conditions, a frequency analysis was completed for each model by performing a long-term simulation (from 1948 to 2022). The long-term flow timeseries were then used to determine the 2% and 4% exceedance storms (one-in-50-year and one-in-25-year flows, respectively) per subbasin model. These storms are used as design storms to evaluate the potential projects listed in Table B-1.

For the long-term simulations, the hydraulic networks of the models were modified so that there were no restrictions to flow and there was free discharge at outfalls. As a result, all simulated runoff could be conveyed without substantial system storage and attenuation.

The event peak flows from the simulations were selected in PCSWMM[1] using two event-based criteria: Minimum inter-event time (time between peak storms) of 12 hours and a flow threshold (varies by subbasin). The peak flows were ranked, and the flow frequencies were established with estimators derived from Cunnane plotting position formulae. The events associated with the 25-year peak flows were used to size storm drainage conveyance to meet the relevant level of service. The results of the flow frequency analysis for the GHI, BCDF, AZ, and R subbasin models are provided in Tables B-3, B-4, B-5, and B-6, respectively. Table B-7 lists the storms that generated the 100-, 50-, and 25-year flows for the subbasin models.

Flow frequencies are unique to each subbasin because of the different hydrologic and hydraulic characteristics of each subbasin. As a result, the storms associated with the return periods are different for each basin.

Table B-3. GHI Subbasin Frequency Analysis Summary

Peak flow rank	Event start date/time	Peak event flow (cubic feet per second) [a]	Return period (year)
1	10/20/2003 4:30	105.0	123.7
2	9/18/2021 15:25	88.6	46.4
3	11/6/2006 0:20	88.5	28.5
4	1/9/1990 4:35	87.4	20.6
5	11/18/2003 10:25	86.0	16.1
6	11/4/2006 15:15	84.4	13.3
7	11/24/1990 4:50	80.1	11.2
8	10/5/1981 23:20	76.4	9.8

Table B-7. Design Storms by Subbasin Summary							
	100-year		50-year		25-year		
Basin	Start Date	Peak Flow Duration (hour)	Start Date	Peak Flow Duration (hour)	Start Date	Peak Flow Duration (hour)	Flow Measurement Location
GHI	10/20/2003	32	9/18/2021	1	11/6/2006	38	Inflow to Brannan Park Pump Station
BCDF	10/20/2003	20	11/6/2006	17	1/9/1990	8	Inflow to 17th Street Pond
AZ	9/18/2021	1	10/20/2003	16	9/7/2019	1	Inflow to 36th Street Pond
R	9/18/2021	1	9/7/2019	1	10/20/2003	11	Outfall to White River at R Street

2.4 Potential Project Evaluations

Of the six projects considered for inclusion in the 2024 Plan (see Table B-1), two were evaluated with the updated subbasin models and considered viable projects. Another two were evaluated but considered not viable because the proposed project would provide little improvement to capacity or reduce conveyance capacity. The City initially decided to defer the remaining two projects to the next planning period, so BC did

not evaluate them. However, after reevaluation, the City decided to include one of these two projects, the 30th Street NE Area Flooding, Phase 2 project, as a CIP in the 2024 Plan.

Table B-8 lists the potential projects, associated model(s), and status.

Table B-8. 2024 Plan Potential Projects and Evaluation Status

2024 Project ID [a]	Project Name	Associated Model Name	Project Evaluation Status
CP2116	R Street SE Widening - 22nd Street SE to 33rd Street SE	BCDF, AZ, and R	Evaluated and included in 2024 Plan.
11	Christa Ministries Facility Retrofit	GHI	
-	30th Street NE Area Flooding, Phase 3	GHI	Evaluated and not included in 2024 Plan.
-	17th Street Pond Capacity	BCDF	
-	West Hills Drainage Improvements near S 314th Street & 54th Avenue S	No model	Not evaluated. Deferred to later planning period.
9	30th Street NE Area Flooding, Phase 2	GHI	Not evaluated but included in 2024 Plan.

[a] If the project was selected to carry forward as one of the capital improvement projects (CIP) within the 2024 Plan, it was given a numerical ID ranging from 1-16. Projects that were included within the City's capital facilities plan (CFP) follow the format of CPXXXX for their project IDs, where the Xs represent numeric placeholders. Line items with neither a CIP ID on behalf of the 2024 Plan, nor a CFP ID were evaluated as part of the modeling effort but were not chosen to carry forward as a 2024 CIP or within the CFP.

2.4.1 Included Projects

Two projects were evaluated with H&H models and determined to be viable projects for inclusion in the 2024 Plan.

2.4.1.1 CP2116–R Street SE Widening - 22nd Street SE to 33rd Street SE

The R Street SE Widening project CP2116 is currently in design and estimated to begin construction in 2025. The project will improve the R Street SE/29th Street SE intersection, add a new southbound lane from 22nd Street NE to 33rd Street NE, and provide new roadway surface from 22nd Street SE to the White River bridge. As part of the project, the City is improving underground utilities as needed, including storm drainage, sewer pipe, and water lines.

The project lies within three drainage subbasins (B, A, and R subbasins) and, as a result, is represented in three of the City's subbasin models (BCDF, AZ, and R). Figure B-2 shows the project extent and the modeled subbasin delineation.

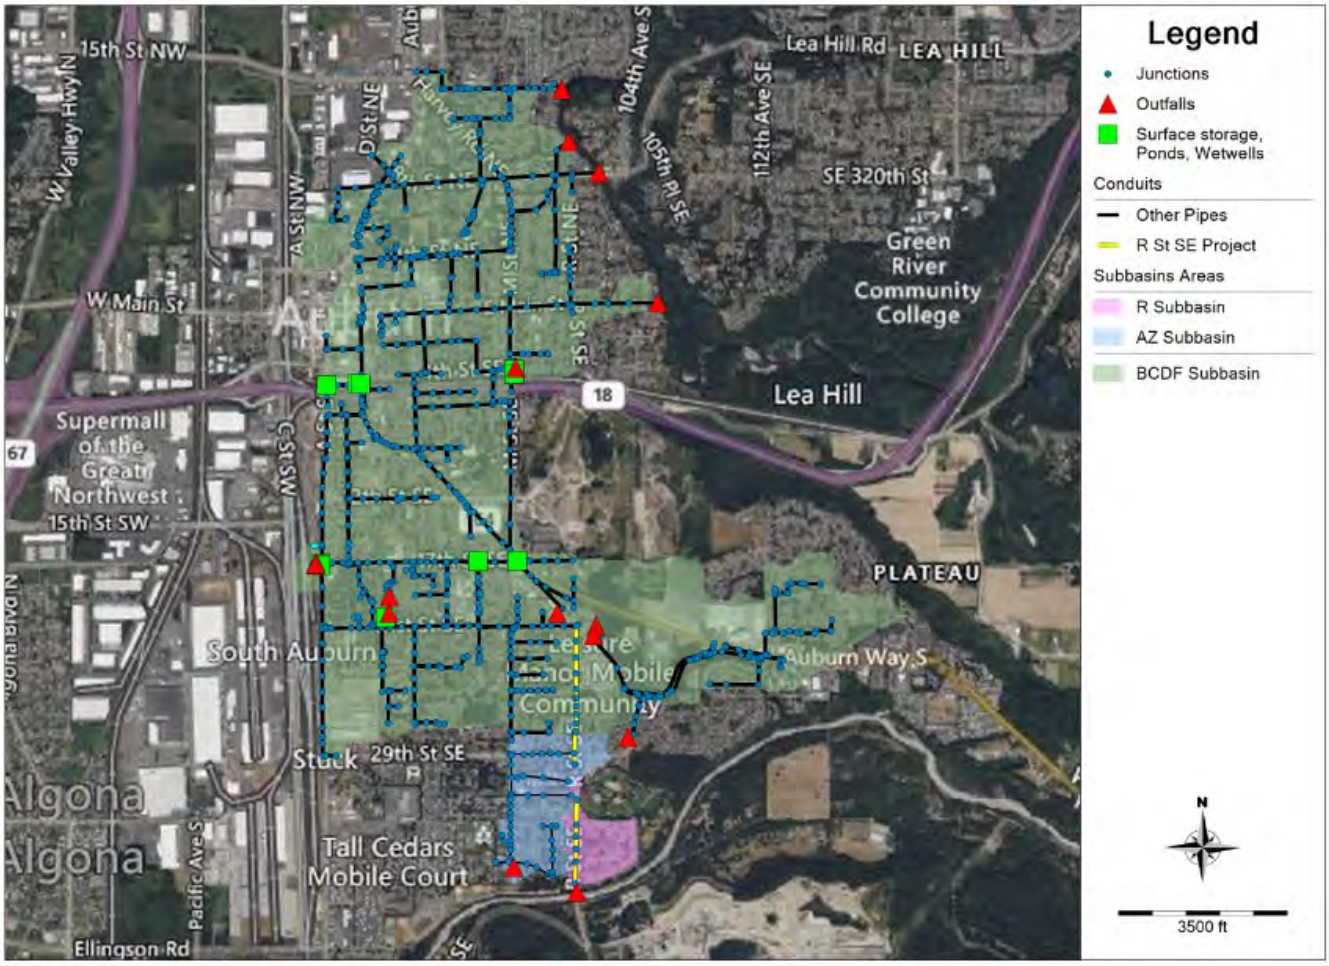

Figure B-2. R Street SE Widening Project Subbasins

BC evaluated the project at the 60% design phase with the 25-year storm flows developed for the BCDF, AZ, and R subbasin models. For all three model evaluations, the design storm simulation showed flooding within the project area resulting from downstream backwater. City staff recommended sizing the R Street SE project pipes assuming downstream impacts are alleviated as part of a future CIP. This evaluation resulted in increased pipe sizes for the R Street SE Project and the identification of the need for a future downstream CIP.

Figures B-3 through B-8 show the plan and profile for the 25-year design storm of the R Street SE Widening project and the future CIP needed to alleviate flooding in the project area from backwater. Table B-9 summarizes the recommended pipe sizes for the R Street SE Widening project and the future CIP.

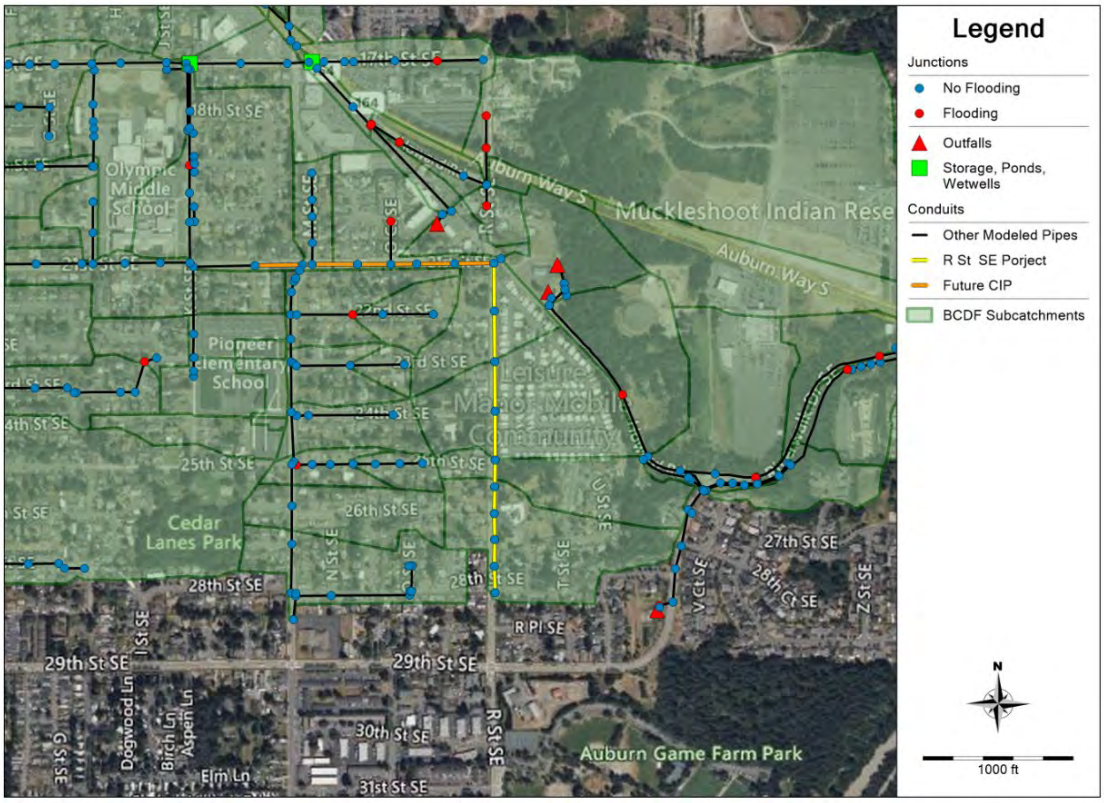

Figure B-3. Plan View of R Street SE Widening and Future CIP (BCDF Subbasin Model, 25-year storm flows [1/9/1990])

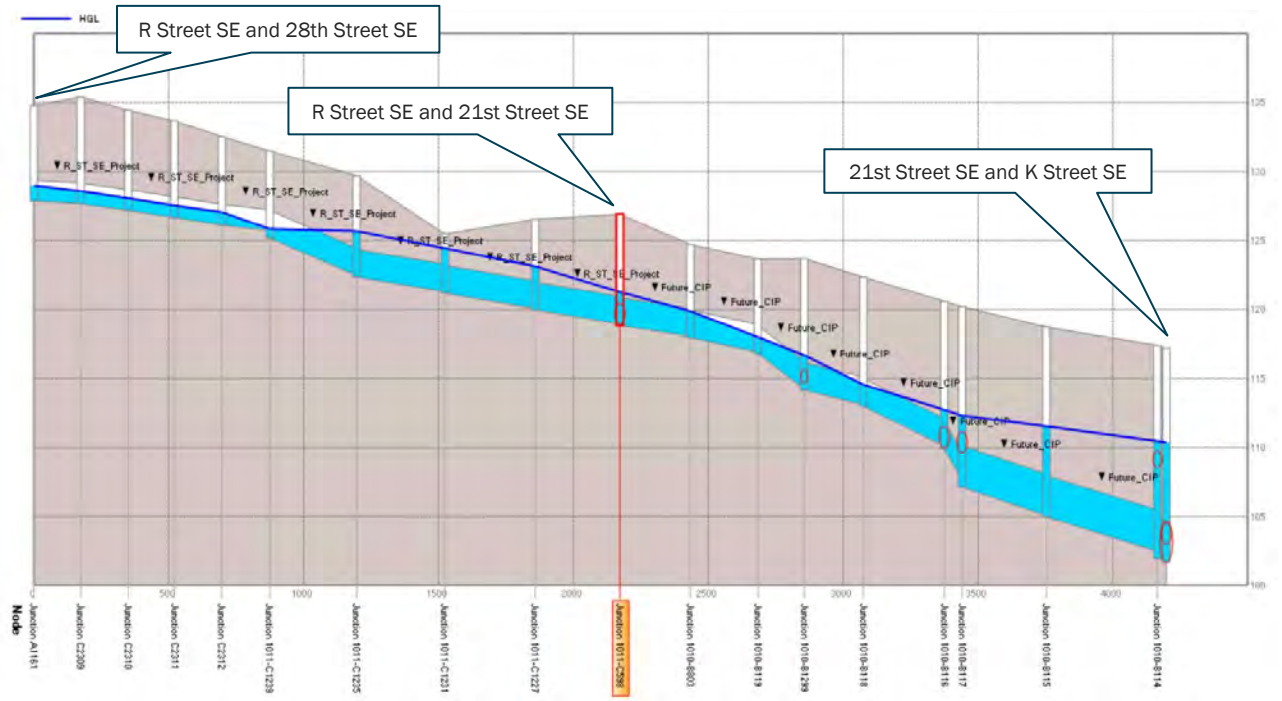

Figure B-4. Hydraulic Grade Line Profile View of R Street SE Widening and Future CIP (BCDF Subbasin Model, 25-year storm flows [1/9/1990])

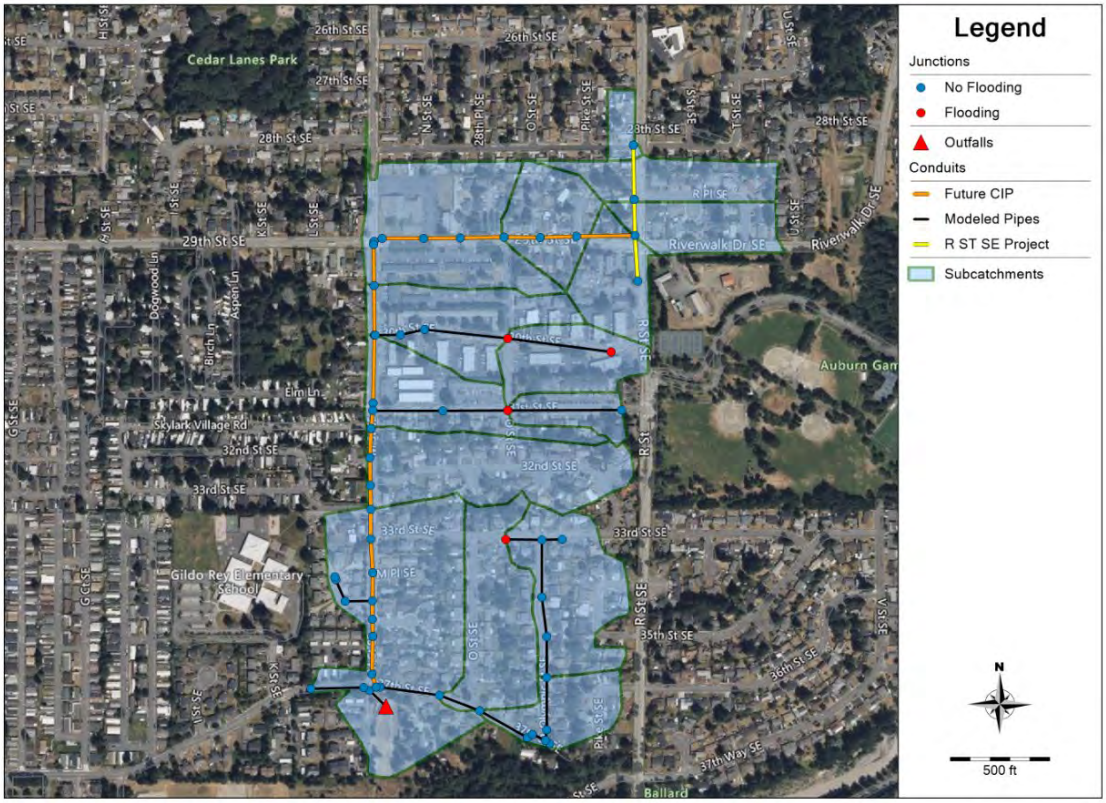

Figure B-5. Plan View of R Street SE Widening and Future CIP (AZ Subbasin Model, 25-year storm flows [9/7/2019])

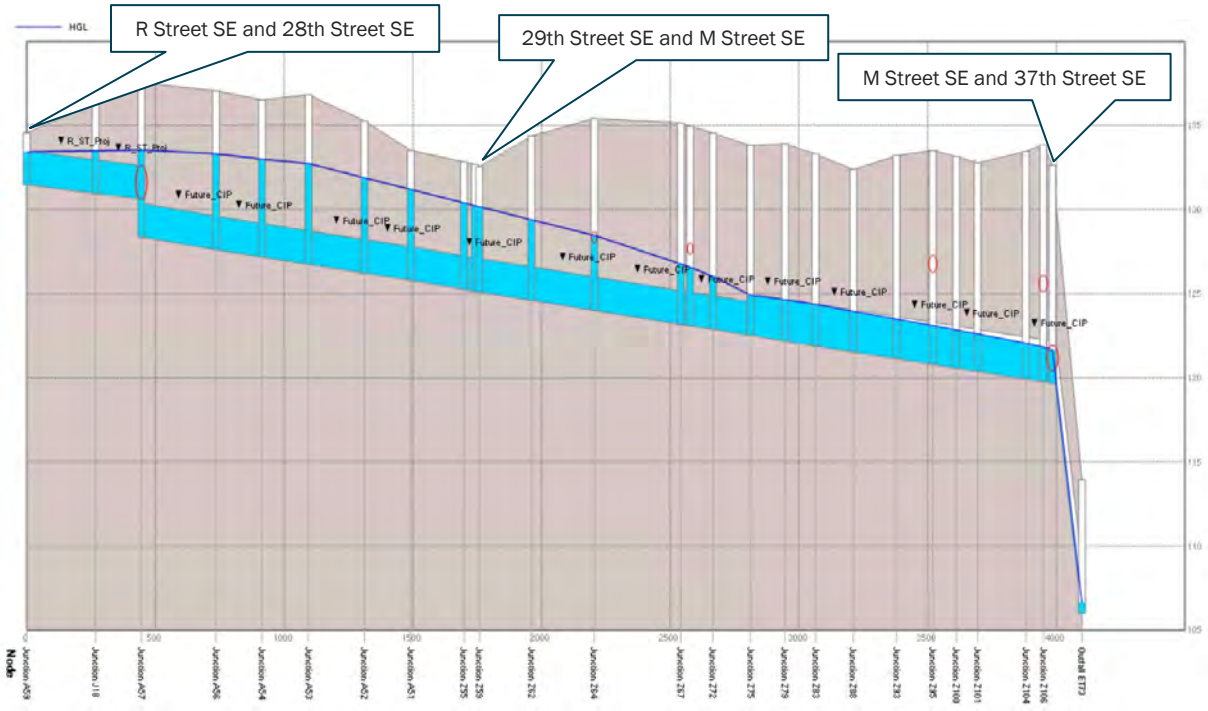

Figure B-6. Hydraulic Grade Line Profile View of R Street SE Widening and Future CIP (AZ Subbasin Model, 25-year storm flows [9/7/2019])

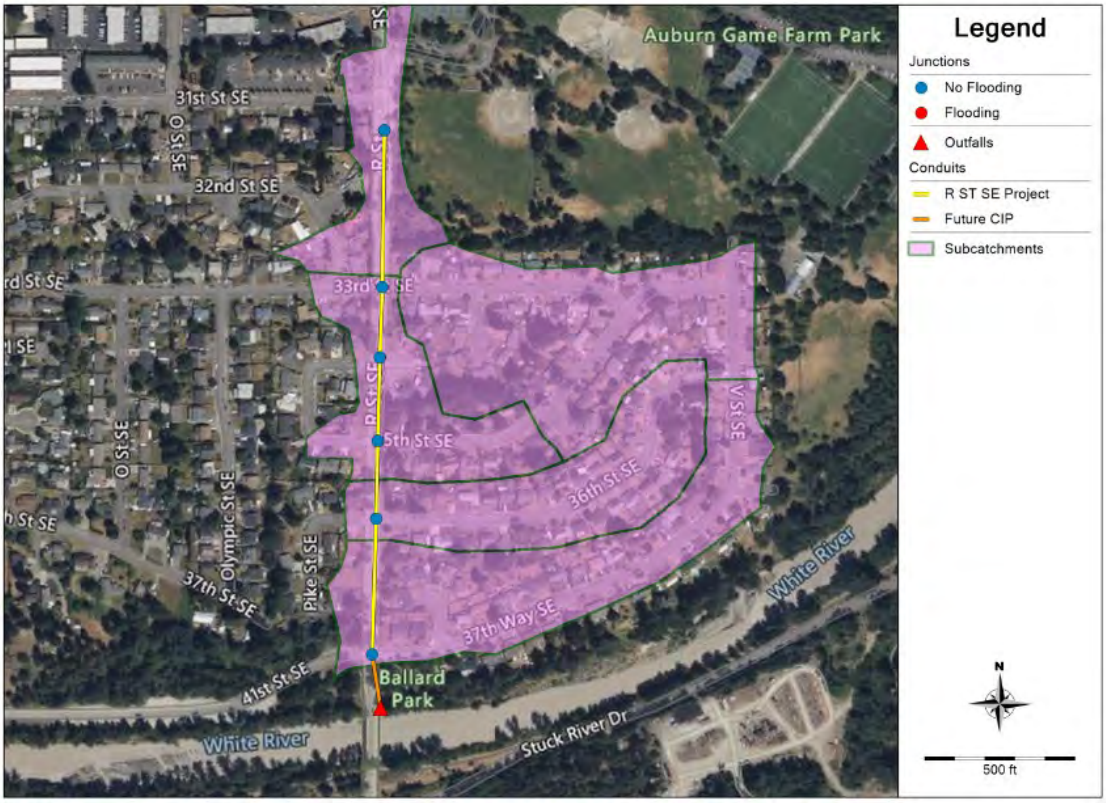

Figure B-7. Plan View of R Street SE Widening and Future CIP (R Subbasin Model, 25-year storm flows [10/20/2003])

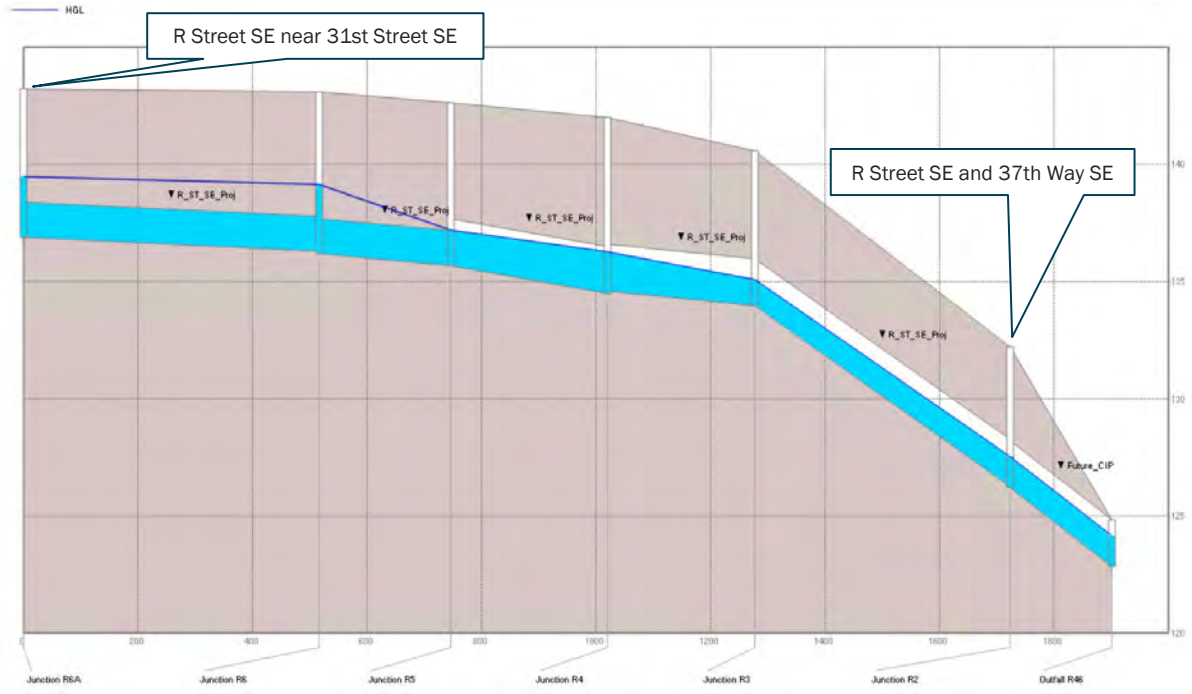

Figure B-8. Hydraulic Grade Line Profile View of R Street SE Widening and Future CIP (R Subbasin Model, 25-year storm flows [10/20/2003])

Table B-9. R Street SE Widening Project and Future CIP Recommendations				
Street Location	Subbasin Model Name	25-year Design Storm Start Date	2024 CIP Recommendations	Future CIP Recommendations
R Street SE from 28th Street SE to 25th Street SE R Street SE from 25th Street SE to 22nd Street SE	BCDF	1/9/1990	Upgrade pipe from 12-inch diameter to 18-inch diameter in R Street SE from 28th Street SE to 25th Street SE Upgrade pipe from 18-inch diameter to 24-inch diameter in 1st Street SE	Upgrade pipe from 18-inch diameter to 24-inch diameter in 21st Street SE from R Street SE to M Street SE Upgrade pipe from 24-inch diameter to 36-inch diameter in 21st Street SE from M Street SE to K Street SE
R Street SE from 28th Street SE to 29th Street SE	AZ	9/7/2019	Upgrade pipe from 10-inch diameter to 24-inch diameter in R Street SE from 28th Street SE south to approximately 225 ft of 29th Street SE	Upgrade pipe from 10-inch diameter to 24-inch diameter in 29th Street SE from R Street SE to M Street SE Upgrade pipe from 18-inch diameter to 24-inch diameter in M Street SE from 29th Street SE to 32nd Street SE Upgrade pipe from 24-inch diameter to 30-inch diameter in M Street SE from 32nd Street SE to 37th Street SE
33rd Street SE to White River Outfall	R	10/20/2003	Upgrade pipe from 10-inch/12-inch diameter to 18-inch diameter in R Street SE from 31st Street SE to 34th Street SE Upgrade pipe from 12-inch diameter to 24-inch diameter in R Street SE from 34th Street SE to 37th Way SE	Upgrade pipe from 18-inch diameter to 24-inch diameter south of 37th Way SE to the White River outfall

2.4.1.2 CIP 11 - Christa Ministries Facility Retrofit

The Christa Ministries Facility Retrofit project is a retrofit of an existing swale resized to meet the water quality flow volume for flows discharging from the Brannan Park pump station. Currently, the swale is part of a wetland and detention pond system on a City-owned parcel.

Modeling efforts for the project consisted of estimating the water quality flow volume discharged from the Brannan Park pump station force main using the Continuous Simulation Method from the 2019 Stormwater Management Manual for Western Washington (2019 SWMMWW) (Ecology 2019). The 2019 SWMMWW describes the methodology as "Using an approved continuous runoff model, the water quality design volume shall be the simulated daily volume that represents the upper limit range of daily volumes that accounts for 91% of the entire runoff volume over a multi-decade period of record."

BC ran the existing conditions GHI model for the 1949 to 2022 period of record to generate daily flow volumes from the Brannan Park pump station. To determine the 91% flow volume, BC removed the days without flow from the daily record and then used the Excel function PERCENTRANK.EXC to determine the rank percentile for each day's flow volume (100 to 0). The Excel formula PERCENTILE.INC was then used to return the flow volume associated with the 91% rank. The resulting water quality flow volume is 375,448 cubic feet or 8.6 acre-feet.

2.4.2 Excluded Projects

Two potential projects were evaluated with H&H models and determined to be not viable because the proposed changes did not provide sufficient benefit or exacerbated simulated downstream flooding conditions during design storms.

2.4.2.1 30th Street NE Area Flooding, Phase 3 (2015 Plan CIP ID 4B)

The 30th Street NE Area Flooding, Phase 3 project was identified in the 2009 and 2015 Plans to reduce flooding along C Street NE between 30th Street NE and 37th Street NE in the GHI subbasin. The area experienced significant flooding during the December 3, 2007, storm and previous model results indicate the system's capacity may be limited by low pipe gradient and shallow inverts. The proposed project would collect stormwater from C Street NE in a new larger and higher gradient pipe and then pump flows to the 42-inch-diameter trunk line in 30th Street NE. The force main connection to the 30th Street NE pipe is also where the airport stormwater system connects to the 42-inch-diameter trunk line.

BC evaluated the impact of this project on the hydraulic grade line (HGL) in the 30th Street NE trunk with the updated GHI subbasin model (update described in Section 2.2) for the 25-year design storm (11/6/2006). The project raised the simulated HGL in the 30th Street NE trunkline by approximately 1 foot, which resulted in flooding at the airport property's lowest inlet rim (409-I51) near the north hangar. In addition, Figure B-9 shows the airport property flooding that resulted from the project. Figure B-10 compares the HGL in the 30th Street NE trunkline with and without this project.

Because of the simulated flooding during the design storm and the lack of reports of flooding on C Street NE since the December 2007 storm, the City opted to remove the 30th Street NE Area Flooding, Phase 3 project from consideration in the 2024 Plan.

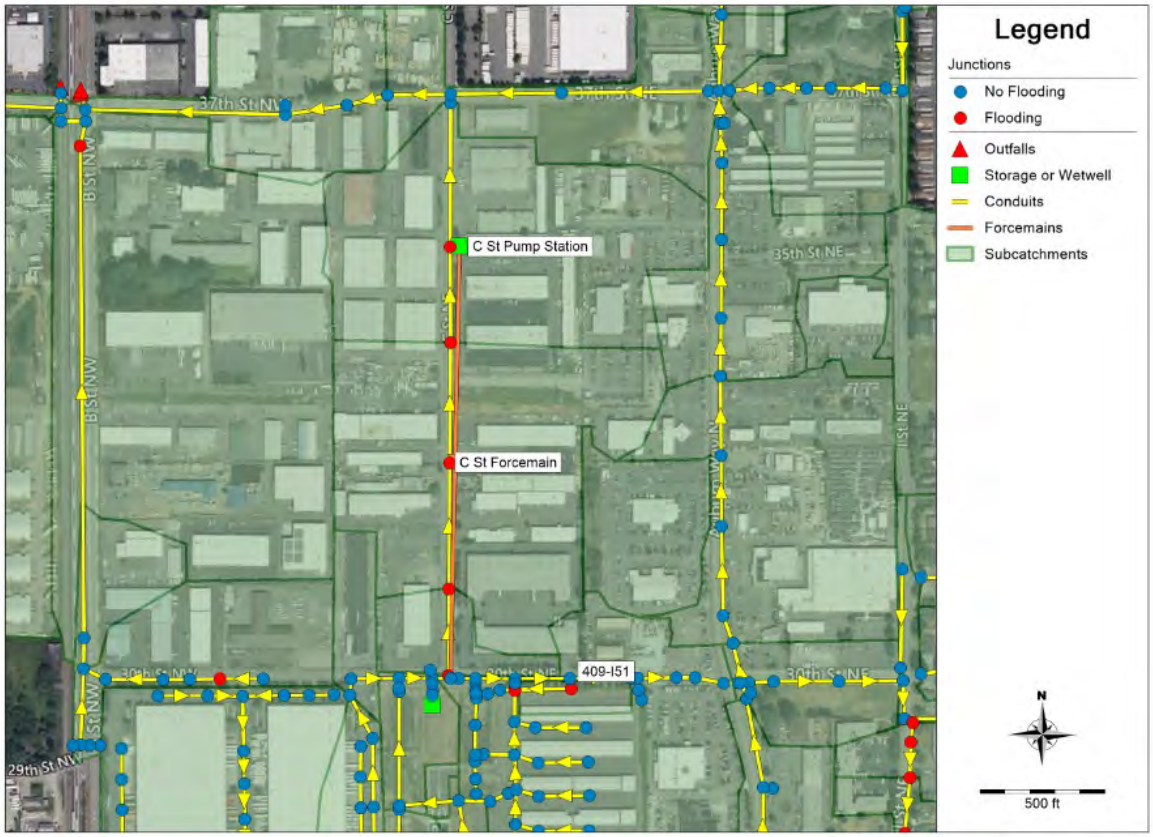

Figure B-9. Flooding impacts of 30th Street NE Area Flooding, Phase 3 Project at the Airport Property Low Area (catch basin 409-I51)

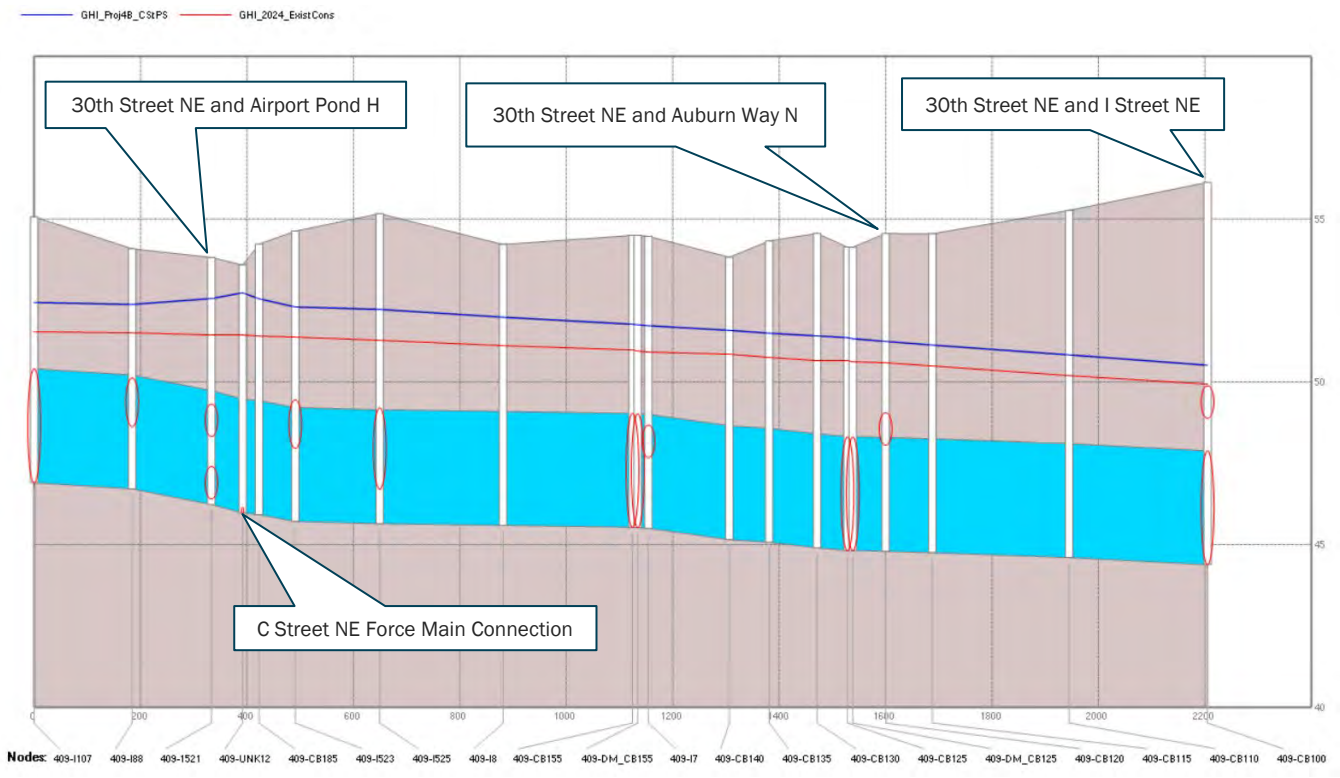

Figure B-10. Hydraulic Grade Line in 30th Street NE (from the Airport Property to I Street NE) Comparison of Existing Conditions and Proposed Conditions from the 30th Street NE Area Flooding, Phase 3 Project

2.4.2.2 17th Street Pond Improvements Project

The 17th Street Pond is one of several infiltration ponds in the BCDF subbasin. Currently, the control structure manhole for the 17th Street Pond is in the right-of-way (ROW) downstream of the pond outlet pipe. The standpipe portion of the control structure is dislodged, allowing stored water to discharge from the pond without control. Also, without the standpipe, model simulations show that downstream capacity limitations during large events cause water to back up in the system and into the ponds, allowing the pond to act as backwater storage. Prior to repairing the pond control, the City asked BC to review several scenarios to optimize the storage and operation of the 17th Street Pond to help reduce flooding in the downstream system, specifically at the low area near the intersection of Auburn Way S and the State Route (SR) 18 overpass. To help compare existing and proposed conditions, BC modeled several 17th Street Pond configurations:

1) Scenario 1: Outlet control as designed (control structure in ROW).
2) Scenario 2: Outlet control under current conditions (no control structure).
    a) Scenario 2a: Scenario 2 plus an increase in pond volume.
    b) Scenario 2b: Scenario 2 plus double the pond volume (as a sensitivity test only, does not represent space available to expand pond).
3) Scenario 3: Outlet control moved inside pond.
    a) Scenario 3a: Scenario 3 plus an increase in pond volume by replacing sloped sides with walls around the entire pond perimeter.

Figure B-11 shows the HGL in Auburn Way South at the SR 18 westbound offramp for the various scenarios. The HGL varies slightly between the scenarios. Figure B-12 shows the flooding rate and volume during the 25-year storm for the scenarios at the low area. The difference in the amount of flooding between the scenarios is minimal.

Asset Management Evaluation

1. Condition Assessment and Data Gaps Analysis

1.1 Existing Conditions

The City uses Cartegraph, a computerized maintenance management system (CMMS), to manage its active asset inventory. Cartegraph may be used to develop work requests, document the time and cost of the work performed, keep track of resources available, and produce reports of various kinds related to asset management. The City uses a Cartegraph mobile app during field assessments, but any further updates/changes to the asset is done on the desktop in a geographic information system (GIS). The City assured that the information between GIS and Cartegraph is universal for active assets.

Figure C-1 shows the City's Cartegraph Asset dashboard. The type and count of stormwater assets within the City's asset inventory is listed on the lefthand side of the figure. Each stormwater asset has several attributes that may be tracked and documented alongside the feature. Some assets have an overall condition index (OCI) rating set up in Cartegraph. However, it is not universal to all stormwater assets, and the City expressed interest in reviewing and revising how the rating was generated.

City field staff noted the Cartegraph mobile app allows users a few options for scoring or making notes, but not all conditions can be accurately noted in the field. For example, one staff member noted that an aspect of a pipe was observed to be failing in the field, but since the failure condition wasn't explicitly asked for in the Cartegraph mobile app, the condition was rated as 100% (signifying an excellent condition). Staff must ensure the conditions are accurately conveyed and update them as necessary after returning from the field.

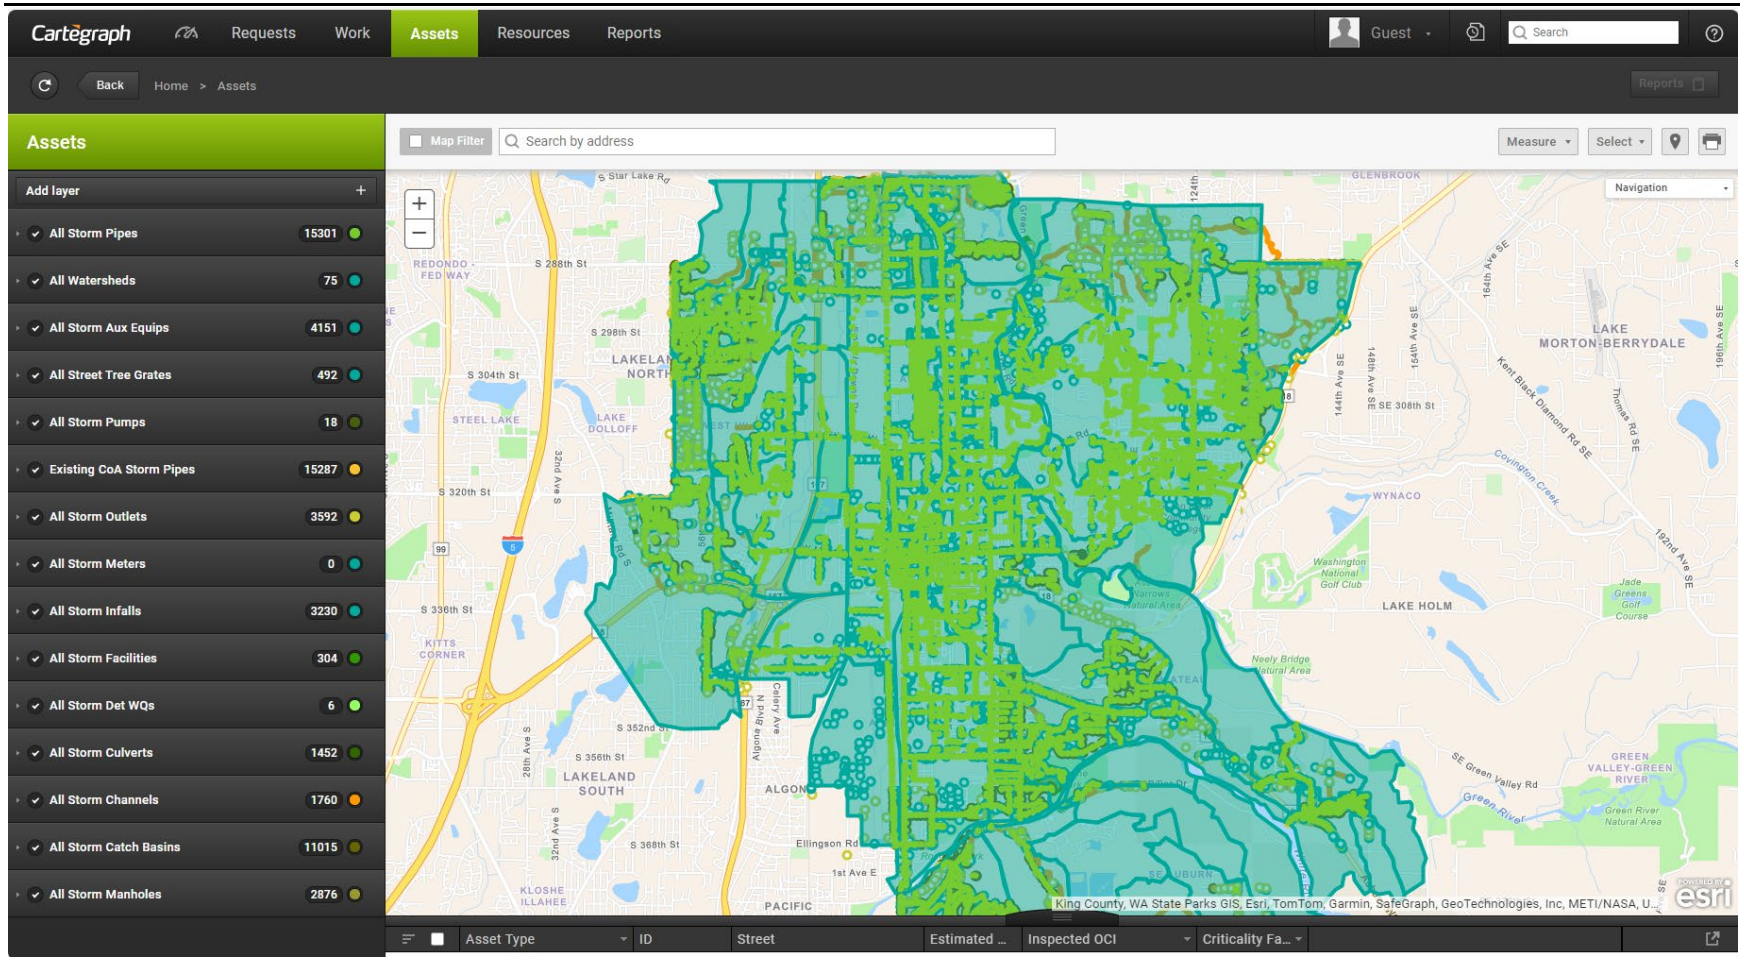

Figure C-1. City's Cartegraph Asset Dashboard and Stormwater Asset Inventory

Screenshot was taken June 4, 2024. Because most of the asset management review was performed more than 6 months prior to taking the screenshot, it is likely there may be some differences in total asset count shown in Figure C-1 and total counts reported elsewhere in this document.

1.2 Critical Attribute Data

One of the goals of this evaluation is to develop criteria for preparing a criticality and risk analysis for the City's stormwater assets. This involved preparing a method for scoring the likelihood of failure and criticality of failure of each type of asset. The likelihood of failure score reflects the expected asset condition based on specified attributes, and the criticality of failure score is demonstrative of the anticipated response should the asset fail.

Each stormwater asset was reviewed, and the criteria necessary for developing its scores was determined based on professional judgment and considered the data available. Some asset types were grouped together because they were anticipated to require similar levels of management/maintenance from the Storm Drainage Utility. Other asset types listed in Cartegraph, specifically fences, infalls, outlets, meters, and auxiliary equipment, were not grouped because they are linked to one of the greater asset types reviewed and should be assigned the same likelihood of failure and criticality of failure as the greater asset it is linked to (as work/inspection is anticipated to occur at the same time).

Another asset type listed in Cartegraph, Storm Channels (ditches), was not assigned criteria for criticality scores either because its condition is based on maintenance and will not be repaired or replaced (see the Ditch Maintenance and Operations Program).

Details regarding the critical attributes used in assigning the criticality scores are listed below. Scoring is discussed in the Criticality Review section.

- Age: Based on the installation date of the asset (current year minus installation year).
- Useful life: The expected amount of time an asset is expected to perform its function. Based on either the material (pipes, culverts, network structures) or type of asset (pumps, ponds). Useful life estimates are given in the Criticality Review section.
- Previous inspection data: The previously inspected condition of the asset.
- Proximity to critical facilities: Based on a GIS analysis where a buffer was placed around critical facilities within the City. Assets were assumed to have a higher criticality of failure if they were closer to a critical facility.
- Adjacency to critical roadways: Based on a GIS analysis where a buffer was placed around critical roadways within the City. Assets were assumed to have a higher criticality of failure if they were adjacent to a critical roadway.
- Adjacency to priority roadways: Based on a GIS analysis where a buffer was placed around priority roadways within the City. Assets were assumed to have a higher criticality of failure if they were adjacent to a priority roadway.

Table C-1 lists the recommended criteria to consider in calculating the likelihood of failure and criticality of failure scores for each category of stormwater asset.

Table C-1. Recommended Criteria for Calculating Criticality Scores of Stormwater Assets

Asset Name in Cartegraph	Asset Category	Likelihood of Failure Attributes	Criticality of Failure Attributes
Storm Pipes	Pipes	Age Useful life Previous inspection data	Proximity to critical facilities Adjacency to critical roadways Adjacency to priority roadways
Storm Culverts	Culverts	Age Useful life Previous inspection data	Proximity to critical facilities Adjacency to critical roadways Adjacency to priority roadways
Storm Pumps	Pumps	Installation date Useful life	Proximity to critical facilities Adjacency to critical roadways Adjacency to priority roadways
Street Tree Grates Storm Manholes Storm Catch Basins	Network structures	Age Useful life Previous inspection data	Proximity to critical facilities Adjacency to critical roadways Adjacency to priority roadways
Storm Facilities Storm Det WQs	Ponds	Installation date Type	Proximity to critical facilities Adjacency to critical roadways Adjacency to priority roadways

1.3 Data Gaps

After the critical attributes were identified for stormwater assets, a data gaps analysis was performed to see what needed to be addressed. This followed a previous effort led by the City to address data gaps in its stormwater asset inventory using a high precision antenna. As there were several stormwater assets, stormwater pipes and culverts were used as examples to demonstrate the completeness of the asset inventory.

Figure C-2 shows the distribution and availability of data for several attributes in the pipe dataset (namely, material, size, start elevation, and installation date). Figure C-3 shows the same for the culvert dataset (with the addition of end elevation). The figures demonstrate a fair amount of the attributes reviewed had <Null> entries. Most significantly, stormwater pipes are missing approximately 10% of their installation dates, while culverts are missing 75%.

Installation date was deemed to be a critical attribute for all of the stormwater assets in determining criticality scores. Lacking this attribute would then have the potential to prioritize an asset for work, even if it were expected to have been installed recently (and more likely to be in good condition), over an asset that is expected to have been installed 50 years ago. The goal of the criticality review is to simplify and provide reasoning for the prioritization of work, so it was deemed beneficial to perform a desktop GIS analysis to provide placeholder estimates for installation year. The stormwater pipe dataset was used for this process.

A copy of the stormwater pipes layer was made, and a new attribute column created for the estimated installation date. This was to make sure that the estimated installation dates entered could be distinguished from the installation dates in the dataset previously. Professional judgment was used to estimate installation dates by considering adjacent infrastructure, parcel build-out years, and historical imagery, as needed. Another attribute column was also created to provide notes as to why the estimated installation date was chosen for that feature. In this way, the remaining pipe dataset was assigned estimated installation dates and used to carry forward in the criticality review.

Note: Attribute data were reviewed prior to capturing a screenshot of Cartegraph (Figure C-1), hence there may be some differences in asset count.

1.4 Recommendations

The findings from the condition assessment and data gaps analysis resulted in the following recommendations for the program:

- City field staff should be able to accurately report/enter asset conditions in the field. If there are features that are consistently being scored incorrectly due to issues with the Cartegraph app, this should be reviewed and amended to simplify the entry process from the field.
- The OCI rating should be reviewed and revised.
- The likelihood of failure and criticality of failure attributes from Table C-1 should be used as the criteria for criticality scoring.
- A similar GIS desktop analysis may be beneficial for other asset types with missing installation dates. Specifically, culverts are expected to benefit as they were missing 75% of their installation dates.

2. Criticality Review

2.1 Likelihood of Failure

To develop the likelihood of failure score, assumptions had to be made regarding the critical attributes listed in Table C-1.

2.1.1 Useful Life

The useful life estimates based on pipe material are given in Table C-2 below.

Table C-2. Useful Life Estimates for Pipe Material

Pipe Material (Cartegraph)	Description	Useful Life Estimate
<Null>	No material listed	50
ADS	Advanced drainage system (type of high density polyethylene pipe)	50
CAST IRON	Cast iron pipe	75
CLAY	Vitrified clay pipe	100
CMP[1]	Corrugated metal pipe	50
CONCRETE[1]	Concrete pipe	100
CPEP	Corrugated polyethylene pipe	50
DUCTILE IRON[1]	Ductile iron pipe	75
HDPE[1]	High density polyethylene pipe	100
LCPE	Line corrugated polyethylene pipe	50
PERFORATED	Perforated pipe	50
POLYETHYLENE	Polyethylene pipe	50
PVC[1]	Polyvinyl chloride pipe	100

Pipe Material (Cartegraph)	Description	Useful Life Estimate
RCP[1]	Reinforced concrete pipe	100
RPVC	Rigid polyvinyl chloride pipe	50
STEEL[1]	Ductile steel pipe	75

1 Useful life estimates were sourced from a similar process performed for the Multnomah County Drainage District. The remaining materials were not included in this process and were assigned a conservative estimate of 50 years as a placeholder value. This value may be updated by the City as they see fit.

Useful life estimates can be made in a similar way for culverts and network structures based on their material. These have not been prepared as a part of this assessment.

Useful life estimates for the ponds category from Table C-1 are given in Table C-3. The possible components for each type of facility was listed, and an estimate of useful life given using professional judgment. The most conservative useful life of one of the facility's components should be used to assign the useful life of the facility. These estimates were given as a basis for developing a likelihood of failure score for the ponds asset category. The useful life of pumps can be estimated in a similar manner as shown in Table C-3, but has not been estimated as a part of this assessment.

Table C-3. Useful Life Estimates for Ponds (Stormwater Facilities and Detention/Water Quality Treatment Facilities)

	Total[1]	Useful Life of Components Assumption (Years)[2]						
Facility Type	Useful Life Assumption (Years)	Control Structure Replacement	Mechanism Replacement	In-Place Soil Media	Media Box Replacement	Vault	Rebuild	Notes
<Null>	–	–	–	–	–	–	–	–
BAFFLE OIL/WATER SEPARATOR	20	–	20	–	–	50	–	–
BASIC BIOFILTRATION SWALE	N/A[3]	–	–	–	–	–	–	Maintenance based
BIORETENTION	25	–	–	25	–	–	–	Full media replacement
CARTRIDGE FILTER	20	–	–	–	20	50	–	–
CP OIL/WATER SEPARATOR	20	–	20	–	–	50	–	–
DETENTION POND	25	25	–	–	–	–	–	Assume 25 years for control structure
DETENTION TANK	25	25	–	–	–	50	–	Assume 25 years for control structure
DETENTION VAULT	25	25	–	–	–	50	–	Assume 25 years for control structure
FILTER STRIPS	25	–	–	25	–	–	–	Full media replacement
FLOOD STORAGE	25	25	–	–	–	–	–	Assume 25 years for control structure
HYDRODYNAMIC SEPARATOR	10	–	10	–	–	50	–	–
INFILTRATION	20	–	–	20	–	–	–	Full media replacement
INFILTRATION POND	20	–	–	20	–	–	–	Full media replacement
MODULAR WETLAND	20	–	–	–	20	–	–	–
PERMEABLE PAVEMENT	10	–	–	–	–	–	10	–
TREE BOX	20	–	–	–	20	–	–	–
WET BIOFILTRATION SWALE	N/A[3]	–	–	–	–	–	–	Maintenance based
WET POND	25	25	–	–	–	–	–	Assume 25 years for control structure
WET VAULT	25	25	–	–	–	50	–	Assume 25 years for control structure

1 Total useful life is based on the most conservative estimate listed for one of the facility's component parts.

2 Estimates were made using professional judgment regarding the useful life expectancy for the components of each facility. There is not a value listed for each facility for the possible components as they do not apply to each facility listed.

3 Facilities that do not have a useful life assumption are maintenance based and should be managed as part of routine maintenance rather than a repair and replacement program.

2.1.2 Remaining Useful Life

The remaining useful life is calculated using its age and its useful life, as shown below.

$$Remaining\ useful\ life = asset\ age - useful\ life$$

This is the basis for the likelihood of failure score for the stormwater assets.

2.1.3 Previous Inspection Data

The previous condition of the asset feature was used to make an adjustment to the likelihood of failure score, if it was available, since this would be the most reliable source of data regarding its condition.

Thus, the remaining useful life equation would be:

$$Remaining\ useful\ life = asset\ age - useful\ life + previous\ inspection\ data\ adjustment$$

Table C-4 shows the adjustment to the useful life based on the previous OCI assigned. These estimated adjustments were only considered for stormwater pipes and should be evaluated to see whether a similar adjustment can be made for network structures. This is not recommended for ponds and pumps.

Table C-4. Remaining Useful Life Adjustment for Pipes and Culverts Based on Previous Inspection Data

Overall Condition Index	Description	Useful Life Year Adjustment
0	Failed	0
20	Poor	10
40	Fair	20
60	Good	30
80	Excellent	40

2.1.4 Likelihood of Failure Score

Table C-5 shows how the likelihood of failure score was assigned based on remaining useful life. A score of 5 is the most likely to fail, while a score of 1 is the least likely to fail.

Table C-5. Likelihood of Failure Score

Score	Description	Useful Life Years Remaining with Updated Inspection Results
5	Structure is greater than 25 years beyond useful life and should be prioritized for inspection	-75
4	Structure is past end of useful life and must be inspected	-25
3	Structure is nearing end of useful life and should be inspected	0
2	Failure not expected for 25+ years	25
1	Unlikely failure in foreseeable future	75

2.2 Criticality of Failure Score

To develop the criticality of failure score, assumptions had to be made regarding the critical attributes listed in Table C-1. Each critical attribute metric was scored independently and then averaged to result in the criticality of failure score.

2.2.1 Proximity to Critical Facilities

A 1,000-foot buffer was placed around the critical facilities within the City of Auburn in GIS. If any asset was within 1,000 feet of a critical facility, then its failure was assumed to be most critical. The score for this assessment is shown in Table C-6 below.

Table C-6. Proximity to Critical Facilities Score

Distance from Critical Facility	Proximity to Critical Facilities Score
0–1000 feet	5
Greater than 1000 feet	1

This GIS analysis was only performed for stormwater pipes for this assessment but can be easily performed for other stormwater assets by applying the same GIS buffer.

2.2.2 Adjacency to Critical Roadways

The roadways considered as critical in this assessment are listed below.

- Emergency evacuation route.
- Snow plow route.
- King County Metro bus route.
- Sound Transit bus route.
- Pierce Transit bus route.

A buffer was placed around the critical roadways in the City in GIS. If any asset was within this buffer, it was deemed to be most critical of failure. The score for this assessment is shown in Table C-7 below.

Table C-7. Adjacency to Critical Roadways Score

Distance from Critical Roadway	Proximity to Critical Roadways Score
Within right-of-way buffer of critical roadway	5
Outside of critical roadway buffer	1

This GIS analysis was only performed for stormwater pipes for this assessment but can be easily performed for other stormwater assets by applying the same GIS buffer.

2.2.3 Proximity to Priority Roadways

A priority rank was assigned to the different functional classifications of roads within the City. A GIS analysis was performed where a buffer was placed around each street. Assets were then assigned a proximity to priority roadways score equal to the priority rank of the street right-of-way where it lay. The priority rank (and proximity to priority roadways score) based on street functional classification is shown in Table C-8 below.

Table C-8. Priority Rank based on Street Functional Classification

Street Functional Classification	Priority Rank
ALLEY	4
HIGHWAY	5
LOCAL	3
MINOR ARTERIAL	1
NON RESIDENTIAL COLLECTOR	2
PRINCIPAL ARTERIAL	1
RAMP	4
RESIDENTIAL COLLECTOR	2
RURAL COLLECTOR	4
#N/A	3
<Null>	3

This GIS analysis was only performed for stormwater pipes for this assessment but can be easily performed for other stormwater assets by applying the same GIS buffer.

2.2.4 Criticality of Failure Score

The criticality of failure score was calculated by taking the average of the proximity to critical facilities score, adjacency to critical roadways score, and adjacency to priority roadways score. The criticality of failure score is summarized in Table C-9 below.

Table C-9. Criticality of Failure Score

Criticality of Failure Score	Description
5	Structure has critical facilities <1000 ft away, is adjacent to a critical roadway, and adjacent to a higher priority roadway functional classification
4	
3	
2	
1	Structure is not adjacent to critical facilities, critical roadways, or higher priority roadways.

2.3 Results

The criticality of failure and likelihood of failure scores can be summed to create a combined score or used independently. A spreadsheet was created to score the stormwater pipes inventory using the methods described above. A screenshot is shown in Figure C-4 below of the first page of results. This spreadsheet may be used as an example for the other stormwater assets in creating a likelihood of failure and criticality of failure score.

Figure C-4. Criticality Spreadsheet Results for Stormwater Pipes

2.4 Recommendations

The following actions are recommended after the criticality review:

- Estimate useful life for culverts, pumps, and network structures
- Consider whether previous inspection data should be used in adjusted useful life for network structures
- Perform GIS desktop analysis needed for the other stormwater assets in Table C-1 based on the methods described for the criticality of failure score.
- Enact the criticality of failure and likelihood of failure scores in Cartegraph for stormwater pipes, then follow suit with the stormwater assets listed in Table C-1.

3. Pipe Depreciation Analysis

The resulting failure scores allow for the City to rank different assets both on likelihood and criticality of failure. It is recommended to use this ranking strategy to develop an inspection program where inspections of different types of assets are prioritized based on their rank. The asset inspection program will serve to fill data gaps, update the likelihood of failure score based on field verification, and identify asset features requiring repair or replacement. After inspection data are input for an asset feature, the results of the inspection will supersede the use of estimated remaining useful life and installation date (where applicable) in calculating a likelihood of failure score. Using this system to prioritize maintenance allows resources to be used more efficiently and fills in data gaps resulting in a more robust asset inventory.

3.1 Inspection of Pipes, Culverts, and Network Structures

For the City's pipe system, the recommended program would prioritize inspection based on likelihood of failure and then criticality of failure. In this way, pipes with likelihood of failure scores greater than or equal to 4 (or a negative useful life estimate) will be inspected first. The next tier of inspections should address pipes with likelihood of failure scores equal to 3 and pipes with unknown installation dates. After pipes are inspected, they should be assigned a condition score, which will supersede the installation date and useful life expectancy in determining the likelihood of failure. The likelihood of failure for a pipe will increase over time, and this prioritization method will take this into account while integrating field inspection data. Table C-10 summarizes the length of pipe requiring inspection using this method.

Table C-10. Pipes Requiring Inspection Summary

	Feet	Miles	Relative to Existing City Total (%)	Notes
Total length of pipe in Cartegraph	2,439,196	461.97		This includes all jurisdictions and statuses.
Total length of pipe in City	1,292,737.73	244.84	100%	Jurisdiction = "CoA" and Status = "Existing"
Total pipe length requiring inspection	52,954.92	10.03	4.10%	Applies for any pipe whose Likelihood of Failure Score = 4 or 5 (Useful Life <0)

Since storm catch basins and storm manholes are related to pipes, it is recommended to inspect these at the same time as adjacent pipes. The same inspection prioritization method is recommended for culverts because the failure consequences are similar.

3.2 Inspection of Remaining Stormwater Assets

For storm pumps, it is recommended to closely evaluate their condition as their useful life nears the end (e.g., 5 or fewer years) and upgrade or replace them before probable failure. Stormwater control facilities should be routinely inspected and prioritized for inspection when critical feature data are unavailable.

4. Pipe Replacement Cost Projection

A brief review of costs were included in the asset management evaluation for consideration in setting the repair and replacement budget and resource planning goals for the 2024 Plan. A comprehensive cost estimate was prepared for both pipe replacement and the replacement of catch basins and manholes within the City. The assumptions and results of this analysis are noted below.

4.1 Method and Assumptions

The cost estimate for pipe replacement is meant to function as a generic cost estimate for the as opposed to being based off a particular project or area. The primary cost estimation calculations assume the replacement of 5,000 linear feet of pipe as well as the associated conveyance structures, such as manholes and catch basins. The estimate also includes work commonly associated with a pipe replacement project, including temporary erosion and sediment control (TESC); site prep, such as the removal of surface pavement and existing structures; the installation of the conveyance system structures, such as trenching and backfill; surface/pavement repair; and project costs, such as design contingency and permitting.

Additional assumptions and further explanation of cost breakdown for the cost of pipe replacement are as follows:

- General:
  - → All pipes and structures are assumed to be within the same/connecting system.
  - → Pipes and structures are under existing asphalt, cement concrete, or landscaping that would need to be replaced in kind.
  - → The City of Auburn GIS map was used to provide information about average pipe sizes, pipe lengths, types of catch basins, and land surface cover in the area that was used to make a general calculation of cost to replace 5,000 linear of pipe.
  - → The City of Auburn Engineering Design Standards (February 2024) as well as the Standard Details (February 2024) was used to inform typical design for the purpose of cost and quantity calculations.
- TESC and site prep: Site prep costs include the removal and cutting of surfaces that may be over the top of existing conveyance systems as well as Utility Conflict Resolution. Other costs for site prep, such as TESC, mobilization, and project temporary traffic control are calculated based on percentages commonly used in projects of a similar nature. Project temporary traffic control for the replacement of conveyance systems may vary depending on the

amount of work done in arterials or heavily trafficked areas. For this cost estimate, it was assumed that the work will need a medium amount of traffic control.

- Conveyance system and structural/asphalt repair: For the simplification of calculations, certain generalizations were made in calculating quantities and costs, such as the assumption that all pipes are the same size, material, and depth. See Figures C-5 through C-8 for assumptions.
- Project costs: Project costs percentages were based off the percentages used for the Stormwater Management Action Plan "One Sheets" completed for the City of Auburn in 2023. They include project costs for design contingency, permitting, design, City project management administration, and construction management.
- Unit costs: Unit costs were based off the assumption of 5,000 or 10,000 linear feet of pipe replacement and associated quantities for other conveyance system replacement appurtenances. Unit costs were estimated using the Washington State Department of Transportation Unit Bid Analysis tabs as well as other project cost estimates that have similar attributes to the general cost estimate of replacing conveyance system structures and pipes.

4.2 Results

Cost estimates were made to show the average cost of replacing 5,000 feet of pipe within the City of Auburn (Figure C-5), replacing 5,000 linear feet of pipe in downtown (Figure C-6), and 10,000 linear feet of pipe in rural areas (Figure C-7). A cost estimate was also made for replacing catch basins without replacing any adjacent pipes (Figure C-8).

Replace 5000 ft Storm Pipe Cost Breakdown 5000 LF

Key: Manual Input of Assumed Value | Calculated Value | Referencing Price Sheet

Assumptions			Reasoning
Pipes and structures are under existing asphalt, cement concrete, or landscaping which needs to be replaced in kind			
Use of 12" PVC piping - City prefers PVC SDR-35 or PS46			
Avg length of pipe between structures (not to exceed 400)	86	LF	Based off average taken from City of Auburn GIS map
Avg size of pipe (used for trenching/volume calculations)	14	in D	Based off average taken from City of Auburn GIS map
Avg length of Type I CBs (used for trenching/volume calculations)	24	in L	Based off average taken from City of Auburn GIS map
Avg size of Type II CBs (used for trenching/volume calculations)	54	in D	Based off average taken from City of Auburn GIS map
Percent of structures Type I CBs	80%		Based off average taken from City of Auburn GIS map
Percent of structures Type II CBs	20%		
Number of Type I CBs	47		
Number of Type II CBs	12		
Number of structures per specified length of system	59		
Total length of system	5148	ft	
Percent of system under street (asphalt)	30%		
Percent of system under sidewalk (cement conc.)	10%

4.3 Discussion

The resulting cost opinion is intentionally conservative, approximately $1,500 per linear foot, to account for the wide range of generalizations and assumptions inherent in the process. Notably, the analysis indicated that pipe replacement in rural areas is expected to be less costly than in the City center. Additionally, replacing a larger quantity of pipe is only marginally more cost-effective.

As a prudent practice, it is recommended to diligently track the costs associated with installation, repair, and replacement of asset features on an annual basis. This data serve as valuable reference information for future asset replacement budget planning. As additional data are collected, cost opinions can be updated to enhance accuracy.

5. Pipe Depreciation Analysis

A life cycle analysis was performed for stormwater pipes to demonstrate the expected depreciation rate of each asset and provide background for the recommended maintenance frequency of the entire system. To do so, a spreadsheet was created to analyze the remaining useful life estimate for the City's pipe database over time. A screenshot of the first page of the spreadsheet is shown in Figure C-9. This shows the existing condition dataset of the stormwater pipes. In the spreadsheet, a cumulative total was calculated for the pipes whose remaining useful life score had gone negative. This represented the total linear feet of pipe "lost." As shown in Figure C-9, at the time of this assessment, approximately 53,000 feet of pipe is expected to be beyond its useful life.

An average rate of pipe loss was calculated by dividing each pipe's useful life from its length and then summing to find the total for the system. As shown in Figure C-9, the average rate of pipe value "lost" is approximately 15,700 feet per year.

To show the sensitivity of the results, a copy of the spreadsheet was created, and all useful life estimates were increased by 20 years. A screenshot of the first page is shown in Figure C-10. This scenario shows the total linear feet of pipe beyond its useful life to be approximately 14,500 feet, and the average rate of pipe loss per year to be approximately 12,500 feet.

Both scenarios were used to project the amount of pipe replacement needed over 10-, 20-, and 50-year replacement durations. The costs estimated in the previous section were used to provide estimates for these replacements for reference. Figure C-11 shows the results of this projection.

Rate of Pipe Replacement Needed	=	12,800	ft pipe needing replacement/year		$ 19,200,000

Figure C-11. Cost Projection Results for 10-,20-, and 50-Year Pipe Replacement Durations

5.1 Discussion

The depreciation analysis was performed to provide a point of comparison on which to base the City's resource planning recommendations. Though the costs of pipe replacement are conservative, the anticipated cost of the various replacement durations was considered too great for the asset repair and replacement program. Thus, the escalated budget for repair and replacement from previous years was used as the basis for the asset repair and replacement program for the 2024 Plan. However, the results from this analysis can be used to inform the budget for future plans should it be of interest to expand the scope of the repair and replacement program. A similar depreciation analysis could be done for culverts.

6. Future Work & Maintenance

This asset management assessment provides a starting point from which the City can base its asset management program. The following actions will be needed to implement the discussed variables into the City's program.

- Review issues with scoring in the Cartegraph app. Ensure that any features being scored incorrectly are reviewed and amended to simplify the entry process from the field.
- The OCI rating should be reviewed and revised as needed.
- Enact the criticality of failure and likelihood of failure scores in Cartegraph for stormwater pipes and use these to prioritize inspections for pipes and adjacent network structures.
- The criticality of failure metrics should be periodically run in GIS and updated in Cartegraph for criticality of failure score.

Future actions that should be considered to expand upon the work described in this assessment are listed below.

- A GIS desktop analysis to fill in estimated installation dates should be considered for other asset types (specifically, culverts are expected to benefit, as they were missing 75% of their installation dates.
- Perform a GIS desktop analysis needed for the other stormwater assets in Table C-1 based on the methods described for the criticality of failure score.
- Estimate useful life for culverts, pumps, and network structures.
- Consider whether previous inspection data should be used in adjusted useful life for network structures.
- Enact the criticality of failure and likelihood of failure scores in Cartegraph for the remaining stormwater assets. Then follow suit with the stormwater assets listed in Table C-1.

Appendix D

Noted Changes to the NPDES MS4 Permit

Changes in Regulation

This table has been prepared to document the changes of note between the previous NPDES MS4 permit from 2019, the draft NPDES MS4 permit prepared in 2024, and the final NPDES MS4 permit released in 2024. The Plan was initially prepared using the draft NPDES MS4 permit prepared in 2024 as guidance and updated accordingly once the final NPDES MS4 permit was released. New language that has been added between versions of the NPDES MS4 permit is shown in red in the table below. Important dates have been highlighted in yellow.

Section	2019 NPDES MS4 Permit Language	Draft 2024 NPDES MS4 Permit Language	Final 2024 NPDES MS4 Permit Language	Changes (From 2019 to 2024 Draft)	Changes (From 2024 Draft to 2024 Final)	Topic
S2.B. Non-Stormwater Discharges	**S2.B.** This permit authorizes discharges of non-stormwater flows to surface waters and to groundwaters of the State from MS4s owned or operated by each Permittee covered under this Permit, in the geographic area covered pursuant to S1.A, only under one or more of the following conditions:				*No changes, included as context for changes to S2.B.2 and S2.B.3,*	Discharges Containing Per- and Polyfluoroalkyl Substances (PFAS)
S2.B.2. Non-Stormwater Discharges	**S2.B.2.** The discharge is from emergency firefighting activities.	**S2.B.2.** The discharge is from emergency firefighting activities and does not involve PFAS-containing aqueous film-forming foams (AFFFs). After the emergency has ceased, non-stormwater discharges (e.g., discharges associated with cleanup) to the MS4 are prohibited. Determination of cessation of the emergency is at the discretion of the emergency on-scene coordinator.	**S2.B.2.** The discharge is from emergency firefighting activities. See Special Conditions S5.C.5, S6.D.3 to address non-stormwater discharges (e.g., discharges associated with cleanup after the emergency).	Added language regarding emergency firefighting activities that do not involve PFAS.	Removed language regarding emergency firefighting activities that do not involve PFAS and redirected the reader to Special Conditions S5.C.5 and S6.D.3 to address non-stormwater discharges.	PFASs Discharges Containing PFAS
S2.B.3. Non-Stormwater Discharges	**S2.B.3.** The discharge is from another illicit or non-stormwater discharge that is managed by the Permittee as provided in Special Condition S5.C.5 or S6.D.3.	**S2.B.3.** The discharge is from emergency firefighting activities and involves PFAS-containing AFFFs, the following conditions apply: **S2.B.3.a.** No later than December 31, 2026, the Permittee shall coordinate with firefighting agencies/departments that	**S2.B.3.** The discharge is from another illicit or non-stormwater discharge that is managed by the Permittee as provided in Special Condition S5.C.5 or S6.D.3. Ditch Maintenance and Operations Program - Development and Recommended Actions

DATE:	June 6, 2024
TO:	Tim Carlaw, PE
FROM:	Paul Fendt, PE
SUBJECT:	Ditch Maintenance and Operations Program
CC:	Michael Murray, PE
	Alex Van Kirk, EIT
PROJECT NUMBER:	553-1931-052
PROJECT NAME:	Comprehensive Storm Drainage Plan Update

Overview and Introduction

This memorandum documents the proposed ditch maintenance and operations (M&O) program of the Stormwater Programs Task for the Comprehensive Storm Drainage Plan (Plan) for the City. This effort has been implemented to improve the M&O of the City's ditch inventory to control stormwater runoff and improve the quality of downstream receiving waters. The analysis considers the existing ditch M&O program and determines if additional controls and resources are required to meet needs and address potential liabilities. This technical memorandum discusses the City's ditch inventory, existing ditch M&O program, an outline for the proposed ditch M&O program, and future recommendations for consideration.

Ditch Inventory Evaluation

The evaluation of the City's existing ditch M&O program began with an assessment of its asset inventory. The City's ditch inventory is mapped under the "Channels" layer in the City's computerized maintenance management system, Cartegraph. At the time of investigation, there were 1,698 features within the Channels layer. Figure E-1 at the end of this memorandum demonstrates the extent of the channel inventory within Cartegraph.

The evaluation of the inventory included reviewing the available attribute and location data for the Channels layer features. The feature attribute review revealed an incomplete dataset with several attributes having little to no data inputs. While the data may be incomplete for the entire inventory, the following attribute fields were available for input and were either beneficial during evaluation or are anticipated to be of use in the program once data is made available.

- Owner: The jurisdiction responsible for M&O of the feature.
- Installed: The date the feature was constructed.
- Channel type: Labels the feature as a ditch or a stream.
- Channel shape: Identifies the feature as having a parabolic, v-bottom, or trapezoidal shape.
- Bottom width: The width of the bottom face of the feature.
- Bottom material: Identifies the feature as having a concrete, grass, plastic, riprap, or soil bottom.
- Slope: The longitudinal slope of the feature from inlet to outlet.
- Length: The length of the feature from inlet to outlet.
- Easement: A yes/no field that indicates whether the feature is within an easement.

Having feature data for these attributes would help with determining maintenance needs and options for water quality retrofits, making an educated guess for the useful life of component parts, and identifying the parties responsible for feature M&O. It is recommended to update features with these attributes upon implementing the ditch M&O program.

Channel features were further evaluated to determine whether they should be considered ditches and, consequently, whether they should be included in the City's ditch M&O program. A copy of the Channels layer was created to classify features accordingly. Attachment E1 describes the process used in classifying layer features and demonstrates the different categories created within the copied layer. The result of this process was a copy of the Channels layer broken into four categories based on expectations from the City's M&O program. These categories are summarized below.

- Roadside conveyance: Ditches within road right-of-way that are assumed to be capturing road runoff. This is the most common form of ditch.
- Facility-related: Ditches within close proximity to stormwater facilities that solely convey stormwater to and from the stormwater facilities.
- Collection (other): The remaining City-owned channel features that are expected to be maintained by the Storm Drainage Utility. This excludes any surface water linework (streams, rivers, etc.), ditches owned by other jurisdictions (including private ownership), and ditches maintained by other divisions within the City (for example, ditches within the median of the airport).
- N/A: All features not included in the preceding categories and not maintained by the City's Storm Drainage Utility.

The tasks proposed on behalf of each of these categories are discussed in a later section of this memorandum.

Existing Ditch Maintenance and Operation Program

The City was consulted regarding the existing M&O program for their ditch inventory. Maintenance activities include regrading and removal of sediment; nuisance vegetation; and isolated obstructions such as trash, trees, and accumulated debris. Because vegetation is important for erosion control, removal of beneficial vegetation is minimized.

Maintenance of the City's ditch inventory is time intensive. Six M&O staff are required for a single ditch maintenance crew to operate the City-owned excavator, control traffic, and manually regrade or remove obstructions. While the City aims to implement a ditch maintenance program, the City's ditch inventory is only maintained on an as-needed basis.

Proposed Ditch Maintenance and Operation Program

The components of the program are listed and discussed below.

Incorporation of Ditch Classifications

Depending on the type of ditch, there may be a specific inspection regime and go-to maintenance activities. It is recommended that the City incorporate the earlier-listed classifications as feature attributes in their Channels layer in Cartegraph.

As detailed in Attachment E1, all channels classified as streams were shown to overlap with surface water linework in the geographic information system (GIS) and assumed to be streams. No streams are included in the ditch M&O program; however, complaints and observations, such as erosion around structures, may be addressed and included in customer service. For the purpose of this technical memorandum, none of the stream features will be discussed further.

Inspection and Routine Maintenance

All ditches will need to be inspected regularly to determine whether further maintenance or construction is required. Routine maintenance will occur during inspection and will include smaller-scale tasks, such as picking up trash, clearing out shopping carts, addressing spot complaints, and mowing. A full inspection will involve evaluating the system for any structural or vegetation issues and documenting the results to determine whether a work order is needed. Ditches identified in a work order should result in a follow up within 15 days.

Roadside ditches are expected to require constant maintenance. The collection ditches will require additional routine maintenance, such as annual mowing and sediment removal. Facility-related ditches are recommended to be maintained and inspected with the facilities they are related to. A checklist for the full inspection and routine maintenance task, along with any additional tasks required for certain types of ditches, should be developed as a follow-up to this memorandum.

Overall System Management

A general management system will be needed to ensure features are mapped, add new ditches to the City inventory, investigate encroachments, develop capital items, coordinate complaint response, make recommendations for water quality retrofits, promote general environmentally friendly practices, and facilitate the generation of work orders. These items are covered in more detail below.

Mapping Update

In addition to updating the Channels layer with the attribute classifications described earlier, the mapped features will need to be evaluated for accuracy after field inspection and confirm they are classified correctly. Similarly, attributes and linework for the feature should be reviewed and modified after field work.

It is recommended that in addition to the attributes listed in the Ditch Inventory Evaluation section, the following attributes be defined and verified for each feature as work orders are developed.

- Inverts (as available).
- Average bottom and top width.
- Permitted encroachments (utility structures, driveways, etc.).
- Ownership and easements.

Some of the attributes may be field verified during inspection, while others may involve desktop research.

Adding New Ditches

There should be a protocol in place where any ditches observed in the field should be noted and then verified of their existence in the City's ditch inventory. This will aim to pick up on any unmapped ditches within the City to ensure features are maintained and operated appropriately. Newly added ditches will require ownership and responsibility research and subsequent easements or purchase.

Encroachment Investigation

Any encroachments observed in the ditch features while in the field must be documented. Examples of encroachments include utility boxes, utility poles, driveway locations, and driveway pipes. These items will need to be investigated and handled appropriately.

Capital Development

The results of the feature inspection may warrant minor capital repairs or replacement. The projects should be added as a program to the Storm Drainage Utility's capital improvement plan. Items noted during inspection that may require capital repair or replacement include sedimentation, erosion, and system/structural failures.

Responding to Complaints

The program does not deal with private ditches. However, if a complaint is received, the City may need to respond. The City may either notify the owner of the complaint and insist they handle it appropriately, or the City may handle the complaint and then bill the owner for the work.

Water Quality Retrofits

As part of the program, the City's ditches should be evaluated for potential water quality retrofits, focusing on roadside ditches. Retrofits would implement strategies to provide treatment for the various pollutants found in road runoff (6PPD-quinone, road maintenance chemicals, heavy metals, eroded soil, etc.). Determining potential retrofits to consider and deciding how a ditch is chosen for retrofit should be determined as a follow-up to this memorandum.

General Environmentally Friendly Practices

It is recommended to follow general environmentally friendly practices when performing ditch maintenance. A few of these practices have been listed below and can be researched further in Volume IV of the Pierce County Stormwater and Site Development Manual.

- Encourage vegetation by not mowing too low.
- Avoid using chemicals where possible.
- Perform regular inspections.
- Conduct vegetative maintenance in the late spring or early fall.

Work Order Development

The following items will need to be addressed and managed in incorporating the proposed ditch M&O program.

- How does inspection turn into a work order?
- How often should ditches be inspected?
- What are the thresholds for action?

Recommendations

It is recommended to implement the proposed ditch maintenance program as detailed above. Further work to develop the inspection checklists, decide on how to implement water quality retrofits, and address the work order development items is necessary as a follow-up to this memorandum. It is recommended to reflect upon the program after 5 years to assess whether any adjustments would be beneficial to the program.

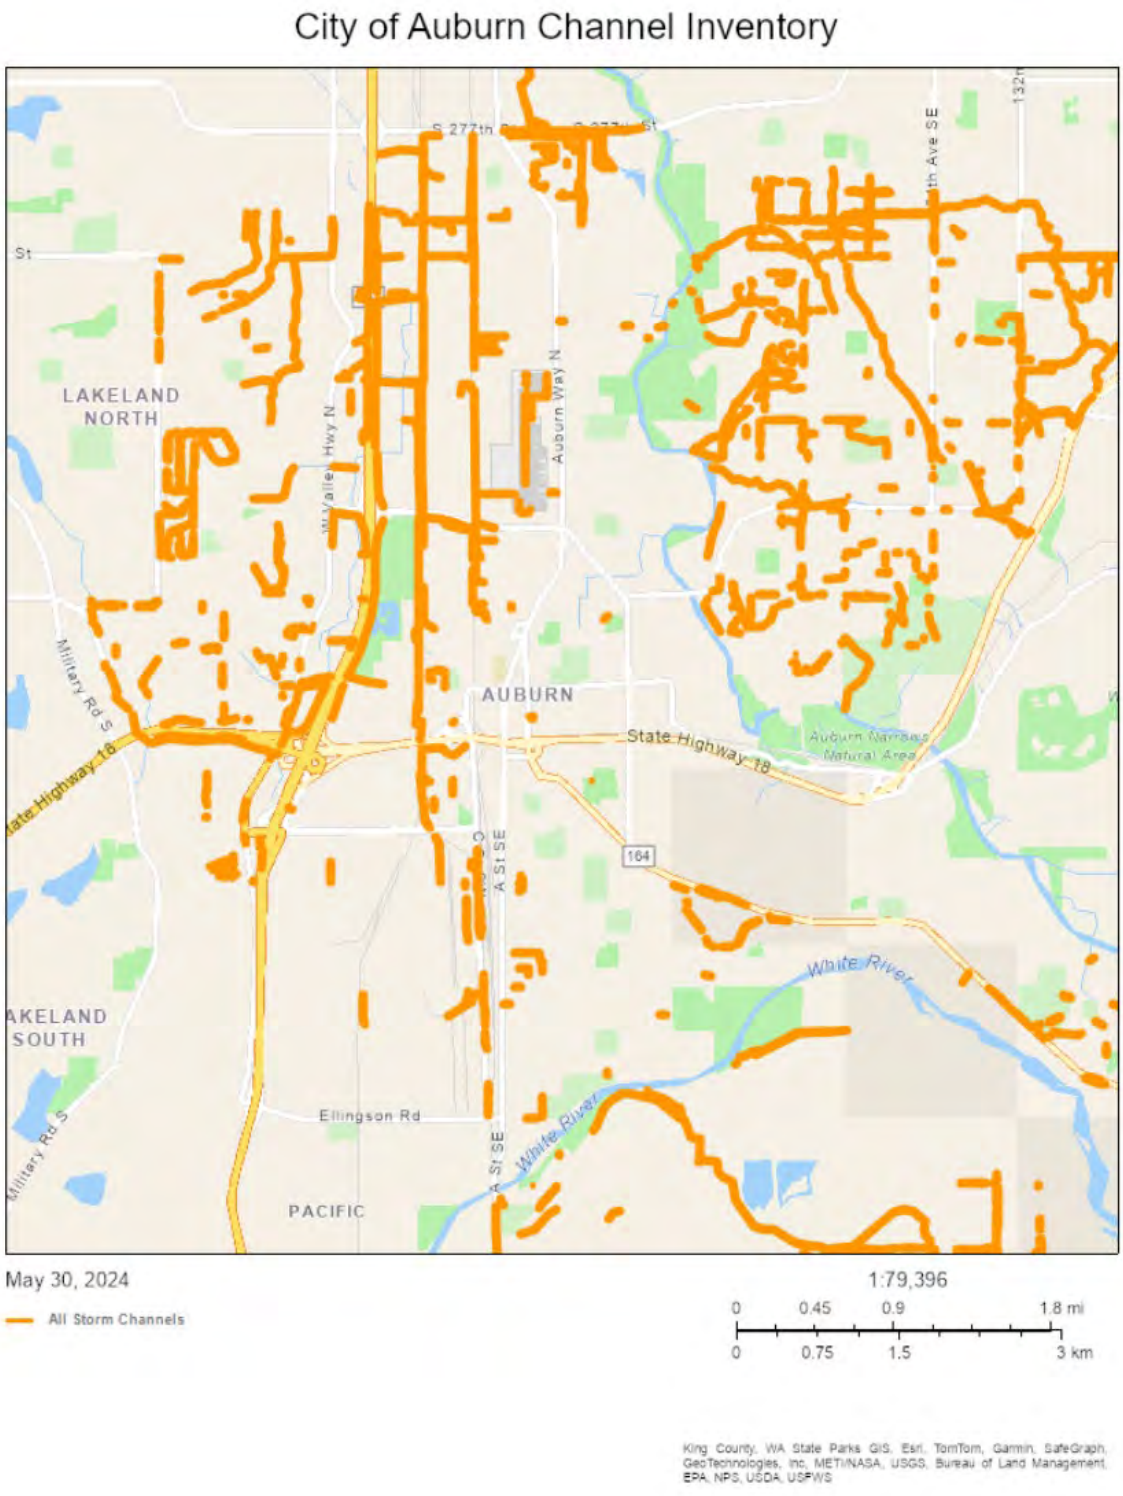

Figure E-1. Extent of Channels Layer in Cartegraph

Attachment E1

Channel Classification

Attachment E1

Channel Classification

The Channel layer was exported from the City's Cartegraph inventory and was used as the basis for the data review. At the time of export, there were 1,698 features with a total of more than 440,000 feet in summed length.

After reviewing the channel inventory, it was determined that a categorization of the channels by type would be beneficial in developing the required inspection criteria, frequency, and maintenance needs. Two attribute columns were added to the Channel layer, named "Source_Drainage" and "Source_Drainage_Note" to ease this process. Features were assigned a common category in the "Source_Drainage" attribute column, and any notes or reasoning for the assignment were justified in the "Source_Drainage_Note" attribute column. The process for classification of the channel inventory (and filling out the Source_Drainage attribute column) is detailed in the following sections.

The characteristics evaluated for classification along with a description of the process for each are listed below.

Ownership

The channels were first broken down using the feature's Owner attribute. The process for this breakdown is listed below.

- Any ditches marked as Owner = "COA"[1] or "0" or blanks were assumed to be City owned and broken down further.
- Any ditches marked as Owner = "Private" were marked as "Private – Ditch."
- Any ditches marked as Owner = "WSDOT" were marked as "WSDOT – Ditch."
- Any ditches marked as any owner not previously identified were marked as "Other Jurisdiction – Ditch."

Surface Water

The Channels layer was overlaid in GIS with linework from surface water and stream network layers. Any features from the Channels layer that overlapped with the surface water and stream network linework were marked as "Streams." These features would not be considered in the ditch maintenance and operations program.

If any features appeared to be visually similar to streams in GIS but did not overlap with any surface water linework, they were marked as "COA – Channelized Streams." An example of this instance is shown in Figure E1-1 below.

[1] Where COA is an abbreviation for City of Auburn.

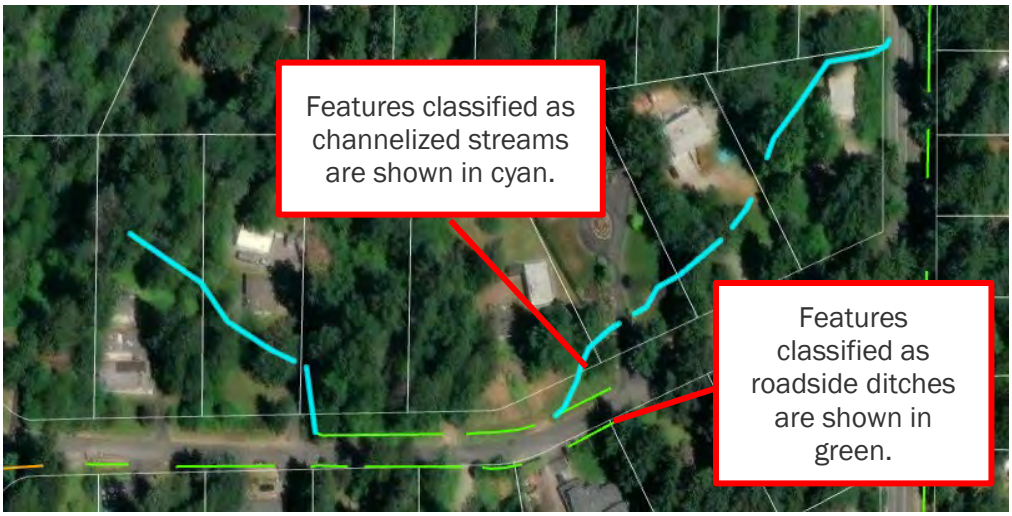

Figure E1-1. COA – Channelized Streams and Roadside Ditches Example

Roadside Ditch

A buffer was applied around roadways in GIS to capture any of the channel features within right-of-way. Any ditches within this buffer were marked as "COA – Roadside Ditch." These features are assumed to be capturing road runoff and are anticipated to be the most common form of a ditch. Examples of these features are shown in green in Figure E1-1.

Stormwater Facility

In a similar fashion to roadside ditches, a buffer was applied around the City's existing stormwater facilities. Any channels that lay within this buffer were visually evaluated to confirm that they seemed to be associated with a stormwater facility. Channel features that were confirmed to be associated with a stormwater facility were marked as "COA – Facility." Maintenance for ditches associated with an existing facility are anticipated to follow a schedule dictated by maintenance of the overall facility. An example of this feature type is shown below in Figure E1-2.

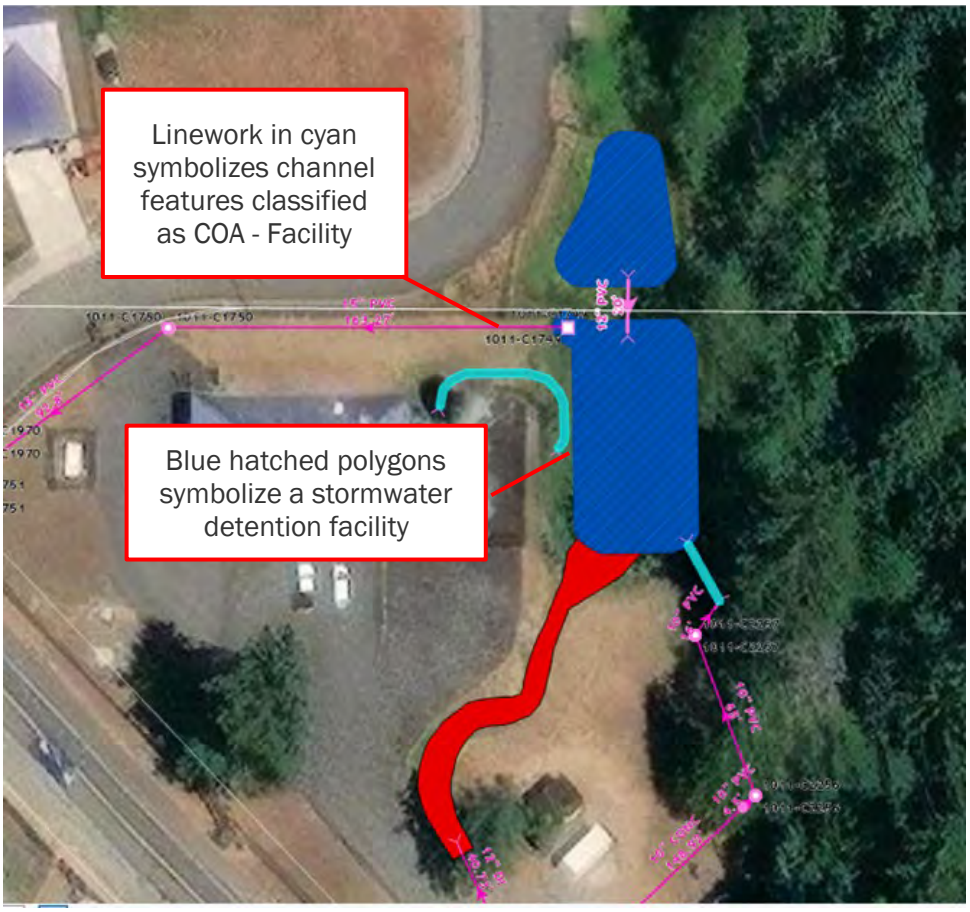

Figure E1-2. COA – Facility Features Example

Airport Median

There were three channel features shown in the airport median that were classified separately. These features were marked as "COA – Other." These are likely not ditches and would follow a different maintenance schedule than what is recommended elsewhere. Maintenance would be dictated by airport requirements. The three channel features of this type are shown below in Figure E1-3.

Figure E1-4. COA – Other Features

Public Ditches

The remaining channel features that were City owned and not surface water, not receiving roadside drainage, not associated with a stormwater facility, and not within the airport median were classified as “COA – Public.” These features will require different inspection and maintenance techniques than the roadside ditches because access may be more challenging and captured runoff is anticipated to be sourced from more than roadways. An example of a channel feature classified as “COA – Public” is shown below in Figure E1-4.

Figure E1-4. COA – Public Feature Example

Results

After classifying the Channels layer as detailed above, the resulting breakdown of features in each category is demonstrated below in Table E1-1.

Table E1-1. Channel Classification Breakdown

Owner[1]	Classification[2]	Length[3] (feet)	Length (miles)	Percent of City-Owned Channels	Percent of Total Channels
Various	Stream	84,000	16	-	19%
WSDOT	WSDOT - Ditch	29,000	5	-	6%
Other Jurisdictions	Other Juris - Ditch	9,000	2	-	2%
Private	Private - Ditch	101,000	19	-	23%
COA	COA - Channelized Stream	14,000	3	6%	3%
COA	COA - Roadside Ditch	176,000	33	79%	39%
COA	COA - Facility	5,000	~1	2%	1%
COA	COA - Other	3,000	~1	1%	1%
COA	COA - Public	26,000	5	12%	6%
-	**COA Total**	**224,000**	**42**	**100%**	**50%**
-	**Total**	**447,000**	**85**	-	**100%**

1 Owner corresponds to the data for the feature attribute of the same name. COA = City of Auburn; WSDOT = Washington Department of Transportation. "Other Jurisdictions" includes any other ownership not included in COA, WSDOT, or Private. Other jurisdictions listed as owners of channel features include City of Algona, City of Kent, King County, and the Muckleshoot Indian Tribe.

2 Classification also refers to the "Source_Drainage" attribute column developed for this evaluation.

3 Length has been rounded up to the nearest thousand. The columns to the right have all been calculated based on this rounded number.

Work Implications

The review of the channel inventory layer was conducted as part of a larger effort to develop a drainage ditch maintenance program for the City. Breaking down the layer into the classifications identified in Table 1 allow for resources to be evaluated appropriately. While the channel classifications aid in giving additional context for the features within the Channel layer, some of the classifications are expected to require the same work items and maintenance frequencies, while others are not maintained by the storm drainage utility and will not be included within the ditch maintenance program. To simplify drainage ditch M&O needs, features can be split into broader categories based on expected work. Table E1-2 shows the groupings for ditch M&O work as they relate to the COA channel classifications.

Table E1-2. COA Drainage Ditch M&O Categories Relative to Channel Classifications

COA Drainage Ditch M&O Category	Channel Classification	Length (feet)	Length (miles)
Roadside Conveyance	COA - Roadside Ditch	176,000	33
Facility-Related	COA - Facility	5,000	~1
Collection (Other)[1]	COA - Channelized Stream	40,000	8
	COA - Public		
Total Maintained by Storm Drainage Utility		221,000	42
N/A[2]	COA - Other	226,000	43

COA = City of Auburn; M&O = maintenance and operation

1 This grouping combines all other COA ditches maintained by the storm drainage utility collecting stormwater. For the purposes of this preliminary ditch maintenance program, these ditches are expected to have the same maintenance needs and frequency of work.

2 N/A includes all features in the channel classifications layer not sorted into one of the other three M&O categories, and not included in the City's ditch maintenance program. COA-Other is included in this category as it is not expected to be maintained by the storm drainage utility. It is expected to have different maintenance expectations dictated by the airport. If this is proven otherwise, it should be sorted into one of the other M&O categories based on expected level of need.

Facility-related ditches will largely be maintained alongside the facilities they correspond with. This may require a first step in associating facility-related features with the respective facility they serve in Cartegraph to ensure that these features are not missed. After this exercise, facility maintenance may include maintenance of any associated ditches (depending on recommended maintenance frequency, facilities may be maintained several times per year, while facility-related ditches may not need as many visits). While these features are still included within the ditch maintenance program, the frequency and scheduling of work is dependent on timing for associated facilities. Though, the work associated with ditch inspection and maintenance will be dictated by the ditch inspection program.

In terms of M&O tasks, features classified as COA-Channelized Stream are expected to have the same inspection and maintenance requirements as those in COA-Public, so these will be treated the same in terms of recommended M&O actions.

Appendix F

SEPA Compliance Documentation

DETERMINATION OF NON-SIGNIFICANCE (DNS)
City of Auburn Comprehensive Storm Drainage Plan Update
SEP24-0010

The City of Auburn is issuing a Determination of Non-Significance (DNS) for the following described project. The permit applications and listed studies may be reviewed at the Auburn Department of Community Development at One E Main St., 2nd Floor, Customer Service Center, Auburn, WA 98001 and by visiting www.auburnwa.gov/landuse.

Proposal: The proposed non-project action includes adoption of the Comprehensive Sewer Plan as an element of the city's Comprehensive Plan. The City of Auburn's 2024 Comprehensive Storm Drainage Plan replaces the City of Auburn's 2015 Comprehensive Storm Drainage Plan. The purpose of the Plan is to guide the City's Storm Drainage Utility with respect to future activities and improvements. The plan reviews the existing stormwater drainage areas which includes both areas within the city limits and potential annexation areas for the City of Auburn. It addresses policies, design criteria, and recommends improvements to the system. The plan analyzes the current level of service and identifies important projects necessary to meet city and state standards regarding public health, facility efficiency, and operations and maintenance. The Comprehensive Storm Drainage Plan is an ongoing element of the city's Comprehensive Plan and serves as a guide for the operation, maintenance and expansion of the stormwater system within the City, in accordance with the local, County, and State requirements.

Comprehensive plan

Environmental Impacts -

- Include care for species
- Each neighborhood could have goals + markers (steps to reach goals) + incentives related to
  - increased healthy eating choices
  - increased health markers
  - increased mental well-being
  - decreased overall emissions
  - increased species health

(Thus there needs to be a collectn of current stats to be able to compare apples to apples & note degree of progress toward goals,

+

There needs to be incentives - One incentive is to post the goals and progress (& hoped for progress)

- There needs to be the concept of checkerboard Development demonstrate in the city and ability planned for expansion in the forested & non-developed land around the city & state.
  - checkerboard Development is where humans live or develop like the middle acre of a 6-acre parcel. This allows space for species including trees, Requiring this 1:5 ratio in cities can help the O_2/CO_2 balance as well.

Even Industrial developments can be required to have a 1:5 ratio of development even if it is 1 hectacre to 5 undeveloped hectacres around them – with trees. OR the business or housing development can be required to sponsor saving this amount of S. Am. Rainforest. (They can develop + oversee a community of human species protectors there to offset their inability to do this here.) they can work w/ S. Am Rainforest non-profits to ~~fortify~~ fulfill this requirement or do their own thing. It should be approved by 3rd party agencies unknown to them.

Also get Brave Browser app for ones cell phone and put in https://oxygenlevels.org – it should take you to Scripps Institute Site. (It looks like an alarming downward trend. I got an answer about "how are methane, CO_2 + O_2 levels" from chatGPT – something like this "methane + CO_2 are above normal (or desired) levels, and oxygen levels are the same." Machines don't like oxygen, as it makes them rust.

Submitted by Linda C. Redman

Comprehensive Plan Input

Planning for ecological, peaceful neighborhoods.

- If the radio frequency the city has can be made to just cover the city area, & if people can know that, this may help to broadcast just to Auburn residents (& some nearby neighbors of Auburn residents.

- There might also be some neighborhood radio signals.

- Then everyone will need a radio.

- Also a bulletin board at neighborhood stores and a neighborhood grocery store of CHEAP, ORGANIC produce, cheap organic staple supplies, including alternative non-dairy milks, non-GMO butter alternatives like Earth Balance soy-free butter, non-chlorinated kitchen & bathroom & office paper products (also from recycled paper or other ecological materials)

- and also a place to have soup, smoothies or celery-apple juice →

with tables + chairs for neighbors to talk. — it can be under a large vinyl tent with clear vinyl windows (like the King County tents for checking if people had the SARS CoV2 virus) — and there could be ceiling heat lamps in cold months.

These could also be places to vote at & have neighbors oversee & validate acceptable elections.

For more ideas see slide show presentation (the one with sound & the one w/o sound - mostly for the initial image.) "Sco-Jhev - A Word and a Plan for a Healthy City." its on YouTube "Eco Peace Vision" Channel.

One more thing —
I want to suggest people in the planning and zoning department guard against bribes as these things have been offered in other cities I've heard. If people can believe in God & want to please

Auburn, WA 98001

ZONING CHANGES & COMPREHENSIVE PLAN COMMENTS

Dear Commissioners:

Our firm represents Schneider Homes, the owner of parcels 0921059127, 0921059038, and 0921059170 in the Lea Hill area of Auburn. The owner fully supports the proposed redesignation of the site to Neighborhood Residential 3 and the proposed new R-4 zoning district. With adoption of these proposed changes, the city will help encourage greater diversity of housing options.

In additional to these proposed map amendments, we respectfully submit the following comments on the draft Land Use & Housing Elements:

- Consider specifying in the draft elements that CPTED (as cited in the policies four times) is the acronym for Crime Prevention Through Environmental Design. It is currently not defined.
- Within the Mixed Use land use designation consider providing context in the policies that the city's intent is to allow vertical or horizontal mixed use. For example, amend LU-405 to read:

  LU-405 Mixed-Use Districts should ~~create~~ support cohesive, diverse, neighborhood mixed-use centers that allow vertical and horizontal flexibility, as well as flexibility in uses ~~that~~ to provide for local housing, shopping, and employment options that also allows each center to foster its own identify.

- Regarding Figure 3 on page HE-19, we strongly support the expansion of the Multi Family Tax Exemption (MFTE) program to multifamily areas outside of downtown. This is a proven incentive to encourage more multifamily housing.

Thank you for your time and consideration. Should you have any questions, please do not hesitate to reach out to me at 425-322-5226 or david@toyerstrategic.com.

Sincerely,

David Toyer
President

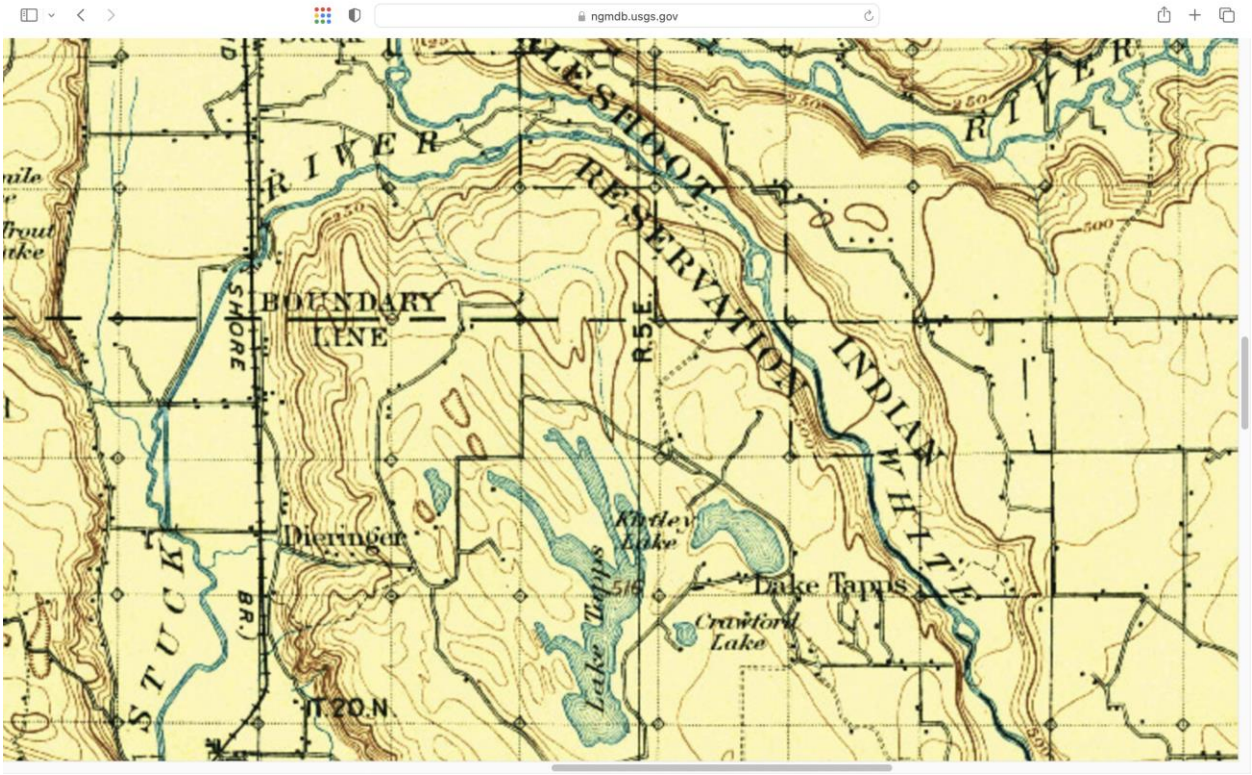
Re: Amendments to the Comprehensive Plan Land Use Section

Date: April 16, 2024



Thank you for the opportunity to make comments regarding future amendments to the Comprehensive Plan. We are unable to make these comments in person today so are submitting them electronically.

We would like the Comprehensive Plan to continue to value open space and the preservation and enhancement of the natural environment. This is even more important today as Auburn continues to grow more densely with smaller lots and multifamily housing.

There are several places in the current Land Use section that address this. The current policies related to Open Space (LU 120- LU 126) should be retained or lean stronger towards preservation and enhancement. With the current pressure to increase housing stock by 12,000 or more units, it is essential to protect the natural environment.

LU 145 Mount Rainier Vista. This policy recognizes the importance of this area to the protection of Coal Creek Springs. It should also recognize the value of Bowman Creek. This is a historic creek which flows from Lake Tapps (before Puget Power Project) down to the Stuck River. It continues to support a variety of wildlife in the area including a herd of more than 30 elk and a variety of birds. Residents have identified more than 60 bird species in 2023.

Re: Land Use and Housing Element – Auburn Comprehensive Plan Update

Dear Planning Commission:

I am writing to express my support for the proposed Comprehensive Plan Amendment to change the Future Land Use Map designation of my property at 2336 I Street (parcel no. 512540-0420) from Multiple-Family to Neighborhood Residential Three.

The current R-20 designation, which allows only low-density single-family development, is no longer appropriate for this property given its proximity to major transportation corridors, employment centers, and commercial amenities along Auburn Way. Updating the land use designation to R-4 Residential High Density will enable more efficient and sustainable use of this underutilized site by allowing for a greater variety of housing types at increased densities in the future.

While I understand that this proposed amendment would only change the land use designation at this time and not the zoning itself, which will be addressed at a later date during the land use code update, it is a critical first step towards unlocking the potential of this property to help meet Auburn's growing housing needs. The Neighborhood Residential Three designation aligns with the city's goals of accommodating projected population growth, providing diverse housing options, and promoting affordability.

I strongly support the proposed expansion of the Multifamily Tax Exemption (MFTE) program to include multifamily areas beyond the downtown core, as illustrated in Figure 3 on page HE-19 of the Housing Element. The MFTE program has a proven track record of incentivizing the construction of new

multifamily housing, and extending its geographic scope will help to encourage much-needed residential development across a wider area of the city.

In conclusion, I strongly encourage the Planning Commission to recommend to City Council this Future Land Use Map amendment as part of the Comprehensive Plan Update. This action will put the city on a path towards more sustainable and equitable growth while enabling the productive redevelopment of underutilized properties like my own.

Thank you for your consideration of my comments.

Very truly yours,

Simon Uppal

CAUTION: The following message originated from outside the City of Auburn. Be careful opening links and attachments

---

4/11/24

Hello Josh,

In keeping with the interagency correspondence principles, I am providing you with comments on the proposed changes to Auburn's Comprehensive Plan updates (Commerce ID# 2024-S-6992).

I looked at the proposal and focused on areas related to WGS work. Of note, but not limited to, I look for language around the geologically hazardous areas, mineral resource lands, climate change, and natural hazards mitigation plans.

Specifically in this proposal, I reviewed the Land Use Element, the Climate Element, the memo dated 2/28/24, and the Critical Areas Checklist.

In the memo dated 2/28/24, on page 2 under b) it states, "In accordance with ACC 16.10.070(C) the city requires all reports and studies required of the applicant for critical area reports shall be prepared by a qualified consultant…" In reviewing the provisions of ACC 16.10.070(C), the definition of qualified consultant could be made more clear and stronger, particularly related to geologically hazardous areas. Here's an excerpt from the existing: "Qualified consultant," for purposes of these regulations, shall mean a person who has attained a degree from an accredited college or university in the subject matter necessary to evaluate the critical area in question (e.g., biology, ecology, or horticulture/arboriculture for wetlands, streams, wildlife habitat, and geology and/or civil engineering for geologic hazards, and hydrogeologist for aquifer recharge areas), and/or who is professionally trained and/or certified or licensed by the state of Washington to practice in the scientific disciplines necessary to identify, evaluate, manage, and mitigate impacts to the critical area in question…" Suggest describing the requirements for geologically hazardous area as a specific call out similar to those for the critical aquifer recharge areas. E.g. A qualified consultant for geologically hazardous areas must be a currently licensed Washington State geologist or civil engineer specializing in geologic hazards.

In the City of Auburn Climate Element, it's great to see the hazard mitigation plan is mentioned four times. No specific changes here, but I suggest you continue to find ways to integrate your climate plan and natural hazard mitigation plan.

Recognizing the limitations of the current proposals, I want to mention that it would be great for you to consider these in future work, be it in your comprehensive plan, development code, and SMP updates, and in your work in general:

- Consider adding a reference to WAC 365-190-120 geologically hazardous areas for definitions.

- Consider adding a reference to the WGS Geologic Information Portal. If you have not checked our interactive database, the WGS Geologic Information Portal, lately, you may wish to do so. Geologic Information Portal | WA - DNR
- If you have not checked out our Geologic Planning page, you may wish to do so. Geologic Planning | WA - DNR

Thank you for considering our comments. If you have any questions or need additional information, please contact me. For your convenience, if there are no concerns or follow-up discussion, you may consider these comments to be final as of the 60-day comment deadline of 6/9/24.

Cheerio,
Tricia

Dear Josh, Senior Planner

Here is a video showing methane is 30 % of greenhouse gasses.

https://youtu.be/nZixelKjiTg?si=I1E-ibyAao0PQzh

In a talk by Bill McKibben at a church at Princeton this month, he said we had surpassed the 1.5 Celsius increase in global heating that was a goal to NOT surpass.

So we have to work much harder and faster to reduce greenhouse gasses & absorb them with more trees, bushes and kelp — as I see it.

And try hard to keep trees up and sponsor drought-tolerant trees to get planted in parts of the world that will tolerate them. (Like maybe around the Rio Grande, Indus River, and the Euphrates, Tigris, and Jordan Rivers)

Incinerating trash that is in dumps or landfills is an important way to stop methane leaks.

Even though our trash is not in our city limits I think we could help make sure it is getting incinerated - in a clean way. It can also heat floors for some housing in the winter months.

Here is an example of that:

(Short video) “waste to energy”
https://youtu.be/O9pwV3JoqwA?feature=shared

12 minute video - one waste incineration in Japan heats a recreation center, & we see they & one in Norway captures CO2. Also we see residents can mark their names on their trash to more easily find who isn’t sorting it correctly.

We also can learn the burning of new trash is not a good incentive to get people to produce less or to recycle better.
https://youtu.be/sAu3LVktMwE?si=lMnHlWcI07mtbChc

—-
I think the City of Auburn could offer the State Parks that we would like to look into the cost of capturing & converting the methane leak
at that location Flaming Geyser Park.

Maybe we could capture & convert methane and maybe also make a museum / and or maybe a heated non-chlorinated swimming pool like the one at the Federal Way Community Center, and or sauna, & maybe semi-covered center with fire place & heated adobe floor

I understand methane is WAY worse than CO2 — like it creates a domino effect of heat trapping, I have read it could be 100 times worse that CO2 for problems.

—-
This is a 4m30s video of clean incineration of trash in Amsterdam

https://youtu.be/DROZUstnsnw?si=-3NGV7vkd_uaufpq

If new buildings could have small versions of these, maybe heating bills and trash hauling bills & pollution could be reduced.

-Linda

Re: Amendments to the Comprehensive Plan Open Space and Trails Section

Date: May 4, 2024

Thank you for the opportunity to comment on future amendments to the Comprehensive Plan. We have lived on 53rd St SE in Auburn for 47 years, part of an area that we will refer to as the **Bowman Creek Plateau**. We also submitted comments at a previous meeting pertaining to specific Land Use policies (LU 120 - LU 126). **We believe the existing policies in the Comp Plan regarding Open Space and Trails are excellent and wish to point out specific sections that are especially applicable to Southeast Auburn and the Bowman Creek Plateau.**

"The GMA also requires us to 'identify open space corridors within and between urban growth area. They shall include lands useful for recreation, wildlife habitat, trails, and connection of critical areas" RCW 36.70A. 160)".

The Bowman Creek Plateau is such a corridor.

"*In addition to benefitting people, open space is valuable to wildlife and to maintaining environmental quality. The preservation of green spaces and natural areas are important to protecting the quality of life for Auburn residents within a highly urbanized area."*

There is a resident herd of elk on the plateau. Open space on the Bowman Creek Plateau provides a corridor for them as well, where they shelter in the wooded area, graze in the grassy area, and drink from Bowman Creek.

"Open space can preserve natural areas and environmental features with significant educational, scientific, wildlife habitat, historic, and/or scenic values such as views of major visual resources such as Mount Rainier, riparian corridors, and vistas along scenic routes."

Both Kersey Way and 53rd St SE were historic wagon and foot routes to the five lakes that now comprise Lake Tapps. Both routes followed the path along the riparian corridor of Bowman Creek. One can imagine through the trees being able to glimpse Mt Rainier in the distance beyond the lakes. Hence the current reference to the plateau as "Mt. Rainier Vista'.

"Open Space can offer health and safety benefits such as flood control, protection for water supply, cleansing of air, and separation from hazards such as landslides."

The open space on the Plateau protects Coal Springs and also separates potential future housing below from the steep slope to the north of the power line.

The goals and objectives of the Open Space Policy are likewise pertinent to the Bowman Creek Plateau, including the potential for trails.

Goal 1, regarding acquiring open space. Objective 1.2 challenges the City of Auburn to 'pursue acquisition and conservation of critical open space lands.'

There is an opportunity to do so on the Bowman Creek Plateau while this unique area exists. Later will be too late.

Goal 2, regarding developing an interconnecting network of open space land allowing movement of people and wildlife.

The comprehensive plan map shows a potential trail connector from Stuck River Road (and the two Game Farm Parks) east, following the river south, and then upward to the Plateau. We remember a horse trail route there. An alternative trail could be designed more directly to the plateau on the eastern part of the mine property. This should be considered. In addition, there could be a trail from the Plateau between the mine property and along the east side of Bowman Creek. This trail would protect users from traffic on Kersey Way and connect to the White River Trail.

Objective 2.1 Develop a system of trail corridors to link major parks and open spaces, residential neighborhoods, and other activity centers such as schools, employment centers, and community centers.

The Comprehensive Plan Survey reports that walking for pleasure is the most popular outdoor activity in the city. The survey ranked walking/running for pleasure and visiting nature areas first and second place for activities. It is essential that planning for these activities happen before development supersedes these unique natural opportunities.

Objective 2.2 Explore the use of utility and transportation corridors to expand the trail system.

The Powerline that separates the current mine property from the Bowman Creek Plateau could be used for this purpose.

We would like the Comprehensive Plan to continue to value open space and the preservation and enhancement of the natural environment. This is even more important today as Auburn continues to grow more densely with smaller lots and multifamily housing.

Subject: Re: Comprehensive Plan - Land Use & Housing Elements

CAUTION: **The following message originated from outside the City of Auburn. Be careful opening links and attachments**

Dear Josh Seiner, Senior Planner,

Thanks for you and your hard work to follow the Washington State laws for dense housing to protect green space from sprawl and aim to dramatically reduce greenhouse gasses.

Even though the Planning Commission approved your current plans for land use and housing I want to encourage these considerations:

Each neighborhood of approximately 1000 - 5000 people, move to be PEDESTRIAN & biking villages

—to develop to be like it's own (beautifully landscaped) college / college town.

—this the jobs in each neighborhood village look like this: (there can be a checklist of skills that residents can gain - model after how Japan is very self-reliant and people work on craftsmanship and can take on apprentices)

—have interest groups, apprentice-type volunteers, paying jobs, research, productions, projects, and activities in these fields:

* visual, acoustic arts / creative and journalistic writing, comedy arts, creative thinking

* physical, speech, occupational, music therapies, caring philosophies like Kineliners (to encourage building strengths)

* education of children, teens, adults, elders & aiding development of talents, skills, incorporating elders to read, tell stories to children

* assisting youth, adults, elders, physical and mentally challenged to be healthy, strong, productive & socially engaged

* family center / boys & girls club / youth center - nature walks, species identification, restoration of native species

* psychology, encouragement-uplifting activity leaders, brain SPECHT scan & counseling (can be a mobile clinic), designing & hosting positive cultural & family activities

* peace-oriented religions, philosophies

* astronomy, magnetic shield, resonant shield information gathering & sharing

* gardening, grocery store with healthy products, good food in restaurants, people only order food within one's neighborhood zone (& delivered by foot or bicycle)

* landscape arts, building and grounds maintenance, making culverts so native species of arthropods can go under roads every 25 feet.

* computers, technology, communication systems, repair technicians - this department overseen by peacekeepers

* library, safe-keeping of books, info (like in a vault in case of fire, asteroid shower, etc.)

* science labs, excellent medical clinic, excellent dental clinic, excellent wholistic clinic with excellent chiropractic, excellent acupuncture, excellent homeopathic, excellent homeopathic providers and assistants

* naturalist museum, collectors (if flora & fauna are dying or dead),

* veterinarian, assistants, wild animal rehab

* protective arts, security, also for the area from asteroid or meteor showers, storms, police assistance, conflict resolution, justice, law, history, political science, the Bible & history of judging and laws

* conservation encouragers - to encourage residents in the village neighborhood to walk more, buy locally, post conservation goals & celebrate successes, sponsoring & extending kelp beds on coast, & assisting "sustainable square" Checkerboard Development in South American Rainforest & around Washington & the planet.

* natural material builders, like Cobb-style (adobe with 2 foot long roof overhangs for protection). The goal is to create very affordable homes for families with children that are ground level, in backyards of existing homes, so children can easily play outside for optimum development. And so parents have less financial stress & can spend more time with their children - ideally in neighborhood jobs of their interests.

—

—have green belts & landscape architecture professionally to work to make different neighborhoods look like distinct villages, and aesthetic to walk in.

—-
The focus isn't on making money, but success with health & greenhouse reduction of whole neighborhood, and sharing in neighborhood successes.

Subject: For Comprehensive Plan - Ecology & Parks / CO2 Reduction

CAUTION: The following message originated from outside the City of Auburn. Be careful opening links and attachments

---

Hi Dear Josh, Senior Planner,

The suggestion of purchasing & assisting Christian residents in the South American Rainforest to live on the land in the middle acre of a 6 acre parcel - or some 1:5 ratio settlement situation,

For the purpose of protecting the trees & species from destruction, and for the purpose of sequestering CO2, and

For the purpose of helping reduce greenhouse gases that the City of Auburn, Washington State, and U.S.A. leaders have committed to, and

For the purpose of helping compensate for the greenhouse gasses that Auburn, Washington residents have contributed to the planet over our lives in the past hundred years especially.

The proposal is to sponsor a groups of people local to the region that are sincere believers in Father God, the Holy Spirit, and Jesus and appear serious to care for God's creation.

Such a group may have some help from God as they pray for protection for the designated unit(s) of land.

The proposal is to support them withas they work to develop jobs in the parcel of land to show this is a viable pattern of living.

I am proposing a group of Christian believers because the idea was relayed to me by a listener of "God" - which I understand was called by Paul in the Bible as "Father God."

The person who relayed this to me is a Christian. I believe the idea should have the most success if the on site group(s) there are Christian's.

An acre is about the size of a football field. I think 50 people could live comfortable in such a space if they can also oversee the surrounding 5 acres.

Some jobs I believe could be developed are jobs to guide naturalists & scientists, permaculture, gardening, growing pretty jungle plants to sell in cities, housing naturalists, researchers, ecotourists, receiving donations for a museum of area species, a store to sell food and homemade crafts and clothing, running schools elementary through university level, understanding indigenous cultures, knowledge of plants, ways, having an integrative medical clinic - so they get advice from Bastyr Center for Natural Medicine - (Seattle, they may agree to do remote calls).

In a major city next to the Amazon River therefore a major flooding several months ago and there may still be many displaced people.

There is also a non-profit group in the U.S. & Ecuador community called the Pachamama Alliance - (https://news.pachamama.org/25-years-of-pachamama-alliance-a-conversation-with-the-co-founders)
This group of English speakers may be open to coordinating a similar project with indigenous people in the Ecuador Rainforest - even if they are not Christian. It may still work — the group appears to be authentically trying to help the indigenous people to get the Rainforest protected.

From Linda

2024 COMPRHENSIVE PLAN

Agency Comments

Puget Sound Regional Council

1201 Third Avenue, Suite 500, Seattle, WA 98101-3055 | psrc.org | 206-464-7090

May 21, 2024

Josh Steiner, Senior Planner
City of Auburn
25 W Main Street
Auburn, WA 98001

Subject: PSRC Comments on City of Auburn Draft Comprehensive Plan

Dear Mr. Steiner,

Thank you for providing an opportunity for the Puget Sound Regional Council (PSRC) to review the City of Auburn draft comprehensive plan. We appreciate that the city has invested a substantial amount of time and effort in developing the draft plan and appreciate the chance to review it while in draft form. This timely collaboration provides an opportunity to review plan elements for the 2024 comprehensive plan and prepares the city well for certification by PSRC once the full plan has been adopted.

We suggest the city consider the following comments as further work is completed for the comprehensive plan update to align with VISION 2050 and the Growth Management Act. Overall, we found few things to comment on. Importantly, though, we encourage the city to work towards a final draft that documents the city's existing tools, as well as barriers, to address affordable housing and enhanced discussion on racially disparate impacts.

We reviewed the draft plan using the PSRC Plan Review Consistency Tool. Key sections of the consistency tool are listed below on the left along with relevant comments on the draft plan on the right:

Transportation

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
Provide travel demand forecasts and identify state and local system projects, programs, and management necessary to meet current and future demands and to improve safety and human health (RCW 36.70A.070, MPP-T-4-5)	The city should ensure that all the city's projects in the Regional Transportation Plan are included in the project list. The Community Profiles dashboard provides a full list of projects for the city.
	The city states that it uses the "preferred 2044 growth model" for the transportation element. The city should clarify the growth numbers used in this model and consistency with the rest of the comprehensive plan.
Ensure mobility choices for people with special needs (MPP-T-10)	The plan should include policy and analysis of transportation planning for people with mobility and accessibility needs. The city will need to incorporate its ADA transition plan in the comprehensive plan by 2029 per HB 1181.
Include mapped inventories for each element of the transportation system, including roadways, transit, cycling, walking, freight, airports, and ferries (RCW 36.70A.070, RCW 36.70A.108, MPP-T-7, T-15-17)	The city should include all transit routes and facilities in the mapped inventory, including the Sounder train. The city should also include the airport in mapped facilities.

Housing

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
Address affordable housing needs by developing a housing needs assessment and evaluating the effectiveness of existing housing policies, and documenting strategies to achieve housing targets and affordability goals. This includes documenting programs and actions needed to achieve housing availability including gaps in local funding, barriers such as development regulations, and other limitations (H-Action-4)	The city should clarify the affordable housing need consistent with King and Pierce counties. A table could be used to show total housing need and the policy on meeting Auburn's share of affordable housing should be updated to be consistent with current CPPs. Existing housing stock by AMI should also be included in the plan for the King County portion of the city.
	The plan should document the city's existing housing tools and incentives and discuss regulatory and financial barriers to affordable housing. Commerce's Adequate Provision checklist can help document this work.
Increase housing supply and densities to meet the region's current and projected needs at all income levels consistent with the Regional Growth Strategy (MPP-H-1)	The draft plan indicates the city currently lacks sufficient capacity for its housing targets. The plan seeks to increase capacity to remedy this gap – following through to provide sufficient capacity for housing will be important in finalizing the plan update. The city should clarify the capacity for housing to meet various income levels, specifically, looking at capacity by county, housing serving 0-30% AMI and capacity for emergency housing units.

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
	Currently, the plan shows ADUs as covering 0-30% AMI and language around "developable acres" could be clarified.
Identify and begin to undo local policies and regulations that result in racially disparate impacts, displacement, and exclusion in housing, including zoning that may have a discriminatory effect and areas of disinvestment and infrastructure availability	The city should include additional data and information on local policies and regulations that result in racially disparate impacts and strategies to address this. Commerce's Racially Disparate Impact Guidance provides additional information on how to do this and UW's mapping provides a resource on racially restrictive covenants in Auburn.
Use inclusionary and incentive zoning to provide more affordable housing when creating additional housing capacity (H-Action-5)	The city should consider pointing to where inclusionary and incentive zoning are used and increase focus on affordability to support the creation of more affordable units.
Identify potential physical, economic, and cultural displacement of low-income households and marginalized populations and work with communities to develop anti-displacement strategies when planning for growth (MPP-H-12, H-Action-6)	The city uses displacement risk mapping tools from both Commerce and PSRC in different areas of the plan. While using both tools may be helpful, clarifying why they are each used or using only one tool could clarify displacement risk and the city's approach to mitigation.

Land Use

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
Demonstrate sufficient zoned development capacity to accommodate targets (RCW 36.70A.115)	PSRC recommends the city discuss capacity within each county to demonstrate consistency with countywide growth targets.
Include growth targets for designated regional growth centers and manufacturing/industrial centers (MPP-RGS-2)	Growth targets for population and housing should be included in the process of updating the Auburn Downtown Plan consistent with regional center guidelines. If timing is appropriate, these targets should be incorporated into the comprehensive plan as well.

Other Elements

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
Prioritize services and access to opportunity for people of color, people with low incomes, and historically underserved communities to ensure all people can attain the resources and opportunities to improve quality of life and address past inequities (MPP-RC-2)	PSRC looks forward to reviewing the Core Plan and further language on incorporating advancing equity in the city of Auburn.
Support programs to ensure that all residents, regardless of race, social, or economic status, have clean air, clean water, and other elements of a healthy environment and prioritize the reduction	The city could include policies to avoid and mitigate environmental impacts to vulnerable population and include information such as maps and demographic data.

Plan Review Consistency Tool	PSRC Comment on Draft Auburn Plan
of impacts to vulnerable populations that have been disproportionately affected (MPP-En-3-4, En-7-8, En-21)	
Identify open space, trail, and park resources and needs, and develop programs for protecting and enhancing these areas (MPP-En-11-12, En-15, En-Action-4)	Consistent with VISION 2050 and national best practices, PSRC recommends including a policy and parks level-of-service to provide parks within a 10-minute walk of all residents. This will set the foundation for adding or expanding parks to create equitable access. PSRC uses the Trust for Public Land's ParkServe mapping tool to identify park gaps. ParkServe shows that 69% of Auburn's residents live within a 10-minute walk of a park.
Address impacts to vulnerable populations and areas that have been or will be disproportionately affected by climate change (MPP-CC-6, CC-8, CC-Action-3, CC-Action-4)	The city could include additional analysis demonstrating the connection between vulnerable populations and climate change, in addition to the policy included.
Identify and address the impacts of climate change and natural hazards on the region to increase resilience (MPP-CC-7-10, CC-Action-4)	The city could identify and analyze hazards related to climate change, including mapping of these hazards. The Puget Sound Hazards Map is a resource for this.
Preserve historic, visual, and cultural resources and consider potential impacts to culturally significant sites and tribal treaty fishing, hunting, and gathering grounds (MPP-DP-5-7)	The city should describe and include policies on tribal treaty rights. PSRC's Coordination with Tribes resource provides more information on this topic.

PSRC has resources available to assist the city in addressing these comments and inform development of the draft plan. We have provided links to online documents in this letter, and additional resources related to the plan review process can also be found at https://www.psrc.org/planning-2050/vision/vision-2050-planning-resources.

We appreciate all the work the city is doing and the opportunity to review and provide comments. We are happy to continue working with you as the draft progresses through the adoption process. If you have any questions or need additional information, please contact me at 206-464-6171 or mmoore@psrc.org.

Sincerely,

Maggie Moore, Growth Management

Re: Draft Comment Letter for Submittal ID 2024-S-6992A – City of Auburn Draft 2024 Comprehensive Plan Periodic Update

Dear City Council:

Thank you for the opportunity to comment on the City of Auburn's draft 2024 comprehensive plan periodic update and appendices. Growth Management Services received the proposed amendments on April 11, 2024 and processed them with material identification number 2024-S-6992A.

Your submission represents a great deal of work and substantial progress towards the 2024 periodic update of your comprehensive plan due December 31, 2024. We appreciate your effort to incorporate environment stewardship policies in your draft utilities element, which include water quality and resource protection, as well as the inclusion of names and contact information for private utility providers and special purpose districts. We applaud the extensive work done to draft the 2024 Comprehensive Transportation Plan which appears to address each requirement as noted in the Periodic Update Checklist for Fully-Planning Cities – well done!

As part of our review, we referenced the draft elements and associated draft appendices submitted on April 11, 2024. We have focused our review on the following comprehensive plan elements, and offer respective comments and/or suggestions as follows:

1. Land Use

    a. There are multiple references to Appendix A throughout the draft land use element and, while not required, it would be helpful if those references specify which chapter(s), and/or section(s) provide analyses noted.

    b. While there are references to the protection of groundwater and public water sources in the Open Space Designation and Residential Conservancy Designation,

the draft land use element does not appear to include specific policy for protection of the quality and quantity of groundwater used for public water supplies. RCW 36.70A.070(1) expressly states, "The land use element shall provide for protection of the quality and quantity of groundwater used for public water supplies". Commerce recommends strengthening the draft land use element by adding such provisions, as required by the Growth Management Act (GMA), and which are consistent with water protection policies provided in the draft utilities element.

2. Housing

   a. While the draft housing element (HE) appears to include policies demonstrating consideration of Accessory Dwelling Units (ADUs), we encourage Auburn to review sections related to ADUs in Housing Element Book 2 (ADU narrative guidance, pages 68-69 and ADU capacity, Step 1.6, pages 27-28) to adjust capacity calculations in HE Table 1 (Residential Capacity by Zone). Generally, ADUs do not serve households below 50% Area Median Income (AMI). Commerce recommends jurisdictions assume ADU rents are on par with apartment rents unless there is better data available at the local/place level.

   b. RCW 36.70A.070(2)(c) requires housing elements to identify sufficient capacity of land for housing, including emergency housing. Auburn's draft HE does not appear to include emergency housing in its land capacity analysis. Please include emergency housing in the land capacity analysis and the findings in the Housing Element. We also recommend addressing/clarifying the following:

      i. In Policy H-19 what constitutes "appropriately designed" manufactured housing?

      ii. In which zones does Policy H-20 allow manufactured housing parks, transitional housing, supportive housing, and multiplex housing?

      iii. Please consider including STEP housing (i.e. emergency shelters, transitional housing, emergency housing, and permanent supportive housing) in Policy LU-37.

   c. Commerce recommends including a list of barriers to affordable housing needs, including barriers to emergency housing and permanent supportive housing (Housing Element Book 2**:** see page 50 and Appendix B). On draft HE pg. 11 there is a short discussion related to addressing identified barriers; please expand on this statement. Commerce recommends including a list of barriers (e.g. gaps in local funding, development regulations) and specific actions needed to remove these barriers. Consider factors that may negatively impact production for each

type of housing allowed in your community. See also Chapter 4, Adequate Provisions in Housing Element Book 2.

d. RCW 36.70A.070(2)(e) requires housing elements to identify local policies and regulations that result in racially disparate impacts, displacement, and exclusion in housing. While there is a statement in the draft Housing Needs & Characteristics Assessment Update on page 40 indicating where racially disparate impacts are anticipated, Commerce recommends expanding analysis of specific policies and regulations that have resulted in the identified racially disparate impacts and how policies were reviewed **(**Housing Element Book 3: see pages 33-36; this specific evaluation framework is not required).

3. Capital Facilities

The draft Capital Facilities Element (CFE) indicates the Capital Facilities Plan (CFP) is "a key component of and adopted with [the comprehensive] plan" (pg. 3). The draft 2023-2028 CFP was included as supporting documentation to the CFE as part of submittal 2024-S-6992A. The checklist for fully-planning cities notes the 2024-2029 CFP is scheduled to be complete during summer 2024. Commerce looks forward to Auburn's submittal of the draft 2024-2029 CFP for review.

While Auburn continues to work on their draft 2024-2029 CFP, Commerce offers the following suggestions for your consideration:

- Counties and cities should create an inventory of existing capital facilities showing locations and capacities, including the extent to which existing facilities have capacity available for future growth. WAC 365-196-415(2)(a)(i).

- The forecast of future need should be based on projected population and adopted levels of service (LOS) over the planning period (i.e. 2024-2044). Additionally, the capital facilities element should identify all capital facilities that are planned to be provided within the planning period, including general location and capacity. WAC 365-196-415(2)(b).

- Infrastructure investments should consider equity and plan for any potential displacement impacts.

4. Utilities

The draft utilities element does not appear to include the general location, proposed location, and capacity of all existing and proposed utilities, including telecommunications, as required by RCW 36.70A.070(4)(a) and WAC 365-196-420. Commerce recommends including this information in the final draft of the utilities element.

As friendly reminder, copies of adopted plans must be submitted to Commerce within ten (10) days after final adoption (RCW 36.70A.106(2)).

Thank you again for the opportunity to comment and we appreciate the hard work these proposed amendments represent. If you have any questions about this letter and/or wish to request technical assistance, please feel free to contact me at Carol.Holman@commerce.wa.gov or 360-725-2706.

Sincerely,

Carol Holman, MUP

Memo

To:	King County Affordable Housing Committee Members
From:	Isaac Horwith, Affordable Housing Planning Program Manager
cc:	Housing Interjurisdictional Team
Date:	July 16, 2024
Re:	AHC Review of Bellevue, Auburn, Bothell, Issaquah, Federal Way, and Covington's Draft Comprehensive Plans

Purpose of July 23 AHC Meeting

At the July 23 Affordable Housing Committee (AHC) meeting, AHC staff will share program updates followed by a briefing on findings from their review of the housing-related components of the cities of Bellevue, Auburn, Bothell, Issaquah, Federal Way, and Covington's draft comprehensive plans and submission materials. AHC members will consider and possibly approve letters commenting on the alignment of each city's draft comprehensive plan with the goals and policies of the King County Countywide Planning Policies (CPP) Housing Chapter.

To prepare for the meeting, AHC members should prioritize review of this memo and the draft comment letters for each city (see Exhibits 2 through 7) and prepare any questions or comments for discussion.

Background

The CPPs that establish the Housing-focused Draft Comprehensive Plan Review Program (plan review program) were adopted by King County Council and ratified by King County cities in 2023.[1] The AHC conducts this review on behalf of the Growth Management Planning Council (GMPC). The AHC's review of draft comprehensive plans is guided by GMPC-adopted plan review standards used to evaluate meaningful alignment between jurisdictional comprehensive plans and CPP Housing Chapter policies.[2]

Since June of 2023, the AHC has approved comment letters for Algona, Burien, King County, Maple Valley, and Redmond's draft plans, with 35 jurisdictions remaining.

Bellevue, Seattle, Auburn, Bothell, Issaquah, Federal Way, and Covington submitted their materials for AHC review on March 8, April 9, April 10, April 19, May 16, May 24, and May 30, 2024, respectively. AHC staff conducted their review of each city's draft comprehensive plan and related

[1] Countywide Planning Policy H-26 directs the GMPC or its designee to conduct a housing-focused review of all King County jurisdiction's draft periodic comprehensive plan updates for alignment with the Housing Chapter goals and policies prior to plan adoption and provide comments. [link]
[2] See Attachment B: Housing-Focused Comprehensive Plan Review Standards in GMPC Motion 23-1. [link]

submission materials, guided by the adopted plan review standards, and drafted comment letters for AHC consideration and potential approval.

The draft comment letters identify strong areas of alignment with the CPP Housing Chapter and recommend actions necessary to be consistent with the CPPs. AHC staff presented to and received feedback on the draft comment letters from the AHC Chair, King County Councilmember Claudia Balducci, and Vice Chair, Futurewise Executive Director Alex Brennan. AHC staff shared the draft letters with Bellevue, Seattle, Auburn, Bothell, Issaquah, Federal Way, and Covington staff in advance of the July 23, 2024 AHC meeting. Seattle asked for additional time to review the draft letter and to defer action to the September 5, 2024 AHC meeting.

Exhibit 1 to this staff report provides links to each jurisdiction's submission materials and an overview of each jurisdiction's housing needs, key facts, and the recommended actions each city needs to take to align with the goals and policies of the CPP Housing Chapter detailed in each draft comment letter. The draft comment letters for AHC consideration and potential approval are attached as Exhibits 2 through 7 of this staff report. AHC staff recommend these comment letters for AHC approval at the July 23, 2024 AHC meeting.

Once approved, the AHC Chair will sign the letters and AHC staff will email the letters to Bellevue, Auburn, Bothell, Issaquah, Federal Way, and Covington staff. AHC staff will then post the approved letters on the AHC webpage.

After adoption of their plans, Bellevue, Auburn, Bothell, Issaquah, Federal Way, and Covington may send updated implementation strategies to AHC staff. The AHC will measure and report on jurisdictional progress to plan for and accommodate their housing need annually following adoption of their comprehensive plan. The GMPC or its designee will review the information collected through annual monitoring and reporting and conduct a mid-cycle check-in and adjustment five years after plan adoption.

Program Update

AHC staff have continued reaching out to and meeting with jurisdiction staff to:

- ensure jurisdictions are aware of the program;
- learn about the status of jurisdiction's draft plans;
- assist jurisdiction staff as they prepare to submit to the program; and
- begin the review process for jurisdictions that have submitted to the program.

In addition to the comment letters prepared for the July 23, 2024 AHC meeting, AHC staff have received submissions from and are currently reviewing and preparing comment letters for the cities of Seattle, Black Diamond, Enumclaw, Kenmore, Kirkland, Medina, and Sammamish. AHC staff tentatively expect to prepare comment letters for AHC consideration and potential approval for these submissions at the September 5, 2024 AHC meeting.

Isaac Horwith, Senior Housing Planner and manager of the plan review program, is taking parental leave beginning in August 2024. Carson Hartmann has been selected to serve in a special duty assignment to manage the plan review program through the remainder of 2024.

Proposal for Timing Issues and Jurisdictions that May Not Submit to the Plan Review Program

On average, the AHC takes two to three months to review a submission and approve a comment letter for a jurisdiction. Jurisdictions receiving a comment letter in the fall of 2024 may not find it

feasible to incorporate AHC feedback into their comprehensive plans before the state-mandated adoption deadline of December 31, 2024. This could result in jurisdictions having to decide whether to adopt their plan without incorporating AHC feedback or delaying comprehensive plan adoption until 2025. Additionally, as of July 15, 2024, AHC staff have not received confirmation from several small jurisdictions that they intend to submit to the plan review program.

AHC staff discussed these timing and submission issues and received feedback on a draft proposal from the AHC's Housing Interjurisdictional Team on June 20, 2024 and the GMPC's Interjurisdictional Team on July 12, 2024.

AHC staff propose the following protocol for submissions going forward:

1. AHC staff will strive to keep the review period as close to two months as possible.
2. AHC letters issued in October through December will acknowledge the challenge in incorporating feedback before the state-mandate adoption deadline of December 31, 2024.
3. AHC staff will encourage jurisdictions to amend plans in 2025 to incorporate AHC feedback if they do not do so in 2024.

If a jurisdiction has explicitly stated they intend not to submit to the program, or have not submitted by the November 7, 2024 AHC meeting, AHC staff propose preparing a letter for approval at the December 5, 2024 AHC meeting stating:

1. The AHC cannot conduct a review of the jurisdiction's draft plan because they have not submitted to the plan review program.
2. The jurisdiction's plan is not in alignment with the CPP Housing Chapter until they have submitted to the plan review program and incorporated the AHC's feedback.
3. The AHC recommends the jurisdiction submit to the plan review program and incorporate AHC feedback in 2025.

AHC staff welcome input from AHC members on this proposed approach at the July 23, 2024 AHC meeting, but a decision by the AHC is not required until later in 2024. AHC staff intend to present this proposed approach at the July 24, 2024 GMPC meeting and will share any guidance from AHC members staff verbally to the GMPC.

Exhibit 1: Links to Submission Materials and Jurisdiction Overviews

AHC members can use the following hyperlinks to access the submitted materials that informed the comment letters prepared for the July 23, 2024 AHC meeting. The materials below and the staff briefings at the July 23, 2024 AHC meeting are organized in the order in which they submitted to the program.

Jurisdictional Overviews

This section provides an overview of each jurisdiction, their housing needs, and a summary of the recommended actions each city needs to take to align with the goals and policies of the CPP Housing Chapter detailed in each draft comment letter (see Exhibits 2 through 7). Reported data comes from each jurisdiction's draft comprehensive plan, except for the following:

- jurisdiction's median household income;[3]
- King County's median household income;[4]
- jurisdiction's and King County's population;[5]
- King County's percentage of residents of color;[6] and
- housing needs.[7]

The cities of Auburn and Bothell are partly in King County, with portions also in Pierce and Snohomish counties respectively. The population and housing need numbers identified below only represent the King County portions of these jurisdictions.

Exhibit 3: Draft Comment Letter for the City of Auburn

July 23, 2024

Mr. Josh Steiner, Senior Planner
City of Auburn
25 W Main St,
Auburn, WA 98001

Dear Mr. Steiner,

Thank you for submitting the City of Auburn's draft comprehensive plan to the Affordable Housing Committee's (AHC) Housing-focused Draft Comprehensive Plan Review Program for review on April 10, 2024. On behalf of the AHC, I am sending you this summary of our review and recommendations.

Background.

The AHC is a subcommittee of the Growth Management Planning Council (GMPC), consisting of representatives of King County and its cities, housing providers, area employers, and others. By direction of the GMPC, the AHC now conducts a housing-focused review of all King County jurisdictions' draft periodic comprehensive plan updates, assessing the draft plans for alignment with the King County Countywide Planning Policies (CPP) Housing Chapter goals and policies prior to plan adoption.

As you know, our county is experiencing a deep and persistent housing shortage. In 2021 the State of Washington adopted House Bill 1220, which amended the Growth Management Act, requiring local governments to plan for and accommodate housing that is affordable to all income levels, including emergency housing. In response to this state mandate and local interest in improving the effectiveness of local housing plans and policies, the AHC led a two-year process to amend the King County CPPs.

The result was a significant update to the CPP Housing Chapter, which was recommended by the GMPC, adopted by the King County Council, and ratified by the cities in 2023. The goals of both the statute and this implementation work are to encourage cities and King County to work together to provide a full range of affordable, accessible, healthy, and safe housing choices to every resident in King County.

This review is guided by Housing-Focused Comprehensive Plan Review Standards, as adopted by GMPC Motion 23-2. In summary, the AHC review seeks to determine whether each jurisdiction's draft plan and submission materials:

1. address all CPP Housing Chapter policies;
2. articulate implementation strategies for relevant CPP Housing Chapter Policies; and
3. lay out meaningful policies that, taken together, support the jurisdiction's ability to equitably meet housing needs.

AHC members appreciate Auburn being among the first jurisdictions to submit to the program in 2024. This program is still relatively new and evolving, and your engagement helps the AHC understand how jurisdictions are seeking to address their housing needs while aligning with the recent changes at the state, regional, and county levels.

The AHC acknowledges the substantial amount of time and effort that went into Auburn's draft comprehensive plan. During review, the AHC noted that many of Auburn's plans, policies, analyses, and implementation strategies align well with CPP Housing Chapter policies. In particular,

1. Auburn's draft proposes substantially increasing Auburn's development capacity from 7,504 units under existing zoning to 46,070. Most of this increase comes from allowing middle housing and expanding their Regional Growth Center and Downtown Center to accommodate greater densities of housing. This strategy will help accommodate households with incomes greater than 80 percent area median income (AMI), which represent over 70 percent of Auburn's overall housing need in King County.
2. Auburn's "Goal 6: Implementation and Monitoring" represents a strong commitment to partner with a broad set of organizations to meeting countywide housing needs. The AHC also recognizes and appreciates that Auburn serves as the administering agency of South King Housing and Homelessness Partners, which promotes subregional collaboration to increase housing stability and produce and preserve quality affordable housing in South King County.

Below, the AHC includes recommendations necessary for Auburn to align with the CPP Housing Chapter policies.

Recommendations to Align with the CPP Housing Chapter

The AHC recommends Auburn take the following actions to align its draft comprehensive plan with CPP Housing Chapter goals and policies.

1. Plan for and accommodate Auburn's allocated housing needs (CPP H-1)

Relevant Countywide Planning Policies

CPP H-1 requires Auburn plan for and accommodate at total of 12,000 net new housing units affordable to households at different income levels, including 812 permanent supportive housing units. and 2,293 new emergency housing beds.

Auburn's Proposal and AHC Findings

Auburn's draft Housing element narrative discusses Auburn's permanent supportive and emergency housing needs, identifying a "severe shortage of emergency housing beds" and a need to supply an additional 115 beds per year to meet the need by 2044 (page HE-11). Auburn's submission also includes policies that will likely support development of these housing types. However, the AHC does not see a policy that explicitly states Auburn's intent to plan for and accommodate permanent supportive housing and emergency housing types.

Auburn's draft Housing element's land capacity analysis uses the housing needs allocated in CPP H-1, indicating Auburn intends to provide sufficient residential capacity for its allocated housing needs. Auburn's proposed policy H-32 also commits Auburn to work in partnership with King and Pierce County and other cities to address countywide housing needs for all income levels, and "act as a County leader in the exploration and implementation of new funding mechanisms and strategies to develop housing affordable at 30 percent [area median income] AMI and below." The AHC commends Auburn for the commitment to partnership and acting as a leader to meet housing needs for households with incomes at or below 30 percent AMI. However, demonstrating sufficient residential capacity and addressing countywide housing needs does not clearly demonstrate that Auburn intends to plan for and accommodate its allocated housing needs.

> **Recommendation 1:** To align with CPP H-1, Auburn should adopt a policy stating their intent to plan for and accommodate its allocated share of countywide future housing needs for moderate-, low-, very low-, and extremely low-income households as well as emergency housing and permanent supportive housing.

2. Complete the housing inventory and analysis (CPP H-3)

Relevant Countywide Planning Policies

CPP H-3 directs jurisdictions to conduct a housing inventory and analysis to help identify and address the greatest needs as well as summarize the findings in the Housing Element.

Auburn's Proposal and AHC Findings

While Auburn's submission includes many data points and substantive analysis, the AHC could not find specific information required by H-3(d), (e), (g), (i), and (k). This includes:

d) percentage and geographic distribution of residential land zoned for moderate- and high-density housing and accessory dwelling units in the jurisdiction;
e) number of income-restricted units and, where feasible, total number of units, within a half-mile walkshed of high-capacity or frequent transit service where applicable and regional and countywide centers;
g) age by race/ethnicity;
i) housing development capacity within a half-mile walkshed of high-capacity or frequent transit service, if applicable; and
k) summary of existing and proposed partnerships and strategies, including dedicated resources, for meeting housing needs, particularly for populations disparately impacted.

This additional analysis should inform additional comprehensive plan policy responses and strategies. For example, analysis responsive to CPP H-3(k) could help inform the analysis of gaps and barriers in existing policies and strategies, as required by CPP H-4.

> **Recommendation 2:** Auburn should include all inventory and analysis components as required by H-3 in the comprehensive plan and summarize the findings in the Housing Element. This additional analysis should inform additional comprehensive plan policy responses and strategies.

3. List and evaluate existing housing policies, strategies, and gaps and plan to address them (CPPs H-3(k), H-4, H-12, and H-20)

Relevant Countywide Planning Policies

CPP H-3(k) requires all jurisdictions to include in their inventory and analysis a summary of existing and proposed partnerships and strategies, including dedicated resources, for meeting housing needs, particularly for populations disparately impacted. CPP H-4 requires jurisdictions to evaluate the effectiveness of existing housing policies and strategies to meet the jurisdiction's housing needs and eliminating racial and other disparities in access to housing and neighborhoods of choice. CPP H-12 requires jurisdictions to adopt and implement policies that improve the effectiveness of existing housing policies and strategies and address gaps in partnerships, policies, and dedicated resources to meet the jurisdiction's housing needs. CPP H-20 requires jurisdictions to adopt and implement policies that address gaps in partnerships, policies, and dedicated resources to eliminate racial and other disparities in access to housing and neighborhoods of choice.

Auburn's Proposal and AHC Findings

Auburn's Housing Element Goal 6 proposes multiple policies to continue and pursue partnerships with many different organizations. The AHC commends these efforts and believes Auburn will continue to collaborate with diverse partners, in alignment with CPP H-6. However, the AHC did not find a summary of existing partnerships and strategies or an evaluation of the effectiveness of policies and strategies, as required by CPPs H-3(k) and H-4. While Auburn's proposed policies may address gaps in partnerships, policies, or dedicated resources, the AHC cannot determine if Auburn is aligned with CPPs H-12 and H-20 without this analysis.

> **Recommendation 3:** To align with CPPs H-3(k), H-4, H-12, and H-20, Auburn should list existing partnerships and strategies and identify gaps in existing partnerships, policies, and dedicated resources for meeting housing needs and eliminating disparities. Please see the Washington State Department of Commerce's "Adequate Provisions Checklists" as a guide for how Auburn could conduct this analysis. Auburn should use this analysis to address those gaps and improve effectiveness of existing policies and strategies.

4. Document racially exclusive and discriminatory land use and housing practices and adopt intentional, targeted actions to repair harm (CPPs H-5 and H-9)

Relevant Countywide Planning Policies

CPP H-5 requires jurisdictions to document the local history and impact of racially exclusive and discriminatory land use and housing practices and explain the extent to which that history is still reflected in current development patterns, housing conditions, tenure, and access to opportunity. CPP H-9 requires jurisdictions to adopt intentional, targeted actions that repair harms to Black, Indigenous, and People of Color (BIPOC) households from identified past and current racially exclusive and discriminatory land use and housing practices.

Auburn's Proposal and AHC Findings

The Racially Disparate Impact analysis in Auburn's draft Housing element identifies racial disparities in housing cost burden and displacement risk among its residents (Housing Element page HE-7). While these disparities are critical to understanding Auburn's housing needs, Auburn's submission does not document the history of racially exclusive and discriminatory land use and housing

practices in Auburn, as required by CPP H-5. For example, many properties in Auburn had or have racially restrictive covenants.[2]

Auburn's proposed land use map represents a major step toward eliminating exclusionary zoning. Auburn's draft plan also includes many policies that will likely benefit BIPOC households, including anti-displacement measures and inclusive engagement practices that are closely aligned with the strategies the CPP Housing Chapter Technical Appendix suggests for CPP H-9. However, without the analysis required by CPP H-5, the AHC cannot determine if these actions are a "targeted" approach to repairing harm from the racially exclusive and discriminatory land use and housing practices. Additionally, while Auburn's proposed policy LU-12 does explicitly mention historically marginalized communities, it only "encourages" inclusive engagement strategies to prevent negative impacts.

> **Recommendation 4:** To align with CPP H-5, Auburn should document the history of racially exclusive and discriminatory land use and housing practices within their jurisdiction and explain the extent to which the history is still reflected in current development patterns, housing conditions, tenure, and access to opportunity. See "Resources for Documenting the Local History of Racially Exclusive and Discriminatory Land Use and Housing Practices" document for assistance.[2]
>
> To align with CPP H-9, Auburn should adopt or clarify how proposed actions are targeted to repair harms identified in their Racially Disparate Impacts analysis.

5. Clarify community engagement findings (CPP H-8)

Relevant Countywide Planning Policies

CPP H-8 requires all jurisdictions to collaborate with and prioritize the solutions articulated by populations most disproportionately impacted by housing cost burden in developing, implementing, and monitoring strategies that achieve the goals of this chapter.

Auburn's Proposal and AHC Findings

Auburn's draft Housing element includes policy H-41, which very closely matches the language of CPP H-8. Auburn's Public Participation Plan also outlines numerous engagement strategies used to reach different populations and community-based organizations in an inclusive manner and provides findings from their community engagement process. However, the findings section does not identify specific input or themes from populations most disproportionately impacted by housing cost burden. Without this information, the AHC cannot determine if Auburn is prioritizing the needs identified by these communities.

> **Recommendation 5:** To align with CPP H-8, Auburn should disaggregate input from community engagement and clarify how the plan prioritizes the needs of populations disproportionately impacted by housing cost burden.

[3] King County Affordable Housing Committee. (2024) *Resources for Documenting the Local History of Racially Exclusive and Discriminatory Land Use and Housing Practices*. [link]

6. Adjust affordability assumptions for accessory dwelling units (CPP H-11)

Relevant Countywide Planning Policies

CPP H-11 requires jurisdictions identify sufficient capacity of land for housing including housing for low-, very low-, and extremely low-income households.

Auburn's Proposal and AHC Findings

Auburn's draft plan proposes significantly increasing where accessory dwelling units (ADUs) are allowed, in alignment with recent state legislation. The AHC appreciates Auburn's steps to allow more ADUs as a method of increasing housing diversity and options within traditionally single-family areas. However, Auburn's initial submission to the AHC assumed ADUs would be affordable to households with incomes at or below 30 percent AMI.[4] Auburn staff sent updated materials that assumed ADUs would be affordable to households at or above 60 percent of AMI after a discussion with AHC staff.[5] However, the AHC does not consider ADUs as a meaningful strategy to address housing needs below 80 percent of AMI in King County communities, which have relatively higher housing costs compared to the rest of the state.

Recommendation 6: To align with CPP H-11, Auburn should update their land capacity analysis to either:

- assume ADUs provide capacity for households above 80 percent of AMI, in alignment with Exhibit 13 in the Department of Commerce's land capacity analysis guidance,[2]
- provide evidence in a detailed market analysis that ADUs are affordable to low-income households, or
- propose subsidies or development incentives that set a reasonable expectation that ADUs would be affordable to low-income households.

This update should inform and be consistent throughout Auburn's Housing Needs & Characteristics Assessment and Housing and Land Use elements.

Conclusion and AHC Resources

Thank you again for your submission to the Committee's housing-focused comprehensive plan review program. AHC members valued the opportunity to review Auburn's submission. Auburn's participation in the plan review program is instrumental in the broader work of the Committee to empower local jurisdictions to address the affordable housing crisis in King County.

AHC staff are happy to assist Auburn in addressing these recommendations. For immediate resources and guidance on aligning with the CPP Housing Chapter, refer to the:

- Engrossed 2021 King County CPPs;
- AHC Housing-focused Draft Comprehensive Plan Review Program Guide; and
- King County Resources for Documenting the Local History of Racially Exclusive and Discriminatory Land Use and Housing Practices.

RE: WDFW Comments Regarding Auburn's Draft Comprehensive Plan

Dear Mr. Steiner,

On behalf of the Washington Department of Fish and Wildlife (WDFW), thank you for the opportunity to formally comment on Auburn's draft Comprehensive Plan as part of the current periodic update. Within the State of Washington's land use decision-making framework, WDFW's role is that of technical advisor with respect to the habitat needs of fish and wildlife and the likely implications of various land use decisions on those resources over time. We provide these comments and recommendations in keeping with our legislative mandate to preserve, protect, and perpetuate fish and wildlife and their habitats for the benefit of future generations – a mission we can only accomplish in partnership with local jurisdictions. Specific comments are provided in the following table.

Table 1. Recommended changes to draft Comprehensive Plan language.

Item	Policy Number	Policy Language (with WDFW suggestions in red)	WDFW Comment
Land Use Draft Element			
1	General Comment	General Comment	This element seems to primarily read as a summary of municipal code. It's crucial to consider the citizens of Auburn, who may not have familiarity with legal definitions or the need to know specific zoning requirements. Furthermore, because every land use designation criterion is included in this section, many of the subsequent comments are relevant across all sections. For a recent example of a document framed for a citizen audience, see how the city of Stanwood is

			formulating their draft Comprehensive Plan and Land Use Element, starting on page 30.
2	LU-2 Page LUE-11	As denser development continues to occur; standards should be developed to maximize density while preserving and connecting open space and critical areas for recreational and habitat corridor linkage purposes.	It's crucial to plan not just for open spaces, but also for their connection and integration to offer various benefits, such as recreational trails and habitat corridors. For guidance on incorporating wildlife habitat features into public spaces, refer to WDFW's Habitat at Home resource and our biodiversity management guidance for developing areas. Furthermore, Auburn's municipal code stipulates that in cluster subdivisions or short subdivisions, at least 50% of the parcel must be common open space, which can include critical areas and buffers. We propose extending this requirement to all new development types. Additionally, check out King County's Public Benefit Rating System (PBRS) as well. This initiative encourages private landowners to voluntarily conserve resources on their property. Currently, over 1,450 landowners across the county are participating, conserving 14,200 acres.
3	LU-16 Page LUE-13	As the market and utility availability enable denser development to occur, standards should be developed to maximize density while preserving open space and critical areas.	We appreciate the inclusion of this policy. See resources above.
4	LU-23 Page LUE-14	Encourage the development of a variety of housing typologies to suit the needs of various potential residents while also encouraging techniques such as Low Impact Development (LID) standards.	We recommend requiring Low Impact Development (LID) standards for all developments, especially near waterways. As noted in the 2021 Update to the WRIA 9 Salmon Habitat Plan, Auburn encompasses many high-priority (tier 1) project areas. This underscores Auburn's unique geographic location and distinctive obligation to preserve, rehabilitate, and re-establish salmon habitat. Especially in an urban setting such as Auburn, LID can provide far-reaching support in attaining these goals. Additionally, utilizing LID techniques can help Auburn address Federal Policy Priorities, such as, "address impacts of the tire dust chemical 6PPD-quinone on salmon survival is needed to ensure long-term viability of salmon in urbanized watersheds." Resources for LID include King County's Regional Stormwater Action Goals (which includes Planning Stormwater Parks), the Sustainable Development

			Code website and the VISION 2050 Planning Resources Guidance on Integrating Stormwater Solutions into Comprehensive Plans.
5	LU-24 Page LUE-14	Density bonuses outside of the Urban Separator Overlay should be approved based on innovations in transportation, stormwater management, and public amenities proposed for the development or adjacent neighborhoods associated with the request....	We suggest additional amenities for consideration include vegetation retention, green building techniques, and other action items to address climate-related hazards. For instance, "cool" roofs, which are coated with light colors or reflective pigments, effectively deflect the sun's heat, resulting in cooler buildings and surrounding areas. This approach is regarded as a cost-effective and immediately beneficial strategy for mitigating the heat island effect. See how the **city of Boston** is identifying priority blocks that could yield the greatest benefits to residents in pursuit of this "cool" roof goal.
6	Mixed Use Designation Suggested **Policy** Page LUE-18	Promote innovative and environmentally sensitive development practices in siting, design, materials selection, construction, and maintenance to balance environmental protection and achievable density. This could be achieved, in part, by the City developing and maintaining a fund to build green infrastructure, such as projects that help capture, filter, store, and reuse stormwater runoff.	We recommend the incorporation of this policy across all land use designations. It is imperative to strategize for the establishment of resilient and sustainable communities. The Georgetown Climate Center's Green Infrastructure Toolkit provides funding models and approaches from U.S. municipalities, including Los Angeles County's Safe Clean Water Program and Boulder, Colorado's Greenways Program.
7	LU-68 Page LUE-23	Explore opportunities to increase the amount of connected public green space in downtown that provide spaces for wildlife habitat, recreation and activation.	See previous comments. Also, some additional resources in achieving this goal include the Trust for Public Lands, the NRPA Safe Routes to Parks Action Framework (which provides professionals with a "how-to" guide to implement Safe Routes to Parks strategies), and the Sustainable Development Code website.
8	LU-70 Page LUE-23	Parking lots must be located and designed in a manner that softens their appearance from adjacent public roads and strives to mitigate negative environmental impacts. This is accomplished through landscaping, pedestrian	We suggest LID be required for impervious area creation with flows that lead directly into waterways (see comments to LU-23). Additionally, Auburn has significant impervious surface coverage currently. Any addition should be highly regulated. Does Auburn have an impervious area database, cataloging increases throughout the city overtime and tracking cumulative impacts?

		spaces, and the location of buildings on the property. Where practicable (but required in areas that drain directly into waterways), low-impact development techniques and landscaping should be used to promote on site stormwater infiltration and shading of hard surfaces. Minimum and maximum parking ratios must be established for each type of permitted use.	Pervious surfaces allow for groundwater recharge, flooding mitigation, and other climate-resiliency benefits. Increasing impervious surface amounts negatively impacts urban flooding, heat island effect, and more. As per Auburn's Hazard Mitigation Plan, the steep topography and impervious surface amounts exacerbate flooding and landslides in the area. We suggest impervious cumulative impacts be assessed when increases are proposed in any capacity.
9	LU-122 Page LUE-31	Increase distribution and connection of open space and increase access to open space amenities throughout Auburn.	See comments to LU-2 above.
10	LU-123 Page LUE-31	Enhance restoration, preservation and protection of natural resources and critical areas to maintain ecosystem services and values, as well as habitat functions.	The importance of ecosystem monetary value cannot be overstated. Protecting and restoring natural assets and the services they provide is often more cost-effective than engineered solutions. For example, restored wetlands and floodplains can prevent flooding and reduce the need for other types of flood-control infrastructure. Implementation of this policy could include comparing lifetime cost-effectiveness of nature-based versus engineered options for climate response to help identify cost-effective adaptation options. This can help build capacity and support for the adoption of response strategies that help protect and restore ecosystem function and services at risk from climate change. For resources, see FEMA's guide *Building Community Resilience with Nature-based Solutions*, as well as software to track these resources from Natural Capital Project. Additionally, see Kitsap County's approach to this through their Kitsap Natural Resource Asset Management Project.
11	LU-137 Page LUE-34	Reasonable use provisions will be included within the critical area regulations that ensure a balance between property owner ~~is not denied~~ use of a preexisting parcel, lot or tract	We suggest the incorporation of no net loss standards as required by state law (WAC 365-196-830).

		and no net loss of ecological values and functions.	
12	General Comment	General comment.	At the end of this section, there are many maps (or the stated intent to create maps) for 'Designated Areas,' 'Adopted Areas,' and so on. We recommend dedicating a map for critical areas (WAC 365-190-080). WDFW's Priority Habitats and Species (PHS) Program provides relevant information on important fish, wildlife, and habitat resources in Washington. The Washington Wildlife Habitat Connectivity Working Group is also a great repository for resources.
Housing Draft Element			
13	H-3, a-d Suggested **Policy** Page HE-13	Promote safe and connected neighborhoods. e. Shape regulations for park and open space requirements to promote healthy and climate-resilient communities for all development projects.	Open spaces, as noted in LU-2 and additional comments above, can act as climate-resilient assets that allow communities space to gather, recreate, filter stormwater, provide shade trees to offset heat island effects, and more. All development within highly impervious areas should strive for open space retention and creation.
14	H-21 Page HE-15	Adopt incentives, strategies, actions and regulations to create and sustain neighborhoods that provide equitable access to parks and open space, safe pedestrian and bicycle networks, clean air, soil and water, healthy foods, high-quality education, affordable and high-quality transit options and jobs.	We appreciate this policy inclusion. Please see comments in relation to LU-68, LU-23, and others for additional resources that may aid in achieving this goal.
15	H-25 Suggested **Policy** Page HE-15	Organize, educate and assist property managers and owners in the creation and preservation of safe neighborhoods... e. Encourage property owners to apply for a Habitat at Home certification plaque from WDFW	We suggest the encouragement of homeowner and landlord involvement in WDFW's Habitat at Home program, with the intent to incentivize community involvement and recognition of wildlife habitat creation in small (and large) spaces. Neighbors may recognize an adjacent property with a Habitat at Home sign and be compelled to participate.
16	H-26, part d. Page HE-16	Help identify professional volunteers at educational or professional associations to	We appreciate this policy inclusion. Please see comments in relation to LU-68, LU-23, and others for

		plan redesign or architectural upgrades of the properties.	additional resources that may aid in achieving this goal.
Capital Facilities Draft Element			
17	Goals # 5 - Essential Public Facilities Suggested **Policy** Page CFE-6	Consider future climate conditions during siting and design of essential public services, capital facilities, and community assets, including changes to temperature, rainfall, and flooding patterns, so they function as intended over their planned life cycle. Avoid siting these facilities where they are vulnerable to climate-exacerbated hazards, and begin planning for relocation of facilities if necessary.	Protecting essential public facilities and the services they provide from climate impacts helps ensure community resilience. It is vital to site these facilities outside of areas that will be impacted by climate-related stressors for the entire operational lifespan of the facility. We suggest updating zoning to allow essential or hazardous uses only in low-risk areas and assess risk when new facilities are proposed.
18	Goals # 5 - Essential Public Facilities Suggested **Policy** Page CFE-6	Promote green building/green development of all public facilities.	We suggest working towards sustainable development code that decreases public facility utility use and cost while simultaneously increasing the capacity for climate resiliency. The Sustainable Development Code website is a great resource in outlining how to remove code barriers, create incentives, and fill regulatory gaps in pursuit of this goal. Additionally, it is mandatory that schools are built to meet green building standards, and with the help of *Washington Sustainable Schools Protocol: Criteria for High-Performance Schools,* additional public or private infrastructure can be modeled after this example. See the LEED rating system for further resources aimed at all building types.
19	Goals # 5 - Essential Public Facilities Suggested **Policy** Page CFE-6	Work with local, county, and state agencies to plan and prioritize public and private culvert upgrades to ensure fish passage barrier removal, adequate projected stormwater passage, and continued climate-related adaptations to handle water passage into the future throughout the City of Auburn.	It is important to plan and prioritize culvert upgrades to ensure not only fish passage benefits, but adequate projected stormwater passage. We suggest this element (and future amendments to the City of Auburn's Capital Improvement Plan) include this goal and incorporate a prioritization list, especially in areas where terrestrial species connectivity can be restored simultaneously (i.e., replacing culverts with wider bridges). See WDFW's "Incorporating Climate Change into the Design of Water Crossing Structures: Final Project Report," as well as WSDOT's "Wildlife Habitat

			Connectivity Consideration in Fish Barrier Removal Projects." Combining stormwater maintenance (or any maintenance) with multi-benefit goals (such as climate change resiliency and salmon recovery) opens up these projects for diverse funding opportunities (such as the Department of Commerce Salmon Recovery through Local Planning Grant, due June 3rd).
20	Goals # 5 - Essential Public Facilities Suggested **Policy** Page CFE-6	Develop and maintain a fund to build green infrastructure projects that help capture, filter, store, and reuse stormwater runoff.	See comments for Suggested **Policy** Page LUE-18 above.
21	Goals # 5 - Essential Public Facilities Suggested **Policy** Page CFE-6	Identify and quantify the ecosystem services benefits of natural systems and include these natural capital assets in cost-benefit assessments for community and development planning.	See comments for LU-123 above, which includes resources such as FEMA's guide *Building Community Resilience with Nature-based Solutions*, as well as software to track these resources from Natural Capital Project. Additionally, see Kitsap County's approach to this through their Kitsap Natural Resource Asset Management Project.
Utilities Draft Element			
22	UE-5 Page UE-3	The City will maintain an asset database to be used in prioritizing asset maintenance and repair and replacement activities. The database includes asset age and material information, and will be validated and updated through inspections, records review, and other available information.	We recommend this asset database incorporate ecosystem services, as stated above in LU-123 and Goal 5 page CFE-6.
23	Goal 5 – Planning Suggested **Policy**	Work with energy utilities to improve the safety and reliability of infrastructure vulnerable to climate change.	Energy utilities' infrastructure, such as transmission lines and gas plants, have been seen to start wildfires and are also impacted by wildfires, extreme heat, and other climate-exacerbated hazards. Working through the state's Utilities and Transportation Commission, local Auburn should review and comment on their

	Page UE-9		local power provider's plans for responding to the risks of wildfires and other hazards. Recommendations might include removing tree limbs near power lines or burying lines, establishing redundancies, and creating small-scale energy generation systems.
24	Goal 5 – Planning Suggested **Policy** Page UE-9	Require new subdivisions to bury electricity transmission lines and associated infrastructure to reduce damage from storms and wildfire ignition risks.	This policy could be implemented via development code changes that require developers of new subdivisions to bury place power lines and associated infrastructure underground. See this FEMA case study regarding the benefits of burying power lines.
25	Goal 6 – Environmental Stewardship Suggested **Policy** Page UE-11	Protect and sustain functioning riparian habitats in order to capitalize on water quality, retention, and recharge benefits these areas provide.	In the *Stormwater Management Action Plan for the Olson Creek Catchment Area – Auburn, Washington*, page 12 calls for the short-term management action, "Review stream buffer requirements for Olson Creek, and consider updating protections." We suggest incorporating Riparian Management Zones (RMZs) to help achieve this goal. RMZs should be designated and protected as a critical area and replace outdated 'stream buffer' terminology. These areas "are disproportionately important, relative to area, for aquatic species (e.g., salmon) and terrestrial wildlife," as stated in WDFW's Riparian Ecosystems, Volume 2: Management Recommendations and supported by WDFW's BAS. This BAS also highlights key ecosystem service benefits RMZs provide. Please see WDFW's checklist to compare Auburn's current critical area ordinance to agency priorities.
26	UE- 86 Page UE-18	UE-86 The City shall seek to manage stormwater runoff within the public Right Of Way (ROW): • to provide access to and functionality of critical services. • to preserve mobility on major transportation routes (i.e., arterial roads) and residential roads. • to protect real property structures (e.g., residences and businesses.)	See comments for LU-23 Page LUE-14 above.

		• to offset negative water quality impacts that cause harm to people and wildlife, including impacts of the tire dust chemical 6PPD-quinone on salmon survival	
27	UE-100 Page UE-20	The City shall require that developers take into consideration all cumulative impacts downstream and upstream of the project site, as well as construct off-site storm drainage improvements needed to serve new development and do so prior to or simultaneously with such development.	If cumulative impacts to water flow are not considered, landowners downstream might experience higher rates of flooding if impervious surface area is increased upstream, areas that once received water may receive less, resulting in less ground water recharge that may impact aquifer recharge and well head protection areas, and more.
28	UE-101 Page UE-20	The City shall continue to prioritize asset management as a business practice and use it to schedule preventative maintenance, predict lifecycle costs, and perform replacement work before actual failures. This includes identifying high-value stream segments for restoration in order to re-establish ecosystem services.	See LU-123 and Goal 5 page CFE-6 above. In the *Stormwater Management Action Plan for the Olson Creek Catchment Area – Auburn, Washington*, page 12 states the importance of identifying high-value stream segments. We suggest incorporating this stated "long-term action" here.
29	UE-112 Page 21	The City shall evaluate the feasibility of improving the water quality of its existing discharges into river systems.	WDFW urges the City of Auburn to implement mandatory LID techniques adjacent to waterways or in areas where flow directly inputs into waterways (see resources related to LU-23 and LU-70 above). Auburn plays a critical role in the success of salmon recovery for WRIA 9. As noted in the WRIA 9 *Salmon Habitat Plan 2021*, there are close to a dozen **highly rated** projects within Auburn that are critical for the future success of salmon in this area. We suggest Auburn align policies and goals with this Plan and utilize example policies starting on page 68.
30	UE-150 Page UE-27	Assign industry standard design lives for sewage assets. The actual physical assessment will be compared to the theoretical design life to	We suggest including climate-related flooding concerns within this element, creating a prioritization list for systems at risk, for the health and safety of residents and the environment.

		determine the optimal economic life. Seek to repair or replace system assets before they exceed their economic life. The number of high-criticality assets beyond their economic life will be minimized. This should also include the creation of a prioritization list for relocation of systems within the floodplain that are susceptible to increased flooding, taking into consideration future climate-projected conditions.	
31	U-12 Page UE-35	The City shall consider the environmental impacts of proposed utility facilities as a part of its environmental review process. When requested by the City, the utility provider shall furnish documentation of current research results and/or provide additional information related to determination of the potential environmental impacts, how these impacts will be avoided or mitigated if impacts are shown to be unavoidable, if any, from the proposed facilities.	We suggest the use of mitigation sequencing (WAC 197-11-768) in this policy, which first states to "avoid." Avoidance is key, as mitigation for impacts can be costly, hard to maintain, and often do not meet no net loss standards (WAC 365-196-830).
Transportation Draft Element (Comprehensive Transportation Plan)			
32	General Comment	General Comment	We suggest Auburn incorporate the interdisciplinary aspects of habitat connectivity within this Transportation Plan, such as incorporating WSDOT's "Wildlife Habitat Connectivity Consideration in Fish Barrier Removal Projects." We suggest stating the intent of channeling traffic onto primary roads to reduce the dispersion of noise and barrier effects, and perforating road corridors with underpasses and overpasses to reduce road barriers and habitat fragmentation. Fencing can also be used to guide wildlife to these passes. Please see WDFW's Landscape Planning for Washington's Wildlife for

			further resources, especially “Chapter 6: Implementation through Comprehensive Plans, Development Regulations, and Incentive Programs,” page 6-1.
Parks Draft Element			
33	Goal 3: Establish a system of high-quality parks that are not only well-maintained but also aesthetically pleasing. Suggested **Policy** Page UE-3	Review parks and grounds maintenance procedures and adopt written Best Management Practices that protect salmon and salmon habitat.	This suggestion is an example policy, taken directly from the WRIA 9 Salmon Habitat Plan (page 3-17).
34	PR-25 Page UE-4	Promote urban forestry: Continue to work towards Tree City USA goals for improved urban forestry design and tree preservation. Require protection of significant trees and limit unnecessary disturbance of vegetation during all phases of development and require mitigation as needed, including replacement for trees removed during development.	We suggest Auburn develop a formal tree canopy management plan in order to track current conditions and benchmark progress towards tree canopy goals. This plan should also measure how well the City’s tree-related ordinances are functioning in retaining trees on the landscape. It may not be enough to rely on ordinances if there is not a system in place to track cumulative impacts over time. This goal is especially important as the number one identified anticipated climate hazard for Auburn is rising temperature and extreme heat. Some examples of Tree Management Plans include the City of Tacoma, the City of Snoqualmie, the City of Redmond, and the City of Renton. The Puget Sound Urban Tree Canopy and Stormwater Management Handbook provides additional guidance.
35	PR-25 Suggested **Policy** Page UE-4	When removing hazard trees, consideration for snag creation or leaving the removed downed tree in-place will be given.	WDFW recommends specifically encouraging the creation of snags as opposed to complete removal of hazard trees. Snags provide crucial habitat and is often missing from urban tree stand compositions (see further info on our website). Similarly, decaying logs are also important ecosystem attributes that tend to be missing in urban forest environments.

36	PR-28 Page UE-5	Preserve Natural Buffers: Maintain, establish, and protect a system of connected forested corridors and buffers to provide a natural separation between urban land uses and natural areas, provide for recreational trail opportunities, wildlife habitat corridor linkages, and maintain ecosystem services.	Please see previous comments for resources. Natural buffers intersect a variety of Comprehensive Plan goals.
37	PR-33 UE-5	Plan for Mitigation: Develop a monitoring and maintenance plan when mitigation is required and avoidance is infeasible, ensuring successful establishment and long-term sustainability that results in no net loss of ecological values or functions.	We suggest the use of mitigation sequencing (WAC 197-11-768) in this policy, which first states to "avoid." Avoidance is key, as mitigation for impacts can be costly, hard to maintain, and often do not meet no net loss standards (WAC 365-196-830).
		Climate Draft Element	
38	Goal 5 Actions Suggested **Policy** Page CE-14	Identify and implement strategies to increase the resilience of riparian environments from increased heat concerns and other climate hazards, while also protecting ecological functions, allowing water dependent uses, and providing public access. Establish regulations that require the location of new lots and structure outside of hazards areas. Address appropriate efforts to protect ecological values and functions, accommodate recreational opportunities, and retreat or redevelop flood-prone structures in floodplain and riparian areas.	We recommend consideration for climate-related hazards when planning for riparian access into the future. For assessing future conditions, see Climate Mapping for a Resilient Washington.
39	C-32 *** Page CE-16	Identify opportunities to retrofit undersized stormwater infrastructure and	See previous comments.

		areas with uncontrolled runoff to improve flow control and water quality, with a priority on locations providing the most benefit, are identified to be most vulnerable to extreme precipitation climate impacts, are identified for wildlife habitat corridor linkage or fish barrier removal purposes, and are communities that have been historically under-resourced.	
40	C-71 ** Page CE-25	Require open space set-asides (such as parks) that are sited and planned for connectivity to other open spaces, parks, and trails for new development when appropriate.	What standards are these required open spaces being held to? Do these standards match public need? Is there a plan to connect these fragmented plots of open space between developments?

Thank you for taking time to consider our recommendations for your draft Comprehensive Plan to better reflect the best available science for fish and wildlife habitat and ecosystems. We value the relationship we have with your jurisdiction and the opportunity to work collaboratively with you throughout this periodic update cycle. If you have any questions or need our technical assistance or resources at any time during this process, please don't hesitate to contact me.

Sincerely,

Morgan Krueger

Auburn, WA 98001

Dear Mr. Sweeting,

The Washington State Department of Transportation (WSDOT) appreciates the opportunity to review and comment on the City of Auburn's draft Comprehensive Plan and accompanying draft Environmental Impact Statement (EIS). Please find our comments on these planning efforts below.

Draft EIS Alternatives

WSDOT is pleased to see the city evaluate growth alternatives that help to increase supply and diversity of housing choices, reduce displacement, and create more communities that allow people to walk, bike or roll to meet their everyday needs. We are particularly supportive of the strategies outlined in Alternative 2 because they concentrate growth in areas most easily served by transit. This alternative best supports the city's role in the Puget Sound Regional Council's Regional Growth Strategy in VISION 2050. Local consistency with regionally adopted plans will help the central Puget Sound meet the long-range goals laid in VISION 2050 and the Regional Transportation Plan.

WSDOT is also glad to see the draft plan acknowledges the implementation efforts that will need to accompany the new growth strategy in Alternative 2. Changes to zoning and development standards will need to be made on properties located on streets with current or planning frequent transit routes – another critical component to support local and regional transit investments and increase the use of these travel options. We also appreciate the city's consideration of potential impacts to state facilities, active transportation, transit and freight. We look forward to further coordination with the City, King County, Pierce County, transit operators and other involved stakeholders as we work together to make smart transportation and land use connections.

Transportation Element and Comprehensive Transportation Plan

WSDOT applauds the City of Auburn's attention to the Bike, Pedestrian and Transit modes. In 2022, the Washington State Legislature passed Senate Bill 5974, the Move Ahead Washington package. The bill directs WSDOT to incorporate the principles of Complete Streets in most state transportation projects. More information, including staff contacts, can be found on WSDOT's Complete Streets webpage. As WSDOT projects on state routes in Auburn advance into the design phase, we look forward to working with the city on our shared goal of a complete active transportation network across city and state facilities.

With these Complete Streets responsibilities in mind, WSDOT's Northwest Region Traffic Office offered the following comments on the projects in the draft Transportation Element.

- *SR 164 is not identified as a future bike route in the Comprehensive Plan but will be subject to WSDOT's Complete Streets requirement. We suggest adding it to the plan, to begin looking at a potential future cross section so that smaller projects on this road can be forward compatible. This will be an important bike facility for users traveling to/from the southeast end of SR 164, since there are not alternate bike routes. It looks like the city's Level of Traffic Stress (LTS) requirements meet WSDOT*

requirements, in that the bike lane would need to be a separated facility (unless the speed limit is brought down to 30, then they differ). Nevertheless, having an identified cross section would be helpful.

- *For the Auburn Way S/M St SE/17th St SE intersection improvements project:*
  - *Any WSDOT work in this section of SR 164 will be subject to Complete Streets and will be required to include bike and pedestrian facilities that meet WSDOT LTS requirements. If the curb line is moving, it should be placed with a Complete Streets cross section in mind so that it is forward compatible.*
  - *The proposed layout does may not meet WSDOT's requirements for closed crossings (Design Manual 1510.09(2)(c)) and may have to be reassessed with this project. WSDOT's current standards are to keep all crossings open unless there are no origins or destinations to support a crossing, or there is a safety concern. This would most likely result in an open crossing on the east leg of the signalized intersection, as keeping it closed requires out-of-direction travel for pedestrians coming from 17th St and heading to the Walgreens lot.*
- *For the SR 18/164 interchange project:*
  - *Previous Complete Streets comments apply to this project as well, especially since this project is changing the curb line.*
  - *Keeping the south pedestrian crossing closed at the SR 18 EB ramp terminal intersection may not meet WSDOT's closed crossing requirements. It may need to be made open and accessible.*

WSDOT Northwest Region Traffic and Complete Streets are eager to further discuss these projects, and any other WSDOT work in City of Auburn, to advance our shared goal of a complete active transportation network across city and state facilities.

WSDOT Planning Resources

WSDOT's comprehensive planning resources for local agencies can be found on our Land Use and Transportation Guidance page. This includes a wealth of information on how WSDOT reviews local agency plans, our land use and transportation goals, best practices in building transportation efficient communities, and pertinent concurrency and SEPA guidance.

WSDOT's Community Planning Portal may be particularly helpful for local jurisdictions. The portal includes data on the state transportation system often needed to complete the transportation element inventory required by the Growth Management Act. In addition to the data included in the portal, local planners can add their own data to ArcGIS Online and create custom reports.

Further Engagement & Coordination

WSDOT appreciates being included in City of Auburn's planning process. Please reach out if you would like to discuss opportunities for ongoing engagement and coordination, as well as technical assistance available during your work updating your plans.

Thank you again for the opportunity to review the Auburn Comprehensive Plan. We look forward to our continuing productive partnership.

Sincerely,

Jeff Storrar, WSDOT Management of Mobility Policy Manager

CC: Matthew Kenna, WSDOT Management of Mobility
April Delchamps, WSDOT Management of Mobility Corridor Planning Manager
Zack Howard, WSDOT Management of Mobility Complete Streets

Subject: Auburn Planview Submittal # 2024-S-7447

CAUTION: The following message originated from outside the City of Auburn. Be careful opening links and attachments

Hello Alexandria,

Here are some middle housing-related comments on Auburn's Planview submission #2024-S-7447.

1. Note that the 1/4 mile distance for middle housing unit density as it relates to a "Major Transit Stop" and off-street parking requirements is "walking distance". ACC 18.02.067(D)(1)(a) references "within one-quarter mile of a "major transit stop". Other places in the amendments there is reference to walking distance. So there is not a consistent application of the use "walking distance". The city should make these consistent references throughout the document and then also determine how it intends to measure walking distance to provide predictability and certainty to the public and property owners.

2. **18.25.020 Applicability.**

   18.25.020 (B)(4) has an exception to the applicability section related to middle housing that states,

   "B. *Exceptions.* This chapter may be applied to development or redevelopment, except for the following below:
   1. …
   2. …
   3. …
   4. Middle Housing allowances shall not be used to justify alteration of a regulated critical area per Chapter 16.10 ACC."

   The placement of this sentence (18.25.020 B.4) in this subsection not clear. Is the intent that alterations of critical areas are not allowed for middle housing? Or is it that middle housing cannot be used for justification of a critical area alteration? Also, what is it about critical areas alteration criteria that would require that middle housing be treated differently than a single family detached dwelling?

For critical areas and exceptions, the RCW 36.70A.635(8) states,

> "(8) The provisions of this section do not apply to:
> (a) Portions of a lot, parcel, or tract designated with critical areas designated under RCW **36.70A.170** or their buffers as required by RCW **36.70A.170**, except for critical aquifer recharge areas where a single-family detached house is an allowed use provided that any requirements to maintain aquifer recharge are met;"

The language in 18.25.020 (B)(4) is not clear as to its intention or meaning, especially as it relates to RCW 36.70A.635(8)(a).

3. ACC 18.25.070 Accessory Dwelling Units.

There are several components of this section that require revision. First an ADU is not listed as a middle housing type in the definition of middle housing (RCW 36.70a.030(26)). Second, it is not clear what standard will be used when stating ADU's must be "an accessory to a principal middle housing unit". Accessory dwelling units, for example, must be allowed to be at least 1,000 square feet in gross floor area regardless of the size of the principal building. Finally the reference to "ADUs cannot be used to supplement the number of dwelling units allowed under this section." is unclear. What is meant by "cannot be used to supplement"?

A. An ADU is listed as a type of Middle Housing; each ADU that is proposed will be considered a dwelling unit when calculating the number of units allowed on a lot or as part of a development proposal.
B. ADUs must be an accessory to a principal middle housing unit.
C. ADUs cannot be used to supplement the number of dwelling units allowed under this section.
D. ADUs are subject to the standards contained in Chapter 18.32 ACC.

4. ACC Chapter 18.25 introduces design standards for middle housing. Design review for middle housing is acceptable, however middle housing design review is subject to administrative design review if design standards for middle housing differ from those for single family homes (RCW 36.70A.030(3)). It is not clear what the administrative design review development permit process is for the planning director or designee to review and then approve or deny a design review proposal. It is suggested that you cross reference that administrative design review process in this chapter.

Please reach out if you would like to discuss.

Best,

Eric
